

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE NEW BRITISH TRAVELLER.

HERTFORDSHIRE

GENERAL DESCRIPTION OF THE COUNTY.

HERTFORDSHIRE is an inland county, bounded, on the North, by Cambridgeshire and Bedfordshire; on the East, by Essex; on the South, by Middlesex; and, on the West, by Buckinghamshire and Bedfordshire. It extends about 33 miles in length, from East to West, and is about 30 miles in breadth, from North to South, and 130 in circumference. According to Halley, it comprises 451,000 square acres; but, agreeably to the tables prefixed to the population returns of 1811, it contains only 385,280. The general aspect of Hertfordshire is remarkably pleasant; and, though its eminences are not sufficiently elevated, nor its vales sufficiently depressed and broken, to afford a decisive character of picturesque or romantic beauty, its surface is diversified, so as to constitute a considerable display of fine scenery. The northern part is the most hilly; and a range of high ground stretches out from the neighbourhood of King's Langley, towards Berkamstead and Tring, which, in many parts, commands a great extent of country. Another elevated ridge commences at St. Alban's, and proceeds in a northerly direction towards Market Street, at a little distance to the east of the high road; while several other ranges of elevated ground run nearly parallel with the former from the vicinity of Sandridge, Whethampstead, Whitwell, &c.—The southern line is also sufficiently high to include some extensive prospects. Most of the country is inclosed; and the inclosures being principally live hedges, intermixed with flourishing timber, have a verdant and pleasing effect. Independent of the wood thus distributed in hedge-rows, large quantities of very fine timber are grown in the parks and grounds belonging to the numerous seats of the nobility and gentry, that are spread over almost every part of Hertfordshire, and give animation to almost every view. Several fine woods also enter into the

composition of the different landscapes, and in conjunction with the fertilizing streams which meander through the vales, give an interesting variety to its general features.

WOODLANDS.]—In this county, the woodlands are extensive; and, independently of those which lie contiguous to the seats of gentlemen, it is every where interspersed with small woods and copices. The timber-trees are chiefly oak, beech, and elm; the oak and beech are particularly flourishing at Askridge, Beech-wood, Hatfield, and Cashiobury, &c. The underwood is generally cut once in about ten or twelve years. The copices adjoining Essex, abound in hazel and hornbeam, which are also grown in various other parts, together with ash, birch, poplar, fir, alders, &c. The birch is occasionally burnt into charcoal. Where necessary, the woods have been hollow-drained, and with much success.

RIVERS.]—The chief rivers in this county, are the Beane, the Colne, the Gade, the Lea, the Marston, or Mimeran, the Meuse, or Ver, the Quin, and the Rib. The Beane rises near Cromer, in the hundred of Odsey, and taking a southerly course, flows past Watton, and through Woodhall Park; thence continuing its direction, it meets with the Lea at Hertford. This river is sometimes called the Benefician.

The Colne is formed by the union of several small streams, one of which rises at Kit's End, in Middlesex: these unite in the vicinity of North Mims, and flowing across Colney Heath, assume a south-westerly course in Tittenhanger Park. Thence giving name to London Colney, Colney Park, and Colney Street, it is increased near the latter, by the Meuse, from St. Alban's, and flowing on to Watford, passes that town on the south-east; then assuming a more westerly course, runs by the south

of Rickmansworth, about a mile and a half from which it leaves this county, and enters Middlesex.

The Gade rises on the borders of Buckinghamshire; and, flowing to the south, gives name to the villages of Little and Great Gaddesden: thence proceeding by Hemel-Hempstead, it is joined near Two-Waters, by the Bulbourne, which rises near Penley Hall, to the east of Tring, and flows past Berkampstead, in a south-easterly direction. The Gade, thus enlarged, runs to the east of King's Langley, and flowing through the Grove and Cashiobury Parks, inclines to the south-east; and, near Rickmansworth, falls into the Colne, having previously received the waters of the Chesham, from the adjoining county of Buckingham.

The Lea originates near Luton, in Bedfordshire; and, entering Hertfordshire, at Hide Mill, proceeds in a south-east direction through Wethampstead, Brocket Park, and Hatfield Park; thence inclining to the north-east, it flows past Hertford and Ware, in which neighbourhood, some of its waters are diverted into the channel of the New River; which is continued for some miles in nearly a parallel direction. Changing its course to the south, after its conflux with the Stort, about a mile east from Hoddesdon, it flows through Brixbourn, Wormley, and Cheshunt, and finally quits the county near Waltham Abbey. The Lea is navigable to Hertford and Ware.

The Maran rises in the neighbourhood of King's Walden, and flowing to the south-east, is soon enlarged by the Beane, after which it runs past Welwyn, and flows on in a serpentine direction, till it falls into the Lea, at Hertford.

The Meuse rises near Market Street, on the confines of Bedfordshire, and flowing to the south-east, passes Redburn, and Redburn Bury; thence proceeding towards St. Alban's, it crosses that town at

St. Michael's Bridge, and flows on towards the ruins of Soperwell nunnery, near which it changes its course to the south, and continues in that direction till it unites with the Colne, which is an inconsiderable stream, till thus enlarged by the waters of the Meuse. The Colne, in one part of its course, has a short under-ground passage, though not particularly observable but in dry weather: this occurs near its entrance into Colney Park, in which it also again emerges.

The Rib rises near Cornybury, above Buntingford, past which it flows, and proceeding in a south-east direction, is joined below Braughing, by the Quin, which rises near Biggin. Thence flowing to the south, it passes Standon and Berwicks, near which, suddenly turning to the west, it runs past Wadesmill, and once more inclining southwards, falls into the Lea between Hertford and Ware.

Various other streams rise in Hertfordshire, and several of them form the heads of more considerable rivers in the adjacent counties: of these, the Thame has its origin from three springs in the parish of Tring, which, uniting in one current, leave the county near Puttenham, and enter Buckinghamshire. The Oughton, the Hix, the Pirral, and the Ivel, also rise on the north side of this county; the three former flow into the latter, which forms one of the principal rivers in Bedfordshire. Several of the small streams which unite to form the Rhu, a chief branch of the Cam, have also their origin in this county, in the vicinity of Ashwell. The springs which constitute the source of the New River, have likewise their rise in Hertfordshire, in the neighbourhood of Ware.

PLANTS.]—The principal rare plants of this county, which are somewhat numerous, are specified in the note below.*

MEDICINAL SPRINGS.]—Hertfordshire is not remarkable

* *Anemone ranunculoides*. Yellow Wild Anemone, or Windflower; in woody places, and in hedges; near King's Langley.

Athamanta orcoselinum. Mountain Stone Parsley; in dry pastures and meadows; between St. Alban's and Stoney Stratford.

Atropa Belladonna. Deadly Nightshade, or Dwale; in the lime pits on Northaw common, plentifully; near the park wall, between Welwyn and Tensford Mills; and in Moor park, near Rickmansworth.

Campanula hybrida. Lesser Venus Looking Glass, or coddled corn Violet; in the corn-fields about Verulam.

— *rotundifolia*, β . A variety of the lesser round-leaved Bell-flower; in an old gravel pit at Rickmansworth.

Carpinus betulus. Hornbeam, or Hardbeam Tree, Horse, or Hornbeam Tree; in woods and hedges; about Broxbourn.

Cistus helianthemum. Dwarf Cistus, or little Sunflower; on the ruins of Verulam, and on the bank between Hertford and Amwell.

Convallaria majalis. Lily-convally, or May-lily: on woods and heaths; near Cashiobury.

Dipsacus pilosus. Small wild Teasel: in watery places and

hedges; at Moor Hall; and near Watton Wood Hall Park.

Digitalis purpurea. Fox Glove; in ways and hedges about Broxbourn.

Euphorbia hyberna. Knotty rooted spurge: in corn-fields; near Otterspool.

Gentiana amarella. Autumnal Gentian, or Fellwort: in dry pastures, not far from Old Verulam.

Heracleum spondylium, β *angustifolium*. Jagged Cow Parsnip: in hedges, meadows, and pastures; near Tring.

Hieracium murorum. French, or Golden Lungwort: on the walls of St. Alban's abbey church.

— *sabaudum*. Broad-leaved bushy Hawkweed: in woods and hedges: about Welwyn.

— γ . A variety of the last: on a dry bank, at the edge of a wood in a lane leading from Hornhill to Rickmansworth.

Hypericum androsamum. Tutsan or Park Leaves: in moist woods and hedges; at St. Paul's Walden, and on Bacher Heath.

Iris fatidissima. Stinking Gladdon or Gladwin: in woods and by hedges: between St. Alban's and Dunstable.

Lichen vulpinus. Gold Liverwort: on trunks and branches of trees,

markable for the number of its mineral or medicinal springs. The few which it possesses are confined to the southern part of the county, and are chiefly chalybeate. There is one at Cuffley, in the parish of Northaw; and others rise on Northaw common; but the one of most consideration, is on Barnet common, near the race-ground. In the northern part of the county near Clothall, some springs of a petrifying or incrustating nature, have been found.

ETYMLOGY.]—This county evidently derives its name from Hertford, its principal town; the situation of which on the Ermin Street, and on a ford of the river Lea, is supposed, by Salmon, and others, to have occasioned its present name, thought to be a corruption from Here-ford; that is, the army's ford; an etymology that receives support from the name of the town being frequently written Hereford, by the Saxon authors, and in charters to monasteries.—That the appellation Hertford, or Hartford, was derived from Heort-ford, or the ford of Harts, is much too fanciful to be admitted, though strengthened by the arms of the town, a hart couchant at a ford; which arms, it should be remembered, were not assumed till many centuries after the Saxon writers had recorded this place by the name of Hereford, and Hertford.

GENERAL HISTORY.]—This county, with those of Bedford and Buckingham adjoining, was, previously to the Roman invasion, chiefly possessed by the Cassii, or Catuochlani; appellations nearly of the same import, and signifying men in hostility, or, of battle. The latter, however, has an addition, denoting that they lived in coverts, or woods. In the British language, the term Cassii would be written Casi, Casiad, Casion, &c. The other would be Cati-y-Gwyllon, Catau-y-Gwyllon, Catwylloni Cadwylloniad, Catwylloni, and Catwyllonwys; im-

plying the Battles, or Warriors of the Coverts.—Cassivelaunus, the Sovereign of the Cassii, who was chosen to lead the associated Britons against the Romans, under Cæsar, is thought to have had a principal residence, or city, at Verulam; at that period, contiguous to the modern St. Alban's, and afterwards advanced to the rank of a municipium. On his defeat, and the consequent fall of his capital, he submitted to the Roman arms: though Cæsar was obliged to depart from the island without securing the full advantages of his recent success. Subsequently to the complete subjugation of the southern parts of the island, by the more decisive victories of succeeding Emperors, Hertfordshire was included in the district named Flavia Cæsariensis; but, on the conquest and division of the island by the Saxons, after the departure of the Romans, it became divided between the East Saxon and Mercian kingdoms; though by far the greatest part was included in the kingdom of Mercia.

ANTIQUITIES.]—The chief Roman stations, either in or connected with the county of Hertford, were Durocobrivis; Verulamium, or Verulam; and Sullonicæ, or Brockley Hills; but the Romans had other, though less important stations within its limits. The principal ancient roads, which intersected Hertfordshire, were the Watling Street, the Icknield Way, and the Irming or Ermin Street. The Watling Street enters the county from Middlesex at Elstree, near the station Sullonicæ, and proceeding by Colney Street, and Park Street, skirts the western side of Verulamium; thence continuing in a north north-westerly direction, and passing through Redburn, and Market Street, it runs into Bedfordshire, near Magiovinium, or Dunstable. The Icknield Way enters the county on the west side from Buckinghamshire, and crossing about one

trees, on branches of heath, on hilly heaths; at Totteridge.
Lonicera periclymenum, β . A variety of the common honeysuckle: in hedges; at Hitchin, in the way to Wimondly.
Lysimachia thyrsiflora. Tufted Loosetrife: on bogs and banks of rivers; near King's Langley.
Mulva alcea. Vervain Mallow: in hedges, and on the sides of fields; at Broxbourn.
Medicago falcata. Yellow Medick: in the footway between Watford and Bushy Hill.
Melica nutans. Melic Grass: in woods and hedges; at Puckeridge, and in the lane leading from Harefield to Rickmansworth.
Mentha piperata. Peppermint: in moist places, and near rivers.
Nepeta cataria. Nep, or Cat-Mint: in pastures and hedges of a chalky soil; about Moor Hall.
Ophrys apifera. Bee Orchis: about the ruins of Verulam.
—— muscifera, β . Fly Orchis: in meadows and pastures of a chalky soil; near Welwyn.
—— paludosa. Marsh Twayblade: on the wet grounds between Hatfield and St. Alban's.
Origium vulgare. Wild Marjoram: in shady places and hedges of a limestone soil at Puckeridge.
Parnassia palustris. Grass of Parnassus: in the boggy field near Cashibury Park.

Peziza cornucopoides. Cornucopia Peziza: in a wood at Welwyn.
Polygonum bistorta. Great Bistort, or Snakeweed: near the rivers at Rickmansworth.
Polypodium cristatum. Crested Polypody: on a bog near Moor Hall.
Prenanthes muralis. Wall Lettuce, Ivy-leaved Sow Thistle, or Wild Lettuce: on shady walls and in shady woods at Welwyn.
Saxifraga granulata. White Sengreen, or Saxifrage: in dry meadows and pastures; at Rickmansworth, and in moist meadows near Moor Hall.
Scrophularia scorodonia. Balm-leaved Figwort: near the lime-pits on Northaw common.
Sedum dasycarpum. Round-leaved Stonewort: upon the house and the walls at Market-Eit near Market Street.
Serapias longifolia. A variety of the broad-leaved Bastard Hellebore: in woods, and bushy places; near Diggeswell.
Spirgula nodosa. Knotted Spurrey, or English Marsh Saxifrage: on Rickmansworth church-yard wall.
Stratoites aloides. Fresh Water Soldier, or Water Aloe: in the ditches at Hatfield.
Tucrium scorodonia. Wood Sage: in woods, bushy places, and on heaths; at Broxbourn.

mile

mile northward from Tring, again intersects a portion of Berkshire; but afterwards re-enters Hertfordshire between Hexton and Lilley, and only a short distance to the south of the ancient camp called Ravensborough. Continuing thence in a north-easterly direction, it passes through Ickleford, and runs along the high ground towards Baldock, which it passes on the north side; and proceeding to the borders of the county, near Odsey Grange, becomes the boundary line between Hertfordshire and Cambridgeshire for several miles; going through Royston, it finally quits the county on the downs about one mile beyond. The Ermin Street enters Hertfordshire at Northaw Common from Enfield Chace, in Middlesex; thence proceeding by Newgate Street and Little Berkhamstead, it runs through Hertford; and crossing the river Lea to Port-hill, continues by Wades Mill, Puckeridge, Braughing, Hare Street, or Here Street, Bark-way, and Barley, into Cambridgeshire. The chief architectural antiquities entitled to notice, are, St. Alban's Abbey, Baldock Church, Berkhamstead Castle and church, Bishop Stortford Castle, Cheshunt Nunnery, Gaddesdon cloisters, near Tring, Hertford castle, Hitchin church, King's Langley church, Offley palace, near Hitchin, Royston church and cave, Rye house, Sawbridgeworth church, Sopwell monastery, Standon house, Ware church, Wymondesley priory.

SOIL.—The soils which most prevail in Hertfordshire, are loam and clay; the former is met with in almost all its gradations, and is more or less intermingled with flints or sand. The vales, through which the rivers and brooks take their course, are composed of a rich sandy loam, with the exception of a small quantity of peat and marshy moor; the slopes of the hills descending to these vales, exhibit inferior sorts of the same loams; but the flatter surface of the higher grounds, are composed of a wet and strong loam, of a reddish hue, and tending in a greater or less degree to clay, by which term it is frequently, though very improperly, denominated. The loam district extends westward from the river Beane, over the greatest part of the county; and is almost every where under a turnip course, and the crops are generally fed on the land. Good loam, or gravel and chalk, also prevails in the division of the county formed by Ware, Hockerill, and Buntingford; and very fine crops of wheat are grown in the vicinity of the latter place, and of Puckeridge. From Westmill to Walkern, the loam is very strong and adhesive, but still fertile; and in the neighbourhood of Hertford, the loams are of good quality. In the vicinity of Cole Green and Hatfield, they are less productive; but improve about Astwick and Sandridge; round which places some very good sandy loams are found; in some parts intermixed with gravel. Round St. Alban's, and extending to Watford and Rickmansworth, the soil is principally composed of deep flinty loam, with a chalk basis; towards Berkhamstead, Hemel Hemstead, and Beccleswood, the loam is of a reddish hue, and full

of flints: in some spots it merges into clay. The most productive of the sandy loams are found on the west side of the river Lea, extending in a line, of between two and three miles in breadth, through the parishes of Cheshunt, Wormley, Broxbourn, and Hoddesdon, and on to the hills about Amwell. This is of a very pale reddish hue; deep, moist, and friable; yet so adhesive, as to bind. The principal clay district is on the north-east, or Essex side; yet even here the upper surface is in general a strong wet loam, improved by hollow drainings, and by ample dressings of manure, from the capital. The pure clay of the stiff harsh and tenacious kind, resembling the bean lands of Middlesex and Berkshire, forms but a small part of the soil of this county. It extends, on the south side, in a line from one to three miles in breadth, through the parishes of Barnet, Totteridge, Elstree, Aldenham, and Bushey; and so on to the vicinity of Moor Park. In the parishes of Northaw and North-Mims, and lower part of that of Hatfield, the general description of soil is extremely sterile: Mr. Young supposes it the most unfertile in the south of England. The characteristics of this soil, he observes, "are wetness or spewiness, as the farmers term it; most of which are sulphury, and extremely unfavourable to vegetation, abounding more or less with smooth pebbles; which, at various depths, are conglomerated into plumb-pudding stones, in some places so near the surface as to impede the plough, if set an inch or two at a greater depth than the old scratchings of bad ploughmen. It is stiff, without a matrix for the roots of plants; and sharp and burning even in the immediate vicinity of springs: it has much sticky clay in the composition, but of a most sterile nature." The tract included in this general description, is interspersed with many fields of better quality, particularly when surrounded by any little stream. Chalk prevails generally on the northern side of the county; and extends from the neighbourhood of Barkway and Royston, through all the contiguous parishes to Baldock, Hitchin, King's Walden, &c. The basis, indeed, of the whole county is chalk, either more or less pure; though the depths at which it is found are very different.

AGRICULTURE.—The greatest portion of this county is under tillage. As a corn country, Hertfordshire is considered as one of the first in England; and was so reputed, indeed, even in the beginning of the eighteenth century. Its progress in improved modes of husbandry, has not, however, kept pace with that of other counties during the same period; though the attention given to agriculture is very general, and of late years, it has become still more a favourite pursuit.

Produce in wheat, barley, and oats, is very considerable: large quantities of turnips are also grown; and artificial grasses are cultivated to a great extent. The rotation of crops is varied according to the nature of the soil: but the general course appears to be turnips, barley, clover, wheat, and oats: in

In the clays and strong loams, fallows are introduced in succession with barley, clover, and wheat, and occasionally varied by peas, beans, &c. The average quantity of seed-wheat sown per acre, is two bushels and a half; the average produce from the same extent of land, may be estimated at from twenty-three to twenty-five bushels: on the rich loams, in the vicinity of Buntingford, forty bushels are frequently produced. The quantity of seed-barley sown per acre, is from three bushels and a half to four bushels; the average produce is thirty-two bushels: the produce of oats is nearly similar; the quantity sown varies from four to five bushels. Turnips and clover are supposed to have been introduced here in the time of Oliver Cromwell, who is said to have allowed 100% yearly to the farmer who first attended to their culture. The most experienced husbandmen plough in the seed, in preference to harrowing it in, by which method it is less liable to be destroyed by the fly, and the produce in dry seasons is much greater. The entire management, however, is not proportionably judicious; for the turnips are, in general, hoed but once, instead of twice or thrice, as in the Norfolk mode. Swedish turnips, have obtained general attention, and are held in great estimation, for fattening sheep, oxen, hogs, &c. Clover is generally mowed twice; but in some places the second crop is fed on the land. Saintfoin, trefoil, rye-grass, lucerne, and tares, are also grown in this county; and cabbages and potatoes are much grown. The system of drill-husbandry has not made any considerable progress. The spirited manner in which manures are employed; tend greatly to increase the products of the soil. Chalk, obtained from pits sunk for the purpose within the district, is generally in use; and night-soil, and stable-dung, brought from the capital at considerable expence, has a very extensive appropriation. In some few places the chalk is burnt into lime; but in others it is strewn upon the land immediately from the pits. From sixty to one hundred loads are commonly spread over every acre, at eighteen barrows-full to the load. Soot, ashes, bones, oil-cake, peat-ashes, woollen rags, hair, and various other substances, are also employed for manure in different parts of the county; and the use of the sheep-fold is general. The grass lands, compared with those under tillage, are very small; though a tract of grass, rendered artificially productive, at a great expence, may be found connected with almost every seat in the county. The meadows on the Stort, which extend from Hockerill to Hertford, are very productive, as are those in the vicinity of the Lea, and in the neighbourhood of Rickmansworth, &c. The many streams which intersect the land, are extremely favourable to irrigation; though that system is not carried on to any great extent, on account of the claims of the mill-owners, which have, in several instances, occasioned much contention and expence. The principal agricultural implements employed are the great

VOL. III.—NO. 80.

Hertfordshire wheel-plough, worked by three and four horses; the swing-plough, the Hereford plough the skim-coulter, and the threshing-mill; but the last is by no means in general use. In some parts, chiefly on the estates of gentlemen farmers, the plough is drawn by oxen, worked in harness: they are also occasionally employed in the team.

PRODUCE.—In the south-west corner of the county, particularly in the parishes of Rickmansworth, Sarret, King's Langley, Abbot's Langley, Flaunden, Bovington, and partly in Watford, and Aldenham, are many orchards; apples and cherries are their principal produce. The apples are the most profitable; but the cherries are very beneficial to the poor, in the quantity of employment which they afford in gathering the crop.

CATTLE.—As the land is chiefly arable, live stock has become an object of inferior regard. The cattle kept on farms, are principally of the Welsh, Devon, Suffolk, and Hereford breeds; the Suffolk is considered as the best. The sheep are mostly ewes, of the South Down and Wiltshire kinds; the former are generally esteemed as the most profitable: on some farms, a breed between the Cotswold and Leicester has been introduced. In several parts, the sheep are fed on oil-cake, with great success. The horses are of various kinds; the Suffolk breed appears to have the preference: tares and clover constitute a principal part of their feed.

INCLOSURES.—In Hertfordshire, the quantity of waste lands is but inconsiderable, when compared with that of other counties; the aggregate does not appear to exceed 4500 acres; and of this extent, many acres are appropriated as sheep downs. The common and open fields in the northern part of the county, as well as in the western district, and in one or two other parts, are numerous; though more than 20,000 acres have been inclosed under different acts within the last fifteen or twenty years. The fences are generally good, and under such a judicious course of management on the plashing system, that almost every farm is supplied from its own hedges, with sufficient fuel for its consumption.

TENURES, RENTS, &c.—A large portion of the land in this county is held by copyhold tenure, with a fine certain, or at the will of the lord; but which fine seldom exceeds two years rent. Land thus held, sells at about six years purchase under the price of freehold. The landed property is greatly divided; the vicinity of the capital, the goodness of the air and roads, and the beauty of the country, have much contributed to this circumstance, by making this county a favourite residence, and by attracting great numbers of wealthy persons to purchase lands for building villas: this has multiplied estates in a manner unknown in the distant counties. Freehold estates have sold at twenty-five and twenty-eight years purchase; and, under particular circumstances, some very large tracts have obtained from thirty to thirty-two years purchase. The largest estate in the county is about the annual value of

70000

7000l. Several others are averaged at from 3000l. to 4000l. annually; more at 2000l. and below that sum, they may be met with of almost any amount. The usual extent of farms is from 150 to 400 acres; though there are many much smaller; several contain from 400 to 700 acres; and a few from 800 to 1000 acres; the latter being considered as the largest size of any in the county. The largest farms are, in general, the best managed, and most productive; the opinion is common, that the land cannot be kept in that degree of fertility, requisite to support the rental, and other expences, without bringing large quantities of manure from the capital; a business but insufficiently executed on small farms. The average of rent per acre is about 15s. subject to tithe, which is compounded for through the whole county, with very few, if any, exceptions, at an average of about 3s. 6d. or 4s. The more productive of the arable lands, let at from 18s. to 25s. per acre; the open lands round Barkway and Royston, at about 10s. on the average; those in the vicinity of Buntingford, at twenty or twenty-one shillings. The meadow lands on the borders of the Lea and Stort, obtain from 40s. to three pounds per acre: and those in other parts, let at proportionable sums. Several of the larger farms are under the immediate direction of the noblemen belonging to the estates; and a piece of ground, seventeen acres in extent, was inclosed at Hatfield, by the Marchioness of Salisbury, about eighteen or twenty years ago, for the purpose of making agricultural experiments.

FARM-BUILDINGS, LABOUR, &c.]—According to Mr. Young's statement, the wages of annual (domestic) servants are nearly as follow; of a carter or ploughman, from six guineas to nine guineas; of a thresher or tasker, from six guineas to seven guineas; their task is five bushels per day, and they are paid at the rate of one shilling for every five bushels extra, and one shilling per load for binding wheat-straw for market. Boys receive from two to four guineas, and maid servants about five guineas annually. The usual price for day-labourers varies, from 9s. to 12s. per week.

The buildings and offices on the most considerable farms are well arranged, and convenient; but the diversity of plans on which they are built, is very great.

CIVIL AND ECCLESIASTICAL JURISDICTION.]—The county of Hertford is divided into eight Hundreds, comprising 132 parishes, and four parts of parishes. It has 12 petty sessions, and 54 acting county magistrates. Hertfordshire is included in the home circuit, and belongs to the province of Canterbury; part of the county is in the diocese of London, and part in that of Lincoln.

PARLIAMENTARY REPRESENTATION.]—Hertfordshire returns six members to Parliament: two for the county, two for the borough of St. Alban's, and two for that of Hertford.

MANUFACTURES.]—The principal manufactures of Hertfordshire are those of cotton and silk; the former is principally carried on in the neighbourhood of St. Alban's and Rickmansworth; the latter in the vicinity of St. Alban's and Watford. About Berkhamstead, black lace is made; but the principal employment of the labouring females, in most parts of the county, is plaiting of straw, for bonnets, &c. The wages obtained by this employ, are very considerable; even young girls earn from six shillings to twelve and fifteen weekly; and the more expert women, from that sum to a guinea, and even twenty-five shillings.

ROADS.]—The chief roads of this county are very good, being mostly turnpike, and communicating directly with the metropolis. The cross roads are also good.

CANALS.]—The western side of this county is intersected by the Grand Junction canal, which enters on the south from Middlesex, and following the course of the river Colne, passes Rickmansworth; then pursuing the line of the Gade, it crosses Cashio-bury, and the Grove, parks, the noble proprietors of those demesnes having very patriotically given permission for that purpose. Proceeding in a northerly direction to Two-Waters, it there inclines to the north-west, and pursuing the line of the Bulbourne, it enters Buckinghamshire about two miles above Tring. Another canal has been projected to extend from St. Alban's, and unite with the Grand Junction canal below Cashio-bury park; but the estimate of the expence having exceeded the sums subscribed, the design has been suspended.

MARKET TOWNS.]—The market towns of Hertfordshire are as follows:—

<i>Towns.</i>	<i>Market Days.</i>
St. Alban's.....	Saturday.
Baldock.....	Thursday.
Barkway.....	Saturday.
Barnet.....	Monday.
Berkhamstead.....	Saturday.
Buntingford.....	Monday.
Hatfield.....	Thursday.
Hemstead.....	Thursday.
Hertford.....	Saturday.
Hitchin.....	Tuesday.
Hoddesdon.....	Thursday.
Rickmansworth.....	Saturday.
Royston.....	Thursday.
Standon.....	Friday.
Sevenage.....	Friday.
Tring.....	Friday.
Ware.....	Tuesday.
Watford.....	Tuesday.

POPULATION.]—The population of Hertfordshire, in the year 1700, amounted to 70,500; in 1750, it was estimated at 86,500; in 1801, it was found to be 97,577; and in 1811, it had increased to 111,654. The marriages in this county are as 1 to 163; the baptisms, as 1 to 34; and the burials as 1 to 55.

Summary

Summary of the Population of the County of Hertford, as published by Authority of Parliament, in 1811.

HUNDREDS, &c.	HOUSES.				OCCUPATIONS.			PERSONS.		
	Inhabited.	By how many Families occupied.	Building.	Uninhabited.	Families chiefly employed in Agriculture.	Families chiefly employed in Trade, Manufactures, &c.	All other Families not comprised in the two preceding Classes.	Males.	Females.	Total of Persons.

CHIEF TOWNS, PARISHES, &c.

ALBAN'S, ST.]—This interesting borough town, which takes its name from its patron, St. Alban the Martyr, is situated 12½ miles W. by S. from Hertford, and 20, N. W. by N. from London. Verulam, or Verulanum, on the ruins of which St. Alban's arose, was an important British city, the seat, as already stated, of the Princes of the Cassii, and, according to the Roman historians, more ancient even than London.* Under the Romans, it acquired the dignity and privileges of a Municipium, in the time of Aulus Plautius. Its advance is ascribed to its attachment to the Roman government, and to the essential aid furnished by its inhabitants to the Roman arms. The same causes, however, by which its prosperity had been augmented, contributed to its fall, by inflaming the vengeance of the Britons associated under Boadicea, who, after the destruction of Camalodunum and Londinium, poured forth her fury upon this devoted settlement. The riches of Verulam probably operated as an additional incentive for the Britons to attack it, as they passed other military posts without assault. The subsequent victory achieved by Suetonius over Bo-

dicea, ensured the predominance of the Roman power, and Verulam gradually recovered its importance. In succeeding ages, its fame was further heightened by the martyrdom of Albanus, or Alban, during the persecution of the Christians, which commenced under Dioclesian, A. D. 303. At that period, the enmity of its citizens to the Gospel was so great, that, as a disgrace to Albanus's memory, and as a terror to other Christians, they had the story of his murder inscribed upon marble, and inserted in the city walls. The flames of Paganism proved, however, insufficient to effect the purpose for which they had been lighted, and both Bede and Gildas concur in the statement, that, within a few years after the close of the persecution, a church was founded in honour of the memory of Albanus, on the very spot on which he suffered, the precise site of the present Abbey church of St. Alban's. The sculpture recording the scene of his martyrdom, was removed from the view; and in its place, and over the gates of their walls, the inhabitants erected square stones, inscribed with memorials of the triumph of the Christian faith.

Early in the fifth century, Germanus, bishop of

* Camden mentions British coins, which he supposes to have been struck here, for the letters VER on one side, and on the reverse, the word Tascia surrounding a running horse. This writer contends, that the word Tascia signifies Tribute money, and that the coins on which it appears, were struck by the British sovereigns, to pay the tribute imposed on them by the Romans. Mr. Pegge, however, and other antiquaries, explain the term Tascia, as the name of the Monetarius, or mint-master, who, on a coin attributed to Cunobeline, is repre-

sented as sitting at his work. This figure, Gough supposes to be a Vulcan, and to have been copied from the Phœnicians. In White's Table of British coins, is an engraving of a gold coin, that has been referred to this city, it having on one side the word VERO; the reverse exhibits several rude marks, with a chariot wheel, and a figure bearing a distant resemblance to a stork, though probably intended for a horse, as appears from comparing it with other British coins.

Auxerre,

Auxerre, and Lupus, bishop of Troyes, came into Britain for the avowed purpose of restraining the progress of the Pelagian heresy; during their stay, they assisted at a synod held at Verulam, A. D. 429. A chapel was afterwards erected to the honour of Germanus, just without the walls of the city, "on the spot on which, as from a pulpit, he spoke the Divine word."

This chapel, the ruins of which existed till the beginning of the last century, gave name to St. German's farm; and this now comprehends a considerable part of the site of the ancient Verulam. The grave of St. Alban is recorded to have been opened by Germanus, to deposit in it the relics of other saints, that "those whom heaven received, one tomb might contain." In the war of desolation which accompanied the descent of the Saxons, Verulam was an early sufferer; yet, previously to its final subjugation and ruin, it is said to have been recovered by Uther Pendragon, who, having been wounded in a great battle fought in the vicinity, was, after some time cured of his wounds by resorting to a salubrious spring, at a little distance from the city walls. The Saxons, on recovering possession, are supposed to have destroyed the population, and reduced the buildings to a mass of ruins. For two centuries, its name is not even mentioned in history; though various events render the opinion probable, that it was not wholly deserted till after the rise of the modern St. Alban's.*—When the Romans became possessed of Verulam, it is probable, that they enlarged its boundaries; yet they did not confine its exterior form to that so generally adopted in their tactics, the rectangular; but, modifying their own rules to the nature of the ground, suffered their municipium to assume the figure of an irregular ellipsis: internally, however, their buildings were extended in right line; and,

though the area has been long under tillage, and divided by hedges into fields, the sites of various streets may yet be discovered at particular seasons of the year, by the diverse hues of the vegetation. Considerable masses of the walls remain, as proofs of the excellence of the Roman masonry. The walls were about twelve feet thick; they were composed of layers of flints, embedded in a strong cement of lime, small gravel, and coarse sand, and strengthened at intervals of about three feet, by rows of large Roman tiles,† two or three in a row: these were continued through the whole range of the walls, as is evident from the fragments remaining on the different sides of the station. According to Dr. Stukeley, the length of the area, from north to south, appears to be 1730 yards; its greatest breadth, from east to west, is nearly 1000 yards. The highest ground is on the south and west sides; but the whole has a gradual descent towards the east, where the Ver, which now flows in a regular channel, from one to two hundred yards beyond the line of the wall, originally formed a great pool, covering about 20 acres of ground, and including what is now the lower part of the present St. Alban's. This still retains the memory of its origin, in the name of Fishpool Street; and this street connects with the high north-west road, which intersects the area of Verulam, from St. Michael's Bridge to that massive fragment of the ancient wall, called Gorham Block. One of the entrances to the city appears to have been near this spot; another was at the south-east angle, and secured by a double ditch and rampart: a third entrance, very strongly defended, was on the west side. The banks and ditches on the south and west sides, are the most perfect: though in many places they are overgrown by large trees; even in the ruins of the wall itself, some small oaks are now flourishing.‡ In tracing the progress by which

* The derivation of the name of Verulam has not been decisively ascertained; but its situation on the river Ver had unquestionably some share in its etymology. The Saxons called it Werlamcestre, and Watlingceastre; the latter term is clearly derived from its connection with the Watling Street. The great extent of the area surrounded by the ruined walls, the immense embankments, called the Verulam hills, with the deep ditches accompanying them, and the innumerable Roman coins, antiquities, and other remains of occupation that have been dug up here, are sufficient even in the absence of all written record, to testify the grandeur and former magnificence of this city.

† The Roman tiles measure from 16 to 18 inches in length, and are from 11 to 13 inches in breadth: they are of a very compact texture; yet so adhesive is the cement which binds them together, that it is almost impossible, without breaking, to remove one of them from the wall.

‡ "Were I to relate," says Camden, "what common report affirms of the many Roman coins, statues of gold and silver, vessels, marble pillars, cornices, and wonderful monuments of ancient art, dug up here, I should scarcely be believed." Camden probably alludes to the discoveries made during the time of Ealdred, and Eadmer, the eighth and ninth abbots of St. Alban's; the former of whom, having conceived the design of rebuilding the abbey church, began to search for materials among the ruins of Verulam; and, on his death, the latter

adopted the plan, and continued the researches, "Ealdred," says Matthew Paris, "ransacking the ancient cavities of the old city, which was called Werlamcestre, overturned, and filled up all. The rough broken places, and the streets, with the passages running under-ground, and covered over with solid arches, some of which passed under the water of the Werlam river, which was once very large, and flowed about the city, he pulled down, filled up, or stopped; because they were the lurking holes, of thieves, night-walkers, and whores: but the fosses of the city, and certain caverns, to which felons and fugitives repaired, as places of shelter from the thick woods around, he levelled as much as ever he could." Oak plank, with nails, and pitched over, oars of fir, and anchors half destroyed by rust, were also dug up at the same period. The most memorable of these discoveries, however, was made in the time of Eadmer, who again employing men to ransack the ruins, they "tore up the foundations of a great place in the midst of the ancient city; and while they were wondering at the remains of such large buildings, they found in the hollow repository of one wall, as in a small press, among some lesser books and rolls, an unknown volume of one book, which was not mutilated by its long continuance there; and of which neither the letters nor the dialect, from their antiquity, were known to any person who could then be found: but the inscriptions and titles in it shone resplendent in letters of gold. The boards of oak, the strings of silk,

which St. Alban's arose from the ashes of Verulam, it becomes necessary to revert to the martyrdom of Albanus, who is recorded to have been an eminent citizen of Verulam, and to have given shelter to a Christian preacher, named Amphibalus, who had fled from Wales for security against the effects of the dreadful persecution of Dioclesian. Being discovered in his retreat, the judge of the city ordered some soldiers to arrest him; but Albanus having received notice of their coming, contrived to send his guest away in privacy, and, disguised in his habit, presented himself to the soldiers as the person for whom they were in search. Not aware of the deception, they bound and conveyed him before the Judge; who, throwing off his cloak, and avowing his conversion to Christianity, he was severely scourged, to induce him to recant: but this availing not, he was ordered to be beheaded on a neighbouring hill, (called Holmhurst, by the Saxons,) and he was executed on the same day.*

Offa, King of the Mercians, whose power had been cemented by blood, was at length struck with remorse, and sought to relieve the horrors of a guilty conscience, by the foundation of a monastery. The particular act that most haunted his imagination, was the death of Ethelbert, Sovereign of the East Angles. Having, in answer to his prayers, received intimation from heaven that his intention was approved, he began to consider whom he should chuse as the patron saint of his new establishment. "After some time, being at Bath, in the rest and silence of the night, he seemed to be accosted by an angel, who admonished him to raise out of the earth, the body of the first British martyr, Alban, and to place his remains in a shrine, with more suitable ornaments." This vision, according to Matthew Paris, was communicated to Humbert, Archbishop of

Lichfield; and Unwon, Bishop of Leicester; and a day was appointed to commence the search for the relics of the martyr, at Verulam: over which city, as the King journeyed, he saw a light shining, resembling a large torch. This appearance was considered as the harbinger of success: for the devastations committed by the Saxons had occasioned the exact spot of the interment to be forgotten. "When the King, the clergy, and the people," continues our author, "were assembled, they entered on the search with prayer, fasting, and alms, and struck the earth every where with intent to hit the spot of burial: but the search had not been continued long, when a light from heaven was vouchsafed to assist the discovery; and a ray of fire stood over the place, like the star that led the magi to the holy Jesus at Bethlehem. The ground was opened; and in the presence of Offa, the body of Alban was found, deposited, together with some relics, in a coffin of wood, just as Germanus had placed them 344 years before." The united testimonies of venerable Bede, and Matthew Paris, establish the fact of a church having been built on the spot where Albanus suffered, within a short period of the time of his martyrdom. This fabric, Bede describes as of "admirable workmanship, and worthy of such a martyr;" and as even existing in his days. As the death of Bede occurred only 55 years previously to Offa's visit to Verulam, A.D. 790, or 791, and, as Matthew Paris records, that "the remains of Albanus, when raised from the earth, were conveyed in solemn procession, to a certain church, small in its size, that had been formerly constructed by the new converts to Christianity, without the walls of Verulam, in honour of the blessed martyr, and on the very spot where he suffered;" it would seem that the words of both historians refer to the same building; though Paris

silk, in great measure, retained their original strength and beauty. When inquiry had been made very far and wide concerning the notices in this book, at last they found one priest, aged and decrepit, a man of great erudition, Unwon by name, who, knowing the dialect and letters of different languages, read the writing of the before mentioned book, distinctly and openly. In the same manner, he read without hesitation, and he explained without difficulty, notices in other books, that were found in the same room, and within the same press; for the letters were such as used to be written when Verulam was inhabited; and the dialect was that of the ancient Britons then used by them. There were some things, in the other books, written in Latin, but these were not curious; and in the first book, the greater one, of which I have made mention before, he found written the history of St. Alban, the proto-martyr of the English, which the church at this very day recites and reads; to which that excellent scholar, Bede, lends his testimony, differing in nothing from it. That book in which the history of St. Alban was contained, was repositied with the greatest regard in the treasury of the abbey; and exactly as the aforesaid presbyter read the book written in the ancient dialect of England or Britain, with which he was well acquainted, Abbot Eadmer caused it to be faithfully and carefully set down by some of the wiser brethren of the convent, and then more fully taught in the public preachings. But when the history was thus made known, as I have said, to several, by being written in Latin, what is wonderful to tell, the primitive

VOL. II.—No. 89.

and original work fell away in round pieces, and was soon reduced irrecoverably to dust." The antiquities recently discovered at Verulam, do not afford any thing so remarkable as the above, but many of them are curious. The Roman coins that have been dug up here at different periods, have been so extremely numerous that many persons have formed large collections; and they are still occasionally met with in great abundance.

* Thus far the history of St. Alban is consistent and credible; but the circumstances recorded to have attended his execution, are too marvelous to ensure belief. The bridge over the river being too narrow to afford passage to the multitudes that crowded to witness the scene of his death, he is said to have prayed that the stream might part, in order to admit sufficient room for them to cross on dry ground, through the midst of the channel. This was accomplished: and the executioner was so impressed by the sight, that he refused to perform his office; and for this refusal, was himself destined to die. Another executioner having been procured, the procession moved on; and on the top of the hill, Albanus besought heaven for some water to quench his thirst, and immediately a fine spring gushed out of the earth at his feet. This second miracle had no effect on the obduracy of the Pagans; and the stroke of death being given, the head of the holy martyr was severed from his body; and, at the same instant, the eyes of him who had executed the bloody office, started from their sockets, and fell with it to the ground!

D

infers

infers, that the original church, built in honour of Albanus, had been destroyed by the Saxons long before. Into this church, then, was the raised body of the martyr now translated, and deposited in a shrine, enriched with plates of gold and silver: Offa himself is recorded to have placed a circle of gold round the scull of Albanus, inscribed with his name and title. The walls of the church were also hung with pictures, tapestries, and other ornaments. The next step taken by the Mercian sovereign, was to assemble the prelates, nobles, and chief personages of his kingdom, for the purpose of concerting the most effectual means of accomplishing his design. In this assembly it was determined, that he should proceed to Rome, to solicit the approbation of the Roman Pontiff, and to procure the requisite immunities and privileges for his intended foundation. His mission was attended with success; but is more memorable, perhaps, from its having been the occasion of entailing, for many centuries, upon the English nation, the tax called Peter-pence, which Ina had originally granted for the maintenance of a Saxon college, at Rome, and which Offa now conferred in perpetuity on the Papal see. On his return to England, Offa again assembled his nobles and prelates at Verulan, and with them determined on further measures for the foundation of his monastery. He resolved, that its endowments should be ample, that its means of exercising hospitality might be sufficient for the entertainment of the numerous travellers whom its vicinity to the Watling Street, would probably attract during their respective journeys either to the metropolis, or to the north. From houses of the most regular discipline, he assembled a convent of monks to the tomb of the martyr; and appointing his relation, Willegod, as the abbot, he began the establishment of his monastery. The first stone of the new building was laid with great solemnity, and by his own hand. He recommended, with fervent prayer, the protection of his foundation to the Saviour, and to St. Alban; pronounced maledictions on all who should disturb it, and invoked eternal blessings on those who should become its benefactors.* So much was the mind of Offa occupied by the concerns of his new foundation, that he

* It is a curious fact, though in opposition to the general belief, and contrary to the testimonies of several authors, that Offa did not erect a church at St. Alban's, neither for the use of his monastery, nor for the greater honour of his saint, for whose remains he had procured the glories of canonization. For the knowledge of this circumstance, which commands assent, we are indebted to the late Rev. Mr. Whitaker, who, from the pages of Matthew Paris, elicited the long hidden truth. Offa, says Paris, "at his own expence, constructed all the buildings, except an old edifice, which he found erected formerly out of the ancient edifices of the heathens." This edifice, though Paris himself seems unconscious of the fact, could be neither more nor less than the very church which he previously mentions, as "built by the early converts to Christianity," and into which the body of St. Alban had been removed.

† Among his endowments, was his manor and palace of Winslow, in Buckinghamshire. The former, says Paris, was 20 miles in circumference; and for this estate he had procured ex-

emption from the payment of Rome-scot, or Peterpence; a privilege that was enjoyed by no other place in his kingdom. Soon afterwards, he retired to his palace at Offley, in this county, where he died, A. D. 796; he was buried in a chapel on the banks of the Ouse, near Bedford: into which river, tradition reports his sepulture to have been carried by the torrent, in a time of flood, together with the chapel in which it had been deposited. The death of Willegod, the first abbot, in about two months after that of his royal master, is said to have been hastened by the grief which he felt at having been refused permission to inter the body of Offa, in the monastery of his own foundation.

Vulsig, or Ulsin, the third abbot, is recorded to have been much addicted to intemperance and hunting; and to have practised the "great enormity" of inviting crowds of noble ladies to his table, by which means he not only injured his own fame, but corrupted the sobriety of his brethren. He also wastefully expended the treasures of his house, altered the form and colour of his garments, used "vestments of silk, and walked with a long train." His female relations he gave in marriage to the nobles and great men, enriching them at the expence of the Abbey: but, after his death, the monks obtained restitution of the greater part of the estates that had been alienated. His successor, Vulnoth, during the first three or four years of his supremacy, strove with exemplary diligence to reform the abuses that had been thus generated. He afterwards fell into all the vices of Vulsig; but altered his conduct, on being struck with the palsy, "and changed his life to such a degree of sanctity, as to reform many by his example, and to end his days in felicity."‡ Edfrid, the fifth abbot, was equally distinguished by his festive cheerfulness, and relaxation from monkish discipline, as his predecessors, till near the close of life; when he resigned his pastoral office, and devoting himself to seclusion, retired to a chapel that had been re-built, by his permission, by Prior Ulpho, in memory of Germanus, and on the spot where the latter had preached to the citizens of Verulam: in this retirement he passed the remainder of his days. Ulsinus, the sixth abbot, was the most considerable benefactor to the town of St. Alban that had yet presided; and that "by inviting persons to settle in it, by assisting them with money and materials for the erection of houses, and even building no fewer than three churches for them."

emtion from the payment of Rome-scot, or Peterpence; a privilege that was enjoyed by no other place in his kingdom. Soon afterwards, he retired to his palace at Offley, in this county, where he died, A. D. 796; he was buried in a chapel on the banks of the Ouse, near Bedford: into which river, tradition reports his sepulture to have been carried by the torrent, in a time of flood, together with the chapel in which it had been deposited. The death of Willegod, the first abbot, in about two months after that of his royal master, is said to have been hastened by the grief which he felt at having been refused permission to inter the body of Offa, in the monastery of his own foundation.

‡ In the time of this abbot, about the year 930, the tomb of St. Alban is said to have been broken open by the Danes, and some of his bones to have been taken away, and carried into Denmark, where they were deposited under a costly shrine, in the hope that they would there become as much venerated and adored, as they had been in England.

These

These churches were erected at the different entrances into the town; and were respectively dedicated to St. Peter, St. Michael, and St. Stephen. He also built a small chapel, or oratory, at a short distance from St. German's chapel, and consecrated it to the honour of St. Mary Magdalen. His successor, Ælfric, obtained great repute for his erudition and piety. He was the author of many epistles and sermons; he composed a Saxon Grammar; and he translated a considerable part of the scriptures. Ealdred, the eighth abbot, is represented, by Matthew Paris, as searching into the ruins of Verulam, "laying up those materials which he found fit for an edifice, and reserving them for the fabric of a church; as he had determined, if he could be furnished with the means, to tear down the ancient church, and to build it anew:" but, "when he had collected a great quantity of materials for the fabric of the church, he was prevented by an over early death, and obliged to leave the work undone." His immediate successor, Eadmer, "did not disperse nor consume what Ealdred had collected for the construction of the church;" he even searched for more among the ruins of Verulam, and "reserved all that were necessary for the fabrication of that church, which he proposed to fabricate to the holy martyr Alban;" yet "did not so far please God and the martyr, as to erect and finish a house for the martyr himself." After him the intention was never revived by any of the Saxons; and even the search for materials was discontinued by them all: yet the intention was never abandoned, as the materials in general remained entire to the Conquest, and the application of them was then begun.* Leofric, son

* During the abbacy of Ælfric, many ravages were committed in different parts of the kingdom by the Danes; and the abbot becoming apprehensive of their visits, secured the most valuable effects of the monastery, together with the shrine and relics of St. Alban, in a wooden chest, which, with the privacy of only a few of his brethren, he concealed in a secret cavity in the wall of the church. Then, the more completely to effect their preservation, he openly solicited the monks of Ely to receive into their convent the relics of the holy martyr; requesting that, as their house was well secured from danger by waters and marshes, they would preserve the invaluable pledges, till the same should be demanded in more peaceable times. On obtaining the permission which he sought, he inclosed the remains of a common monk in a very rich chest, and dispatched it to Ely, with many of the church ornaments, and an old shagged garment, which he insinuated was the very cloak that had been worn by Amphibalus, the instructor of Albanus. When the alarm had subsided, Ælfric demanded the relics; but they were considered as of such immense value by the monks of Ely, that they scrupled not to express their determination to keep them for their own church. On its being threatened, however, to inform both the king (Edward the Confessor) and the Pope of this impious breach of a religious engagement, a great schism arose among the brethren, but the majority determined that the relics should be kept; yet, to save appearances, they agreed that the chest should be returned, having first contrived to open the bottom of it, and to substitute ether remains for those of the supposed St. Alban. The cheat was, however, discovered; the real relics of the martyr were removed from the hidden recess of the wall, and again placed with the shrine in the midst of the church; while the monks of

to the earl of Kent, and afterwards promoted to the see of Canterbury, succeeded Eadmer. This abbot was renowned for benevolence: during a grievous famine, that raged over England, he expended the treasures that had been reserved for the fabrication of a new church, in relieving the distresses of the poor; and when this was found insufficient, he sold the slabs of stone, the columns, and the timber, that had been dug up from the ruins of the ancient city, to provide additional supplies for the same purpose, together with all the gold and silver vessels, both belonging to his own table, and to the church. On his acceptance of the see of Canterbury, in 993, Ælfric, his younger brother, became abbot. He had previously been chancellor to king Ethelred, and had obtained from the monarch a grant of the manor of Kingsbury, with all its appurtenances: of this grant he procured a confirmation from king Canute, and immediately caused the regal palace to be levelled with the ground, that it might no more occasion inconvenience to the abbey, from becoming the residence of a court: one small tower, however, situated somewhat nearer to the monastery, Canute preserved, as a memorial of royalty.* Leofstan, the twelfth abbot, who was confessor to Edward, and Edith, his queen, procured various rich grants for the monastery. Much of his attention was employed in rendering the high roads to the town safe and commodious. — The successor of Leofstan was Fretheric, a man of the royal blood of the Saxons, and also related to king Canute.†

Paul, who succeeded Leofstan, began to apply the immense stores of materials that had been collected from the ruins of Verulam, towards the re-construction

Ely, the dupes of their own artifice, incurred all the odium of knavery, without benefiting by its artifice.

† This was the man whose spirit and bravery impeded the march of William the Conqueror near Berkhamstead, by causing the trees that grew on the road side to be cut down, and laid across the way; and when, at a subsequent meeting, William enquired the reason, he boldly answered, that 'he had done no more than his duty;' and that, 'if all the ecclesiastics in the kingdom had performed theirs in like manner, it would not have been in the power of the Normans to have advanced so far.' Fretheric afterwards placed himself at the head of a confederacy of the malecontents, whose object was to compel the king to reign according to the ancient laws and customs of the country, or, to raise the exiled Edgar Atheling to the throne; who was the rightful heir, and was called "Engelondes Dering." William found it necessary to temporize; and, by the advice of Lanfranc, he submitted to the terms proposed. No sooner, however, were the effects of his dissimulation sufficiently matured by the gradual dissolution of the confederacy, than his despotism overwhelmed the liberties of the nation with a deeper flood, and a more extensive ruin. St. Alban's particularly suffered for the conduct of its abbot, who was himself obliged to seek refuge from the vengeance of the king, in the monastery of Ely, where he died of grief and mortification. William seized all the abbey lands between Barnet and London Stone, together with the manor of Redbourn; and but for the solicitations of Lanfranc, would have effectually ruined the monastery: his interposition stayed the impending blow; and his influence procured the vacant abbacy for Paul, a Norman, and his kinsman, or, as some have conjectured, his son.

tion

tion of the abbey church; which he "re-edified," with all the buildings of the monastery, except the bake-house and the mill-house. After the death of Paul, Richard de Albany was appointed abbot, and by him the new church was consecrated, at Christmas, 1115. Richard died in 1119; having previously built a small chapel, within the church, in honour of St. Cuthbert, by whose intercession he is fabled to have received 'a wonderful cure of a withered arm.'

Geoffrey de Gorham was the next abbot. His attention was principally directed to the internal economy of the monastery; to the providing of rich vessels, and costly and splendid garments, for the various services of the church; and to the preparation of a very sumptuous shrine for the relics of St. Alban. Into this shrine (anno 1120) the remains of the martyr were removed with great solemnity; the ancient tomb being first opened in the presence of the bishop of London, several abbots, and the whole convent.* Abbot Geoffrey made several additions to the abbey buildings, and also founded a nunnery at Sopwell, and an hospital for lepers near the town, on the London road. Upon Geoffrey's death, about 1147, Ralph was appointed, but was soon obliged, from the infirm state of his health, to resign the office, when he was succeeded by Robert de Gorham, the 18th abbot, who, by his influence with Pope Adrian IV. (a native of Abbot's Langley in this county, and the only Englishman who ever sat in the chair of St. Peter, as pontiff,) obtained many valuable privileges and exemptions for this monastery; and among others the right of precedency for its abbots, and exemption from all ecclesiastical jurisdiction whatever, the papal alone excepted. Hence arose great contention between him and the bishop of Lincoln, who, prior to this period, had exercised episcopal authority over this abbey, and matters proceeded to such lengths as to require the royal interposition. After a turbulent government, in which, however, he generally rose superior to opposition, Robert died in 1166, and left the abbacy at the disposal of Henry II. who, engaged in continual opposition to the usurpations of the Papal dominion, by which bulls were in vain fulminated, and sentences of excommunication pronounced against him, kept the abbey vacant for many months; till at length the persuasions of Gilbert Foliot, bishop of London, prevailed with him to appoint prior Simon, who was accordingly installed in June 1167, and gained great reputation for his literary acquirements, and added considerably to the library founded by

his predecessor. His death, which happened in 1183, was followed by the appointment of Warren, a native of Cambridge, a man of overbearing and insolent manners, remarkable chiefly for his successful opposition to the renewed claim of episcopal jurisdiction, made by the bishop of Lincoln. This abbot died in 1194, and bequeathed to his successor, John of the Cell, one hundred marks, for the purpose of rebuilding the west front of the abbey church. This John, having studied at Paris, had returned to England with the reputation of being "a very Priscian in grammar; a perfect Ovid in poetry; and in physic, a Galen." After his election, he began to apply Warren's bequest to its destined use; but he soon involved himself, and his monastery, in much embarrassment, from the magnitude of the plan on which the work had been commenced; and, for a short time, the building was abandoned. The abbot then assigned the work to the care of one of the brethren, named Gilbert de Eversholt, and imposed an annual tax of one sheaf of corn for every acre sown on the abbey estates. This tax was first levied in the third year of John's government, and was continued during his whole life, and for ten years of his successor's; yet the work did not advance in any manner to administer joy to the old abbot. He offered many presents of gold and silver to any person who would forward the work, and caused this offer to be proclaimed throughout all the lands of the abbey, and some of the diocese; and having sent one Amphibalus to travel about with relics, and pretend, 'that he had been raised from the dead by the merits of Alban and Amphibalus, and was able to give good proof of their miracles,' he collected, by this illusion, great sums of money: but this unfortunate work absorbed all the supplies; and after the death of Eversholt, it was once more suspended; but it was again recommenced under the superintendence of William Sisseverne, who is recorded to have received great supplies for carrying on the work; though its progress was still so slow, that it "did not advance two feet in height in any one year." The abbot John died in 1214, having obtained great reputation for his devotion and sanctity; so much so, indeed, that it was recorded of him, that when he sang alone, the responses were made by angels! The turbulent times which followed his decease, prevented his successor, William de Trumpington, from proceeding in the work for many years; peace being at length, however, restored, he resumed the undertaking, which he completed, and also effected a thorough repair of

* On this occasion, and to remove the doubts which had been excited by the assertions of a certain college in Denmark, and also by the pretensions of the monks of Ely, "the bones were numbered, taken out, and shewn singly: the head was lifted up for the inspection of all present, by the hands of the venerable Ralph, archdeacon of the church: on the fore part was a scroll of parchment, pendant from a thread of silk, with this inscription, Sanctus Albanus; and the circle of gold inclosed the skull, which was fixed there by the order of Offa,

engraved with these words, Hoc est caput Sancti Albani, protomartyris Angliæ. In reviewing the bones, the left scapula, or shoulder bone, was missing: however, the translation was effected; and some years after, saith the historian, came two monks, with letters credential, from the church and monastery of Naumburg, (Nuremberg,) in Germany, saying, that they were possessed of this valuable relic, (the scapula,) and that the same had been brought to them many years ago, by king Canute.

the whole building. His successor, John of Hertford, added not a little to the buildings of the monastery, erecting a magnificent hall and other apartments for strangers, and also adding chimnies, which had hitherto been wanting. While he continued abbot, this place was honoured with frequent visits from Henry III. who upon these occasions always made some present to the church. This prince, in the spring of 1248, granted to the abbot and his successors the liberty of free-warren in all their estates, authorising their infliction of a penalty of 10*l.* upon any persons who, unlicensed by them, should dare to hunt upon their manors. In 1250, a great earthquake was felt in this town, and its vicinity. John of Hertford died in April, 1260, having ruled the monastery with much honour, during a period of twenty-five years. In the preceding year, the abbey had lost one of its most valuable members, Matthew Paris, the celebrated historian.

John of Hertford was succeeded by Roger de Norton, in whose time St. Alban's was put into a fortified state, in order to prevent the ravages accompanying the Barons' wars. He died in 1290. John of Berkhamstead, the succeeding abbot, was principally engaged in disputes and compromises with the crown, respecting the claims and privileges of the church. He died in 1301, and was succeeded by John Maryns, who died in 1308. Hugo de Eversden, the next abbot, was involved in many contentions with the townsmen, as to what privileges the latter had a right to exercise independently of his will. He was twice besieged in his abbey, each time during several days, to compel him to sign a charter, granting liberty to the inhabitants to return their own burgesses to Parliament, to grind their own corn, to regulate the assize of ale and bread by twelve men chosen from among themselves, and to answer all pleas and inquisitions before the itinerant justices, by a jury of townsmen, (sine conjunctione forensicorum,) without the admixture of persons from a different vicinage. The beautiful, but now neglected, chapel of Our Lady, was built during the abbacy of Hugo. The name of William Boyden is recorded as the principal architect. Hugo died in 1326. Richard de Wallingford, the succeeding abbot, was the son of a blacksmith. This abbot was a very successful defender of the claims of his church; and he obtained from the towns-people, a formal surrender of all the privileges they had wrested from Hugo de Eversden, together with all their charters and records of whatever kind. He died in 1335.* Michael de Mentmore, his successor, made

many new regulations for the better government of his monastery. He died in 1349, a victim to the dreadful pestilence that was then traversing the greatest part of the globe. Thomas De la Mare, the thirtieth abbot, commenced his studies at the cell of Wymondham, in Norfolk, where he cultivated the art of rhetoric with such success, that his skill therein was a principal cause of his future advancement. De la Mare was in high favour with Edward the Third; and at his request, made a general visitation of the Benedictine monasteries throughout the kingdom, with a view to correct the irregularities, and depravities, into which many of them had fallen. Under a license from the same king, he also surrounded the abbey with a stone wall, in place of the ancient bank of earth which had inclosed the abbey precincts.

The insurrection which broke out in the fourth year of Richard the Second, and, under Wat Tyler, and Jack Straw, threatened a complete subversion of all existing establishments, proved a fruitful source of danger to this abbey; but the prudence of the abbot, in complying with the demands of the insurgents before they proceeded to extremities, effected its security. He is recorded to have expended 4000*l.* in adorning his church. He also built a house for the copyists, and new paved the western part of the church. He died in 1396, at the age of eighty-eight; and was buried in the choir, habited in his best and richest vestments. The spot of his interment is yet pointed out by a large slab, inlaid with fine brasses. John De la Moote, the succeeding abbot, obtained various new privileges for his monastery, from Rome. He constructed a new chamber for the abbot, re-built part of the cloisters, and increased the monastic buildings. Various edifices were also constructed under his direction, on many of the granges and manors belonging to the abbey; and the mansion of the abbots at Tittenhanger was begun by him, though it was not finished till the time of John of Whethamsted. In this house De la Moote was seized with a pleurisy, and being removed to his abbey, he died there, in 1400. His successor, William de Heyworth, governed the monastery till the year 1421, when he was promoted to the see of Lichfield. John of Whethamsted, who was chosen abbot on the death of Heyworth, directed his attention to the state of the abbey church; and, by his influence with the great, procured some large sums towards putting it into repair, and furnishing it with additional ornaments. The nave of the church was new ceiled and painted; the choir was

* Wallingford was a proficient in most of the liberal sciences, and also an excellent mechanic. He constructed an astronomical clock, called Albion, of which Leland gives the following description: "Willing," says he, speaking of the abbot, "to give a miraculous proof of his genius, of his learning, and of his manual operations, with great labour, greater expence, and very great art, he formed such a fabric of a clock, that all Europe, in my opinion, cannot show one even second to it; whether you note the course of the sun and moon, or the fixed

stars; and whether you consider, again, the increase or decrease of the sea, or the lines, with the figures and demonstrations, almost infinitely diversified; and when he had completed a work truly worthy of immortality, he wrote and published in a book, as he was the very first of all the mathematicians of his time, a set of canons, lest so fine a piece of mechanism should be lowered in the erroneous opinion of the monks, or should be stopped in its movements from their ignorance in the order of its structure."

repaired, and a neat chapel erected in it for the abbot's burial place: the chapel of the Virgin was also fresh painted, and further embellished: the cloisters were new glazed, with painted or stained glass, representing a series of subjects from scripture history: the bake-house, which abbot Paul had left standing, was re-built, together with the infirmary: a new library was constructed; and various other improvements were made in the monastic edifices. The beautiful monument, in memory of Humphrey, duke of Gloucester, was also constructed during the time of Whethamsted; and it is extremely probable, that the elegant screen also, which separates the chancel from the presbytery, was designed and begun under his direction, as his arms are carved on it over the doorways. The approaching troubles of the state (A. D. 1440,) and the reverse of fortune, which seemed impending over his best friend, the duke of Gloucester, induced Whethamsted to re-

* The period of his second rule was that of the disastrous struggle between the houses of York and Lancaster. Two battles were fought in this town by the rival partizans, both of which were extremely sanguinary. The first was fought on the 23d of May, 1455: the king himself, Henry the Sixth, being present. This ill-fated prince had set out from London with about 2000 men, apparently with the design of impeding the progress of the duke of York, who was marching from the north, accompanied by the earls of Warwick and Salisbury, and a body of about 3000 hardy soldiers. The duke encamped on the east side of the town, in Key-field; while the king occupied the town itself, and fixed his standard at a spot called Goselow, in St. Peter's Street. The barriers of the town were well defended by the royalists; and the assault made on the side next St. Peter's Street, by the duke of York, proved unsuccessful; till the earl of Warwick, with a chosen band, forced an entrance on the garden side, in Holywell Street; and, by the terror of his name, his soldiers shouting, 'A Warwick! a Warwick!' and the vigour of his onset, obliged his opponents to give way. Thus aided, the duke was enabled to overpower the force opposed to him at the barriers; and, after a short, but sanguinary, conflict in the streets of the town, the royal army was defeated. The king himself, being entirely deserted, and wounded in the neck with an arrow, took refuge in a small house, or cottage, where he was afterwards discovered by the duke of York, and by him conducted to the abbey. The slain on the king's part amounted to about 800. About 600 of the Yorkists were killed. The bodies of the slain were mostly interred at St. Peter's; but those of the principal nobles were received into the abbey church; and after their obsequies had been solemnly performed, they were interred in the chapel of the Virgin.

The second battle of St. Alban's was fought on the 17th of February, 1461. The duke of York had been recently defeated and slain at Wakefield, in Yorkshire; but his claims to empire devolving on his son Edward, earl of March, were now asserted with additional vehemence. The government was still carried on in the name of Henry the Sixth; but as he was a mere instrument in the hands of the Yorkists, his high spirited queen employed every means in her power to regain her lost authority, and to rescue her partner from bondage. Her success at the battle of Wakefield had inspired her with firm hopes of an eventual triumph; and she advanced towards the metropolis, where the earl of Warwick governed in the absence of the earl of March, who was then recruiting his army in Wales. Warwick, having received intelligence of her advance, quitted London with a strong force, carrying the king with him. On arriving at St. Alban's, he found that the queen's army had *taken* post on Bernard heath, on the north-east side of the town;

sign, though contrary to the persuasions of all his monastic brethren. The next abbot was John Stoke, on whose death, in 1451, Whethamsted was again made abbot, and continued to govern the monastery with exemplary discretion till 1462, when he experienced the common fate of mankind.*

Sometime after the Earl of March had been proclaimed King by the title of Edward the Fourth, a general bill of attainder was passed against the chiefs of the Lancastrians; their estates were seized, and their persons proscribed. Even the possessions of some of those who were now no more, were adjudged to be forfeited to the crown. Among the estates included by this ordinance, was the priory of Pembroke, with all its lands, rents, goods, and appurtenances, which had been given to the abbey of St. Alban, by Humphrey, Duke of Gloucester. To prevent the resumption, Abbot Wethampsted had a bill brought into the Upper House, and by the

and his forces were quickly attacked by a strong party, which advancing to the market place, was there repulsed, and driven back on the main body. The fight then became more general, and the Yorkists for some time maintained their advantage; but the van not being properly supported, was at length obliged to give way; and the panic spreading through all the ranks, Margaret obtained a complete victory. Between two and three thousand of Warwick's army were slain; one of whom Sir John Grey, of Groby, first husband to Elizabeth Widville, had been knighted by the king, at Colney, the preceding day. Warwick fled to the earl of March; the other noblemen, that fought on his side, dispersed in different directions, except the lord Bonville, and Sir Thomas Kyriell, who remained with the king on assurance of safety; but they were afterwards beheaded by the queen's order. When the king was in a manner left alone, without any guard, Thomas Hoo, Esq. advised him to send a messenger to the Northern Lords, and let them know, that "he would gladly come to them; for he knew they were his friends, and meant to serve him." The king approving it, appointed him to carry the message, who first delivered it to the earl of Northumberland, and returning back to the king, brought several lords with him. They conveyed the king first to the lord Clifford's tent, that stood next to the place where the king's army had encamped. They then brought the queen, and her son, prince Edward, to him, whom he joyfully received, embracing, and kissing them, and thanking God, who had restored his only son to his possession. The queen caused him to dub the prince a knight, with thirty other persons, which the day before had fought valiantly on her part; then they went to the abbey, where the abbot and monks received them with hymns and songs, brought them to the high altar, then to the shrine, and thence conveyed them to the chamber in which the king was wont to lodge. The abbot moved the king and queen to restrain the northern men (of whom the queen's army was chiefly composed) from spoiling the town; and proclamation was made to that effect; but it availed nothing; for the queen had covenanted with them, that they should have the plunder and spoil of their enemies after they had passed the river Trent, and they spared not anything that they found that was fit for them to carry away. The ravages thus committed, were the principal causes of the subsequent ill success of the queen; for many who had been inclined to afford her assistance now began to waver, and held back, lest they should themselves contribute to the extension of the rapine which marked this period of the civil war with more than its accustomed calamities. The rapid approach of the earl of March, and the evident disinclination of the Londoners to aid her progress, again induced her to retreat to the north; and she quitted St. Alban's a few days after the battle.

influence

influence of George Neville, Bishop of Exeter, who was then Chancellor, his claim was admitted; and on the 22d of December, in the same year, (1461,) the King confirmed by his letters patent, the said priory, and all its dependencies, to the abbot, and his successors for ever. This was not the only favour which the address of Whethamsted procured for his monastery from the new sovereign, to whom, in the ensuing year, he presented a petition on the impoverished state of the abbey, the revenues of which had been much decreased through the distractions of the times. The King, having taken the petition into consideration, granted a new charter of privileges, by which the civil power of the abbots was greatly augmented; and a kind of palatine jurisdiction vested in them, in many respects similar to that still enjoyed by the sees of Durham and Ely. Shortly after the signing of this charter, Whethamsted died, and was succeeded by William Alban, who died in 1476; and William Wallingford, the prior, was chosen his successor. In his time, the beautiful screen, at the high altar, was finished, at the expense of 1100 marks; but the most important event that occurred under his rule, was the introduction into the monastery, of the art of printing with fusile types, which but a few years before, had been brought into England, by Caxton. Among other works, the celebrated book, since intitled, *The Gentleman's Recreation*, partly compiled by the Lady Juliana Berners, prioress of Sopwell nunnery, was printed here in 1486. This work consists of three treatises; one on hawking; another on hunting, and fishing; and the third, on coat armour. The printer was a monk of this abbey, and is called by Chauncy, John Insomuch.—Wallingford died in August, 1484, and was interred in a small chapel, which he had built for the purpose, near the high altar; but this has been destroyed, with his tomb and effigies.

Henry the Sixth, and Edward the Fourth, were frequently entertained at St. Alban's; but, after their death, the favour of the sovereign was in a great measure withdrawn. In the reign of Richard the Third, the abbey received some slight manifestation of royal kindness; but his successor, Henry the Seventh, appears to have kept the temporalities in his own hands, till the year 1492, when he permitted Thomas Ramryge to be appointed abbot. How long he continued in this office, is uncertain; but Newcome imagines, that he survived till 1523, "when Wolsey, then Bishop of Winchester, Archbishop of York, Chancellor of England, the Pope's legate, and a cardinal, thought proper to resign his bishopric, and take this abbey in commendam." He was interred within a most elegantly carved monument, or chapel, which he had built for the purpose in the choir. Wolsey is supposed to have applied the revenues of the abbey in aid of the charges incurred in founding the two new colleges of Oxford and Ipswich; but when he was convicted on the statute of *præmunire*, in October, 1529, all his pro-

perty was declared forfeited to the King. On his obtaining a pardon in the succeeding year, he was permitted to retain the title of Abbot of St. Alban; but Henry reserved all the revenues to himself.—Wolsey dying in the September following, 1530, Robert Catton succeeded him. He continued abbot, till 1538; when, determined not to become a willing accessory to the surrender of his possessions, Richard de Stevanache, or Boreman, was made abbot, "with no other view than to make a surrender in form." Boreman, who had previously been Prior of Norwich, surrendered on the 5th of December, 1539; and, for his ready compliance, had an annual pension granted him of 266*l.* 13*s.* 4*d.* The prior was also pensioned in the sum of 33*l.* 6*s.* 8*d.* and smaller sums were granted to the remaining monks, of whom there were then only 38. The annual revenues of the abbey were estimated, according to the *Monasticon*, at 2102*l.* 7*s.* 1*d.*: according to Speed, at 2510*l.* 6*s.* 1*d.* The possessions of the dissolved monastery were quickly dispersed amongst the minions of the court. The monastic buildings, with all the ground lying round the abbey church, and the parish church of St. Andrew, which stood near the north side, were granted to Sir Richard Lee, in February, 1539-40: and Sir Richard had scarcely obtained possession, when he began to demolish the whole. Great part of the materials were sold. The remainder was appropriated to the enlargement and reparation of the nunnery at Sopwell, which had also been granted to Sir Richard, and was afterwards his chief residence. The abbey church was not included in the grant, but continued in the crown, till 1553; when Edward the Sixth sold it to the inhabitants of St. Alban's, for 400*l.* This bargain was confirmed by a clause in the charter of incorporation granted by the same monarch, wherein it was enacted, that the late parish or chapelry of St. Andrew, should form a part of the borough, and 'the abbey church be called the parish church of the said borough of St. Alban.'

The general form of this curious and interesting church is that of a long cross, with a square and massive tower rising from the intersection of the nave and transept, and supported on four large semi-circular arches. The most ancient parts are evidently the most central; both the east and west ends being of a dissimilar style of architecture, and of a much later period. Its external appearance, from a distance, is dignified and imposing; but, when nearly approached, it loses part of its effect, from the rude mixture of Roman tiles, flints, bricks, stones, which appears in its walls, and which excites a stronger idea of dilapidation than the real state of the building will justify. The tower seems the most perfect, probably from its having been covered with a coat of strong plaster, part only of which is worn off. The battlements and spire are of later date than the lower portion of the tower, which is divided by bands into three stages: the uppermost exhibit

bits two double windows on each side, latticed, having semicircular arches ranging beneath a larger semicircular arch: in the spandril between the large and smaller arches, and also above the former, are various diamond-shaped apertures, evidently constructed to give issue to the sound of the bells, which are hung in this compartment of the tower. Below the windows, in the middle division, are four double semicircular arched openings on each side, which admit the light into a narrow passage formed in the walls; these also have larger semicircular arches above them, and every double opening has a thick heavy column in the centre. In the stage beneath these, are eight circular windows, which admit light into the belfry. Along the upper part of the south and north walls of the nave, extends a range of narrow pointed arches, reaching to the transept; these appear to have been altered into this form from round arches, and were formerly opened as windows. In the aisles below, the windows are few, and irregular. The whole eastern part of the church is furnished with plain battlements; the buttresses are strong and massive.—The south-east side displays some remains of elegant fly-buttresses, which rose from the aisles to the upper part of the choir, the windows of which are pointed. The chapel of the Virgin, now used for a grammar-school, exhibits some mutilated and disfigured remains of beautiful architecture in the forms and ornaments of its windows. The east end of the choir, and the extremities of the transept, are terminated by octagon turrets, rising above the roof, and embattled: two or three of these are of the Norman era; but the others are of subsequent date. The prospect from the summit of the tower is extensive and diversified. The principal entrance is at the west end beneath a projecting porch, opening by a high pointed arch, supported on massive buttresses, and ornamented with several mouldings: the outermost moulding rests on two human heads, greatly mutilated. Above the arch are shields, displaying the arms of Offa, three crowns; and the abbey arms, azure, a saltire, Or. The interior of the church has a striking effect on entering from the west porch, and the variations in the architecture excite considerable interest. Immediately over the west entrance, is a large and pointed arched window, nearly filling the entire space between the side walls of the nave, and divided into numerous lights by mullions and transoms. The west end of each isle appears to have been originally open like the porch, and has been similarly decorated with ornamental arches, and clustered columns of Purbeck marble. The columns and arches of the nave display much grandeur. On the south side, the outer mouldings of the large arches terminate in human heads, sculptured in bold relief, and representing an abbot, a king, a queen, and a bishop.—Above them, beneath a line of roses, are shields of arms, probably so placed in allusion to the sculptures. That over the abbot displays the abbey arms;

that over the king, the arms of Mercia; above the queen, are three lions passant; and over the bishop, are the arms of Westminster; a cross fleury between five martlets: two other shields, with three lions passant on each, range, in a similar manner, on the opposite sides of those just mentioned. Every part of the building yet noticed, from the west end, is constructed of Tottenhoe stone; a very fine and close grained free-stone, obtained from the quarries at Tottenhoe, in Bedfordshire. The parts next to be described, with the exception of the screens, the choir, and presbytery, are of Roman tile, as every where appears, on piercing through the thick covering of plaster that has been spread over the walls.

St. Cuthbert's screen is of Tottenhoe stone, finely sculptured in the pointed order, but not entirely uniform. The continuation of the nave, now called the baptistry, from its containing the font, comprehends the space between St. Cuthbert's screen, and the first or most western arch of the tower. The choir comprehends all the space between the west arch of the tower, and the altar-screen. The tower itself is supported on four noble semicircular arches, springing from uncommonly massive piers. Above these arches, under the belfry-floor, is a passage going round the tower, and opening in front by a treble range of double semicircular arches. The light of the belfry is admitted into the choir, through a circular opening in the centre of the floor, which has been surrounded by a railing, and covered by some open work above, to prevent accidents. On passing beneath the east arch of the tower, the architecture is seen to assume a new form. On the south side, are three large blank-pointed arches; and, on the north, two similar ones: all these seem to have been formed against the original walls, which probably terminated at no great distance from the point where Abbot Ramryge's monument on the one side, and Abbot Whethamsted's on the other, abut against the ancient columns. The monument of Ramryge fills up the lower point of a large pointed arch, which was originally open to the north aisle, and is ornamented with fluted and groined mouldings. The arch opposite to this is blank above; but the under part includes the neat monument of Abbot Whethamsted. Above the large arches, on each side, is a range of pointed arches, with trefoil heads; some of these are blank, and others open into the triforium, which is continued through the walls of the whole church: over these are three pointed arched windows on each side. The altar is approached by a short flight of steps. The altar-screen, or, as it is more commonly denominated, Wallingford's screen, which separates the choir from the presbytery, is one of the most beautiful pieces of stonework in England, and very highly illustrative of the improved taste in architectural sculpture which distinguished the age of Edward the Fourth. The presbytery includes the space between the screen, and what is now the east end of the church; but this

this was formerly open to the chapel of the Virgin, by three high, pointed, and well-proportioned arches, springing from clustered columns. On each side, beyond the large pointed arches, against which the screen stands, is another high pointed arch, also springing from clustered pillars, and similarly ornamented with round and fluted mouldings: under that on the north side, is the monument of Duke Humphrey; and beneath that on the south, an ancient watch-tower, or gallery of wood, in which the monks were stationed to keep watch over the shrine of St. Alban. On the frieze of this gallery, is a series of carvings in high relief, representing the most memorable events of St. Alban's history, &c. In the pavement in the middle of the presbytery, is a stone thus inscribed, the date of which appears to be erroneous:

S: ALBANUS
VEROLAMENSIS
ANGLORUM
PROTO-MARTYR
XVII JUNI
CCXCVII.

The large windows, at each end of the transept, are of a different style and age. That to the south was constructed about the year 1703, when the former window was blown down by the fury of the wind, during the great storm: the north window is more highly embellished. In the south part of the transept, have been several chapels; and, in a recess of the wall, was a seat for the watch monk, who had the care of the respective altars: the door-way, which led from the upper part of the cloisters, has been walled up. Beyond the south end of the transept, but opening into it by a flight of several steps, and running parallel with it, is a short covered passage, which probably communicated also with the abbot's chambers, and with the cloisters. Against the wall on each side, is a range of elegant intersecting semicircular arches, ornamented with beaded mouldings, springing from slender columns, with well sculptured, and singularly curious capitals.—All the sculptures are different, and in tolerably good preservation. Some of them represent wreaths of foliage; others display the heads of entwined snakes: on one is a human mask, with the stems of leaves issuing from his mouth on each side; and on another, three very singular grotesque figures, a kind of trio of Bacchantes. Those at the sides are in sitting positions, but leaning backwards, as if to make room for the centre figure, which is formed by the head of a zany, apparently gorging a considerable quantity of fruits: one of the side figures is sustaining a sort of club, in a threatening attitude, as if to compel him to the performance of his task; the other is holding what appears to be a leathern bottle.

Some parts of the roof of the aisles are vaulted with stone, having groined ribs, intersecting, and resting on the great columns on one side, and on

pillasters of clustered columns on the other. In the south aisle, between the west end and the transept, are several pointed arched windows; in one of them was a representation of the martyrdom of St. Alban, in painted glass: only a few fragments of which remain in the crockets. On the wall below, is the following inscription, now scarcely legible:—

This image of our frailty, painted glass,
Shews where the life and death of Alban was.
A knight beheads the martyr; but so soon,
His eyes dropt out to see what he had done;
And leaving their own head, seem'd with a tear
To wail the other head laid mangled there:
Because, before, his eyes no tears would shed,
His eyes themselves like tears fall from his head,
Oh! bloody fact, that whilst St. Alban dies,
The murderer himself weeps out his eyes.

In zeal to heav'n, where holy Alban's bones
Were buried, Offa raised this heap of stones;
Which, after by devouring Time abused,
Into the dying parts had life infused;
By James the First, of England, to become
The glory of Alban's proto-martyrdom.

Adjoining to the closed door-way, formerly the principal entrance on the south, is an ancient piscina, beneath a recessed arch, in the pointed style. The piscina itself is sustained on three slender clustered pillars, and has a canopy above it with a cinquefoil arch; over which is a triangular compartment, containing the remains of a mask of Bacchus, encircled by vine leaves. The screen-work before the door-way just mentioned, is very beautifully sculptured in the pointed style, and consists of three divisions. The door of the arch of entrance is ornamented with rich carvings of oak, vine leaves, quatrefoils, &c. This entrance is generally called the abbot's door. The north aisle does not now display any thing very remarkable: formerly it contained several altars dedicated to different saints. The ceilings of the nave, transept, and choir, are of wood, formed into square compartments, and painted. The northern part of the transept presents an indifferently executed painting in the centre, of St. Alban's martyrdom. A representation of Offa, seated on his throne, over an arch, in the north aisle, is probably of the same age. The ceiled roof of the choir is more highly embellished: it exhibits, in alternate compartments, the holy lamb, on a mount, vert, with the banner of the cross, gules, ensigned with a cross botone, or, and charged with the star of Bethlehem; and the eagle of St. John, standing on a mount, vert: these devices were those assumed by Abbot Whethampsted, in whose time, the ceilings of the nave and chancel were constructed, and probably those of the transept.

The chapel of the Virgin is now completely separated from the church, by the arches having been walled up. Though formerly one of the most elaborate and beautiful parts of the whole structure, it is now the most dilapidated, and ruinous. The east end, now used as the school-room, still displays traces

traces of fine sculpture, in ranges of figures surrounding the windows, and even yet exhibiting an air of gracefulness, though lamentably obscured by whitewash. The original pavement has been covered by a boarded floor, so that no sepulchral memorials are to be seen. Across what may now be called the anti-chapel, a low wall has been erected, to form a passage for the convenience of the inhabitants. The entire length of the church, including the west porch, and the chapel of the Virgin, is 539 feet; of which the chapel measures about 100, and the porch, 18. The breadth of the transept is nearly 32 feet; its extreme length, 174 feet. The breadth of the body of the church, is $71\frac{1}{2}$ feet; that of the choir and chancel, 34 feet 8 inches; that of the nave, from the inner parts of the columns, 30 feet; and that of each aisle, 22 feet 3 inches. The height of the tower, according to Newcome, is 144 feet. The extreme breadth of the Virgin chapel, is 76 feet, 6 inches; of the middle part, 35 feet, 9 inches; and of the east end, 27 feet nearly.

The sepulchral inscriptions in this church, are numerous; though the monuments are but few.—The magnificent sepulchre of Humphrey, the good Duke of Gloucester, was erected in the time of Abbot Whethamsted, ‘the Wykeham of his time.’ It consists of an upper and lower division, separated by a fascia, filling up the whole space beneath one of the large arches of the presbytery, and having a similar front both to the north and the south. The lower division, or canopy, consists of a large open pointed arch in the centre, with a smaller one on each side; and beyond them, a fourth and fifth arch in relief. The open arches are divided by rich pendants, and the mouldings of the arches are charged with tendrils of vine leaves: the roof of the canopy is richly sculptured into fan-work. The blank arches on the sides, are separated into two compartments, displaying some minute ornaments, and many shields of the arms of Whethamsted, in quatrefoils, under a cornice of wheat-ears, in vases on pedestals, which also appear on the canopy.—The capitals of the pillars are charged with oak-leaves. In the various spandrils of the arches, are ten shields of the Duke’s arms, and of France and England in a border: these are seven times repeated on the fascia, of a larger size; and four of them are surmounted by ducal coronets, encircled by vases of wheat-ears: the other three are surmounted by helmets and mantles; but the crests are destroyed. The upper compartment displays a variety of beautiful niches, with canopies, pinnacles, and finials; together with rich open-work, and close arches in relief. In the niches, on the south side, are statues of 17 sovereigns, called by Sandford, the Duke’s royal ancestors; but Mr. Gough conjectures from one of them sustaining a church, and from other circumstances, that they were intended to represent

the Kings of Mercia. They are extremely uncouth in form, and as squat as if they had been modelled in clay, and compressed by a heavy weight. The same number of statues originally stood on the north side; but all of them are now lost, with the exception of one, which has been placed in a niche on the south side, to supply the room of one that was stolen some years ago. This monument is secured, on the south, by an iron-grating, painted blue: the expense of erecting it, amounted to 434*l.* 6*s.* 8*d.* The body of the Duke was accidentally discovered in the vault beneath, in the year 1703; and was then lying in pickle, in a leaden coffin, inclosed by another of wood. Since that period, the skeleton has been rudely handled, bone after bone having been purloined by the curious, till very few remain. On the east end of the vault was painted a crucifix, now partly obliterated, with chalices to receive the blood as it drops from the wounds. At the extremity of the south aisle, near the Duke’s monument, is a latin inscription to his memory, which, according to Sandford, in his Genealogical History, was written about 60 years before his time, by Dr. Westermann, parson of Sandridge and Bushey. It is, in English, as follows:—

Sacred to the pious Memory of an excellent Man.

“Interr’d within this consecrated ground,
Lies he, whom Henry his protector found,
Good Humphrey, Glo’ster’s Duke, who well could spy,
Fraud couch’d within the blind impostor’s eye.*
His country’s light, the state’s rever’d support,
Who peace, and rising learning, deigned to court;
Whence his rich library, at Oxford plac’d,
Her ample schools with sacred influence grac’d:
Yet fell beneath an envious woman’s wile,
Both to herself, her king, and kingdom vile;
Who scarce allow’d his bones this spot of land:
Yet ‘spite of envy, shall his glory stand.”

The chapel or monument of Abbot Whethamsted, which occupies the lower part of one of the great arches of the choir, is from a very simple, but elegant, design. The lower part is a canopy, opening by an obtuse pointed arch, with a fretted roof: above is a rich cornice, with the abbot’s arms, three ears of wheat, several times repeated; and the inscription, “*VALLES HABUNDABUNT*,” in relief, on each side of the monument. Over this is a range of square compartments, containing quatrefoils, each displaying some ornament, as a rose, a mitre, the abbey arms, &c. The inner fascia is charged with lilies, dragons’ heads, and other objects of excellent sculpture. Beneath the canopy is a blue slab, on which was a brass figure of the abbot, in pontificalibus; but this has long been stolen. On the wall above the monument, is an inscription as follows:—

* Alluding to a pretended miraculous cure of a blind man, detected by the Duke.

JOHANNES

De loco frumentario

*Hic jacet hic? Paterille JOHANNES, nomina magna
Cui WETHAMSTEDIO parvula villa dedit
Triticie in tumultu signant quoque nomen arista
Filius res clara, non monumenta, notant.**

Immediately opposite to Wethamsted's monument, is the beautiful monumental chapel of Abbot Ramryge; the sculpture of which is extremely fine, and mostly in good preservation. The roof is elegantly sculptured into rich fan-work, with pendants of quatrefoils, and circles of the same. At each end, are three large niches, with rich canopies, the insides of which are adorned similarly to the roof, with quatrefoils; and several smaller niches running up between them, with towers in relief over the canopies. Below the niches, is a cornice of foliage, with human and animal heads at the angles; one of the heads has a stem of a vine tendril issuing from the mouth. Beneath the cornice, at each end, are three shields of arms, with rams for supporters, in bold relief, and wearing collars, on which are the letters "RYGE;" thus forming rebusses of the abbot's name: among the arms are those assumed by Ramryge, three eagles on a bend. On each side of the monument is a double range of cinquefoil-headed, narrow arches; the upper arches finely pierced; and below are various minute ornaments in relief, sculptured on the square extremities of an embattled cornice. One of these ornaments has an old man's head and body united to the tail of a fish, and leaning on a crutch: the letters R. Y. G. E. are also repeated in this part. Over the door, that opens into the monument from the choir, are several small sculptures, as a lion, a dragon, two rams, a shield with the abbey arms, &c. and in the spandrels of the arch, is a mutilated representation of the martyrdom of St. Amphibalus. On other parts, are various shields of arms, with flowers, foliage, vine tendrils, &c. together with a shield of the five wounds, and others displaying the instruments of the Crucifixion. On the south side, also, is a double range of niches, with canopies richly worked, and terminating pyramidically over the arches between. Round the upper part of the monument, is the inscription

"SANCTI SPIRITUS ASSIT NOBIS GRATIA VENI SANCTO
SPIRITUS REPTU TUORUM CORDA FIDELIUM ET TUI
AMORIS IN EIS IGNE ACCENDE, AMEN."†

The pavement of the choir presents many slabs in

* *Translation.*—John, descended of a corn merchant's family. Who lies here? Father John, to whom a little farm gave a great name. Ears of wheat, on his tomb, are an emblem of his name. His great actions, not his monument, celebrate his life.

† *Translation.*—Let the grace of the Holy Spirit be with us; come Holy Spirit, glide into the hearts of the faithful, and warm them with the fire of thy love. Amen."

† Sir John Mandeville was born about the beginning of the 14th century. He left England, in 1339; and having visited

memory of abbots, and other personages; some of them display remains of rich brasses; but the greater part have impressions only, the brasses having been either stolen or destroyed. On a slab in the south aisle, is an altar-tomb, and several inscriptions to the memory of the Maynards, a respectable family of St. Alban's, who represented the borough in four Parliaments, during the reigns of Mary and Elizabeth.

The celebrated traveller, and native of St. Alban's, Sir John Mandeville, is said to have been buried in this church; and various inscriptions to his memory have been pencilled on the second column from the west, on the north side of the nave, near the supposed site of his interment. Weever, however, affirms, that he had seen his tomb and epitaph in the church of the Guiliammists, in the city of Liege; according to which he died in November, 1371.† Alexander Nequam, another celebrated native of St. Alban's, is also recorded to have been buried here; but no memorial remains to point out the place of his interment.§ The monument, chiefly entitled to notice, of modern date, is in the transept against the wall at the north end: this was erected in memory of Christopher Rawlinson, Esq. of Cark Hall, in Cartmel, Lancashire, who was descended by the maternal line from Edward the Fourth. He was celebrated for his comprehensive knowledge of Saxon and northern literature; and, while at college, published a correct edition of the Great Alfred's version of 'Boethius de Consolatione Philosophæ.' His monument displays a figure of History sitting upon a sarcophagus, in a reclining posture, and writing in a book. He died in January, 1732-3, in his 56th year: he was collaterally related to Dr. Richard Rawlinson, the celebrated antiquary. Robert de Mowbray, the gallant Earl of Northumberland, temp.; William Rufus; Edmund Beaufort, Duke of Somerset; Henry Percy, Earl of Northumberland; Thomas Clifford; Lord Clifford; Sir William Clynton, Earl of Huntingdon; Sir Walter Sothington, Knt.; Reginald, Bishop of Chichester; and Sir William Blythe, Knt. of York; are recorded, with various other persons of distinction, to have been also interred in this fabric; but their places of sepulture are not now to be distinguished.

Camden mentions 'a most beautiful brass font; in which the children of the kings of Scotland used to be baptised,' as belonging to this church; to which it had been given by Sir Richard Lee, of Sop-

most parts of the world, and acquired a knowledge of many languages, returned home, after an absence of 34 years. His Itinerary has been published in English, French, Latin, and German; and, though it contains many improbable statements, is still interesting.

§ Alexander Nequam flourished in the reign of King John, and attained very general celebrity for his knowledge in philosophy, poetry, divinity, and rhetoric. So great was his fame, that he was styled 'miraculum ingenii;' the wonder and miracle of wit and science.

well

well; who 'having recovered it from the flames,' had brought it from Edinburgh, and placed upon it a pompous Latin inscription, to the following purport:—

"When Leith, a principal town, and Edinburgh, the capital of Scotland, were on fire, Sir Richard Lee, Knight of the Garter, rescued me from the flames, and brought me to England. Not forgetful of this favour, I, who was accustomed to baptize only the children of kings, now submit to do the same office for those of the poorest persons. So has victorious Lee ordained. Farewell. A. D. 1543, 36 Henry VIII."

This font was embezzled in the civil wars; during which period, also, considerable damage was done to the brasses, and other sepulchral memorials: the particulars of which are involved in obscurity, through the destruction of all the old vestry and parish books, which were burnt, with the rectory house, about the year 1743. The lower part of the choir is neatly pewed, and has a good gallery, erected in 1715, by William Hale, Esq. of King's Walden, who was then a representative of this borough. Over the pulpit is a crown, apparently of the time of James the First; and high over the western arch of the tower, on the west side, are the royal arms of the house of Stuart. These, and other circumstances, render it probable, that the adaptation of the church to the Protestant form of worship, was effected during the reign of that king.

Many of the monks and abbots belonging to St. Alban's abbey, became eminent for their learning, and for their ingenuity and skill in various branches of science and of art. So early as the time of abbot Paul, the monastery had both a library and a scriptorium; and a few of the manuscripts, known to have belonged to the abbey, may still be found in our public collections.

Nearly all the monastic buildings appear to have been situated on the south and south-west side of the church; but of these only the great Gate house, on the west, and a few cottages, said to have been originally parts of the king's stable, are now standing. The Gate house, a large, and heavy, gloomy building, forming the chief entrance into the abbey precincts, was built in the time of Richard the Second; the upper part is now used as the prison of the liberty, as the lower part formerly was of the monastery.

The capacious extent of the court yard of the abbey, may still be traced, from the scattered fragments of walls that formed the inclosure. In the fields on this side, but at different distances, are two arched passages, termed the Monks' Holes. The opening into that which seems to have been the principal, though both have a very general similarity, is at the side of a small ditch, about 350 or 400 yards

from the church. The present entrance is almost choked up with weeds, fragments of tiles, broken stones, &c. The extent of this passage in a northern direction, is about 248 feet; at that point all further progress has been impeded by the fall of the arch, and consequent descent of the superincumbent earth. It may be seen, however, that it has a continuation in the same direction. Its height is three feet, nine or ten inches; and its breadth at the bottom, about two feet. This passage is curiously wrought: the workmanship is good; and generally speaking, the whole is in an excellent state of preservation. The second passage opens into a field about 150 yards nearer to the church; its interior direction is, however, the same; but the entrance is more choked up than that of the former. That these passages were intended for drains, may be presumed from the circumstance of the passage last mentioned, having two smaller apertures opening into it; one on each side, but at some distance from each other.

St. Alban's contains two churches, besides that of the abbey, respectively dedicated to St. Michael and St. Peter. St. Michael's church stands at the bottom of the town, on the road to Dunstable, within the walls of the ancient Verulam. This church, which, equally with St. Peter's, was founded about the middle of the tenth century, by abbot Ulsinus, presents unquestionable specimens of its original Saxon architecture. It has, however, been much altered; and the massive tower at the west end is apparently of a later date. The ancient inscriptions, recorded by Weever and Chauncy, have no particular interest, with the single exception, perhaps, of that to the memory of the illustrious Francis Bacon, who, with his mother, was buried in this fabric. His lordship is represented by a finely sculptured alabaster statue in a niche on the north side of the chancel. He is sitting in a contemplative posture, in an elbow chair; and beneath is the following beautiful epitaph, from the classical pen of Sir Henry Wotton:—

FRANCIS. BACON, BARO DE VERULAM, S.^U ALBANI VIC.
Seu, notioribus titulis,
Scientiarum lumen, Fœcundæ lex,
Sic sedebat.

Qui, postquam omnia naturalis sapientiæ
Et civilis arcana evolvisset,
Naturæ decretum explevit,
Composita Solvantur,
An^o. Dⁿⁱ M. DC. XXVI.
Ætat. LXVI.

Tanti viri
Mem.
THOMAS MEAUTYS,
Superstitis cultor,
Defuncti Admisor,
H. P.*

BARON OF VERULAM, VISCOUNT ST. ALBAN'S,
or, by more conspicuous Titles,

* Translation.
FRANCIS BACON,

Sir Thomas Meautys, who erected this monument, had been private secretary to lord Verulam, and continued his fidelity to him through all his troubles; and, on the death of his master, inherited his possessions, as cousin and next heir. He, himself, was interred in this church, as appears from an imperfect inscription on a stone on the pavement near the altar rails. In this church is also the burial place of the family of the lords Grimston, of Gorbambury.

St. Peter's church occupies an elevated situation at the north-east extremity of the town. Though originally constructed in the Saxon times, it appears to have been re-built about the time of Henry the Third. Since that period, however, it has undergone considerable repairs and alterations; the most recent of which have been made at the expence of about 4000*l.* since the year 1803, when an act of Parliament was obtained to empower certain trustees, appointed under the act, to levy a rate on the parishioners to the above amount. The tower having become extremely ruinous, and in great danger of falling, had been previously taken down; and a general reparation of the whole structure was deemed necessary. The church as it anciently stood, was in the form of a long cross, with a tower rising from the intersection of the nave, chancel, and transept; but the tower is now built up from the ground: the chancel has been shortened upwards of thirty feet; and both ends of the transept have been taken down to the level of the side walls of the church. The present tower is of brick, neatly stuccoed, and embattled: its height is sixty-seven feet. The interior of the church has a light and elegant appearance, the nave being separated from the aisles by a double series of high pointed arches, supported on well proportioned, clustered pillars. Before the former repair, there were many sepulchral brasses with curious inscriptions in this church; and in the windows was a great variety of painted glass, some of which still remains. It was noticed by Salmon, in his account of Hertfordshire, in the following manner: "A great deal of painted glass in the windows. In the north window, St. Peter with his keys, twice: St. Andrew at the west. In the north window, a man drinking; a label, *Ecce bibi Venenum crede*: two stand by him; one of them holds the bottom of the cup to his mouth; a third is sitting, with two children leaning their heads in his lap. In the next, (window,) one in armour kneeling; two others standing by. In the middle window is a person naked, his hands tied down, an executioner stabbing him in the throat with a long sword; a

woman stands behind: this seems designed for Offa's queen, seeing young Alfred murdered. The third hath a grave man, in a blue gown and cap, with his hands tied to a pillar, a woman sitting by in a mournful posture." The most remarkable of the inscriptions was under the figure of a priest, on a slab in the chancel: it was engraved in a double circle, between the leaves of a rose. The outer circle, divested of its contractions, and spelt agreeably to the present system, is as follows:

Lo all that ere I spent, that sometime had I;
All that I gave in good intent, that now have I,
That I neither gave nor lent, that now abie I;
That I kept till I went, that lost I.

In the inner circle are the same sentiments in Latin, but more concisely, as follows:

*Quod Expendi habui,
Quod Donavi habeo,
Quod Negavi punior,
Quod Serviavi perdidit.*

In the centre, is the word *Ecce*, which should be rendered, 'Thus it is!'

In the chancel another brass represented a merchant and his wife; the latter dressed in a close-bodied mantle, with a cloak descending to the feet, and rising in a square hood above her head; and, on a slab in the nave, were brasses of a male and female; the former in the habit of a merchant; with the following epitaph in four lines:

William Victor, and his Wyf Grace,
under this stone ben buried here
In heven good Lord graunt hem a place
As thu them bought with thi blood ful dere
Whiche William as here it doth appere
The 14 day of Marche. past this present yere
1500. LXXXI and LI yere
Of xpiat whos grace be their preseruatye.

In the chancel is a handsome monument in memory of lieutenant colonel William Dobyns, lieutenant governor of Berwick-upon-Tweed under queen Anne, who, after retiring from the military service, at an advanced age, became justice of the peace for Middlesex and Hertfordshire, and for the liberty of St. Alban. He died in January, 1738-9, at the age of eighty-eight. Another handsome monument in the chancel, with a florid Latin epitaph, records the memory of Robert Runney, D. D. who was vicar of this church upwards of twenty-eight years, and of whom some curious circumstances are related

OF SCIENCE THE LIGHT, OF ELOQUENCE THE LAW,
SAT THUS:

Who, after all natural Wisdom
And Secrets of Civil Life he had unfolded,
Nature's Law fulfilled:

Let Compounds be dissolved!
In the Year of Our Lord, 1626; of his Age, 66.

Of such a Man, that the Memory might remain,
THOMAS MEAUTYS,
Living, his Attendant; Dead, his Admirer,
Placed this Monument

In the first article (Mirza to Selim) of the second volume of Dr. Cotton's *Various Pieces*; he died at the age of fifty-eight, in December, 1743. Against the west wall, at the end of the nave, is a tablet to commemorate the virtues of Robert Clavering, M. B. Scholar of Christ Church, Oxon, who died in June, 1747, aged twenty-nine. Beneath a Latin epitaph, giving him an exalted character, are the following lines, by Dr. Cotton:—

Oh! come who know the childless parent's sigh,
The bleeding bosom, and the streaming eye;
Who feel the wounds a dying friend imparts
When the last pang divides two social hearts:
This weeping marble claims the generous tear:
Here lies the friend, the son, and all that's dear.
He fell full-blossomed in the pride of youth,
Firm and serene he view'd his mouldering clay,
Nor fear'd to go, nor fondly wish'd to stay;
And when the King of Terrors he descry'd,
Kiss'd the stern mandate, bow'd his head, and dy'd.

Against the west wall, another monument displays the bust of Edward Strong, of New Barns, in this parish, citizen and mason of London, who, "equally with its ingenious architect, Sir Christopher Wren, and its truly pious diocesan, bishop Compton, shared the felicity of seeing both the beginning and the finishing of that stupendous fabric," the cathedral church of St. Paul, (to the laying of the last stone,) about which he was employed as mason: he died at the age of seventy-one, in February, 1723. The church yard is very large, and contains numerous monuments; one with this inscription: "Here are deposited the remains of Anne, Hannah, and Nathaniel Cotton." This is the only memorial for Dr. Cotton, author of *Visions in Verse*, the *Fire-side*, &c. The deceased were buried respectively, the 14th of April, 1749; 19th of May, 1772; and 8th of August, 1788.

In the town of St. Alban's, the principal charitable foundation is locally named the Buildings. It consists of nine alms houses, forming three sides of an oblong square, with a palisade in front, near the entrance of the town from Hertford: each house has a detached garden, and contains four apartments. These were built and endowed by Sarah, Duchess of Marlborough, for the comfortable support and maintenance of thirty-six poor persons; one half to be poor men, and the other half poor women. The present allowance to the alms people is 12*l.* per annum each. Not far distant, and near the north-west side of St. Peter's church, in Bow-gate, is Pemberton's alms house; a range of six buildings, erected for as many poor widows, in pursuance of the will of Roger Pemberton, Esq. who was sheriff of this county in 1620. Over the gate of the little court before the alms-house, is an arrow, or short

spear head, stuck upright in the brick work; and the tradition is, that the founder shot a widow with an arrow by accident, and built the alms-house by way of atonement. He was grandfather to Sir Francis Pemberton.* Other alms houses of inferior importance, are established in different parts of the town; and several schools, for the instruction of the children of the poor, supported by voluntary contributions, and other patronage. The Grammar school was founded under the charter of incorporation granted to the borough by Edward the Sixth. Queen Elizabeth, by letters patent, (1570,) empowered the mayor and burgesses, to grant two wine licenses to any persons they should think fit, within the borough, permitting them, "to sell all sorts of wine, by any measures and at any price," to the exclusion of all others; provided that the annual salary of 20*l.* was paid by the mayor and burgesses to the master of the school. Another wine license was granted, by James the First, to augment the stipend of the master by the 'sum of four marks;' and at the same time the mayor and burgesses were privileged to seize any wine kept for sale contrary to the grant, in any place within the borough, or the distance of two miles. These wine licenses are usually let by auction, for a term of years, for the benefit of the grammar master. Another school, for thirty boys and ten girls, has been established by the Presbyterians, who have a meeting house here; as have also the Quakers, the Baptists, and the Independants.

The charter by which this borough was first incorporated, was granted by Edward the Sixth, in 1553. The provisions of this charter were somewhat altered by Charles the First, Charles the Second, and James the Second; but the charter of James was afterwards made void, and the borough is now governed by that of Charles the Second. The corporation officers consist of a mayor, twelve other aldermen, twenty-four assistant burgesses, a high steward, a recorder, a town clerk, a coroner, &c. The mayor is chosen annually on St. Matthew's day. The first return to Parliament was made in the thirty-fifth of Edward the First; but after the reign of Edward the Third, no members appear to have been sent by this borough till the first of queen Mary; and since that period the returns have been regular. The right of election is vested in the "mayor, aldermen, and freemen, and in such householders only as pay scot and lot."

The town hall, an old building in St. Peter's Street, had previously belonged to the abbey, and was called the Charnel house; by which name it was granted to the mayor and burgesses when the borough was first chartered. All the public business is now transacted here; as well of the borough as the liberty.

* Sir Francis Pemberton, descended from an ancient family in Lancashire, was the son of Ralph Pemberton, Esq. mayor of this borough in 1627 and 1638. After receiving the rudiments of his education at Cambridge, he pursued his studies at

the Inner Temple, and was called to the bar in November, 1654. After successive promotions, he was made chief justice of the Common Pleas in 1682. He died in 1697, at the age of seventy-two, and was buried at Highgate.

In the lower part is the prison of the borough, or town gaol. The market house is a plain structure, supported on wooden pillars. The market cross, which is also of wood, is of an octagonal form, and is said to stand on the same spot where Edward the First had previously built one of those beautiful stone crosses which he erected in commemoration of his beloved Eleanor. Near this is an ancient square tower, called the Clock house, principally built of flints, with strong vaulting beneath: the lower part is now inhabited. The markets are well supplied, particularly with corn, butcher's meat, eggs, &c.

Numerous improvements have been made at St. Alban's within the last thirty years: one of the principal was forming a new road through the south-east part of the town, under an act of Parliament obtained in 1794, by which some dangerous turnings were avoided. In pursuance of another act passed in March, 1804, the whole of the borough has been paved and lighted. Some of the houses, especially in the higher parts of the town, are respectable buildings.

The situation of the town on the north-west road, occasions considerable business from the passage of travellers, and many principal and inferior inns have been established here. Additional employment is supplied by two breweries, a cotton manufactory, and two silk mills; the first of which occupies the same situation on the Ver as what was named the abbey mill.

Holywell house, the delightful residence of the dowager countess Spencer, who retired hither after the decease of the late earl, in 1783, is situated at the bottom of Holywell hill, in St. Alban's, on the north-east side of the Meuse. The mansion was principally erected by Sarah, duchess of Marlborough, into whose family the estate was conveyed by the marriage of a daughter and coheirress of Ralph Rowlat, Esq. sheriff of Hertfordshire and Essex, in the thirty-third of Henry the Eighth. In the pediment of the principal front, are various military trophies, in allusion to the victories achieved by the grand duke of Marlborough: the garden front opens to the lawn by a sort of cloister, which formed part of the old building that stood upon this spot. Amongst the few interesting pictures that decorate the apartments, is a very fine three-quarter length of Sarah, duchess of Marlborough, by Sir Godfrey Kneller; and a portrait of lady Howard, by the same artist, with the date 1694. Also a painting of queen Anne, and the duke of Gloucester, when a boy, (given by that queen to the duchess of Marlborough); portraits of the earl and countess of Besborough; a whole length of the present earl Spencer, when a youth, by Sir Joshua Reynolds; and another of his sister, the late duchess of Devonshire, by Gainsborough. A large picture of William Poyntz, Esq. brother to the lady dowager Spencer, represents him in a shooting dress, with a gun; and near him is a water spaniel. The landscape part of this picture is extremely fine; and the

whole is eminently creditable to Gainsborough's powers. The grounds connected with this mansion, though not extensive, are pleasingly varied. The Holy-well, from which the estate derived its name, is on the lawn adjacent to the garden front; it is still in estimation, for its purity, and salubrious properties.

The ruins of Sopwell nunnery, which occupy a considerable space of ground, about half a mile S. E. from St. Alban's, are mostly huge fragments of wall, composed of flint and brick: the windows in what appear to have been the chief apartments, are square and large, with stone frames; some of them have been neatly ornamented. The gardens, which lie contiguous, are now orchards: in the wall, over the door leading into the principal one, is a square tablet of stone, sculptured with the figure of a dexter hand and arm, elevated, and holding a broken sword; above was an inscribed label, now mutilated. In an angle in this garden is a strongly arched brick building, with various small recesses and niches, constructed within the walls. This nunnery is said to have obtained the name of Sopwell from the circumstance of the two women who first established themselves here, steeping their crusts in the water of a neighbouring well. One of the outbuildings is yet standing at a little distance, and is now used as a barn. Many of those who assumed the veil at Sopwell were ladies of distinguished rank, family, and learning. An unauthorised tradition represents Henry the Eighth as having been married to Ann Boleyn in the chapel here. This nunnery was of the Benedictine order, and was founded about the year 1140, by Geoffrey de Gorham, sixteenth abbot of St. Alban's, on the site of an humble dwelling that had been constructed with branches of trees, by two pious women, who, as already mentioned, lived here in seclusion and strict abstinence. The abbot ordained that the number of nuns should not exceed thirteen, and that none should be admitted into the sisterhood but maidens. At the period of the dissolution of this house, its annual revenues were estimated, according to Speed, at 68*l.* 8*s.* 0*d.* according to the Monasticon, at only 40*l.* 7*s.* 10*d.* In 1511, Henry the Eighth granted the site and buildings to Sir Richard Lee, who had previously obtained the grant of the lands lying contiguous to the abbey church. By him the buildings were enlarged and altered for his own residence; and the surrounding grounds were inclosed by a wall, and converted into a park. Sir Richard left two daughters; by Anne, the eldest, Sopwell passed into the family of Sadleir, of Standon, in this county. It afterwards went to the family of Saunders, of Beechwood, and subsequently to Sir Harbottle Grimston, ancestor to lord viscount Grimston, of Gorbamby, now owner of a considerable part of Sopwell-Bury manor.

About a mile S. W. from the town of St. Alban's, stands St. Stephen's church, which was founded in the tenth century, by abbot Ulsinus. It still displays

plays vestiges of its original architecture though it has been much altered. In the chancel is a curious ancient brazen eagle, said to have been found buried in the earth, on opening the vault of the Montgomery family, about the year 1748, or 1750. Near the top is engraved a mitre, and crosier passing through it, and a coat of arms of a lion rampant, both twice repeated: lower down is a circular inscription in the old German character; and at the end of the circle, the arms again repeated. On the pavement is an inscribed slab in memory of Olive Mountgomery, wife of Lewis Mountgomery, Gent. who died in 1696: over it hangs a singular little hatchment, only twenty-seven inches in diameter, the border of which is ornamented with bones, spades, hour glasses, &c. Against the south wall is an inscribed tablet in memory of John Rolfe, Esq. "Official of the archdeaconry of St. Alban, commissary of the archdeaconry of Huntingdon, and one of the masters of Chancery:" he died at the age of sixty-five, in October, 1630. Chauncy gives the epitaph as follows:—

James, art thou here? and must this church of Stephen
Inshrine thy body, now thy soul's in heav'n?
Had not thy monument been better fixt
Nearer to that of ABBOT JOHN the Sixth,
By ALBAN's shrine? where thy religious care
Redeem'd those sacred relics from despair.
No! thou wast wise, and sure thou thought it better,
To make each Proto-martyr's church thy debtor;
That glories, kept by thee from ruin's rust,
And this may glory that it keeps thy dust.

An hospital for female lepers, called, from its situation, St. Mary de Pre, or de Pratis, formerly stood at a little distance from the N. W. side of ancient Verulam. It was founded by Guarine, abbot of St. Alban's, about the time of Richard the First. Its inmates were at first supported by the abbey; but afterwards obtained some inconsiderable possessions. In 1528, Cardinal Wolsey obtained a bull for suppressing this hospital, and annexing its lands to those of the abbey; but he afterwards procured a grant of them for his own use. After his attainder, Henry granted the site to Ralph Rowlat, Esq. of whose female descendants it was purchased by Sir Harbottle Grimston, Bart. and is now the property of Lord Viscount Grimston. Not any of the buildings remain; but the memory of the hospital is preserved in the name of St. Mary de Pre Wood, which occupies a considerable plot of ground adjoining to Gorbambury, and of Pre Mill, upon the Ver.*

ALBURY.]—Albury, called Eldeberie in the Domesday book, lies 4½ miles N. W. from Bishop's Stort-

* Amongst the distinguished characters not yet noticed, to which the town of St. Alban's has given birth, was Sir John King, an eminent lawyer, born in the year 1639; he was admitted into Queen's College, Cambridge, at the age of sixteen, and became remarkable for his early and great attainments. In 1660, he was removed to the Inner Temple, where he made

ford. Albury Hale was, in the time of Charles the Second, the residence of the learned Sir Edward Atkins, who was made Chief Baron of the Exchequer in the year 1686, and had purchased a moiety of the manor. It is now the seat of Nicholson Calvert, Esq. M. P. Lord of the Manor.—Albury church contains some ancient inscriptions and monuments of the lords of the manor.

ALDBURY.]—The manor of Aldbury, the property of the Duke of Leeds, is three miles E. by N. from Tring. In the church, are several ancient monuments in commemoration of the Verneys and Andersons of Pendley; and of the Hydes, the former lords of this manor; one of the Dukes of Leeds was also buried here; but without any memorial.

AMWELL.]—The adjacent villages of Great and Little Amwell lie about a mile and a half S. E. by S. from Ware. They are termed Emme-Well in the Domesday Book; an appellation supposed to have been derived from Emma's Well, a spring of pure water, which, issuing from the hill on which Amwell church is situated, now forms part of the New River. This eminence and the surrounding scenery, have been celebrated in a poem by the late John Scott, Esq. of Amwell house, which is now, or was lately the property and residence of J. Hooper, Esq. who married the daughter of Mr. Scott. The poet thus expatiates on the beauty of the scene:—

"How picturesque the view, where up the side
Of that steep bank, her roofs of russet thatch
Rise mix'd with trees, above whose swelling tops
Ascends the tall church tow'r, and loftier still
The hill's extended ridge! How picturesque
Where slow beneath that bank the silver stream
Glides by the flowery isle, and willow groves
Wave on its northern verge, with trembling tufts
Of osier intermix'd."

A few years ago, on the "flowery isle," here mentioned, Robert Mylne, Esq. planted several mournful trees; in the centre of which is a votive urn, upon a pedestal, surrounded by a close thicket of evergreens. An inscription is engraven on each side of the pedestal; that on the south is as follows:—

Sacred to the Memory of
SIR HUGH MYDELTON, Baronet,
Whose successful care,
Assisted by the patronage of his king,
Conveyed this stream to LONDON:
An immortal work:
Since man cannot more nearly
Imitate the Deity,
Than in bestowing health.

On the north side of the pedestal is a Latin trans-

great progress in the study of the law; and afterwards became king's counsel, and Solicitor General to the Duke of York, and was knighted by Charles the Second, in 1674. He died about three years afterwards, at the age of thirty-eight, and was buried in the Temple church.

lation of these lines. The inscription on the west records the distance of Chadwell, the other source of the New River, at two miles; and the meanders of the river from Amwell to London, at forty more: the east side records the dedication of this "humble tribute to the genius, talents, and elevation of the mind, which conceived and executed this important Aqueduct," by 'Robert Mylne, architect, engineer, &c.' in the year MDCCC. The plague has twice raged in these villages: first, in 1603; and again in 1625. On the hill above the church, are traces of an extensive fortification, the rampart of which is distinguishable on the side overlooking the vale through which the river Lea flows. Toward Hertford, is Barrow Field, wherein is a large tumulus; and not far distant are remains of what is supposed to be an ancient Roman road.

ANSTREY.]—At Anstey, three miles S. E. from Barkway, are the remains of a castle, built immediately after the Conquest, by Eustace, Earl of Boulogne, for the purpose of keeping the English in the greater subjection. The moat surrounding the artificial mount upon which the keep was erected with the additional works made in the reign of John, still remain. In the south aisle of the church is an ancient monument, with the effigies, as traditionally reported, of Richard de Austie, the founder.

ASHRIDGE CASTLE.]—Of this beautiful and stately mansion, the seat of John William, Earl of Bridgewater, which stands partly in Buckinghamshire, we gave some account in our description of that county.* The greater part of the building, however, is in the parish of Great Berkhamsted, three miles north from the town. For the following particulars, we are indebted to the pen of an intelligent friend, resident on the spot.

The old mansion having been pulled down, and disposed of in lots, as already stated, in the years 1802-3, the first stone of the new building was laid on the 4th of June, 1807, by Charlotte, the present Countess of Bridgewater. This magnificent structure, which occupies the site of the former castle, in the centre of the park, surrounded by beautiful oak and other trees, is built in the pure gothic style. The floor of the entrance hall is of white stone, and the ceiling is of the finest oak, of excellent workmanship. At the end of the hall is a music gallery, of curious stone work. From the saloon—the most costly, perhaps, in England—a stone staircase ascends to the top of the grand tower, the height of which is 160 feet. Over the saloon are three tiers of galleries; and, above the galleries, on the sides of the tower, are four large windows, facing the respective cardinal points. The sides of the saloon are adorned with highly wrought statues, vases, flowers, and chandeliers. The dining, drawing, and anti-rooms are all furnished in the richest manner: 900 yards of beautiful crimson silk were ex-

pended in the hangings. Adjoining the drawing room is the conservatory, unrivalled for the rare and choice plants with which it is filled. At the end of the conservatory is the chapel, with a lofty tower surmounted by a spire, rising to the height of 200 feet. The chapel, on both sides, is divided into stalls, each stall having a canopy, the whole of beautiful stone work. The floor, of white stone, and the pews and the ceiling, of Dantzic oak, are in admirable keeping with the other parts of the structure. Near the altar is a beautiful organ, supported by four gilded lions. The windows, each of which cost 400*l.* are of painted glass. The library is fitted up in a style of princely magnificence: the book cases are of ebony, and the books, which are of a select description, display the utmost splendour of binding. This mansion contains seventy-five bed rooms, the whole of which, with every other part, is furnished in the richest and handsomest style. The doors are all of the finest Dantzic oak; and the manufacture of each, from the beauty and extent of the workmanship, furnished employment adequate to a man's three months' labour.

The surrounding pleasure grounds of Ashridge castle, which comprise about four acres, are laid out in the most enchanting style, intersected with delightful walks, and decorated with statues, grottos, &c. The kitchen garden, consisting of about 13 acres, in the highest state of cultivation, is about a mile from the house. The park is abundantly stocked with deer, the number of which is never less, but frequently more than 200.

ASHWELL.]—Ashwell, anciently Escwelle, is $4\frac{1}{2}$ miles N. N. E. from Baldock. From the frequent discovery of Roman coins in an adjacent earth-work, or fortification, called Arbury banks, Camden supposes it to be of Roman origin. The village is situated near the source of the river Rhee, or, to use the words of Camden, "in a low situation on the northern edge of the county, where a famous spring breaks out from a rocky bank, overhung with lofty ashes, where flows such a continued quantity of water, as presently being collected in one channel, turns a mill, and soon after becomes a river: from this spring, and these ash-trees, it is certain that the Saxons gave it this new name of Ash-Well."

Ashwell was an ancient demesne of the Saxon Kings; but, before the time of Edward the Confessor, it was granted to the abbots of St. Peter's, at Westminster, who appear to have had a market here, previously to the Conquest. In the Domesday Book, it is expressly called a borough. It continued to belong to the abbey of Westminster, till the Dissolution, when the abbey was erected into a deanery, and that into a bishopric. It followed the fate of those foundations; and when the bishopric was dissolved, in the reign of Edward the Sixth, it

* Vide MODERN PANORAMA, Vol. I. pages 135, and 167. VOL. III.—NO. 90.

was granted, with other manors, to the see of London, in which it is still vested. The church consists of a nave, aisle, and chancel, with a tower at the west end, surmounted by a spire. In the chancel are several slabs, formerly inlaid with brasses. Among the inscriptions, recorded by Weever, was one with the words, *Orate pro* — Walter Sumner. "I read," continues Weever, "that one Walter Sumner held the manor of Ashwell of the King, by petty serjeantie, viz. to find the King spits to roast his meat upon the day of his coronation: and John Sumner, his sonne, held the same manor by service, to turne a spit in the King's kitchen, upon the day of his coronation. Ann. 6. Ed. 2, and Ann. 35. Ed. tertij."

ASPEDEN.]—Aspeden Hall, three-quarters of a mile S. W. from Buntingford, is the residence of Charles Boldero, Esq. lord of the manor. In the Hall Park, is the village church, containing various monuments and inscriptions, in memory of the Freemans; and a handsome monument in memory of Sir Robert Clyfford, late knight for the body to the most excellent Prince, Henri the Seventh, and master of his ordinance. The slab which covers the tomb, is inlaid with curious brass figures of the knight and his lady, in attitudes of prayer. In the church-yard, is a memorial for John and Martha Ward, the parents of Seth Ward, Bishop of Salisbury.

AYOTT.]—There are two parishes of this name: Ayott Parva, or Ayott St. Peter's, a mile and three-quarters S. W. from Welwyn, and Ayott Magna, or Ayott St. Lawrence, three miles N. by W. from Welwyn. The manor anciently belonged to a family, surnamed De Ayott. It was held by the family of Bristowe, from the reign of Henry the Eighth till the beginning of the 18th century, when it was purchased by Thomas Lewis, Esq. after whose death, it was sold to Cornelius Lyde, Esq. The latter left two daughters, co-heiresses, one of whom married her cousin-german, Sir Lionel Lyde, an eminent tobacco-merchant, created a baronet, in 1772. He purchased the other share of this manor from his wife's sister; and, dying without issue, in 1793, the whole estate devolved to his brother, Samuel Lyde, Esq. The mansion of the Lydes, is a neat brick building, situated in a small, though pleasant park. Ayott St. Lawrence contains two churches; one of which was erected by the late Sir Lionel Lyde; the other is an ancient and venerable ruin: the plans on which they were built, are singularly dissimilar. The new church was erected upon the ancient Grecian model, by the celebrated Nicholas Revet. The west front consists of a colonnade, connected with a kind of open pavilion at each extremity, having a dome above; and of a portico, forming the principal entrance. In the centre of each pavilion is a pedestal of white marble; that to the south is inscribed to the memory of Sir Lionel Lyde, who died in June, 1793, in his 68th year; and it has also an inscription on the back, in com-

memoration of the architect. The ground-plan of the old church is equally uncommon. It is an oblong square, nearly a double cube, separated into two parts by pointed arches; and the eastern part again divided into two chancels, communicating by an open arch. At the north-west angle of the western part is the tower which occupies about one-eighth of the whole fabric, and opens to the nave by pointed arches. Against the north wall of the north chancel, was an ancient altar-tomb, neatly ornamented at the sides, by ranges of handsome pointed arches in relief, with trefoil heads; and having, on the top, incumbent effigies of Sir John Burre, and his lady; the former in armour, with a close helmet, having an oval aperture for the face; his feet resting on a lion, and his head on a helmet. This tomb has been removed to the tower. On a tomb, against the south wall of this chancel, were brasses of Nicholas Bristowe, Esq. and Emma, his wife, the first possessors of this manor of that name, with the figures of their children, and an inscription, all of which are now gone. Above the tomb is a piscina. In the north wall of the south chancel, was a curious free-stone miniature figure of a Knight Templar, or Crusader, lying in a recess, probably coeval with the building, under an obtuse pointed arch, quite plain. This figure scarcely exceeds 24 inches in length; a peculiarity which cannot be paralleled in more than two or three instances: the hands, now broken off, formerly held a heart. In the wall that separates the chancels, on the south side, is an ancient stone coffin, which was considered as a seat, till the falling of a beam broke off an upper corner of the lid, and discovered a skull lying in a cavity purposely formed to receive it. On opening the coffin, in August, 1801, all the remaining bones of a skeleton were found arranged nearly in their proper order. The lid is sculptured with an ornamented cross, and shaped similarly to that of the coffin of King William Rufus, at Winchester, with a ridge in the middle, and sloping towards the edges. The east window of the north chancel was elegantly ornamented in the pointed style, and contained some fine painted glass, with the arms of the Bristowes, &c. now preserved in the window of a house near the church. The new church was erected at the expense of Sir Lionel Lyde, under the expectation, that he should be permitted to add the site of the ancient one to his park; but, when the roof of the latter had been destroyed, and the building otherwise greatly dilapidated, an injunction was issued by the bishop, on the principle, that ground once consecrated, ought not, without evident necessity, to be converted to secular purposes.

BALDOCK.]—The market-town of Baldock, containing a population of 1438 persons, is situated 19 miles N. by W. from Hertford, and 37½ N. by W. from London. The manor and parish are co-extensive, and contain about 120 acres of land, the greatest part of which is occupied by the streets, houses,

houses, and malt-houses of the town. The Knights Templars, who probably regarded it as convenient for inns, from its situation at the intersection of the great north road from London to York, with the Icknield Way, built a town here before the time of Henry the Third. The Templars had a place here, on account of the salubrity of the air, for such of their brethren as were afflicted with the leprosy.—The church is a spacious and handsome building, supposed from the stone coffins in the walls, and other sepulchral manorials, to have been built on the site of a former church. On a slab in the pavement of the nave, is engraved a large cross, and having the remains of an imperfect Norman French inscription round the verge, in Saxon characters, of which Weever has given the following translation :—

Regnald de Argentyné here is laid,
That caused this chapel to be made ;
He was a knight of St. Mary the Virgin,
Therefore pray pardon for his sin.

Under an arch, in the north wall, is an ancient stone coffin; and, in the south wall, in similar recesses, are two others; in which, according to tradition, three Knights Templars, were buried. This town is a great thoroughfare; and, besides the trade thus occasioned, many of its inhabitants have enriched themselves by the malting business, and by dealing in corn. The principal street is wide, and many of the buildings are respectable.

BARKWAY.]—The decayed market-town of Barkway, lies 13½ miles N.N.E. from Hertford, and 34½ N. by E. from London. The church, a handsome building, nearly in the centre of the village, contains several monuments of the Chester family, and the windows of the north aisle contain some fragments of painted glass, representing the Creation, &c. The population of Barkway does not exceed 700.

BARNET.]—The small but busy market-town of Barnet, High Barnet, or Chipping Barnet, occupies an elevated situation on the high road from the metropolis, 13½ miles S.W. by S. from Hertford, and 11 miles N.N.W. from London. "Near this town," observes Lysons, "was fought, in the year 1471, the famous battle between the houses of York and Lancaster, which terminated in the defeat and death of the Earl of Warwick, and established King Edward the Fourth upon the throne. An obelisk was erected near Barnet, in the year 1740, by Sir Jeremy Sambrook, in memory of the battle. Antiquaries have differed in their opinions, nevertheless, concerning its site; some supposing, that it was fought near the obelisk; others on Monkey-Head plain, more to the north, within Enfield Chase." The manor of Barnet, which includes the whole parish, with that of East Barnet, anciently belonged to St. Alban's abbey. It recently belonged to Edward Burton Long, Esq. in right of Mary, his wife, grand-daughter, and sole heiress, to John Tomlinson, Esq. The church consists of a chancel,

nave, and side aisles, separated by pointed arches, rising from clustered columns; with a low embattled tower at the west end. In the chancel, is an altar monument, in commemoration of Thomas Ravenscroft, Esq. whose effigy, in a recumbent position, is represented on the tomb, in veined marble. He died in 1630. Several others of his family are also buried here; and, among these, James, his eldest son, who erected and endowed an almshouse, or hospital, in Barnet, "for six poor ancient women, being widows or maidens," inhabitants of the town, and "neither common beggars, common drunkards, back-biters, tale-bearers, common scolds, thieves, or other like persons of infamous life, or evil name, or repute; or vehemently suspected of sorcerie, witchcraft, or charming, or guilty of perjury; nor any ideot, or lunatic." The annual value of the original endowment is now about 45*l.* besides which, the trustees have a further income of about 30*l.* annually, arising from other sources. Another alms-house, for six poor widows, was built and endowed here, about the year 1723, under the will of John Garrett, Gent. who bequeathed 800*l.* for that purpose. Near the race-ground, on Barnet Common, is a mineral spring, of a mild purgative quality, that was discovered about the middle of the 17th century, and was formerly in much repute. A few years ago, a subscription was raised, for arching it over, and erecting a pump. The population of Chipping Barnet, is about 1580.

The adjoining parish of East Barnet has a population of little more than 400 persons; but it contains several pleasant gentlemen's seats. There are no remarkable monuments in the church. Amongst the numerous tombs, however, in the church-yard, is one to the memory of Major-General Augustin Prevost, bearing the following inscription :—

Sacred to the Memory
of Augustin Prevost, Esq. Major-General in his Majesty's army, Colonel of the second battalion of the 60th regiment of foot, &c. &c. By birth, a native and citizen of Geneva. He entered into the service of Great Britain, in 1756, in the rank of Major, and uniformly distinguishing himself with the zeal and honour of a true soldier, he merited, and on repeated occasions, received the thanks, both public and private, of the Generals under whom he served. He finished his more active military career with the memorable defence of Savannah, in Georgia, in 1779, where he commanded, and in a post, entrenched merely on the spur of the occasion, sustained a formal siege against the combined armies of France and America, commanded by the Count D'Estaing, of about three times his own number, supported by a powerful fleet, and furnished with a numerous and well-served artillery: he repulsed them in a general and well maintained assault, and finally compelled them to raise the siege, 33 days from its being closely invested, 26 of open trenches, and 15 of open batteries. As a man, he was mild, unassuming and modest, perhaps approaching to a fault; as a soldier, manly, firm, determined; possessing himself equally in the hour of danger, as in that of the calmest retirement: his solicitude on every occasion of public import, was solely directed to the honourable discharge of his duty to the King and country he had chosen for his. A kind
husband,

husband, a tender father, a sincere friend, a humane man.—He was also eminent in all the virtues and duties of private life. This monument is erected by the companion of some of his most trying scenes, now his afflicted widow, in pious and affectionate testimony of her gratitude to him, who was the best of husbands, and the best of men. Ob. May 4th, 1786, æt 63.

On the tomb of Julia, daughter of the Rev. Dr. Dechair, who died in 1793, is the following inscription, from the pen of Mr. Jerningham:—

“ Within the jaws of this relentless tomb,
The beauteous Julia meets an early doom:
Clos'd is that eye where wit's resplendent ray,
Chastis'd by meekness, gave a softer day.
How mute! for ever mute! that tuneful tongue,
On which the practis'd ear enraptured hung!
How still that heart which virtue call'd her own,
To pity's impulse exquisitely prone,
Where warm sincerity benignly shone! }
Grateful, affectionate, no pain had power
To damp those feelings, e'en in life's last hour.
Each look, each word, a noble heart revealed,
Which others sufferings felt—its own conceal'd.
Oh, early lost!—Oh, wept by every tear!
'To fond remembrance still shalt thou be dear!
Still shall affection count thy virtues o'er,
View scenes endear'd by thee, and weep the more!

Mr. John Walker, the celebrated author of the *Critical Pronouncing Dictionary of the English Grammar*, and several other works of acknowledged excellence, was a native of Barnet. He died on the 1st of August, 1807, in the 76th year of his age.

BAYFORD.]—The manor of Bayford, anciently Begesford, the property of Mr. Baker, lies $3\frac{1}{4}$ miles S.S.W. from Hertford. Bayfordbury, the residence of Mr. Baker, does not stand on the side of the ancient manor-house, but is a modern building, at a little distance from the village. The park is extensive, and the situation of the mansion high and commanding. The church contains several monuments and inscriptions for the lords of the manor, since the time of Elizabeth. Against the north wall, is the monument of Sir George Knighton, Knt. who is represented by a recumbent figure of a knight in armour: he died in November, 1613, at the age of 76.

BEECHWOOD.]—Beechwood Park, the seat of Sir John Sebright, Bart. at Flamsted, about three miles N.W. from Redbourn, was anciently called Woodchurch, or St. Giles in the Wood, from a Benedictine nunnery, founded here, for a prioress and ten nuns, by Roger de Toni; in the time of King Stephen. The estate passed, in marriage, to Sir Edward Sebright, Bart. of Worcestershire, from whom the present owner is descended. The mansion is a handsome fabric, standing in a delightful and well-wooded park; particularly abounding in fine beech. All the original papers belonging to the nunnery, as well as the manuscript collections of the learned Humphrey Lwyd, and others, are in the possession of Sir John Sebright. This gentleman has a farm

here of about 700 acres, and devotes a considerable portion of his time to the improvement of agriculture.

BENINGTON.]—Benington, called Belintone, in the *Domesday Book*, lies $5\frac{1}{4}$ miles E.S.E. from Stevenage. It was a seat of the Mercian Kings; and here a great council of nobility and prelates was assembled about the year 850, under King Bertulph, who, on the complaint of Askill, a monk of Croyland, of the great devastations committed on the property of that monastery by the Danes, granted the monks a new charter of divers ‘splendid liberties,’ and several extensive manors. In the 33d of Edward the First, a charter of a weekly market, and a fair annually, was granted for this manor; but the former has long fallen into disuse. The manor was long in possession of the Bourchiers, Earls of Essex. Robert, the third Earl, after his divorce from the infamous Lady Frances Howard, his first wife, in 1613, sold it to Sir Julius Cæsar, Knt. from whom it descended to his son and heir, Sir Charles Cæsar. This gentleman was appointed Master of the Rolls, in 1638; and, after being twice married, and having fifteen children by both wives, died of the small-pox, at Benington, in 1643: this disease proved fatal also to several of his issue, and, among them, to Julius, his eldest surviving son, who dying within a few days, was buried in the same grave with his father. Henry, his next son, and heir, represented this county in the two first Parliaments held in the reign of Charles the Second; and he was knighted by that sovereign, in 1660: he also died of the small-pox, in January 1667-8, and was succeeded by Charles, his second son, who was knighted in October, 1671, at Cambridge, on the King's visit to that University. This gentleman, with his brother-in-law, Sir Thomas Pope Blount, represented this shire, in the Convention Parliament, in the first of William and Mary, and dying in August, 1694, was succeeded by his eldest son, Charles, in whose family this manor continued till the year 1744, when it was sold by the devisees, in trust, under his will, to the trustees under the will of Sir John Cheshire, Knt. whose son, Robert Cheshire, Esq. married one of the daughters and coheirs of Mr. Charles Cæsar. His great nephew, John Cheshire, Esq. is the present possessor, and resides in a small mansion near the ancient castle at Benington, which stood westward from the church, and most probably occupied the spot whereon stood the palace of the Saxon Kings. The artificial mount of the keep, with the surrounding ditch, are still to be seen. The old manor-house that had been inhabited by the Cæsars, stood in the park, at a distance from the village, but was burnt down between 40 and 50 years ago. A smaller edifice, since erected on the site, was for some years occupied by Mr. Bullock.

Benington church is a small fabric, consisting of a nave and chancel, with a tower at the west end, and a chapel or burial-place, connected with the chancel

chancel on the north. Here are two ancient monuments, under arches, which form part of them, each exhibiting recumbent figures of a Knight and a Lady. Many of the Cæsars lie buried here. The Benstede family, sometimes lords of the manor, are supposed to have built this church, as their arms are displayed both upon the roof, and on the tower. In a niche over the south porch, St. Michael and the Dragon are sculptured.

BERKHAMSTED.]—The market-town of Berkhamsted lies 25½ miles W. by S. from Hertford, and 26½ N.W. by W. from London. "The Saxons, in old time," observes Norden, "called this town Berghamstedt, because it was seated among the hills; for Berg signified a hill; ham, a town; and stedt, a seat; all of which was very proper for the situation hereof." The population of this town is nearly, if not quite, 2000. The buildings are chiefly of brick, and irregular, but intersected with various handsome houses. Berkhamsted consists of one principal street, about half a mile in length, extending along the side of the high road; and another smaller one branching out from the church towards the site of the castle. The Grand Junction Canal runs the whole length of the town, and very close to it, which makes it a place of considerable trade. Many respectable and genteel families reside here, and hold their monthly balls at the King's Arms Inn, during the winter.

A great council of all the prelates and military men, is said to have been held here by Withred, King of Kent, in the year 697; but this appears to be a mistake, that council having really assembled at Bursted, near Maidstone. The King of Mercia had a palace or castle here; and the town had attained sufficient importance at the time of the Conquest, to be appointed as the place of meeting between the Norman sovereign, and the chiefs of the confederacy formed against his power, and headed by Abbot Fretheric, of St. Alban's, as already stated. "In the brough of this vill," says the Domesday Book, "are two-and-fifty burgesses, who pay four pounds a year for toll; and they have half a hide, and two shillings rent by the year: there are two arpends of vineyard; meadow, eight carucates, common of pasture for the cattle of the vill; wood to feed a thousand hogs; and five shillings rent by the year. Its whole value is sixteen pounds. When he, Robert, Earl of Mortaigne, the Conqueror's half brother, received it, its value was twenty pounds; and, in the time of King Edward, twenty-four pounds. Edmar, a Thane of Earl Harold, held this manor." The castle erected by the Saxons was enlarged, and strengthened, and fortified with additional outworks, by the Earl of Mortaigne; but in the time of his son and successor, William, who had rebelled against Henry the First, it was seized, and ordered to be razed to the ground." It is probable, however, that the demolition was only par-

tial, as the castle was again fitted up as a royal residence, either in the time of Stephen, or early in the reign of Henry the Second. The castle and honour of Berkhamsted continued in the crown till the seventh of King John, who granted them to Geoffrey Fitz-peers, Earl of Essex, for 100*l.* per annum. In the year 1216-17, the castle, which had reverted to the crown, was besieged by Lewis, Dauphin of France, in conjunction with those of certain English barons. The garrison, taking advantage of the negligence of the besiegers, made two successful sallies on the same day, capturing divers chariots, arms, and provisions, and the banner of William de Magnaville; but, after a siege of some continuance, they surrendered. Henry the Third granted the Earldom of Cornwall, with the honour and castle of Berkhamsted, to Richard, his brother, King of the Romans, for his services at the siege of the castle of Riolo, in France; but, disagreeing with him, he revoked the grant. The interposition of the Earls of Pembroke and Chester occasioned its restoration to the Earl of Cornwall; who afterwards married Isabel, dowager of Gilbert de Clare, Earl of Gloucester, and sister to the Earl of Pembroke: this lady died in childbed, at Berkhamsted castle, in 1230. In 1244, the Earl again married to Senchia, sister to the Queen, and daughter to Raymond, Earl of Provence. In 1245, the King granted him an annual fair, of eight days continuance, for his manor of Berkhamsted; and here, after a long illness, he died on the 4th of the nones of April, 1272. Edmund, his only surviving son, by Senchia, succeeded to his estates and titles; and in his time, there were four knights' fees held of this honour; and there were twelve burgesses within the borough, with fifty-two free tenants, and twenty-two tenants by serjeancy. This Earl founded the college of Bon-Hommes, at Ashridge, in Buckinghamshire, where he died without issue, in the calends of October, A. D. 1300.* In the first of Edward the First, Berkhamsted was granted to Piers Gaveston, on his marriage with Margaret, daughter of Joan of Acres, the King's sister. On his death, his titles and possessions devolved to the crown: and in the fourth of Edward the Third, John of Eltham, brother to the King, had a grant of Berkhamsted, with other manors, to the value of 2000 marks per annum: but, dying without issue, in 1336, his estates were granted by the King, to Edward the Black Prince, with the Dukedom of Cornwall, to be held by him and his heirs, and the eldest sons of the heirs of the Kings of England." Richard the Second occasionally resided at Berkhamsted castle. On the accession of the house of York, the stewardship of this castle and lordship was given to John, Lord Wenlock; and the castle became the residence of Cicely, daughter of Ralph Neville, Earl of Westmoreland, and Duchess of York, the King's mother, who died here, in 1496. Since that period,

* Vide MODERN PANORAMA, Vol. I. page 167.

he castle and honour of Berkhamsted have descended from the crown, to the successive Princes of Wales, as heirs apparent to the throne, and possessors of the Dukedom of Cornwall, under the grant of Edward the Third. The proprietor of Berkhamsted Place, is the present lessee of the castle estate under the Prince of Wales. The castle was situated on the east side of the town; and, though the buildings are now reduced to a few massive fragments of wall, the remains are still sufficient to evince the ancient strength and importance of this fortress. The ramparts are very bold, and the ditches still wide and deep, particularly on the north and east sides, though partly filled up by the lapse of centuries. The keep was a circular tower, occupying the summit of a high and steep artificial mount, moated round. Large trees are now growing on the sides of the mount, as well as on many parts of the outward rampart, and declivities of the ditches: other parts are covered with underwood, in many places so thick as to be impassable. The inner court is now an orchard; the outer court is cultivated as a farm; and a small cottage, with a few out-buildings, now occupies a portion of the ground once occupied by Princes and Sovereigns. Near the rampart, on the west side, flows the little river Bulbourne.

The church, at Berkhamsted, dedicated to St. Peter, is built in the form of a cross, with a tower rising from the intersection towards the west end, and having a projecting staircase at the south-east angle, terminated by a turret at the summit. The tower is supported on strong pointed arches, and was originally open; but is now closed from the church by the belfry floor. On the outside of the tower, next the street, is a sculpture of an angel supporting a shield, impaled with the arms of England and France quarterly, and gules, a saltire, Or; with this imperfect inscription, — — *ohn Pheylp and Alys, his wyff*: the same arms are painted on glass in the window of a small chapel within the church. Various small chapels and chantries were founded here in the Catholic times, and are still partially divided from the body of the church. The sepulchral memorials here are numerous. Between two columns of the nave, surrounded by pews, is an ancient tomb of rich workmanship, having on the top, full-length effigies of a Knight, and his Lady, both recumbent; and, at the sides, various canopied niches, with small ornamental pointed arches in relief, interspersed with shields of arms. The Knight is represented in armour, with his hands raised in the attitude of prayer across his breast: his head rests on a helmet, having a human head, with a long beard, at the upper end; his feet are supported on a lion: he has on a hood and gorget of mail; and, on the sash, which crosses his body and shoulder, is a rose: opposite to this, on his breast-plate, is a dove. The figure of the lady is greatly mutilated; her hands and head are broken off; the latter rests on a cushion, and is covered with net-work: she is

arrayed in a close dress, and has a rose on each shoulder. Some of the shields of arms that surround this tomb, are completely defaced; others display a rose on a bend; in the honour point, a dove. On another shield, at the east end, is St. George's cross, having in the dexter chief, a saltire engrailed; and in the sinister chief, a cross doubly crossed. Not any inscription is remaining on this tomb, to designate the persons to whose memory it was erected; but the same arms are displayed on shields of brass, inlaid on a slab in the middle of the nave, over two good brass figures of a male and female, holding each other's hand, under elegant canopies, now partly mutilated. Round the verge of the slab, was the following inscription, of which only the latter part, from the word *objit*, now exists:—

*Hic jacent Richardus Torynton et Margareta uxor ejus,
qui quidem Richardus obiit quarto die mensis Martij
Anno Domini Millesimo CCC L Sexto, et Margareta
obiit die mensis Maij Anno Domini Millesimo CCC,mo
XL nono.*

This Torynton is supposed to have been the founder of the church; a man in special favour with Edmond Plantagenet, Duke of Cornwall. The Torringtons appear to have intermarried with the Incents of this town, as the same arms appear on the memorials of the latter family. In Sayer's chancel, which connects with the south aisle, is an altar-tomb of alabaster and black marble, in memory of John Sayer, Esq. who was chief cook to Charles the Second when in exile, and founder of the alms-house for poor widows in this town. Against the east wall of the south transept, is a neat monument in memory of John Dorrien, Esq. who died in December, 1784; and another, in commemoration of Ann, his relict, who died in February, 1802. The latter, executed by J. Bacon, Jun. displays a personification of Faith, with a burning lamp. Among the other monuments deserving notice, are those to the memory of Thomas Baldwin, Esq. who died in 1641; Mrs. Elizabeth Cradock, who died in 1704; and Joseph and James Murray, sons of Mrs. Murray, nurse to Charles the First, and builders of the west window of this church. In St. Catherine's chapel, are several memorials to the families of Waterhouse; and in that of St. John Baptist, to the family of Incent. Several piscinas remain in different parts of this structure.

A large and strong building of brick, erected as a Free School in the reign of Henry the Eighth, and endowed with the lands of the guild or brotherhood of St. John Baptist, an ancient foundation in this town, stands at the bottom of the church yard. In the next reign, the school was made a royal foundation, and incorporated by the style of the Master Chaplain, and Usher, of the Free School and Chantry of Dean Incent, of Berkhamsted. The master is appointed by the crown, and has apartments at one end of the Free School; the school room occu-
pies

pies the centre; and the other end is inhabited by the chaplain and usher. Here is also a charity school, supported by voluntary contributions, &c. Numerous donations for charitable purposes have been made to this parish, the principal of which was a bequest of 1000*l.* made by John Sayer, Esq. in July, 1681, for the building and endowment of an alms house: this was erected after his decease by his relict, who placed in it six poor widows, and increased the original endowment by the gift of 300*l.* Each widow has a small allowance weekly, and a cloth gown worth 20*s.* once in two years.

In the fourteenth of Edward the Third, two representatives were sent from this borough; but this was the only return ever made, except to the great council held at Westminster, in the eleventh of the same king. Berkhamsted had a charter of incorporation granted by James the First, but it scarcely survived the reign of his son. An attempt was made to revive the charter, a year or two after the restoration, but it did not succeed. The honour of Berkhamsted formerly included upwards of fifty-five lordships and manors, in the three counties of Herts, Northampton, and Buckingham.

Berkhamsted Place, the seat of John Roper, Esq. is seated on a pleasant eminence adjoining the town. Great part of the structure was erected by the Careys, having been burnt down in the time of the Lord Treasurer Weston, who then resided in it: the remainder was afterwards repaired, and with some additions, forms the present dwelling. King James's children were mostly nursed in this house.

BRANTFIELD.]—Brantfield, formerly a possession of the abbey of St. Alban, lies 3½ miles N. W. from Hertford. It formed a pleasant little retirement, for the late Lord Henry Stewart, in right of his wife the Lady Gertrude Amelia Villiers.

BRAUGHING.]—This place, called Brachinges, in the Domesday Survey, lies one mile N. N. E. from Puckeridge. It was an ancient domain of the Saxon kings. The church, which is a handsome building, contains various memorials of the Brograves, and other families. "Near the church yard, (says Salmon) is an old house, at present the habitation of poor families: it was given, with all sorts of furniture, for the use of weddings. They carried their provisions, and had a large kitchen, with a caldron, large spits, and dripping pan; a large room for entertainment and merriment; and a lodging room, with bride bed, and good linen; some of this furniture was lately in being."

BRICKENDEN BURY.]—At Brickenden, three miles S. by W. from Hertford, is the delightful seat of Mr. Morgan, situated in a large park, well wooded and watered. This estate once belonged to the abbey at Waltham, in Essex, to which it had been granted or confirmed by Edward the Confessor. The abbots had liberty of Free Warren, with the privileges of fishing in the Lea, &c.

BROCKET HALL.]—Adjoining Digswell park, (1½ mile S. E. from Welwyn) stands Brocket Hall, the

delightful seat of Lord Melbourne. It takes its name from the ancient family of the Brockets, its former possessors. The site of the ancient manor house is occupied by a handsome dwelling, commenced from the designs of Mr. James Paine, by the late Sir Matthew Lamb, and completed by Lord Viscount Melbourne. The apartments are elegantly fitted up, and decorated with many fine paintings. The park and grounds are very beautiful; and the scenery is much enriched by the river Lea, which flows through the park, and has been formed into a spacious sheet of water, over which is a handsome bridge. Lady Melbourne pays great attention to agriculture; and has two farms on different kinds of soil, where experiments are frequently made as to the most beneficial mode of culture.

BROXBOURN.]—The village of Broxbourn, a mile and three quarters W. S. W. from Hoddesdon, occupies a rising ground, divided by rich meadows from the river Lea. About the centre of the village is a bridge over the New River, which here crosses the road on its way to London. Jacob Bosanquet, Esq. is the Lord of the Manor.

Broxbourn church is a handsome structure, supposed to have been erected about the time of Henry the Sixth. It consists of a nave, chancel, and aisles, with a tower at the west end, terminated by an octagonal spire, and a small chapel, connecting with the chancel at the end of each angle. The chapel on the north side was built in the year 1522, by Sir William Say, Knt. The workmanship of this chapel is in a superior style. Beneath the arch which separates it from the chancel, is an elegant altar tomb of reddish grey marble, having a rich canopy, supported on four octagonal columns. This was erected in memory of the founder, who died in 1529, and of his "wyffs, Geneveve, and Elizabyth." On the sides of the tombs have been brass plates, containing the arms of the family, together with ten others of whole length figures, all which are gone; and against the east end, under the canopy, have been brasses, representing a knight, and two ladies, kneeling beneath a representation of the Trinity. On the north side of the chapel is a square tower, supposed to have been for the safe keeping of the vests, the rich silver chalices, and the other vessels, used in the celebration of high mass. Beneath the arch between the chancel and the south chapel, is a large altar tomb in memory of Sir John Say, Knt. and Elizabeth his wife. On the slab which covers the tomb, are brasses of the knight and his lady: the former in armour, with his tabard of arms above, gauntlets on his hands, and a long sword coming before him. His lady is richly apparelled in a close dress, with a narrow waist, and an outward cloak, blazoned with the arms of Cheyne, of Cambridgeshire. She has on a necklace of jewelry work, wrought with pearls; on her left hand are three rings; on her right hand, one. Her head dress is very singular, her hair being turned back, and closely trussed up in a sort of cap of rich lace, from which, by means of wires,

a sort

a sort of lappet, of very great size, is suspended. Many other ancient brasses were formerly in this church, and some yet remain. In the north aisle is a slab, inlaid with curious brass figures of John Borrell, Sergeant at Arms to Henry the Eighth; Elizabeth, his wife; and their children, eight sons and three daughters. The lady is arrayed in the square head dress of the time. Amongst the other monuments, are several in commemoration of the Cock and Monson families; one of which in the chancel, erected to the memory of Sir Henry Cock, keeper of the wardrobe to Queen Elizabeth and James the First, who died in 1609, is constructed in a very stately manner. Near it is the monument of William Gamble, alias Bowycar, having beneath the inscription a grotesque carving, consisting of various specimens of osteology, exhibited in eight compartments, as through a shop window. The most elegant monument lately erected, records the virtues of Henrietta, "daughter of Sir George Armytage, of Kirklees, in the county of York, Baronet, and wife of Jacob Bosanquet, of Broxbourn Bury, Esq. who died in 1797. The upper part displays a pyramid, on which is sculptured a fine female figure, bearing an inverted torch, and mournfully reclining on an urn overhung by a drooping willow. The inscription also commemorates the exemplary character of Elizabeth, relict of Jacob Bosanquet, of the city of London, Esq." who lived a widow thirty nine years, and died at the age of seventy-three, in January, 1799. Beneath are the arms of Bosanquet, impaling Armytage. Sir William Monson, and his lady, who founded an alms house in Broxbourn; and various other persons of note, have memorials in this church. The interior of the building has a neat and handsome appearance. The font is ancient; the bason is supported by a column in the centre, surrounded by eight smaller pillars. There is a Free School in the parish.

Broxbourn Bury, the seat of Jacob Bosanquet, Esq. and formerly the residence of Lord Monson, is a spacious edifice, standing in the midst of a pleasant park. Sir Henry Cock entertained James the First in this mansion, in his progress from Scotland.

BUNTINGFORD.]—The little market town of Buntingford is 13 miles N. N. E. from Hertford, and 31 N. from London. It is situated near the Rib, on the high road to Huntingdon, at the junction of Layston, Aspenden, Throcking, and Widdial, on land formerly belonging to all those places. Edward the Third granted a market and fair here to Elizabeth de Burgo, at the annual rent of 6*d*.

Buntingford chapel was built by voluntary subscription, during the years 1614 and 1621, under

the superintendence of the Rev. Alexander Strange, who was vicar of Layston, forty-six years. Near it is an alms house for eight poor men and women, founded and endowed in 1684, by Dr. Seth Ward, Bishop of Salisbury, who was a native of this town. He also founded four scholarships, in Jesus College Cambridge, for boys born in this county, and educated in the Grammar school at Buntingford; giving the preference to natives of this and the adjoining parishes.*

BUSHEY.]—Bushey, the property of Mr. Capper, who has a pleasant seat here, called Wiggen Hall, is a mile and a quarter S. E. by E. from Watford. The church is a small fabric of flint and rubble, with a tower at the west end. In the church yard are some memorials to the Cappers; and the tomb of Mrs. Elizabeth Fuller, of Watford Place, who founded the Free School at Watford. The houses in Bushey are chiefly situated on the sides of the high road.

CASHIOBURY.]—The manor of Cashiobury, which gives name to one of the Hundreds of the county, lies a mile and a half N. W. from Watford. This place, which was formerly parcel of the lands of St. Alban's Abbey, to which it had been given by the Mercian King, Arthur, now constitutes one of the beautiful seats of George Capel Coningsby, Earl of Essex, by one of whose ancestors, Lord Capel of Hadham, it was obtained by marriage with the Morrisons, about the time of Charles the First. The mansion is a spacious edifice, agreeably situated in an extensive and well wooded park, through which flows the Gade; across which, by the consent of the Earl, has been carried the Grand Junction Canal. The house was begun in the time of Henry the Eighth; but it has since been greatly altered and improved. It contains a number of elegant apartments, with a kind of cloister, the windows of which, a few years ago, were ornamented with painted glass, executed in a very superior style. In its general appearance, the mansion has the aspect of a castellated dwelling. Many of the pictures are of the first order of merit. In the drawing room, a superb apartment, are four frames, containing a considerable number of beautiful miniatures by the present Countess of Essex, from originals by the first masters: many of these are extremely fine, possessing the greatest delicacy and harmony of colouring, combined with strength, expression and brilliancy. The state bed room is decorated with blue and white furniture, and hung with Gobelin tapestry, displaying a village feast, from Teniers: making wine, &c. This apartment has a low roof, painted of a fine azure; the upper part gilt, with a coronet: over the door is a well executed Fruit and

* Dr. Ward was born in 1617; and having been taught the early rudiments of learning in the Grammar School of his native town, was removed to Sydney College, Cambridge, of which he was afterwards chosen fellow. In the civil wars, he was imprisoned for his opposition to the ruling powers; but, after

the restoration, he was promoted to the see of Exeter. He was afterwards made Chancellor of the Order of the Garter, and by his influence occasioned that office to be annexed to the see of Salisbury, to which he was translated in 1667. He died in January, 1698, and was buried in Salisbury Cathedral.

Flower

Flower Piece. In King Charles's room is a full length of Charles the First, standing against a pillar, by Vandyck; Countess of Ranelagh, three-quarters, Sir Godfrey Kneller; Three Children of Charles the First, by Vandyck; Charles the Second, a head, by Sir Peter Lely; and two beautiful female portraits, by the same artist. The park is between three and four miles in circumference, and affords some rich scenery, and noble timber. The walks are said to have been originally laid out, and the woods planted, by the famous Le Notre; but they have since been greatly improved and enlarged.

CHESHUNT.]—Cheshunt, formerly a market town, is eight miles S. by E. from Hertford. The houses extend principally along the sides of the high road. In the Domesday Book it is called Cestrehunt, an appellation which, with its distance from London, the remains of an ancient camp in a field to the west from Cheshunt Street, and a supposed military way leading from that to the Ermin Street, induced Salmon to place here the Durolitum of Antoninus. Some Roman coins have been discovered here, of the Emperor Hadrian, Claudius Gothicus, and Constantine. The Domesday Book records, that the right of trading here was in ten men, who paid ten shillings annual rent to the Lord for the privilege; that the land was valued at twenty hides; and that here was pannage for 1200 hogs. The manor, which has passed through numerous families, was purchased of the Lords Monson, about thirty years ago, by the late George Prescott, Esq. with whose descendants it remains. Amongst the several subordinate manors of Cheshunt, was that of St. Andrew le Mote, granted, by Henry the Eighth, to Cardinal Wolsey, who resided in the manor house, now called Cheshunt house: this is a plain brick structure, but much modernized since the time of Wolsey. It is now in the family of Sir John Shaw, Bart.

In the north part of the village, are some remains of a nunnery, originally founded for nuns of the Sempringham order. Henry the Third placed nuns of the order of St. Benedict in the room of those, and made them independent. Henry the Eighth granted the nunnery manor to Sir Anthony Denny; but it has since had a variety of possessors; and was for some years the seat of the late Mrs. Blackwood, who had a valuable collection of paintings. The remains of the nunnery form the domestic parts of a large house, which has been erected at different periods, and contains some elegant apartments. The grounds are disposed with taste; and the river Lea has been formed into a canal before the east front of the mansion.

At a little distance from the church stands a house which was formerly inhabited by Richard Cromwell, the abdicated Protector; who, after his return from the Continent, about the year 1680, assumed the name of Clark, and lived here during the remainder of his life, in retirement. Here also he died, in July, 1712, in the arms of the gardener of Baron

VOL. II.—NO. 91.

Pinquelly, and was conveyed to Hursley, in Hampshire, for interment.

Cheshunt church is a handsome structure, raised in the time of Henry the Sixth, by Nicholas Dixon, who was rector of this parish during thirty years, and lies buried in the chancel. On a large broken gravestone, that covers his remains, has been a brass figure, under an elegant triple-arched canopy, in the pointed style, with the arms, a flower-de-lis, in chief, ermine, and an inscription to his memory. On the north side of the altar is a tomb with an inscription in memory of Robert D'Acres, Esq. of Cheshunt, Privy Councillor to Henry the Eighth; of his wife, Elizabeth, and several others of their family. Against the north wall is a monument for Dr. Henry Atkins, who was thirty-two years physician in ordinary to James the First, and Charles the First, and died in 1635; Mary his wife, and Sir Henry Atkins, Knt. their son, who died in 1638, at the age of thirty-four. Various other inscriptions for the D'Acres and Atkins families, occur in different parts of the church.

DIGSWELL.]—The manor of Digswell, the Dichelswell of Domesday, a mile and three quarters S. E. from Welwyn, belongs to Earl Cowper. The church contains some fine brasses in memory of the Perients formerly lords of the manor. On a slab in the chancel, are those of John Perient, and his lady, who are represented by large figures: the former as a knight, in a pointed helmet, adorned with engrailed facings, and having plated armour, with roundels at the shoulders and elbows: a kind of collar or belt is round his neck; a long strait sword, without a cross bar, at his left side; a dagger at his right; and at his feet a leopard couchant. His lady, at his right hand, is in a singular triangular head dress, the curls coming down in a point to her neck; and at the top a wreathed fillet: she has slender arms, the wristbands studded, and wears a mantle; at her left foot is a dead hedge hog.

DINSLEY.]—At Dinsley, or Temple Dinsley, one of the hamlets in the parish of Hitchin, formerly stood a preceptory of Knights Templars, founded in the time of the Baliols, Lords of Hitchin. Here also in ancient times was a castle.

EASTWICK.]—This place, which formerly had a market, lies $4\frac{1}{2}$ miles S. W. by W. from Sawbridge-worth. The petty sessions for Eastwick division are holden here. In the church is the effigies of a Knight Templar, and some other monuments.

ELSTREE.]—The ancient village of Elstree, or Idlestree, is situated on an elevated ground, on the Watling Street, near the site of the Roman station, called Surloniæ, $4\frac{1}{2}$ miles W. by S. from Chipping Barnet. The church, which is a poor structure, is supposed to have been built out of the ruins of the Roman town. The only monument of note that it contains, is that of William Sharpes, Esq. on the east wall of the chancel. It appears, from an entry in the parish register, that Martha Ray,

the

the unfortunate victim to the too ardent sensibility of her hapless lover, the Rev. James Hackman, was buried here on the 14th of April, 1779.* The manor, which was granted by Arthur to St. Alban's Abbey, has been some years the property of George Byng, Esq. M.P. for Middlesex. A Sunday school, supported by voluntary contributions, was established here in the year 1805.

FLAMSTEAD.]—Flamstead, anciently called Verlamstedt, from its situation on the Vere, 2½ miles N. W. from Redbourn, was amongst the possessions of St. Alban's Abbey. The church consists of a body, chancel, side aisles, and a tower at the west end. It contains several family memorials of recent date; but, of the "three wondrous ancient monuments," mentioned by Weever, only one remains, between the nave and the north aisle. It is a plain altar tomb, about four feet high; having the figures of a male and female in demi-relief, under an angular canopy of quatre foil arches, ornamented with foliage, and smaller arches. At their feet are two dogs; that on the left has a label proceeding from its mouth, which curls round, and terminates on the back of the other, but the inscription is defaced. On a slab in the chancel, is a brass of a priest under a pointed canopy, containing traces of a representation of the Trinity. This marks the place of interment of Johannes Oudeley, rector of this church, who died on the 7th of May, 1414. Several monuments and memorials of the Saunders and Sebright families, of Beechwood, are also preserved here: and in the wall near the altar, is an inscription in memory of Sir Bartholomew Fouke, master of the household to Queen Elizabeth and James the First. The capitals of the pillars of the nave are richly carved with foliage; and the nave is separated from the chancel by a lofty screen, elegantly carved in the pointed style, over which is the ancient roodloft. On the south side of the chancel are two ancient stalls, with a piscina adjoining.

GADDESSEN.]—Great Gaddesden is 2½ miles N. W. by N. from Hemel Hempstead; and the adjoining parish of Little Gaddesden is four miles N. by E. from Berkamstead. The church of the former contains various monuments of the Halseys, of Gaddesden Place, an elegant mansion erected about the year 1773, by the late Thomas Halsey, Esq. The church of Little Gaddesden is a small structure with a tower at the west end. The chancel is the burial place of the Egertons, lords of the manor, of whom Sir John Egerton, Knight of the Bath, and first Earl of Bridgewater, died at the age of Seventy, in December, 1649; and John, Viscount Brackley, his third son, who succeeded him in the earldom, died in October, 1686, in his sixty-fourth

year. In this parish was born the eminent Physician, John de Gaddesden, who was educated at Merton College, and flourished at the beginning of the fourteenth century. He wrote many learned treatises on professional subjects, and is mentioned in the preface to the *Canterbury Tales* of Chaucer.

GILSTON.]—Gilston park, 3½ miles W. from Sawbridgeworth, is the principal residence of William Plumer, Esq. whose more ancient seat is at Blakesware, in the parish of Ware. In Gilston church are some monuments of the Gore and Roos families. There is a free school in this parish.

GORHAMBURY.]—About two miles W. from the town of St. Alban's, stands Gorhambury, the delightful seat of Lord Viscount Grimston, formerly the property and residence of the great Lord Bacon, and others of his family. It derives its name from — de Gorham, a relation of Geoffrey and Robert de Gorham, Abbots of St. Alban's, from whom he had received a grant and confirmation of certain lands, about the middle of the twelfth century. On this estate he erected a mansion, called Gorhambury. His descendants continued to enjoy it during several generations; but, towards the end of the fourteenth century, it was reannexed to the Abbey by Abbot de la Mare, who purchased it for 800 marks; and it continued attached till the period of the dissolution. Henry the Eighth granted it to Ralph Rowlat, Esq. by whose eldest daughter, married to John Maynard, Esq. it became the property of that gentleman; and he, about the year 1550, sold it to Nicholas Bacon, Esq. afterwards lord keeper under Elizabeth. Sir Nicholas erected a new mansion, at a short distance westward from that which now forms the residence of Lord Grimston; and here he was frequently visited by the queen, who dated many of her state papers from Gorhambury. This house appears to have formed a quadrangle; but the chief parts now standing are the ruins of the hall, which constituted the inner side of the court; and a high octagonal tower, in a ruinous state, commanding some good views over the surrounding country. This mansion of the Bacons was reduced to its present ruinous state, when the present house of the Lords Grimston was built, between the years 1778 and 1785. Sir Nicholas Bacon was twice married; by his first wife, Jane, daughter of William Fernley, Esq. of West Creting, in Suffolk, he had issue three sons and three daughters: by his second wife, Anne, one of the learned daughters of Sir Anthony Cooke, of Giddy Hall, Essex, he had two sons, Anthony and Francis. Anthony was an accomplished scholar; and, at the age of twenty-one, he began to travel for further improvement, previously to which Sir Nicholas

* This unfortunate lady, the mistress of Lord Sandwich, was shot by Mr. H. while getting into her carriage, after coming out of Covent Garden Theatre, on the evening of the 7th of the same month. Her frantic murderer, who had made an unsuccessful attempt to destroy himself at the same instant, was

tried within a few days at the Old Bailey, and was executed at Tyburn on the 19th. He evinced the most perfect resignation to his fate, united with the settled composure of a man, feeling that he had survived every thing that was dear.

conveyed

conveyed to him the manor of Gorhambury, and this estate continued in his possession till his death, when it descended to his brother, Francis, afterwards Lord Verulam. Anthony's time, after his return from the continent, was appropriated to his studies, except what was employed in the service of his patron. Owing to this reserved life of his, his father's fine seat fell to decay; and the water, which had been laid to it from springs at a considerable distance, was cut off in such a manner, that it could not afterwards be recovered, but at so great an expence, that the Lord Viscount St. Alban's chose rather to build a little neat house near the great pond, saying merrily, that "Since the water could not be brought to his house, he would bring his house to the water."

On the decease of Lord Verulam, in 1626, Gorhambury became the property of Sir Thomas Meautys, Knt. and he having married Anne, daughter of Sir Nathaniel Bacon, of Culford Hall, Suffolk, half-brother to the Lord Chancellor, conveyed it to her for life, with remainder to his heirs. After his decease, his widow married Sir Harbottle Grimston, Bart. second son and successor to Sir Harbottle Grimston, of Bradfield, in Essex, who purchased the reversion of the manors of Gorhambury and Kingsbury, of Hercules Meautys, nephew and heir-at-law to Sir Thomas Meautys.*

* The Grimstons are descended from Sylvester, afterwards surnamed De Grimston, a valiant Norman, who accompanied the Conqueror to England, and bore his standard at the battle of Hastings. In the reign of Edward the Sixth, Edward Grimston, Esq. was made Comptroller of Calais; and he was afterwards continued in that office by Queen Mary. On the taking of Calais by the Duke of Guise, in the year 1558, he was made prisoner, and confined in the Bastille, where the ministry of that day suffered him to languish, lest he should return to England, and make public the repeated remonstrances which he had addressed to them, on the ill-conditioned state of the garrison to withstand a siege. At length, after two years' confinement, he escaped by stratagem to his native country, and was honourably acquitted of any misconduct connected with the loss of Calais. He was afterwards knighted by Queen Elizabeth, and represented the borough of Ipswich in several Parliaments. He lived to the great age of 98, and was succeeded by his eldest son, Edward, whose grandson, the second Sir Harbottle Grimston, was the person who purchased Gorhambury. This Sir Harbottle was created a baronet, in the tenth of James the First. He was twice married: his first wife was Mary, daughter of Sir George Croke, Knt. Justice of the Common Pleas, in 1623-4; and afterwards celebrated for his decision in the famous case of ship money. Sir Harbottle was himself one of the first to contest the presumed legality of that measure; and his father suffered a long imprisonment, because he would not submit to the payment of the loan attempted to be enforced by the friends of the ill-fated Charles. He was one of the commissioners appointed to treat with the King in the Isle of Wight, and pressed the acceptance of the King's concessions so strongly, that he was soon afterwards excluded the House by force, with other members, by Cromwell. He afterwards withdrew from public affairs. His personal liberty had suffered; and, to obtain his release, he was obliged to engage "not to act, or do any thing, to the disservice of the Parliament, or army." The death of Cromwell, and the imbecility of his successor, Richard, again left him at liberty to aid in the distracted councils of his country. The plans then pursuing, by Monk, to effect the restoration of

Gorhambury House, is a spacious stone edifice, of the Corinthian order, built of brick, and stuccoed. It was erected between the years 1778 and 1785, by the late Lord Viscount Grimston, from the designs, and under the direction of Sir Robert Taylor. The grand entrance is by a flight of steps leading beneath a handsome pediment, supported on well-proportioned columns: the summit of the central part is finished by a balustrade and cornice. The hall, with the library, and the other principal apartments, are large, and are decorated with a rich collection of portraits, chiefly of the age of Elizabeth, and her immediate successors. The following may be selected from the most eminent:—Lord Chancellor Bacon, at full-length, by Vansomer; a three-quarter length of Abbot, Archbishop of Canterbury, in his pontificals, by Vandyke; a three-quarter length of the Earl of Clarendon, by Sir Peter Lely; a three-quarter length of Queen Elizabeth, by Hilliard; presented to Lord Bacon, as some conjecture, by the Queen herself; a three-quarter length of Lodowick Stewart, first Duke of Richmond, in his Parliamentary robes; a three-quarter length of James, second Duke of Richmond, by Geldorp; a portrait of George Calvert, Lord Baltimore, in black, with his hair cropped, by Vandyke; a portrait of Robert Devereux, Earl of Essex, Elizabeth's unfortunate favourite; a portrait of

monarchy, appear to have received his concurrence; and, after the re-admission of the excluded members into the House of Commons, he was chosen Speaker. In the November following, 1669, he was made a Privy Counsellor, by Charles the Second, and appointed Master of the Rolls, which office he retained till his death, in 1683-4. He died in his 82d year; and was succeeded in his estates and title by Samuel, his only surviving son by his first marriage. Sir Samuel Grimston represented the borough of St. Alban, in six Parliaments, during the reigns of Charles the Second, and William the Third: he was a zealous promoter of the Revolution of 1688; and his conduct proved so obnoxious to James the Second, that he was excepted from the act of grace, or amnesty, prepared by that degraded Sovereign, when he had formed the design of landing in England, in 1692. This gentleman made Gorhambury his principal residence. He was twice married: first, to Elizabeth, eldest daughter of Heneage Finch, Earl of Nottingham; and secondly, to Anne, sixth and youngest daughter to John Tuf-ton, second Earl of Thanet. By these ladies, he had three children; who, all dying before him, he bequeathed his estates, under certain limitations, to William Luckyn, Esq. grandson to Mary, his eldest sister, who had married Sir Capel Luckyn, Bart. of Messing Hall, Essex. On acceding to the property of his great uncle, this William assumed the name of Grimston; and having represented the borough of St. Alban, in four successive Parliaments, he was created a peer of Ireland, in April 1719; and in the July following, he took his seat in Parliament. He died at the age of 73, in October, 1756, and was succeeded by James, his second son, who died in December, 1773. James Bucknall Grimston, his eldest son, who succeeded to the family estates and titles, received the honour of a British peerage, in the year 1790. His Lordship married Harriet, daughter of Edward Walter, Esq. of Stalbridge, in Dorsetshire. By this Lady, he had a son, James Walter, who married Charlotte, daughter of the late Earl of Liverpool; and two daughters. His Lordship died in the month of January, 1809, aged 62; and was succeeded by his son and heir, James Walter, the present Viscount.

Richard.

Richard Weston, Earl of Portland, in black, by Vandyke. These are in the library, which also contains busts of Sir Nicholas Bacon, his second wife, and second son, afterwards Lord Bacon. In the dining-room, a spacious and elegant apartment, are the following :—A three-quarter length of Lord Bacon, of admirable execution ; a portrait of Thomas Wriothesley, Earl of Southampton, by Vandyke ; a full-length of George Villiers, Duke of Buckingham, in a white dress, with his hat and feather upon an adjacent table, by Mytens ; a copy, by Sir Godfrey Kneller, of Sir Peter Lely's portrait of George Monk, Duke of Albemarle ; an excellent painting of Sir Nathaniel Bacon, half-brother to Lord Bacon, by Sir Nathaniel himself ; a portrait of Edward Somerset, Earl of Worcester, who in the reigns of Elizabeth and James the First, filled the office of master of the horse ; a portrait of Philip Herbert, Earl of Pembroke and Montgomery, by Vandyke ; a full-length of Thomas Wentworth, Earl of Cleveland, by Vandyke ; a portrait of Sir Thomas Meautys, Lord Bacon's successor in the manor of Gorhambury. There is also in this room, a large painting, by Sir Nathaniel Bacon, representing a cookmaid with dead game, which she has just received from an old gamekeeper, who appears in the back ground. The cookmaid is said to be a striking likeness of the painter's mother, dame Jane Bacon. The following are the portraits contained in the drawing-room and hall : a three-quarter length of Sir Harbottle Grimston, in his official robe as master of the Rolls, by Sir Peter Lely ; Sir Harbottle's first wife, daughter of Sir George Croke ; Lady Elizabeth Grimston, Sir Samuel's first wife, daughter of Heneage Finch, Earl of Nottingham, by Sir Peter Lely ; Sir Samuel's second wife, Lady Anne Grimston Tufton, the Earl of Thanet's daughter ; Sir Edward Grimston, by Holbein ; Sir Nicholas, father to the painter, Sir Nathaniel Bacon ; * a small half-length of Sir Nicholas's first wife, dame Jane Bacon, by her son, Sir Nathaniel ; a long painting, representing Algernon, Earl of Northumberland, in black, his lady, in blue, and seated, her child near her, by Vandyke ; a portrait of Charles Howard, Earl of Nottingham, by Sir Peter Lely. Upon a pannel in the drawing-room, is a singular antique half-length of one of the Grimston family, in a green jacket, the sleeves of which are loose, and his head covered with a large bonnet, from which a long train of silk hangs down.—A full-length of James the First, by Holbein, in black and gold armour ; a

portrait of James the Second, by Sir Godfrey Kneller ; a portrait of Charles the First, by Henry Stone ; a portrait of Henry Rich, first Earl of Hertford, beheaded in 1649 ; a full-length of Thomas Howard, third Duke of Norfolk, by Holbein ; a portrait of Catherine, Charles the Second's Queen, in the character of St. Catherine, by Huysman ; a whole-length of Catherine Howard, Countess of Suffolk, † dressed in white, and wearing a large ruff ; her bosom also in a considerable degree exposed ; a portrait of Edward Carew, Earl of Totness ; his beard white, and hair short, dressed in a white flowered jacket, and resting his hand upon his sword ; a portrait of Sir Edward Sackville, fourth Earl of Dorset ; a nobleman renowned for his accomplishments and wit ; he killed Lord Bruce, a Scotch peer, in a desperate duel which they fought at Antwerp. Besides portraits, there are some Scripture paintings, by the first masters, in the drawing-room, as follow :—A painting, by Tintoretto, of St. John preaching in the wilderness ; the Adoration of the Shepherds, by Luca Giordano ; the Annunciation of the Blessed Virgin, by Annibal Caracci ; and our Saviour curing the cripple, at the pool of Bethesda, by Bassano.

The park and grounds at Gorhambury, comprise about 600 acres, and are well stocked with fine timber ; particularly beech, oak, and elm. The surface is agreeably diversified ; and the scenery forms some good landscapes ; to which the contiguity of Pré Wood gives additional interest. The park contains a considerable number of fine deer.

GROVE.]—The Grove, about two miles N. from Watford, is the property and chief residence of the Earl of Clarendon. It was formerly the estate of the Heydons ; afterwards of the Hamptons, of Buckinghamshire ; and from them it passed through several families, to the Hydes, Earls of Clarendon. The mansion is an irregular structure of brick, standing on the west side the Gade, in a park about three miles in circumference, through which the river flows in a divided stream. The principal apartments contain a valuable collection of original portraits, chiefly of the times of James the First, and Charles the First ; as well as a few fine copies from the first masters. In the hall, are the following :—A whole-length, by Vandyke, of Francis, Lord Cottington, Chancellor, and under Treasurer of the Exchequer, in the reign of Charles the First ; the Earl of Kinnoul, Vandyke, whole-length, in armour ; Elizabeth, Queen of Bohemia, Corn. Jansen, in

* The following relation of his death, is from Mallet's Life of the Lord Chancellor Bacon :—" He was under the hands of his barber, and the weather being sultry, had ordered a window before him to be thrown open. As he was very corpulent, he presently fell asleep, in the current of fresh air that was blowing upon him, and awaked after some time, distempered all over. " Why," said he to his servant, " did you suffer me to sleep, thus exposed ? " The fellow replied, that he durst not presume to disturb him. " Then," said the Lord-Keeper, " by your civility, I lose my life ; and so removed into his bedchamber, where he died a few days after."

† This Lady was the daughter of Sir Henry Knevit, Knt. of Charlton, in the county of Wilts. Her venality, during the four years, in which her husband held the office of treasurer to James the First was notorious, insomuch that Weldon scruples not to charge her avarice with the beneficial peace which Spain obtained, at the expence of much of the interest of this country : this writer thus expresses his undisguised sentiments, " In truth, Audley End, that famous and great structure, had its foundation in Spanish gold."

black,

black, whole-length; Marquis of Hertford, Vandyke, whole-length, in armour; Jerome Weston, Earl of Portland, son of the Lord Treasurer Portland; whole-length, in black. The other portraits are those of Queen Elizabeth; James the First; Cecil, Lord Burleigh, Robert, Earl of Salisbury, his son; Lord Chancellor Clarendon; Edward, Earl of Jersey; and John, Earl of Rochester: artists unknown. Here, also, are copies, from Vandyke, of Algernon, Earl of Northumberland; the Prince of Parma; and Henry Cary, Lord Falkland. In the saloon, is a curious head of Anne Hyde, Duchess of York, by Sir Peter Lely; half-lengths of her daughters, Queen Mary, and Queen Anne; William the Third, small whole-length, in armour; James the Second, in a large wig; Edward Hyde, Earl of Clarendon, Sir Peter Lely; Henry, Earl of Clarendon, son of the Lord Chancellor, when a youth; Lawrence, Earl of Rochester, his brother, Lord High Treasurer, in the reign of James the Second; Lady Rochester, first wife of Lawrence, a head; Lady Charlotte Hyde, in the dress of Mary, Queen of Scots; Duchess of Queensbury; Jane, Countess of Essex; Catherine of Braganza, in the dress in which she arrived in England. The saloon also contains two small, but very beautiful pictures, by Stubbs, of a bull of the small India breed, bred by Lord Clarendon; and a horse, the property of his Lordship. In the drawing-room, among others, are portraits of Lady Clarendon, daughter of Sir Thomas Ailesbury, and second wife to the Lord Chancellor Clarendon; Sir Thomas Ailesbury, and Lady Ailesbury; James Stuart, Duke of Richmond, whole-length, in black; and Thomas Howard, Earl of Arundel, all by Vandyke; Mary, Duchess of Beaufort, daughter to Arthur, Lord Capel; Lady Newport; Sir Henry Capel; the poet Waller, represented sitting; and Sir Geoffrey Palmer, all by Sir Peter Lely; the Lord Keeper Coventry, Corn. Jansen; one of the finest pictures ever executed by that artist. In this room, are also two Bacchanalian pieces, by Lanerst. In the dining-room, are whole-lengths of William Villiers, Viscount Grandison, in scarlet, Vandyke; George Villiers, Duke of Buckingham, in a curious worked dress, Corn. Jansen; William, Earl of Pembroke; and Philip, Earl of Pembroke and Montgomery, both by Vandyke; Lord and Lady Cornbury, Sir Peter Lely; Lady D'Aubigny, Vandyke; Count De Borghe, a head in armour, Vandyke; James Stanley, Earl of Derby, with his Countess and child, whole-lengths, Vandyke; Sir John Minns, Vandyke; Lord Goring, an admirable head, in armour, Vandyke; Lady Barbara Villiers, youngest daughter of the Duchess of Cleveland, in a nun's dress; Philip Villiers, de L'isle Adam, Great Prior of France, and Grand Master of Malta. Over the staircase, is a curious picture of the Duke of Saxony and the Reformers: and, on the landing-place, half-

lengths of John Seldon, Esq. and Sir Henry Spelman. In the library, is a full-length picture of the Duke of Monmouth, in armour, accompanied by a man, who appears like a foreign seaman, pointing to the Netherlands, on a globe; and another fine picture of a lawyer, name unknown, apparently of the time of Cromwell, with a book, papers, &c.

HADHAM.]—The adjoining parishes of Great and Little Hadham, lie about 4½ miles W. by S. from Bishop's Stortford. In the reign of Henry the Third, the manor of Little Hadham belonged to Sir William De Baud, who granted a fat buck and doe annually to the dean and canons of St. Paul's, for liberty to enlarge his park with 22 acres of their lands, adjoining to his seat at Corningham, in Essex.* The Earl of Essex is now owner. In the church, are inscriptions for Arthur, Lord Capel, Baron of Hadham, who was beheaded, for his loyalty to Charles the First, in 1648; Elizabeth, his wife; and Henry Capel, third son of Lord Arthur, Lord-Deputy of Ireland, in the time of William the Third. Several ancient slabs for the Baud family, mostly deprived of their brasses and inscriptions, are yet remaining.

HAILEYBURY COLLEGE.]—This institution, in the vicinity of Hertford, is designed for giving a suitable education to young gentlemen intended for the appointment of writers, in the East India Company's service, in India. The college, which was first inhabited in the autumn of the year 1809, is a neat and handsome structure, entirely on the Grecian model; after designs, by Mr. William Wilkins, junior, M.A. of Caius College, Cambridge, and consists of four sides, forming a quadrangle, the centre of which forms a well-proportioned square. The principal front is of free-stone, and faces the east, commanding a distant view of the high north road, from which it has a very beautiful appearance. In this front are contained the chapel, dining-hall, and library; the kitchen and offices composing one wing, and the principal's apartments the other. The other three sides contain separate apartments, for 120 students, having a recess for a bed, and book closet in each, so that every student has a commodious apartment to himself. The centre and wings of these three sides of the quadrangle also contain houses for the professors, and several lecture rooms, besides the various offices necessary for the college servants, &c. The grounds belonging to the college were laid out agreeably to a plan of Mr. Rep-ton's. The college and grounds constitute a great improvement of this part of the county; and, whether as a specimen of the arts, or with reference to the purpose to which they are appropriated, they will form a splendid memorial of the zeal of the founders in the cause of literature and science, as well as the source of benefit and advantage at home and in India. It is highly to the credit of the architect, Mr. Wilkins, that this elegant structure

* Vide MODERN PANORAMA, Vol. II. p. 375.

was raised and completed in three years, by contract; and although the terms of that contract were full 20,000*l.* below any other tender delivered in on the same account, Mr. Wilkins finished the building in the most complete and perfect state, without any advance upon, or addition to, his original terms.—The patronage of nominating students to the college, is vested in the Directors of the East India Company, and a nomination thereto is, in fact, a virtual appointment as a writer, which is confirmed upon a young man's quitting the college; where, in general, he must reside at least two years, under a general recommendation from the college council, for good conduct, &c. to the Court of Directors. The terms of admission are 100 guineas per annum. The students wear an academical habit, and are subject to college discipline and restrictions.

HARPENDEN.]—Harpenden, or Harden, 2½ miles E. by N. from Redbourn, is a chapelry to Whethamsted, the population is upwards of 1300. The houses are built with considerable neatness, and scattered over a considerable plot of ground. The church, or rather chapel, was erected in the Norman times. It is built in the form of a cross, with a tower at the west end: the arches at the intersection of the nave and transept, are plain and semi-circular; but are sustained on clustered columns, with varied capitals. In the chancel, is a neat cenotaph in memory of Godman Jenkyn, Esq. Several of the Cressies, formerly lords of the manor, lie buried here, for whom some inscriptions yet remain; the oldest of which records the memory of Matthew Cressey, and Joan, his wife, the daughter of Edward Perient, Esq. of Dinwell: the latter died in November, 1478. Another inscription is inserted on a slab in the east wall of the north cross, under the brass figures of a male and female kneeling before desks, with the scriptures lying open on each desk, and above them, in the centre, their arms quartered, with a singular crest, of a hairy man rising from a basket on a helmet, and in the act of throwing the javelin; his left arm extended with a shield.

HATFIELD.]—The market-town of Hatfield, or Bishop's Hatfield, called Haethfeld in the Saxon times, from its situation on a heath, lies 7½ miles W.S.W. from Hertford, and 19½ miles N.N.W. from London. It has been erroneously considered as the place where a synod was held in the year 680; and also as the birth-place of William De Hatfield, second son of Edward the Third. Hatfield, in Yorkshire, was the scene of both those events. The manor of Hatfield was ancient demesne of the Saxon Kings, till granted in the tenth century to the abbey at Ely. On the conversion of that foundation into a bishopric, it became attached to the new see, and the manor-house becoming a palace of the bishops, the town was thenceforth distinguished by the appellation of Bishop's Hatfield. Queen Elizabeth greatly admired the situation; and by virtue of the statute which gave her the power of exchange, procured the alienation of this manor

from the then Bishop of Ely, Richard Cox; James I. in the third year of his reign, exchanged it for the house, manor, and park of Theobalds, with his minister, Robert Cecil, Earl of Salisbury, whose descendant, the Marquis of Salisbury, is the present Lord.

Hatfield church is a handsome fabric, consisting of a nave, chancel, aisles, embattled tower, with a chapel, or burial-place of the Earls of Salisbury, on the north side of the chancel. This chapel was erected by Robert Cecil, first Earl of Salisbury, of that surname, but contains neither monumental inscription, nor other memorial, for any of the family, except the founder. His monument represents the Earl in his robes, lying on a slab of black marble, which is supported by figures, in white marble, of the cardinal virtues, kneeling, in virgin habits, with proper attributes. Beneath, on another slab of black marble, the Earl is represented as a skeleton, lying on a well-sculptured mat, in white marble. The Earl died at Marlborough, in May 1612, in his fiftieth year, and was buried at Hatfield. On the south side of the chancel, is the chapel of the lords of the manor of Ponsburne, in which are several monuments of the Brockets and Reads, of Brocket Hall. Various charitable benefactions have been made for the poor of this town: and here are several small alms-houses. The population of Hatfield, as returned under the late act, amounted to 2677.

Hatfield House, the principal seat of the Marquis of Salisbury, occupies a beautiful situation in a finely diversified park, watered on the north side by the Len, and including an area of several miles in circumference. This mansion, which is of brick, and of vast extent, was erected by Robert Cecil, first Earl of Salisbury, between the years 1605 and 1611. Its form is that of a half H: various improvements have been made here, by the last Earl. Many of the apartments are very large; and most of them are decorated with pictures of considerable merit and curiosity. Of these, the following are particularly entitled to notice:—The Lord Treasurer, Burleigh, and his son, Robert Cecil, in their robes, with white wands; William, second Earl of Salisbury, in black, with long hair, wearing the George, a star on his cloak, and near him a dog, Sir Peter Lely; Lord Viscount Cranbourn, son of the preceding, Sir Peter Lely; James, third Earl of Salisbury, in his robes, Sir Peter Lely; James, fourth Earl, Sir Godfrey Kneller; Lady Latimer, Sir Peter Lely; Algernon, Earl of Northumberland, and the Lady Anne, his wife, daughter of William, second Earl of Salisbury, half-lengths, Vandyke; Queen Elizabeth, a very curious picture, in which that Princess appears in a close-bodied gown, with a long distended gauze veil. On her head is a coronet and aigret; her neck is adorned with a necklace of pearl, and her arms with bracelets. Her hair is yellow, depending in two long tresses; and her face young, and tolerably handsome. The lining of her robe is wrought with eyes and

and ears; and on her left sleeve is embroidered a serpent: in the other hand is a rainbow, with the adulating motto, (*non sine sole Iris*).—Mary, Queen of Scots, a whole length, on board; the dress consisting of a long black mantle, bordered with white lace; at her girdle, a cross and rosary.—Robert Dudley, Earl of Leicester; Richard the Third, a head; Margaret, Countess of Richmond, on board, veiled as a nun; to which her having taken a vow of celibacy, at the age of 64, is considered to have given her a title. This Lady was the noble foundress of the colleges of Christ and St. John, Cambridge.—Laura, the celebrated object of Petrarch's passion; Henry the Sixth, a head, on board; Catherine de Cornara, Queen of Cyprus.—Amongst the other pictures, is a singular representation, on board, of Henry the Eighth, and his Queen, Ann Boleyn, at a country wake, or fair, at some place in Surrey, within sight of the Tower of London.—In this piece, is a great number and variety of figures, the dress and occupations of which are curious in a remarkable degree.

The park and grounds of Hatfield House contain some of the finest timber in the county, oak, elm, ash, &c. The scenery is very beautiful. Robert, the first Earl, originally laid out two parks here, for red and fallow deer; and, in one of them, he planted a vineyard, which was in existence at the time that Charles the First was a prisoner at field; the deer still abound. The Marchioness of Salisbury, who has particularly exerted herself in the promotion of agriculture, has a very interesting experiment-ground, including about 17 acres, well fenced, and crossed by walks, for the convenience of inspecting the crops.

Hatfield Wood Hall, the ancient family mansion of the Basingbourns, was pulled down a few years ago; the estate having been purchased by the Marquis of Salisbury.

HEMPSTEAD.—The respectable market-town of Hemel Hempstead, lies 20½ miles W. by S. from Hertford, and 28 N.W. from London. It is pleasantly situated on a rising ground, at a short distance from the Gade, and enjoys a population of about 3240. The manor, which was granted by Offa, to the church of St. Alban, came into the possession of John Waterhouse, Esq. Auditor to Henry the Eighth, whose family had been long seated at Hempstead Bury. By his interest with the King, a charter of incorporation, and a weekly market, were granted to the inhabitants.

It has been generally understood, as we have before had occasion to state, that the remains of Offa, King of the Mercians, were deposited in a chapel, founded on the banks of the Ouse, in Bedfordshire; and that the chapel and tomb were shortly afterwards swept away by a flood. Proof, however, is said to have been obtained, that the ashes of Offa

were inhumed at Hemel Hempstead, and that they were actually discovered in the church-yard there, in the month of October, 1809. "In digging a vault," we are told, "for a young Lady of the name of Warren, the sexton, when he had excavated the earth about four feet below the surface of the ground, felt his spade to strike against something solid, which, upon inspection, he found to be a large wrought stone, which proved to be the lid of a coffin, and under it, the coffin entire, which was afterwards taken up in perfect condition; but the bones contained therein, on being exposed to the air, crumbled to dust. On the lid of the coffin, was an inscription, partly effaced by time, but still sufficiently legible, decidedly to prove it contained the ashes of the celebrated Offa, King of the Mercians, who rebuilt the abbey of St. Alban's, and died in the eighth century. The coffin is about 6½ feet long, and contains a niche, or resting-place, for the head, and also a groove, on each side, for the arms, likewise for the legs: it is curiously carved, and altogether unique of the kind."

Hemel Hempstead church, which stands in a spacious church-yard, adjoining to the town, on the west side, appears to have been erected in the Norman times, of the architecture of which it presents some pleasing specimens. It is in the form of a cross, and consists of a nave, chancel, transept, and side aisles, with an embattled tower, surmounted by a high, octagonal spire, rising from the intersection. Almost hidden amongst the pews, is an ancient tomb, in good preservation, with brass figures of a Knight and his Lady on the top; and beneath their feet, an old French inscription, as follows:—

*Robert Albyn gist icy Et Margrete sa femme outibte luy
Dieu se les almes eyt mercy. Amen.**

The Knight is in plate armour, with a gorget of mail, and represented as standing on a lion: the head of the Lady rests upon a cushion; at her feet, is a dog: she has on a square head-dress, and a long cloak, fastened, across the shoulders, with broaches, from which a knotted cord and tassel descend to the feet.

The market-house is a plain wooden edifice: the shambles near it, form a neat range of brick building. The principal charitable donation was made by Mr. Thomas Warren, who, by will, dated December 2, 1796, gave 1200*l.* stock, in the three per cent. consolidated bank annuities, in trust; the dividends to be applied to support 50 poor widows, by distributing 7*l.* 10*s.* a year to each, on the 3d of January; and to the establishment of two Free Schools, one for 13 boys, and the other for 15 girls. Great quantities of corn are annually sold in this town; and its contiguity to the Grand Junction Canal has a very beneficial effect on its trade.

* Translation.—Robert Albyn lies here, and Margaret, his wife, with him: God have mercy upon their souls. Amen.

Hemstead Bury, or the Bury House, at the bottom of the town, is a neat modern building, the property of Mr. Hilton, a descendant from the ancient and noble family of Hilton, of Hilton castle, Durham. A small part of the old Bury-sted, or mansion, in which Henry the Eighth was entertained by John Waterhouse, Esq. is yet standing on one side of the garden. This estate includes the whole of the town of Hemel Hemstead; though its extent is not more than 35 acres.

HERTFORD.]—Hertford, anciently Durocbriva, supposed, by Dr. Heylin, to have been a principal residence of the East Saxon Kings, is situated at the distance of 21 miles N. from London. It gave name to the shire on the division made about the time of Alfred the Great, and it has ever since continued to be the county town. After the Danes were driven from this neighbourhood, a castle was built here by Edward the Elder, about the year 900. The same King is recorded to have built and fortified the town, which had probably been wholly despoiled and ruined by the Danes. At the time of the Domesday Survey, Hertford contained 140 burgesses, and had two churches: the lands and houses were then divided between the King, and eight of his principal officers, among whom was Peter de Valoines, who had been constituted Governor of Hertford castle, and who was afterwards confirmed in that post by Henry the First. In the year 1345, Edward created John of Gaunt, his fourth son, Earl of Richmond, and granted him the honour, castle, and town of Hertford, as a place where he might be 'lodged and accommodated in a manner suitable to his dignity.' While the castle was in his possession, it was the occasional residence of John, King of France, who had been made prisoner, by Edward the Black Prince, at the battle of Poitiers. David, King of Scots, was a prisoner here about the same period; and here, in 1362, died Joan, his Queen, sister to Edward the Third. In the year 1582, the Michaelmas term was adjourned from London to Hertford, on account of the plague that was raging in the metropolis, and all the courts were kept in the castle: this was also the case, and from a similar cause, in the years 1591 and 1592. Queen Elizabeth occasionally resided here; and in this has probably originated the tradition of her imprisonment in the castle; and a small chamber, in the highest tower, is now pointed out as the scene of her captivity. About the year 1619, all the honours, lands, and revenues of the crown, at Hertford, except what arose by the mills, were, by James the First, settled in trustees for the use of Prince Charles: and after the latter had ascended the throne, in his sixth year, he granted the manor and castle of Hertford, to William, Earl of Salisbury, whose descendant, the present Marquis of Salisbury, is now Lord of the manor. The castle was leased by Earl William, to Sir William Harrington, Knt. It was afterwards assigned to Sir William Cowper, Bart. who bequeathed it to his

fifth son, Spencer Cowper, Esq. who sold it to Edward Cox, of Cheshunt, who resold it to the Cowpers; since which it has had various possessors, and a few years ago, it was hired by the East India Company, for the purpose of establishing a college. Very few remains of the original castle are now standing, and those are principally confined to the outer walls, which show parts of one round, and some angular towers. The present body of the castle is chiefly of brick work, apparently of the time of James or Charles the First, except the high tower, which is more ancient, and commands an extensive prospect. The apartments are mostly small, but neat, and convenient. Beneath, are some strong vaults, and a subterraneous passage, reputed to extend a considerable distance towards the east. The walls have been surrounded by a deep moat, supplied with water from the Lea, which flows under the north side. The inclosed area has been converted into gardens, &c.

The civil government of Hertford was originally vested in a chief bailiff, an under bailiff, and other officers; but this form was abrogated by James the First, and the jurisdiction committed to a mayor, and common council. Charles the Second, by letters patent, dated in 1680, vested the corporation in a mayor, recorder, ten aldermen, a chamberlain, sixteen assistants, and other officers; under which charter, the borough is now governed. The earliest return of members to Parliament from Hertford, was in the year 1297; but, after the year 1377, no return appears to have been made till 1623, when the right of sending was restored, on petition. The right of election is vested in the inhabitant householders, resident freemen, &c. about 580 in number. The burgesses were formerly obliged to furnish one man, completely armed, to attend the King in his wars.

This town had formerly five churches; four parochial, and one belonging to the priory; but only two are now standing. All Saints, the principal church, is a large edifice, in the south-east part of the town, consisting of a nave, chancel, and side aisles, with a low tower, and spire. At the west end, is a large gallery for the use of the younger children belonging to Christ's Hospital, who are brought up in this town till vacations occur in the school at London. The monuments are numerous: one of the most ancient is a slab at the east end of the south aisle, on which has been a male figure, inlaid, of brass; but only the feet are now left: beneath, is a Norman French inscription, in the Saxon character; to the memory of John Hunger, Esq. master cook to Queen Catherine, who died in 1435. Several of the Dunsters, of Jerningsbury, were buried here; as well as of many other respectable families. In St. Andrew's church, on the north side of the Lea, are also many sepulchral memorials. Here are two meeting-houses, for dissenters, and one for Quakers.

On the site of the priory, which stood in the east part

part of the town, a good modern house has been erected. The priory was founded for monks of the Benedictine order, by Ralph de Linesey. It was subordinate to St. Alban's abbey. At the suppression, its revenues were estimated, by Speed, at 86*l.* 14*s.* 8*d.* The founder of this priory, said to have been nephew to the Conqueror, became a monk on his own establishment, and was buried in the priory church. Tanner mentions another religious house in this town for friars, called *Le Trinité*: this was subordinate to Mottenden, in Kent.

The sessions, and market-house, and town-hall, rebuilt between 40 and 50 years ago, are handsome brick edifices. The Blue Coat School, or that connected with Christ's Hospital, is a large building, at the east end of the town, and forming three sides of a quadrangle: it contains sufficient accommodation for upwards of 500 children. Here is a good Grammar School, founded and endowed by Richard Hale, Esq. of King's Walden, in the time of James the First. Since that period, the School has been rebuilt, and the endowments increased by various benefactors. Bernard Hale, Esq. gave 100*l.* per annum, for establishing seven scholarships at Peter House, Cambridge, for boys educated on this foundation. The gaol and penitentiary house are situated at the end of the town. The former, which is also the county bridewell, is surrounded by a boundary wall, 15 feet high; which, being at a considerable distance from the building, admits a free circulation of air; and the gaoler has within it a convenient garden.

In the vicinity of Hertford are many elegant seats; amongst which may be particularly noticed Balls, the property of the Marquis Townshend. It stands in a very pleasant park, and commands an extensive view over the surrounding country: it was built in the time of Charles the First, by Sir John Harrison, Knt.

HERTINGFORDSBURY.]—This village, a mile and three quarters W.S.W. from Hertford, is very pleasant, and contains some good houses, one of which was purchased of Lady Hughes, the widow of the gallant Admiral of that name, by Earl Cowper, some years ago. In the church are various memorials of respectable families, particularly a noble cenotaph in memory of William, second Earl Cowper. Here is also a monument in memory of Spencer Cowper, Esq. brother of the first Earl Cowper. The park and manor of Hertingfordbury seem to have been appurtenances to Hertford castle.

HEXTON.]—Hexton, formerly a possession of St. Alban's abbey, lies six miles N.W. by W. from Hitchin. William Young, Esq. has a seat here, which was formerly Admiral Pasley's. The hills, in this neighbourhood, are very considerable, and give issue to many springs. The church is dedicated to St. Faith, a statue of whom was anciently standing over a fountain near the church-yard, called St. Faith's well. On the north of the chancel, is

VOL. III.—NO. 92.

a chapel appropriated to the interment of the lords of the manor.

HITCHIN.]—The market-town of Hitchin, which, including the hamlets of Missenden, Preston, and Temple Dinsley, has a population of about 3608 persons, lies 17 miles N.W. by N. from Hertford, and 34 N.N.W. from London. It is situated in a fertile valley, surrounded by considerable eminences. It was given by Edward the Confessor, to Earl Harold, by the appellation of *Hitchie*. In the *Domesday Book*, it is called *Hiz*, from the little river of that name, which flows through it. The jurisdiction of the manor court extends into several neighbouring parishes. The church is a handsome structure, in the pointed style, occupying the site of a more ancient fabric near the middle of the town. The interior is spacious, and consists of a nave, chancels, and side aisles: its length is upwards of 150 feet; and its breadth, 67. At the west end, is a massive tower, 21 feet in diameter, terminated by a small octagonal spire. The whole fabric is embattled; and the principal chancel is additionally ornamented by pinnacles. The north and south porches are well wrought; the latter has a groined roof, with canopied niches, and ornaments in front. Amongst the monuments, which are very numerous, some ancient ones of the Kendale family possess considerable interest. Some very fine brasses of the 15th and 16th centuries, also occur in different parts of the church. Here are likewise several monuments, for the Radcliffes, of Hitchin priory. The font has been ornamented with figures of the twelve Apostles, under niches; but they can scarcely now be traced.

Near the church, formerly stood the priory of Biggin, founded for nuns of the Gilbertine order. At the Dissolution, its annual revenues were, according to the *Monasticon*, estimated at 13*l.* 16*s.* Hitchin priory was founded for White Carmelites, in the time of Edward the Second. Its annual revenues were valued at only 4*l.* 9*s.* 4*d.* when it was surrendered to Henry the Eighth. Very few traces of the priory remain: the immediate site is occupied by a mansion of the Radcliffe family.

In the year 1668, John Skynner, Gent. gave 300*l.* to build alms-houses; 300*l.* to purchase lands to endow the same; 100*l.* to apprentice poor children; 100*l.* towards the further endowment of the Free school, in Hitchin: and the produce of his orchard, next the church-yard, to keep the alms-houses in repair. The respective estates now vested in trustees, produce about 21*l.* for the alms-people; 5*l.* for repairs; and 5*l.* for the school, annually. In 1697, Ralph Skynner, Gent. (probably son of the above,) bequeathed 200*l.* to buy lands, to augment the revenue of the vicarage; 800*l.* for building and endowing eight alms-houses; and 60*l.* for apprenticing ten poor children.

Hitchin market has existed from an early period; and very large quantities of corn and grain are annually

nually sold in it; probably in some degree from being free of toll, by prescriptive right. Formerly the wool trade was very flourishing here. The town is divided into three wards, and is governed by two constables, two headboroughs for each ward, two leather sellers, two ale-tasters, a bellman, &c. The town consists of several streets and lanes.

HODDESDON.]—The handsome little market town of Hoddesdon, $4\frac{1}{4}$ miles S. E. from Hertford, and 17 N. by E. from London, is a chapelry in the parishes of Amwell, and Broxbourn. The manor, now belonging to the Marquis of Salisbury, was anciently a part of the estate of the Bassingbourns. The town consists chiefly of one street on the high road. The chapel, a neat brick structure was erected about thirty years ago, on the site of a more ancient building. The market house, an old and curious edifice of wood, supported on arches and pillars, is yet standing, though greatly out of repair; a number of rude and grotesque figures are carved on different parts.

Near the market house is a conduit of good water, which is supplied by pipes from a spring at some distance. It was erected by the Raudons, a respectable family of this town, and is kept in order by a bequest of a certain sum annually, made by Marmaduke Raudon, Esq. in the year 1679.

Hoo.]—Hoo, which derives its name from the ancient family of Hoo, near Kempton, is the pleasant residence of the Honourable Thomas Brand; M. P. The manor was formerly the property of the Keates, whose burial place is in the neighbouring church of Kimpton.

HUNSDON.]—The pleasant village of Hunsdon occupies a rising ground overlooking the fertile meadows watered by the Stort, five miles W. by S. from Sawbridgeworth. In the reign of Henry the Sixth, the manor, now the property of N. Calvert, Esq. belonged to Sir William Oldhall, whose son, Sir John Oldhall, built a large castellated mansion here, in the time of Edward the Fourth. Henry the Eighth built a palace here, afterwards called Hunsdon house, for the education of his children. This mansion has been much reduced, but has still a venerable appearance, and is surrounded by a moat. The Princesses Mary and Elizabeth, appear to have resided here several years. With them, was educated their second cousin, the Lady Elizabeth Fitzgerald, the Earl of Surrey's Fair Geraldine, who was grand-daughter to the Marquis of Dorset, the brother of Elizabeth, Henry the Seventh's Queen.

In Hunsdon church are monuments for some of the Calverts; and in the chancel is the monument of Sir Thomas Forster, Chief Justice of the King's Bench, who died in 1612. Near the pulpit is a slab, inlaid with a curious brass, representing a huntsman, with his bugle horn and broad sword, leveling a cross bow at a stag, while death, as a skeleton, is pointing a dart at his breast. The following inscription is beneath:—

Beloved of all whilst he had Lyfe,
Unmoaned of none when he did die
James Gray interred of his Wyfe
Near to this Death's Signe Brass doth lye;
Years Thirty-five in good Renown
Parke and House-keeper of this Town.
Obiit 12 die Decembris A. D' Ni 1591,
Æ. 60.

The huntsman is said to have died suddenly while in the act of shooting at a buck: his motto is Sic Pergo; which has been translated, 'Thus I go on till the same fate befalls me.'

ICKLEFORD.]—This is a little village, two miles N. from Hitchin, supposed to derive its name from its situation on the Icknield Way, near a ford of the Ivel. In the church was interred, under a white marble slab, Henry Boswell, King of the Gypsies, who died in 1780, aged ninety: his wife, and grand-daughter, were also buried here. Ickleford was anciently a market town.

KENSWORTH.]—Kensworth church ($2\frac{1}{4}$ miles N.W. from Market Street) is entitled to notice from the curious specimens which it presents of Norman architecture.

KNEBWORTH.]—In the village of Knebworth, anciently the inheritance of the family of Hoo, $3\frac{1}{4}$ miles N. from Welwyn, stands the old seat of the Lyttons, subsequently lords of the manor, called Knebworth Place. The mansion, is a spacious quadrangular range of brick building, surrounding a court, and having a square castellated pile in the centre of the principal front, of an earlier period than the other parts of the structure. At a little distance is the church, consisting only of a body and chancel, with a tower, and a chapel, or burial place, of the Lyttons, on the north side of the chancel. Here is a very fine brass in memory of Simon Bache, canon of St. Paul's, and treasurer of the household to Henry the Fifth. Between the chancel and the chapel of the Lyttons, is an altar tomb for John Hotoft, and his lady; the former of whom was treasurer of the household to Henry the Sixth. From his arms appearing in different parts of the building, he is supposed to have built the church. The chapel contains several handsome monuments, &c. of the Lyttons.

LANGLEY, ABBOTS.]—Abbot's Langley, the Langelai of Domesday, deriving the prefix of Abbots, from having belonged to the Abbey of St. Alban, is situated $1\frac{1}{4}$ mile E. by S. from King's Langley. The church, a spacious and handsome fabric, has a chapel adjoining the chancel on the south. Amongst several good monuments, is one in memory of 'Dame Ann Raymond, daughter of Sir Edward Fish, formerly of Southill, in Bedfordshire, Bart. and widow of Sir Thomas Raymond, Knt. one of the judges of the King's Bench to Charles the Second.' She died in 1714, in her eighty-third year, and lies interred with her three grand children, sons of Sir Robert Raymond, Knt. of Langley Bury, 'who all died within a few weeks of their birth.'

birth.' The monument displays the figure of an aged woman, sitting, with three children in cradles beneath.*

LANGLEY, KING'S.]—King's Langley, now an irregular little village, was formerly an admired residence of the English kings, who were owners of the manor. It is situated on the Gade, nearly opposite to Abbot's Langley, 20 miles W. S. W. from Hertford. Henry the Third built a palace here, in which Edmund of Langley, fifth son of Edward the Third was born. Very few traces of this building remain. Part of the site is now occupied by a mean farm house, which exhibits the ancient bake house, and some other vestiges of the domestic offices of the palace. Richard the Second passed his Christmas here, in the year 1391. He was also buried in the church at Langley; but Henry the Fifth removed his body to Westminster. A priory of Dominican, or Preaching Friars, was founded here by Roger, son of Robert Helle, an English Baron, supposed to be Robert Lucy, who lived at the beginning of the thirteenth century, and was so called because "he played the Devil with the Welsh." The buildings were afterwards enlarged, and the revenue, at the suppression, were estimated at 150*l.* 14*s.* 8*d.* Queen Mary restored this house to a prioress and nuns; but it was dissolved in the first of Elizabeth. The Priory buildings are destroyed. Great part of the manor is now the property of the Earl of Essex.

King's Langley church consists of a nave, chancel, and aisles, with a massive embattled tower at the west end, which was originally open to the nave by a pointed arch, rising from clustered columns. Among the ancient monuments in this edifice, is a very large altar tomb of free stone, in the east angle of the north aisle, having recumbent, but greatly mutilated, effigies of a knight and a lady; the latter on the right hand. The knight is in armour, with a shirt of chain work: his hands folded across his body, as in prayer. The lady has on a flowered robe, and over it a long cloak, fastened across the neck, from which is pendant a chain, and small cross. The head dress is of an angular form, of the time of Henry the Seventh. This is conjectured to be the tomb of Sir John Verney, of Pendley; sheriff of Herts and Essex in 1498. Salmon seems to intimate that it was the tomb of Piers Gaveston, the favourite of Edward the Second; but the arms are those of Verney. Gaveston was first buried among the Friars preachers at Oxford; but, afterwards,

* Nicholas de Breakspear, afterwards Pope Adrian the Fourth, is generally reputed to have been born in this parish; yet the place called Breakspears, from which his name was evidently assumed, is in the adjoining parish of St. Michael's. In his early years, his intellects appeared so dull and clouded, that he was refused the habit of a monk in St. Alban's Abbey. He then went to France, and became a canon in the Abbey of St. Rufus, in Provence, where he was afterwards chosen abbot: but the monks, disliking his administration, complained to the then Pope, Eugenius the Third, with whom he had afterwards an interview, at which he contrived to ingratiate himself so highly, that he was made Bishop of Alba, and sent on a mis-

his body was removed by the king with great pomp, and re-interred at King's Langley. Within the altar rails, on the north side, is the tomb of Edmond of Langley, son of Edward the Third, who was buried here, near the remains of his first wife, Isabel, younger daughter of Pedro, King of Castile. Opposite, on the south side of the altar, is a plain tomb of white marble; over which is a tablet, in memory of the Honourable William Glasscocks, of Aden House, in Essex, judge of the Admiralty in Ireland in the time of Charles the Second. Several slabs, with brasses, are yet remaining here: one of them, in the north aisle, has small, but neat figures of a male in a long cloak; and two females, with large hats and ruffs, of the time of Elizabeth. Below them, and over two smaller brasses, containing groups of children, nine in each, is an inscription, as follows:—

Here lyeth the Body of John Carter, late of Giffers, who had two Wives: by the first he had issue 4 sonnes, and 5 daughters; and by the second, he had issue 5 Sonnes and 4 daughters. He was buried the 9, of August, 1588.

On another slab, close to the former, is a small brass of a female, with an indent for a male figure, which is gone: the inscription records the name *Marion Carter, and Alys his Wyfe*: the former died the 11th of April, 1528. Some fragments of painted glass remain in a window of the north aisle. The church yard is extensive, and contains many tombs and sepulchral memorials; the most remarkable of which, within a space inclosed by iron rails, at the end of the south aisle, displays an elegant sarcophagus, having a circle in front, surrounding a section of a Saxon building, with the motto, "Stabilior Amicitia." above this, on a circular marble tablet, is a bas-relief of an infant Hymen, weeping, his torch inverted. This was executed in memory of Mrs. Elizabeth Crawford, of King's Langley, who died in 1703.

Langley Bury, the seat of Long Kinsman, Esq. built by the Lord Chief Justice Raymond, about the time of Charles the Second, stands on elevated ground, rising from the western bank of the Gade, nearly opposite to Hunton bridge.

LAYSTON.]—This was formerly a market town, about three quarters of a mile N. N. E. from Buntingford. The church contains many ancient slabs, but they have been mostly deprived of their brasses.

sion to convert the Pagans in Denmark and Norway. After the decease of Eugenius, in 1154, he was chosen to fill the vacant seat. Governing with a haughty and strong hand, he refused to invest the Emperor Frederic with the imperial diadem till he had prostrated himself before him, and held the stirrup of his palfrey, while he mounted. He died in September, 1159, not without suspicion of poison, though generally said to have been choked by a fly; and was buried in St. Peter's church, near his predecessor, Eugenius. His father became a monk in St. Alban's Abbey, where he lived fifty years; and, on his death, was interred among the abbots in the chapter house.

MINNA.

MIMMS.]—North Mimms, anciently the inheritance of the Magnavilles, and in the time of Edward the Third, the property of the renowned warrior, Sir Robert Knoles, lies 3½ miles S. S. W. from Bishop's Hatfield. Since the death of the late Duke of Leeds, in 1799, the manor has been sold to Henry Brown, Esq. whose seat, in North Mimms park, is a very handsome building, and its situation, and the surrounding scenery, are extremely fine. The church consists of a nave, side aisles, and chancel, with an embattled tower at the west end. Among the monuments is a grand one in the chancel, in memory of John, Lord Somers, "Baron of Evesham, and Lord High Chancellor in the time of William the Third, who died the 20th of April, 1716." On the north side of the chancel is the chapel or burial place of the Coningsbys. Several of the Botelers, of Watton Wood Hall, with whom the Coningsbys intermarried, also have memorials here.

Gobions, an estate in North Mimms parish, had its name from the ancient family of Gobion, seated here in the time of King Stephen. In Henry the Seventh's time, it was the property of Sir John More, father of the illustrious Sir Thomas More. It was afterwards settled on the Princess Elizabeth, who retained it till her death, after which it was again the property of the Mores; but has since passed through various hands. The gardens were formerly celebrated for their splendour in the ancient style.

Brookmans, another estate in this parish, was formerly the property of the great Lord Somers. The house is a respectable building, standing in a pleasant park.

MOOR PARK HOUSE.]—In the parish of Rickmansworth, eastward of the town of that name, stands Moor Park House, the splendid mansion of Robert Williams, Esq. an eminent banker, of London. The manor of the Moor, anciently parcel of the possessions of St. Alban's Abbey, having passed through numerous possessors, was purchased by Mr. Williams, in the summer of 1799. The house is a magnificent building of the Corinthian order, situated in a finely wooded park about five miles in circumference, and having two fronts, respectively towards the north and south. The principal or southern front has a very elegant and grand portico, the pediment being supported on four noble columns, each thirty-seven feet high, independent of the base and the capital; a very rich cornice, with a ballustrade above, goes round the house. The height of the ground towards the south, contracts the view; but the northern front commands an extensive prospect; the hill which had previously obstructed the sight, having been purposely lowered, about the years 1725-6, at the expence of 5000/. This was effected by B. H. Styles, Esq. who had realized a great fortune by the famous South Sea scheme; and to him also is the present mansion indebted for the chief part of its grandeur. It was originally constructed

of brick, as reputed, at the expence of the unfortunate Duke of Monmouth, to whom the estate once belonged; but Mr. Styles had it entirely new cased and fronted with Portland stone; and having built the magnificent portico, erected two wings for the chapel and offices, and connected them with the centre by colonnades of the Tuscan order. His architect was the celebrated Italian, Giacomo Leon; but Sir James Thornhill, who painted the saloon, acted as surveyor of the building. The expence of the carriage of the stone from London, amounted to upwards of 13,800/. and the entire expence, including the improvements in the park, was more than 150,000/. Further improvements were made by its subsequent possessors, Lord Anson, and Sir Lawrence Dundas; the latter of whom fitted up and ornamented the ball room in a superb style, at the cost of about 10,000/. Mr. Rous, the predecessor of Mr. Williams, who had been a director of the East India Company, retired hither with an inadequate fortune, and afterwards found it expedient to pull down the wings, for the sake of disposing of the materials. The central part of the mansion was, however, left untouched, and now forms one of the most elegant residences in the county. Its internal parts are uncommonly rich, and have an air of grandeur, at once interesting and dignified. The hall is a spacious square apartment, splendidly ornamented with paintings, marble door ways, military trophies, &c. the latter formed of a composition resembling stone. The chief paintings are contained in four large compartments, below a rich gallery, and represent the principal circumstances in the Story of Io and Argus. These paintings are, in general, well executed; and the circumstances of the story are treated with propriety and judgment. The sides of the gallery are ornamented with paintings in fresco, in imitation of several of the most celebrated statues. The ceiling, painted to represent a dome, has an excellent effect. The saloon is a well proportioned and handsome room, wainscotted with oak, and decorated with paintings of the Four Seasons, &c. in pannels on a grey ground. The ceiling is one of the finest works of Sir James Thornhill; but was copied from one of Guido's, in the Respighi Palace: Sir James was paid 3,500/. for executing it, but not till he had established its value by the testimony of some of the most celebrated artists, in a court of justice. The hall, or long drawing room, has a superb ceiling, decorated in square and circular compartments, with fanciful ornaments, executed with much spirit and taste. The chimney piece is of fine marble, ornamented above with several small female figures, and at the sides, with two others, as large as life, beautifully sculptured and polished. The principal staircase is well painted with various subjects from Ovid. The surface of the park being finely diversified, gives considerable interest to the scenery, which includes a great quantity of timber, particularly oak, elm, and lime; but many of the former are decayed from their tops; a circumstance that may be thought to strengthen

strengthen the tradition concerning the Duchess of Monmouth, who is said to have resided here at the time of the death of her unfortunate husband; and immediately on hearing of that event, to have ordered the heads of all the trees to be struck off! The grounds at Moor park were originally laid out by the celebrated Lucy, Countess of Bedford, in the formal style of the age; and though praised by Sir William Temple, as the "perfectest figure of a garden, and sweetest place," he had ever seen, either "at home or abroad," must have been completely tame, and insipid, from the monotonous recurrence of fountains, gravel walks, parterres, and terraces, connected with each other by descents of many stone steps and ballusters. This formality has been long destroyed, and the scenery has proportionably improved, as nature has been unshackled, and true taste suffered to regain her rights. These improvements were principally made by Lord Anson, who expended about 80,000*l.* in his alterations. He destroyed the pleasure garden so much praised by Sir William Temple, and had the present one laid out at a little distance from the house on the south side. Here, in the vicinity of a circular bason, he planted a fine grove, or wilderness of cypress, laurel, firs, &c. His lordship also formed the kitchen garden, and planted in it the celebrated Apricot called the Moor Park, from which the others of that name are derived. The person employed by Lord Anson, in effecting these alterations, was the celebrated capability Brown.

MUNDEN.]—Great Munden, or Munden Farnival, lies $2\frac{1}{2}$ miles W. N. W. from Puckeridge. Little Munden or Munden Frewell, is $3\frac{1}{2}$ miles W. from Puckeridge. At Rownea, in the former parish, was a Benedictine nunnery, founded about the year 1163, by Conan, Duke of Bretagne. After the suppression, the priory buildings were converted into a farm, and the hall yet remains: the site of the chapel may also be traced near the farm house. In the church of Little Munden, beneath the arches between the chancel and a chapel on the north side, are two ancient altar monuments, on each of which are the effigies of a knight in armour, and his lady, both unknown.

NEWCELLS.]—Newcells, or Newsells, a manor in the parish of Barkway, already described, is in the family of Lord Selsey. Cocken-latch, an adjoining manor, is thought to have derived its name from a Saxon, named Cockenach, who possessed it before the Conquest. The mansion, recently occupied by the Lady of Sir Francis Wills, is rather a singular structure, standing in a pleasant park. In a chalk pit in Rockley Wood, not far from Newcells, was found, in the year 1743, a brass figure of Mars, with a brass handle, and seven thin plates, having a figure of Vulcan engraven on two of them, and on each of the others, a Mars: on two of the latter were also inscriptions. The word Alatorum, in one of them, was referred by Mr. Ward, who communicated an account of the discovery to the Royal

VOL. III.—NO. 92.

Society, to the Cartra Aleta, of Ptolemy, or Edinburgh; and he supposed the plates to have been ornaments on a shrine of Mars about the time of Dioclesian.

OFFLEY.]—Great Offley, or Offley St. Legers, three miles W. S. W. from Hitchin, is thought to have received its former appellation from the Mercian King, Offa, who had a palace here, in which he died. Subsequently to the Domesday Survey, the manor was granted to the family of St. Leger; and, after passing through several possessors, it came to the Spencers, and Salusbrys. Sir John Salisbury, LL. D. Judge of the High Court of Admiralty, in the year 1773, bequeathed it to Sarah, his second wife, for her life, with remainder to Robert Salusbury, Esq. of Llanwerne, in Monmouthshire, who was afterwards created a baronet, and on the death of Lady Salusbury, in June, 1804, became possessed of this estate. The situation of Offley is high and commanding. The manor house, called Offley Place, is a large and interesting building, erected by Sir Richard Spencer, about the year 1600.

Offley church consists of a nave, chancel, and side aisles; with a tower at the west end: the chancel was rebuilt by Sir Thomas Salusbury. Many of the Spencers have been interred here; and at the entrance of the chancel, on tablets of black marble, is the following inscription relating to the family:—

In memory of that branch of the SPENCER family settled at Offley. Sir John Spencer, from whom the present Earl of Sunderland is descended, settled his eldest son at Althorpe in Northamptonshire; his second son, Sir Thomas Spencer, at Clarendon, in Warwickshire; his third son, Sir William Spencer, at Yarnton, in Oxfordshire; and Anno Dom. 1554, purchased the manors of Offley St. Leger's and Cockern Hoo; which he settled upon his fourth son, Sir Richard Spencer, in 1577, who married Helen, the fourth daughter and co-heir of Sir John Bocket, of Bocket Hall, by Helen, his first wife, daughter and co-heir of Sir Robert Litton, of Knebworth. He built Offley Place about the year 1600, and died in November, 1624; and was succeeded by his son, Sir John Spencer, who married Mary, daughter of Sir Henry Andersop, of Pendley, &c.

In the chancel against the north wall, is a costly monument of various coloured marbles, in memory of Sir Henry Penrice, LL. D. and Elizabeth his lady: the former died in 1732. On a pedestal is a sarcophagus of black marble, above which, is a figure of truth, of statuary marble, sitting on a rock, with a torch in her right hand, and a laurel wreath in her left; and round her different symbols, in allusion to the functions of Sir Henry, who, besides being a judge of the Admiralty court, was chancellor of the diocese of Gloucester: on a medallion above, are busts of the deceased, with their arms.—On the south side of the chancel is a very fine monument, by Nollekens, in memory of Sir Thomas Salusbury, LL. D. who died in 1773.

N

His

His figure is represented standing, on an inscribed pedestal of white marble, and receiving a chaplet of laurel from the hands of his surviving lady. Behind is a sarcophagus of black marble, with the trunk of a blasted oak rising above, on the extended arms of which is thrown a mantle that falls down to the ends of the sarcophagus. In the north aisle is an elaborate monument of white marble, in commemoration of Sir John Spencer, Bart. who died a bachelor, at Tunbridge, in 1699. The deceased is represented by a recumbent figure of a youth in a Roman dress, resting his right elbow on a cushion, and his left hand on his breast; he is looking up to an aged matron (his mother,) who is kneeling at his feet, and pointing to two angels in the clouds, one of whom has a palm branch, and the other a celestial crown. At the top are the arms of Spencer; and at the bottom, a long inscription. This church contains several other neat monuments of different families.

PANSHANGER.]—In the neighbourhood of Hertingfordbury stands Panshanger, the delightful seat of Earl Cowper. It became the family residence only a few years ago, the more ancient seat being Coln Green, at a little distance to the south-west. The house at Coln Green has been taken down since the decease of the fourth Earl Cowper, in 1799. The situation of Panshanger is extremely fine; and the grounds, though small, are pleasant, being enlivened by the vicinity of the Maran, which flows on the south-west side. Amongst the oaks is one which has been named the Great Oak for upwards of a century: it is now a very healthy and luxuriant tree, and measures eighteen feet in girth; at about four feet from the ground: the lowermost branches issue at about the height of twelve feet.

PELHAM.]—The adjoining parishes of Brent Pelham, Furneux Pelham, and Stockin Pelham, formerly united, lie between six and seven miles to the eastward of Buntingford. The name of Furneux Pelham was derived from the family of Furneux, Lords of the manor; that of Brent Pelham, was obtained from a fire in the reign of Henry the First, which nearly destroyed the whole place, together with the church; and that of Stockin Pelham, was given from its being situated adjacent to a wood, that had been grubbed or stocked up. Brent Pelham church is a small structure, with a tower at the west end; the chancel is of brick work. In the north wall of the nave is the curious monument of O Piers Shonkes, who is said to have been owner of a subordinate manor in this parish very soon after the Conquest; and the site of his mansion is still pointed out, surrounded by a moat, "The lower part of the tomb is of modern brick-work; but the top is covered with an ancient slab of Petworth

marble, sculptured in very high relief, with the figure of an angel, surrounded by the symbols of the Evangelists, and sustaining a festoon of drapery, out of which rises a small human figure, with his hands raised in the attitude of prayer: below this, in the centre of the slab, is a cross fleury, with a kind of branched stem, the lower end of which is entering the mouth of a dragon or serpent. This symbolical representation of the triumph of Christianity, was most probably the origin of a traditional tale concerning the person buried here, and which represents him as having so offended the Devil, by killing a serpent, that his highness threatened to secure him, whether buried within or without the walls of a church; to avoid which, he was deposited in the wall itself. Over the tomb is this inscription, which as it differs from the copies given both by Chauncy and Salmon, has most probably been renewed since their times."

O PIERS SHONKES
Who died Anno 1086.

*Tantum Fama manet Cadmi, Sanctiq. Georgi
Posthuma Tempus Edax Ossu Sepulchra vorat
Hoc Tamen in Muro tutus, qui perdidit Anguem
Invito positus Dæmone Shonkus erat.**

O Shonkes appears to have been a character much venerated, as the buttresses on the outside of the church, which bound the place of his sepulture, are marked with crosses.

The church at Furneux Pelham consists of a nave, chancel, and side aisles, with a small tower, in the centre of the structure, at the west end. In the north aisle remains a very curious piece of Gothic screen work; the ancient seat of the Newports, Lords of the Manor, covered with an elegant canopy of light tracery, carved in wood. In a burial chapel appropriated to the interment of the families of the Lords of the Manor, are the mutilated remains of several monuments for the Newports, and their predecessors, the At Lees; but all without inscriptions. On one of the tombs are brasses of a male and female under rich canopies: the former has a small sword, or dagger, at his left side, and is standing upon a shepherd's dog; his beard is forked in the fashion of the times of Richard the Second. His Lady is in the dress of the same age. The inscription and arms are gone; but the whole costume of the figures evinces this to be the monument which Weever mentions as 'fouly defaced,' in his days, and as then having an imperfect epitaph on one of the At Lee family.

PUCKERIDGE.]—The hamlet of Puckeridge, formerly a market town, nine miles N.E. by N. from Hertford, is partly in the parish of Braughing, and

* Translation:—

Nothing of Cadmus, nor St. George, those names
Of great renown, survive them, but their fames;

Time was so sharp set as to make no bones
Of theirs, nor of their monumental stones;
But SHONKES one serpent kills, t'other he defies,
And in this wall, as in a fortress, lies.

partly

partly in that of Standon. It stands on the road, and has some respectable inns.

RAVENSBURY CASTLE.]—In the parish of Hexton, already noticed, is an ancient camp, approaching to the figure of an ellipsis, and occupying the summit of a very high and steep hill on the immediate confines of Bedfordshire: it is surrounded with a single trench and rampart, and includes about sixteen acres. Dr. Stukely imagines, that the present name of this camp, is a contraction from Romansborough; but a more obvious derivation arises in supposing it to have been a Danish fortress, whence the term Ravens-bury, from the celebrated Danish standard, becomes peculiarly apposite. A contiguous piece of ground is still called Dane-furlong; and the Danes are known to have sustained a considerable defeat here in the reign of Edward the Elder. The remarkable long barrows between this place and Lea-grave, in Bedfordshire, are supposed to have been raised over the bodies of the chieftains slain in that battle.

REDBOURN.]—The populous village of Redbourn, 17 miles W. by N. from Hertford, extends about half-a-mile on the road to Dunstable, and is chiefly supported by the passage of travellers. The church, which was rebuilt by Abbot Whethamsted, in the time of Henry the Sixth, stands at some distance from the village, on the west. On Redbourn Green, the relics of St. Amphibalus, the instructor of St. Alban, are said to have been dug up, with the bones of many of his fellow-sufferers, in the year 1178, and to have been translated with much solemnity, to St. Alban's, where a sumptuous shrine was prepared for their reception. A small priory, or cell of Benedictines, subordinate to St. Alban's abbey, was founded here previously to the year 1195, and dedicated to St. Amphibalus.

RICKMANSWORTH.]—The market-town of Rickmansworth, or it is sometimes called, with more propriety, Rickmersworth, lies 24 miles S.W. by W. from Hertford, and 17½ N.W. by W. from London. This town, which enjoys a population of about 3230, occupies a low moorish situation near the confluence of the Gade and Colne, and the small rivulet, which flows from Chesham and Flanden, in the county of Buckingham. This situation renders it very convenient in trades that require the aid of water; and several mills, for various purposes, have been erected in its neighbourhood. At the entrance of the town from the south, is a large cotton and flour-mill; a flock mill, and a silk-mill, stand at a little distance to the west: and towards the north, on the rivulet that flows from Chesham, are several paper-mills, &c. The manufacture of straw-plat furnishes additional employment, particularly to girls and women. The market-house is a mean wooden fabric, supported on pillars, and open beneath. The market, formerly celebrated for its corn trade, though toll free, is now little frequented. The town

is governed by two constables, and two headboroughs. The manor was ancient demesne of the Saxon Kings, and was given, by Offa, to the abbey at St. Albans. It had the charter of a weekly market, and two annual fairs, granted it by Henry the Third. Edward the Sixth gave the manor to Ridley, Bishop of London; and Queen Mary bestowed it on Bishop Bonner. It was finally sold by Charles the First, to Sir Thomas Fotherley, whose family became extinct by the dreadful event of its possessor being swallowed up, with his only daughter, in the great earthquake at Jamaica, in 1694. He bequeathed the reversion of this manor to his nephew, Temple Whitfield, Esq. whose descendant, Henry Fotherley Whitfield, Esq. is now owner; and whose mansion, called the Bury, an irregular brick edifice, nearly adjoins the church-yard, on the west side.

Rickmansworth church is a spacious building, consisting of a nave, aisles, and chancel, with a handsome embattled tower of hewn flints at the west end. This edifice was repaired in 1677, and again in 1802, and 1808: the large gallery which is at the west end, was probably erected about the former period. Here are many funeral memorials.—Against the north wall of the chancel, is a mural monument in commemoration of Sir Thomas Fotherley, Knt. a Gentleman of the Privy Chamber to Charles the First, and of his son, and grandson. A slab on the floor also records the memory of several others of his family. In the east part of the south aisle, are three very large altar-tombs, inclosing the remains of different individuals of the families of Colte, Salter, and Whitfield, all of this town. In the north aisle, is a very neat mural monument, in memory of Timothy Earle, Esq. of Moor House, who died in 1787; and of Dorothy, his wife. A marble tablet against the north wall, records the memory of Admiral William Bladwell, of Money Hill, in this parish, who died in 1783.—In the middle of the nave is a stone, formerly inlaid with brasses, of a man standing between his two wives; but one of the latter was stolen during the last repairs: beneath is an inscription as follows:—

Here lyeth buried under this stone	Alice	} Decesed	{ the 10th of July, 1585.
The Body of THOMAS DAY	Joane		
And his two wives, Alice and Joane;	Thomas		
— The times here see you may.			
			{ the 10th of July, 1613.

These three, no doubt, had faith in Christ, their sins for to forgive,
And they can tell, that knew them well, ye poore they did relieve.

ROYSTON.]—The market-town of Royston, partly in this county, and partly in that of Cambridge,* lies 20 miles N. by E. from Hertford, and 37½ from London. Its history has been much disputed, particularly by Dr. Stukely; and the Rev. Charles Parkyn; both of whom, however, concur, in supposing it to have been occupied by the Romans.—Dr. Salmon appears to think it of Saxon origin;

* Vide MODERN PANORAMA, Vol. I. page 262.

but as deriving its name from the Danish mode of sepulture, called Royser, or At Royse, which consisted in burning the body, and depositing the ashes under a large tumulus or barrow: in support of this conjecture, he refers to the number of barrows scattered over the adjacent downs. Camden says, that it first rose in the Norman times, and derived its name from the Lady Roisia, who erected a cross by the road side, to remind passengers of Christ's passion: and Weever and Chauncy concur in this statement. That the origin of the town was as thus represented, seems extremely probable. Only a few remains of the priory buildings, mentioned in our Cambridgeshire account, are now standing, with the exception of the church. Besides the priory, there were two other religious foundations at Royston. One of them, an hospital, dedicated to St. Nicholas, was founded as early as the time of King John; but no particulars concerning it, are known. The other, also an hospital, or free chapel, was in existence as early as the year 1227. Some of its remains are now to be seen in a dwelling-house. James the First had a palace, or hunting-box, in this town, which he frequently visited, and wherein he signed the perfidious order for the apprehension of his favourite, Carr.* It was recently the habitation of a carpenter.

Immediately beneath the market-place, is the cave, a kind of subterraneous crypt, or oratory, dug out of the solid chalk, and having originally a perpendicular aperture rising to the street, and communicating with the upper part of the cavity. This was of a circular form, about two feet in diameter, and had been closed by a mill-stone, which was accidentally discovered in August, 1742, by driving a post into the ground, as the foundation of a bench for the market-women. The aperture, or descent, had holes for the feet cut into the chalk on each side; but as the lower part of the crypt was found to be filled with loose earth and rubbish, this passage was quickly enlarged, that the interior might be cleared with more celerity, the curiosity of the towns-people being strongly excited by the hope of discovering some hidden treasure. About two hundred loads of earth were drawn out before the cavity was entirely cleared; but the zeal of the labourers was repaid only by the finding of a skull, and other human bones, for the most part very much decayed. The interior of this very curious, and probably unique, subterraneous apartment, is completely circular, finishing in a kind of dome above, broken only by the original entrance. Round the lower part of the sides is a series of rude carvings of the Crucifixion, St. Christopher, St. Catherine, St. Lawrence, and various other subjects in sacred and profane history. These are supposed, by Dr. Stukely, to have been cut by the Lady Roisia, whom he imagines to have had this place made as an ora-

tory and burial-chapel for herself; and that the skull, and other bones, found here, were really her remains. These opinions were controverted by the Rev. C. Parkyn, who maintained, that the Lady Roisia was buried in the chapter-house at Chick-sand, in Bedfordshire: a priory of her own foundation, to which she retired in the latter part of her life; and that this cell, or crypt, was a hermitage long before Roisia was born, and that it continued so long after her death. The bottom of the crypt is surrounded by a raised seat about one foot high, and between two and three wide, but divided on the east side by a hollow place, called the Grave. The present entrance is by a regular descent, or passage, formed in the chalk from an adjacent house, and nearly 100 yards in length. The diameter of the crypt is about 25 feet; its height, between 30 and 40.

The church, at Royston, consists of a nave, chancel, and aisles, with a low tower, embraasured. Before the altar is a slab, inlaid with a brass, representing a cross with the five wounds. Several other slabs are in this church, but the brasses are mostly gone. Here is also an ancient figure of a Knight, with his head resting on a cushion, and his hands closed as in prayer. The population of this parish, according to the late returns, was 1309: the houses are principally of brick, and the streets are narrow.

The Royston crow, described by Pennant, as coming into England about the beginning of winter, and leaving it with the woodcocks, is very plentiful on the chalk downs, in this neighbourhood. These birds breed in Sweden, in the south parts of Germany, and on the Danube. The head, the under part of the neck, and the wings, are black, glossed over with a fine blue; the breast, belly, and back, are of a pale ash colour: the bottoms of the toes are broad and flat, the better to enable them to walk on marshy grounds.

RUSSEL FARM.]—This pleasant seat, about two miles N. from Watford, was the residence of the late Lady Ann Capel, and subsequently, of General Ross.

SACOMBE.]—The manor of Sacombe, four miles N. by W. from Ware, belongs to George Caswall, Esq. The ancient manor-house, which was situated in Sacombe Park, was pulled down by the late Mr. Caswall, who erected the present residence of the family, called Cold Harbour, at some little distance.

SAWBRIDGEWORTH.]—The little market-town of Sawbridgeworth, or Sabridgeworth, corruptly called Sabsey, and Sabsworth, is situated 12 miles N. by E. from Hertford, and 25½ N.N.E. from London. The population is about 1800. The manor was granted by the Conqueror to Geoffrey de Magnaville; but it appears to have derived its name from

* Vide MODERN PANORAMA, Vol. I. page 262.

William de Say, its possessor, in the time of Richard the First. Earl Hardwicke is now the proprietor.

Sawbridgworth church consists of a nave, chancel, and aisles, with a massive tower, embattled, at the west end. The monuments are numerous; and among them are some very fine ancient brasses.—Among the latter, in a small chapel, connected with the south aisle, are two full-length figures, represented as completely emaciated, and in winding sheets; these are extremely well-drawn, and appear by the arms, to be of the family of the Plantagenets. In the chancel, is a good altar-tomb of Bethesden marble, with a rich canopy, in the pointed style: beneath it, are indents of brasses, which have evidently delineated a Knight kneeling before a representation of the Trinity, and behind him the figures of his two wives, one of whom appears to have had four, and the other three children. This is said to have been erected in memory of Sir Ralph Jocelyn, Knt. twice Lord Mayor of London, whose family became seated at Hyde Hall, in this parish, as early as the 38d of Henry the Third, by the marriage of Sir Thomas Jocelyn with Maud, a daughter and co-heiress of Sir John Hyde. Amongst the other monuments, are several to the memory of the Hursts, formerly lords of this manor, and of Pishobury; whose burial-vault is beneath the entrance to the chancel. The figure of George, Lord Hewit, who died in 1689, is represented in armour, standing upright, and surrounded by trophies. Sir Walter Mildmay, Knt. and Mary, his wife, daughter of Sir William Walgrave, Knt. of Smallbridge, in Suffolk, were also buried, and have a monument in this church.

The manor of Pishobury, in this parish, was granted by Queen Elizabeth, to Walter Mildmay, Esq. afterwards Sir Walter, who erected a mansion here for his own residence. It has passed through various families to that of Milles. The situation of the house and grounds is very pleasant; the river Stort nearly encircles it on the south and east.

SHENLEY.]—The village of Shenley, five miles N.W. from Chipping Barnet, consists principally of a few buildings near the church, which is constructed of squared flint and brick. Among the sepulchral memorials, is one in memory of the Rev. Philip Falle, the historian of Guernsey and Jersey, rector of this parish about the beginning of the last century. The parsonage, or rectory-house, is delightfully situated about two miles southward from the church, on a commanding eminence, from which the view to the north is very extensive, and beautiful.

Colney House, now, or recently, the seat of George Anderson, Esq. in this parish, is about a mile S.W. from London Colney. Formerly this estate constituted part of the extensive manor of the Weald, or Wild, and had the name of Colney chapel, as supposed, from a religious edifice thought

to have stood on a small piece of land in the park, which is still surrounded by a moat. The present mansion, built with Tottenhoe stone, was erected about 35 years ago, by Governor Bouchier, at an expense of about 53,000*l.* including the charges for laying out the pleasure-grounds, &c. It is a handsome and regular structure, with wings, and two fronts; the principal of which faces the east, and has a semi-circular portico at the entrance, surmounted by a half-dome. The west front is diversified by a uniform projection on each side the door-way, finished by a balustrade. The principal apartments are fitted up with taste and elegance. The chimney-pieces are all of marble, and the doors of mahogany. The offices are connected with the house by an underground passage; and, though nearly as large as the body of the mansion, are completely concealed by a plantation of evergreens, and other hardy trees. The park, comprising about 150 acres, contains some fine oak and elm timber. The pleasure-grounds are extensive, and well stocked with fruit trees. The green-house, a large range of building, is full of choice plants, both indigenous and exotic. This estate was sold by Governor Bouchier to the late Margrave of Anspach, who disposed of it to the Earl of Kingston; of whom it was purchased by Mr. Anderson, in the year 1804.

Porters, the delightful seat of the Marchioness of Sligo, in this parish, is an irregular mansion, in a small, but pleasant park, commanding some bold and extensive prospects to the west and north. This estate, like that of Colney, was formerly part of the manor of the Weald.

SIFFIVERNES.]—At Siffivernes, in Codicote parish, two miles N.N.W. from Welwyn, in the year 1627, was a remarkable walnut-tree, covering 76 poles of ground. The weight of the boughs at last cleft the trunk to the ground. Mr. Penn, then lord of the manor, had 19 loads of planks out of it; a gun-stock maker, at London, had as much as cost 10*l.* for carriage; there were 30 loads more of roots and branches. Mr. Penn declared, that he had been offered 50*l.* for the tree; and Jasper Docura attested, that when he was fifteen years old, the compass of both his arms would not reach round it at eight times. In the year 1720, or 1724, between Codecot and Henxworth, various Roman antiquities were found by some workmen, in digging gravel; among them were large urns, full of burnt bones and ashes; some pateræ of fine red earth, with names impressed on the bottoms; glass lachrymatories, rings, beads, and fibulæ. Several human skeletons were also discovered within about a foot of the surface; and, near them, urns of different sizes.

STANDON.]—The market-town of Standon lies 11½ miles S.E. from Puckeridge, and 26½ N.N.E. from London. The population, according to the last returns, was 1189. The manor, now, or recently, the property of William Plumer, Esq. M.P. was granted, by Henry the Eighth, to Ralph Sadleir,

leir, Esq.* whose eldest son, Sir Thomas, had the honour of entertaining James the First at Standon, for two nights, during his progress from Scotland to London. Ralph, the son of Thomas, married Ann, daughter of the Lord Chief Justice, Sir Edward Coke, but had no issue; indeed, the tradition of the place represents him as never having consummated the wedding, though he lived upwards of 59 years with his wife, 'in good correspondence, and in the same house.' Gertrude, his sister, succeeded him in the possession of Standon: she was married to Sir Walter Aston, Bart. The co-heiresses of the last Lord Aston, sold the estate and manor, between 30 and 40 years ago, to William Plumer, Esq. The ancient mansion of the Sadleirs, is now a very fine ruin, mantled with ivy. After it ceased to be the residence of the Lords Aston, it was converted into a seminary for Roman Catholics; but, when the manor was purchased by Mr. Plumer, that gentleman refused to suffer its continuance on his estate. The establishment was removed, therefore, to Old Hall Green, at a little distance, where a spacious building has been erected for its accommodation.

In this parish, about half a mile eastward from the church, was a preceptory of Knights Hospitallers, built on lands given to that order, by Gilbert de Clare, in the time of King Stephen: the site, and some of the remains of this building, are now connected with a farm, called Friars. A hermitage, founded at Standon, in the time of Richard de Clare, was given by him to the monks of Stoke, in Suffolk, and afterwards became a cell to that house.

Standon church contains many monuments, and sepulchral memorials. In the chancel, are the monuments of the Sadleirs. Against the south wall, is the tomb of Sir Ralph Sadleir, whose effigies is represented in armour, lying beneath a canopy; with his sons and daughters kneeling below.

Walter, second Lord Aston, was buried here, with several of his family. On a tablet, in the vestry, is an inscription in memory of Ann, eldest daughter of Sir Edward Coke, Knt. "by his first and best wife, Bridget Patson, daughter and heiress of John Patson, of Norfolk, Esq. and wife to Ralph Sadleir, Esq." Among the many other sepulchral memorials in this church, is one in com-

memoration of Philip Astley, Esq. which, in Salmon's time, had brass figures of himself, his four wives, and ten children. He died in July, 1491.

On an eminence, called Haven End, in this parish, are two large barrows, supposed by Salmon, to have been raised by the Danes. In the neighbouring parish of Widford, are two other barrows.

STANSTED.]—Stansted Abbots, recorded in Domesday, as a borough town, governed by a portreeve, with seven burgesses, is now only an inconsiderable village, 2½ miles N.E. by E. from Hoddesdon. The church contains several old monuments. In this parish stands the Rye House, a building of some celebrity, having been tenanted by one of the persons engaged in the real or pretended conspiracy to assassinate Charles the Second, and the Duke of York, on their return to London from Newmarket. The Rye House was originally built under a licence from Henry the Sixth, granted to impark the manor of Rye; and to erect thereon a castle, with battlements and loop-holes. The same licence gave liberty of free warren in this, and the neighbouring manors of Stansted, Amwell, Hoddesdon, Ware, and Widford. Some remains of the ancient structure, principally consisting of a gate-house, are yet standing; and have for many years been converted into a workhouse for the poor of Stansted.

In the adjoining parish of Stansted-le-Thele, was formerly a college or chauntry, for a master and four secular priests, founded by Sir William de Golder-ton, in 1315. In the 15th century, the college was dissolved, and its possessions annexed to the priory of Elsing Spittle, in London.

STEVENAGE.]—Stevenage, anciently called Stigenhauce, and Stigenhaught, from its situation on a hill, is a respectable little market-town, on the high north road, 12½ miles N.W. by N. from Hertford, and 31½ N.N.W. from London. It consists of one large and several smaller streets. The population, in 1811, was 1802. The church is a small structure, consisting of a nave, chancel, and aisles, with a small chapel on each side the chancel, and a tower at the west end: two niches for holy water remain near the altar.

About three miles S. E. from Stevenage is the village and manor of Aston, ancient demesne of the Saxon Kings. Henry the Eighth granted the manor to Sir John Boteler, of Walton Wood Hall. The

* This gentleman was a native of Hackney, in Middlesex; and, having been educated under Cromwell, Earl of Essex, he became his secretary. While in this situation, he attracted the notice of the King, who received him into his own service, in the 26th of his reign; and, within four years afterwards, he was appointed a principal Secretary of State, and employed on different negotiations with the Scottish court. Henry made him one of the executors to his will; and soon after the accession of Edward the Sixth he was knighted. In the same year, 1547, he accompanied the Protector, Somerset, to Scotland, as Treasurer for the army; and was present at the decisive battle of Musselburgh, fought on September the 10th: in this battle, his bravery was so eminently conspicuous, and tended so much towards the success of the day, that he was constituted a knight

banneret on the field, with Sir Francis Bryan, and Sir Ralph Vane. The banner of the King of Scots was taken by Sir Ralph Sadleir in this battle; and, after his death, was placed near his monument in Standon church, where the pole of it still remains. After the accession of Queen Mary, he resigned his employments, and retired to this estate, where he rebuilt the manor-house on the site of the former one. In the reign of Elizabeth, he was again very actively employed in state affairs, and was a member of all the committees of Parliament for the trial of the Queen of Scots. He died at Standon, in March 1587, having represented this county in various Parliaments, from the 33d of Henry the Eighth, to the 28th of Elizabeth; leaving three sons, and four daughters.

house now standing at Aston Place, indicates earlier antiquity than the time of that sovereign.

About three quarters of a mile southward from Stevenage, on the eastern side of the high road, are six large barrows, thought to be of Danish origin. Two of them have been opened, but were not found to contain any thing of consequence.

STORTFORD.—The market town of Bishop's Stortford is 14½ miles E. N. E. from Hertford, and 30 N. N. E. from London. It derives its name from its situation on the Stort, and from having been the property of the Bishops of London from the Saxon time. During its temporary alienation from the see, in the time of King John, that prince erected the town into a borough; but, since the 14th of Edward the Third, no return has been made. The bishops now appoint a bailiff to exercise jurisdiction throughout the extent of their liberty. The town is in form of a cross, the two principal streets crossing each other at right angles. Its extent is considerable, and many improvements have been made here of late years. The trade of the town has also been increased by a canal, completed about the year 1769. In the High Street is a square building, having the market place and shops beneath, and a Grammar School above, connected with a library; and writing school: this was erected about the commencement of the last century. Here are some good inns, and many of the houses are respectable buildings. Various small donations and bequests have been made to this parish for charitable purposes. The population, in 1811, was 2630.

The church, situated on a commanding eminence, consists of a nave, chancel, and aisles, with a tower at the west end. The monuments, and sepulchral tablets, are numerous; many of them record the family of the Denuys, of Waltham Abbey, in Essex. In the chancel are several ancient stalls. Eastward of the town are some remains of an ancient castle, called Waytemore, on a piece of ground environed by the Stort. This was probably built by the Saxons on the site of a Roman camp, as Roman coins, of the Lower Empire, have been found in the castle garden. King John ordered it to be demolished; but some of the out buildings, and other parts appear to have been standing in the seventeenth cen-

tury; and the bishops continued to appoint a custos, or keeper of the 'Castle and Gaol of Stortford,' till the time of James the First. Some remains of the lower walls are yet to be seen in the cellar of an ale house below the Castle Hill. Quit-rents, for castle guard, are still paid to the see of London, from many adjacent manors.

TEMPLE CHELSING.—At this place, in the parish of Bingham, a mile N. N. E. from Hertford, was a preceptory of Knights Templars, the site of which surrounded by a moat is still visible.

TEWING.—The village of Tewing, or Tewin, 3½ miles E. S. E. from Welwyn, was anciently parcel of the lands belonging to St. Alban's Abbey. Subsequently to the Conquest, it gave name to the family of Tywinge; but, about the time of Henry the Third, it appears to have been given to the canons of St. Bartholomew, in London; and, after the Dissolution, was granted, by Henry the Eighth, to John Cock, Esq. of Broxbourn. Frances, elder daughter and co-heiress of his son Henry, sold the manor to Richard Hale, Esq. in Queen Elizabeth's time; and his younger son sold it to William Cecil, Earl of Salisbury. He settled the estate on William, his third son, of whose grandson it was purchased by James Fleet, Esq. son of Sir John Fleet, Lord Mayor of London. He died in 1733, and bequeathed it to his widow for her life. She soon afterwards married Joseph Sabine, Esq. a general officer under the Duke of Marlborough, who was afterwards killed at the battle of Fontenoy. She married, thirdly, in 1739, Charles, eighth Lord Cathcart, who died the following year. Her fourth and last husband, was Lieutenant-Colonel Hugh Macguire, whom she survived; but, during the greater part of the time from the period of her marriage to him, to that of his death, he kept her in obscure and severe confinement, in a remote part of Ireland.* She died at the age of ninety-eight, in August, 1789, and was buried in Tewing church. The reversion of the manor was purchased by William, Earl Cowper, whose descendant, the present earl, is now owner. The ancient manor-house of Tewing stands at the bottom of a hill, on the north side of the Maran, about 300 yards south-west from the church; it is now inhabited by a farmer.

* In Miss Edgeworth's novel of Castle Rackrent, appears the following note, by that lady's brother, who mentions that he was acquainted with Colonel M'Guire, and had questioned the maid-servant, who lived with the Colonel during Lady Cathcart's confinement. "Her ladyship was locked up in her own house for many years; during which period her husband was visited by the neighbouring gentry; and it was his regular custom at dinner, to send his compliments to Lady Cathcart, informing her, that the company had the honour to drink her ladyship's health, and begging to know whether there was any thing at table that she would like to eat. The answer was always—Lady Cathcart's compliments, and she has every thing she wants. At Colonel M'Guire's death, her ladyship was released.—When she was first told of her husband's death, she imagined that the news was not true, and that it was told only with an intention of deceiving her. At that period, she had

scarcely clothes sufficient to cover her; she wore a red wig, looked scared, and her understanding seemed stupified. She said that she scarcely knew one creature from another. Her imprisonment lasted above twenty years.—An instance of honesty in a poor Irishwoman, deserves to be recorded. Lady Cathcart had some remarkably fine diamonds, which she had concealed from her husband, and which she was anxious to get out of the house, lest he should discover them. She had neither servant nor friend to whom she could entrust them; but having observed a poor beggar woman, who used to come to the house, she spoke to her from the window of the room in which she was confined, and obtaining her promise to do what she desired, she threw a parcel containing the jewels to her. The poor woman carried them to the person to whom they were directed; and several years afterwards, when Lady Cathcart recovered her liberty, she received her diamonds safely."

Tewing

Tewing House was rebuilt in a magnificent manner, by General Sabine, who embellished it with paintings of the battles of the Duke of Marlborough. He was buried in the church yard of Tewing, where a noble marble monument was erected to his memory; which becoming greatly damaged by the weather, and ill-usage, has been since removed into the church. Lord Cowper purchased the mansion and estate, in the year 1800. Marden, another beautiful seat in this parish, also belongs to Earl Cowper.

THEOBALDS.]—In the hamlet of Theobald Street, about a mile S. from Cheshunt House, is Theobalds, the noble park and seat of George Beeston Prescott, Bart. whose grandfather, George Prescott, Esq. purchased the estate, in the year 1762, from the late Duke of Portland, to whose ancestor, the Earl of Portland, it was granted by William the Third. Here Cecil, the great Lord Burleigh, erected a magnificent mansion, with extensive gardens, in which he seems to have anticipated all the absurdities ascribed to a taste supposed to have been long after imported from Holland. "The garden," says Hentzner, "is encompassed with a ditch, filled with water, and large enough to have the pleasure of rowing in a boat between the shrubs: it was adorned with a great variety of trees and plants, labyrinths made with much labour, a jet d'eau, with its bason of white marble, and with columns and pyramids." The great garden contained seven acres of ground; besides which, there was the pheasant-garden, privy-garden, and laundry-garden. "In the former, were nine knotts, artificially and exquisitely made; one of which was sett forth in likeness of the King's armies." The stables stood on the road leading from Waltham Cross to Cheshunt. On the west side of the road, was the camel stable, 63 feet in length: on the east side, were two stables, each 110 feet; and a barn, 163 feet in length. Lord Burleigh was one of the greatest contributors of his time to the science of botany, then in its infant state. He patronised that distinguished botanist, John Gerrard, and collected the greatest variety of plants ever before seen in a private garden. Queen Elizabeth paid this nobleman twelve visits at this place; each of which cost him from 2 to 3000*l.* her stay being prolonged from three weeks to a month, and even six weeks. Her first visit was on the 27th of July, 1564. This was repeated in the year 1571, when Lord Burleigh presented her Majesty with a complimentary ode, and "a portrait" of the house. She visited him in the years 1572, 1575, 1577, and 1583, which last was a visit of but four days' duration, her retinue being very large. The four remaining visits were paid in 1591, 1593, 1594, and 1596; of this last, mention is made by the Earl of Monmouth. Lord Burleigh left this seat to his younger son, Sir Robert Cecil, afterwards Earl of Salisbury. In the time of this nobleman, James the First having rested here one night, as he was travelling to London, to take possession of the crown, was so fascinated with the beauty of the

place, that he exchanged with him the manor of Hatfield for this, and afterwards enlarged the park, which he surrounded with a wall, of ten miles in extent. This park became a favourite residence of James, and was often visited by him, on account of its vicinity to Enfield Chase. Here this monarch breathed his last upon the 27th of March, 1625.

Charles the First occasionally resided here. The petition from the two Houses of Parliament was presented to him here; and, from this place, he shortly afterwards set out to erect his standard, and head his forces at Nottingham. In the civil war, which immediately followed this procedure, Theobalds was plundered and defaced. In 1649, when it was debated whether the crown-lands should be sold or not, it was at first agreed to except this estate; a subsequent vote, however, condemned it. The Parliamentary commissioners reported it to be, in 1650, "an excellent building, in good repair, by no means fit to be demolished." Its annual value, independent of the park, was stated to be 200*l.* and the estimate of the building materials rated at 8275*l.* 11*s.* The park was surveyed and found to contain 2508 acres, the value of which, with six lodges erected upon the premises, and of which Colonel Cecil possessed one, was estimated at the annual amount of 1545*l.* 15*s.* 4*d.* On the Restoration, this manor was granted by Charles the Second, to George Monk, Duke of Albemarle. Reverting, however, for want of heirs male, to the crown upon his death, it was granted to William Bentinck, Earl of Portland. Previously to its being purchased by Mr. Prescott, the park had been divided into farms; and, in about three years afterwards, the remaining fragments of the ancient palace were removed to make room for the houses which now form Theobalds' Square. Mr. Prescott then inclosed a new park of about 205 acres, in which he built a handsome structure of brick, upon an agreeable eminence, commanding a beautiful, extensive, and diversified prospect. The present mansion is situated at the distance of about one mile north-west of the site of the palace; the New River runs through the park, in view of the mansion.

THROCKING.]—Two miles W.N.W. from Buntingford, is Throcking, at which was formerly a seat of the Soames, Baronets, now demolished. The estate belongs to the family of Elves, of Roxby, in Lincolnshire. It is singularly remarkable, that the Rector of Throcking has no house, nor any land, in the parish, excepting the church-yard.

TITTENHANGER.]—Tittenhanger is a hamlet in the parish of Ridge, 3½ miles N.W. by N. from Chipping Barnet. The manor was an ancient seat of the Abbots of St. Alban's, and at the Dissolution, it was granted to Sir Thomas Pope, founder of Trinity College, Oxford. From the Popes, whose family became extinct about the middle of the last century, it descended to the present Earl of Hardwicke, in right of his mother, Catherine, first wife of the Honourable Charles Yorke, Lord Chancellor

lor

lor of Great Britain; she being the sole heiress of the ancient families of Pope, Blount, and Freman. The present mansion, built by Sir Henry Pope Blount, in 1645, is inhabited by the Right Hon. Charles Yorke, brother to the Earl of Hardwicke. The old gardens have been long destroyed, and the park is converted into a farm. The house contains several family pictures of the Blounts; amongst which is a three-quarter length of Catherine, Lady Blount, by Sir Godfrey Kneller. A fine picture of Sir Thomas Pope, has been removed to Wimpole, the seat of Lord Hardwicke, in Cambridgeshire. Sir Thomas Pope Blount, Knt. with his father, William Blount, Esq. and his Lady, Frances Blount, lie buried under an altar-tomb in the neighbouring church at Ridge. In the *Cæsar MSS.* appears the following remarkable entry, after the date, 'August 31, 1603—Mr. Charles Blount, of Tittenhanger, in Hertfordshire, died in London, *felo de se*, five weeks after he had shot himself into the belly with a pistoll: for love of Mrs. Hobby, (his wives sister) who was a rich widow.'

TRING.]—The little irregular market-town of Tring, the *Trewing* of Domesday, is situated on the north-western side of the county, 30 miles W. by N. from Hertford, and 31½ N.W. by W. from London. Its population amounted, in the year 1811, to 1847. The market-house is a mean edifice, on wooden pillars, having a pillory and a cage beneath. The market is principally for corn, meat, and straw-plat. Several small donations, that have been given for the use of the poor, are enumerated on a table in the church; and a Sunday school, for about 80 boys and girls, has been established by subscription. A small old building, called the Post-house, is now inhabited by poor people. Tring contains meeting-houses for the General Baptists, Particular Baptists, Anabaptists, and Quakers.—The manufacture of straw-plat constitutes the employment of most of the females in this part of the country.

The history of Tring is distinguished by the following melancholy instance of the superstition of the vulgar. In April, 1751, a fellow who kept a public-house, in this town, imagining himself to be bewitched, by one Ruth Osborne, and her husband, harmless people, above 70 years of age, had it cried at several market-towns, that they were to be tried by ducking, on a particular day. This occasioned a vast concourse. The parish officers, who were men of sense, removed the old couple from the workhouse into the church, for security; but the blind fury of the mob was not to be appeased; for, not finding them, they demolished part of the workhouse, and seizing the governor, threatened to drown him, and burn the house. The poor creatures were

at length for the public safety delivered up; on which the mob stripped them naked, and having tied their thumbs to their toes, wrapped them in different sheets, then dragged them two miles, and threw them into a muddy stream. After much ducking, and ill usage, the old woman was thrown naked on the bank, almost choaked with mud, and expired a few minutes after. She was kicked and beaten with sticks, even after she was dead. To add to this barbarity, they put the dead witch, as they called her, into bed with her husband, and tied them together. The old man recovered, but did not appear as an evidence. For this crime, Thomas Colley, one of the most active of the rabble, suffered.*

The church is a large and well-proportioned regular building, consisting of a nave, side aisles, and chancel, with a massive tower at the west end: the walls are supported by strong buttresses, and the whole is embattled. The lower part of the tower is used as a vestry. The roof is of timber frame-work, with strong beams going across; the supporters on each side are terminated by a carved figure, each of which has a well-sculptured figure for a corbel base. One of these figures is a monkey, with a book and purse; another is a fox, with a goose; another, a muzzled bear; a sucking-pig; dogs in various attitudes; Nebuchadnezzar, in his degraded state, having a human face, with a long beard, and a lion's body, &c. This edifice was repaired about the year 1715, at the expence of William Gore, Esq. At the same period it was newpewed with oak, and the columns of the nave were painted in resemblance of variegated marble; as well as the wainscoting of the chancel, which had been previously put up at the expence of Sir Richard Anderson, Bart. of Pendley, and is embellished with Corinthian pilasters. The altar-piece represents Moses and Aaron, with tables of the decalogue, the Lord's prayer, and the creed. In the pavement, within the rails, are various slabs in memory of the Andersons of Pendley; and another in commemoration of Mrs. Elizabeth Guy, wife to Henry Guy, Esq. of whom the manor was purchased by the Gores. Against the south wall, is a handsome monument, inclosing a tablet, with a medallion of John Gore, Esq. of Bush Hill, Middlesex, who died in 1765; and, with his wife, Hannah, and their only son, John, was interred beneath.—Against the north wall, is a costly monument in memory of Sir William Gore, Knt. and his lady, Elizabeth, constructed of alabaster and black marble.

The manor of Tring was purchased a few years ago, of Thomas Gore, Esq. by Sir Drummond Smith, Bart. so created in May, 1804. Tring Park, the beautiful seat of that gentleman, consists

* This town gave birth to Robert Hill, a self-taught genius of extraordinary merit, born in the year 1699, and bred a taylor and staymaker. By indefatigable application, he acquired a sufficient knowledge of the Latin, Greek, and Hebrew languages, to be able to teach them. He died at Buckingham, in 1777. He wrote, *Remarks on the Essay on Spirit; The Character of a Jew; Criticisms on Job, &c.*

guages, to be able to teach them. He died at Buckingham, in 1777. He wrote, *Remarks on the Essay on Spirit; The Character of a Jew; Criticisms on Job, &c.*

of between 3 and 400 acres, on the south-east side of the town, pleasantly varied by bold swells, and commanding eminences. Some of the timber is particularly luxuriant and flourishing. The house is a large and convenient building: the principal apartments are spacious, and neatly fitted up: the southern windows command some extremely fine and extensive prospects over the adjacent grounds, into the contiguous vales of Buckinghamshire.—The hall is ornamented with Corinthian pillars: at the upper end, is an excellent game-piece, by Snyders; and, on each side, near the top, are six whole-length figures, in pannels, of Queen Elizabeth, Mary, Queen of Scots, General Lambert, General Ireton, and others. In the billiard-room, is a fine picture of the Maries, with the body of Christ, by Veronese; a girl with fruit; and several portraits. In a small drawing-room, opening from the hall, is a curious full-length of Queen Elizabeth, probably copied from a painting of the same Princess, by Zuccherro, mentioned by Walpole, as being preserved in the gallery at Kensington palace. The dress is fancifully imagined, and richly wrought with birds and flowers. Her right hand is placed on the head of a stag, crowned with flowers. Behind is a tree, on the branches of which swallows are perched; and, on the trunk, are inscribed the following sentences:—

*Injusta Justa Queralo
Mea Sic Mihi.
Dolor est Medicina
Dolori.*

In the corner below the tree, are these lines on a scroll:—

The restless swallow fits my restless mind,
In still renewing still reviving wrongs;
Her just complaints of cruelty unkind,
Is all the musick that my life prolongs.

With pensive thoughts my weeping stag I crown,
Whose melancholy tears my cares express;
His tears in silence and my griefs unknown,
Are all the phisick that my harms redress.

My only hope was in this goodly tree,
Which I did plant in love, bring up in care:
But all in vain, for now too late I see
The shells be mine, the kernels others' are:
My musick may be plaints, my phisick tears,
If this be all the fruit my love-tree bears.

* The parish and neighbourhood of Walkern were greatly agitated, about the commencement of the last century, by an alarm of witchcraft, reputed to have been exercised on the persons of two servant maids and a boy, by a poor woman, named Jane Wenham, who was tried for the crime at the Hertford assizes, before Judge Powel. Some time before her trial, the poor creature confessed herself guilty; but she afterwards accounted for this confession, as arising from fear. The jury pronounced her guilty; but the Judge reprieved her; she received a pardon from the Queen; and a gentleman in the county provided her an apartment over his stables, sent her victuals from his table, and suffered her to attend on his children. She was ever after looked upon, by the family, as an

honest good-natured woman. Mr. Bragge, in his evidence on her trial, declared, on 'the faith of a Clergyman,' that 'he believed her to be a witch;' whereupon the Judge told him, that, 'therefore, on the truth of a Judge, he took him to be no conjuror.' Judge Powel is said to have presided when another woman was arraigned on a similar ridiculous charge of witchcraft, and one of the witnesses gave evidence that the prisoner could fly! On this the Judge asked the woman if it really was so: she answered in the affirmative; when the Judge, with a promptitude of expression, which evinced the superiority of his understanding, told her, 'So she might, if she would; he knew of no law against it.'

Tring Grove, to the north-east of the town, is the pleasant residence of — Broadwood, Esq. brother to Lady Dashwood, of Halton.

WALDEN.]—King's Walden lies 4½ miles S.S.W. from Hitchin; and Paul's Walden, is 5½ miles W.N.W. from Welwyn. G. W. Hall, Esq. the proprietor of the former manor, is the descendant of Richard Hale, by whom it was purchased in the reign of Queen Elizabeth. The mansion stands in a small well-wooded park. The manor of Paul's Walden, or Abbot's Walden, anciently belonged to St. Alban's abbey; it was granted by Henry the Eighth to the church of St. Paul, London, to which it still belongs. On this manor, is an ancient mansion, held under that church: it was anciently in the Strathmore family.

The manor of Stayenhoo, or Stayenhoe, in the parish of Paul's Walden, belongs to Robert Thornton Heysham, Esq. The house was built by Sir John Hale, Knt. about the year 1650. It is a handsome building, situated in a small park.

WALKERN.]—The manor of Walkern, four miles E. by N. from Stevenage, is one of the most ancient possessions of the Capels, Earls of Essex, in this county. The Bury, or manor-house, now occupied by a farmer, is surrounded by a moat. In the church, beneath an arch on the south wall, is a defaced effigy of a Knight Templar.*

WALTHAM CROSS.]—West Waltham, or Waltham Cross, though a market-town, is only a hamlet in the parish of Chesham. It lies nine miles S. by E. from Hertford, and 12 miles N. from London. It derives its name from one of those elegant stone crosses, which the pious affection of Edward the First occasioned him to erect in memory of his beloved and faithful consort, Queen Eleonor, who died in November, 1291, at Hardeley, near Graun-

tham,

tham, in Lincolnshire.* Her bowels were interred in Lincoln cathedral; but her body was brought to London, and deposited in Westminster abbey. At each of the places where it had been rested during this journey, namely, at Lincoln, Grantham, Stamford, Geddington, Northampton, Stony Stratford, Dunstable, St. Alban's, and Charing, (now Charing Cross, London,) Edward afterwards erected a cross, of which only those at Geddington, Northampton, and Waltham, now remain. This cross, which is the least perfect of the three, is almost the only thing deserving of notice in the place. The Society of Antiquaries have repeatedly interested themselves in its preservation. It was originally surrounded by a flight of steps, like those at Geddington and Northampton; but the steps have been long removed. The upper parts are also greatly mutilated: much of the foliage is defaced, and the pinnacles and battlements are broken. The form of the cross is hexagonal: it is in three stories; the middlemost of which is open, and displays statues of Queen Eleanor. Each side of the lower story is divided into two compartments, beneath an angular coping, charged with shields pendant from different kinds of foliage, and exhibiting the arms of England, of Castile, and Leon, quarterly, and of Ponthieu. The cornice over the first story is composed of various foliage and lions' heads, surmounted by a battlement pierced with quatrefoils. The second story is formed of twelve open tabernacles in pairs, but so divided that the dividing pillar intersects the middle of the statue behind it: these terminate in ornamented pediments, with a bouquet on the top; and the pillars that supported them, are also purlied in two stories. This story finishes with a cornice and battlement, like the first, and supports a third story of solid masonry, ornamented with single compartments in relief, somewhat resembling those below, and supporting the broken shaft of a plain cross. The statues of the Queen are crowned; her left hand holding a cordon; and her right, a sceptre, or globe. This cross stands close to the Falcon inn, which has been built up against it, in the angle formed by the high road, and another road, which branches off towards Waltham abbey.

An ancient spittal, appropriated, by prescription, for poor lame impotent people, in this hamlet, is occupied by four poor widows. It pays a small quit rent to the manor of Theobalds. Here also, is the workhouse for the parish of Cheshunt.

WARE.]—The ancient and populous market-town

* Queen Eleanor was daughter to Ferdinand the Third, King of Castile and Leon, and had been married to Edward from motives of state policy; yet, contrary to the common issue of marriages so made, she conceived a very ardent attachment for her husband, and is reported to have saved his life by sucking the poison from a wound which he received by the hand of an assassin in the Holy Land.

† In the year 1739, a circumstance, somewhat ludicrous, occurred in this town. An eminent tradesman, having lost by

of Ware, seated on the western bank of the Lea, is three miles E.N.E. from Hertford, and 20½ N. from London. Its population, according to the returns of 1811, amounted to 3369. The town enjoys a considerable trade in malt and corn. Several almshouses for poor widows, &c. are in different parts of the town; and various other benefactions for charitable purposes have been made to the parish. This town is celebrated for its enormous bed, which measures twelve feet square, and is still preserved at an inn here. Twelve butchers, and their wives, slept in this bed at once; being placed in alternate pairs, so that each man was next to his own wife.† At a tournament held here, in the year 1240, Gilbert le Mareschal, the potent Earl of Pembroke, was killed by falling from his horse, and being afterwards trampled on: Robert de Say, one of his knights, was also slain in the diversion; and several others were wounded. In 1408, the town was greatly damaged by a flood: its low situation rendering it very liable to this inconvenience.

Anciently there were two religious establishments in this town: one of them was for Grey, or Franciscan friars; but, by whom it was founded is unknown. The other was a priory of Benedictines, subordinate to the abbey of St. Ebrulph, at Utica, in Normandy, to which Hugh de Grentemaisnil, granted the church of Ware, and two carucates of land in this manor. Upon the seizure of the alien priories by Edward the Third, during the wars with France, this was farmed at 200*l.* per annum. After the suppression of foreign houses, it was given, in 1415, to the monks at Shene. Henry the Sixth, for some time, annexed it to the abbey of St. Mary, near Leicester; but it was afterwards restored to Shene, and, as parcel of its possessions, granted by Henry the Eighth, to Trinity College, in Cambridge.—Some remains of the priory buildings are yet standing at a little distance from the church, near the banks of the river. They chiefly consist of ancient walls, fitted up, and accommodated to the purposes of a modern dwelling.

The church is a spacious edifice, consisting of a nave, chancel, and aisles, with an embattled tower at the west end. The roofs are of timber, and have been ornamented with paintings and inscriptions, of which there are now considerable remains; particularly in the south chancel, or chapel. The sepulchral memorials are numerous, and among them are various ancient slabs, most of which have lost their brasses. The font is ornamented with various sculptures, representing St. George, and other sub-

jects, death, a favourite mare which he had had many years, made, in consideration of her good services, a grand funeral for her, to which he invited nearly 300 people. He and his wife going next the carcass, as chief mourners, were followed by the rest of the company in couples; and about four o'clock, she was interred in Hare Lane Field, near the town, with great pomp: after which the company returned, and were treated with plum-cake, and strong beer, at the mourner's house, who expressed great concern for the loss of the valuable creature.

jects.

jects. At the west end of the church, is a handsome gallery, built by the governors of Christ's hospital, for the use of the school that was formerly established here, for the younger children of that institution, but which has been many years removed to Hertford.

In 1802, four stone coffins, each consisting of a single stone, neatly excavated and squared, and having a lid also of a single piece, were discovered at the depth of about three feet below the surface, in Bury Field, the south-west corner of the town. Three of these coffins lay almost close together, while the fourth was separated from them by a distance of about 20 feet. They contained lime, and the bones, which were regularly disposed, had acquired a deep yellow, and in some places a deep reddish brown hue. In one of the coffins, the skull was found, with a small quantity of short tufty hair adhering to it. The coffins were formed of a yellowish calcareous stone, filled with fossil shells, much resembling the *Lunacelli* of the Italians. A small copper coin of Constantine the Great, having upon the obverse, the Emperor's head, crowned with a laurel wreath; and, upon the reverse, two victories supporting a shield, with the legend *VO-TA PR.* or *VOT. X.* was found at the same time.

Ware, in the Domesday Survey, is called *Warus*, and it is thought to have derived its name from a kind of dam, called a *Wayre*, or *Wear*, anciently made to stop the current of streams; a conjecture rendered the more probable by the abundance of water here, which frequently obliged the inhabitants to make weirs and sluices to preserve the town, and the adjoining lands, from inundations. In other ancient writings, it has the name of *Guare*, and *Guaris*, from which Salmon was induced to imagine that the Danes, who infested this neighbourhood, in the time of Alfred, had their place of arms either here, or immediately adjacent. Whether Edward the Elder built a town here, is questionable; as, in that case, it would doubtless have been made independent of Hertford, which it does not appear to have been till long after the Conquest. The manor, now the property of T. H. Byde, Esq. one of whose ancestors purchased it of the Fanshaws, at the time of the Norman Survey, was held by Hugh de Grentemaisnil, to whom it had been given by the Conqueror. In the reign of King John, it descended to Margaret, married to Sayer de Quincy, after-

wards Earl of Winchester. "Before his time," observes Salmon, "a great iron chain was put across the bridge, to prevent a road here to the disadvantage of Hertford. The bailiff of Hertford had the keys in his power; and no carriage, with horses or harness, could go over without paying a toll to him, which toll was esteemed worth 10*l.* 13*s.* 4*d.* yearly. But the Earl broke the chain, and laid the road open, which made this a great thoroughfare, brought trade to the town, and occasioned buildings in it."

Ware Park, the seat of T. H. Byde, Esq. is pleasantly situated on an eminence, commanding the rich meadows which extend between Ware and Hertford. The ancient manor-house was pulled down by the present owner, with the chapel and long gallery; and a new mansion, in the modern style, was erected. This is very elegantly fitted up. The park and grounds are rendered extremely pleasant by the contiguity of the rivers Lea and Rib. In the opposite meadows, on the south-east, are the springs of Chadwell, the proper source of the New River. These are concentrated in a small pool, or bason, surrounded by a light railing, from which the stream slowly issues in its course towards London, and is swelled, at a little distance, by a cut from the river Lea.*

WATFORD.]—The market-town of Watford, having a population, according to the last returns, of 3076, is 20½ miles W.S.W. from Hertford, and 14½ N.W. from London. The Abbots of St. Alban's had various privileges granted to them for this manor, by different sovereigns: the charter of the market was bestowed by Henry the First; and Edward the Fourth gave them liberty to hold two fairs annually. The market-house is a long building, rough-cast above, and supported on wooden pillars beneath. The quantity of corn sold here is very great; and the number of sheep, cows, calves, hogs, &c. is proportionable.

Watford church is a very spacious building, consisting of a nave, aisles, and chancel, with a massive embattled tower at the west end, about 80 feet high, terminated by a small spire, rising about 20 feet more. The roof is of a circular form; the supporters rest on half-figures, sustaining shields. The east window is divided by mullions into several compartments; but the light is obscured by a large altar-piece of oak. On the north side of the chancel, is

* Sir Richard, tenth child of Sir Henry Fanshaw, was born in the ancient manor-house at Ware, in 1607. He received his education at Cambridge; and, having travelled, was appointed Ambassador to Spain, by Charles the First, in 1635. At the commencement of the civil war, he returned to England, and took a very active part in the royal cause. In 1644, he had the degree of LL.D. conferred on him, by the University of Oxford. About the same time, he was appointed secretary to the Prince of Wales. At the battle of Worcester, he was taken by the Parliament's army, and being closely imprisoned in London, the rigours of his captivity brought on a severe illness, on which he was permitted to retire into the country, on parole. He

spent some time at Ware Park, and employed his leisure hours in translating Guarini's *Pastor Fido*, and the *Lusiad* of Camoens's; he also made various translations from the Latin Poets, &c. In 1659, he went to the exiled King, at Brede, and received the honour of knighthood. After the Restoration, he was appointed Envoy Extraordinary to Portugal, where he negotiated the match between the King and the Infanta, Catherine of Braganza. In 1664, he was sent Ambassador to Madrid, where he died in June, 1666. His body was brought to England by his widow, and buried in Ware church, where a monument was erected to his memory.

the chapel, or cemetery of the Morisons, and now of the Essex family, lords of the manor. This contains, amongst others, two very fine monuments, by Nicholas Stone. The first which is erected against the south wall, is a stately fabric, in memory of Sir Charles Morison, Knt. of Cashobury, who died in 1599. The upper and central part consists of a pediment and canopy, resting on Corinthian pillars: below the canopy is the effigy of Sir Charles, in white marble. He is represented as a knight in armour, in a recumbent position, with his elbow resting on a cushion, and one hand on the pommel of his sword. His beard is in the Vandyke fashion; whiskers on his upper lip; about his neck, a large ruff. At each end, under a canopy of flowing drapery, dependant from a ring, is a figure kneeling on a cushion. These represent the son and daughter of Sir Charles. The other monument of Stone's workmanship, is on the opposite side, against the north wall: this was erected in memory of Sir Charles Morison, Bart. and Knight of the Bath, son of the above Sir Charles, by Mary his lady, second daughter of Baptist Hicks, Viscount Campden. In its general form, it is similar to the former: the canopy is supported by Corinthian pillars of black marble, with wreaths of flowers below the capitals. On the tomb beneath, are the figures of the baronet and his lady, in white marble, most exquisitely sculptured. The former, who is represented in armour, is reclining on his side, his right elbow resting on a cushion, and his hand placed on a skull: he has a peaked beard and whiskers. His lady is lying recumbent, with her head on a double cushion, and has on a veil, turned back over her forehead: round her neck is a ruff. Her sleeves are purpled; and one hand holds an outward robe, which is fastened to her boddice by a diamond-headed pin. At the east side, on a lower base, are the figures of a youth and a boy, kneeling on cushions: both have ruffs; and the former a cloak, and a sword. At the west side is a young lady, also kneeling, with flowing drapery, extending behind her head, and brought up and fastened over her left breast by a diamond brooch. Sir Charles died in 1628. The expense of executing this monument was 400*l.*; that of the former, 260*l.*—In the middle of the cemetery are two large tombs with effigies. That towards the east was erected in memory of the Lady Bridget, Countess Dowager of Bedford, who died in January, 1600. Her figure, well-sculptured in alabaster, lies on the tomb; the head resting on an ornamented cushion; and, between the feet, a fruit-tree, with a reindeer below. From the sides of the tomb, the base is carried out in a square projection; and, on each, is a half-sized male figure in armour, kneeling on a cushion. Round the tomb, are various shields of arms; and, at the east end, an inscription in memory of the Countess. The westernmost tomb commemorates the virtues of "The Right Honourable Lady Dame Elizabeth Russell, daughter and sole heire of Henrie Longe, of Shingay," in Cambridgeshire, and wife of William, Lord

VOL. III.—NO. 93.

Russell, of Thornhaugh, son of Francis, Earl of Bedford: she died in 1611. Amongst the other memorials, are two tablets against the south wall; one of these records the character and memory of "The Honourable John Forbes, second son of George, third Earl of Granard, Admiral of the Fleet, and General of Marines, who died at the age of 82, in March, 1769:" the other is in commemoration of his Lady, "the Right Honourable Mary Forbes, daughter of William, third Earl of Essex, by the Lady Jane Hyde, daughter of Henry, fourth Earl of Clarendon, and second Earl of Rochester." William Anne-Holles Capel, son of the above William, and fourth Earl of Essex, was also buried in this cemetery, in March, 1799. On a slab of breccia, in the pavement, are figures in brass of three servants to the Morisons, in dresses of the time of James the First. In the nave and aisles of the church, are many other sepulchral memorials. The following epitaph, written by Dr. Johnson, appears on a tablet of white marble, on the south wall of the nave:—

In the Vault below are deposited the Remains of
 JANE BELL, Wife of JOHN BELL, Esq.
 Who, in the Fifty-third Year of her Age,
 Surrounded with many worldly Blessings,
 Heard with Fortitude and Composure truly great,
 The horrible Malady which had for some Time began to afflict her,
 Pronounced Incurable;
 And for more than three Years
 Endured with Patience, and concealed with Decency,
 The daily Tortures of gradual Death;
 Continued to divide the Hours not allotted to Devotion,
 Between the Cares of her Family, and the Converse of her Friends;
 Rewarded the Attendance of Duty,
 And acknowledged the offices of affection;
 And while she endeavoured to alleviate, by Cheerfulness,
 Her Husband's Sufferings and Sorrows,
 Increased them by her Gratitude for his Care,
 And her Solicitude for his Quiet:
 To the Memory of these Virtues,
 More highly honoured as more familiarly known,
 This Monument is erected by
 JOHN BELL.

Watford church is crowded with pews and galleries: the organ-gallery is very large, and supported on four Corinthian columns; the organ is well-toned. At the east end of the south aisle, are tablets registering numerous benefactions that have been made for the use of the poor, &c. At the south side of the church-yard, is a good free-school, founded and endowed by Mrs. Elizabeth Fuller, of Watford Place, in the year 1704, for 40 boys, and 20 girls, who are partly clothed, and taught reading, writing, and arithmetic. The original endowments have been increased by additional legacies. The government of the school is vested in nine trustees, chosen from the inhabitants of Watford, a preference being given to the kindred of the foundress, a full-length portrait of whom is preserved in the school-room.

The houses in this town are principally of brick; many of them are respectable and handsome buildings; they principally range on the sides of the high

high road, and extend in a north-westerly direction, rather more than a mile. The chief employment of the labouring classes is derived from agriculture; but additional labour is furnished by the throwing of silk, three silk mills having been established in and near the town. The largest mill is worked by the waters of the Colne river; but the others are worked by horses.

WATTON.]—The manor of Watton, or Watton-at Stone, $5\frac{1}{2}$ miles N. N. W. from Hertford, was purchased of John Palmer Boteler, Esq. by Sir Thomas Rumbold, Bart. late Governor of Madras, who died in 1791, and was buried in Watton church. It was afterwards sold to Paul Benfield, Esq. and subsequently to the failure of him and his partner, Walter Boyd, it was again sold to Samuel Smith, Esq. the present proprietor. Sir Thomas Rumbold bought the estate, of about 5000 acres, for 85,000*l.* wood included: it sold for 150,000*l.* timber excluded.

Watton Wood Hall, the seat of Mr. Smith, occupies one of the finest situations in the county. It is a spacious and elegant mansion, standing on an eminence in a large park, nobly diversified by hill and vale, and watered by several small streams, which flow into the river Beane in its course through the grounds. The woods are extensive, and many of the trees are of great magnitude, and luxuriant growth. Salmon records, that the cut-water to the Royal Sovereign was wrought out of a single tree from this park, which it required 18 horses to draw when slit. The ancient mansion was mostly destroyed by fire, in 1772. The present structure, erected by Sir Thomas Rumbold, is fitted up with much taste.

Watton church contains various brasses with inscriptions, and other monuments in memory of the Botelers, lords of the manor, said to have been preserved from dilapidation in the time of the civil wars, by the care of an Oliverian who resided at Bardolfs, a manor subordinate to Watton. The most ancient of the brasses represents a knight in armour, of the Peletoyt family, who died in the reign of Edward the Third. Against the north wall, is a large and costly monument in memory of Philip Boteler, Esq. and his wife Elizabeth, daughter and co-heiress of William Ettricke, Esq. On a slab in the south aisle, are brasses of Edmund Bardolf, Knt. Edmund Bardolf, Esq. his son; and Joan Bardolf, wife of the latter; all of whom appear to have died in the time of Henry the Sixth.

WELWYN.]—The advowson of Welwyn, eight miles W. N. W. from Hertford, is in the college of All Souls, Oxford, which, in 1730, presented to the Rectory, the Rev. Dr. Young, author of the *Night Thoughts*, who retained it till his death, in 1763. He died here, and was buried in the chancel of Welwyn church, near the body of his wife, Lady

Elizabeth Lee, who died in 1741. Frederick, their only son, erected a monument over the remains of his parents, with an inscription, as follows:—

M. S.
Optimi parentes
EDWARDI YOUNG, LL. D.
Hujus Ecclesię Rect.
Et ELIZABETHÆ,
Fam. prænob.
Conjugis ejus amantissimę
Pio et gratissimo animo
Hoc marmor posuit
F. Y.
*Filius superstes.**

This is said to have been the place where the massacre of the Danes began on Hock Tuesday.

Mardley Bury, a subordinate manor in this parish, was formerly held by the rent of a July clove-flower.

Lockleys, another manor in Welwyn, was lately the seat of George Gardner, Esq. The mansion is pleasantly situated at a short distance from the Maran, on the east side. Here is a mineral spring.

WESTMILL.]—At Westmill, a mile and a half S. by E. from Buntingford, about a century ago, were found some Roman antiquities. Hamells, in this parish, was purchased of Lord Hardwicke, by the late J. Mellish, Esq. The grounds are laid out with much taste.

WHETHAMSTED.]—Whethamsted, four miles W. S. W. from Welwyn, is mentioned in the Domesday Survey, by the appellation, Watamestede, a circumstance which controverts the opinion of its having received its name from the goodness and plenty of the wheat grown in the neighbourhood. Edward the Confessor granted it to the abbey at Westminster; and it is still possessed by the dean and chapter of the cathedral. St. Helen's church at Whethamsted, is a curious fabric, in the form of a cross, with a tower, surmounted by a well-proportioned octagonal spire, rising from the intersection of the nave and transept. In the north cross, is a handsome monument of alabaster, in memory of Dame Elizabeth Garrard, wife of Sir John Garrard, Knt. and Bart. of this county. In the south cross, is an ancient altar-tomb, with mutilated free-stone figures of a knight in armour, and his lady, lying on the top, and round the verge an imperfect inscription. Several of the Brockets, of Brocket Hall, lie buried here; and also of the Leventhorpes, &c. The barons who confederated against Edward the Second, assembled their forces at Whethamsted.

Lamer, a manor in this parish, is the property and residence of Charles Drake Garrard, Esq. brother to T. D. T. Drake, Esq. of Amersham. The mansion is a handsome structure, pleasantly situated on an eminence.

WIDDIAL.]—Widdial church, two miles N. E.

* Translation:—F. Young, the surviving son of Edward Young, LL.D. rector of this church, and Elizabeth Young, his

beloved wife, has erected this marble out of pious gratitude to the best of parents.

from

from Buntingford, contains various monuments, in a chapel which runs the whole length of the north side, of the Gill and Goulston families, with an inscription in memory of George Canon, Gent. who built the chapel in the reign of Henry the Eighth. The windows of the chapel have been ornamented with painted glass in a superior style, representing various events in the history of our Saviour; some of the subjects are still in fine preservation.

WILBURY HILL.]—On this eminence, about three miles W. from Baldock, are traces of an ancient camp, or fortification, which Salmon supposes to have been an amphitheatre; and mentions a silver coin, of the Empress Faustina, that was found here. The area included about seven acres, and is crossed by the Icknield Way.

WYMONDLEY.]—The manor of Wymondley Magna, 2½ miles E.S.E. from Hitchin, is held by the Lord, upon condition, that on the coronation day, he performs the office of cup-bearer to his Sovereign: the cup, which consists of silver-gilt, is returned to the cupbearer, as the fee of his office; and this has been appendant to this manor ever since the Conquest.

At Little Wymondley, 2½ miles S.E. by E. from Hitchin, Richard de Argentine founded a priory for Austin canons in the reign of Henry the Third; its possessions, at the Dissolution, were valued at 37*l.* 10*s.* 6*d.* After the Suppression, it was leased by Henry the Eighth, to James Needham, Gent.; whose son, John Needham, afterwards obtained a grant of the fee of the property. The manor comprises about 300 acres: it contains a noble chesnut-tree, of an immense size, and great age.

Wymondley House is now the principal academy for the education of Presbyterian ministers; having been enlarged for the accommodation of two tutors and 24 students.*

WORMLEY.]—The manor of Wormley, two miles N.b. E. from Cheshunt, was one of the seventeen with which Earl Harold endowed the abbey at Waltham. It now belongs to Oliver Cromwell, Esq. of Cheshunt, but was lately rented by Sir Abraham Hume, Bart. of Wormley Bury. The mansion is a substantial brick building, with a portico, sustained

on four stone columns of the Composite order.—The grounds are pleasant, though not extensive; and their beauty is much increased by a sheet of water, over which a Chinese bridge has been thrown. The church is a small fabric, consisting only of a nave and chancel: the west end exhibits traces of considerable antiquity, and has on the north side, a small Norman doorway; and the chancel is lighted by three lancet windows. Here are several very ancient monumental remains. Mr. Gough, the celebrated antiquary, of whom, in our first volume, (page 265,) we gave some biographical particulars, was buried, on the 28th of February, 1809, in the church-yard, here, in a vault built for that purpose, on the south side of the chancel, not far from the altar, which, for several years, he had devoutly frequented. The following epitaph, written by himself, he directed to be inscribed in the church:—

“ Hunc propi parietem,
Reliquias suas condi voluit
RICHARDUS GOUGH,
Antiqua stirpe ortus:
Ex heroibus qui in belles Gallicis et
Civilibus clamere
Gloriam,
Ex mercatoribus Stapulæ Calinæ Indizque
Orontalis diritias,
deduxit:
Patriæ amorum, erga Regis fidem,
Legum antiquitatumque patriæ pietatem,
Ex atavis consanguineis derivatam,
Constantem coluit;
Hæc investigandi cupiditatis innata
Testimonia habeto
Topographiam Britannicam,
Gulielmi Camdeni Britanniam renovatam.
Monumenta Sepulchralia Magnæ Britannie.
Abi, hector, nec vanitatis insinues
Obiit XX die mensis Februarii, A.D.
MDCCCIX.
Erat. LXXIV.†

YARDLEY.]—The manor of Yardley, 4½ miles W. S. W. from Buntingford, was given by King Athelstan, to the canons of St. Paul's, London, to whom it still belongs. Yardley Bury, the manor-house, was the residence of the Chauncys, more

* This institution, which originated at Northampton, in 1729, owes its endowment, which consists of funded property to a considerable amount, to William Coward, Esq. an opulent West India merchant, who lived at Walthamstow. Dr. Philip Doddridge was the first tutor, and continued to officiate as such during 22 years; in which time, 200 persons, chiefly ministers, had studied under his direction. In 1752, the academy was removed to Daventry, under the care of Dr. Caleb Ashworth; thence back to Northampton; and finally to this place, in 1799; when the Rev. Messrs. Parry and Ward were appointed its resident tutors, by the trustees acting under the direction of Mr. Coward's will. The library contains a valuable assemblage of upwards of 10,000 volumes of the best authors in divinity, criticism, classics, mathematics, topographical antiquities, &c. together with a cabinet of medals, a collection of natural history, and other curiosities. Mr. Coward founded a similar seminary at Hoxton, near London, which was dissolved about the mid-

dle of the last century. Drs. Savage, Kippis, Rees, and Jennings, were its tutors. The library and endowment have reverted to the establishment at Wymondley.

† Translation.—Richard Gough, descended of an honourable family, desired that his remains might be deposited near this wall. From the heroes who distinguished themselves in the civil wars and in those with France, he derived his glory; and from the merchants of Estaples, Calais, and the East, his fortune. He was steady in his love to his country, and fidelity to his King, and cultivated with care that skill in the laws and antiquities of his country, which he derived from his ancestors and relations. Of the innate desire of investigating these, his British Topography, the renovated Britannia of William Camden, and the Sepulchral Monuments of Great Britain, may serve as a proof. Depart, reader, nor accuse him of vanity. He died on the 20th day of February, 1809, in the 74th year of his age,

than two centuries; and here Sir Henry Chauncy wrote his History of Hertfordshire.*

FAIRS.—*St. Alban's*—March 25 and 26, Oct. 10 and 11, for servants, horses, cows, and sheep.

Albury, Portsmouth Heath—July 17, toys.

Baldock—March 7, last Thursday in May, August 5, October 2, December 11, large fairs for cheese, household goods, and cattle.

Barnet—April 8, 9, 10, linen-drapery, mercery, toys, &c.; September 4 and 5, the harvest fair, commonly called the Welsh fair, for Welsh cattle and horses; September 6, mercery, &c. sometimes a few horses, pigs, &c.

Barkway.]—July 20, pedlary ware.

Bennington—June 20, pedlary ware.

Berkhamstead—Shrove-Monday, Whit-Monday, a small fair for cattle; August 5, cheese; September 29, statute fair; October 11, statute.

Braughing—Whit-Monday, toys.

Buntingford—June 29, St. Andrew's, November 30, pedlar's ware.

Hatfield—April 23, October 18, toys.

Hemel Hempstead—Holy Thursday, sheep; third Monday in September, statute.

Hempstead.—First Thursday after Whitsun-week, horses, cows, sheep, and servants.

Hertford—Saturday fortnight before Easter, May 12, July 5, November 8, horses, and other cattle.

Hitchin—Easter Tuesday, Whit-Tuesday, sheep and pedlary.

Hoddesdon—June 20, toys.

Little Hadham, Bury Green—July 15, toys.

* The Chauncys derived their name from the town of Chauncy, near Amiens, in Picardy. One of them, who came to England with William the Norman, appears to have settled in Yorkshire. The most distinguished of this family was Henry, the historian. He received the rudiments of his education at Bishop's Stortford, and was afterwards entered of Caius College, Cambridge. Thence he removed to the Middle Temple, and was called to the bar, in 1656. In 1675, he was made bench-er;

Much Hadham—Wednesday before June 29, toys.

Northall Statute—September 28.

Preston, near Hitchin—First Wednesday in May, and Wednesday before October 29, sheep.

Puckeridge Statute—September 10.

Purton, near Hitchin—Fourth Thursday after April 5, fourth Thursday after October 10, sheep.

Redbourn—First Wednesday after New Year's day, Wednesday in Whit-week, sheep.

Rickmansworth—July 20, November 24, horses, black cattle, sheep, hogs; Saturday before the third Monday in September; hiring servants.

Royston—Ash Wednesday, Wednesday in Easter week, Wednesday in Whitsun-week, first Wednesday in July, first Wednesday after October 10, cattle of all sorts.

Sawbridgeworth—April 23, October 19, horses.

Standon—April 25.

Stevenage—Nine days before Easter, nine days before Whitsunday, first Friday in September, hawkers and pedlars, and a little cheese; cattle market.

Stortford Bishop's—Holy Thursday after Trinity Sunday, October 10, horses and cattle.

Tring—Easter Tuesday, October 10, hiring servants.

Ware—Last Tuesday in April, Tuesday before St. Matthew, September 21, horses and other cattle.

Watford—Last Tuesday in March, Trinity Thursday, for pleasure; May 12, August 31, cattle, horses, &c.; September 9, a statute for hiring servants.

and, in the same year, chosen steward of the Borough Court, in Hertford, of which also, in 1680, he became Recorder. In the following year, he was knighted by Charles the Second; and, in 1685, was made Treasurer of the Inner Temple. Three years afterwards he was made Sergeant at Law, and Judge of one of the circuits of South Wales. He died in 1700, leaving three sons and four daughters. His "Historical Antiquities of Hertfordshire," is a very valuable work.

TABLE OF JOURNEYS THROUGH THE PRINCIPAL TURNPIKE, AND CROSS ROADS, IN THE COUNTY OF HERTFORD.

* * The Reader is requested to observe, that the *first column*, shows the NAMES OF PLACES; the *second*, the DISTANCES FROM PLACE TO PLACE; the *third*, the DISTANCES FROM THE COMMENCEMENT OF THE JOURNEY; the *fourth*, NAMES OF SEATS, INNS, &c. In the last column, the letters R, and L, are the abbreviations of RIGHT AND LEFT.

1. CHIPPING BARNET, to DUNSTABLE. (N. W.)

Barnet.....	4	Inns.—Green Man, Red Lion.
Obrisk.....	4	New Lodge, — Barronmean, Esq. and Wrotham Park, G. Byng, Esq.
Kitt's End.....	1½	White Hart.
South Mimms.....	4	Porters, Esq. of Alkington.
Colney.....	7½	Inns.—Angel, White Hart, Woolpack, Holloway House, Countess Dowager Spencer. St. Stephens, Mrs Howard.
St. Alban's.....	10½	
(Cross the Colne River)		
Redburne.....	4½	Inn.—8m. Market Cell, J. Howell, Esq.
Market Street.....	14½	R.—Formerly a nunnery of Benedictines.
Dunstable.....	22½	

2. HERTFORD to BALDOCK. (N.)

Hertford.....	2½	Inns.—Bell, Falcon. Half Moon.
Waterford.....	1½	Goldings, Richard Emmet, Esq. L.
Stapleford.....	3½	Paushanger, Earl Cowper.
A. T. R. on R. to Ware.....		
Watton.....	5½	R.—Woodhall House, Honourable Mr. Smith.
Braybury End.....	8	
Broadwater.....	10½	At Broadwater, W. Whittington, Esq.
Stevenage.....	12½	Inn.—Swan.
R.—A. T. R. to Baldock.....		
Gravelly.....	14	
Baldock.....	18	

3. HATFIELD to WARE. (E.)

Hatfield.....		Inn.—Salisbury Arms.
Colne Green.....	3½	Hatfield House, Marquis of Salisbury.

HERTFORDSHIRE.

Hertingfordbury.....	2½	6	Hertingfordbury Park. S. Baker, Esq. L.
Hertford.....	1½	7½	Inns.—Bell, Falcon, Half Moon.
Ware.....	3	10½	Castle, Lord Percy.
			Inns.—Bull, Saracen's Head.
			Ware Park, Thomas Hope Hyde, Esq.

4. BALDOCK, to HATFIELD. (S.)

Baldock.....	4	Inn.—White Horse.
Gravelly.....		
R. to Hitchin 4½ miles.....		
Stevenage.....	5½	Inn.—Swan.
Broadwater.....	8½	
Woolmer Green.....	10½	
R. to Hitchin, nine miles.....		
Welwyn.....	12½	Digswell House, T. Shallcross, Esq. and on L. Lockleys, C. Gardner, Esq.
		Inns.—White Hart, Swan.
(Cross the Maran River.)		
Brickwall.....	14½	
(Cross the Lea.)		
Lemsford Mills.....	15½	
R. to Whethamstead.....		
Stanborough.....	16	
Hatfield.....	17½	Hatfield House, Marquis of Salisbury.

5. FROM ROYSTON, to TRING through DUNSTABLE, HITCHIN, and BALDOCK. (W.)

Royston.....	3½	Inns.—Bull, Red Lion. At Royston is a subterraneous cave said to be a Roman chapel.
The Thirst.....		
Osney Grange.....	4	
Baldock.....	4½	
Letchworth.....	10½	
Walworth.....	12	
Hitchin.....	13½	Inn.—Sun.

Leagrave

JOURNEYS CONTINUED.

Legrave.....	10	231	R.—Sundon House, Earl of Egmont.
Dunsable.....	24	234	Inn.—Bull, Crown, Sugar Loaf.
Tring.....	10	354	Sticks House, William Hayton, Esq.

6. HODDESDON to ROYSTON, through WARE (N.)

Hoddesdon.....	10	231	
Near the New River, on L. a T. R. to Hertford.....	24	234	
Amwell.....	24	234	Amwell Bury, Major Brown.
(Cross the New and Lea Rivers.)			
L. A T. R. to Ste- venage.....	21	5	
Ware.....	21	5	Inns.—Bull, Saracen's Head. Ware Park, late Paul Benfield, Esq.
(Cross the Gairn Ri- ver.)			
Wades Mill.....	2	7	
Colliers End.....	2	9	
Puckeridge.....	2	11	Inn.—Bell.
A T. R. to Cam- bridge, on R.....			
(Cross the Rib Ri- ver.)			
Buntingford.....	4	15	Inns.—Bell, George. Hornead Bury, T. Welsh, Esq. R. Aspenden Hall, G. Franklin, Esq. L.
Chipping.....	14	164	
Buckland.....	14	18	Inn.—Chequers.
Royston.....	4	22	

7. WALTHAM CROSS to HODDESDON. (E.)

Waltham Cross.....			L.—George Prescott, Esq. Inns.—Falcon, Four Swans.
Turners Hill.....	1	14

HUNTINGDONSHIRE.

GENERAL DESCRIPTION OF THE COUNTY.

THE inland county of Huntingdon is bounded on the east, by Cambridgeshire; on the south, by Bedfordshire; on the west, by Northamptonshire; and, on the north, by a part of Northamptonshire and Lincolnshire. Its general form is an irregular square. Its extent, from north to south, is about 30 miles; its greatest breadth, from east to west, 23; and its circumference about 100. The superficial contents of this county, have usually been estimated at from 220,000 to 240,000 acres: according to the tables prefixed to the population returns of 1811, the number of acres, is 220,800.—Tradition, and ancient records, concur in the representation that this county was once covered with wood; and it appears to have been a forest, till Henry the Second, in the beginning of his reign, disforested the whole, as set forth by an old perambulation, except Waybridge, Sapple, and Herther, which were the Lord's woods, and remain forest. Sir Robert Cotton says this country was not completely disafforested till Edward the First's time, when that sovereign, in his 29th year, confirmed the great charter granted by Henry the Third, and left no more forest than his own demesne. This description of forest land cannot be supposed to apply to the fens, of which there are 44,000 acres in this county, exclusive of about 5000 acres of what are

called skirty lands. These constitute a seventh part of what is called the Great Bedford level, but they belong to that division called the Middle level, and are principally found on the north and eastern parts of the county.* About 8 or 10,000 acres of the fen lands are productive; but, through the imperfect state of the drainage, the expense of keeping them from inundation, amounts to almost one-third of the rents. "The fen," observes Stone, in his *General View of Huntingdon, &c.* "is generally unproductive, being constantly either covered with water, or, at least, in too wet a state for cultivation; and considerable parts are very frequently forfeited to the corporation of the Bedford level, the tax annually charged upon the fen for its drainage, far exceeding any advantages the proprietors can derive from the soil in its present state, so that they rather prefer relinquishing their estates, than to pay the taxes imposed upon them."† The woodlands are now only of considerable extent, and the country is thin of timber, which is attributed to the very great demand for it in the fens: the underwood is sold at a higher price by the pole, than in most other counties.

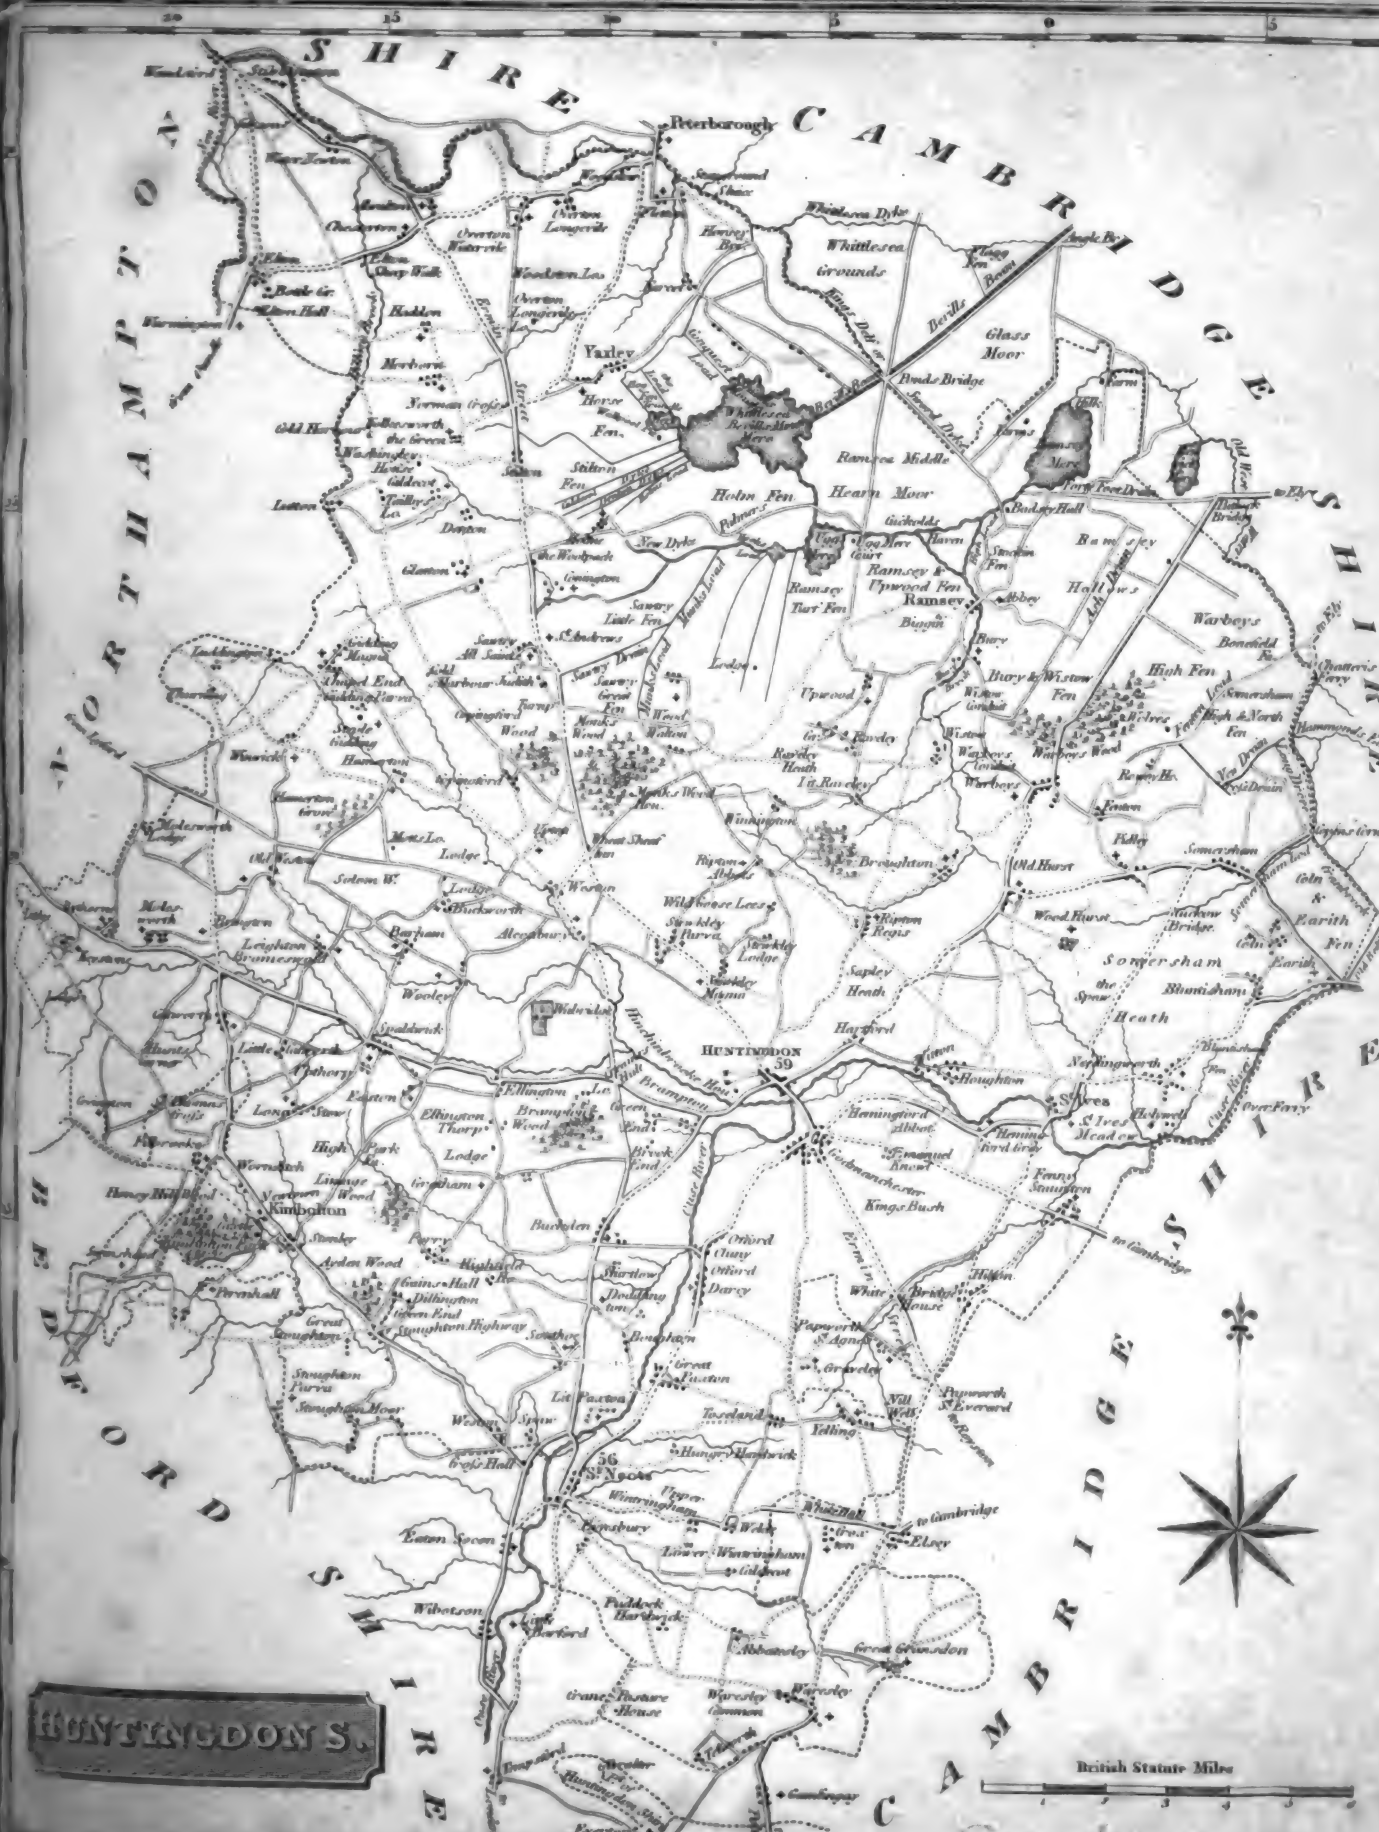

The air of Huntingdonshire, is, in general, very good; excepting the northern part, where it is rendered less salubrious than in many other counties,

* For information respecting the Great Bedford level, the reader is referred to the *MODERN PANORAMA*, Vol. I. page 277.

† Maxwell, in his *General View*, observes, that "it may seem paradoxical, that the fens of Huntingdonshire, whose surface is comparatively high, should be worse drained than those that lie between them and the sea, the surface of which last is considerably lower; the natural supposition being that water will inevitably fall from the higher to the lower level. But this is the case with all the fens that are upon the skirts of the high land, and proves only, that the general drainage was executed upon principles fundamentally wrong. The fact is, that there was not a proper outfall to the sea, at the time of the general undertaking to drain the fens, nearly a century and a half ago; and ingenious men employed themselves not in obtaining an outfall, as they ought to have done, but in con-

structing large drains, and high banks, within the boundaries of the fens, expecting the water would force its own passage, in spite of every impediment; though the distance between the fen and the sea, was from ten to fifteen, and twenty miles.—This not proving to be the case, ingenuity was set to work, to invent engines for the purpose of throwing the water out of the lands into the internal rivers. Still it did not find its way to the sea, but overtopped the banks, or broke them down with the weight of its pressure: even to this moment, instead of resorting to the outfall, the engines have been increased in size, and the banks raised still higher, so that the water, which, if there had been an outfall, would have found its way to the sea, and if left to itself, would have rested on the lowest of the land, has been forced in a retrograde motion, over the surface of the higher lands; and hence the deplorable state of the fens in Huntingdonshire."

Longitudinal W. from London

by the damps and fogs, and putrid exhalations, which arise from the stagnant waters of the fens and meres, with which it abounds.

RIVERS.]—The principal rivers of Huntingdonshire, are the Nen, or Nene, and the Ouse. The Nen has its source near Daventry, in Northamptonshire, and flowing through a delightful vale, reaches Huntingdonshire, near Elton, where it becomes the boundary between both counties, and meandering to the north, passes Yarwell and Wandsford: soon after, winding to the east, through a more level country, it pursues a devious course to Peterborough, below which it sinks into the fens, and slowly winds onward to the sea.

The Ouse, or lesser Ouse, enters this county from Bedfordshire, between St. Neot's and Little Paxton, and in its northern course towards Huntingdon, is increased by numerous small streams, from the north-west. Having passed that town, it assumes an easterly direction, and flowing near the west end of St. Ive's, becomes, near Holywell, the boundary between this county and Cambridgeshire, till it finally enters the great level of the fens, in the neighbourhood of Erith: this river is navigable along its whole line across the county of Huntingdon.

The north-east side of this county is watered by some smaller streams, with several large meres, or pools of water; namely, Whittlesea mere, Ramsey mere, Ugg mere, &c. Of these, Whittlesea mere is by far the largest, and covers an area of several miles extent: it affords excellent sailing and fishing, and is, in the summer-season, much frequented by parties of pleasure. Most of the meres are visited by abundance of wild fowl, and contain excellent fish. It is remarkable, that these meres, particularly Whittlesea mere, are frequently thrown into the most violent agitations, without the least breath of wind being perceived, to the great terror and danger of the fishermen and others. These agitations are generally supposed to arise from eruptions, or subterraneous winds.

MINERAL SPRINGS.]—There are two mineral springs at Hailweston, near St. Neot's; one of which is of a brackish taste, and is recommended in cutaneous disorders: the other is fresh, and is said

to be good against dinness of sight. St. Ive's was formerly remarkable for its medicinal waters.

PLANTS.]—The plants in this county are, in great measure, common with those of Cambridgeshire.* The others, of a more rare description, enumerated by Camden, are mentioned in the note below.†

ETYMOLOGY.]—This county derives its name from Huntingdon, called Huntindene in the Saxon chronicle; Huntantun, in other ancient writings; and Huntedone, in the Domesday Survey. The "Public Scale" calls it "Huntersdune, or Hunterizdune; that is, the hill or downe of Hunters, as Henry of Huntingdon interpreteth it; whence it useth in their common seal, an hunter."

GENERAL HISTORY.]—This county, with those of Cambridge, Norfolk, and Suffolk, as already stated, composed the extensive territory of the Iceni, a powerful British tribe.‡ In the Roman division of the kingdom, their country was included in the district named Flavia Cæsariensis. In the early Saxon times, this county formed part of the kingdom of East Anglia, and was then called Huntedunescyre, and Huntandunescyre. It was afterwards subjugated by the Mercian sovereigns, and continued under their dominion till the union of the Saxon states into one monarchy, by Egbert. "In the decline of the Saxon government," says Camden, "this county had an officary Earl, named Siward; for Earldoms were not yet hereditary in England, but the governors of shires were, according to the custom of that period, called Earls, with the additional titles of the shires they presided over, as this Siward, while governor here, was called Earl of Huntingdon; but, afterwards having the government of Northumberland conferred on him, was called Earl of Northumberland." Waldeof, or Waltheof, son of Siward, a brave and potent English chief, being taken into favour by William the Conqueror, was by him married to Judith, his niece, and made Earl of Huntingdon. After his death, Judith, his widow, was offered in marriage to Simon de St. Liz; but, "she disliking his person, was turned out of her estate; and Simon married her eldest daughter by Waltheof. Her name was Maud, or Matilda. Simon dying, his widow was re-married to David, brother to Alexander,

Inula Helenium. Elecampane: in damp meadows and pastures; about Bugden.

Linum perenne, β. Wild blue flax, with small heads and flowers: in meadows and pastures of a limestone soil.

Lythrum Hyssopifolia. Grass Poly, or small hedge hyssop.

Myrica Gale. Goule, Sweet Willow, or Dutch myrtle: in boggy places.

Paris quadrifolia. Herb Paris True Love, or One Berry: in woods and shady places.

Sedum Dasyphyllum. Round-leaved Stone-crop: on walls about Bugden.

Silene noctiflora. Night-flowering Campion: in woods.

‡ Vide MODERN PANORAMA, Vol. I. p. 201.

King of Scotland, and afterwards his successor in the throne, who, in her right, inherited the possessions of Waltheof, and was made Earl of Huntingdon, and Northumberland. After these events, "by the revolutions of fortune, and the King's favour, sometimes the Scots, and another time, the St. Lizzes, held this honour:" that is, the Earldom of Huntingdon; and with it, they possessed the greater part of the lands in this county. In the wars occasioned by the rival claims to the Scottish crown, of the families of Bruce and Baliol, this earldom was seized by the Kings of England; and Edward the Third, in his eleventh year, created William Clinton, Earl of Huntingdon. Some portion of the land, however, was retained by the Bruces, and from them descended to the knightly family of Cotton. Henry the Eighth bestowed his title on George Hastings, grandson to the Lord Hastings, beheaded by the Duke of Gloucester, and in his posterity it continued till the decease of Francis, tenth and last Earl of this family, in 1789, when the title became extinct.

ANTIQUITIES.]—The chief Roman stations in this county, were Duriloponte, or Godmanchester; and Durobrivæ, near Dornford ferry, about midway between Chesterton, and Castor, in Northamptonshire. The principal ancient roads, three in number, intersected each other at Godmanchester: one of them has been called the British Ermin. This seems to have entered Huntingdonshire from the neighbourhood of Cæsar's camp, or Salenæ, in Bedfordshire, and to have proceeded by Crane Hill, in the track since known by the name of Hell Lane, whence passing through Toseland, Godmanchester, and Huntingdon, it continued by Alconbury, Weston, and Upton; and falling into the Bullock Road, passed to the east of the "Ruins of Ogerston;" and finally entered Northamptonshire at Wandsford. The Roman Ermin Street entered this town from Cambridgeshire, in the vicinity of Papworth St. Agnes, and proceeding to Godmanchester, nearly in the line of the present high road, followed the course of the British Ermin to the neighbourhood of Alconbury; when branching to the eastward, it again assumed the line of the high road, through Sawtry St. Andrew's, Stilton, and Chesterton, to Durobrivæ, whence crossing Northamptonshire, it entered Rutlandshire, near Stamford. The Via Devana entered from Cambridgeshire, in the neighbourhood of Fenby Stanton, and proceeded to Godmanchester, as the present turnpike road: thence pursuing the track of the British Ermin to Alconbury, it passed to the north of Buckworth and Old Weston, and entered Northamptonshire, in the vicinity of Clapton. The chief architectural antiquities are Bugden palace, Connington church and castle, Godmanchester Bridge, Hinchinbrooke priory, St. John's hospital at Huntingdon, Ramsey abbey, and Somersham palace.

CIVIL AND ECCLESIASTICAL JURISDICTION.]—The whole of this county is in the diocese of Lincoln.—

Its civil government is very peculiar; Cambridgeshire being joined to it under one sheriff, who is chosen out of that county one year, out of the isle of Ely the second, and out of this county the third; and in the isle of Ely alternately out of the north and south parts. It is divided into four hundreds, comprising 103 parishes, and six parts of parishes. It has two petty sessions, and 21 acting county magistrates.

PARLIAMENTARY REPRESENTATION.]—Huntingdonshire returns four members to Parliament: two for the shire, and two for the town of Huntingdon.

AGRICULTURE, SOIL, &c. In the upland parts of the county, the soils are various; but they principally consist of a deep gravel with loam, or of a strong deep clay, with loam. Of what are called the deep staple lands, great part is still in an open field state, where each particular occupier is necessarily obliged to pursue whatever course of tillage is practised by the parish at large. This, on the best of land, is a four years' course, viz. first year, fallow; second, wheat, or barley; third, beans and peas, or oats: where the land is fit for turnips, first, turnips; second, barley, or wheat; third, wheat, if after barley; or beans, if after wheat. The average produce from the best of the inclosed lands, may be stated at five quarters per acre of barley, four of beans, and three and a half of wheat. Upwards of one-third of the high lands are yet uninclused.—Formerly, in the fens, nothing, "observes Maxwell, "was thought of but getting as much as possible out of the land, and trusting to a general drowning for restoring its goodness: the common practice now is, first, to set apart some given proportion of the farm, which is held sacred from the plough; then to have one-third of the remainder under the plough, and two-thirds in grass; keeping the whole of that remainder in a succession of tillage and grass. That portion which is immediately under the plough, is divided either into three or four seasons for occupation as follows: if into three, first year, pare and burn, after six, seven, or eight years, grass, and cole-seed, brushed in upon the first ploughing, but little or none suffered to stand for a crop, it being fed off in the winter with the sheep; and then, generally, after one ploughing, sowed the second year, with oats, which are generally so rank as to make it impracticable to have grass seeds with them: third year, wheat or oats, with seeds, to remain until it comes again into a succession for tillage. If three crops of wheat are taken, oats are sowed, after the wheat, or wheat, after the oats, and sometimes oats or barley." Excepting the ploughmen of Norfolk and Suffolk, those of the fens are probably the most expert of any in the world. No such thing as a driver is known, although they frequently plough with three mares, which are always abreast, and girded with a line. A fen ploughman has been known to win a considerable wager, by ploughing an acre of high land without a single back, keeping his mares always in a trot when at the

the land's ends, those being the two conditions of the bet. The common rate of ploughing is about two statute acres with the paring plough, and about one acre and a half with the seed plough per day. The fen farmers use light waggons instead of carts, one side of the waggon being made of loose boards, for conveniency in the carriage and distribution of farm-yard manure. The skirty lands are those which border on the fens, and partake of the properties of moor, combined with whatever soil, whether clay, gravel, or loam, that may be prevalent in the adjacent uplands. In general, these lands afford luxuriant grazing, and the surface being considerably higher than that of the fens, properly so called, would be seldom flooded, were it not for the injudicious contrivances by which the waters from the lower lands are raised up, instead of being drained off by a proper outfall.

CATTLE.]—In the fens, mares are used for all the purposes of agriculture; and every farmer breeds from them as many as he can, selling the colts off at two years old; and, as many of the fillies as can be spared, with proper attention to the filling up of his team. They are also in general use for the same purposes, in the other parts of the county; but the high land farmer does not breed near so many colts as the fenman: though, in general, they have an eye to the keeping up of their teams without going to fairs. The neat cattle are the refuse of the Lancashire, Leicestershire, and Derbyshire breeds, or are bred from those sorts without any particular choice in the breed, and unfortunately are never used in husbandry. From the open state of the country, dairy farming is not much followed; and the cows are used in suckling calves, in the southern parts, for the London market. The breed of sheep upon the inclosed pastures, is of a mixed description, nearly approaching to the Leicestershire and Lincolnshire kinds, with which the native breed has been much crossed. The sheep are of the polled sort, and though profitable, are not distinguished for symmetry of form. The wool is of pretty good quality; the average produce is between seven and eight pounds from each fleece. The sheep bred in the open fields, and on common lands, are much inferior; and their average produce of wool is scarcely half the above quantity: those bred in the cultivated part of the fens, are mostly of the Lincolnshire sort, though not of the superior kind.

FARMS, &c.]—The average rent of the cultivated part of the fens, is from ten to twelve shillings per acre, subject to tithes: in a few instances, the rent is as high as forty shillings per acre. The more ancient inclosed parts are principally in the hands of large proprietors; but in the new inclosures, and in the open fields, property is divided among a much greater number of persons. The rental of many farms in the inclosed parts, amounts from 200*l.* to 500*l.* per annum: in the open fields, the farms are mostly under 150*l.* a year, and downwards to as low as 50*l.* a year. On some estates, the tenantry have

no more than a yearly interest on the lands they occupy.

LABOUR, &c.]—Stone observes, that from “the little employment given to the husbandmen, in respect to constant work throughout the year, the labourers remain with the farmers during the winter season to thrash out their grain, and on the approach of summer, set off for more cultivated counties, where labour is more required.” There is a scarcity of comfortable cottages for the poor of this county; and the farmers are more studious to prevent this very necessary class of men from making settlements amongst them, than to provide them useful and profitable employments; the most distressing circumstance resulting from which is, that, on the approach of harvest, inhabitants of the county cannot be found to reap, gather, and embarn the corn; and were it not from the accidental peregrinations of the Irish, of manufacturers from Leicestershire, and persons of other distant counties, the corn must be spoiled in the fields. Hence it results, that in some parts of the county, in times when labourers are scarce, a guinea and upwards per acre is frequently paid for reaping wheat and oats, which, according to an equal scale in the price of labour, might otherwise be performed for seven shillings; and it has often occurred, that at a critical time in harvest, when labourers have been wanted extremely, that half-a-guinea per day, and even upwards, has been paid them. Maxwell, however, remarks, “that the poor, in general have dwellings suited to their station; and, as almost every one may grow his own potatoes, and have constant employment, they are naturally as little disposed to emigrate from Huntingdonshire, as from other counties.”

MANUFACTURES.]—This is not a manufacturing county. Wool-stapling, however, and spinning of yarn, are carried on to some extent: the latter furnishing useful employment to women and children in the winter season.

ROADS.]—The high roads in this county are generally good; but, in the winter, many of the cross roads are hardly passable.

MARKET-TOWNS.]—The market-towns in Huntingdonshire, are as follow:—

Huntingdon.....	Saturday
St. Ives.....	Monday
Kimbolton.....	Friday
St. Neot's.....	Thursday
Stilton.....	Wednesday
Ramsey.....	Wednesday
Yaxley.....	Tuesday

POPULATION.]—The population of Huntingdonshire, in the year 1700, was 34,700; in 1750, 32,500; in 1801, 37,568: of which, 18,521 were males, and 19,047 were females: 8536 were employed in agriculture; 4484 in trade, &c; and 20,565 in other pursuits. In 1811, the number of inhabitants was 42,208. The proportion of marriages is one in 129; of baptisms, one in 31; of burials, one in 48.

CHIEF TOWNS, PARISHES, &c.

ALCONBURY.]—Alconbury, or Alkmundbury, 4½ miles N.W. from Huntingdon, is said to have been given by King John to David, Earl of Huntingdon. The church contains some ancient portraitures and inscriptions.

ALWALTON.]—Five miles N. N. W. from Stilton, stands Alwalton, or Allerton, supposed, by Dr. Stukely, to have been a corruption from Ald-werk-ton, but by Dr. Neve, who was rector of the parish, to have been derived from the Roman Ad Val-lum, Alwalton, or Adelwoldtume, from Adelwold, Bishop of Winchester. Some very high banks of an ancient town were seen by Mr. Gale, in the year 1731, among the fields and hedges on the east side of the high road, near the village of Alwalton.

BLUNTISHAM, 5 miles N.E. by E. from St. Ives, was purchased by the monks of Ely, by the prelate Ædelwold, in the early part of the 11th century. In the general confirmation of the possessions of the church of Ely, granted by Edward the Confessor, Bluntisham is mentioned with Spaldwich, Colne, and Somersham; these being all the places in Huntingdonshire, then belonging to the abbey. The church at Bluntisham is remarkable from being one of the very few whose chancel terminates in a half hexagon; each division of which is carried up pyramidically, with buttresses at the angles, and is lighted by a pointed window, separated by a mullion into two parts, with trefoil heads. It is a handsome and nearly uniform building. At the west end is a good embattled tower, surmounted by a spire; and on the south side, a large porch, opening under a pointed arch, above which is a broken niche for a statue, with sculptures of heads, and other

figures: among them are two flying monsters, with distended jaws, for water-spouts. The interior is light, and well kept: the nave is divided from the aisles by four pointed arches, on each side, rising from clustered piers; the roofs are of timber; and at the entrance of the chancel is an old wooden screen, carved and ornamented in the Gothic style. At the end of the north aisle is a piscina; and some ancient stained glass remains in the crockets of the east monuments. Among the monuments, is a white marble tablet in memory of the learned Dr. S. Knight, who was chaplain to George the First, and died rector here in December, 1746. He wrote the Lives of Dean Colet and Erasmus. The font is octagonal, and ornamented with sculptures of roses, masks, &c. On the north side of the tower, at the west end, is an apartment used as a charity-school for poor boys of Bluntisham and Erith, who are taught reading, writing, and arithmetic. In the church-yard, which commands an extensive view into Cambridgeshire, including the towers of Ely cathedral, and several other churches, is a tombstone, with the following singular inscription to the memory of Adrian Lucius, a celebrated prize-fighter and wrestler, who died in May, 1762:—

Here lyes the conquerer conquered,
Valiant as ever England bred,
Whom neither art nor steel, nor strength,
Could e'er subdue, till Death at length
Threw him on his back; and here he lyes,
In hopes hereafter to arise."

The village of Bluntisham, which consists principally of one long, irregular street, contains about 100 houses.*

BROUGHTON.]—

* In the month of September, 1741, a most extraordinary hurricane happened at Bluntisham. A storm from the south-west, bringing with it a mist, and seeming not 30 yards distant

from the ground, rolled at the rate of a mile and a half in a minute, with a noise like thunder. It began exactly at noon, and lasted about 13 minutes, eight of them in full violence. Dr. Knight's

BROUGHTON.]—The little decayed village of Broughton, five miles N.E. by N. from Huntingdon, was anciently the head of the barony of the Abbots of Ramsey.

BUCKDEN.]—At Buckden, otherwise Bugden, 3½ miles S.W. from Huntingdon, is the venerable palace of the Bishops of Lincoln, to whom this manor was granted by the Abbot of Ely, during the reign of Henry the First, in return for the leave given him to "make his abbacy a bishopric." The palace, which consists of two quadrangular courts, with a square tower, and entrance-gateway, is principally of brick, and partly surrounded by a moat. Bishop Rotherham built the tower, and Bishop Russel, his successor, most of the remaining part: Bishop William, in the reign of James the First, and Bishop Sanderson, in that of Charles the Second, also expended much money on this building. The apartments are large, and its situation is pleasant, but the grounds are not extensive. Bishop Russel is commemorated by a hawk, cut on the dormants of the dining-room, with the sentence, "*Je suis Le Rus-cella,*" surrounding it. In the church, which is a handsome structure, lie buried the following Bishops of Lincoln:—William Barlow, died 1613; ——— Sanderson, 1668; Thomas Barlow, 1691; ——— Reynolds, 1743; and ——— Green, 1779.

BURY.]—Bury, formerly parcel of the possessions of Ramsey abbey, lies about one mile S. from Ramsey. The church stands upon a hill; at some distance from which, in a bottom, is the village, containing between 40 and 50 thatched cottages. The church has an embattled tower at the west end, which, though much dilapidated, exhibits

Knight's house was untiled, the statues and ballustrades on it blown down, as also all the stabling, 60 empty barns in the parish, the alehouse, and about 12 dwelling-houses out of 100, and all shook from their under pinnings; all the mills in the country, and many stacks of hay and corn; the pigeons that were flying in its tract were dashed to pieces against the ground. The fine spire of St. Ives, and that of Hemmingford, were blown down. Its course was from Huntingdon to St. Ives, Erith, between Wisbeach and Downham to Lynne, and so to Snetsham, not further south-west than Huntingdon, or north-east than Downham; very few trees escaped. Its violence was not less at Somersham. Mr. Whiston, who lived at Wisbech, watched it very narrowly. There were two currents of clouds that moved on with great force and rapidity, one from the north-west, the other from the south-west; the south-west was the strongest. These two currents united between Wisbech and Lynne, when nothing could withstand their violence. The storm blew down St. Margaret's great church at Lynne, which cost the town 8000*l.* to rebuild. It was accompanied by thunder and lightning at Cambridge, where it was not so violent, and only a few booths were blown down at Sturbitch fair. It was such a storm as happened in Sussex about 12 years before; a calm succeeded for an hour, and the wind then continued pretty high till ten o'clock at night.

* Numerous antiquities have been discovered near this station. Dr. Stukeley says, that in making the turnpike road from Kate's Cabin to Walmsford Bridge along the side of the city of Durobrivæ, they turned up, in the cemetery of that place, many urns of different clay and shape, with coins, and several coffins of equal breadth throughout, of one stone, well cut, and covered with another handsome stone; and also a leaden

many vestiges of architectural beauty. At the entrance of the chancel is a carved wooden screen; and, against the south wall, is a neat monument in memory of the Rev. Thomas Whiston, M.A. "who succeeded his father in the curacy of this parish, A.D. 1792; and died January 17, 1803, aged 55." Over a brook, between the church and the village, is a strong stone bridge, of two arches, supposed to have been built by one of the Abbots of Ramsey. On the right of the road leading from Bury towards Warboys, at the corner of a field, is a large barrow, which appears to have been opened.

CATWORTH.]—Great Catworth, 4½ miles N. by W. from Kimbolton, was the birth-place of Sir Wolston Dixie, Lord Mayor of London, in 1585. He was a considerable benefactor to Emmanuel college, Cambridge; and he erected and endowed a free-school, at Bosworth, in Leicestershire, where his family long flourished.

CHESTERTON.]—The village of Chesterton, which contains not more than twenty scattered cottages, lies five miles N.N.W. from Stilton. It formed part of the estate of the ancient family of the Bevels, Knights; many of whom lie buried in the church. The estate was purchased, of the Walters, by the Earl of Aboyne. At the intersection of the roads, near this village, is the well-known inn, called Kate's Cabin.

The site of the Roman Durobrivæ, the fort of which stood on the Huntingdonshire side of the Nen, is about midway between Chesterton and Castor, in Northamptonshire. The city appears to have spread itself principally on the northern side of the river.*

COLNE.]—Six miles N.E. from St. Ives, is the

coffin of 400 pounds weight: all the coffins had skeletons in them; one of which was a female skeleton, having a child in the womb, in situ. Among the coins was an Antoninus Pius; a silver Nerva, reverse *Libertas Publica*; a small brass Valentinian, reverse *Victoria*; and a consecration of Constantine the Great ascending to Heaven, in a chariot drawn by four horses. On the dry gravelly hill, by Stibbington hedges, they crossed another burying ground, by the river side, where the earth of the ustrina, or burning places, appeared very black, and bits of charcoal, and innumerable fragments of urns, bones, and stones, were scattered over them to a considerable extent. In digging a ditch at the south entrance to the city, the foundations of hewn stone, and thick pointed iron bars, ten feet long, as of a portcullis, were found. In digging on the side of the high road, near Chesterton, in 1754, a coffin was found, of a yellowish hard stone, six feet two inches long, covered with a flat lid, which had on the under side an edging let quite down, about one inch and a half or two inches deep, coinciding with the edges of the chest, and containing an entire skeleton, near six feet long, the teeth sound and firm, the ribs fallen from the back bone, the right leg broken in the middle, and repaired by a callus; also three glass lacrymatories, of which that which was entire contained a corrupted fungous substance mixed with water, and of an aromatic smell on first opening; a small black seal was also found, with three or four pins, like ebony or agate, a coin of Faustina, a silver one of Gordian, besides other defaced coins, and some scraps of white wood, inscribed with Roman and Greek letters. The substance of nine or ten other skeletons was likewise found near the coffin, and all of them at the depth of only one foot from the surface.

village of Colne, consisting principally of thatched cottages, scattered over a large plot of ground.—Here, in the reign of Edward the Third, resided the Lady Blanch Wake, daughter of Henry, Earl of Lancaster, nephew to Edward the First, whose mansion was about a mile from the palace belonging to the Bishop of Ely, at Somersham. The contiguity of their estates occasioned “many controversies to arise daily concerning bounds, and other matters,” between the then Bishop, Thomas Lylde, and this Lady; and as “the bishop was a rough and plain man, hardly brooking such indignities as it is likely a woman of that nobility would be ready enough to offer,” she “conceived a deadly and inveterate malice against him, for wreaking whereof she awaited an opportunity.” This soon occurred; for the bishop having offended the King, by reprehending him for appointing Robert Stretton to the bishopric of Lichfield, the Lady, “thinking it now a fit time, commenced a suite against him, the ground and colour whereof was this. Certaine lewde persons had fired some housing belonging to the said Lady, and being apprehended were content to accuse the bishop of this foule fact; and before ever the bishop heard any thing of the matter, at the instance of the Lady, and commandment of the King, a nisi prius passed against him, and adjudged to the payment of 900*l.* which presently he was faire to lay downe.” Notwithstanding this, he appealed to a jury; but the Lady’s influence having prevented him from obtaining a copy of the former judgment, “nothing could be done;” on which he complained to the King; but with so much warmth, that Edward accused him to the Parliament, then assembled,” by whom he was sentenced “never more to come into the King’s presence.” The enmity of the principals was taken up by the domestics; and, not long afterwards, the bishop’s chamberlain slew one of the Lady Blanch’s servants, in a violent affray that originated in a dispute about the boundaries of the two estates. The bishop was soon accused as an accessory to the murder; and though “knowing himself guiltless,” yet fearing that this would prove but as his other sutes had done, he sold all his movable goods, put the money into the hands of trusty friends, and hid himself. This might not serve his turn; he was found guilty by the crowner’s inquest, and his temporalities seized into the King’s hands. Seeing, therefore, the worst, (as hee thought,) he was content, upon summons, to appear in the King’s Bench, where he demanded trial by his peeres, which the judges denied him, well knowing, that, by an honourable triall, they should not be able to condemn him. A common jury of twelve knights of the post, found him guilty, as accessory after the fact, forsooth, quod predictum Radulfum (the chamberlain) post perpetratum feloniam receptasset scienter; which, notwithstanding, he to the last gaspe with great protestations ever denied.” Judgment being pronounced against him, he appealed to the Archbi-

shop of Canterbury, that he might be put to “his canonically purgation;” but the primate advising him to intreat favour of the King, he resolved to “have recourse unto the Pope, to whom repaying, he declared all his trouble, from the beginning unto the end. Hereupon his accusers were cited to appear in the Pope’s court, and for not appearing, were excommunicated. The Bishoppe of Lincolne was commanded to denounce this excommunication, which he did to his great trouble; and also, that if any of the excommunicate were dead, he should cause them to be digged out of their graves, and forbid them buriall in holy earth. This peremptory dealing of the Pope moved the King unto great choller; for divers of those that were excommunicate, were persons of no small account; some of them of his privy council. Proclamation was therefore made throughout the realme, that, upon paine of death, no man should hereafter be so hardy as to bring into the realme any kind of writing from the Pope’s court. Some, notwithstanding, contrary to this prohibition, delivered letters to the Bishoppe of Rochester, then Treasurer of England, from the Pope, concerning this matter; and, fearing the worst, had armed themselves: this done, they shrunke away and fled; but were soon after apprehended, and diversely punished; some dismembered, other faire and well hanged. The Pope hearing of this, was so incensed, that hee wrote a very sharpe letter unto the King, breathing out terrible threats against him, if hee did not presently reconcile himself unto the bishoppe; and cause such amends to be made him for all the losse hee had sustained, eyther by the Lady, or him, in these troubles. The King was too wise eyther to do all he required, or utterly to despise his authority: the one he knew was not for his honour, nor (so farre had this tyrant incroached upon the authority of Princes) the other for his safety. Warned by the examples of King John, Henry, the Emperour, and other, hee thought good not too exasperate him too much; and so was content to yealde unto somewhat: but, before the matter could grow to a full conclusion, it was otherwise ended by God, who took away the bishop by death: he deceased at Avinion (Avignon) June 23, 1361, and was there buried.” Not any fragment of the Lady Blanch’s house is now standing; and the bishop’s palace at Somersham, has been equally destroyed. The former was, in the last century, inhabited by the Drurys; and was wholly pulled down about 30 years ago: the grounds round the site have a park-like appearance.

Colne church, which is almost half-a-mile from the village, appears, from the style of its architecture, to have been erected about the time of Henry the Third. It consists of a nave, chancel, and aisles, with a tower at the west end, standing within the area of the church, and open to the aisles, but not to the nave, on which side the arch has been walled up for additional support. In the south wall

wall of the chancel is a piscina; and at the end of the south aisle, where was probably a chapel, is a double piscina. Some mutilated remains of arms and figures in stained glass, appear in two or three of the windows. The walls are supported by buttresses, those on the west side being particularly strong. This edifice was new roofed, and otherwise repaired in the year 1807.

CONINGTON.]—Conington, 2½ miles S.S.E. from Stilton, celebrated as the seat of the Cotton family, was anciently, observes Camden, “holden of the honour of Huntingdon,” and there, “within a square ditch, are traces of an ancient castle, the seat, as also saltrez, by gift of Canute, of Turkill, the Dane.” On his exile, in the reign of Edward the Confessor, it was granted by the King to Waltheof, afterwards Earl of Northumberland and Huntingdon, whose daughter, Maud, conveyed her inheritance in marriage, first to Simon de St. Liz, and afterwards to “David, son of Malcolm the First, King of Scotland, and the holy Margaret his wife, niece to King Edward the Confessor, grandchild to Edmund, surnamed Atheling; by which marriage, the stem-royal of the Saxons became united with the blood-royal of the Scottish Kings, in whose male line that earldom and this lordship continued until Isabel, the daughter and heiress of David, Earl of Huntingdon, and brother to Malcolm, William, and Alexander, successively Kings of Scotland, brought them both, by her marriage with Robert de Brus, into that family. She gave this lordship of Connington, with the other large possessions in England, to her second son, Bernard de Brus; and after four descents in that stem, they were, by the marriage of Anne, daughter and co-heir of Sir John de Brus, with Sir Hugh de Weseham, conveyed into his family. After three more descents, Mary, niece and heiress of Thomas Weseham, married William, second son of Sir Richard Cotton, of Ridware, in Staffordshire, from whom Sir John Cotton, Bart. is lineally now descended to this lordship of Connington, and hath

here and hereabouts great possessions.”* Sir John Connington finding the mansion at Connington in a ruinous state, and having a superior predilection for that of Stratton, in Bedfordshire, “took it down,” says Gough, “excepting a stone colonnade of the front. It was built by Sir Robert Cotton, and stood at the west end of the church fronting the north, but is now succeeded by a farm-house.”—On a terrace in the garden, were two octangular stone summer-houses, one of which was fitted up with the Roman inscriptions and altars brought from the wall of Severus, some of which are now fixed up at the foot of the library stairs in Trinity College, Cambridge; they having been given to that college by Sir John Cotton. Connington is now, or was lately, the seat of John Heathcote, Esq. The grounds, though not extensive, are pleasant, and a small stream runs through them.

The church is a large and handsome building, consisting of a nave, chancel, and aisles, with a north and south chapel, and an embattled tower at the west end. Here are many monuments, chiefly of the Cottons; and, against the north wall, is the following inscription, “Prince Henry of Scotland, Lord of Connington, and Imperator, Rex. Francie, Anglo-Saxonum, Angliæ, Scotiæ,” with the arms which make quarterings of Cotton. Among the monuments, are four large marble medallions, with inscriptions, to the memory of Sir Robert Cotton, his son, Sir Thomas, who died in the year 1662, his grandson, Sir John, and his second wife, both of whom died in the year 1702.

DENTON.]—Denton, a mile and three-quarters S.W. from Stilton, was part of the estate of the Cottons, of Connington, above-mentioned. Sir John Cotton partly rebuilt the church, about the year 1665. The east window contains a shield of arms, quarterly;—1st. Cotton; 2d. Bruce; 3d. Scot; and, 4th, Earl Waltheof. This was the birth-place of the celebrated antiquary, Sir Robert Cotton, to whom we are indebted for the well-known Cottonian library, in the British Museum.†

ELTON.]—

* The Cottons took their surname from Cotton, in Cheshire; and from “William de Cotton, who lived in that county, are derived all the eminent families of that name, in England.” William, who married the heiress of the Wesehams, was slain at the battle of St. Alban’s, in 1455; he was great great grandfather to Sir Robert Cotton, who “having collected,” says Camden, “the remains of venerable antiquity from all parts, has here formed a cabinet, from which he has often with singular kindness, furnished me light in my dark pursuits.” Through this descent from the Bruses, Sir Robert was related to the blood royal both of Scotland and England; “on which account, King James was wont to call him cousin; and he used frequently to write his own name, Robert Cotton Bruce.”

† Robert Cotton, fourth son of Thomas Cotton, Esq. and Elizabeth, daughter of Francis Sherrey, Esq. of Stanton, in Leicestershire, was born on the 22d of January, 1570. He completed his education at Trinity College, Cambridge, where he became Bachelor of Arts; and afterwards was admitted a member of the Society of Antiquaries, then recently established. In 1599, or 1600, he accompanied Camden to Carlisle, at which

time he collected these Roman monuments from the neighbourhood of the Picts’ Wall, that are now preserved at Trinity College. On the accession of James the First, he was created a knight: “and during this whole reign, he was very much courted, admired, and esteemed, by the greatest men in the nation; and consulted as an oracle, by the privy counsellors, and the rest of the Ministers, upon every difficult point relating to our constitution.” In 1608, he was one of the commissioners to inquire into the state of the navy; and soon afterwards, he began to direct his attention “towards the manner and means how the Kings of England have, from time to time, supported and repaired their estates; for King James having prodigally exhausted his treasury, new projects, as they were then called, were to be contrived to fill it up again.” Among the expedients, suggested by Sir Robert, for this purpose, was the creation of baronets: one of whom he himself became.—In the first Parliament of Charles the First, he was a member, and took a very active part in public affairs, till the year 1620, when he was arrested by order of the Privy Council, “for having in his custody a pestilent tractate, which he had fostered

ELTON.]—At Elton, $3\frac{1}{2}$ miles N.W. by W. from Stilton, was formerly a seat of the Sapcott family. Camden mentions a private chapel here, “of singular workmanship, and most beautiful (painted) glass windows, that was built by Elizabeth Dinham, widow of Baron Fitz-Warin, who married into the Sapcott family.” A curious tower of the old mansion is still remaining, but the present manor-house was rebuilt after the Restoration, by Sir Thomas Proby, Bart. whose collateral descendant, John Joshua Proby, created Earl of Crysfort, in 1789, is now owner. Part of the seat is in the adjoining county of Northampton.

ERITH.]—Erith, or Earith, six miles E. N. E. from St. Ives, is a hamlet to Bluntisham, near the edge of the county, on the road to Ely. The houses form a street about half a mile in length, and many of them are inhabited by Quakers, who have a meeting-house here. About a quarter of a mile from the village, towards the north-east, is the side of an encampment, called the Bulwalks, which appears to include between three and four acres of ground. Its form is nearly that of a parallelogram, with bastions at the angles, &c. It seems to be of no very remote origin, and was probably thrown up in the civil wars. At a short distance from Erith is Belfars Hill, a curious artificial mount, supposed to have been thrown up by those who took up arms against William the Norman, in the year 1066, after he had defeated Harold at the battle of Hastings.

EVERTON.]—In the church of Everton-cum-Tetworth, $4\frac{1}{2}$ miles N. by E. from Biggleswade, Beds, is the following inscription on a monument to the memory of “Sir Humphrey Winche, alias de la Winche, Knt. who in the fourth year of King James, Anno Domini 1606, was sent by him to serve in Ireland, as chief baron, and counsellor of state for that kingdom; from whence recalled, he served his Majesty as one of his justices of his court of Common Pleas, &c. until an apoplexy seized on him in his robes, the fourth day of February, 1624, in the 71st year of his age, whereof about 24 hours after he died, in Chancery Lane, London; whose corpse, embalmed, was buried here below,” &c. Sir Humphrey was lord of the manor. This was the birth-place of Sylvester de Everton, Bishop of Carlisle, who died in 1254; and also of the celebrated John, Lord Tiptoft, created Earl of Worcester, by Henry the Sixth. The village of Everton is partly in the county of Bedford.

fostered as his child, and had sent it abroad into divers hands; containing a project how a Prince may make himself an absolute tyrant.” On this occasion, his library and papers were seized by the government; and though in the course of the proceedings it appeared, that the tract complained of, and which bore for its title, “A Proposition for his Majesty’s Service, to bridle the Impertinency of Parliaments,” had been actually written by Sir Robert Dudley, whilst in exile at Florence, in the reign of James the First, and had been copied and circulated entirely without the knowledge of Sir Robert, by his librarian, his collections were still withheld from him; and, in a letter written

EYNSBURY.]—Half a mile S. from St. Neot’s, on the opposite bank of the Ouse, is the village of Eynesbury; the church of which stands separate from its tower, which is on the south-east side.—By the north wall in the chancel, “is a stone tombe, or coffin of stone, in which, as said, Saarde Quincey was buryed.” The register of this parish contains the following singular entry of a licence granted to “eate fleshe,” between the years 1556 and 1568. “Whereas by a statute made in the fifth yeare of the Queene’s Majestyes raygne, that now is called the statute of Navigacion, yt is graunted, that persons notoriously sycke maye be lycensed by the parson of the paryshe where the partyes dwell, to enjoy the benefyt of eatynge of fleshe on the daies prohibited by the saide statute, for the recoveryng of theyre healthe; (yf yt pleasith God) let yt be knowne to the seere hereof, that Jhon Burton, of the paryshe of Eynesburye in the countye of Huntingdon, being verye sycke, ys lycensyd to eate fleshe for the tyme his syckness, soo that he enjoycinge the benefytt of the lycence, his syckness continewinge eight dayes, do cause the same to be registered into the regester booke in the same paryshe, accordyng to the tenor of statute in that behalfe; and this lycense no longer to indure than his syckness doth laste; by me, Wyllyam Samuell, parson of Eynesburye.” The Earl of Sandwich is lord of the manor.

FLEETON.]—This little village, one mile S. by E. from Peterborough, with that of Alwalton, was given by one of the monks of Peterborough, “for the augmentation of their commons.”

GIDDING.]—Between five and six miles S.W. from Stilton, are the three contiguous parishes of Great Gidding, Little Gidding, and Steeple Gidding. John de Engaine, who died in 1296, held a portion of land in Great Gidding, by the searjentry of hunting a wolf, a fox, and a cat, and removing all vermin from the King’s forests in this county. In the time of Charles the Second, this manor belonged to Lewis, Earl of Rockingham. Steeple Gidding was part of the inheritance of the Cottons. Little Gidding excited much notice in the time of Charles the First, as the retreat of the religious family of the Ferrars, and the scene of their severe though pious establishment.* In the church-yard, are several memorials of this family and their alliances: among them is a brass plate, on which is graven, on a bend cottised, three horse-shoes with nails;

but a short time before his death, it is asserted, that, before he died, “he requested Sir Henry Spelman to signify to the Lord Privy Seal, and the rest of the Lords of the Council, that their so long detaining his books from him, without rendering any reason for the same, had been the cause of his mortal malady.” He died at Cotton House, Westminster, on the 6th. of May, 1631; and was buried in the south chancel of Conington church, in this county. Besides numerous publications, and other works yet in manuscript, written by Sir Robert, he assisted all the learned men of his time with communications.

* The Ferrars derived their descent from Walkeline de Ferraris,

nails; the crest, an arm holding a sword, with an inscription for "John Ferrar, Esq. lord of this manor, who departed this life the 28th of September, 1657."

GLATTON.]—Glatton, or Glatton-cum-Holme, 2½ miles S.S.W. from Stilton, formed the liberty so called, which in the reign of Charles the Second belonged to Sir John Cotton, Bart. It was afterwards possessed by the Castells and Sherrards; and more recently by Mr. Wells, ship-builder at Chatham; who built

raris, who came into England with the Conqueror, and whose descendants branched out into several different counties. One line settled in Yorkshire, from which sprung Nicholas Ferrar, Esq. a merchant adventurer of great repute in the city of London; whose table was frequented by Hawkins, Drake, Raleigh, &c. He married Mary, daughter of Laurence Wodenoth, Esq. of the ancient family of that name, who had been seated at Savington Hall, in Cheshire, nearly 500 years. They had several children, the fourth of whom was Nicholas, the founder of the society at Gidding. He was born on the 22d of February, 1592, in Mark Lane, London. His mind was early imbued with the principles of piety and virtue; and being fond of learning, he rapidly acquired a knowledge of the Latin and Greek languages. In his fourteenth year, he was admitted of Clare Hall, Cambridge; and he afterwards became Fellow of that Society. In 1613, he took the degree of Master of Arts; and in the same year commenced his travels on the continent, where he acquired a knowledge of Low and High Dutch, Italian, French, and Spanish; and studied some time at the then famous universities of Leipsic, in Germany, and Padua, in Italy. After passing five years in Holland, Germany, Italy, and Spain, he returned to his native country, and within a short time was appointed King's counsel for the Virginia plantation, in place of his brother John, who was chosen deputy Governor of the Virginia Company. To this office, also, Nicholas succeeded in about three years afterwards; but he held it not long; for the King, James the First, instigated by the Spanish ambassador, had the charter of the Company declared "null and void," under a writ of quo Warranto. In the following year, 1624, he was elected a member of Parliament; and appointed, in conjunction with Lord William Cavendish, and Sir Edwyn Sandys, to draw up the charge made against the Lord Treasurer Cranfield, Earl of Middlesex, for taking bribes, &c. The seriousness of his disposition had long led him to contemplate the advantages of religious retirement with a sort of enthusiastic fervour, and he now determined to carry his ideas into effect. He therefore purchased the lordship of Little Gidding, "which he found with respect to privacy of situation, exactly suited to his wishes. It was a parish that had been for some time depopulated: nothing was left but one extremely large mansion-house, going hastily to decay, and a small church, within 30 or 40 paces of the house, and at that time converted into a barn." The raging of the plague in London, anno 1625, accelerated his preparations for retirement; and things being in order the same year, himself, his brother John, and his mother, now 73 years of age, with her daughter and son-in-law, and their numerous family, were finally seated at Gidding, where, with servants, &c. they formed a community of nearly 40 persons. In 1626, Mr. Nicholas Ferrar was ordained deacon; and the church and mansion having been put into complete repair, and properly furnished, he completed his establishment. The regularity of the arrangements, and the exactness with which the rules were observed, attracted much attention; and the common people gave the name of Protestant Nunnery to this seminary for religious and moral instruction. Amongst the provisions made for the employment of those hours that were not appropriated to religious offices, was the reading, in rotation, of certain short histories, characters, and moral essays, written by Mr. Ferrar; who also composed several "Harmonies of the Evangelists;" and wrote and translated various other works, all of a pious

VOL. II.—NO. 94.

the Glatton, of 50 guns, the commander of which, the brave, but unfortunate Captain Seccombe, was mortally wounded on the coast of Calabria, in February, 1808, whilst aiding in the attempt to recover some Sicilian gun-boats that had been taken by the French.

GODMANCHESTER.]—The town of Godmanchester, by some supposed to be the Durosiponte, or Duro-liponte of the Romans, lies three-quarters of a mile S.E. by S. from Huntingdon, from which it is sepa-

or moral nature, forming many large volumes. The fame of this institution was at length so generally spread, that in May, 1633, the King himself, Charles the First, stepped out of his road, when on his way to Scotland, to make inquiries at Gidding. He was met by the family at the extremity of the parish, and, in "the form of their solemn processions," conducted to their church; and, after examining into all the particulars of their public and domestic economy, he departed much pleased. At his Majesty's request also, signified in the following year, Mr. Ferrar composed a "Harmony of the Evangelists;" and another of "the two books of the Kings, and the Chronicles," for the King's own use. From this period, a sort of friendly acquaintance was preserved between the Ferrars and the King; who visited Gidding several times: the last was during his secret journey northwards, to throw himself under the protection of the Scotch army. This was on the 2d of May, 1646; and though Mr. Nicholas Ferrar had then been dead some years, "the King, having an entire confidence in the family, made himself known;" and Mr. John Ferrar conducted him for better concealment, to the obscure hamlet of Coppinford, near Gidding, where he slept that night in safety, and on the next day went on to Stamford. The decease of Mr. N. Ferrar occurred in December, 1673; his mother died at the age of 83, two years previously. His own days were partly shortened by the severity of his application to religious observances. "In his latter years, wrapping himself up in a loose frieze gown, he slept on a bear's skin upon the boards. He also watched either in the oratory, or in the church, three nights a week. His nephew of the same name, who was a youth of most extraordinary accomplishments, also died from the effects of a too severe application to his studies and pious duties, when in his twenty-first year. He composed several works from the Scriptures for the use of Prince Charles; among them was a New Testament "harmoniously arranged," in 24 different languages; and he afterwards composed a second in 26 languages! To the latter was annexed the Lord's Prayer, in 60 different tongues. His varied talents determined the King to place him at the university of Oxford, under his own immediate protection; but the ensuing troubles in the state, and the premature death of the youth prevented it. He died in May, 1641. The poet Crashaw, who was intimately acquainted with the Ferrars, wrote a sepulchral eulogy on his memory. During the tempestuous period of the civil wars, many falsehoods were circulated respecting the establishment at Gidding. The unfortunate appellation of Nunnery rendered it particularly obnoxious; and it was at length broken up by one of the common events of those disastrous times. Some soldiers of the Parliament army resolved to plunder it; and the family, having notice of their approach, thought it prudent to fly, that they might, as to their persons, at least escape the intended violence. "The military zealots, in the rage of what they called reformation, ransacked both the church and the mansion. In doing this, they expressed a particular spite against the organ, which they broke into pieces, and making a large fire with them, thereat roasted several sheep, which they had killed in the grounds. This done, they seized all the plate, furniture, and provision, which they could conveniently carry away; and, in this general devastation, perished those works of Mr. Nicholas Ferrar which deserved a better fate." This outrage was committed but a short time before the execution of King Charles.

u

tated

rated by bridges over the Ouse. Many Roman coins, and other antiquities, have been found here. From the old verse, quoted by Camden—"Gormonis à Castri, nomen habet"—it seems probable, that Gormond, or Guthrum, the Danish chief, had a military post, or fortified residence, at this village, which, in after times, was dignified with the appellation of Cestre, or Chester. It was subsequently called Guma, Gumicastria, and Gumicestre. Camden says, that some other ancient writers "avoucheth withall, that Machutus had here his episcopal see." Godmanchester was the old land of the crown, by grant of King John. In the Cotton MS. are the following particulars of the customs of this manor, but from what source they were derived is not quoted. "Also it is ordeyned and statutyd, that if any man of the s^d towne of Gumy-cester, have two or three sons by one woman lawfully begotten, the younger of the s^d sons shall be the ayer, according to the use and custome of borough English; and although that he have had two or three wives, and each of them children, nevertheless the younger son of the first wife shall be the heire. Also that if any man have purchased any lands or tenements wth his wife, y^e ys leffull for the s^d man, while he is alyve, to gyve, sell, or bequeath the s^d lands or tents, without the license of his s^d wife, and such a woman shall have no dowres.—Also that men children shall be of full age, so that they may gyve, sell, or assigne their land and rents, when they come to the age of xx years, and women at the age of xvi years. Also that if any man have two sons married by his lyfe, and one of these sonnes hath an ayre masculine, and the other an ayre femynyne; and if it chance after, these two sonnes to depart and dye, the father of them being alyve, and after it chanches the father of them to dye, then that same heir masculyne shall be the ayer, and not the ayre femynyne, though she be of the yonger son."

Godmanchester church is a large light edifice, with an embattled tower, surmounted by a spire at the west end, and a very large south porch: the latter has strong buttresses at the angles, and monstrous heads, with distended mouths, for water-spouts. The nave, which has a timber roof, is separated from the aisles by five high-pointed arches, rising from light shafts, and from the chancel by another large pointed arch, partly boarded up.—The windows exhibit some ornamental tracery. On the tower is the date 1623, which probably refers to some general repair. Here "is a school, called the Free Grammar School of Queen Elizabeth: the vicar, and fourteen men of the towne, called governors of the possessions, rents, and goods of the said schoole, are a body corporate, and have a common seale." This establishment continues to be well supported.

This village was for several centuries highly ce-

lebrated for the goodness of its husbandry; but, from the general improvement that has taken place, it is now but little superior to the common level. Camden remarks, that there is "no place in all England, that has so many stout hinds, or employs more ploughs; for they make their boast of having formerly received the Kings of England in their progresses this way, with nine score ploughs brought forth in a rustical kind of pomp for a gallant shew." When James the First passed through Godmanchester, in his progress from Scotland to London, "they met him with seventy new made ploughs, drawn by as many teams of horses; and when he enquired the reason, he was answered, that they held their lands immediately from the Kings of England, by the tenure of so meeting them, on passing through their town. In the reign of James the First, but whether from the circumstance just stated is doubtful, Godmanchester was incorporated as a borough, by the style of two bailiffs, twelve assistants, and commonality: it never, however, had the privilege of sending representatives to Parliament. The houses are spread over a considerable plot of ground, and though in general irregular, many of them are good brick buildings: the two bridges next the village, on the road to Huntingdon, are also of brick. The population of Godmanchester, in 1811, was 1770.

The famous Parliamentary divine, Stephen Marshall, the head of the Smectymnians, "who raised the strongest arguments against episcopacy, that the Presbyterians were able to furnish them with," was born here.

HAILWESTON.]—At the little village of Hailweston, N.W. from St. Neot's, are some mineral springs, already mentioned.

HARTFORD.]—Hartford church, a mile E.N.E. from Huntingdon, is composed of a nave, chancel, and aisles, with an embattled tower, having pinnacles at the angles, at the west end. The nave is separated from the south aisle, by three semi-circular arches, and from the north aisle by three pointed ones, all rising from round columns. The monuments are not remarkable.

HEMINGFORD.]—Hemingford Abbott's, lies 2½ miles W. and Hemingford Grey, or East Hemingford, a mile and three-quarters W.S.W. from St. Ives. The former was given to the Abbots of Ramsey, by the munificent Bishop Æthelric, about the time of King Canute, and continued in their possession till the period of the Dissolution. The altar-piece, presented by the late Dr. Dickens, who died in 1794, after holding the rectory 47 years, is a good painting of the miracle of the loaves and fishes. The church has an embattled tower, surmounted by an octagonal spire.

Hemingford Grey was also granted to the church of Ramsey, with several other manors, by King

* Translation.—From Gormond's castle, now it takes its name.

Hardicanute, through "the entreaties of his mother Emma, who was a most magnificent lover of the Christian faith, and of monastic discipline." The church, which stands close upon the south bank of the Ouse, has a tower at the west end: the columns supporting the arches of the nave and aisles appear of Norman origin, as well as the arches. In the east window, are various fragments of early painted glass. The west window is rather handsome. Within the altar-rails, is an oval monument of white marble for James Johnson, LL.D. Chancellor of Ely, who died in 1727. Here are some other memorials, but they are not of importance.

HINCHINBROOK.—At Hinchinbrook, partly within the jurisdiction of the town of Huntingdon, (from which it is distant half a-mile W.) partly in the hundred of Hurstingstone, partly in the parish of St. Mary, and partly extra-parochial, is Hinchinbrook House, the seat of the Earl of Sandwich.—It enjoys an elevated situation, commanding some beautiful and extensive views over a fine tract of country, particularly of the rich vale fertilized by the waters of the Ouse. The house, which is a large irregular building, partly of stone, and partly of brick, occupies the site of a Benedictine nunnery, dedicated to St. James, and built here, says Leland, by William the Conqueror, "when the nunnery at Eltesley, (in Cambridgeshire) wher St. Pandonia, the Scottish Virgin, was buried, was destroyed." At the Dissolution, the annual amount of the revenues of this establishment, was 17*l.* 1*s.* 4*d.* according to the Monasticon; or, according to Speed, 19*l.* 9*s.* 2*d.* Henry the Eighth granted it, with all its appurtenances, to Richard Williams, alias Cromwell, Esq. whom he had received into great favour, and whose son, Sir Henry, called the Golden Knight, from his liberal disposition, erected the family mansion here, and had the honour of entertaining Queen Elizabeth in it, after her visit to the University at Cambridge, in August, 1564. His eldest son and successor, Sir Oliver, uncle and godfather to the Protector Cromwell, continued to live in the same splendid style as his father had done, through which he so much impaired his fortune, that he was forced, from time to time, to alienate one or other of his estates, by which means the paternal inheritance of his family was greatly decreased. He received and entertained James the First, whom he invited to Hinchinbrook, when on his progress from Scotland to London, in the most sumptuous style.—King James visited Hinchinbrook again, in 1605, 1616, and 1617; and probably, several other times, as Royston, his usual place of hunting, and favourite residence, was in that neighbourhood, and from thence he frequently went to Huntingdon. Charles the First is also believed to have honoured Hinchinbrook with his presence. The loyalty and regard which Sir Oliver paid to his Prince, seemed almost unbounded; for when James quitted Hinchinbrook, he was presented by him with many things of great value; amongst others, "a large

elegant wrought cup of gold, goodly horses, deep-mouthed hounds, divers hawks of excellent wing, and at the remove, he gave 50*l.* amongst the principal officers." So many great proofs of attachment gained the regard of James, which he took an early opportunity of expressing, by creating Sir Oliver, with 59 others, a knight of the Bath; he likewise gave him 6000*l.* for his relinquishing a grant of 200*l.* issuing yearly out of the royal lands, given to him as a free gift. After the death of James, he possessed an equal degree of the favour of the unfortunate Charles, whose cause he supported both at the hazard of life and fortune. "For this purpose, he not only, at a very heavy expence, raised men, and gave large sums of money, but obliged his sons to take up arms, and go into the royal army; and he was of greater use to his Majesty, than any other in this part of the kingdom, by which he rendered himself particularly obnoxious, and Oliver Cromwell, (who to hide his ambition, seemed to pay no distinction to any on private accounts,) his nephew and god-child, paid him a visit at Ramsey, his then residence, accompanied by a strong party of horse. While there, he endeavoured to unite the character of a dutiful relation with that of a stern commander; for, though during the few hours he staid with him, he would not keep on his hat in his presence, and asked his uncle's blessing, yet he did not leave the house until he had both disarmed the old knight, and seized all his plate for the public service." Previously to the removal of Sir Oliver to Ramsey, he had been obliged to sell his mansion, and all his lands at Hinchinbrook, on account of his increasing necessities; and, from a deed, bearing date the 20th of June, 1627, it appears "that he joined with his eldest son and heir apparent, and Sir Robert Smith, of Leeds Castle, Kent, Knt. and dame Mary, his wife, in consideration of 1650*l.* 4*s.* 4*d.* paid to him, and 1409*l.* 15*s.* 8*d.* to Sir Richard, to convey the mansion of Hinchinbrook, with all those lands lying near it, that had been granted to his grandfather, Sir Richard Williams, alias Cromwell, Knt. by Henry the Eighth, &c. to trustees, who conveyed the same, the following day, to Sir Sidney Montagu, of Barnwell, one of the Masters of the Requests to his Majesty," from which gentleman, the present Earl of Sandwich is descended.

On a broken stone cornice of Hinchinbrook House, belonging to the small portion which remains of the ancient nunnery, is the date 1437; but the greater part of the present edifice was built by the Cromwells, in the reign of Elizabeth. The large bow-window of the great room was erected by Sir Oliver Cromwell, in 1602, as appears from that date on the stone-work of the outside, and over which are the royal arms of Tudor, with their supporters, a lion and a dragon. Below is another shield of arms, displaying eleven quarterings of the Williams and Cromwell families, and their motto, *Su-dore non Sepore*: various other shields of arms are sculptured

sculptured on the seven ribs that form the divisions of the window; and, on the cornice, are the initials O. C. and E. C. A. for Sir O. Cromwell, and his two wives, the ladies Elizabeth and Anne. In the window itself, are two large ovals of stained glass, containing two shields, baron and femme, of the Cromwell arms, which were also put up by Sir Oliver: this window is in the east front, and looks into the pleasure-garden. The offices on the north side include what was the common room of the nuns, now the kitchen; and about eight or nine of the nuns' cells, which are used as lodging-rooms by the menial servants: they are small cheerless rooms of stone, ranged on each side of a narrow gallery, and each lighted by one small window: the floors are solid, of stone-like composition. The more regular portion of the interior of this mansion forms a quadrangle. The hall, which is principally lighted by a large bow-window, contains a variety of portraits; amongst which are those of John Wilmot, the profligate Earl of Rochester; and of many distinguished naval officers. The great staircase is ornamented with carvings, displaying shields of the Sandwich arms, flowers, &c.

The dining-room, though small, has an imposing effect, from being adorned with whole-lengths of their Majesties, George the Third, and Queen Charlotte, by Sir Joshua Reynolds; the Duchess of Cleveland, in white satin, leaning on her elbow, in a musing position, by Sir Peter Lely; Charles the Second, in armour, with a long blue robe, and the ribband of the order of the Garter round his leg; William, Duke of Cumberland, in his robes, well-painted, but much cracked in the colouring; Edward, first Earl of Sandwich, in his robes, with the George pendant; Edward, third Earl, by Sir Godfrey Kneller; and King George the Second; a half-length of Edward, second Earl of Sandwich, by Kneller; and a very beautiful three-quarter length of Queen Henrietta Maria, depicted with a mournful cast of countenance, and holding some roses; near her, the crown on a table. Over the fire-place is a large picture of the Battle in Solebay; and, in the windows, are the arms and quarterings of the Montagu family, in stained glass, put up by the late earl in 1758. In the little dressing room is a portrait of Elizabeth, afterwards third Countess of Sandwich, the eccentric daughter to the Earl of Rochester, who confined her lord during a long period in one of the upper rooms of this mansion: it represents her when a girl, and in the act of placing a wreath of flowers round the neck of a lamb. In the drawing room is another picture of this lady, an oval head; and also three others of her friends, Madame de Berri, and the Duchess of Mazarine and Orleans: these portraits, with a corresponding head of the celebrated Ninon de L'Enclos, now in the library, are supposed to have been painted for her ladyship during her residence in

France. In the green room, among others, is John, fourth Earl of Sandwich, a small whole length sitting. In the velvet room, so named from an ancient bed, above the fire place, is a large and singular Bacchanalian subject, well painted, but indelicately composed; Charles the Second, of Spain, when a boy; Anne Maria, Queen of Spain, as a nun, sitting; and some others. The work room, and the work dressing room, also contain several portraits.

The great room, to which the bow window was added by Sir Oliver Cromwell, retains its ancient character.* The roof is of timber, in the style of the College Halls, and has been painted and gilt in square compartments: the walls have also been painted in fresco, but are now partly covered with remains of rich tapestry hangings, worked after the cartoons of Raphael. Here are also two or three models of ships of war, and various old carved elbow chairs, probably of the time of the Cromwells. In the ship room are several good pictures of sea fights, &c. chiefly those of the years 1745 and 1746. Here is also a very fine portrait of Edward, first Earl of Sandwich, represented with long flowing hair, in body armour, with a red sash, and laced neckcloth: one hand holds a truncheon, the other is rested on a cannon. The library contains a small but select collection of good authors; with good half lengths of Prince Rupert when a youth, and Ireton; a head of the Protector Cromwell in an oval, and two very curious pictures of Cromwell's parents. General Ireton is painted in a red dress, in body armour, with a sash over it; his sleeves slashed, his hair dark; his countenance expressive and intelligent, with whiskers. Richard Cromwell, Esq. father to Oliver, is in the solemn dress of his time; his features pleasing, but languid.

The park and grounds of this demesne are neither extensive, nor much diversified. On the south side, bordering the road, is a raised terrace, between which and the house, skulls, and other human bones, have been dug up. Towards the south-west are vestiges of a more ancient entrance than the present; and in different parts of the estate are fish-ponds, which evidently appear to have belonged to the nunnery. The entrance gateway is of stone, opening on to the court by a large pointed arch for carriages, and two smaller ones at the sides for foot passengers. It is ornamented in the style of Henry the Seventh's time, and on each face have been since put up two rude figures of human beings, clothed in garments of skins, with ragged staffs of an enormous size.

[HOLYWELL.]—The village of Holywell, deriving its name from a well or spring of soft water, which rises near the bottom of the church yard, and which in the days of superstitious credulity was much frequented by religious devotees; is situated on a commanding eminence, two miles E. by S. from St. Ives. It is thought, by some, to be the site of a Roman

* Charles the First, when taken from Holmby by Cornet Joyce, on the 4th of June, 1647, was brought to Hinchin-

brook, and kept there, till the 7th, when he was removed to Childerley.

station,

station, numerous fragments of ancient pottery, &c. having been dug up here.

HUNTINGDON.]—N. by W. from London, 58½ miles stands Huntingdon, the principal town in this county. It is situated on the northern side of the Ouse, on a gently rising ground, and is nearly connected by three bridges and a causeway with Godmanchester. Henry of Huntingdon, the archdeacon, and historian, describes it as "surpassing all the neighbouring towns both in pleasantness of situation, beauty of buildings, nearness to the fens, and plenty of game and fish." Most writers agree with Camden, in respect to the origin of this town; and like him, also, have placed the Duroloiponte of Antoninus at Godmanchester; yet the nature of the ground affords decisive evidence that the Roman station could not have been at that village, but was rather at Huntingdon, where the entrenchments yet remaining show the works to have been very strong and extensive. These works are generally referred to times long subsequent to the Roman period; but Camden's own testimony may be urged in support of the opinion, that they had a far more remote origin than is commonly assigned. "On the river near the bridge," says he, "which is fair built of stone, are to be seen the mount and site of a castle, which, in the year 917, King Edward the Elder built anew; and David, the Scot, (to whom, according to an ancient historian, 'King Stephen gave the borough of Huntingdon for an augmentation of his estate,') enlarged with many works." The rebuilding of the castle, by King Edward, evinces, in a great measure, its previous antiquity; and its site, as in Camden's time, remains to prove, that no spot of ground in this neighbourhood could be better adapted for a station or fortress. On the south it is bounded by the river, from which it rises very abruptly to a considerable height, and from its summit commands a fine view over a great expanse of country, particularly to the south; the prospect towards the north must also have been formerly very extensive, but is now impeded by the houses of the town. The outer ramparts inclose an area of several acres, of a square form, with the angles rounded off, and the whole was environed by a deep ditch: the banks on the south, and south-east, are still very bold; the principal entrance was on the east side. Not any vestiges of buildings now remain, but the foundations may in various places be traced from the unevenness of the surface: the artificial mount, on which most probably stood the keep of the castle, was surrounded by a ditch. Towards the west, the high ground continues for some distance; but on the north and east it more quickly declines. Such are the characteristics of this spot. The situation, and square form of the inclosed area, furnish strong evidence of a Roman origin; and though no coins are known to have been found here, as at Godmanchester, that circumstance alone cannot be admitted as sufficient to invalidate the assumed fact. Both the

VOL. III.—No. 94.

distance and the ancient name, as recorded in the Itinerary, will suit Huntingdon, equally as well as Godmanchester; and the latter place, from the lowness of its situation, is not likely to have been selected by the Romans for the site of a fort, in direct contradiction to their acknowledged system of military tactics. The short distance of half a mile afforded them a superior and proper choice of ground. It is deserving of remark, too, that no vestige of entrenchments can be found, nor are remembered to exist, at Godmanchester. That any Roman coins, or other antiquities, have been met with about the castle hills, here, has not been recorded; but on that which adjoins the site of the fortress, and on which the windmill stands, was dug up, about eight or ten years ago, a human skeleton in a stone trough, or coffin. Camden supposes the appellation Duroloiponte, to be a corruption from Durosiponte, (more accurately Dwr-osi-ponte,) "signifying, in British, the Bridge over the Water Ose; for all allow that this river is indifferently called Use, Ise, Ose, and Ouse." This etymology seems very just; for anciently, as it still does in time of floods, the river must have spread over the low grounds under the castle hills, in a broad expansive sheet. He states, also, that the castle itself was utterly destroyed by Henry the Second, not only from its having become a retreat for seditious rebels, but from the frequent contentions for its possession between the Scots and the St. Lizes, which occasioned him to level it with the ground, he having sworn in his anger, that 'it should no longer be a cause of dispute.' Below the high ground to the south-westward of the entrenchments, is an extensive and fertile meadow, called Portsholm, which Camden describes as 'the most fresh and beautiful that the sun ever shone upon.' This meadow is partly surrounded by the Ouse river; and here the Huntingdon races are held: a small part of it, which belonged to the Protector Cromwell, and now to the Earl of Sandwich, still bears the appellation of Cromwell's Acres.

Huntingdon is a borough by prescription, and the only one in the whole shire. During the civil wars in the time of Charles, it was pillaged by the king's troops, who, commanded by the king in person, and taking advantage of the absence of the Parliament's army in the west, suddenly entered the 'associated eastern counties,' and committed great ravages. Whitelocke, who notices this under the date of August 25, 1645, after mentioning a skirmish with the van of the king's army, (which consisted of about 5000 horse and dragoons,) says, "on Sunday last, in the afternoon, the king's forces entered Huntingdon, after some resistance made at the bridge by Captain Bennet, with his foot, till he, his lieutenant, and many of his men, were slain; the king's soldiers miserably plundered the town, and the counties of Bedford and Cambridge, and took away their horses and goods."

In March, 1640-41, Charles the First stopt here in

x

his

his way to York, where he kept his court for some months previously to the commencement of hostilities.

The religious houses, of which there were formerly four in this town, are almost as entirely obliterated as the castle. A Priory of Austin Canons was founded on the spot where St. Mary's Church now stands, before the year 973; and here it continued till the time of Stephen, or Henry the Second, when Eustace de Luvetote, "translated the channons from the place where now St. Maries Church is, to the place without the town, where late it stood."

At the Dissolution, its annual revenues were valued, according to Speed, at 232*l.* 7*s.* 0*d.* In 1542, it was granted to the Cromwell family. The buildings have long been demolished; but the 'lanes which sever the closes from each other, still retain their ancient appellation. In the Priory Close, two stone coffins were dug up in the course of the last century.' David Bruce, the Scotch Earl of Huntingdon, and brother to King William, was buried here; and there "was also an elegant monument, with the figure of a knight on horseback (eques) in his hunting dress, ascribed by the town's people to another Earl of Huntingdon."

An hospital dedicated to St. Margaret, 'for a Master and Brethren, and several leprous and infirm people,' to which Malcolm the Fourth, King of Scotland, and Earl of Huntingdon, was a great benefactor, and probably the founder, was the next in order of time. In the year 1445, this hospital was annexed to Trinity Hall, in Cambridge, and confirmed to that foundation by Edward the Fourth.

Another hospital, for leprous and poor people, was founded in the north part of the town, by David, Earl of Huntingdon, in the time of Henry the Second, and dedicated to St. John Baptist. On its dissolution, in 1534, its annual revenues were estimated at the nett sum of 6*l.* 7*s.* 8*d.* Almost the only vestiges of this hospital are some fragments of the garden wall. At the north end of the town, also, was a house of Augustine Friars, established about the year 1285. This Friary was suppressed in 1540, and granted to Thomas Arden.

The town of Huntingdon is generally thought to have been once much larger than it is at present; and Sir Robert Cotton ascribes its decay to some alterations made in the river by one Grey, "a minion of the time," which impeded its navigation. Leland says, that "some ages before it had fifteen churches though in his time reduced to four; the rest fallen through time and neglect, but traces of their walls and yards remaining. Twelve of these churches were dedicated to St. Botolph, St. Martin, St. Edmund, St. John, St. Benet, All Saints, St. Mary, St. Andrew, St. Nicholas, St. George, and St. German. The first seven were granted to St. Mary's Priory, in the time of Henry the Third: St. Andrew's belonged to Ramsey Abbey: St. John's was pulled down between the years 1651 and 1660; and St. Benet's has been since entirely demolished, the

tower, which alone remained standing during the last century, having been taken down about 12 or 14 years ago, to prevent the danger of its expected fall.

The only churches that now remain, are those of St. Mary and All Saints. St. Mary's, which is the Corporation church, was rebuilt between the years 1608 and 1620. It consists of a nave, chancel, and aisles, with a handsome embattled tower at the west end, having strong buttresses with ornamental niches at the angles: the nave is separated from the chancel by a high pointed arch, and from the aisles by pointed arches arising from round and octagonal columns. The area is well pewed; and across the west end runs a large gallery, in which is a good organ. On the north side of the chancel are several monuments of the Sayers. Against the south wall, within the altar rails, is a neat tablet in commemoration of Mary Elizabeth, wife of Rear Admiral Montagu, who was born August 13, 1774; married April 24, 1792; and died May 29, 1805; and another monument against the south wall records the memory of Nicholas Pedley, Knt. Amongst the other monuments is a large one for the family of "Eliz. de Carcassonet, widow of John Francis de Carcassonet, Esq. and formerly the wife of the Honourable Remigius Birmingham, second son to Francis Lord Athuury, in the kingdom of Ireland." The font consists of an octagonal base, supported by a central column, surrounded by small pillars. On the outside of the church are various sculptures of rude heads, both human and animal. Nearly opposite to this edifice is a respectable mansion, the property and seat of Sir John Arundel.

On the north side of the market place, stands All Saints Church, which appears, from its architecture, to have been built in the time of Henry the Seventh. It is an embattled edifice, consisting of a nave, chancel, and aisles, with a small tower at the north-west angle, ornamented with pinnacles. Below the battlements is a continued frieze, charged with sculptures, representing human and other heads, flowers, &c. and among them the Tudor rose and the portcullis. The water spouts are discharged through the mouths of grotesque animal figures. In the east wall of the south porch are the remains of a broken piscina. The nave is divided from the aisles by three pointed arches on each side, rising from clustered columns, and from the chancel by a high pointed arch. The roof is of timber: that of the nave is curiously ornamented with whole length carved figures, placed at the ends of the principal rafters, and at the rise of the knees. The windows are large, and are divided by mullions into several lights; the tracery of some of them possessing considerable elegance. At the sides and west end are large galleries; the latter containing a good organ. Against the north wall of the chancel is a large monument inscribed to the Fullwoods, descended from an ancient family settled soon after the Conquest at Fullwode, (now called Clea Hall,) at Tanworth,

worth, in the county of Warwick. The first of whom, who came to reside at Huntingdon, married here in 1627: the last, a female, died in 1756. Dr. William Fullwood, mayor of Huntingdon, was an eminent physician, and obtained great praise for his benevolent conduct during 'the sickness,' or plague, which made great havoc here in the time of Charles the Second. Several of the grave stones display the indents of brasses. Many of the Cromwells of Hinchinbrook, &c. were buried here; but no memorials of them are to be found, excepting the respective entries in the register.

The town of Huntingdon at this time consists of four parishes, that of St. John being connected with All Saints, and that of St. Benet with St. Mary's. The church-yard of St. John's having become so crowded with graves, as to leave little, if any, space for new burial places, a piece of ground adjoining it, whereon it is supposed the ancient church of St. John formerly stood, was, on the 27th of March, 1817, consecrated by the Lord Bishop of Lincoln, and added to the former cemetery for the united parishes of All Saints and St. John. The principal charitable establishments, are a Free Grammar School, well endowed; and a Green Coat School, wherein twenty-four poor boys are clothed and educated, called Walden's Charity, from Lyonel Walden, Esq. who, by will, dated in July, 1719, gave 500*l.* for the purpose. The sum of 2000*l.* was bequeathed by Richard Fishbourne, a citizen of London, who died in 1625, to purchase lands, the rents to be appropriated to the use of the poor: the same person made similar bequests to other places, the amount of the whole being computed at 11,000*l.* The market place is tolerably spacious: on the south side stands the Town Hall, a good modern brick building, stuccoed, with a piazza in front and at the sides, for the market people; and behind it, the butchers' shambles. The assizes are held here; the lower part of the building being divided for the purpose into two courts; one for criminal, and the other for civil causes. Above is a spacious assembly room, ornamented

with full length portraits of their Majesties George the Second and Third, with their respective queens; and also a well painted picture of John, the late Lord Sandwich, who died in 1792. The market is well supplied with provisions, and great quantities of corn are annually sold here.

This town had its first charter about the year 1206. King John granted it a peculiar coroner, receipt of tolls and customs, a recorder, town-clerk, and two bailiffs. Charles the Second, by a new charter, granted in 1680, vested its government in a mayor, twelve aldermen, and an indefinite number of burgesses, or common council, chosen from the principal inhabitants. The right of returning the two members to Parliament, is generally understood to be vested in the freemen and inhabitant householders, paying scot and lot; the number of voters is about 200. The interest of the borough is in the Earl of Sandwich. It sent members to Parliament, from the year 1294. The town principally consists of one street, extending, in a north westerly direction, from the banks of the Ouse, nearly a mile, and intersected by several lanes at right angles. The more ancient town appears to have spread further to the eastward. Most of the houses are of brick, and many of them large and respectable buildings, inhabited by genteel families. The streets are paved, and lighted. Huntingdon being a principal thoroughfare to the north, has a good road trade, and contains several large inns. The brewing business is carried on here, but not to so great an extent as formerly; and near the principal bridge is a small vinegar manufactory. The inhabitants are supplied with coals, wood, &c. by barges, and small vessels, which come up the river from Lynn, in Norfolk.

Amongst the most celebrated natives of this town, may be mentioned Henry, surnamed de Huntingdon, an eminent ecclesiastic and historian, who lived in the reigns of Henry the Third and Edward the First, and wrote a history of the Saxon Heptarchy; and Oliver Cromwell the Protector.*

Ives, St.]—The little market town of St. Ives is pleasantly

* This celebrated personage was born in the parish of St. John, on the 25th of April, 1599, and baptized four days afterwards. His family was of Welsh extraction; and there are pedigrees extant, which trace the descent of his ancestors from the Lords of Powis and Cardigan, who lived about the era of the Norman invasion. Their name, prior to the assumption of that of Cromwell, was Williams, which seems to have been first taken by Morgan ap-Williams, Esq. who possessed a small estate at New Church, in Glamorganshire, and was gentleman of the privy chamber to Henry the Seventh. He married to a sister of Thomas Cromwell, afterwards Earl of Essex, and Vicar General, the great favourite of Henry the Eighth; and the earl himself was married to Jane, widow of one Williams, of an ancient family of Wales, and daughter and heir of Sir John Prior, Knt. The Williams here mentioned, was nearly related to Morgan, probably a brother; and to this double alliance the Protector's family were indebted for that patronage which led the way to their advance in the state, and to the acquisition of extensive possessions in this county. Richard Wil-

liams, alias Cromwell, eldest son of Morgan Williams, Esq. and great grandfather to Oliver, was born in Glamorganshire. He was introduced by his uncle, the Earl of Essex, to the notice of Henry the Eighth. His preferment was forwarded by his zeal in suppressing the dangerous insurrection that began in Lincolnshire, when the king's measures first evinced a determined intention to abrogate the institutions of Papacy. In the following year, he was appointed one of the visitors of the religious houses; and he quickly obtained a full share in the rich harvest of Abbey lands. Previously to this, he had superadded the surname of Cromwell to his own, in honour of the Earl of Essex; and on the recommendation of the king, who had strongly enjoined the adoption of family names to all his Welsh subjects, in preference to the mode which then prevailed. In March, 1537-8, he had a grant of the nunnery of Hinchinbrook; and this was followed by several others, which rendered him one of the richest commoners of his time. In 1540, the bravery and prowess he displayed in a great 'triumph of justice' at Westminster, 'which justs had been proclaimed in France,

pleasantly situated on the banks of the Ouse, five miles east from Huntingdon, 50 N. by W. from

London. In the Saxon times, it was called Sleppe; but it afterwards obtained the name of St. Ives from Ivo,

France, Flanders, Scotland, and Spain, for all comers that would, against the challengers of England, still further advanced him in the king's favour, and he received the honour of knighthood on the field. Henry was so much delighted with his skill and courage, that he exclaimed, "Formerly thou wast my Dick, but hereafter shall be my Diamond," and thereupon "let fall his diamond ring unto him; in avowance whereof, these Cromwells have ever since given for their crest, a lion holding a diamond ring in his fore paw." In 1541, Sir Richard was appointed high sheriff of the counties of Huntingdon and Cambridge: he was also returned a member for Huntingdonshire in the Parliament which met in January, 1542: in this year likewise he was made one of the gentlemen of the privy chamber. On the recommencement of the war with France in 1543, Sir Richard was appointed 'Capitaine of the Horsemen' in the expedition sent into that country under Sir John Wallop, and Sir Thomas Seymour, which consisted of 6000 men, including the 'flower of the English chivalry.' In the following year, he was made constable of Berkeley Castle: he had also "given him the office of steward of the Lordship of Archenfield, with the constableness of the castle of Goderyche, in the March of Wales, with the power of appointing the master, serjeant, and porter, belonging to those offices, during the nonage of the Earl of Shrewsbury." Sir Henry Williams, alias Cromwell, Knt. "eldest son and heir of Sir Richard, was highly esteemed by Queen Elizabeth, who knighted him in 1563, and did him the honour of sleeping at his seat of Hinchinbrook, August 18, 1564, upon her return from visiting the University of Cambridge. He was in the House of Commons in 1563, as one of the knights for the county of Huntingdon; and was four times appointed sheriff of the shires of Huntingdon and Cambridge by that sovereign, viz. in the 7th, 13th, 22d, and 34th, years of her reign; and in the twentieth, she nominated him a commissioner, with others, to enquire concerning the draining of the fens through Cloughs Cross, and so to the sea. He made Huntingdonshire the intire place of his country residence, living at Ramsey in the summer, and at Hinchinbrook in the winter: he repaired, if not rebuilt, the manor house at Ramsey, and made it one of his seats. He also built a house adjoining to the nunnery at Hinchinbrook, and upon the bow windows there put the arms of his family, with those of several others to whom he was allied. He died in 1603-4, the funeral pomp used at his interment, by the charges of the heralds, were the same as those incurred by some of the greatest knights, his contemporaries. He was called, from his liberality, 'the Golden Knight.' Sir Henry was twice married: by his first wife, Joan, daughter of Sir Ralph Warren, Knt. he had eleven children. By his second lady, whose surname was Weeks, he had no issue; she died in 1592, of a lingering illness, which the superstition of the age attributed to Witchcraft; and three persons, of the name of Samwell, who were then inhabitants of Warboys, were committed to prison, and afterwards tried, and executed, as the authors of her death. This judicial murder was accompanied by the forfeiture to Sir Henry, as Lord of the Manor of Warboys, of all the goods of the much injured sufferers, which amounted in value to about forty pounds; "but he, unwilling to possess himself of the supposed felons' goods, gave them to the corporation (of Huntingdon) conditionally, that they procured from the Queen's College, in Cambridge, a doctor, or Bachelor of Divinity, to preach on every anniversary of the Annunciation of the Blessed Virgin, a sermon against the sin of witchcraft." The bulk of Sir Henry's fortune went to Sir Oliver, his eldest son; to each of his other sons were given estates of about the annual value, at that period, of 300*l.* each. Robert Cromwell, Esq. second son to Sir Henry, and father of the Protector Oliver, settled at Huntingdon, his estate consisting chiefly of possessions in and near that town. He was a gentleman of good sense, and com-

petent learning, and was one of the members for Huntingdon in the Parliament held in the thirty fifth of Elizabeth. He married Elizabeth, daughter of William Steward, Esq. of Ely, a descendant from a younger branch of the royal house of Scotland, and widow of William Lynne, Gent. of Bassingbourne. By her he had ten children; and, "to ease the expences incident on such a numerous progeny, and so much felt where the fortune is small, and the descent ancient, Mr. Cromwell carried on a large brewing business, chiefly conducted by servants, whose accounts were intirely inspected by Mrs. Cromwell herself. She was a careful prudent mother, and brought up her family after her husband's decease in June, 1617, in a very handsome, though frugal manner, chiefly from the profits arising from the brewing, which she continued to carry on; and by that means gave each of her daughters a fortune sufficient to marry them to persons of genteel families. Her greatest fondness was lavished upon her only (surviving) son, Oliver; and to her he was every way deserving of it, as he behaved always in the most filial and tender manner; and upon exalting himself to sovereign greatness, he gave her apartments in the palace at Whitehall, where she continued until her death, which happened on the 18th of November, 1654. As it was with reluctance she partook of the pageantry of sovereignty, so she continued undazzled with its splendour; and the regard she possessed for Oliver, rendered her constantly wretched from the apprehension she had of his danger." She was buried with much pomp in Westminster Abbey; but "at the restoration her body was taken up, and indecently thrown (with others) into a hole made before the back door of the lodgings belonging to one of the canons or prebendaries in St. Margaret's church yard."

Oliver Cromwell received his baptismal name from his uncle and god-father, Sir Oliver, of Hinchinbrook. "His very infancy," says Mr. Noble, "if we believe what Mr. Audley, brother to the famous civilian, says he had heard some old men tell his grandfather, was marked with a peculiar accident, that seemed to threaten the existence of the future protector: for his grandfather, Sir Henry Cromwell, having sent for him to Hinchinbrook, when an infant in arms, a monkey took him from the cradle, and ran with him upon the lead that covered the roofing of the house. Alarmed at the danger Oliver was in, the family brought beds to catch him upon, fearing the creature's dropping him; but the sagacious animal brought the 'Fortune of England' down in safety; so narrow an escape had he, who was doomed to be the conqueror and sovereign magistrate of three mighty nations, from the paws of a monkey." His father paid great attention to his education, and after placing him for a short time under the tuition of the Rev. Mr. Long, of Huntingdon, he removed him to the care of the learned Dr. Beard, master of the Free Grammar School in that town. The activity of his disposition suited not with the severity of scholastic discipline; and his character at this early period, may be described as more addicted to mischievous daring, than prone to studious contemplations. Heath says, in his *Flagellum*, that "Oliver, when at school, had fits of learning; now a hard student for a week or two, then a truant, or otiose, for twice as many months, of no settled constancy." His youthful pranks sometimes led him into danger; and he is said to have been once saved from drowning by a clergyman named Johnson, (some time curate of Conington,) who many years afterwards was recognised by Oliver when the latter was marching at the head of his troops through Huntingdon; and asked by him, "whether he did not remember having saved his life?" "Yes," replied the other, "I do: but I wish I had put you in, rather than see you thus in arms against your king." Several circumstances are related as occurring during the time that Oliver continued at the Grammar School, which have been considered by some as omens of his future greatness. "They have a tradition at Huntingdon," says Mr. Noble, "that when the Duke

Ivo, a Persian archbishop of much sanctity, who is reported to have travelled through England about

the year 600, preaching the Gospel with unremitting diligence. In the reign of King Edgar, Æthelstan

Duke of York, afterwards Charles the First, in his journey from Scotland to London, in 1604, rested in his way at Hinchinbrook, Sir Oliver Cromwell, to divert the young prince, sent for his nephew Oliver, that he, with his own sons, might play with his royal highness; but they had not been long together, before Charles and Oliver disagreed; and the former being then as weakly as the latter was strong, it was no wonder that the royal visitant was worsted; and Oliver, even at this age, so little regarded dignity, that he made the blood flow in copious streams from the prince's nose. I give this only as the report of the place.—It is more certain that Oliver averred (and mentioned it often, when he was in the height of his glory) that he saw a gigantic figure, which came and opened the curtains of his bed, and told him that he should be 'the greatest person in the kingdom,' but did not mention the word king. Though informed of the folly of such an assertion, he persisted in it, for which he was flogged by Dr. Beard, at the particular desire of his father; yet, notwithstanding this, he would sometimes repeat it to his uncle Steward, who told him it was traitorous to relate it." Additional evidence of the early ambition, and aspiring mind, of Oliver, is inferred from the enthusiasm and fire with which he performed the character of Tactus, in the comedy of 'Lingua, or the Combat of the Tongue and the Five Senses for the Superiority,' when it was acted at the Free Grammar School at Huntingdon. No other part would satisfy him. The scene that more particularly fixed his attention, was the fourth of the first act, wherein Tactus is represented stumbling over a crown and robe, and afterwards, putting them on, as thus giving utterance to his delight at his good fortune.

Tactus, thy sneezing somewhat did portend:
Was ever man so fortunate as I,
'To break his shins at such a stumbling block?
Roses and bayes, pack hence; this *Crown and Robe*,
My brows and body circles and invests.—
How gallantly it fits me! Sure the slave
Measured my head that wrought this coronet.
They lie who say complexions cannot change;
My blood's ennobled, and I am transform'd
Unto the sacred temper of a KING.
Methinks I hear my noble parasites
Styling me Cæsar, or great Alexander;
Licking my feet, and wond'ring where I got
This precious ointment: how my pace is mended!
How princely do I speak, how sharp I threaten!
Peasants, I'll curb your headstrong impudence,
And make you tremble when the lion roars:
Ye earth-bred worms! O for a looking glass!
Poets will write whole volumes of this change!
Where's my attendants? Hither, sirrah, quickly come,
Or by the wings of Hermes—

In April, 1616, Oliver was removed from the Huntingdon Grammar School, and entered of Sydney Sussex College, in the University of Cambridge. On the decease of his father in June, 1617, Mrs. Cromwell sent for him home. While at Cambridge, "he made no great proficiency in any kind of learning; but then, and afterwards, sorting himself with drinking companions, and the under sort of people, being of a rough and blustering disposition, he had the name of a royster amongst most that knew him."

The juice of the grape, and the charms of the fair, with a habit of gaming, are said to have engrossed his mind, instead of attending to Coke upon Lyttleton, and law reports, which he was sent to study at Lincoln's Inn, soon after his return from Cambridge; and thus, the first years of his manhood were spent in a dissolute course of life. From the gay capital, he

returned a finished rake to the place of his nativity; and for some time continued to pursue an unhallowed and boisterous line of conduct, which ultimately led to the total estrangement of the affections of his godfather and uncle, Sir Oliver. His extravagance in expenditure, soon produced its concomitant want. From hypocrisy, or some other cause, "he now took to a stricter course of life, which he daily increased, till his mind seemed wholly bent upon religious subjects: his house became the retreat of the persecuted Non-conformist teachers; and they shew a building behind it, which, they say, he erected for a chapel, where many of the disaffected had their religious rites performed, and in which he himself sometimes gave them edifying sermons." Thus he obtained the confidence of a large party, and he was returned a member for the borough of Huntingdon to the Parliament which met in January, 1628. He had, indeed, been once before chosen for the same place, (anno 1625;) but on this latter occasion, he was elected as a kind of champion against the measures of the court. Upon the dissolution of this Parliament, he retired to Huntingdon, and more than ever espoused the cause of the disaffected. His overheated enthusiasm disturbed his mind; and Dr. Simcott, his physician, asserted that Mr. Cromwell 'was quite a splenetic, and had fancies about the cross in that town; and that he had been called up to him at midnight, and such unseasonable hours, many times, upon a strange phantasy, which made him believe he was then dying. In the new charter that was granted to the corporation of Huntingdon, in July 1630, he was appointed a justice of peace, with his former preceptor, Dr. Beard, and Robert Bernard, Esq. "Huntingdon, however, soon became disagreeable to him: his uncle, Sir Oliver Cromwell, was eminently loyal, and he had influence enough to keep the corporation of that town so likewise; which, with his quarrel with Dr. Beard for precedence, (and, as most say, his embarrassed fortune,) made him determine to leave the place. Whether he was concerned in the brewing business, is difficult to determine; many of his enemies lampooned him for it in his life time; but Heath, one of his bitterest foes, assures us that he never was a brewer."

In May, 1631, Oliver, with his mother, and his uncle Sir Oliver, (whose favour he had partially regained, from the alteration in his conduct,) joined in the sale of his paternal estates at Huntingdon, &c. The sum they produced was 1800*l*. With this he removed to St. Ives, and stocked a grazing farm in the skirts of that town, where he remained till the death of his maternal uncle, Sir Thomas Steward, in January, 1635 6, leading a very strict and devout life; so much so, indeed, that his success in his new business was altogether impeded through the loss of the time which he and his servants daily consumed in prayer, and other devotional exercises. By the decease of his uncle without issue, he became possessed of a considerable estate in Ely and its neighbourhood; and he soon afterwards went to reside at the Glebe-house in that city. Here he still continued to oppose the measures of government, and greatly increased his interest among the puritanical party. "In 1638, he so strenuously opposed the scheme of draining the fens of Lincolnshire, and the Isle of Ely, which was undertaken by the Earl of Bedford, and others, under the royal sanction, that, by his plausibility, activity, and interest, at the meeting held at Huntingdon, he obliged the projectors to drop their intention."

About this period, Oliver, with many of his friends, including his cousin, Hampden, and Sir Arthur Hasilrigge, proposed to emigrate to America. Cromwell arranged his affairs, and had actually embarked with his family for New England, when the fatal interference of the court prevented him from accomplishing his intention; and, in its ultimate effects, proved the very cause of the beheading of the King, and of the subversion and overthrow of the monarchy. Oliver returned to Ely. His mind,

Æthelstan Manvessune, a noble Saxon, bequeathed Slepe, and various other estates, to the abbey of Rainsey; and, a few years afterwards, the remains of Ivo, which were pretended to be accidentally

discovered by a ploughman, were conveyed, with much solemnity, to the abbey; and the place where they had been found, was honoured by the erection of a priory or cell, subordinate to the former abbey.

mind, agitated by religious gloom, and political discontent, knew no rest. In 1640, he was returned to Parliament, for the borough of Cambridge, by the Puritan interest. In the House, he was a frequent speaker, vulgar and vehement, always opposing the court, and attacking the church. He was, in a great measure, the cause of the war, as he was continually, by his plots and contrivances, urging matters to that extremity. In 1642, when Parliament determined upon hostilities, Cromwell went to Cambridge, where he raised his troop of horse, and behaved with great inhumanity to the loyal members of the University. He soon acquired the rank of Colonel, and a great reputation for military skill and valour. His men were well disciplined, and animated with a strong portion of religious fanaticism, which their commander encouraged in such a manner, that they acquired at the battle of Marston Moor, in 1644, the name of *Ironsides*. At the battle of Newbury, Cromwell's behaviour obtained for him, from his party, the title of *Saviour of the Nation*. This party consisted of the Independents, who had gained so great an influence in Parliament, as to pass the famous *self-denying ordinance*, by which all members of either House were excluded from commands in the army, with the particular exception of Cromwell; who, by this master-piece of policy, acquired an ascendancy over the army, and thus paved the way for his future advancement. He was now constituted Lieutenant-General; and, by his management, the battle of Naseby was gained, in 1645, which decided the fate of the royalists. This victory was followed by a series of successes, for which he was voted 2500*l.* per annum, and the thanks of the House. When the King was betrayed by the Scotch to the Parliament, Cromwell determined to get him into his own power. This he effected by means of Cornet Joyce, in 1647. The same year, he purged the House of Commons, that is, he turned out those members who were not likely to be gained over to his purpose. The share he had in the murder of the King, is too plain to need detail. He acted in it with his wonted hypocrisy, was present at the trial, and signed the warrant of execution. Soon after this, a mutiny broke out in the army, which threatened dangerous consequences; but Cromwell, by punishing the ringleaders, put an end to it. In 1649, he went to Ireland, which he subdued, and leaving Ireton as deputy, returned to England, in 1650; but his cruelties are regarded with horror and detestation in that country to this day. He was now appointed Commander-in-Chief against the Scots, who had armed to restore Charles the Second. September 3, 1650, he gained the battle of Dunbar; and that day twelvemonth, he defeated the King at Worcester. From this time, he kept his eye on the sovereign power. He began this favourite project by moulding the army to his will; and having a party subservient to his wishes, he struck a bold stroke by dismissing the Parliament, and locking the door of the House. He then dissolved the Council of State; after which, he called a council, composed of his officers. He next convened a mock representation of the nation, consisting of 142 persons, called, from one of the members, *Burbon's Parliament*. This assemblage, being a motley crew of ignorant fanatics, and the creatures of Cromwell, agreed to resign their authority; on which the council of officers assembled, and drew up an instrument, declaring him Protector of the Commonwealth of England, Scotland, and Ireland; accordingly, December 11, 1653, he was invested with this dignity in the Court of Chancery. The following year, he called a Parliament; but, finding that the members began with questioning his authority, he placed a guard at their door, and then made each member, as he entered, take the oath of allegiance to him. This Parliament still continuing refractory, he dissolved them, after sitting five months. A war broke out between England and Spain, in 1655, in which Jamaica was taken, and Blake gained several splendid victories,

and caused the English flag to be respected in the Mediterranean. One consequence was an alliance between the Protector and France, and the delivery of Dunkirk to England, after its being taken by the united forces of the two countries. In 1656, he called another Parliament, which gratified the Protector by confirming his title, and sanctioning his proceedings. He wanted now the title of King; but this was rejected by his most zealous friends; and, finding the object unattainable, he abandoned it. However, he had the privilege granted him to make a sort of Lords; and the title of Protector being recognised, he was inaugurated with the pomp of a coronation, in Westminster Hall. In 1658, he convened the two Houses, and addressed them in the language usual for the Kings of England; but none of the hereditary nobles would attend his mock Parliament. Finding that he could not form any thing like a regular establishment, he dissolved the assembly. In August, of that year, his favourite daughter, Mrs. Claypole, died, bitterly reproaching him for his conduct; which, with the publication of a pamphlet, by Colonel Titus, intitled *Killing no Murder*, tending to prove the assassination of the tyrant a public duty, produced a slow fever, of which he died, September 3, 1658. His corpse was interred in Henry the Eighth's chapel; whence, at the Restoration, it was taken and exposed on, and afterwards buried under, the gallows of Tyburn. He had six children; viz. Richard, Henry, Bridget, Elizabeth, Mary, and Frances. Richard succeeded him in the Protectorate; but, when affairs turned, and he found his post no longer tenable, he resigned, and went abroad. He died at Cheshunt, in Hertfordshire, in 1712. Henry went to Ireland, as Lord-Lieutenant, and bore a good character; he died in 1674. Bridget married first Ireton, and afterwards Fleetwood. Elizabeth, his favourite daughter, married John Claypole, Esq. of Northamptonshire. Mary married Lord Fauconberg, and is supposed to have assisted in the restoration of Charles the Second. She died in 1712.—Frances married first, a grandson of the Earl of Warwick; and, secondly, Sir John Russel, of Cambridgeshire. Elizabeth, the wife of Cromwell, was a woman of strong mind, and a constant spur to her husband in the career of his ambition. She also governed her household with great address. She died in 1672. The character of Cromwell is thus concisely given by the following persons: Cardinal Mazarine calls him a fortunate madman; Father Orleans styles him a judicious villain; Lord Clarendon, a brave wicked man; and Gregorio Leli, says he was a tyrant without vices, and a prince without virtues. Bishop Burnet observes, that his life and his arts were exhausted together; and that if he had lived longer, he would scarcely have been able to preserve his power. Wellwood has traced the features of the Protector, with great individuality in the following passages: after "Cromwell assumed the supreme power, he became more formidable, both at home and abroad, than most Princes that had ever sat upon the English throne; and it was said that Cardinal Mazarine would change countenance whenever he heard him named, so that it passed into a proverb in France, 'that he was not so much afraid of the Devil, as of Oliver Cromwell.' He had a manly stern look, and was of an active healthful constitution, able to endure the greatest toil and fatigue. Though brave in his person, yet he was wary in his conduct; for, from the time he was first declared Protector, he always wore a coat of mail under his clothes. His conversation among his friends was very diverting and familiar; but, in public, reserved and grave. He was sparing in his diet; though he would sometimes drink freely, yet never to excess. He was moderate in all other pleasures; and for what was visible, free from immoralities, especially after he came to make a figure in the world. He writ a tolerable good hand, and a style becoming a gentleman, except when he had a mind to wheedle under the mask of religion, which he knew nicely how

to

bey.* On the spot where St. Ivo is stated to have been found, Abbot Ednoth built a church; and soon afterwards, anno, 1017, the priory was erected by Earl Adelmar, who placed here some Benedictine monks from Ramsey, and granted them various possessions and privileges. In 1207, the church and priory offices were burnt; but, having been rebuilt, they continued in subordination to Ramsey, till after the Dissolution, when the site of the priory was granted to Sir Thomas Audley. The priory-barn and dove-house, are yet standing in the north-east part of the town.

It was at St. Ives, that the Earl of Holland, who had taken up arms for Charles the First, was made prisoner, after his defeat, on the 7th of July, 1648.

The church is a light and neat edifice, consisting of a nave, chancel, and aisles, with a north and south porch, and a handsome tower, surmounted by a spire, at the west end. The tower is sustained on strong piers, and is open to the aisles by pointed arches. The sepulchral memorials, both in the church and church-yard, are numerous, but do not now record any thing remarkable. In the church-yard, was formerly a stone for a celebrated gamester, inscribed as follows:—

Here lies the body of *All Fours*,
Who spent his money, and pawned his clothes.
If any one should ask his name,
'Tis Highest, Lowest, Jack, and Game.

The spire of this church has been twice blown down. Here are two Baptists' meetings, a Quakers' meeting, and a Presbyterian meeting. Great part of this town was destroyed by a sudden and dreadful fire, which happened on the 30th of April, 1689, and which "began in a malt-house, at the end of White Hart Lane, next Paddle Moor. The wind being very high, the fire presently flew up to the street, and across the Sheep Market, consuming every thing in its way down to the water-side; as

to do, when his affairs required it. He affected, for the most part, a plainness in his clothes; but in them, as well as in his guards and attendance, he appeared with magnificence upon public occasions. No man was ever better served, nor took more pains to be so. As he was severe to his enemies, so was he was beneficent and kind to his friends; and if he came to hear of a man fit for his purpose, though never so obscure, he sent for him, and employed him, suiting the employment to the person, and not the person to the employment: and, upon this maxim in his government, depended, in a great measure, his success."

* The account of the discovery of Ivo's remains is thus given, in the history of Ramsey:—"These things being thus achieved, it happened that St. Ivo, whom the Ancient of Days, rising from above and foreknowing had decreed, before the beginning of the birth of the first day, to visit the church of Ramsey, to be happily found at the same time. The blessed relics of that holy archbishop, which venerable antiquity of many ages had entombed in the land of Slepe, near the channel of the river Ouse, were found, whilst the plougher turned up the bowels of the earth deeper with the plough, compelled by the will of God, with oxen. Cleaving fast to the possession of so great a treasure, which, while all were ignorant whose remains they were, the saint appearing in a visit by night to a certain

also part of Bridge Street, and of the two houses over the bridge. It laid in ashes, messuages and dwellings belonging to 122 persons, and families, with all their household goods, malt, corn, grain, hay, shop-goods, houses, and merchandises; the whole loss amounting to upwards of 13,072*l*." The lower parts of the town being built directly on the Ouse banks, have been several times overflowed; particularly in January, 1725-6, when all the adjacent meadows, and a great portion of the fens, were under water. Over the river is a good stone bridge of six arches; two of which were rebuilt in 1716, by William, Duke of Manchester, who also rebuilt and widened the wharf, in 1724. The bridge is said to have been first erected by the Abbots of Ramsey. Over one of the piers, is an ancient building, probably intended for a chapel, but now inhabited: the upper part, which suffered by the fire in 1689, is said to have served as a light-house to persons navigating the Ouse. The police of the town is under the superintendence of a high constable. The two manors of Slepe and Bustellers are chiefly copyhold, and held under the Dukes of Manchester: the tenants, however, have the singular privilege of "cutting down wood or timber on their own grounds, not only for their own use, but to sell and dispose of as they may see fit, without license from the Lord." The charter for the market, was granted about the year 1290. It is one of the largest in the kingdom, for beasts, sheep, poultry, pigs, &c. Here are three ale and small-beer breweries, and several malt-kilns. The inns and public-houses are numerous. Many charitable donations are recorded on two tables in the church, but the gifts are not large. The population of St. Ives was last returned at 2426. On the outskirts of the town, are some good mansions, the residences of respectable families. The principal of these is Slepe Hall, commonly called Cromwell Place, from Cromwell having resided here when he rented the Wood Farm of

honest man of the ville, affirmed to be his own, and directed the discovery to be made known at Ramsey, where three of his companions were also to be found. The Lord Abbot Ednoth, convinced of the truth of this vision by supernatural testimony, sent for his associate in good works, the Abbot Germanus; and these two having the precious relics of exalted piety placed upon their shoulders, conveyed them, attended by a great multitude of people, to the church of Ramsey, where, at this day, they shine with renowned miracles. In the tenth year then after the death of our patron Earl Ailwyn, and on the same day on which he had been entombed, viz. 8th kal. of May, the earth, through the Divine bounty, gave us a new advocate, not in any wise to be afterwards snatched from us by destiny, who, from the place of his repose, unceasingly intercedes before God for the same, nay, even for all his worshippers." The reality of the discovery of the saint's remains, was, however not wholly regarded as satisfactory in those credulous days; or the monkish historian affirms, that "Ednoth, who is by most conjectured to have been once Bailiff of Slepe," for deriding the truth of the vision, and calling the saint himself, Saint Cobler, was, in "vengeance of his persevering rashness," plagued with "boots to the end of his life;" in order that, through this destruction of the flesh, his spirit might deserve to be saved in the day of the Lord."

Mr.

Mr. White's (the present proprietor's) ancestors; by one of whom, the substantial brick edifice, which now stands here, on the site of the old house, was built about the beginning of the last century.—Pratt, the poet, was also a native of this town.*

KIMBOLTON.]—The market-town of Kimbolton, lies ten miles W. by S. from Huntingdon, and 62½ N.N.W. from London. In 1801, the number of males and females in this town, which is small, was equal—633 of each; but, in 1811, there were only 659 males to 741 females.

Camden remarks, that "the east side of this county, is adorned with the castle of Kinnibantum, now Kimbolton, anciently the seat of the Magnavilles; afterwards of the Bohuns and Staffords; and now of the Wingfields." Sir Richard Wingfield obtained a grant of Kimbolton castle and lordship from Henry the Eighth. Dying whilst ambassador in Spain, he was buried at Toledo; and his son, Sir James, sold Kimbolton to Sir Henry Montagu, afterwards first Earl of Manchester; whose descendant, the present Duke of Manchester, is now owner.† In Kimbolton church, many of the Montagues lie buried, and various memorials have been erected to their memory. The costly monument of Henry, first Earl of Manchester, who died November the 7th, 1642, on which are his effigies, is thus inscribed:—

"Here lyeth Sir Henry Montagu, Knt. Lord Kimbolton, Viscount Mandeville, Earl of Manchester, who in his younger years, professed the Common Law, was chosen Recorder of London, and afterwards made the King's Serjeant at Law, thence Chief Justice of England, afterwards Lord High Treasurer of England, then Lord President of the King's Most Honble Privy Counsell, and dyed Lord Privy Seale."

Amongst other monuments in this church, are

* Samuel Jackson Pratt, Esq. died October 4, 1814, at his apartments in Colmore Row, Birmingham. He was descended from a very respectable family; his father, it is believed, having been High Sheriff of Huntingdonshire; and was born at St. Ives, December 25, 1749. Mr. Pratt commenced his literary course very early in life, under the name of Courteney Melmoth. The first of his productions was "The Tears of Genius, occasioned by the death of Dr. Goldsmith, 1775," whose poetical works are the model of his own. His poem "of Sympathy," has passed through many editions. Having established a fame by his poems and novels, he threw off his assumed name. His reputation increased by his succeeding productions; and he became one of the most prolific writers of his day: his works tend to promote the interests of benevolence and virtue. His chief error was not knowing how to raise his imagination; and, therefore, his sentiments were sometimes weakened by tedious extent. His first novel, "Liberal Opinions upon Animals, and Providence," 1775, &c. was published in detached volumes, which were eagerly procured as they appeared. His "Shenston Green," "Emma Corbett," "The Pupil of Pleasure, on the New System, [Lord Chesterfield's] illustrated," have passed through many editions, and are likely to preserve their station. His "Gleanings," and "Cottage Pictures," have been much admired; but the former are certainly extended to excess. Dr. Hawkesworth was one of Mr. Pratt's most intimate friends; and he wrote a tragedy, intitled "The Fair Circassian, 1780," founded on the novel of "Almorán and Hamet," written by the former. It was represented with consider-

those of Essex, daughter to Sir Thomas Cheeke, of Pergo, in Essex, and Anne, Lady Mandeville, daughter to Robert, Earl of Warwick, two of the five wives of Edward, second Earl of Manchester, &c.

Kimbolton castle is of remote, but unknown origin. The castle, says Leland, "is double diked, and the building of it metely strongly: it longed to the Mandevilles, Erles of Essex. Sir Richard Wingfield built new fair lodgyns and galleries upon the old foundation of the castle. There is a plotte now clene desolated, not a mile by west from Kimbolton, called Castle Hill, where appear ditches and tokens of old buildings." This castle was the jointure, and became the retirement, of Queen Catherine, after her divorce from Henry the Eighth. Henry, first Earl of Manchester, expended large sums in making it a comfortable residence; and Robert, his grandson, the third Earl, made further and very considerable alterations.

NEEDINGWORTH.]—At Needingworth, two miles E. by N. from St. Ives, on the road to Bluntisham and Erith, the houses are neatly thatched, almost all white-washed, and interspersed with small gardens. Sir Ambrose Nicholas, Lord Mayor of London, in 1576, who founded and endowed an alms-house for twelve poor persons, in Mugwell Street, was born here.

NEOT'S, ST.]—St. Neot's is a considerable market-town, nine miles S.S.W. from Huntingdon, and 56 N.N.W. from London. Pleasantly situated on the banks of the Ouse, it is connected with the village of Eynesbury, by a handsome bridge—now of stone, formerly of timber—of several arches, two of which are of more than ordinary span. The river is here of considerable width, and gently winding through the meadows, forms, with the sur-

able success, at Drury Lane Theatre, and the heroine was performed by the present Countess of Derby. He wrote many other dramas. Mr. Pratt was for a short time in the church, during which he published a beautiful elegy, intitled "The Partridges," which is found in all collections of fugitive poetry. He afterwards ventured to perform Hamlet at Covent Garden, in 1774, but not with such success as to tempt him to adopt the profession of an actor, though he was followed and admired as a public reader. He then entered into partnership with a bookseller at Bath; but he found a shop little congenial to his disposition and habits, and therefore soon relinquished the connection. The early life of Mr. Pratt was marked by such indiscretions as too frequently accompany genius, obliged to subsist by its own labours; but he was always ready to employ his efforts in the service of humanity, and was particularly zealous in the cause of unfriended talents; witness his "Specimens of the Poetry of Joseph Blackett." No man was more exempt from envy; he had his errors, but malice or ill-nature cannot justly be imputed to him.

† The Montagues claim a descent from the illustrious family of that name, who were barons from the time of the Conquest, and were anciently Earls of Salisbury; yet there is sufficient reason to suppose, that, if they really are descended from that noble stem, it is from an illegitimate branch; and that James Montacute, natural son of the last Earl of Salisbury, who lies buried at Luddesdown, in Kent, was the actual progenitor of the present family.

rounding

rounding objects, some very beautiful scenery.—This town contains a largemarket-place, with several streets, and has a lively and respectable appearance. The population, in 1811, amounted to 1988. Most of the buildings are of brick. The Earl of Holland, with other noblemen, who had taken up arms against the Parliament, was defeated in July, 1648: the Earl was afterwards made prisoner at St. Ives.—Hugh of St. Neot's, a Carmelite friar at Hitchin, made a doctor at Cambridge; Sir Robert Drope, Lord Mayor of London, 1414; Sir John Gedney, Knt. draper, Lord Mayor of London, in 1427, and 1441; Francis White, Bishop, first of Carlisle, then of Norwich, and last of Ely; and his brother, the Rev. John White, Chaplain to King James, in ordinary, who died in 1615, were natives of this town. Camden states, that "St. Neot's, commonly called St. Needs, had its name from Neot, a learned and holy man, who spent his whole life in propagating the Christian religion, and whose body was translated hither from Neotstock, in Cornwall; and in honour of him, Alfric turned the palace of Earl Efrid into a monastery, which after the Norman invasion, was enriched with many fair possessions by dame Roisia, wife to Richard, Lord of Clare; before this, the place was called Ainulphsbury, from Ainulph, another holy man, which name still remains in a part of it." The monastery was seized with the other alien houses; but being made "prioratus indigena," it continued till the Dissolution, in the reign of Henry the Eighth, when its annual revenues were estimated at 240*l.* 11*s.* 4*d.* The remains of the priory buildings, which stood near the present church, are inconsiderable. The site and appurtenances were granted to Sir Richard Cromwell, Knt.: they now belong to the Earl of Sandwich.

St. Neot's church is the noblest building of the kind in the county. The architecture is of the more beautiful style of Henry the Seventh's time; and it appears to have been built about 1507. Its plan is perfectly regular, and consists of a nave, aisles, and chancel, with a finely proportioned and ornamented tower, 150 feet high, at the west end. The interior is very neat, and it has a good organ, which was put up about the year 1750. In a chapel here, called Jesus chapel, that was laid open to the church about the same time, were the remains of a monument, said to have once contained the relics of St. Neot; a regal crown sculptured in stone, belonging to it, is still preserved. The windows are large, and elegant; they were formerly highly adorned with stained glass, and some fragments of draperies yet remain.*

NORMAN CROSS.]—At this place, about a mile from Stilton, near where the road branches off to Peterborough, were built, during the late war, very extensive barracks, principally for the reception of

French prisoners, several thousands of whom were confined there, and for whom it became the principal inland depot. They included a very large area, surrounded by a high wooden palisade. Since the peace with France, they have been pulled down, and the materials sold.

OFFORD.]—The little villages of Offord Cluny and Offord D'Arcy, are about four miles N.N.E. from St. Neot's, on the road to Huntingdon, immediately adjacent to the Ouse. The houses are principally inhabited by persons engaged in husbandry. In the church at Offord Cluny, are two piscinas. Offord D'Arcy church displays some remains of Norman architecture. In the south wall of the chancel is a piscina; and within the altar-rails, are some memorials of the Nailours, formerly Lords of this manor. In the south aisle, is a half-length brass of Laurence Pakenham, Knt. in complete armour, between his two wives, Elizabeth and Johanna, with an inscription dated 1377.

OLDHURST.]—Oldhurst and Woodhurst are two very small villages, from three to four miles northward from St. Ives; the former containing 18 scattered houses, the latter nearly 60, and of better construction. This neighbourhood, as the names imply, was formerly woodland; and some timber still remains about Oldhurst. On the road from Oldhurst to St. Ives, is a very large square stone, with an ancient illegible inscription; and it is supposed, that, from this village and stone, the hundred of Hurtingstone took its name.

OVERTON.]—The two little parishes of Overton (or Orton) Longueville, and Overton Waterville, lie between four and five miles northward from Stilton. The manor of Overton Longueville, having been "forfeited for felony, was redeemed of King John, by Nigel Lovetoft, whose sister and co-heiress married Hubert, alias Robert de Bromford; and their children assumed the name of Lovetoft." The manor is now the property and seat of the Earl of Aboyne, who acquired it by his marriage with Miss Cope, second daughter and co-heiress of the late Sir Charles Cope, Bart. to whose memory there is a mural monument in the church. The mansion is not large, but it is pleasantly situated amidst clumps of wood, and fruitful meadows. Lord Aboyne has considerably extended his estate here, by purchasing the two adjoining parishes of Haddon and Chesterton, for 75,000*l.*

In the church-yard of Overton Longueville, is an ancient monument of a knight, whose sculptured figure, though greatly mutilated, shews him to have been represented in armour, with his head resting on a pillow; he appears to have been cross-legged, with a lion at his feet. The costume of the figure is that of the twelfth century; and the knight represented, was probably one of the Lovetofts.—According to an absurd tradition, recorded by Bi-

* For particulars of St. Neot, vide MODERN PANORAMA, Vol. I. p. 479.

shop Kennet, this tomb was intended to commemorate "a Lord Longueville, who in fighting with the Danes near this place, received a wound in his belly, so that his entrails fell out; but wrapping them round the wrist of his left arm, he continued the combat with his right hand till he had killed the Danish King, and soon after fell himself."

PAXTON.]—The insignificant villages of Great and Little Paxton, lie about two miles northward from St. Neot's; Little Paxton, and Toseland, having both been chapels of ease to Great Paxton, the minister is called Vicar of Three Steeples." In the south wall of Great Paxton church is a double stone seat for a deacon and sub-deacon, with a piscina; and in one of the windows of the north aisle, is the Tudor rose in stained glass, &c. At Little Paxton, are the seats of Henry P. Stanley, Esq. and Richard Reynolds, Esq.

RAMSEY.]—Ramsey is a small market-town, in the north-eastern part of the county, ten miles N.N.E. from Huntingdon, and 68½ N. by W. from London. It occupies a tract of firm land, encompassed by the river Ouse, and the marshes being almost two miles in length, and accounted a little narrower in its breadth; where, according to a traditional tale, related by the Ramsey historian, a solitary ram, "armed by Nature's cunning with twisted and crooked horns," took up his abode, and "left his lasting name to the place;" the present name, Ramsey, being abbreviated from Ram's Eye, or the Ram's Island. "This island," observes the same writer, "was separated on the west, from the moresolid land, for the distance of about two stones' throw, by a sluggish stream, which formerly received between its cheerful shores, only ships carried forward by a gentle gale, but it is now approached by a public causeway, the muddy stream being pent up by means of heavy labour, and a great consumption of timber, sand, and stones. It was abundantly encircled with beds of alders, as well as by those of reeds, and a luxuriance of flag and bull-rushes, and was formerly covered with many different sorts of trees, but particularly with the verdant wild ash; yet now, by lapse of time, the woods being partly destroyed, it appears a rich arable soil; rich in fruits, smiling with corn, planted with gardens, and fertile in pastures; its beautiful meads seeming in spring as-if painted with flowers, by which the whole island becomes a picture tinted with variety of hues. It is, besides, surrounded with fenny meres, full of eels, and lakes breeding many sorts of fish and water-fowl: one of these, called Rames-mere, from the name of the island, excelling all the others in beauty and fertility, affords, from that part where it flows gently along its sandy shore, and where the largest wood is most abundant, at a place called Mereham, a most delightful prospect. In its vast pools, pikes of a wonderful size, called habredes, (al. habedes,) are frequently caught, as well by the sweep, or drag-net, as by other kinds of nets, the baited hooks being let down, with other implements

of the fisher's art; and though by day, as well as night, the watery sportsman incessantly labours there, and a variety of the watery brood is always taken, yet there still remains an abundance for future sport."

Ramsey was formerly a place of extraordinary note, being proverbially called Ramsey the Rich, previously to the dissolution of a wealthy abbey, situated at the upper end of the town, towards the south, the abbots of which were mitred and sat in Parliament. It was founded by Aylwyn, Earl of the East Angles, and Alderman of England, in the year 969, for Benedictine monks. At the Dissolution, its revenues were estimated at 1716*l.* 12*s.* 4*d.* per annum. The only remain of importance of this once famous abbey, is the ruined gateway, a very fine fragment of beautiful architecture, but most lamentably dilapidated; this is said to have been used as a prison. Browne Willis says that the manor-house and offices were built out of the abbey ruins; they now form the residence of Mr. Fellowes. The house is large and handsomely furnished; and it enjoys some very fine views. In the year 1721, a great quantity of Roman coins were found here, which are thought to have been hidden by the monks, on some incursions of the Danes. In 1731, the town was partly consumed by fire; the conflagration which happened on the 21st of May, destroying "upwards of 80 dwelling-houses, besides shops, barns, granaries, &c. with an amazing quantity of malt and flour. A free-school was established here in the reign of Charles the Second, which was endowed in the year 1668, with 100 acres of fen land. This foundation has been greatly neglected; and the old school-house fell down about 80 years ago. Here is also a charity-school, for girls, founded about the beginning of the last century, by John Dryden, Esq. a relation of the great poet of that name.

This town consists principally of one long street, with a second branching off northwards, along the banks of the river from the bridge: the houses are chiefly of brick. The market grew nearly into disuse after the dissolution of the abbey; but it afterwards recovered through the convenience of its situation for the sale of cattle, and live stock generally; and it is now in tolerable repute. According to the returns under the act of 1811, the population of this parish amounted to 2800.

Ramsey church is a spacious and elegant structure, consisting of a nave, chancel, and aisles, with a well-built tower, embattled, and otherwise ornamented at the west end. The nave is divided from the aisles by seven large and well-proportioned arches on each side, springing from handsome columns, and from the chancel by a still larger arch, with a carved wooden screen crossing the lower part. The windows, which are large and handsome, appear, from the many fragments remaining, to have been once adorned with beautiful stained glass, some small figures of angels, crowned heads, &c. exhibiting

biting some very rich hues. Sir Oliver Cromwell, K.B. and several others of his family, were buried here; but their places of interment are not pointed out by any inscription. The sepulchral memorials are few, and of no particular interest. Several large slabs in the nave were formerly inlaid with brasses, most probably of abbots and priests of Ramsey.

A singular anecdote is related by Noble, in his memoirs of the Cromwells, of the introduction of the plague into this town, in 1665-6. Major William Cromwell, (fourth son of Sir Oliver,) who engaged in a plot to assassinate the Protector Cromwell, "died of the plague at Ramsey, in the morning of February the 23d, in the above year, and was buried the next evening in the church there. He caught the infection by wearing a coat, the cloth of which came from London; and the taylor that made the coat, with all his family, died of the same terrible disorder, as did no less than 400 people in Ramsey, as appears by the register, and all owing to this fatal coat."*

About a mile from Ramsey, stands Bodsay House, which was granted to the Cromwells, as "a grange or farm-house, parcel of the possessions of the late monastery. It appears to have been surrounded by a large moat, supplied with water from Ramsey-mere. Here, in the time of Charles the Second, resided Colonel Henry Cromwell, or Williams, as he then called himself, who was one of those included in the list of "Knights of the Royal Oak;" the final establishment of which order was relinquished from motives of policy.†

RIPTON.]—The two small villages of Ripton Regis and Abbots' Regis, lie from three to four miles to the northward of Huntingdon. The latter was given to Ramsey Abbey by Henry the Second.

SAWTREY.]—Sawtrej St. Andrew's, Sawtrej Judith, and Sawtrej All Saints, are all contiguous parishes, about 3½ miles S. E. from Stilton. Sawtrej Judith, or Ivit, was the site of a Cistercian Abbey, founded by the second Simon de St. Liz,

* William de Ramsey, a native of this town, and Abbot of Peterborough, in the reign of Edward the Fourth, wrote a Life of St. Guthlac, in verse, and was also the author of several other works.

† King's Delf, or Dyke, is the name that, in later times, has been given to part of the high road, or causeway, which runs between Peterborough and Ramsey. It occurs in records as early as the reign of Edgar; but appears to have then designated a ditch or channel, cut through the marshes; and it was by that King made the boundary of his donation to Peterborough. This dyke is generally confounded with Cnuts-delf, or Swerdes-delf, (called also Steeds-dyke,) on the origin of which Camden writes as follows:—"When the sons and servants of Canute, sent from Peterborough to Ramsey, were crossing this lake, (Whittlesea,) a most violent storm arose, with a whirlwind, as they were cheerfully sailing along amusing themselves with singing, and enveloped them on every side, so that they absolutely despaired of their lives, as well as of assistance. But the mercy of the Almighty did not quite fail them, nor suffer the dreadful gulph to swallow them up; but mercifully from his providence delivered some of them from those raging waves,

Earl of Huntingdon, A. D. 1146, on land which had belonged to the Lady Judith, wife to Earl Waltheof. Henry Saltry, a writer on purgatory, is thought to have been a native of this place. Some Roman urns were found in this neighbourhood, in the year 1772.

SOMERSHAM.]—The little market town of Somersham, with a population of about 1032, lies 5¼ miles N. E. by N. from St. Ives, and 6¼ N from London. The manor of the Soke, or liberty of Somersham, which includes the several parishes of Somersham, Pildley-cum Fenton, Colne, Bluntisham, and Erith, belonged some years since to the Hammonds of Kent, and was afterwards "the property of the Duke of Manchester by purchase from the last Thomas Hammond, Esq. It has since been bought by Sir Robert Burton, Knt. who has disposed of a considerable portion of the estates, but still retains the manorial rights. Somersham was given to the monastery of Ely by the brave Duke Brithnoth, or Brithnod, in the year 991, with several other valuable manors, on the condition that, if he should be slain in battle, the monks should inter his body in their church; and this, as the event demanded, they punctually performed. It appears, that Brithnoth having been refused a sufficiency of food for himself, and his companions in arms, at the abbey of Ramsey, when on their way to oppose the Danes at Malden, repaired to Ely; where the abbot and his convent, treating him with much greater hospitality, he, to recompence their bounty, gave them the manors alluded to. The Soke of Somersham was probably separated from the see of Ely at the Dissolution, as it is described in the Cotton MS. as his 'Majesties Manor;' and the palace, "which James Stanley, the lavish and expenceful Bishop of Ely, beautified and enlarged," is there said to have been annexed to the crown by exchange. The only wing which remained of the bishop's palace, but which formed a good house, and was inhabited by the Hammonds, was pulled down about 40 years ago by the late Duke of Manchester. Somersham

and permitted the rest, according to the secret workings of his righteous judgment, to pass out of this frail life in the midst of those waves. When the report of this danger reached the King's ears, fear and trembling laid hold on him; but, after he had recovered himself, by the advice of his nobles and friends, to prevent, for the future, the misfortunes occasioned by this raging element, he caused a dyke to be marked out by his soldiers and servants in the adjoining marshes between Ramsey and Whittlesea, and afterwards to be cleared by labourers; whence, as we learn by the creditable testimony of our predecessors, some of the neighbouring inhabitants gave that dyke the name of Swerdes delf, from its having been marked out with swords; and others will have it called it Cnuts-delf, from the King. It is now commonly Steeds-dike, and is accounted the boundary between this county and Cambridgeshire." Gough remarks, that "the road above-mentioned might probably be the work of some abbot of this rich monastery, (Ramsey,) like that from Deeping to Spalding, made by Egelric, Abbot of Peterborough, and Bishop of Durham, 1008; called from him Elrich-rede, or Egelric's road."

was part of the jointure of Henrietta Maria, Charles the First's Queen. The Hammonds became Lords of the Soke soon after the restoration.

This town, or rather village, is pleasantly situated; and, from the houses being mostly white-washed, it has an air of cheerful cleanliness, very grateful to the eye. It principally consists of one street, about three quarters of a mile in length, running east and west, with a second, but much shorter street, crossing the former at right angles, near the upper end.

Somersham church is a noble and spacious building, on a fine gravelly eminence. It consists of a nave, chancel, and aisles, with a substantial tower, embattled, at the west end, and two porches, now disused, at the sides: in the south porch is a large stone basin for holy water. The roofs of the nave and aisles are of timber, and leaded above; the corbel supporters display a singular mixture of curious and grotesque carved figures: the area is well paved and across the west end is a large gallery. In the south wall, near the altar, is a double piscina, and a triple graduated stone seat. The church, with the exception of the chancel, is covered over with a thick stucco, partly composed of small gravelly pebbles. The building itself is of stone, chiefly consisting of a congeries of shells; similar to various other churches, in this county, and also in Cambridgeshire. At the end of the chancel is a monument for Anthony Hammond, Esq. a former lord of this manor. In the pavement, within the altar rails, are three large slabs that have been inlaid with brasses of priests, one only of which now remains; but the inscription is gone: the figure is in a sacerdotal habit, and holds the sacramental cup, and consecrated wafer. In the south aisle is another slab now divested of its brasses, which have represented a person in armour, with different shields of arms. Amongst the other monuments, are two against the north wall for the Whiston family. One of them records the memory of the Rev. Daniel Whiston, (younger brother to the celebrated mathematician),

* In the month of March, 1817, an inquest was taken, before D. Green, Esq. coroner of the Soke of Somersham, on a body found in a small wood or coppice at Pidley-cum-Fenton, with a hat lying on its face, as though in a somnolent state, with the arms orderly folded across, forming a pillow for its head; but which, on a closer inspection, presented the most offensive and horrid spectacle imaginable. An empty, embowelled trunk, a skull bare, bleached, and dis severed from the neck, hands from the arms, arms from the shoulders, legs from the thighs—all having, from exposure to a summer's heat, a winter's cold, and the ravages of rapacious insects, animals, and birds, melted down and rotted asunder, leaving no traces of the once pleasing anxious being which animated them.—Neither were there letters, papers, or property of any kind (saving a silver hunting watch, and two razors, cased) found upon the body; but by the initials "C. B." on a pocket handkerchief, and stocking top, and the aid of one witness, it was soon identified, and proved to be that of the late Charles Blake, aged twenty-six, and recently the unfortunate occu-

who, "for conscience sake, was fifty-two years curate of this parish," and died in April, 1759, aged eighty-two: the other commemorates his only daughter, Mrs. Susannah West, 'a pious, learned, and excellent woman;' her husband, the Rev. John West; and her brother, the Rev. Thomas Whiston, who was many years minister of Ramsey, and died at the age of eighty, in May, 1795.

The site of the Bishop of Ely's palace, which stood at a short distance westward from the church, is partly built on.

An urn, containing a number of Roman coins, was turned up, by the plough, in this neighbourhood, about the year 1731. About the middle of the last century, a mineral spring was discovered at Somersham, by the late Dr. Layard; but its virtues are now very little noticed.*

SPALDWICK.]—The manor of Spaldwick, now belonging to the Duke of Manchester, was given to the church of Lincoln, by Henry the First, as a compensation for taking the bishopric of Ely out of the diocese of Lincoln. It lies $3\frac{1}{4}$ miles N. E. by N. from Kimbolton.

STANTON.]—Fenny Stanton is a considerable village, two miles S. by E. from Ives. It formerly had a market and a fair.

STILTON.]—The well known little market town of Stilton lies 13 miles N. N. W. from Huntingdon, and 71 N. N. W. from London, on the high north road. It is noticed by Drunken Barnaby, as follows:—

Veni Stilton, lento more,	Thence to Stilton slowly paced,
Sine fronde; sine flore,	With no bloom or blossom graced;
Sine prunis, sine pomis,	With no plums nor apples stored,
Uti senex sine comis,	But bald, like an old man's forehead:
Galva tellus, sed benignum	Yet with inns so well provided,
Munstrat viatori signum.	Guests are pleas'd when they have try'd it.

Stilton, however, is indebted for most of its celebrity to the cheese of that name, which has fre-

pant of a farm near Peterborough, whence the pressure of the times precipitately drove him, about eighteen months before to an obscure lodging at Huntingdon, which he wandered from early one morning in the month of May, 1816, telling his host, with apparent cheerfulness, "That if he returned not to dinner, not to expect him until seen." Returning, however, no more, it was supposed he had fled to America, being never more seen or heard of until the sad day above mentioned, which discovered his remains on a well known spot, part of an estate once fondly occupied by himself or family, and on the identical spot where a father had some years past similarly perished; and also a spot close to the residence of a beloved object, compelled, on the very eve of marriage, to discard him; and a spot, where, alas! being obviously broken in fortune, bereft of all friends, and "crossed in hopeless love," it is most reasonably presumed, that, in the absence of all hope, and in a paroxysm of despair, he destroyed himself by laudanum; a small phial of which was found lying by his side.

quently

quently been called the English Parmesan.* The population of Stilton is about 663.

STRITLOE.]—About one mile S. E. from Buckden, is Stritloe House, the pleasant seat of Lawrence Reynolds, Esq.

STONLEY.]—At the village of Stonley, about three quarters of a mile S. E. from Kimbolton, was a small priory of Austin canons, founded by William Mandeville, Earl of Essex, A. D. 1180. At the suppression of the lesser houses here were seven canons, whose annual revenues were estimated at 62*l.* 12*s.* 3*d.*

STOUGHTON.]—The manor of Great Stoughton, three miles S. E. from Kimbolton, became, with other considerable estates, the property of the Knightly family of Wauton, by marriage with the heir general of Sir Adam de Cretings, who distinguished himself in the wars of Edward the Third, and dwelt here at Cretingsbury. The estates remained in the Wauton family, till the restoration, when they were seized by the crown, and granted to the Earl of Manchester. †

Stoughton church is a venerable fabric, consisting of a nave, chancel, and aisles, with an embattled tower on the west. At the east end of the south aisle is a costly monument, now partly mutilated, erected by Sir Oliver Cromwell, K. B. to the memory of his friend Sir George Wauton, who died in the year 1606, aged 72. He is represented in armour, lying upon a high table, supported by two male figures standing upon elevated pedestals. Amongst the other memorials, in the chancel are inscribed slabs for John Baldwin, Esq. one of the committee men for Huntingdon in 1647, who died in 1657; and Anna, his wife, daughter to Sir Oliver Cromwell by his second wife. Against the north wall is a monument of the Deyers, Knights, of whom Sir James Deyer, chief justice of the com-

mon pleas, who died in 1582, and Sir Richard Deyer, who died in 1605, lie buried here with their respective ladies.

In this parish, which is extensive, is Gains Hall, a seat and manor anciently belonging to the abbots of Ramsey, and since to the Knightly families of Lake and Beverley: it is now the property and residence of J. Duberley, Esq. Another seat in this parish belongs to Earl Ludlow, of whose family was the celebrated republican General Ludlow.

STUKELEY.]—The contiguous little villages of Great and Little Stukeley are from 2½ to 3½ miles from Huntingdon, on the high road to Stilton. Richard Broughton, author of the *Monasticum Britannicum*, was a native of Great Stukeley. At the entrance of this village, close to the road, is a round hill, ditched.

UPWOOD.]—Upwood, anciently Upwode, 2½ miles S. W. by W. from Ramsey, was given by King Edgar to Duke Ailwin, who passed much time here in the 'sports of hunting and hawking.' After the Dissolution, the manor became the property of the Cromwell family. It subsequently passed through various hands, to Sir Richard Bickerton, Bart. who derived it from his father, Rear Admiral Sir R. Bickerton, who died of an apoplexy in 1792, and was buried here. He made considerable improvements in Upwood House, which also appears to have been altered by the Cromwells in the time of James the First. Sir Peter Pheasant, some time lord of the manor, and several of the Cromwell family, were buried at Upwood.

WANDSFORD.]—Wandsford, or Walmsford, is 36½ miles, N. E. from Northampton. Wandsford Bridge connects the two counties of Huntingdon and Northampton, the limits of each extending to the middle of the bridge, which is of stone, and consists of thirteen arches. A few of the houses are on

* Marshall, in his remarks on the agriculture of the Midland counties, asserts, that, "this cheese was first made by a Mrs. Paulet, of Wymondham, near Melton Mowbray in Leicestershire, who was related to, or intimately acquainted with, the celebrated Cooper Thornhill, who kept the Bell Inn in this village, and that she supplied his house with this new manufacture, which he frequently sold as high as half a crown per lb. hence it acquired the name of Stilton cheese from the place of sale." Thornhill was a famous rider, and it is recorded of him, that "he rode three times to London in eleven hours;" and that he won the cup at Kimbolton with a mare which he took accidentally on the course, after a journey of twelve miles.

† John de Wauton, or Waweton, was a knight of the shire, for Huntingdon, in several Parliaments, during the reigns of Edward the Third and Richard the Second. His descendant, Sir George Wauton, who was knighted by James the First, held this manor of the Bishop of Lincoln, as subordinate to the manor of Buckden. Between this gentleman and Sir Oliver Cromwell, uncle to the Protector, there was a particular friendship, which probably led to the marriage of Valentine Wauton, Esq. his relation, and successor in this manor, with Margaret, sister to the Protector Oliver. Valentine strenuously assisted his brother-in-law in forwarding the designs of the Parliament; and it was in a great measure through his aid, that

Cromwell intercepted the University plate when sent from Cambridge for the king's use. He was of the strictest republican principles. His name occurs in almost every public and private sitting of the commissioners of the high court of justice, erected for trying the king; and his hand is also to the warrant of his execution. This, with his relationship to Cromwell, procured him many places of consequence, which his abilities and services in the cause deserved. He was one of the council of state in the years 1650, 1651, and 1652; and governor of King's Lynn, and Croyland, with all the Level of Ely, Holland, and Marshland. He was greatly dissatisfied at Oliver's assumption at the Protectorate, and lived in retirement and neglect, till the ascendancy of the Parliament, after the deposition of Richard, brought him from his retreat, and he was nominated one of the seven commissioners for governing the forces in October, 1659. In February, 1660, he was joined with General Monk, and three others, for governing the army; and he was also appointed one of the twenty-one commissioners for managing the affairs of the admiralty and navy. Shortly afterwards, perceiving that Monk's design was to restore the monarchy, he retired to the continent, where he lived in great privacy in Flanders, or the Low Countries, under a borrowed name, and in the disguise of a gardener; and he died there in the following year.

the Huntingdonshire side of the Nen river; but the church, and principal buildings, are in Northamptonshire.

WARBOYS.] — Warboys, or Warbois, anciently Wardeboys, is a considerable village, four miles S. S. E. from Ramsey, on the high road to Huntingdon. It consists principally of detached houses, mostly thatched; in the north part forming a large triangle, inclosing a green of that figure, and having a long branch extending towards the south, and terminating with the church. This edifice consists of a nave, chancel, and aisles, with a north and south porch, and a handsome tower and spire at the west end. The upper stage of the tower is of light and not inelegant architecture; and the spire has a pleasing, though singular, effect, from taking its rise immediately from the battlements, and not, like most others, from within the square. The chancel has been partly rebuilt, and so much shortened, that the grave stone over a former rector, who was buried inside the church, is now in the church yard. In the windows, are many fragments of stained glass, representing knights, kings, saints, and angels. In the chancel, against the north wall, are two small but tasteful monuments by Bacon, in memory of John Leiman, Esq. of Northaw, Herts, who died in September, 1781; and his relict, Elizabeth, (afterwards wife to William Strode, Esq.) 'daughter of Captain Philip Worth, many years commander in the East India Company's service, who died in December, 1790.' — The Cotton MS. informs us, that "William Johnson, D. D. rector to this towne, was author of a book intituled 'Deus Nobiscum, or a sermon preached upon a great deliverance at sea, 1648; with a narrative annexed,' &c. wherein it is said, that 'he was twice shipwreckt, and that he lived four days without any sustenance, and lay two nights and two days upon a rock in the deep several times, all hope of life being taken away.' The said Dr. Wm. Johnson had been (Fellow) of Queen's College, chaplain and sub-almoner to King Charles the Second, and the most witty and pious man living: he died Archdeacon of Huntingdon, March, 1666-7, and was buried at Westminster, æt. fifty-four."

"The Witches of Warboys, as the unfortunate family of the Samwells have been denominated by the credulous votaries of a rank and debasing superstition, occupy a most distinguished page in the bloody annals of witchcraft. These miserable victims to popular delusion, were John Samwell, Alice, his wife, and Ann, their daughter; all of whom, in defiance of common sense, and in the absence of all rational evidence, were publicly tried, and executed. Their history, as given at length in a pamphlet of the time, furnishes a memorable instance of the infatuated credulity in regard to witchcraft, which at that period possessed even the superior ranks of the community; and shews how strongly the human intellect may be fettered by prejudice and folly. The title of the narrative, as reprinted at London in

1693, is as follows: 'The most strange and admirable Discoverie of the three Witches of Warboys, arraigned, convicted, and executed, at Huntingdon in this county, for the bewitching the five daughters of Robert Throckmorton, Esquire, and divers other persons, with sundrie devilish and grievous torments; and also for bewitching unto death, the Lady Cromwell: the like hath not been heard of in this age.' It will be seen from the opening of the narrative, that the whole of the dreadful business sprung from the observation of a child! — 'About the tenth of November, 1589, Mistress Jane, one of the daughters of Master Throckmorton, being neare the age of ten years, fell upon the soaine (sudden) into a strange kind of sickness, the manner whereof was as followeth. Sometime she would sneeze very loude and thicke for the space of halfe an houre together, and presently as one in a swone lay quietly as long; sometime she would shake one leg, and no other part of her, as if the paleasie had been in it; sometime the other: presently she would shake one of her arms, and then the other. In this manner she had continued to be affected for several days, but without any suspicion of witchcraft, when old Alice Samuel came to visit the sick child, and sat down by the side of her in the chimney corner, having a black knit cap on her head. This the childe soon observed, and pointing at her, exclaimed, 'Grandmother, look where the old witch sitteth: did you ever see one more like a witch than she is? Take off her blacke thymb'd cap, for I cannot abide to look at her.' The child afterwards became worse; and Dr. Banow, 'a man well known to be excellent skilful in phisicke,' being applied to, repeatedly tried the effect of his prescriptions without success, and then said, that 'he had had some experience of the malice of some witches, and he verily thought that there was some kind of socerie and witchcraft wrought towards this child.' Exactly one month afterwards, more of the daughters were seized with the same malady, and complained in the same manner of 'Mother Samuel.' Six of the servants, also, who were at different periods afflicted in a similar way, brought the same kind of charge against the now strongly reputed witch, who was reported to be confederated with nine familiar spirits, whose visits to her were generally paid in the assumed form of dun chickens.

"Just before the ensuing Christmas, one of the children was attacked with a more violent fit than it had yet experienced, and was 'threatened by the spirit with one still more terrible; though at the same time, mother Samuel, who was present, was so 'affected at the sight, that she prayed many times, that she might never see the like again in any of them.' The children then entreated her to confess, that 'they might be well, and keep a merry Christmas;' and their father also seconded their entreaties; but in vain. He then requested her to charge the spirit, that his daughter might escape

escape the fit with which she was threatened; on which she 'presently said, I charge thee, Spirit, in the name of God, that Mistress Jane never have this fit.' And again, at the father's request, the old woman charged the spirit 'in the same manner,' to leave all the children immediately, and never to return to them again. 'Scarce had she uttered these words, before three of them, who were then in their fits, and had so continued for the space of three weeks, wiped their eyes, and instantly stood upon their legges.' This event appears to have surprised the old woman herself, who immediately fell upon her knees, and intreating Mr. Throckmorton to forgive her, confessed that she was the cause of all his children's troubles; and on the following day, she publicly confirmed this confession in the church. She was then permitted to go home; but her reflections, when in the midst of her family, assumed their natural tone, and she denied every thing she had before been induced to acknowledge. This being communicated to Mr. Throckmorton, he threatened to take her before the justices; and on her steadily persisting in her innocence, he gave the constables in charge both of her, and of Agnes, her daughter, and on the same day they were taken before the Bishop of Lincoln at Buckden. Here, on her different examinations, she was led to confess that 'a dun chicken did frequently suck on her chin before it came to Mr. Throckmorton's house, and that the ill and trouble which had come to his children, had come by the means of the said dun chicken; that she knew the said dun chicken was gone from the children, because it was come with the rest unto her, and they were then in the bottom of her bellie, and made her so full that she could scant lace her coat; and that on the way as she came, they weighed so heavy, that the horse she rid on did fall downe, and was not able to carrie her.' These insane ravings, with many others of similar import, were thought sufficient by the sapient prelate, and two justices, his assistants, to warrant her committal to the gaol at Huntingdon, together with her daughter, against whom there as yet appears to have been no specific charge!

"Previous to these latter events, however, the children were visited by the Lady of Sir Henry Cromwell, and she had not been long with them, when they fell into their usual fits, 'an occurrence which invariably took place whenever any strangers came to see them.'—'Whereupon, she caused mother Samuel to be sent for; and taking her aside, she charged her deeply with this witchcraft, using also some hard speeches to her; but she stiffly denied all, saying, 'that Master Throckmorton and his wife did her much wrong, so to blame her without cause.' Lady Cromwell, unable to prevail with her by good speeches, sodainly pulled off her kercher, and taking a pair of sheeres, clipped off a locke of her haire, and gave it privately to Mistress Throckmorton to burn; upon which mother Samuel, in resentment, operated upon Lady Crom-

well, bewitching her in like manner. Her Ladyship's fits were much like to the childrens; and that saying of mother Samuel, 'Madam, I never hurt you as yet,' would never out of her mind.'

"At the quarter sessions following the committal of the girl and her mother, Mr. Throckmorton requested the high sheriff and the justice to suffer him to 'baile this maide, and to have her home to his house, to see whether any such evidences of guiltiness would appear against her, as had before appeared in the children against her mother.' After some demur, this was consented to; and within a few days after Agnes Samuel had accompanied him home, 'the children fell all of them into their fits; and then the spirits did begin as plainly to accuse the daughter as ever they did the mother, and to tell the children, that 'the old woman hath set over her spirits to her daughter, and that she had bewitched them all over agayne.'

"On the suggestions of 'the Spirits,' various proofs of the guilt of the hapless girl were afterwards tried, and, as the narrative affirms, always with 'instant success,' as was 'repeatedly proved by different people, and even by the judge himself, the day before the trial of the culprits.' One of these proofs was a charm, or formula, conceived in the following words: 'I charge thee, devil, as I am a witch, and a worsen witch than my mother, and consenting to the death of Lady Cromwell, that thou suffer this child to be well at present.—Encouraged, as it were, by the attention paid to their remarks, 'the spirits,' now began to accuse the father, John Samuel, as they had before done the mother and daughter; and appealed to similar charges in attestation of the truth of their accusation; but, from the perversity of circumstances, and the 'obstinacy of the old man,' this was only once proved previous to the trial of the three delinquents.

"On the fifth of April, 1593, these three wicked offenders were arraigned before Mr. Justice Tanner, for bewitching of the Lady Cromwell to death; and for bewitching of Mistress Joane Throckmorton, Mistress Jane Throckmorton, and others; when Master Dorrington, Doctor of Divinitie, and parson of the town of Warboys; Thomas Neet, Master of Arte, and Vicar of Ellington; the father of these afflicted children, and others of their relations, appeared as evidence against them. By these, the before related proofs, presumptions, circumstances, and reasons, with many others of the same species, were at large delivered, until both the judge, justices, and jury, said openly, 'that the cause was most apparent;' and that 'their consciences were well satisfied that the sayed witches were guiltie, and had deserved death.' During the trial, Mistress Jane Throckmorton was brought into court, 'and there in her fit, was unable to speak, or to see any one, though her eyes were open,' till old Samuel, intimidated by the threat of the judge, that, if he persisted in his refusal to pronounce the charm, 'the court would hold him guiltie of the crimes whereof he

he was accused,' said "in the hearing of all that were present, 'as I am a witch, and did consent to the death of Ladie Cromwell, so I charge thee devil to suffer Mistress Jane to come out of her fit at this present;' which words were no sooner spoken by the old witch, but the said Mistress Jane, as her accustomed order was, wiped her eyes, and came out of her fit.'

"On such puerile and contemptible evidence were these ill fated beings adjudged guilty, and condemned to die. At the place of execution, the mother, who was nearly eighty years old, and whose faculties were impaired by age, and still further by the brutal reasonings of those who had supported the accusations of witchcraft, 'confessed her guilt,' and asserted, that her husband was her associate in 'these wicked proceedings:' at the same time she strenuously exculpated her daughter. The father resolutely denied the charge against him; and the daughter, with equal warmth, protested her own innocence; but 'being willed to say the Lord's Prayer, and the Creed, when as she stood upon the ladder ready to be executed, she said the Lord's Prayer, until she came to say, 'but deliver us from evil,' the which she could by no means pronounce; and in the Creed, she missed very much, and could not say that she believed 'in the Catholic Church.'

"The goods of the much injured sufferers were declared forfeited to Sir Henry Cromwell as Lord of the Manor of Warboys, who gave them for the purpose of having an annual sermon preached at Huntingdon for ever, against 'the sin of witchcraft.'"

WARESLEY.]—Waresley $5\frac{1}{2}$ miles S. E. from St. Neot's, was a possession of the Hewitts, Baronets, who purchased it of the Marshes, in the time of Charles the First. The church contains memorials of both parishes.

WITTON.]—Witton, which is a chapelry to Houghton, lies $2\frac{1}{2}$ miles N. by W. from Ives. The late Right Hon. Charles James Fox was married here, by license, to Elizabeth Blane (better known as Mrs. Armstead) as far back as the 28th

of September, 1795. The marriage was not acknowledged till seven or eight years afterwards. Here is a monument for the Ainsworths, and a grave stone for the Purchas family.—The mother church, at Houghton, half a mile distant, presents nothing remarkable.

YAXLEY.]—The ancient little market town of Yaxley—the Takesle of Domesday—lies $2\frac{1}{2}$ miles N. E. by N. from Stilton, and $7\frac{1}{2}$ miles N. by W. from London. From its contiguity to the barracks, at Norman Cross, its population increased, from 986, in 1801, to 1891, in 1811.—The manor was granted to the abbots of Thorney, one of whom, surnamed De Yakesley, who died in 1291, was a native of this town. The church is a handsome fabric, and remarkable for its well proportioned spire, which is seen at a considerable distance, in all directions.

FAIRS.]—*Alconbury.*—June 24, for pedlar's ware.

Earith.—May 4, July 25, November 1, for cattle of all sorts.

Godmanchester.—Easter Tuesday, cattle of all sorts.

Huntingdon.—March 25, for pedlar's ware.

St. Ives.—Whit-Monday, October 10, for cattle of all sorts, and cheese.

Kimbolton.—Friday in Easter-week, pedlary and sheep, December 11, for a few cattle and hogs.

Leighton.—May 12, October 5, for cattle of all sorts.

St. Neots.—Saturday before the third Tuesday in January, old style, a shew of horses and other cattle, toll free. Ascension day, Corpus Christi, December 17, for cattle of all sorts, and pedlary. August 1, for servants.

Ramsey.—July 22, for small pedlary.

Somersham.—June 22, Friday before November 12.

Spaldwick.—Wednesday before Whit-Sunday, November 28, for cattle of all sorts.

Stilton.—February 16, pedlary.

Yaxley.—Ascension Day, for horses and sheep.

TABLE OF DISTANCES.

The Names of the respective Towns are on the top and side, and the square where both meet gives the Distance.

TABLE

TABLE OF JOURNEYS THROUGH THE PRINCIPAL TURNPIKE, AND CROSS ROADS, IN THE COUNTY OF HUNTINGDON.

* * The Reader is requested to observe, that the *first column*, shows the NAMES OF PLACES; the *second*, the DISTANCES FROM PLACE TO PLACE; the *third*, the DISTANCES FROM THE COMMENCEMENT OF THE JOURNEY; the *fourth*, NAMES OF SEATS, INNS, &c. In the last column, the letters R. and L. are the abbreviations of RIGHT AND LEFT.

1. HUNTINGDON to BYTHORNE. (W. by N.)

Hinchinbrook.....	1	1	R.—Hinchinbrooke House, Earl of Sandwich.
Brampton.....	1	14	L.—J. Richards, Esq. A turnpike-road to Buckden.
Creamer's Hut.....	12	3	R.—A turnpike-road to Alconbury Hill. L. to St. Neot's.
Ellington.....	3	5	Three miles beyond Spaldwick, on L. a turnpike-road to Kimbolton. R. to Oakham.
Spaldwick.....	21	74	
Bythorne.....	5	124	

2. ZYNSBURY, through ST. NEOT'S, and HUNTINGDON, to RAMSEY. (N.E.)

St. Neot's.....	11	1	Inns.—Falcon, Cross Keys. R.—A turnpike road to Cambridge. L. to Eton Sacon.
Little Paxton.....	14	14	R.—Richard Reynolds, Esq. and H. P. Stanley Esq.
Doddington.....	3	34	R.—Doddington House, George Thornhill, Esq.
Buckden.....	14	5	R.—Palace of Bishop of Lincoln. Striloe House
Erington.....	3	7	L.—A turnpike road to Spaldwick.
Huntingdon.....	14	84	Inns.—George, Crown, Fountain. R.—A turnpike road to Royston. L. to Stukeley.
Hartford.....	14	94	
Hartford, T. G.....	34	134	
Old Hurst.....	4	134	
Warboys.....	2	154	
Bury.....	14	174	
			R.—A turnpike road to Somersham. R.—A turnpike road to Wisbeach.

3. PETERBOROUGH, through CHESTERTON, to ELTON. (W. by S.)

Woodston.....	1	1	R.—Cross the Nen, Thorpe Hall.
Overton Leangueville.....	14	24	Earl of Aboyne.
Waterville.....	1	34	

Atwalton.....	14	5	Cross the great north road.
Kate's Cabin.....	4	54	R.—A turnpike road to Stamford. L. to Norman Cross.
Chesterton.....	4	54	Colonel Belford, and W. Waller, Esq.
Elton.....	24	8	R.—Elton Hall, Earl of Carysfort. A turnpike road to Stamford.

4. FENNY STANTON, to HINCHINBROOK. (W. by N.)

Godmanchester.....	44	44	R.—A turnpike road to St. Ives. L.—To St. Neot's.
(Cross the Ouse.)	1	54	Inns.—George, Crown, and Fountain.
Huntingdon.....			R.—Turnpike roads to Alconbury Hill, and Ramsey.
Hinchinbrook.....	4	64	R.—Hinchinbrook House, Earl of Sandwich.

5. GODMANCHESTER, through HUNTINGDON and STILTON, to WANDSFORD. (N. W. by N.)

Huntingdon.....	4	1	Inns.—George Crown, and Fountain. L.—A turnpike road to St. Neot's, by Buckden, 10 miles.
(Cross the Ouse.)			R.—To Ramsey, by Ripton Regis, 94 miles.
Great Stukeley.....	24	24	Inn.—Wheatheaf.
Little Stukeley.....	4	34	L.—A turnpike road to Buckden.
Alconbury Hill.....	24	54	
Sawtre St. An-drews.....	34	94	
Stilton.....	34	13	Inn.—Bell.
Norman Cross.....	4	134	R.—A turnpike road to Peterborough.
Kate's Cabin.....	34	174	R.—A turnpike road to Peterborough. L.—To Oundle.
Water Newton.....	14	19	Inn.—George.
Sibson.....	4	194	
Wandsford.....	14	214	L.—A turnpike road to Oundle, eight miles.

KENT.

KENT.

GENERAL DESCRIPTION OF THE COUNTY.

KENT is a maritime county, bounded on the north, by the Thames and the German ocean; on the east, by the sea; on the south, by the sea, and the county of Sussex; and, on the west, by the counties of Sussex and Surrey. Situated in the south easternmost part of Britain, it includes the angle opposite to France, from which its nearest point is distant about 24 miles. Its figure is irregular; but it approaches nearer to that of the trapezium, than to any other. It extends, in length, from the west of the lands in Beckenham, called Langley, to Ramsgate, in the Isle of Thanet, about 63 miles; and, in breadth, from the Rother, south of Newenden, to the Thames, at Nowrhead, in the Isle of Graine, about 30 miles: its circumference is, from 160 to 170 miles. The superficial contents of Kent have usually been estimated at 832,000 acres; but Boys, in his General View of the Agriculture of this county, states them at 1,200,000 acres; and, according to the tables prefixed to the last population returns, the number of acres is 945,680. It is generally considered, that, in ancient times, this county extended some miles further westward than it does at present;—that it included within its bounds the original site of London, which Ptolemy and Ravenus describe, as situated on the south side of the Thames. Its general aspect is very beautiful; arising from the inequality of the surface, the diversity of the scenery, and the variety

in the verdure. "The whole county," observes Hasted,* "excepting the marshes and the Weald, is a general cluster of small hills; two chains of which, higher than the rest, run through the middle of Kent, from west to east, in general at about eight miles distance from each other, (though at some places much less,) and extending from Surrey to the sea." These are called the Upper and Lower Hills, and are mostly covered with coppice and wood lands. The northern range, and, indeed, the whole north side of the county, is composed principally of chalk and flints, as well as a large tract on the sea coast: the southern range is chiefly of iron stone, and rag stone; more westerly, clay and gravel prevail on the eminences.—Kent is generally, and with much propriety, regarded as one of the most interesting counties in England; whether considered in respect to the advantages of its situation for trade and commerce, its extent, the general fertility of its soil, the important events that have been transacted within its limits, the peculiar division of its lands, its numerous antiquities, the acknowledged bravery of its inhabitants, the ecclesiastical pre-eminence of its chief city, its produce or its proximity to the Continent, to which, many learned antiquaries suppose it was originally united by a narrow isthmus, extending between Dover and Calais.†

CLIMATE.—With respect to the climate of this county,

* Vide "The History and Topographical Survey of the County of Kent. Containing the ancient and present state of it, both civil and ecclesiastical. Collected from public records, and other best authorities, both manuscript and printed, and illustrated with maps and views of antiquities, seats of nobility and gentry, &c. By Edward Hasted, of Canterbury, Esq. F. R. S. and S. A. Canterbury, 1778, Vol. I." Folio, published by subscription at 3*l*. 3*s*. A second edition of Mr. Hasted's work was published in 1798, in twelve volumes octavo. Mr. Hasted, who was master of Lady Hungerford's hospital, at Corsham, Wilts. died, in the master's lodge there, on the 14th of January, 1812, at the age of 80. His history of Kent occupied his attention more than 40 years. Notwithstanding this, he was use-

fully and zealously employed, as an acting magistrate, and a deputy lieutenant of the county. He was the only son of Edward Hasted, Esq. barrister at law, of Hawley, in Kent, and was honourably descended both by his father and mother. He left four sons and two daughters.

† Camden, Wallis, Somner, Burton, Twine, Versteegan, Harris, Hasted, &c. maintain this opinion; the arguments advanced in support of which are chiefly drawn from the great resemblance which the cliffs of Dover have to those of Boulogne and Calais, on the opposite coast of France. On both shores, these cliffs consist of chalk, with flints intermixed: their faces are rugged and precipitous, appearing as if they had been rent asunder by violence; and their length on both coasts is similar,

KENT

British Statute Miles

county, a great part of it lying upon the sea, the air is thick, warm, and foggy, though it is often purified by the south and south-west winds; and the shore being, in general, cleaner than that of Essex, the marshy parts of this county are more healthy, and do not produce agues in the same degree as the hundreds of Essex. As to the higher parts of Kent, they enjoy a very healthy air. The climate of Kent is generally mentioned with reference to the three districts, into which the county is divided; viz. East Kent, West Kent, and South Kent; or Upper Kent, Middle Kent, and Lower Kent. Upper Kent, or East Kent, which is the north east division, is said to be "wealthy but not healthy;" Lower Kent, or the south parts, called also the weald of Kent, are said to be "healthy but not wealthy;" and Middle Kent, bordering upon London and Surrey, is said to be both "wealthy and healthy."

RIVERS.]—The principal rivers in Kent are the Cray, the Darent, the Medway, the Ravensbourne, the Rother, the Less and Greater Stoure; and, though last not least, the majestic Thames.

Of these, the Cray rises at Newell, in the parish of Oppington, and pursuing a northerly course, gives name to St. Mary's Cray, Paul's Cray, Foot's Cray, North Cray, and Crayford. From the last mentioned place it winds through Crayford marshes, and falls into Dartford creek.

The Darent has its source on the borders of this county and Sussex, near Westerham, whence, taking a north-east course, it passes Valance, Brasted, Chepsted, and other villages, to Riverhead; whence it turns to the north, and in that direction flows past Shoreham, Eysford, and Farningham, to South Darent. Hence winding to the north-west, it proceeds to Dartford, and thence under the appellation of Dartford creek, it flows onward to the Thames, which it enters at Long Reach, having first had its waters increased by those of the Cray. Dartford creek is navigable from the town to the Thames for small craft.

The Medway was, by the Britons, called Vaga; a name descriptive of its mazy and sinuous course. To Vaga, the Saxons gave the prefix Med, making it Medweg, or Megwege; either because it ran between two bishoprics, or because it flowed through the midst of the Kentish kingdom. Its present appellation is evidently a corruption of the Saxon.—The Medway is formed by four streams, only one of which rises in Kent, two of the others being in Sussex, and the fourth in Surrey. In its progress towards Tunbridge, it flows through a very beautiful country, passing Eaton Bridge, Hiver Castle,

and Penshurst. A little above Tunbridge it divides into two channels; the northernmost of which is navigable, and it again unites about two miles below the town. Proceeding to Twyford Bridge and Yalding, it is considerably increased by the united waters of the Beyle and Theyn rivulets; and flowing in a winding direction to Maidstone, and in a still more irregular course to Rochester, it thence passes Chatham, Upnor Castle, and Gillingham Fort, and enters the Thames between the isles of Graine and Shepey.

The Medway was first made navigable to Tunbridge about the middle of the last century, under the provisions of an act of Parliament, passed in 1740, though an act had been procured for the purpose in the reign of Charles the Second. The trade on the river is very great. The Medway is plentifully stocked with fish of various species, and was formerly noted for its salmon and sturgeon. "On the Medway and in the several creeks and waters belonging to it, within the jurisdiction of the corporation of Rochester, is an oyster fishery; and the mayor and citizens hold a court once a year called the admiralty court, for regulating this fishery and to prevent abuses in it."

The source of the Ravensbourne is on Keston Downs, near the ancient Roman camp. Taking a north north-west course, it passes through Hayes, Bromley, Lewisham, and Lee, receiving in its progress the waters of several smaller streams. At Deptford it becomes navigable for lighters, &c. and shortly afterwards falls into the Thames.

The Rother, anciently called the Limene, rises at Gravel Hill, Rotherfield, Sussex, and flowing eastward, becomes the boundary of Kent below Sandhurst, and Newenden; after which it skirts the south side of the Isle of Oxney, and suddenly turning to the south, empties its waters into Rye harbour. This river in ancient times, flowed round the north side of Oxney Isle to Aplemore, and thence into Romney, where forming a harbour, it extended over a considerable part of Romney marsh, and in that direction fell into the sea; but the waves rolling over this tract, during a dreadful tempest in the reign of Edward the First, so altered the ancient channel, that the river was forced to take a new course; which it did by forcing a passage into the sea at Rye, from Appledore.

The Stoure consists of two streams, distinguished by the names of the Greater and Smaller Stoure: both rise in the southern and woody parts of this county, called the Weald of Kent, and direct their course north-east; the Greater Stoure through the

it being about six miles. In the strait immediately between them, the sea is also much shallower than on either side; and to this may be added, that a narrow ridge of sand, with a stony bottom, called the Rip-rapps, extends between Folkestone and Boulogne, its distance from the former being about ten miles, and its length the same: this ridge, at low spring tides, is covered with only fourteen feet water; and another ridge, called the Vane, about six miles off Dover, has scarcely any more water

on it at the same times, though immediately on each side of both ridges, which are but narrow, the depth increases to twenty-five fathoms. Whatever may be the fact, however, history is silent as to any isthmus that might once have united Great Britain with the continent; and all that can be offered to establish the supposition, rests only on the basis of probable conjecture.

city

city of Canterbury, and the Smaller Stoure through Elham; and falling into one channel, called the Wantsumne, are again divided into two other streams, one of which flows north-west, and the other south-east, cutting off the north-east angle of the county, and thus forming the Isle of Thanet, falls into the German sea.

The Thames, the Tamesis of Cæsar, skirts the county of Kent on the north side, the entire distance from Deptford to the Nore. From Deptford, this 'first of rivers' passes the town and Royal Hospital of Greenwich; the buildings of which, with the adjacent country, compose a most delightful view. Hence the river continues to flow in a bold sweep to Woolwich, and proceeding towards Erith, has its prospects enriched by the plantations of Belvidere, the elegant seat of Lord Eardley. Between Erith and Long Reach, the Thames receives the united waters of the Cray and Darent, and rolling onward in a semi-circular course, flows between Tilbury and Gravesend in a broad stream of about a mile over. Thence rapidly increasing in width as it proceeds, it winds through the channel called the Hope, and opening due east, passes the Isle of Grain, and flows into the German ocean at the Nore, where it also mingles its stream with the waters of the Medway.

CANALS.]—The Rochester canal extends from Chatham to Gravesend. About 16 or 17 years ago, a junction of the rivers Thames and Medway, by a canal from Gravesend to Rochester, was projected; but, from various causes, this useful scheme was nearly abandoned. About nine years since, however, it was revived; and, on the 27th of November, 1800, the first stone of the entrance lock was laid, with much ceremony, by Joseph Stonard, Esq. the chairman, and the committee. This canal, though less than seven miles in length, is of incal-

culable advantage, as it saves a long and often dangerous passage, of nearly 50 miles, round the Nore; conveying timber, hops, corn, and merchandise of every description, to and from the London market, in a short and certain time.

Some time ago, a plan of Mr. Rennie's was in contemplation for the junction of the Medway, Rother, and Stoure, by means of navigable canals. The line of the canal proposed for the junction of the Medway and Rother was from the Medway at Yalding to Horsmonden, thence by Frittingden to Gallows Green, near Fenterden, and from thence to the royal military canal at Stone, which connects it with the Rother. The line projected to unite with the Stoure was proposed to branch off at Middle Quarters near High Halden, which in its course would embrace Ashford, and be continued to Wye, whence it might without difficulty be extended to Canterbury. The total cost of this last line, twenty-seven miles in length, was estimated at 100,744*l.* of the former line, nearly thirty-four miles in length, 190,688*l.*

MINES, MINERALS, &c.]—This county affords some mines of iron; now but little in request, and that part of it which borders on the Thames abounds with chalk hills, whence, not only the city of London and the adjacent parts, but even Holland and Flanders, are supplied with chalk for making lime; and from these hills the refuse of this chalk is carried in lighters and hoys to the coasts of Essex, Suffolk, and Norfolk, where it is sold to the farmers as manure.

PLANTS.]—The plants of this county, as will be seen below,* are very numerous. In the Isle of Thanet, fennel grows naturally in the hedges, and under the chalk walls; and the soil agrees particularly with rosmary, which has been known to attain a height of 17 or 18 feet.

WOODLANDS.]—

- * *Acrostichum septentrionale*. Forked or horned Fern; on the north side of Botton church.
Adonis autumnalis. Adonis flower, Pheasants' eye, Red Morocco, or Red Maithes; at Chatham, near Northfleet, and between Maidstone and Rochester.
Adoxa Moschatillina. Tuberous Moschatel; in Charlton wood, and common in woods and hedges about Feversham.
Agaricus Lactifluus. Milky Agaric; } in Charlton
piparatus. Pepper Agaric; } wood.
Agrostis polymorpha β. A variety of creeping Bent grass; in Greenwich park.
Aira aquatica β. A variety of Water hair grass; about Northfleet.
— cristata. Cristed hair grass; on Blackheath.
Ajuga reptans. (flore albo) Bugle (with a white flower;) in Charlton wood.
Alchemilla vulgaris. Ladies' Mantle; at King's wood near Feversham, and elsewhere.
Alisma Damasonium. Star-headed Water Plantain; in a field pond, at East church in the island of Shepey.
Allium carinatum. Mountain Garlic; near Ramsgate in the Isle of Thanet, and between Sandwich and Deal.

- Allium nasinum*. Ramson, on Stroud Green.
Alopecurus aristatus. Monspeliensis. Bearded Foxtail grass; in the salt marsh by Erith church.
— geniculatus β *bulbosus*. Bulbose Foxtail grass; in the first field next the road before the entrance of Northfleet.
— ventricosus. Red bent grass; in the Isle of Shepey plentifully.
Althea officinalis. Marsh mallow; in the marshes about Graveney, Ore, and Luddenham, and at Clapgate and Goodnestone.
Anagallis arvensis δ. A variety of male Pimpernel; in Romney marsh.
Anchusa sempervirens. Evergreen Alkanet; near Horn place, near Rochester, and on rubbish near Preston church yard.
Anemone ranunculoides. Yellow Anemone; near Wrotham.
Anethum Feniculum. Fennel or Finckle; about Gravesend and Greenhithe abundantly, by the road side on entering Feversham, and in hedges and under the chalk walls in Thanet isle.
Anthemis arvensis. Corn Camomile; in fields between Eltham and Shooters hill.
Anthoceros punctatus. Spotted Anthoceros; on the banks of Woolwich heath, in moist shady places.
Anthyllis

WOODLANDS.]—In the eastern part of the county, the woodlands are dispersed principally between the great road from Rochester to Dover, and the chalk hill that runs from Folkestone, by Charing to Detling. These furnish the adjacent country with fire

wood, and the dock yards with timber for ship building; but the most material part of their produce is the immense quantity of hop poles cut out for the neighbouring plantations. The chalky soils are principally productive of ash, willow, and hazel; the

Anthyllis vulneraria. Kidney Vetch or ladies finger, on Gad's hill, and abundantly about Gravesend and Greenhithe.

Antirrhinum Majus. The greater snapdragon; on chalk cliffs near Dover, on old walls about Feversham, and between Northfleet and Gravesend.

——— *repens*. Mouspessulanum. Sweet smelling toad flax; in the fields near Gad's hill.

Aquilegia vulgaris. Common Columbine; between Maidstone and Rochester, and in the woods at Bexley.

Arenaria peploides. Sea Chick weed: at Sheerness in the Isle of Shepey.

——— *tenuifolia*. Fine leaved Chick weed; in a close on the left hand, a mile from Deptford towards Southfleet.

Arenaria trinervia. Plantain leaved Chick weed; in Charlton wood.

Aristolochia clematitis. Climbing Birth wort; near Maidstone and elsewhere.

Artemisia maritima. Sea Wormwood; in the salt marshes about Feversham, and at Sheerness.

——— *maritima* β . γ . δ . Three varieties of the last at Sheerness.

Arundo arenaria. Sea Reed grass; at Sheerness.

——— *epigejos*. Wood reed; in a lane between the Grove at Camberwell and Dulwich.

Asparagus officinalis. Asparagus or Sperage: by the Thames shore at Feversend.

Asperula odorata. Woodroof; in Charlton wood and ospringe woods.

——— *cynanchica*. Squinancy wort; on Badgen downs, in chalk pits at Northfleet and Ospringe, on chalk cliffs at Greenhithe, and at Dartford.

Asplenium Adiantum nigrum. Black Maiden hair; at Greenwich, on Stroud church, and on the hollow sandy banks in Hornhill, and in Charlton wood.

——— *Ceterach*. Splun wort or Milt wast; on the north side of Cliff church, below Gravesend, and on Stroud and Lenham churches.

——— *Ruta muraria*. White Maiden hair, Wall rice, or Tentwort; at Queenborough, on Rochester bridge, on the houses at Cobham, and on the buttresses of Feversham church near the south door.

——— *Trichomanes*. Common Maiden hair; in Cox's lane at Lewisham, on Stone church, and on the walls of Feversham church and abbey.

Aster Tripolium. Sea Star wort; between Greenwich and Woolwich, in the Isle of Shepey, and in the salt marshes about Feversham.

Astragalus glycyphyllos. Wild Liquorice or Liquorice vetch; about Charlton plentifully, and under hedges in Peasedown near Whitehill Ospringe.

Atriplex hastata β . A variety of wild Orach; at Sheerness in Shepey island.

——— *laciniata*. Saggd sea Orach; near Sheerness in Shepey island, and at Queenborough and Margate.

——— *pedunculata*. Stalked sea Orach; in the Isle of Thanet, near the ferry, in great plenty.

——— *portulacoides*. Sea purslane; at Sheerness in the Isle of Shepey.

Atriplex serrata. Indented sea Orach; near Sheerness, and in the marshes about Gravesend.

Atropa Belladonna. Deadly Nightshade or Dwale; at Chatham, between Maidstone and Rochester, and in Preston church yard.

Avena pubescens. Rough oat grass; near Northfleet.

Ballota nigra β *alba*. A variety of stinking Horehound; at Tunbridge.

Beta maritima. Sea Beet; on the sea wall near Graveney third sluice, on the sea wall at Ham, and at Sheerness in the Isle of Shepey.

Betula Alnus. Common Alder; by the side of the Ravensbourn at Lewisham.

Brassica Oleracea sylvestris. Sea Cabbage: on the chalky cliffs at Dover.

Bromus erectus. Upright Brome grass; at Dartford, Gravesend, and Rochester.

Bromus erectus β *arvensis*. Corn Brome grass, at Gravesend.

——— *giganteus*. Tall Brome Grass; in Charlton wood, and elsewhere.

Bryum calcareum. Chalk Bryum; on the sides of the chalk pit, nearest the west end of Dartford.

——— *caulescens*. Greyish Bryum; on Blackheath, and elsewhere.

——— *carneum*. Shining Bryum; between Blackheath and Eltham.

——— *heteromallum*. Heath Bryum; at Woolwich.

——— *hornum*. Rough Bryum in Charlton wood.

——— *hypnoides*. Woolly Bryum; on Dartford Heath, and Blackheath.

——— *pomiforme*. Round-headed Bryum; on Shooters Hill, and at Woolwich.

——— *sericetum*. Silky Bryum; near Woolwich.

——— *serpyllifolium*. Thyme-leaved Bryum; between Crayford and Plum-street.

——— *serpyllifolium* β *proliferum*. A variety of the last, near Eltham.

——— *triquetrum* α and γ . Triangular Bryum; and a variety of it; on Shooters Hill.

Bunias cakile. Sea Rocket; near Sheerness in Shepey, and Cliff's end in Thanet.

Bupleurum rotundifolium. Thorow Wax; at Lewisham, in corn-fields near Brogdale, in Ospringe, and between Greenhithe and Stone, in a field by the road side.

——— *tenuissimum*. The least Hare's Ear; near Sheerness, in the Isle of Shepey, and in the Isle of Thanet, near the ferry.

Buxus sempervirens. Box Tree; at Boxley, and a few large trees near houses in Sheldwich.

Byssus aurea. Golden Byssus; in a chalk pit, near Gad's Hill.

——— *velutina*. Velvet Byssus; in Charlton wood.

Caltha palustris. (flore pleno.) Marsh Marigold, with a double flower; between the sluice and the powder mill, near Feversham.

Campanula trachelium. Great Throatwort, or Canterbury Bells; on Gad's Hill, in woods and hedges about Feversham, and elsewhere, and found with a white flower in Herne Hill.

——— *hederacea*. Ivy-leaved Bell-flower; on the bogs at Caesar's camp, near Bromley, and elsewhere.

——— *hybrida*. Lesser Venus-Looking-Glass, or Coddled Corn Violet; at Northfleet.

the stiff clays of oak, birch, and beech. When the wood is fit for cutting, it is generally sold to the dealers by the acre. It is generally cut at from ten to fourteen years growth, and is valued in proportion to the quantity of hop-poles produced: the

best poles are those of chesnut, ash, willow, and maple; the first are in most estimation. The wood is found to degenerate after every fall, unless replenished from the nursery.

Hop Grounds.]—Nearly one-fourth of the whole produce

Campanula rapunculus. Rampions; in the lane that leads from Dartford Heath to Bexley.
Cardamine amara. Bitter Cresses, or Ladies Smock; at Lewisham.
Carduus acaulis. Dwarf Thistle; at Chalk, on Blackheath, and Beacon Hill.
 ——— *nutans*. Musk Thistle; in Charlton church-yard.
 ——— *pratensis*. Meadow Thistle; in the meadows about Ore mill pond.
Carex acuta γ. A variety of Brown Carex; in a pond at Eltham.
 ——— *depauperata*. Charlton Carex; in Charlton wood.
 ——— *divisa*. Marsh Carex; near Hithe.
 ——— *panicea*. Pink Carex; on the bogs at Chiselhurst.
Caucalis daucoides. Fine-leaved Bastard Parsley; among corn, about Northfleet, Gravesend, &c.
Centaurea solstitialis. St. Barnaby's Thistle; near Northfleet.
Centunculus minimus. Bastard Pimpernel; in a pasture before the town of Chiselhurst.
Chara tomentosa. Brittle Chara; on a bog near Chiselhurst.
Chilidonium glaucium. Yellow-horned Poppey; in Shepey island, on the beach at Sea-salter, and on the shore at Feversham.
Chenopodium glaucium. Oak-leaved Goosefoot; about Deptford.
 ——— *hybridum*. Maple-leaved Blite; near Northfleet.
 ——— *maritimum*. Sea Blite, or White Glasswort; at Sheerness, in the isle of Shepey.
Chlora perfoliata. Yellow Centaury; at Gravesend.
Chrysosplenium oppositifolium. Common Golden Saxifrage; in Charlton wood.
Cistus helianthemum. Dwarf Cistus, or Little Sunflower; at Chalk, Greenhithe, Northfleet, and on dry chalky banks about Feversham.
Clavaria ophioglossoides. Black Clavaria; in ditches at Woolwich.
Clematis vitalba. Great Wild Climber, or Traveller's Joy; between Greenwich and Woolwich, and between Lewisham and New Cross.
Clinopodium vulgare. Great Wild Basil; at Chatham, and in hedges about Feversham.
Cochlearia anglica. English Scurvy Grass; on the banks of the Thames below Greenwich.
 ——— *armoracea*. Horse-Radish; on the banks of Ore stream, near Feversham.
Conferva canalicularis. Mill Conferva; at Leeds Abbey.
 ——— *cancellata*. Latticed Conferva; on the shore at Sheerness.
 ——— *capillaris*. Thread Conferva; in the marsh ditches in Shepey island.
 ——— *dichotoma*. Bristle Conferva; in marsh ditches, near the Thames, at Charlton; and in ditches between Greenwich and Woolwich.
 ——— *elongata*. Pointed Conferva; at Sheerness.
 ——— *gelatinosa*. Frog spawn Conferva; between Greenwich and Woolwich.
 ——— *glomerata*. Cluster Conferva; in the cistern, or conduit-house at Leeds abbey.
 ——— *littoralis*. Matted Conferva; behind the town of Sheerness.
 ——— *pennata*. Feathered Conferva; between Dover and Margate.
Conferva polymorpha. Palmated Conferva; behind the town of Sheerness.

Conferva sericea. Silk Conferva; in the isle of Shepey, plentifully.
 ——— *scoparia*. Broom Conferva; between Dover and Margate.
 ——— *vagabunda*. Spreading Conferva; in the isle of Shepey.
Convallaria maialis. Lily Convally, or May Lily; between Shooters Hill, and Woolwich, in a wood on the left of Chiselhurst Heath, before the entrance of the town, and in Blean woods.
 ——— *multiflora*. Solomon's Seal; at Crayford, in a wood two miles from Canterbury, by Fishpool Hill, on Roe Hill, and in Chesson wood, on Chesson Hill, between Newington and Sittingbourne.
Convolvulus soldanella. Sea Bindweed, or Scottish Scurvy Grass; on the sand downs near Sandwich.
Conyza squarrosa. Ploughman's Spikenard; at Dartford, Greenhithe, on Beacon Hill, and in Charlton wood.
Cotyledon umbilicus veneris. Navelwort, Kidneywort, or Wallpennywort; on Maidstone and Tenterden churches, and in a stone pit at Boughton Monchelsea.
Crambe Maritima. Sea Colewort; at St. Margaret's at Cliff.
Crepis biennis. Rough Succory Hawkweed; in the road between Sittingbourne and Rochester, and elsewhere.
 ——— *fatida*. Stinking Hawkweed; near Greenhithe, and in Northfleet chalk pits.
Crithmum maritimum. Samphire; on the cliffs between St. Margaret's and Dover.
Cucubolus viscosus. Dover Campion; on Dover cliffs.
Cynoglossum sylvaticum. Green-leaved Hound's Tongue; in several places.
Dactylis stricta. Smooth Cock's-foot Grass; near the mouth of Feversham creek.
Dianthus armeria. Deptford Pink; on Beacon Hill, in dry pastures in Ospringe, in Charlton wood, in the fields just above Dartford, on Gad's Hill, and plentifully in the pastures about Deptford.
 ——— *caryophyllus*. Clove Pink, July Flower, or Carnation; on Rochester, Deal, and Sandown castles, plentifully.
 ——— *deltoides*. Maiden Pink; on the banks of Beacon Hill.
Dipsacus pilosus. Small wild Tansel, or Shepherd's Rod; between Lewisham and New Cross, and in Beckenham church-yard.
Echinophora spinosa. Prickly Samphire, or Sea Parsnip; on the beach in the way from Feversham to Sea-salter.
Elatine alsinistrum. Waterwort; on the boggy ground on the common by the road from Eltham to Chiselhurst.
Epilobium angustifolium. Rose-bay Willow-herb; on Blackheath, and by the sand pits on Maize Hill, Greenwich.
Equisetum sylvaticum, β. A variety of wood horse-tail; in the wood near Chiselhurst.
Erigeron acre. Blue flowered Fleabane; on Blackheath, Gad's Hill, and in sand pits at Charlton.
Eryngium maritimum. Sea Holly, or Eryngo; at Sheerness, in the isle of Shepey, and on the shore between Gravenny and Seasalter.

Euphrobia

produce of the hop duty is paid from the plantations of East Kent. The grounds extending from Maidstone and Canterbury, and thence to Sandwich, are exceedingly productive, and under a good system of management. The soils, however, are

different, as well as the kind of hops cultivated.—The plantations have of late years been greatly increased, especially in the vicinity of Maidstone, Feversham, and Canterbury: the plantations called the City Grounds, extend through a circuit of two miles

Euphorbia exigua. Dwarf Spurge; in the corn-fields at Stone, near Dartford, and about Shooter's Hill.

—— *hyberna*. Knotty-rooted Spurge; between Feversham, and Sittingbourne.

—— *paralias*. Sea Spurge; at Sheerness, in the isle of Shepey.

—— *platyphyllos*. Broad-leaved Spurge; near Northfleet, and in corn-fields near Thorn creek.

—— *Portlandica*. Portland Spurge; in bogs at Charlton.

Eupatorium cannabinum, β . A variety of Hemp Agrimony, or Dutch Agrimony; on the banks of rivers and rivulets.

Fagus castanea. Chesnut; frequent in this county, in Charlton wood, in some woods near Sittingbourne, and plentifully in Baldwin woods between Dartford and Bexley.

—— *sylvatica*. Beech tree; frequent in this county.

Festuca myurus. Wall Fescue Grass; in Greenwich Park.

Frankenia laevis. Smooth Sea Heath; near Minster, in the isle of Shepey, and plentifully in the isle of Thanet.

Fucus capillaris. Capillary Fucus; near Sheerness, in the isle of Shepey.

—— *ceranoides*. Buck's Horn Fucus; on the shore between Sheerness and Minster, in the isle of Shepey.

—— *concatenatus*. Bearded Fucus; in the isle of Shepey.

—— *crispus*. Curled Fucus;

—— *digitatus*. Fingered Fucus;

—— *fastigiatus*. Forked Fucus;

—— *filum*. Thread Fucus;

—— *incurvus*. Black Fucus, or Sea Pine;

—— *lorcus*. Narrow-leaved Fucus, or Sea Thongs; at Sheerness;

—— *natans*. Flote Fucus, or Gulfweed; in the isle of Shepey,

—— *pinnatifidus*. Jagged Fucus; at Deal.

—— *plumosus*. Feathered Fucus; at Dover.

—— *saccharinus*, α and β . Sweet Fucus, Sea-belts, and a variety of it; on the shore at Sheerness.

—— *serratus*. Serrated Fucus, or Sea Wrack; in the isle of Shepey, and at Margate in the isle of Thanet.

—— *spiralis*, β . A variety of Twisted Fucus; on the shore frequent.

—— *verrucosus*. Warty Fucus; behind Sheerness.

—— *vesiculosus*, γ *divaricatus*. Shrubby Fucus; at Sheerness.

Fumaria claviculata. Climbing Fumitory; at Greenwich, in the road leading from Charlton to Woolwich, and in Charlton wood.

Galanthus nivalis. Snowdrop; in pastures at Davington.

Galeopsis tetrahit, λ . A variety of Nettle Hemp, or Hemp-leaved Dead Nettle; in a wood hedge at Hackington.

Galium anglicum. Small Ladies Bedstraw, or Goose Grass; between Dartford and Northfleet, and upon a wall in Farningham.

—— *uliginosum*. Marsh Goose Grass, on the lower bog at Chiselhurst.

Gentiana amarella. Autumnal Gentian, or Fellwort; in an old chalk pit in the way from Dartford Heath to Stanhill, and in Ospringe chalk pits.

—— *centaurium (flore albo)*. Lesser Centaury (with a

white flower); in dry and barren pastures; in the isle of Shepey.

Gentiana Pncumonanthe. Calathian Violet; near Tunbridge Wells, Longfield by Gravesend, Greenhithe, and Cobham, and in a chalky pit, not far from Dartford, by a paper mill.

Geranium columbinum. Long-stalked dove's-foot Cranesbill; in meadows near Stone, in Heath Lane, near Dartford, at Charlton, and in the lays about Swanley, near Dartford.

Gnaphalium sylvaticum. Upright Cudweed; at Charlton.

Hedynois biennis, β . A variety of tall Hedynois; about Northfleet, and elsewhere.

Hedysarum onobrychis. St. Foin, or Cockshead; at Chatham, about Gravesend and Greenhithe plentifully, and on the chalky hills about Feversham.

Helleborus fetidus. Great Bastard Black Hellebore, Bearsfoot, or Setterwort; between Northfleet and Gravesend, and by the road side up the chalk hill, about a mile N. W. of Charing.

—— *viridis*. Wild Black Hellebore; on the cliffs beyond Westfield, in Pluckley.

Hippocrepis comosa. Tufted Horse-shoe Vetch; on chalky hills in this county: between Gravesend and Northfleet, and on a chalky ground in Ospringe.

Hippophaë Rhamnoides. Sallow Thorn, or Sea Buckthorn; in the isle of Shepey, near Sandown castle, and about Sandwich, Deal, and Folkstone.

Hippuris vulgaris. Mare's Tail; in Feversham powder mill waters.

Hyacinthus non scriptus (flore albo). English Hyacinth, or Hare Bells (with a white flower); in Scadbury Park.

Hydnum imbricatum. Common Hydnum; at Lewisham, and near Maidstone.

Hypericum androsamum. Tutsan, or Park Leaves; in the Wild.

—— *elodes*. Marsh, St. Peter's wort; in the bogs by Caesar's camp, near Bromley.

—— *hirsutum*. Tutsan, or Hairy St. John's Wort; in Charlton wood, in the lanes in Boughton, and at Bexley.

—— *humifusum*. Trailing St. John's Wort; by the road from Blackheath to Charlton, and on the sands in Ore.

—— *montanum*. Imperforate St. John's Wort; in Charlton wood.

Hypnum abietinum. Fir Hypnum; about Northfleet plentifully.

—— *aduncum*. Hooked Hypnum: on the bogs at West Wickham.

—— *crispum*. Curled Hypnum; by the Thames shore, at Gravesend.

—— *crista castrensis*. Crested Hypnum; between Gravesend and Northfleet.

—— *cuspidatum*. Pointed Hypnum; on bogs at Charlton.

Hypnum denticulatum. Feathered Hypnum; on Shooter's Hill, and in moist shady places at Woolwich.

—— *filicinum*. Bog Hypnum; at Chiselhurst, and between Gravesend and Northfleet.

—— *myosuroides*. Mousetail Hypnum; near Eltham.

—— *sericeum y lutescens*. Yellow Hypnum; on chalky hills between Northfleet and Gravesend.

Hypnum

miles and a half round the latter city, and are estimated to include from 2500 to 3000 acres. The hops grown here, and in the grounds running hence to Sandwich, are very rich, and of great strength; and, if well managed, also of a good colour. The

most productive grounds are those which have a deep rich loamy surface, with a sub-soil of deep loamy brick earth; and this kind of land forms the principal part of the plantations of East Kent; though there are some good grounds where the surface

- Hypnum smithii*. Curled Hypnum; on trunks of trees, near Barham downs.
- *undulatum*. Waved Hypnum; on Shooter's Hill.
- *viticulosum*. Mountain Hypnum; on the chalky hills between Northfleet and Dover.
- Jasione montana*. Hairy Sheep's scabious; in a field near Bexley Lane.
- Inula crithmoides*. Golden Samphire; in the marshes in the isle of Sheppey.
- *Helenium*. Elecampane; on the moist ground, near the half-way house to Canterbury.
- Iris fetidissima*. Stinking Gladdon, or Gladwyn; in woods and hedges; in Charlton wood, and by Sandgate castle, near Folkstone.
- Isatis tinctoria*. Wood; in corn fields, and at the sides of fields; by Woolwich church.
- Juncus bufonius* β . A variety of Toadrush; in sandy meadows and pastures, especially where rain water stagnates.
- *pilosus*. Common Hairy Woodrush, or Grass; in woods at Dover.
- Jungermannia albicans*. White Jungermannia; in wet woods and meadows, near Eltham.
- *epiphylla*. Broad-leaved Jungermannia; in moist shady places at Woolwich.
- *furcata*. Globe Jungermannia; at Tunbridge.
- *multifida*. Dwarf Jungermannia; in a moist shady place, under Alders, at Chatham.
- *multiflora*. Many flowered Jungermannia; in a little wood on Shooter's Hill.
- *pinguis*. Jagged Jungermannia; in a bog on the east side of Charlton wood.
- *pusilla*. Shining Jungermannia; in moist places at Woolwich.
- *reptans*. Creeping Jungermannia; in moist shady places at Woolwich.
- Lactuca saligna*. The least wild Lettuce; in the marshes at Erith and Sheerness.
- Lathraea squamosa*. Toothwort; in the woods about Maidstone.
- Lathyrus sylvestris*. Narrow-leaved Pease-everlasting; between Rochester and Northfleet; between Canterbury and Sittingbourne, and on Gad's Hill.
- *latifolius*. Broad-leaved Pease everlasting; in a hollow lane, near Feversham, also in a field hedge at Copton.
- Lathyrus Nissolia*. Crimson Grass Vetch; on Beacon Hill, and near Chislehurst.
- Lepidium latifolium*. Dittander, or Pepperwort; near the Kingshead quay, in Feversham town, and in ditches in the isle of Thanet.
- Leucojum aestivum*. Summer Snowflake; by the side of the Thames, below Greenwich.
- Lichen uncialis*. Short Liverwort; on Woolwich Heath.
- Lithospermum officinale*. Gromwell, Graymill, or Gromill; in Charlton wood, in Heath Lane, near Dartford, and on the chalk cliffs between Northfleet and Gravesend.
- *purpureo caruleum*. Creeping Gromwell; in a chalky soil, not far from Greenhithe.
- Linum angustifolium*. Narrow-leaved wild Flax; near Minster in the isle of Sheppey, near Deal, on Beacon Hill, and elsewhere.
- Lycoperdon fornicatum*. Turret Puffball; about Wickham, near Bromley.
- *stellatum*. Star Puffball; in bogs at Charlton.

- Lycoperdon tuber*. Solid Puffball; on the Downs.
- Lysimachia nemorum*. Yellow Pimpernel of the woods; in Charlton wood, and in Judd's wood at Ospringe.
- *tenella*. Purple Moneywort; in bogs at Charlton and Chislehurst, and in moist meadows, near Feversham abbey.
- Lythrum hyssopifolia*. Grass Poly, or Small Hedge Hyssop; in ditches, near Feversham-abbey pond.
- Malva pusilla* (*M. parvi flora*, *Fl. Angl.*) Small-flowered Mallow, near Hythe.
- Marchantia hemispherica*. Marsh Marcantia; in a small water course, near Dulwich wells.
- Marrubium vulgare*. White Horehound; on Chislehurst common.
- Medicago polymorpha* *hybrida*. A variety of Heart Medick, Trefoil, or Clover; near Charlton.
- Melica nutans*. Melic Grass; in Charlton wood.
- Melissa calamintha*. Common Calamint; in Heath Lane, near Dartford, and by the sides of roads, and under hedges, about Feversham.
- *nepeta*. Field Calamint; about Charlton, Dartford, and many other places.
- Menyanthes trifoliata*. Marsh Trefoil; in several places.
- Mentha sylvestris*. Long-leaved Horsemint; at Lewisham, and by the river side, at Dartford.
- *rotundifolia*. Round-leaved Horsemint; near Halley.
- *villosa*. Hairy Mint; about Maidstone.
- Milium effusum*. Milet Grass; in Charlton wood.
- Mercurialis annua*. French Mercury; by Brookland, in Romney marsh, plentifully.
- Mnium fissum*. Forked Mnium; on Shooter's Hill.
- *pellucidum*. Transparent Mnium; on Woolwich Heath.
- *trichomanes*. Fern Mnium; at Eltham, and in moist shady places at Woolwich.
- Monotropa hypopithys*. Bird's Nest, smelling like Primrose roots; in a wood near Maidstone.
- Myosotis scorpioides* β . A variety of Mouse-ear Scorpion Grass; in Charlton wood.
- Myrica gale*. Goule, Sweet Willow, Dutch Myrtle; near Tunbridge Wells, and on Wellsborough Lees, near Ashford.
- Narcissus poeticus*. At Shorne, between Gravesend and Rochester.
- *pseudonarcissus*. Wild English Daffodil; at Dartford, Woolwich, in Charlton wood, and in woods near Erith.
- Nardus stricta*. Matt Grass; on Dartford Heath.
- Narthecium ossifragum*. Lancashire Asphodel, or Bastard Asphodel; in the bogs by Caesar's camp, near Bromley.
- Oenanthe crocata*. Hemlock Dropwort; half-a mile south-east of Dartford town near the mills, and in the watery lane, between Sittingbourne and Milton.
- Ononis inermis* β *repens*. Creeping Restharrow; at Charlton, at Gravesend, by the Thames shore, and on the sand downs at Deal.
- Ophioglossum vulgatum*. Adders Tongue; in the pastures between Ospringe and Ore, and in meadows at Luddenham.
- Ophrys anthrophora*. Green Man Orchis; near Northfleet and Greenhithe, in Bocton churchyard, also between Dartford and Greenstreet Green, on the chalky banks on both sides the road, on chalky banks

surface is very flinty. The produce is subject to great fluctuation; in some seasons, the hops amount to 14 or 1500 weight per acre; in others they do not weigh 200 per acre. In the plantations of Maidstone and its vicinity, very great crops of hops

banks about Feversham, and on Gravesend chalk cliffs.

Ophrys apifera. Bee Orchis; on Trunhill Downs, Dartford.

—— *aranifera*. Spider Ophrys; in Bocton church-yard.

—— *muscifera*. Fly Orchis; at Northfleet, and among the bushes in Ospringe parsonage meadows.

—— *paludosa*. The least Orchis; in divers places of Romney marsh.

—— *nidus avis*. Bird's-nest; in some thickets at Bocton Munchelsey, near Maidstone, and in Charlton wood, and about Roc Hill.

—— *ovata*. Common Twayblade; } in Charlton

Orchis bijolia. Butterfly Orchis; } wood.

—— *militaris* β *purpurea*. Purple Man Orchis; in woods and bushy places, near Northfleet.

—— *pyramidalis*. Purple late flowering Orchis; at Dartford.

Orobancha ramosa. Branched Broom Rape; near Rochester and Feversham, and in the isle of Shepey.

Osmunda lunaria. Moonwort; in Scadbury Park, on Chiselhurst common, and in an upland broomfield, on the south-east of Brookbridge, in Graveney.

—— *regalis*. Flowering Fern, or Osmund Royal; in the miry meadows, near North Cray.

Paris quadrifolia. Herb Paris; in Longwood, near Chiselhurst, in Hindbury wood, three miles from Maidstone, and in several other places.

Peucedanum officinale. Hog's Fennel, Sulphurwort, Harestrong; on the sea wall leading to Thorn, and near Feversham.

Peziza cyathoides. Smooth Peziza; in Charlton wood.

—— *punctata*. Spotted Peziza; on Blackheath.

Phalaris canariensis. Manured Canary Grass; at Sandwich.

Phallus esculentus. Esculent Morel; at Stone, and in a wood near Swanscomb.

Pimpinella magna. Great Burnet Saxifrage; between Maidstone and Farningham, and between Canterbury and Sittingbourn.

Phyteuma orbicularis. Horned Rampions, with a round head, or spike of flowers; on Beacon Hill.

Pinguicula vulgaris. Butterwort, or Yorkshire Sanicle; in Petsbog, Chiselhurst, and in Feversham mere.

Pisum maritimum. Sea Pease; at Guilford, among the stones on the west side of Dungeness, near Lyd, and on the sea coast among the flints and pebbles, near New Romney.

Plantago coronopus, β . A variety of Buckshorn Plantain, or Star of the Earth; in a field between Dartford and Greenhithe.

—— *major* γ . Besom Plantain; at Margate, in the isle of Thanet, and at Reculver.

—— *maritima*, β *loeflingii*. Sea Plantain; at Sheerness.

Poa compressa. Creeping Meadow Grass; on walls about Eltham.

—— *distans*. Loose-flowered Meadow Grass; about Northfleet.

Polypodium filix femina. Female Polypody; in Charlton wood, and on the bogs at Chiselhurst.

Polytrichum striatum, γ . A variety of tree Polytrichum, at Westerham.

Potamogeton gramineum. Grass-leaved Pondweed; near Deptford, and in the shallow waters about the powder mills at Feversham.

—— *marinum*. Sea Pondweed; in the dykes at Sheerness.

are grown, but they are inferior in quality to those of Canterbury and East Kent. The soil is what is locally termed stone-shatter; that is, where there is a greater or less mixture of small pieces of stone and sand; the sub-soil is called Kentish rag, and burns

Potamogeton pusillum. Small Grass-leaved Pondweed; in the marshes between Greenwich and Woolwich.

Potentilla argentea. Tormentil Cinquefoil; in Charlton wood, and on Blackheath, by the road to Charlton.

Poterium sanguisorba. Burnet; at Northfleet, and in Greenhithe chalk pits.

Primula farinosa. Bird's-eye; near Eltham.

Pteris aquilina, β . A variety of female Fern, or Brakes; on the walls about Feversham.

Pulmonaria officinalis. Bugloss Cowslip; between Chevening and Nokeholt, and between Ludham and Down.

—— *pusillum*. Small Grass-leaved Pondweed; in the marshes between Greenwich and Woolwich.

Ranunculus lingua. Great Spearwort; between Rotherhithe and Deptford, and on the old haven, near Sandwich.

—— *parviflorus*. Small-flowered Crowfoot; near Dartford plentifully.

Reseda lutea, β . A variety of Base Rocket; near Gravesend plentifully.

Rhamnus frangula. Blackberry bearing Alder; in the bogs at Chiselhurst, and elsewhere.

—— *catharticus*. Buckthorn; in the hedges near Shot-tenton Hill.

Riccia glauca. Marsh Riccia; on Woolwich Heath.

—— *minima*. Small Riccia; on Blackheath.

Ribes grossulariu. Gooseberry; in a lane between Bexley and Dartford, &c.

—— *nigrum*. Black Currants; in a wood between Chiselhurst and Bromley.

—— *rubrum*. Currants; in some thick hedges in Ospringe.

Rosa spinosissima. Burnet Rose; between Milton and Chalk.

Rubus idaeus. Raspberry Bush, Framboise, or Hindberry; in Stocking wood, near Lees Court.

—— *saxatilis*. Stone Bramble. In the isle of Thanet, and other places.

Rumex pulcher. Fiddle Dock; by the sides of footways about Feversham town.

—— *sanguineus*. Bloodwort; near Maidstone, and in Davington Brooks.

Ruppia maritima. Sea Grass; in the isle of Shepey plentifully.

Ruscus aculeatus. Knee Holly, or Butcher's Broom; on Woolwich Heath, and in Ospringe woods.

Sagina erecta. The least Stitchwort; on Blackheath.

Salicornia Europea herbacea. Marsh Samphire, Jointed Glasswort, or Saltwort; in the marshes between Feversham and Thorn.

—— *Europea* β *fruticosa*. A variety of the last; in the isle of Shepey.

Salix repens, γ . Sand Willow; by Sandown castle, near Deal.

Salsola kali. Prickly Glasswort; at Sheerness, in the isle of Shepey.

—— *nigra* γ . Parsley Elder; at Greenwich.

Samolus valerandi. Round-leaved Water Pimpernel; between Greenwich and Woolwich, and in the salt marshes two miles below Gravesend.

Sanicula Europea. Sanicle; in Charlton wood.

Saponaria officinalis. Soapwort; on Blackheath, near Morden college, found with a double flower in the road from Rochester to Sittingbourn.

Satyrion hircinum. Lizard Flower, or Goat's Stones; about Dartford.

Satyrion

burns into good lime. The hop plantations furnish employment to great numbers of the poorer classes, not only of this, but of other counties. Hops are generally regarded as having been introduced into

- Satyrion viride*. Frog Satyrion, or Orchis; in Ospringe chalk pits.
- Saxifraga granulata*. White Saxifrage, or Sengreen; upon Beacon Hill.
- Scabiosa columbaria*. The Lesser Field Scabious; on the chalky grounds about Northfleet and Greenhithe.
- *siccisa (floribus albis et subrufis)*. Devil's Bit (with white and blush coloured flowers); about Appledore.
- Scilla autumnalis*. The Lesser Autumnal Star Hyacinth; on Blackheath, in the highway to Eltham.
- Schoenus compressus*. Compressed Bastard Cyperus; about Chiselhurst.
- Scirpus maritimus*. Round-rooted Bastard Cyperus; in the ditch by Feversham abbey pond, and at Sheerness.
- *setaceus*. The Least Rush; on the bogs at Chiselhurst.
- Sedum acre, β sexangulare*. Insipid Stonecrop; in the isle of Shepey plentifully, and near Northfleet.
- *telephium*. Orpine, or Livelong; in Charlton wood.
- Serapias latifolia, α and β*. Broad-leaved Bastard Hellebore; and a variety of it; in the woods near Ospringe.
- *longifolia grandiflora*. White-flowered Bastard Hellebore; in Judd's wood, Ospringe.
- Silene amania, Fl. Angl.* Sea Campion; in the isle of Shepey.
- *conoides*. Greater Corn Catchfly, or Campion; near Sandown castle plentifully, and on the sandhills, near Deal.
- *quinquevulnera*. Variegated Catchfly; in sandy corn fields, near Wrotham.
- Sison segetum*. Corn Parsley, or Honewort; in a field near Northfleet plentifully.
- Sium latifolium*. Great Water Parsnip; at Northfleet, and between Rotherhithe and Deptford.
- Smyrniolum olusatrum*. Alexanders; near Deptford, at Cliff, and in a hedge at the entrance of Graveney marsh.
- Sonchus palustris*. Marsh Sow Thistle; on the banks of the Thames, not far from Greenwich.
- Sorbus aucuparia*. Quicken Tree, or Mountain Ash; in Charlton wood.
- Spirea filipendula*. Dropwort; on Beacon Hill.
- Splachnum ampullaceum*. Common Splachnum; on the bogs at West Wickham.
- Staphylea pinnata*. Bladder Nut Tree; about Ashford.
- Statice armeria*. Thrift, or Sea Gillyflower; in the marshes between Gravesend and Cliff, and in all the salt marshes about Feversham.
- *limonium*. Sea Lavender; at Sheerness, and on cliffs near Margate, in the isle of Thanet.
- *γ*. A variety of the last; at Ramsgate.
- Sisymbrium sylvestre*. Water Rocket; in Ham ponds, near Sandwich.
- Tanacetum vulgare*. Common Taney; near Rochester castle.
- Teucrium chamaepitys*. Ground Pine; about Rochester and Dartford, and upon Chatham down, near the beacon.
- Thymus acinos*. Wild Basil; at Chatham.
- *serpyllum*. Lemon Thyme; between Southfleet Longfield Down, and between Rochester and Sittingbourn, in the highway.
- Tragopogon porrifolium*. Purple Goat's Beard; in the marshes near Longreach below Woolwich, and in a marsh, near Sheerness.
- Tremella granulata*. Granulated Tremella; about Charlton.

this country about the time of Henry the Sixth; and in the year 1428, they were petitioned against as a "wicked weed." This, however, can only refer to the use of them; for they are found wild

- Trichomanes tunbrigense*. Tunbridge trichomanes; near Tunbridge.
- Trifolium filiforme*. Small Trefoil; on Blackheath.
- *glomeratum*. Round-headed Trefoil; near Greenhithe, on Blackheath, and on Crome's Hill, under Greenwich Park wall.
- *scabrum*. Oval-headed Trefoil; on the chalky hills between Northfleet and Gravesend, near Chatham, in the isle of Shepey plentifully, and between Greenhithe and Northfleet.
- *maritimum*. Teasel-headed Trefoil; in Dartford salt marsh.
- *subterraneum*. Dwarf Trefoil; at Deptford by the road to Eltham, and on Blackheath.
- Triticum caninum*. Bearded Wheat Grass; between Greenwich and Woolwich.
- *juncum*. Sea Wheat Grass; at Sheerness.
- Turritis glabra*. Great Tower Mustard; near Lewisham, and in a lane between Charlton and Woolwich.
- *hirsuta*. Hairy Tower Mustard; on old walls at Colkins, in Boughton.
- Ulvacompressa*. Flat Laver; on the wall of the Thames at Woolwich.
- *diaphana*. Sea Ragged Staff; near Sheerness, in the isle of Shepey plentifully, and near Margate, in the isle of Thanet.
- *fusca latissima*. Curled Laver; near Sheerness, in the isle of Shepey plentifully, and at Dover.
- *incrassata*. Thick Laver; between Greenwich and Woolwich.
- *luctuca*. Green Laver, or Oyster Green; at Sheerness.
- *linza*. Ribbon Laver; in ditches near Sheerness.
- *pisiformis*. Pea Laver; in ditches between Greenwich and Woolwich.
- *umbilicalis*. Navel Laver; near Sheerness sparingly.
- Urtica pilulifera*. Roman Nettle; at Lidde near Romney, and in the streets of Romney.
- Valeriana dioica*. Small Wild Marsh Valerian; in Charlton wood.
- Verbascum blattaria*. Yellow Moth Mullein; by the road side, near the fourteenth mile stone, Dartford, and near Charlton.
- *lychnitis*. Hoary Mullein, or White-flowered Mullein; in chalk and sandy meadows and pastures in this county, frequent.
- *nigrum*. Sage-leaved Black Mullein; in Charlton wood, on the sides of chalk fields in Ospringe, by the road side, in many places between Shooter's Hill and Dartford, and on the side of St. Martin's Hill, near Canterbury.
- *thapsoides*. Bastard Mullein; in sandy and chalky meadows and pastures.
- Veronica montana*. Stalked Speedwell; at the lower part of Charlton wood, plentifully.
- Viburnum lantana*. The pliant Mealy Tree, or Wayfaring Tree; in the hanging woods, Charlton, and in several places between Northfleet and Dartford.
- Vinca minor*. Periwinkle; in hedges in Preston and Ospringe, in Hays wood, near South Street, Bocking.
- Viola hirta*. Hairy Violet; at Northfleet, by the church at North Cray, and by the way from Foot's Cray to Chiselhurst.
- *tricolor*. Pansies, Heartease, or Three Faces under a Hood; on Blackheath.
- Zostera marina*. Grass Wrack; at Sheerness.

in almost every part of Britain, and having even a British name, *llewig y blaidd*, or *bane of the wolf*. They came into more general use in the reigns of Henry the Eighth and Elizabeth.

ORCHARDS, &c.]—The neighbourhood of Maidstone is noted for apples, cherries, and filberts; many small fields, of from twelve to fifteen acres each, being appropriated to their growth. Hops, apples, cherries, and filberts, are frequently all planted together; and sometimes the cherries and apples are planted in alternate rows, with two rows of filberts between each of them. The apples for cyder, are generally gathered about the 20th of October. The apples for domestic uses, are sold to fruiterers, who send them to London by the hoys, or to the north of England by the coal vessels.—The filberts and cherries, which are of the white and black-heart, Hertfordshire-black, red, and Flemish, or Kentish kinds, are usually sold to higlers, who retail them on the coast; or, they are sent by water to London, and consigned to the fruit factors. The cherry gardens continue in full bearing about 30 years; during which they are more profitable than orchards.*

SOIL, AGRICULTURE, &c.]—Mr. Boys, in his Agricultural Survey of this County, divides it into eight districts, according to the nature of the soil and produce. These districts respectively comprehend the isle of Thanet, the upland farms of East Kent, the rich flat lands in the vicinity of Faversham, Sandwich, and Deal, the hop grounds, &c. of Canterbury and Maidstone, the isle of Shepey, the upland farms of West Kent, the weald of Kent, and Romney marsh. The isle of Thanet forms the north-east angle of Kent, from the main land of which it is separated by the river Stoure, and the water called the Nethergong: its length is about nine miles, and its breadth about five. This district is in a very high state of cultivation; and of very remarkable fertility; its soil, though originally a light mould on a chalky bottom, having been greatly improved by the inexhaustible store of manure supplied by the sea. The whole island contains about 3500 acres of excellent marsh land, and 23,000 acres of arable: those of the latter, which border on the marshes, are the most productive; though even the uplands are rendered extremely fertile through the excellent modes by which they are cultivated. The general routine of crops on the lighter soils, is fallow, barley, clover, and wheat; but a crop of peas is occasionally introduced in place of the fallow; and sometimes beans in room of the clover. Where the round-till course is pursued in the rich sandy loam lands, the general routine is beans, wheat, and barley. Canary seeds are grown here in great quantities; as well as radish, spinach, mustard, cabbage, &c. for the Lon-

don markets. The marsh lands are principally applied to the fattening of sheep and cattle: the sheep are chiefly of the Romney marsh breed; the cattle mostly Welsh. Many pigs are reared in this district: the hogs are of various sorts, both small and large; the former are mostly a cross from the Chinese breed. Very little wood is now growing in this island; though it seems to have been anciently abundant. The farm-houses are in general good and handsome buildings; and the roads are in excellent order. The sea weed is sometimes burnt into kelp, and exported to Holland.

The upland farms of East Kent include an open and dry tract of land, between Canterbury and Dover and Deal; and another tract, inclosed with woods and coppice, extending from Dover by Eleham and Ashford, to Rochester, in length, and from the isle of Shepey to Lenham, &c. in breadth. The former tract comprises a great variety of soils, hardly that of any two farms being similar. The prevailing soils are chalk, loam, cledge, (stiff tenacious earth, intermixed with flints, and sometimes with small particles of chalk) hazel-mould, and stiff clay; with intermixtures of flint, gravel, and sand. The stiff clays are principally met with on the tops of the highest hills about Dover; the flinty tracts occur in the vallies in the same neighbourhood, and about Stockbury, near Maidstone. The routine, and nature of the crops on these various soils, are, of course, very different. The sheep, cattle, horses, and hogs, are of similar breeds to those in the isle of Thanet. The hop grounds are but few; the principal are almost confined to the parishes of Woodnesborough, Wingham, and Ash.

The woodlands, in the eastern part of the county, have been already noticed.—The rich flat lands in the vicinity of Faversham, Sandwich, and Deal, lie nearly on a level, are extremely fertile, and excellently managed under a general system. The soils are a rich sandy loam, intermixed with a larger or smaller quantity of sand, and a stiff wet clay. The former produces abundance of wheat, beans, barley, oats, and peas; the latter, when well drained and weeded, is also very productive in wheat, beans, and canary seed. The dry loamy soils are chiefly cultivated under the round-till system of East Kent, viz. barley, beans, and wheat: much of the stiff wet clay is under a two-fold course of beans and wheat alternately; but canary is often sown in place of wheat. In the vicinity of Sandwich are many orchards, which, in some years, produce large quantities of good apples. The live stock here is similar to that of the preceding districts.

The isle of Shepey, separated from the rest of Kent by an arm of the sea, called the Swale, which is navigable for vessels of 200 tons burthen, is in length about eleven miles, and in breadth eight.—

* Speaking of the cherry, Pennant says—"the Romans introduced this delicious fruit into our island, about 130 years after Lucullus had brought it out of Pontus to Rome: but the Kent-

ish cherry, or the old English variety, with a short stalk, was brought out of Flanders by our honest patriot, Richard Harrys, fruiterer to Henry the Eighth, and planted at Teynham."

About

About four-fifths of this island are marsh and pasture lands; the remainder arable. The prevailing soil is a deep, strong, stiff clay. The marshes have also a thick clay beneath, but are covered with a rich black vegetable mould; great numbers of sheep having been regularly fed on them for many years. On the arable lands, which are in high cultivation, beans and wheat are grown alternately; a fallow being occasionally substituted for the bean crop. The wheat is excellent. Much clover is also grown here; and on the few gravelly tracts in the higher parts, oats and barley are sown: the clover is generally mown twice; the first time for hay, and the last for seed. The upland pastures are applied to the feeding of lambs and young lean sheep: the ewes are generally put to the rams about the middle of November, and the lambs are weaned in August. On the best of the marsh lands, the more forward sheep and cattle are fed: the sheep are mostly of the Romney Marsh breed; the cattle are almost wholly of the Welsh sort. The horses are of a kind that has been bred in the island from time immemorial, and are somewhat smaller than those of the other parts of Kent. The arable lands have been greatly improved by being manured with cockle shells, great quantities of which are continually thrown on the shores: they are spread on the lands at about thirty loads per acre.

The Upland farms of West Kent comprise a great variety of soils, and are cultivated under various systems. This district is more inclosed than the eastern part, and produces greater quantities of timber and underwood, particularly on the upper or westernmost side. The best cultivated tract in this division lies between Rainham and Dartford; and is about five or six miles in breadth. Parallel with this, and of nearly the same breadth, is the range of chalk hills which extend from the sea near Folkstone to Surrey near Westerham. From being the most elevated land in the county, it has obtained the local name of the Hog's Back. The soil on the flat top of this hill is a cold, stiff, flinty clay; generally requiring six horses to plough it. Between this hill, and the borders of the Weald, and confines of Surrey, the country is pleasantly diversified by hill and dale. This part produces great quantities of hops and fruit, with some corn and grass, and much timber and coppice wood. In the gravelly and sandy soils about Dartford and Blackheath, early green peas, turnips, rye, winter tares, clover, oats, &c. are produced. The rotation of crops on these different soils is so variable, that no general course can be said to exist. The dairies are mostly small, many of them not keeping more than eight or ten cows. The sheep are mostly of the South Down

kind, and those from Wiltshire and Dorsetshire. They are frequently fattened on turnips, oil cake, and hay. The waste and common lands of this district (including Blackheath, Bexleyheath, Coxheath, and the heaths of Charing, Dartford, and Malling) form an extent of many thousand acres. The cross roads of West Kent are frequently impassable for carriages; but the turnpike roads are mostly in good condition.

The Weald of Kent is a considerable and remarkable tract, stretching along the south side of the county, from Romney Marsh to Surrey: on the north it is bounded by the range of hills which enters the county near Well Street, and extends in nearly a due west direction, to Sutton and Egerton, and thence stretches south-eastward to Hythe; on the south it extends to the confines of Sussex, and includes the Isle of Oxney. It is generally supposed that the Weald extended anciently much further; and that it formerly began at Winchelsea, in Sussex, and was 120 miles in length, and thirty in breadth.

This district was in ancient times an immense wood, or forest; wholly destitute of inhabitants, and stored with hogs and deer only. By degrees, however, it became peopled, and is now every where interspersed with towns and villages; though it still contains some extensive and flourishing woodlands. Its present name is Saxon, and signifies a woody country; but the Britons called it *Coit Andred*; the great chace, or forest. The whole was ancient demesne of the Saxon Kings; and there are still certain privileges annexed to the possession of the lands, which induce the proprietors to contend for their being within its limits.* The Weald, when viewed from the adjoining hills, exhibits a most delightful landscape, interspersed with small eminences, highly cultivated, and animated by farm houses, seats, and villages, promiscuously scattered among towering oaks, and other trees. The soil is principally clay, with a sub-stratum of marl: in some places strong and heavy, but in others so pliant, that the ploughing is performed by oxen, unshod. The other soils are sand, hazel-mould, and gravel; but those do not exist in any quantity. The parish of Bethersden is celebrated for a variegated lime-stone, called Bethersden marble: in the parts adjacent to Sussex, much iron-stone is obtained. Wheat, oats, barley, rye-grass, clover, turnips, and beans, are among the chief productions of this district: the pastures are also very rich and fertile, and great numbers of cattle are annually fattened in them. The highways in this district are in general very indifferent, and frequently impassable for carriages, even in tolerable weather.

* "It is said," observes Hasted, "that within the Weald, the proof of woodlands having ever paid tithe, lies on the parson, to entitle him to take tithe of it, contrary to the usual custom in other places, where the proof of the exemption lies on the owner; nor are the lands in it subject to the statute of

woods; nor has the Lord waste within the Weald; the timber growing thereon belongs to the tenant. This latter custom of excluding the Lord from the waste, is called *land-peerage*."

Romney Marsh is an extensive level tract, on the southern coast, comprehending about 23,925 acres. When described, however, as it frequently is, in connection with Walland Marsh, which adjoins it on the south-west, and Denge Marsh, which connects with the latter on the south-east, it includes about 43,326 acres: of these 16,489 are contained in Walland Marsh, and 2912 in Denge Marsh. The whole level, is yet more extensive; for Guildford Marsh (mostly in Sussex) which adjoins Walland Marsh on the west, comprises 3265 acres. The beautiful appearance of these levels in the summer season, when the entire surface is clothed with luxuriant verdure, and covered with numerous flocks of sheep, and droves of cattle, cannot fail to excite considerable interest in every observer. The marsh is defended against the violence of the sea by an immense wall of earth, of vast strength, called Dimchurch Wall, extending in length somewhat more than three miles. This wall is the sole barrier that prevents the sea from overflowing the whole extent of the level; and as it is for the general safety, so "is it supported," says Hasted, "as well as the three grand sluices through it, which are for the general drainage of the marshes, by scots levied over the whole of it: but the interior drainage, which is portioned out into a number of divisions, called waterings, is provided with sewers, and maintained at the expense of the respective land holders, by a scot raised separately on each," in proportion to the extent of their own watering. In that proportion of the marshes within this county, are comprehended the two corporate towns of New Romney and Lydd, and sixteen other parishes. The inclosures are principally formed by ditches, and a rail fence. The roads, which are wide, are only the marshes fenced off; the soil of which being remarkably deep, makes travelling on them very unpleasant after the least rain. Excepting the villages, which consist of but a very few houses, standing close round the churches, there are hardly any others interspersed in it. The inhabitants are chiefly such as are hired to look after the grounds and cattle; the owners and occupiers of which live in general in the neighbouring towns, or upland country. The soil of these spacious levels has been almost wholly deposited by the sea, and principally consists of a fine, soft, rich loam, and clay, with a greater or less proportion of sea sand intermixed. The subsoil consists of alternate layers of sand and clay, with sea-beach occasionally intervening. In many places throughout the marsh, at the depth of three or four feet, have been frequently dug up oak leaves, acorns, &c. together with large trees lying along in different directions; some across each other; some appearing with the roots to them, as if overturned by a storm, or other convulsion of nature; and others as if cut down with an axe, or sharp instrument; the colour being as black, and the wood as hard, as ebony. These marshes are almost entirely

VOL. III.—NO. 96.

appropriated to the grazing and fattening of sheep and cattle, which are bred and fed here in immense numbers. "Every grazier, (observes Boys) whose business is complete, has two sorts of land, namely, breeding land, and fattening land. The breeding land is stocked with ewes in the autumn for the winter; and every field has such a number put into it, as the occupier supposes it will sustain; which is from two and a half to three and a half, and, in some cases, to four per acre, in proportion to the strength of the field. The rams are usually put to the ewes, allowing one to forty or fifty, and sometimes sixty, about the middle of November; and they remain with them about five weeks. The ewes live entirely on the grass, without any hay, during the winter; though in deep snows they lose flesh, and sometimes become very poor by their yearning time. This marsh produces many twins; but a great number are lost; so that most graziers consider their crop not a bad one, if they wean as many lambs as they put ewes to ram. The lambs are weaned the first or second week in August, and very soon after are put out to keep to the upland farmers of the county, where they remain till the 5th of April, at from two to three shillings per score per week. When they return to the marsh, they are put on the poorest land, or on such fields as want improvement by hard stocking, which is here called tugging a field, and is held to be of great service." They are afterwards distributed over the fields in proportion to the richness of the feed, and to the number which it is judged each field will maintain from the beginning of April till August; which varies, on the average, from five to twelve per acre. In autumn the wether tugs "are removed to the fattening, and the ewe tugs to the breeding, grounds, among the two and three yearling ewes. The wethers remain till the July or August following, when, as they become fat, they are taken out, and sold either to the dealers at the Marsh markets, or to those of Smithfield. The two-yearling wethers, when fat at this season, weigh from twenty to twenty-eight pounds per quarter; and some of the largest, and best fed, a few pounds more. The old ewes, here called barren, are put to fatten as soon as their milk is dried after their third lamb, which is at the age of four years, on some of the best land, on which they are placed at from three to five per acre, for the winter. These, in favourable winters, are sometimes made fat, and are sold in the spring, time enough for the same field to take in a fresh set of wethers to fatten by the autumn; but this can only be done by light stocking. The breed of sheep thus encouraged, is known by the appellation of the Romney Marsh kind: the sheep, themselves, are much larger than those of the South Down, or west country breeds, yet by no means so large as those of Lincolnshire, and the lower parts of Norfolk. The wool is very fine and long: the produce from each sheep, on an average,

2 E

18

is estimated at five pounds; and the whole quantity annually produced at about 4000 packs. The arable lands, though of inconsiderable extent, are extremely productive in wheat, beans, and peas. This tract has generally been considered as unhealthy; but latterly it has been greatly improved by the attention that has been given to keep the ditches free from stagnant and putrid water. Welland Marsh, is divided from Romney Marsh by the embankment named the Rhee Wall, and extends about four miles in breadth and five in length. The general level is here somewhat lower than in Romney Marsh; a circumstance which, jointly with some defects in the drainage, occasions many acres to be covered with water during great part of the year. The soil, however, is extremely rich and fertile, and large cattle are fattened here during the summer. The sheep and their management, are of the same kind as those of the adjoining marsh.

ETYMOLOGY.—The opinions of antiquaries, &c. respecting the etymology of the word Kent, have been various. "Time," says Camden, "has not yet stripped this county of its ancient name; but as Cæsar, Strabo, Diodorus Siculus, Ptolemy, and others, call it Cantium, so the Saxons, as Nennius tells us, named it Cant-guar-lantd, or, in other words, the country of the people inhabiting Cantium." This name Camden conjectures to have been derived from the old Gaulish language, and to be descriptive of the angular form of Kent on the eastern side, or that towards France. Caint, however, is a British word, and is still the name of this county in Welsh; and the name of Caer Gaint, occurs in Nennius for Canterbury, in his list of British cities. The term Caint is descriptive of a country abounding with clear, fair, or open downs, which is the general characteristic of Kent. The British Tryads record, that, after the island was first settled by the Cymry, three other colonies came here by sufferance; of these, two were from Gaul; the one from Belgium, the other from the country about the mouths of the Loire river. The Belgæ most probably peopled Kent, and afterwards lost their proper name in the word Cantii, from the name of the county. In the Domesday Book, it is written, Chenth.

GENERAL HISTORY.—The inhabitants of this district, at the time of the first descent of the Romans, were in a more advanced state of civilization than those of the more inland parts, through their vicinity to the Continent, and continued intercourse with it. If Cæsar's pretext for engaging in the conquest of Britain be true, 'that its inhabitants furnished the enemies of the Commonwealth with continual supplies during his wars with the Gauls,' it was probably the men of Kent that had most offended, and it is certain that they were the first sufferers; for Cæsar having determined on the invasion, embarked his forces at Boulogne, in the 69th year after the foundation of Rome, and fifty-five years before the birth of Christ; and about one o'clock in the morn-

ing of the twenty-sixth of August, according to Dr. Halley's computation, made sail for the coast of Britain. The Britons being aware of his designs, made preparations for the defence of their country; and on Cæsar's arrival off Dover, about ten the same morning, he found the cliffs covered with armed men, so advantageously posted that he was convinced he could not effect a landing at that point without great loss. He therefore proceeded about eight miles further, bringing up his ships on a plain open shore near Richborough or Rutupia. The Britons, who had followed him with their army, with great courage opposed his descent, and for some time had the advantage. But Cæsar ordering some of the larger vessels to be rowed in by the transports, and stationed so as to face the Britons, the showers of darts and missile weapons discharged from the slings and engines on board the ships obliged the Britons to give way. At this moment the standard bearer of the tenth legion, solemnly addressing himself to Heaven, for the success of his legion, and crying aloud "Leap down, fellow soldiers! if ye would not abandon your eagle to the enemy; for myself I am determined to do my duty to my country and general;" immediately threw himself out of the ship, and advancing with the eagle against the enemy, was followed by the rest. As soon as the Romans got on dry ground they charged the Britons, and routed them, but they could not pursue them, as the cavalry were not yet arrived. The Britons, after this defeat, immediately sent deputies to sue for peace, which Cæsar readily granted, upon receiving hostages. This peace was ratified four days after his landing in Britain. About the same time the ships which had the cavalry on board, being just in sight, were driven to the westward by stress of weather, and with much difficulty made the coast of Gaul. The same night, the moon being full, the tide broke into the large vessels, which were laid dry, and the wind so shattered the transports which were at anchor, that they were quite unfit for service. The British chiefs perceiving the situation to which the Romans were apparently reduced, by these misfortunes, revolted, and determined to prevent their being supplied with provisions. Cæsar, suspecting this, had ordered corn to be brought into the camp every day, and repaired his ships with the materials of those destroyed by the weather. In the meanwhile the Britons, surprised and surrounded with their cavalry and chariots the seventh legion, when out a foraging. But upon Cæsar coming opportunely to their relief, the Romans recovered from their panic, and the Britons made a stand, having flattered themselves with hopes of recovering their independence, from the small number of the enemy, and their want of provisions. They advanced in considerable force towards the Roman camp; but Cæsar received them before it, routed them with great slaughter, and burnt their villages on every side. The same day they sent deputies once more to Cæsar, begging for

for peace, which he granted, taking however a double number of hostages, whom he ordered to be conveyed into Gaul soon after. As it was now within a day of the equinox, he set sail from Britain with his fleet, and returned to the Continent.

For these exploits, upon Cæsar's letters, the senate decreed a thanksgiving for 20 days, though he gained nothing by this expedition, for himself or Rome, but glory. Next year, having fitted out a great fleet, consisting of above 800 ships, including the vessels equipped for that season by persons for their private advantage, Cæsar set sail from Portus Ilius with five legions and 2000 horse, and landed his army upon the Kentish coast, in the same place as in the preceding summer. No enemy appeared, for though a large body of Britons had assembled there, the number of ships struck them with such a panic that they retreated to the higher grounds. Here Cæsar encamped his army, in a proper spot, where he left ten cohorts and 300 horse to guard the ships. Advancing about twelve miles, he discovered the Britons, who, retreating to the river, began an engagement here, but being repulsed by the Roman cavalry, retired into the woods, where they had chosen a spot fortified both by nature and art. The Romans, however, forming their usual kind of covering by closing their shields, and throwing up a bank against the fortifications, made themselves masters of them, and drove the Britons out of the wood. The next day Cæsar sent out his troops in three divisions to pursue the Britons, but soon recalled them upon advice that the ships had suffered by a storm the preceding night, which had driven them on shore with great damage. After taking the necessary precautions for the future preservation of his ships, he marched back to the place from whence he came. A considerable body of Britons were now assembled here under Cassivelaun, or Cassibelin, who was invested with the chief command and conduct of the war. Their horse and chariots skirmished with the Romans on their march, and many were slain on both sides. After some time the Britons, perceiving the Romans busy in fortifying their camp, made a vigorous attack on the soldiers stationed before the works; but Cæsar sending two cohorts to their relief, with the best troops of two legions, they broke through them, and made a safe retreat. A few Britons appeared next day on the hills, and at noon they fell upon the three legions, and all the cavalry sent out to forage, but were repulsed with great slaughter. After this they had no general engagement with the Romans. Cassivelaun, renouncing all hopes of carrying on the war to advantage, kept with him only 4000 chariots, to watch the motions of the Romans, and as often as their cavalry straggled over the country incautiously to forage, sent his chariots against them. The Trinobantes, Cenimagni, Legontiaci, Ancolites, Bibroci, and Cassii, having submitted to Cæsar, they informed him that Cassivelaun's town, supposed to have been Verulam, was not far off, fortified by woods and

marshes. Hereupon he attacked it on two sides, and the Britons escaped out at another; yet many of them were killed and taken in the flight. In the mean time, by order of Cassivelaun, four petty princes of Kent, Cingetorix, Carnilius, Taximagulus, and Segonax, attacked the works, which the Romans had raised to secure their ships, but were repulsed in a sally, and the first of these princes made prisoner. Cassivelaun having suffered so many losses, and being particularly alarmed at the defection of his allies, sent deputies to Cæsar to treat about submission. Cæsar having determined to winter upon the Continent, demanded hostages, and appointed an annual tribute to be paid by Britain, laying an injunction on Cassivelaun not to molest Mandubratius or the Trinobantes; he then led off his army, as well as a great number of prisoners, at two embarkations.

Such is Cæsar's account of his expedition against our island. About ninety years afterwards, in the year 43, the Romans under Aulus Plautius, then prætor in Gaul, landed without opposition in this country. He was at first successful, but being in the end obliged to retreat, he fortified himself in a strong camp on the Kentish side of the Thames, where he waited the arrival of the Emperor Claudius, who had assembled a considerable army for the reduction of Britain. Claudius having landed, immediately marched to the camp of Plautius, and crossing the Thames attacked the Britons, and defeated them with great slaughter. After this the Roman power over the southern parts of Britain was completely established, and this county in particular becoming firmly attached to the Roman government, was included by Constantine in the division called *Britannia Prima*.

The sea coast which, probably on account of the depredations of the Saxons, was called *Littus Saxonicum*, or the Saxon shore, had a peculiar governor called the Count of the Saxon Shore, and it was no doubt in imitation of this government that William the Conqueror appointed a governor of this coast, called the warden of the Cinque Ports. During the Saxon Heptarchy, of which Kent was the first kingdom, it was governed by seventeen kings successively; the first was Hengist, the last Baldred, who being conquered by Egbert, Kent became part of the West Saxon kingdom, and so continued till the arrival of the Normans. The inhabitants of this county are said to have been the first in England that were converts to Christianity, and by their courage and resolution they retained some privileges which the inhabitants of every other county lost by a capitulation with William the Conqueror; particularly a tenure called *Gavelkind*, of which we shall speak hereafter.

ANTIQUITIES.]—Many traces of the Romans, Saxons, and Danes, are visible in this county.—The Watling Street, which entered Kent from London, and extended to Dover, is supposed to have crossed Blackheath towards Shooter's Hill, nearly in

in the direction of the present road. On Bexley Heath it becomes plainly visible, directing its course south south-east to Crayford, where, or near which, several writers have placed the Noviomagus of the Romans. It does not appear, however, that any antiquities, coins, or other remains, have been discovered, to support this opinion. Camden places this station at Woodcote, in Surrey; others have fixed it near Keston, in this county, where is a very large Roman camp. That it was in this county is tolerably evident from the distances of the Itinerary, yet those distances will not admit of this being the place. The Watling Street "shews itself very conspicuously on the south side of the high road between Dartford and the Brent, and when it comes to the latter, it shapes its course more to the south south-east, leaving the high road at a greater distance on the left, and entering among the inclosures and woods, in its way to a hamlet, called Stonewood." This lies to the right of Swanseombe, where some have placed the Vagniacæ of Antoninus, which Camden had fixed at Maidstone, and Horsley removed to Northfleet. Thorpe, however, assigns it to Southfleet, where numerous Roman antiquities have been dug up at different times; and from which place the Roman road proceeded by Shinglewell, and Cobham Park, to Rochester, the Durobrivis, or Durobrivæ, of the Romans. Here the Watling Street crossed the Medway, and continuing up Chatham hill, proceeded in nearly the same tract as the present high road to Newington, where some writers have placed the Durolevum of the Itinerary. Beyond Key Street, probably from Caii Stratum, the Watling Street again becomes visible, and proceeds, in almost a direct line, by Sittingborne, Bapchild, Beacon Hill, Stone, Judde Hill, (where are remains of a strong Roman camp,) and Broughton Street, across Harbledown, to Canterbury, the Durovernum of the Itinerary. Hence it proceeded in a south-east direction, but in a straight line, across Barham Downs to Dover, the Dubris of the Romans; and at that station it terminated. Several other Roman ways have intersected this county in different parts; of these, two appear to have led from Canterbury towards the stations called Regulbium, or Reculver, and Rutupium, or Richborough, which stations commanded the opposite entrances of the Roman Haven, called Portus Rutupensis. A third Roman road, which still bears the name of the Stone Way, ran from Canterbury, nearly due south, to Linne, the Roman Portus Lemanis. This road was intersected below the village of Leminge, or Liminge, by another Roman way, that terminated at what is now called Saltwood Castle, where the Romans had a fort, built, according to Dr. Gale, to defend the Port of Hythe, after the Portus Lemanis had been deserted by the sea. This latter road appears to have been continued across the southern part of the parish of Wye, towards Charing, Lenham, and Aylesford; and it seems probable, that it proceeded onwards, by Malling, towards

London. Some other ancient Ways have been traced in different parts; and with every probability may be referred to the Romans, who had various encampments in this county, besides those that have been mentioned. According to Lambard, Camden, and Selden, they had also a station near Newenden, supposed to have been the Anderida of the Notitia, and the Caer Andred of the Britons.

CASTLES.]—Numerous castles have been erected in this county; and many of them yet remain either more or less perfect. The immense fortress at Dover may be regarded as the principal; this is garrisoned with a strong force, as are several others on the sea coast; but most of the castles in the interior, are dismantled, and mouldering in decay.

RELIGIOUS HOUSES.]—In ancient times, there were many religious houses in this county, and their net annual income, at the Dissolution, amounted to 9000*l*. Among them were two abbeys, three priories, and five nunneries, of the Benedictine order; of the Cluniac, one priory; of the Cistercian, one abbey; of Secular Canons, five colleges; of Regular Canons, four abbeys, and five priories, one of which was Premonstratensian; of Friars, there was one priory, and one nunnery, of Dominicans; two priories of Franciscans, one priory of Trinitarians, three priories of Carmelites, and four Alien priories; there were also, two Commanderies of Knights Hospitallers of St. John of Jerusalem; and fifteen hospitals; besides various hermitages, chantries, free chapels, &c.

CIVIL AND ECCLESIASTICAL JURISDICTION.]—The county of Kent is in the province of Canterbury; and, about three fourths of the county are in that diocese—the remaining fourth in the diocese of Rochester. This county is divided into five lathes—a division peculiar to Kent and Sussex, consisting of two or more bailiwicks—subdivided into fourteen bailiwicks, and those again into 68 hundreds. Kent has also been long divided into the two districts of East and West: the eastern division contains the lathes of Sutton-at-Hone, and Aylesford, and the lower part of the lathe of Scray; the western division, the lathes of St. Augustine and Shipway, and the upper part of the lathe of Scray. In each of these great districts, a Court of Sessions is holden four times in the year; twice originally, and twice by adjournment. The number of Petty Sessions is 14. The justices, of which there are 133, though appointed for the whole county, generally confine their attention to their resident districts.—Kent contains 403 parishes, and three parts of parishes.

Dover, New Romney, and Sandwich, are of the number of the original Cinque Ports (Quinque Portus—Five Havens) that are over against France, and were thus called, by way of eminence, on account of their superior importance. They have a peculiar form of government, being governed by a keeper, who has the title of lord warden of the Cinque Ports. King John granted them a peculiar jurisdiction, and several other privileges, which have been

been confirmed by most of his successors. Their warden, who was first appointed by William the Conqueror, has the authority of an admiral, among them, and issues out edicts in his own name.

The two other original ports, are said to have been Winchelsea and Rye, market towns in Sussex; and to these five original ports there were afterwards added, Hastings and Seaford, two other market towns in that county, and Hithe in this. The privileges anciently annexed to the Cinque Ports, and their dependants were, first, exemption from all taxes and toll. Secondly, cognizance of all courts, and a power to oblige all that lived in their jurisdiction to plead in their courts. Thirdly, a power to take toll in their markets, and to punish offenders in their own bounds. Fourthly, a power to punish murderers and fugitives from justice. Fifthly, to have a pillory and tumbrel or ducking stool. Sixthly, a power to punish foreigners as well as natives for theft. Seventhly, a power to raise mounds or banks in any man's lands against breaches of the sea. Eighthly, to appropriate to their own use all lost goods and wandering cattle, if not claimed within a year and a day. Ninthly, to have the commons, and be at liberty to cut down the trees growing upon them. Tenthly, to convert to their own uses such goods as they found floating on the sea, goods thrown out of ships in a storm, and goods driven on shore where no wreck or ship was to be seen. Eleventhly, to be a guild, or a fraternity, and to be allowed the functions of court leet, and court-baron. Twelfthly, a power to assemble at Shepey, and keep a port-mote or Parliament, for the Cinque Ports, to punish all infringers of their privileges, make bye laws, and hear all appeals from the inferior courts. Thirteenthly, their barons, to have the privileges of supporting the canopy, over the king's head, at his coronation. The service required of the Cinque Ports, in recompence for the privileges they enjoyed, was to fit out fifty-seven ships, each manned with twenty-one men and a boy, with which they were to attend the king's service for fifteen days at their own charge, and if the state of affairs required their assistance any longer they were to be paid by the crown. The number of ships required from each of the four ports in Kent was as follows: Sandwich, with its members five; Dover, and its members, twenty-one; Hithe five; and Romney, with the towns dependant, five more. When the service required of the Cinque Ports became too burthensome, each was allowed a certain number of other towns in their neighbourhood, as auxiliaries that they might bear a part in this public charge. Many serious disputes arose between the Cinque Ports and the town of Yarmouth, on account of the privilege the former exercised of appointing a bailiff to have jurisdiction with the magistrates of Yarmouth during the fishing fair. These animosities were carried into such extremes, that, in the 25th year of the reign of Ed-

VOL. III.—NO. 96.

ward the First, that king passing into Flanders, to the assistance of the Earl of Flanders against the King of France, being no sooner landed, than the men belonging to the Cinque Ports, and those belonging to Yarmouth, engaged each other and fought with such fury on the sea, that, notwithstanding the king's positive commands to the contrary, 25 ships belonging to Yarmouth were burnt and destroyed, and others very much damaged, 171 men killed, and goods to the value of 15,356*l.* spoiled and taken from them: this produced a retaliation, and, notwithstanding every endeavour used by succeeding monarchs, the animosity had not completely subsided till the reign of Queen Elizabeth, who finally reconciled the parties to each other. It was to direct and enforce the due performance of these important services, and to superintend the punctual preservation of these privileges, that the lord warden, chancellor, and admiral of the Cinque Ports, was appointed; which high office is always executed by persons of the first rank in the kingdom. In consequence of this establishment, the ships of these in conjunction with other ports were the navy of the realm; and, as our historians shew in almost every reign, discharged this trust with great reputation: neither were the Cinque Ports restrained to the number of vessels above mentioned, but have sometimes fitted out double the number; and, when larger ships were thought necessary, have equipped fewer of these, at an expence equivalent to that which their services by tenure would have occasioned. At the end of Queen Elizabeth's reign they had five ships, of one hundred and sixty tons each, at sea for five months at their own expence; and in the beginning of Charles the First's reign, they fitted out two large ships, which served two months, and cost them upwards of 1800*l.* In the year 1293, in the reign of Edward the First, the fleet of the Cinque Ports, consisting of one hundred sail, attacked that of France, composed of upwards of two hundred, defeated, and destroyed them; so that, for a season, that kingdom was in a manner deprived of its naval strength.

TENURES AND CUSTOMS.—It is generally considered, that the flourishing condition of Kent originated in the peculiar customs by which the descent of landed property is regulated, and which are comprehended under the term *GAVEL-KIND*.—These customs are of very remote date; “and, if any reliance,” observes a modern writer, “can be placed on similarity of names, that of *gavel-kind* may be derived from the ancient British *GAFÆL*, to hold; and *CENEDL*, a family; which is certainly as good a derivation as the Saxon *gif-eal-cyn*, give all kind.” Lambard and Somner conceive the term to have originally denoted the nature of the services yielded by the land, and therefore have compounded the word *GAVEL*, which signifies a *rent*, or customary performance of husbandry, and *gecynde*, implying the nature, kind, or quality of the performance;

2 F

ances; so that the proper definition of Gavel-kind, is lands which were held by rent, in opposition to land subject to military tenure; and which yielded no rent or service, in money, provisions, or works of agriculture. The law of gavel-kind comprehends the joint inheritance of all the sons to the estate of the father; and should the father survive, the inheritance devolves to his grandsons, if there are any, or else to his daughters. The partibility of this custom is not restrained to the right line of consanguinity; for all brothers may jointly inherit the estate of a deceased brother; and, agreeably to the same rule, nephews and nieces, by the right of representation, are, in their degrees, intitled to the same division of property. One of the laws of Canute implies, that our Danish ancestors admitted daughters, as well as sons, to an equal share both of real and personal estate. The Saxons do not seem to have been so complaisant to the fair sex in this respect. At the Norman conquest, the eldest son did not inherit to the exclusion of his brethren; and it was at that period, that the custom was introduced, of the right of sole succession, in preference to the divisible practice of inheritance. The men of Kent resisted this encroachment with success; and so predominant is gavel-kind in this county, that all lands are presumed to be subject to that usage, till the contrary is proved; and formerly such lands only were exempted from it, as were holden by knight's service. Anciently a royal prerogative was exercised, by changing the customary descent as well as the tenure; and in some instances, this prerogative was delegated to subjects, and particularly by King John, in the third year of his reign, to Hubert, Archbishop of Canterbury, and his successors. Contrary interpretations have, however, been, at different times, put upon this tenure; but it is evident, that the legislative authority alone can over-rule the custom of an equal partition among the sons, or other collateral descendants. For this purpose, several statutes have been made, the first of which was in the reign of Henry the Seventh, at the request of Sir Henry Guldeford: another act, on the same disgavelling principle, passed in the fifteenth of Henry the Eighth: another statute was obtained by Sir Henry Wiat. In the 31st year of the reign of the same Prince, the lands of 34 noblemen and gentlemen were disgavelled in the same manner; and a similar liberty was allowed to 42 others, by a statute of the second and third of Edward the Sixth. The lands of three gentlemen only, were disgavelled during the long reign of Queen Elizabeth; and of the same number, in that of James the First; and it does not appear that any act, of the same nature, has passed since the first year of the latter monarch. These disgavelling acts divested the lands to which they related, of their partible property only, without affecting, in the least, their other incidental qualities; which remained the same, because they were not expressly

uttered by the letter of the law; else the owners of gavel-kind lands would have suffered great prejudice by the loss of their usual privileges, instead of the benefit intended by the acts. One of these privileges is, that lands in Kent do not escheat to the King, or other Lord, of whom they are holden, in the cases of conviction and execution for felony; but heir of a tenant in gavel kind, notwithstanding the offence of his ancestor, shall enter immediately, and enjoy the lands by descent, after the same customs and services by which they were before holden.

The privileges attached to gavel-kind, do not, however, extend to cases of treason: for any person attainted, in the smallest degree of this high offence, forfeits all the lands which he holds by this tenure, to the crown, according to usage. Heirs are also deprived of the title of possession, if their ancestors, being indicted for felony, should abscond, and consequently become outlaws: and, in the times of Papal jurisdiction, if the tenant had taken refuge in a consecrated place, or had abjured the realm, the immunity ceased; because, an offender, before he could avail himself of sanctuary, was obliged to make a full confession of the crime laid to his charge; and flight always excited a strong presumption of guilt. By the like custom, a wife's dower in lands of the nature of gavel-kind, is in no case forfeitable for her husband's felony, except where the heir is liable to be debarred of his inheritance. This was a privilege almost peculiar to the widows of tenants in gavel-kind; nor was the severity of the common law mitigated in this particular, till a statute was passed, in the first year of the reign of Edward the Sixth, allowing every wife her dower, notwithstanding her husband's having been attainted of felony. There ever was, and still is, a material difference between such lands as are gavel-kind, and those which are without that rule, in respect to the proportion, or the rent assigned for dower. Thus, by the common law, a widow has a right to a third part only of her husband's real property; but, by the law of gavel-kind, a moiety is due of all the estates possessed by the husband, at the marriage, and at any time during the coverture. One disadvantage, however, is incident to dower in gavel-kind, to which the dowries of lands holden under many other tenures are not subject; namely, that a tenant of the former does not enjoy it absolutely for life, but as long as she continues unmarried and chaste. A very circumstantial proof of incontinence was formerly required; and, before a forfeiture of dower could be incurred, it was necessary to attain a widow of child-birth. This is explained by Laubard's translation of a French manuscript, intitled, "The Customal of Kent," in the following manner:—"If when she is delivered of a child, the infant be heard cry, and the hue and cry be raised, and the country assembled, and have the view of the child so born, and of the mother, then let her lose her dower wholly; and

and otherwise not, so long as she holdeth her a widow; whereof it is said in Kentish,

"He that doth wende her, let him lende her."

Or, according to Hasted,

"He that does turn or wend her,
Let him also give unto her, or lend her."

In the present practice in these cases, it is sufficient to shew, that a widow in gavel-kind has been caught tripping, to deprive her of her dower, without producing actual evidence of this casual, though frequent, effect of a breach of chastity. Another famous property of gavel-kind is, that the tenant is of sufficient years to alienate his estate at the age of fifteen; but it must be by feoffment, that being a method of conveyance of every other the most proper, lest there be any suspicion of fraud and imposition. This privilege makes the tenant some compensation for his being kept in ward one year longer than is permitted by the course of the common law. And infants in gavel-kind always enjoyed several advantageous immunities formerly denied to other persons during their minority. In the "Customal of Kent," the noble usage claimed in behalf of wards, is expressed in the following terms:—"And if the heir or heirs shall be under the age of fifteen years, let the nutriture be committed by the Lord, to the next of the blood to whom the inheritance cannot descend, so that the Lord take nothing for the committing thereof.—And let not an heir be married by the Lord, but by his own will, and by the advice of his friends, if he will. And when such heir, or heirs, shall come to the full age of fifteen years, let all their lands and tenements be delivered unto them, together with their goods, and with the profits of the same lands remaining above their reasonable sustenance: of the which profits and goods, let him be bound to make answer which hath the education of the heir, or else the Lord, or his heirs, which committed the same education." It was formerly "the custom of this county to divide the chattels, after the funeral expenses and debts of the deceased were paid, into three parts, if he left any lawful issue; of which, one portion was for the performance of legacies; another towards the education of his children; and the third towards the support of his widow. If the tenant of gavel-kind lands withdraws from his Lord his due rents and services, the custom of Kent gives the Lord a special and solemn kind of cessavit, denominated Gavelit, by which, unless the tenant redeems his lands by payment of the arrears, and makes reasonable amends for his neglect or contumacy, they become forfeited to the Lord, and he enters, and occupies them as his own demesnes.—The tenants of gavel-kind also claim the privilege, that where a writ of right is brought concerning gavel-kind lands, that the grand assize shall not be chosen in the usual manner, by four knights, but by

four tenants in gavel-kind, who shall not associate to themselves twelve knights, but that number of tenants in gavel-kind; and trial by battle shall not be allowed in such a writ for those lands. The invaluable benefits of the various privileges of the tenants in gavel-kind, cannot be more clearly shewn than by contrasting them with the burthens of the military or feudal tenure. "The heir," says Sir William Blackstone, "on the death of his ancestor, if of full age, was plundered of the emoluments arising from his inheritance, by way of relief and primer seisin; and if under age, of the whole of his estate during infancy." Sir Thomas Smith, in his Commonwealth, also has the following remarks on this head: when the heir came to his own, after he was out of wardship, his goods were decayed, houses fallen down, stock wasted and gone, lands let forth and ploughed to be barren: to make amends, he was yet to pay half a year's profits as a fine for sueing out his livery; and also the price and value of his marriage, if he refused such wife as his Lord and guardian had bartered for, and imposed upon him; or twice that value, if he married another woman. And when, by these deductions, his fortune was so shattered and ruined, that, perhaps he was obliged to sell his patrimony, he had not that poor privilege allowed him, without paying an exorbitant fine for a license of alienation." The grievances thus established in consequence of the feudal system, were not wholly abolished, till the reign of Charles the Second. Whatever opinion may be entertained of the story related by Sprot, of the men of Kent impeding the Conqueror in his march, and, with the Archbishop of Canterbury, at their head, obliging him to consent to the preservation of their ancient liberties, it may be observed, that the continuance of such peculiar privileges must have originated in some important cause, though that cause be now forgotten. They not only succeeded in preserving their lands from a state of servitude, thus complicated and diffusive, but maintained an old claim highly favourable to the natives of Kent, by which it was insisted, "That all the bodies of Kentish men be free, as well as the other free bodies of England." The privilege extended to every native of the county, and to their children, at a period when other English subjects were held in an hereditary state of bondage; and when the Lords of Manors exerted a legal power of claiming, recovering, and transferring, the persons of villains in the same manner as they did of their horses and their oxen. It is a curious circumstance, that, since the passing of the disgavelling acts, the continual change of property, the extinction of the Court of Wards, and of the Inquisitiones post Mortem, the want of knowledge where records are deposited, and the great expence of searching for them, the difficulty of proving what estates the persons named in the disgavelling statutes were seized of at the time of making them, together with that of shewing what

lands

lands were formerly subject to military tenures, which has daily increased since their abolition, have occasioned difficulties so accumulated, and so insurmountable, that the landholders entitled to the benefit of those acts, waive their privilege, and suffer their lands to pass in common with those of their neighbours, rather than enter into a labyrinth of litigation and cost. "The consequence is," says Robinson, "that at this time, there is almost as much land in the county of Kent subject to the controul of the custom of gavel-kind, as there was before the disgavelling statutes were enacted."

FARMS.]—In this county, the extent and rental of farms are uncommonly various, as must be evident when the peculiar customs of the county are considered in connection with the diversities of the soils and surface. The number of freeholds in the county is stated by Hasted, at about 9000; independent of the large estates of the churches of Canterbury and Rochester, and of various corporate bodies; the rack-rents of which are estimated at 180,000*l.* per annum. The copyhold and customary tenures are very few. The general distribution of the freeholds and their close intermixture with each other, occasion a frequent intercourse between the gentry and the yeomen.

MANUFACTURES.]—The county of Kent has a variety of manufactures, though they are not remarkably extensive. The clothing trade, which once gave employment to great numbers, is now nearly forgotten. At Canterbury, muslins, brocaded silks, and stockings, are made; at Deptford and Whitstable, are large copperas works; at Stonar, in the isle of Thanet, and also in the isle of Graine, salt is manufactured; at Ospringe, is an extensive manufactory for gunpowder, erected by government; and there is another, near Dartford, in private hands: in the weald, bordering on Sussex, are various iron furnaces; and at Dartford, and Crayford, are mills for the manufacturing of iron. At the latter place also, are extensive works for the printing of calicoes, and spacious grounds for the bleaching of linens; at Seven-oaks are large silk mills; and at Boxley, near Maidstone, is one of the most extensive and curious manufactures of paper in Europe. Paper is also made in the neighbourhood of Dartford, &c. The various dockyards of Woolwich, Chatham, &c. give employment to numerous artisans in all the different branches of naval affairs; ship-building is also carried on at other places on the sea-coast to a considerable extent.

MARKET TOWNS.]—The following is, we believe, an accurate list, of the towns in this county, now enjoying the privilege of a market:—

<i>Towns.</i>	<i>Market Days.</i>
Ashford	Saturday
Bromley	Thursday
Canterbury	{ Wednesday and Saturday
Cranbrook	Saturday
Crayford	Tuesday
Cray	Wednesday
Dartford	Saturday
Dover	{ Wednesday and Saturday
Faversham	{ Wednesday and Saturday
Folkstone	Thursday
Goudhurst	Wednesday
Gravesend	{ Wednesday and Saturday
Greenwich	{ Wednesday and Saturday
Hythe	Thursday
Lenham	Tuesday
Lydd	Thursday
Maidstone	Thursday
Malling (West)	Saturday
Milton	Saturday
Queenborough	{ Monday and Thursday.
Rochester	Friday
Romney	Saturday
Sandwich	{ Wednesday and Saturday
Seven Oaks	Saturday
Tenterden	Friday
Tonbridge	Friday
Westerham	Wednesday
Woolwich	Friday
Wrotham	Tuesday

PARLIAMENTARY REPRESENTATION.]—The county of Kent returns 18 members to Parliament: viz. two for the shire, two for the city of Canterbury, two for the city of Rochester, two for Maidstone, two for Queenborough, two for Dover, two for Hythe, two for Romney, and two for Sandwich.

POPULATION.]—The population of Kent, in the year 1700, was 158,800; in 1750, 190,000; and, according to the returns of 1801, 307,624; of whom 151,374 were males, and 156,250 females. The number of houses, at the last-mentioned period, was 52,998. In 1811, the population had apparently increased to 373,095; and the houses to 64,362. The annual proportion of marriages, in this county, is one to 118 persons; of births, one to 30; and of deaths, one to 41.

Summary of the Population of the County of Kent, as published by Authority of Parliament, in 1811.

HUNDREDS, &c.	HOUSES.				OCCUPATIONS.			PERSONS.

CHIEF TOWNS, PARISHES, &c.

ACRYSE.]—Acryse Place, the seat of the Papillon family, is five miles N. N. W. from Folkestone. The mansion, recently much altered and improved, is supposed to have been built by the Cossentons, in the reign of Henry the Seventh. Almost close to the house, on the north side, stands Acryse church.

ADDINGTON.]—In this parish (seven miles N. W. by W. from Maidstone) a short distance N. W. from the church, are the remains of a supposed Druidical temple.

ALLINGTON.]—About two miles N. N. W. from Maidstone, are the remains of Allington Castle, said to have been founded by the noble Saxon family of Columbarii. Sir Thomas Wyatt, one of the distinguished ornaments of Henry the Eighth's reign, was born here. Becoming vested in the crown, the castle and manor were granted, by Queen Elizabeth, to the Astley family, by one of whom it was transferred to that of Lord Romney. The park has long been under cultivation; but the moat exists; and the ruins of the castle, which are still extensive, convey the idea rather of a fortified dwelling, than of a place of strength. Here was

formerly a weekly market, and a three days' annual fair. The church is a very mean structure.

APPLEDORE.]—Appledore, six miles S. E. by S. from Tenterden, was anciently a sea port town, before the Rother changed its course, and left it at some distance. In 893 the Danes sailed up to the town and built a fort or castle, which it is supposed was destroyed by the French in 1380, and the present church built on its foundations. Appledore is now a small mean village, inhabited chiefly by graziers, and others employed in the marshes.

ASH.]—In this parish, says Gough, "were found; 1737, in a sandy field, which seemed the burying place of Richborough, being on a rising ground above the intervening marshes, on the right hand of the road from Canterbury to Sandwich, close by the road, several bodies placed separately in wooden cases about four feet deep; a sword was found generally put on the right side, and a spear on the left of each; a necklace, of three or four coarse glass beads, and then an amber bead, about the neck, and so on, the fibula on the shoulder, and the umbo of a shield directly over the face. The shield was of wood, round, and about 18 inches diameter, to which the iron umbo was fastened by iron pins. Several Roman medals of the upper and lower empire were found

found in the graves. The Rev. Mr. Fausset, of Heppington near Canterbury, procured from this spot a small pair of scales, a touchstone weight of 23gr. and a nest of weights piled on one another in a wooden case decayed was found with an armed skeleton, September 20, 1762." Many other antiquities have also been found at this place.

ASHFORD.]—The respectable market and post-town of Ashford, 20 miles S.E. by E. from Maidstone, and 54½ E.S.E. from London, is seated on a gentle eminence, near the confluence of the upper branches of the river Stour. In the Domesday Book, it is written Estefort, and Essetesford. It afterwards became the property of the family surname De Asshetesford. The church is a spacious and handsome fabric, consisting of a nave, aisles, and three chancels, with a lofty and well-proportioned tower rising from the intersection of the nave and principal chancel. It was renovated in the reign of Edward the Fourth, by Sir John Fogge, whose family were originally seated in Lancashire, but came into this county early in the reign of Edward the First. His ancestor, Sir Francis Fogge, Knt. acquired the manor of Repton, in this parish, by marriage with a co-heiress of the Valoigns; and at the mansion on that estate, Sir John resided.*—This latter gentleman founded a college at Ashford, for a master or prebendary, who was to be vicar of this church for the time being, two chaplains, and two secular clerks, who were to pray for the souls of "the King; George, Archbishop of Yorke; Sir J. Fogge, the founder; Alice, his wife, &c. and other the King's liege subjects of the county of Kent, lately slain at the battles of Northampton, St. Albans, and Shirborne, in defence of his right and title." He died in 1490: on his tomb, which stands on the north side of the altar, and is very large, have been brasses of himself as a knight in armour, and his two wives. On a slab in front of the altar steps, is a curious full-sized brass in memory of Elizabeth, daughter to Henry, Lord Ferrers, of Groby, and wife to David le Strabolgie, (fourth of that name,) Earl of Athol. She is represented in the old French round dress, closely buttoned from the waist; her hair frizzed in three rows of curls surrounding her face, and hanging frizzed over her shoulders: in her hands were two banners supporting a canopy. In a small chapel adjoining to the south transept, formerly appropriated to the Smyths, Lords of Westenhauger, and owners of this manor,

* The seat of the Foggess, at Repton, is now a farm. This family, which lived in much splendour, became extinct in the latter part of the last century. They were so greatly reduced, that one of the last was wife to a poor shepherd at Eastry; and her nephew was executed for a robbery.

† Richard Glover, Somerset herald, in the reign of Elizabeth, was a native of Ashford. He died in 1588, æt. 46, and was buried at Cripplegate church, in London. His sister Joan, married Richard Milles of Ashford, whose son, Thomas Milles, author of "the Catalogue of Honour," was born here; and following the directions of his uncle, became eminent for his

are three sumptuous monuments of that family, composed of various coloured marbles.

The college, founded by Sir John Fogge, appears to have been dissolved about the reign of Henry the Seventh. The dwelling was afterwards appropriated to the vicar, and it retained its ancient character till within 50 or 60 years ago, since which it has been greatly altered and modernized; and of a "profusion of painted glass," that originally ornamented the windows, only a few representations of arms are now left.

The Free Grammar School, adjoining to the church-yard, was built and endowed by Sir Norton Knatchbull, in the time of Charles the First; and the master is appointed by his family.

The population of this town, in 1811, was 2582. Many of the houses are large and well-built. The market-house is a good modern edifice, standing near the middle of the High Street. At the east end of the town is a stone bridge of four arches, crossing the Stour. An annual fair has been instituted here, within these few years, for the sale of sheep, &c. and another for the sale of wool.*

AYLESFORD.]—Aylesford, called Ægelesford by the Saxons, and Elesford in the Domesday book, lies 3¼ miles N.N.W. from Maidstone. It was granted by Henry the Third, to Richard, Lord Grey, of Codnor; who, for his fidelity to King John, had been previously made constable of Dover castle, and warden of the cinque ports. He afterwards went on a crusade to the Holy Land, and on his return brought with him some Carmelite friars, for whom, in 1240, he founded a priory here, about half-a-mile west from the church. Richard, his great grandson, in 1330, obtained a charter for a weekly market for this manor with other privileges. The site and demesne of the priory, or friary, as it is now called, were given, by Queen Elizabeth, to the Sedleys, from whom the estate passed, in the time of Charles the First, to Sir Peter Rycaut, Knt. whose youngest son, Sir Paul Rycaut, was the celebrated eastern traveller, and confidential servant of the crown, during three reigns; and, on his death, in November, 1700, at the age of 72, was buried near his parents, in the south chancel of Aylesford church. He wrote the "State of the Ottoman Empire," and several other works. The heir of Sir Peter alienated the friary to Caleb Banks, Esq. in 1657, whose son, Sir John Banks, converted the hall, chapel, cloisters, &c. into a suite of

skill in genealogy and heraldry. He had granted to him a chapecau with wings, as a crest to his arms, in allusion to the celerity with which he returned with an answer from Henry the Fourth, of France, to whom he had been sent with a message of importance, by Queen Elizabeth. The Rev. Dr. John Wallis, the celebrated decypherer and mathematician, was also born in this town, in November, 1616, his father being then vicar of Ashford. He wrote many works, both on divinity and mathematics; and, in 1699, all his writings were collected, and printed at the University Press, Oxford, in three volumes, folio. He died in his 88th year, in October 1703.

stately

stately apartments. He died in 1699, when this estate fell to the Hon. Heneage Finch, afterwards Earl of Aylesford, who had married his eldest daughter and coheirress: their descendant, the present Earl, is now owner. Nearly the whole of the conventual buildings are yet standing, and form a convenient, though not a splendid residence.*

Aylesbury church is a handsome building. It contains various memorials of the Aylesford branch of the Finch family; and of the Colepeper, Duke, Banks, Rycout, and Sedley families. On the costly monument of Sir John Banks, Bart. who died in 1699, æt. 72, is his effigy in marble, with that of his wife, Elizabeth, daughter of Sir John Dethick.

In Aylesford Street stands the hospital of the Holy Trinity, a regular stone building, 105 feet long, and 21 feet and a half in width, founded in pursuance of the will of John Sedley, Esq. of the friary, who died in 1605, for six poor and impotent persons. This foundation has long been appropriated to private purposes.

Aylesford has been the scene of several battles, the most memorable of which was fought in 455, between the Britons, under Vortimer, and the Saxons, under Hengist and Horsa. The conflict was well sustained; but, after a sanguinary struggle, the Britons obtained the victory, with the loss of Catigern, brother to Vortimer.† Horsa was also killed on the spot, and was buried, according to Bede, in the east part of this county. The second battle recorded to have been fought here, is said, by Lambard, to have been at the place, "both now and anciently called Fernham:" this was between Alfred and the Danes, when the latter were defeated, and "compelled to take the Thames without boat or bridge, in which passage there were a great number of them drowned."—No less notable was that other chase, wherein, not many years after, Edmund Ironside most fiercely pursued the Danes from Otford to this town; in which also, as some write, he had given them an irreparable overthrow, had he not, by fraudulent and traitorous persuasion of one Edric, (then Duke of Mercia, and in the Saxon speech surnamed, for his covetousness, Streona, that is to say, the 'getter, or gatherer,') withdrawne his foote, and spared to follow them."

In this parish, on the S.W. side of the Medway,

* Sir Charles Sedley, the poet and dramatist, noted for wit and gallantry in the days of Charles the Second, was the posthumous son of Sir John Sedley, and was born at Aylesford friary about the year 1639. The brilliancy of his parts was so great, that King Charles is said to have told him, that "Nature had given him a patent to be Apollo's viceroy." He married Catherine, third daughter of John, Earl Rivers, by whom he had an only daughter, also named Catherine, who was debauched, and created Countess of Dorchester, by James the Second. Sir Charles was much incensed at this disgrace; and, though he had received various favours from James, took a very active part in forwarding the revolution. His answer to the accusation of deserting his royal master, is well known: "Since his Majesty," said he, "has made my daughter a Countess, it is fit that I should do all I can to make his daughter a Queen." He

stands Preston Hall, which was a residence of a branch of the Colepepers, from the time of Edward the Third till the reign of George the First, when it passed in marriage with Alicia, sister and heiress of Sir Thomas Colepeper, Bart. to John Milner, M.D. on whose family she afterwards made a settlement of this and other estates, including the manor of Aylesford. The late Rev. Dr. Joseph Butler, (Milner,) much improved the house and grounds, which are situated in a very pleasant, fertile, and healthy part of the country. The date 1102, in Arabic numerals, sculptured in stone, over a window of an ancient barn on this estate, has given rise to much controversy; but has evidently been executed at a much later period by one of the Colepepers. The road, which crosses the park, communicates with a stone bridge of six arches, leading to Aylesford: this was built by Sir William Sedley, but is now maintained at the charge of the county.

BADLESHERE.]—At Badlesmere, 3½ miles S. from Faversham, Bartholomew de Badlesmere, lord of the manor, in the 13th of Edward the Second, obtained a license for founding a house of regular canons. The church is a small and very plain Saxon structure. In the porch are the fronts of two ancient wooden seats, carved in high relief. One represents a shield, upon which are the star, ribbon, and motto of the order of the Garter; on the other are some scriptural sentences relative to the Holy Trinity, in four circles united by bands; so that the words Pater, Filius, Spiscus, and Deus, though only once repeated in the circles, form a part of every sentence.

BAPCHILD.]—(See Tong.)

BARFRETON.]—Barfreton, or Barston, 5½ miles S. by E. from Wingham, is celebrated for its very curious church, which is generally considered as an undoubted specimen of Anglo-Saxon architecture; though, more probably, it was built in the times immediately preceding the general adoption of the pointed style. It consists only of a nave and chancel, which communicate with each other by a semi-circular arch, rising from wreathed columns, and richly sculptured. Instances of longevity, in this and the contiguous parishes, are very frequent; and one of them, recorded by Dr. Harris, is equally singular. "In the year 1700," says that writer,

died about the beginning of the reign of Queen Anne. His works were collected and published in two volumes, 8vo. 1719.

† The burial-place of Catigern is supposed to be pointed out by the well-known cromlech, called Kit's Coty House, which stands on the downs, about one mile north-eastward from Aylesford church. It is composed of four huge stones unwrought; three of them standing on end, but inclined inwards, and supporting the fourth, which lies transversely over them, so as to leave an open recess beneath. About 500 yards S. by E. from Kit's Coty House, was formerly another cromlech, now lying in a confused heap; and still nearer to Aylesford, within 100 yards from the road of Tottington farm-house, formerly the site of a moated mansion, is a remarkable stone, called, by Stukely, from its shape, the coffin. It is upwards of 14 feet long, about six broad, and two thick.

"the

"the minister of Barfreston was buried at the age of 96; he that preached his funeral sermon was 82; he that read the service, 87; the parish clerk was of the same age, but was then absent; the sexton was 86, and his wife above 80; and several of the neighbouring parish of Coldred were at this funeral, who were above 100 years old."

BARHAM.]—In this parish, six miles S.E. by S. from Canterbury, stands Barham Court, which was for many ages the seat of the Barhains, originally of the same family as Reginald Fitz-Urse, one of the murderers of Archbishop Becket. It is now the property of Charles Dering, Esq. The house is a modern structure. Barham downs derive their name from this parish, though a considerable part of the range lies within those of Kingstone and Bishopshorne. The medium extent of these downs is about half-a mile; but their length, from their commencement near Bridge, to their termination at Denne Hill, is upwards of four miles. Various remains of ancient encampments may be traced here, some of which have been assigned to the Romans. A small advanced work on the slope of the hill, of which the rampart and ditch on three sides are still evident, is ascribed to Cæsar. Vast numbers of tumuli were scattered over these downs: most of them were opened by the late Rev. Brian Faussset, of Heppington, who greatly increased his valuable collection of Roman antiquities, by various articles which he then found. When King John assembled a mighty army, in 1213, to oppose the threatened invasion of King Philip, he encamped on Barham downs; and here, also, Simon de Montfort, Earl of Leicester, assembled a powerful force in the reign of Henry the Third. From the favourable nature of the air, situation, &c. camps are now frequently formed on these downs; and the annual county races, holden here, in August, give them additional celebrity.

BARMING.]—East Barming, anciently called Barmelinge, "from its moist situation amongst many springs," is $2\frac{1}{2}$ miles W. by S. from Maidstone. It is a well-cultivated and pleasant parish, much celebrated for its plantations of hops, apples, cherries, filberts, and other fruit. From the remains of foundations that were discovered about nine or ten years ago, in taking up an accumulated heap of stones and rubbish near the church, it is evident that some Roman building, perhaps a villa, once stood there. Many fragments of Roman tiles, Roman vessels, and other antiquities, have, at different times, been found about the spot. The manor belongs to the Hon. Philip Pusey, brother to the Earl of Radnor. The court-lodge, which stood near St. Helen's Bridge, and near which was an ancient cross, was pulled down a few years ago.—Hall Place, a subordinate manor, is now the property of Lord Barham. On this demesne, a respectable mansion was built, in 1656, by the Rev. Richard Webbe, rector of Barming, whose descendant conveyed it to Peter Smart, Gent. about

the year 1726. This gentleman, who lies buried in the church-yard, was father to the poet, Christopher Smart, author of "The Hop Garden," and other poems. The church is a small neat edifice, having a cemetery embosomed in fine elms, in which are various monuments, and among them a costly tomb, of different coloured marbles, in memory of Thomas Harris, Esq. who resided at Home Stall, a respectable seat in this parish, erected about the year 1730. The parsonage-house, which stands on the declivity of a commanding eminence, about a mile from the church, has been greatly improved, and almost rebuilt by the Rev. Mark Noble, F. A. S. the rector, whose various publications on biography and history, evince the great extent of his acquirements. Not less than 20,000 trees and shrubs have been planted by him on the glebe lands. In this and the adjoining parishes, much stone is dug, chiefly of the kind called Kentish-rag; and from the circumstance of Sir Christopher Wren's discovering the foundations of a Roman temple under the site of St. Paul's church, of the same kind of stone, it has been supposed, that some of these quarries were worked in the Roman times.

BAYFORD.]—At this place, N. of Sittingbourne, are some remains of an ancient entrenchment, which Alfred the Great is said to have thrown up, when engaged against Hastings, the Danish chief, about the year 893. A castle was afterwards built here, the site of which is now occupied by a farm.

BECKENHAM.]—The pleasant village of Beckenham—supposed to derive its name from the Saxon words, *bec*, a brook, and *ham*, a dwelling—lies ten miles S.S.E. from St. Paul's cathedral, London. The church is a neat edifice, containing many monuments of the Style, Raymond, Burrell, and other families. On a slab in the chancel, is a remarkable brass, in memory of dame Margaret, wife of Sir William Dalsell, Knt. and daughter of John Barnes, Esq. of Redhall, in Norfolk, who died in 1563: she is represented in a flowered petticoat, and close-bodied gown; the sleeves slashed at the shoulders, and hanging down to the feet. Here is also the monument of Mrs. Jane Clarke, wife of Dr. Clarke, physician at Epsom, with an elegant inscription, by Gray. The parish register, under the date October 24, 1740, records the burial of Margaret Finch, who lived to the age of 109 years. She was one of the people called gipsies, and had the title of their Queen. After travelling over various parts of the kingdom, during the greater part of a century, she settled at Norwood; whither her great age, and the fame of her fortune-telling, attracted numerous visitors. From a habit of sitting on the ground, with her chin resting on her knees, the sinews at length became so contracted, that she could not rise from that posture: after her death, they were obliged to inclose her body in a deep square box. Her funeral was attended by two mourning coaches: a sermon was preached upon the occasion, and a great concourse of people attended the ceremony. Her picture adorns

adorns the sign-post of a house of public entertainment in Norwood, called the Gipsy House.

Beckenham Place, the seat of John Cator, Esq. is partly in the parish of Bromley; but the mansion itself is in that of Beckenham. Rear-Admiral Sir Piercy Brett, who died in 1781, and with his Lady, lies buried in the church, resided here. The estate, which had long been owned by the St. Johns, was alienated to the Cators, in 1773. The house is a handsome building, commanding a beautiful prospect.

Kent House, the ancient seat of the Lethieullers, in Beckenham parish, is now occupied as a farm: the estate belongs to J. J. Angerstein, Esq. Clay Hill, or the Oakery, also in this parish, was the property of the late learned Edward King, Esq. F.R. and A.S.*

Eden Farm, another seat in Beckenham, is the elegant retirement of the Right Honourable Lord Auckland, who purchased it of J. A. Rucker, Esq.

Langley Park, and Kelseys, likewise in this parish, are two estates belonging to the Right Hon. Peter Burrell, Lord Gwydir. The former, which is the more considerable, obtained its name from the Langleys, who had lands here about the middle of the 14th century. From the Raymonds, subsequent possessors, it passed, by an heiress, to Peter Burrell, Esq. whose grandson was created a peer in June, 1796. Kelseys, the more ancient seat of the Burrells, was purchased, about the year 1688, from the Brograves, one of whom had license for an oratory here, in 1479. Lord Gwydir's house was originally built by Alderman Kirkham, of London.

BEXESBOURNE.]—Bekesbourne, near the village of Patricksbourne, is pleasantly situated amongst small enclosures sheltered with trees and woodland, especially the western part of it, and stretching eastward to the high downy country. It is only about a mile and a half in length, and not more than half a mile broad. The soil is mostly fertile near the valley, especially for hops, of which there are several plantations. It anciently belonged to the cinque port of Hastings, and enjoyed the same privileges. Henry de Beke held certain lands in this parish, by grand serjeantry, to find one ship each time Henry the Third passed the sea. Philipot says, the branch of the Stour was navigable to this place in the reign of Edward the Third. The Archbishops of Canterbury had here a small but elegant palace, of which there are at present but few remains. The gateway of the palace was pulled down within these few years. It was built of brick, and had, in the middle of the front of it the arms of Cranmer. On the inside of the gateway was a stone, on which

was A.D.—T.C.—1552; and underneath, the Archbishop's motto, Nosce Teipsum.

Howletts, anciently Owletts, in this parish, was formerly a seat of the Hales family, of whom it was purchased by Isaac Baugh, Esq. who rebuilt the mansion, and in 1709, sold it to Cholmeley Dering, Esq. The house has a portico of the Doric order in front, and the surrounding scenery is very fine.

BELVIDERE.]—About a mile from the Thames, and nearly the same distance between Erith and Lesnes abbey, is Belvidere, the beautiful seat of Samson Gideon, Lord Eardley. The grounds, though not extensive, are agreeably diversified and well wooded. The house commands fine prospects of the Thames, and the opposite parts of Essex. It is elegantly fitted up, and contains a rich collection of paintings; among them, is a view of Venice, and its companion, with the ceremony of the Doge marrying the sea, by Cannolletti; the Alchemist, Teniers; Sir John Gage, Holbein; Noah's Ark, Brughel; St. Catharine, Leonardi da Vinci; the Dutch Admiral, Van Tromp, T. Hells; Rembrandt painting an old woman, Rembrandt; a courtesan, and her gallant, Georgione; the golden age, Bruigh; Snyders, with his wife and child, Rubens; marriage in Cana, P. Veronese; the genealogy of Christ, Albert Durer; the conception, and the flight into Egypt, Murillo; Christ and the doctors, Lucca Giordano; a landscape, Claude; three landscapes, Poussin, and many others.

BENENDEN.]—Benenden, or Biddenden, three miles S.E. from Cranbrook, is at present populous, though the clothing manufacture, which first occasioned the increase of the population of this part of the county, in the reign of Edward the Third, has for many years failed here. Several good houses still remaining, discover the prosperity of the former inhabitants.

The church is a handsome regular building, and its tower a structure of considerable height and strength. By the old part now remaining, it appears to have been originally but small. The interior contains several ancient brasses, and among them, one for the Goldwells of Great Chart; with the dates 1452, and 1499, in Arabic numerals: the rebus of this name, a golden fountain, or well, is also in one of the windows. A Free Grammar School, now degenerated into a complete sinecure, was founded here in the year 1522. There is a tradition in this parish, that a bequest, for the use of the poor, of 20 acres of land, now called the Bread and Cheese land, lying in five pieces, was given by two maiden sisters, commonly called the "Biddenden Maids," of the name of Chulkhurst, "who were born joined together by the hips and shoulders,

* This gentleman, who was a native of Norfolk, was elected president of the Society of Antiquaries on the decease of Dr. Milles, in 1784; but, on the succeeding election in the year following, he was obliged to relinquish the chair to the Earl of Leicester, after an unprecedented contest. He was author of

VOL. III.—NO. 97.

various works; the principal of which are his "Observations on Ancient Castles;" "Morsels of Criticism," tending to illustrate the Scriptures; and the "Munimenta Antiqua;" the concluding volume of the latter is now printing. He died in 1806, at. 72.

in the year 1100;" and having lived in that state 34 years, died within about six hours of each other. This tale is affected to be established by the correspondent figures of two females impressed on cakes, which, after Divine service, in the afternoon, on every Easter Sunday, are distributed to all comers, and not unfrequently to the number of 800 to 1000. At the same time, about 270 loaves, weighing three pounds and a half each, and cheese in proportion, are given to the poor parishioners; the whole expence being defrayed from the rental of the bequeathed lands. The marvellous part of the story however, is wholly discredited by the well-informed.

BETSHANGER.]—At Betshanger, 3½ miles S.S.W. from Sandwich, is a handsome mansion, belonging to the Rev. James Morris; and, at a little distance, at Updown, is the seat of J. M. Fector, Esq. enjoying some particularly fine prospects.

BETHERSDEN.]—Bethersden, or Bethersden-Lovelace, 5½ miles W.S.W. from Ashford, was in early times a possession of the Greensteds, and afterwards of the Lovelaces. The manor is now the property of William Baldwin, Esq. of Harriets-ham. In the church, are several brasses of the Lovelaces. Among the other sepulchral memorials, is one for Sir George Choute, Bart. who died in 1721, and several for the family of Withersden, owners of Wisenden, an ancient seat in this parish. Bethersden was formerly much celebrated for its marble quarries; the marble from which was in considerable request for the ornamental parts of buildings, chimney-pieces, slabs, monuments, &c.

BEXLEY.]—Bexley, three miles W. from Dartford, was given by King Cenulph, to the see of Canterbury. Edward the Second granted a weekly market to be held here, but this has long been disused. Archbishop Cranmer alienated Bexley to Henry the Eighth. James the First granted it to Sir John Spilman, who afterwards sold it to the celebrated Camden, who made over his right to the university of Oxford, for the purpose of founding an historical professorship; but covenanted, that all the revenues of the manor should be enjoyed for 99 years from his own death, by Mr. William Heather, his heirs and successors, subject to the payment of 140/. annually. The University have since granted leases from time to time, for 21 years, to the Leighs, of Hawley. The church, a peculiar of the Archbishops of Canterbury, has a shingled tower, and small octangular spire. On the south side of the chancel, is an ancient confessionary, consisting of three divisions of pointed arches, and a recess for holy water; on the north side are seven ancient stalls of oak, with carved heads, and other figures. Here are several curious old monuments.

High Street House, which adjoins the church-yard, was rebuilt, in 1761, by the late learned antiquary, John Thorpe, Esq. F.S.A. author of the "Cus-tomale Roffense," who purchased this estate of the Austens, of Hall Place, in 1750. On his death,

his possessions devolved to his two daughters, by Catharine, daughter of Dr. Lawrence Holker, of Gravesend: High Street House, was allotted to the youngest, married to Cuthbert Potts, Esq.—This gentleman became owner also, in right of his wife, of a contiguous villa, called Bourne Place, which was built about 40 years ago, by Lawrence Holker, Esq. son of Dr. Holker.

Hall Place, anciently the seat of a family sur-named At Hall, is an ancient and spacious edifice, now occupied as a boarding-school.

Blendon Hall, anciently Bladingdon Court, be-longed to the De Bladingdone family; and, having passed through various proprietors, it was pur-chased, about 1763, by Lady Mary Scott, relict of Arthur Scott, Esq. and daughter of the fourth son of George, fourth Earl of Northampton. This Lady rebuilt Blendon Hall, and considerably im-proved the grounds. She died in 1782, and was buried at Bexley. This estate is now, or was re-cently, the property of John Smith, Esq.

The estate of Lamienby belonged to an ancient family, who assumed the surname of Lamienby, but afterwards obtained that of Sparrow. The mansion was rebuilt by William Steele, Esq. about the year 1744: he also laid out the park, through which runs a canal, and, after flowing by Blendon Hall, Bourne Place, and Hall Place, falls into the river Cray.

Danson Hill, early in the last century, became the property of John Styleman, Esq. who lies bu-ried at Bexley, and who bequeathed a moiety of his estate in Kent to found an alms-house, for 12 poor families. This estate being included in the moiety, was leased to John Boyd, of London, mer-chant, who, in 1761, procured the fee simple to be vested in himself, and his heirs, by act of Parlia-ment, under an agreement with the trustees, to whom he made over a rent charge of 100/. annually for the uses of the charity. Mr. Boyd erected the present mansion, which is a handsome fabric, stand-ing on a commanding eminence, in a pleasant park. The grounds were laid out by the celebrated Brown, who also formed a spacious sheet of water towards the southern extremity of the park, which exhibits some flourishing plantations. Mr. Boyd was created a baronet, in 1775. The present Sir J. Boyd sold the estate a few years ago, to John Johnstone, Esq. for about 50,000/.

BILSINGTON.]—At Bilsington, six miles S. S. E. from Ashford, was formerly a priory of black can-ons, founded by John Mansell, provost of Rever-ley, and chancellor to Henry the Third, about the year 1253. The site of the priory, of which there are still some remains, is now a farm.

BIRLING.]—Birling, 6½ miles N.W. from Maid-stone, was part of the great estate of the Says, from about the time of Richard the Second, till the reign of Henry the Sixth, when it passed through female descent to that branch of the illustrious fa-mily of the Nevilles, now Earls of Abergavenny. These

These noblemen had two seats here ; the one called *Birling Place* ; the other, *Comfort* ; to the latter, a park was attached. A stone gateway, and some other ruins, still point out the site of *Birling Place* ; and the remains of *Comfort* have been converted into a farm-house. In the church, a large and handsome fabric, many of the *Nevilles* lie buried, but there is not a single monument to their memory. In the chancel, is a mural tablet, in commemoration of "the Rev. Edward Holme, late vicar of this parish, and founder of the two Free Grammar Schools of *Seybourne* and *East Malling*:" he died in January, 1782.

BISHOPSBOURNE.]—This parish lies 4½ miles S.E. by S. from Canterbury. Ascending *Barham downs*, from the village of *Bridge*, on the right is *Bourne Place*, long the property and residence of the *Auchers*, *Baronets*. *Thomas Colepeper, Esq.* of *Bedbury*, in right of his wife, became possessed of this estate ; and having also acquired the manor of *Bishopbourne*, by exchange with *Archbishop Cranmer*, he soon afterwards sold the whole to *Sir Anthony Aucher*, of *Otterden*, descended from *Earl Aucher*, first *Earl* and *Duke of Kent*. The Rev. *John Charles Beckingham*, now, or recently, owner of these estates, is maternally descended from *Sir Hewit Aucher*, the last baronet of his family. The house, which is a large and respectable edifice, was built upwards of a century ago, in place of the ancient mansion. In *Bishopbourne church* lies the celebrated *Richard Hooker*, author of the "*Ecclesiastical Polity*," who died rector of this parish, in 1600 : his monument, which is in the chancel exhibits his bust, in a square cap and gown.

BOBBING.]—In the church of *Bobbing*, a mile and a half W. by N. from *Milton*, are two curious brasses, under rich canopies, in memory of *Sir Arnold Savage, Knt.* and *Joane, his Lady* ; the former in plate armour, standing on a lion, &c. the latter in the dress of the age, and at her feet, two lap-dogs, playing with her drapery. *Sir Arnold* was lord of the manor, *Speaker of the House of Commons*, &c. in the reign of *Henry the Fourth*. In the north chancel, is a brass, similar to the above, in memory of his son, who died in 1420. In the south wall of the principal chancel is a piscina, and a triple stone seat, curiously ornamented. In the south aisle, is a handsome monument, in memory of *Charles and Humphrey Tufton*, sons of *Sir Henry Tufton, Knt.* of *Maidstone*. *Titus Oates*, the discoverer of the *Popish plot*, in the reign of *Charles the Second*, was vicar of this parish ; to which he was inducted in the year 1672.

* The doctor, born in 1641, received the rudiments of his education in the Grammar School, at *Wye*, and afterwards entered a student at *Oxford*. There his application being unremitted, he commenced Bachelor, and afterwards Doctor of Laws, in 1671. He was elected Secretary to the *Royal Society*, and he published its *Transactions* from No. 143 to 166, inclusive. In 1683, he was appointed the first Keeper of the *Ashmolean Museum*, and at the same time he was nominated

BORDEN.]—This parish lies 2½ miles W. by S. from *Sittingbourn*. The church has a massive Norman tower, with a circular-arched door-way on the west side, with a zig-zag moulding. Here is the burial-place of the *Plot* family, settled in this neighbourhood, in the reign of *Edward the Fourth*. *Dr. Robert Plot* was born here, in the manor-house of *Sutton Baron*, an estate which had been purchased by his grandfather, in 1559.*

BOUGHTON.]—*Boughton-Aluph*, lies four miles N. N. E. from *Ashford* ; *Boughton-under-Blean*, three miles S.E. from *Faversham* ; *Boughton Malherbe*, five miles W. by N. from *Charing* ; and *Boughton Monchelsea*, four miles S. by E. from *Maidstone*. In the first of these parishes, the manor of *Wilmington* was anciently held by a family of the same name, by the service of finding for the King, one "pothook for his meat," whenever he should come within the manor of *Boughton-Aluph*. *Seaton*, another subordinate manor in this parish, was, in the time of *Henry the Third*, held by the service of providing one man, called a "vautrer," (or hunter of wild boars) "to lead three greyhounds when the King should go into *Gascoigne*, and till he had worn out a pair of shoes of the price of four-pence, bought at the King's cost." *Boughton-Aluph church*, which is in the form of a cross, was anciently a very light and elegant structure ; but it has been much disfigured by imperfect repairs. The windows, though much dilapidated, still exhibit many traces of their pristine beauty ; the ramifications having been designed with much taste, and executed with great ingenuity and elegance. All of them have been richly adorned with painted glass : and some fine fragments are still remaining, particularly in the east window, which in the lower part displays two regal figures nearly perfect ; probably designed for *Edward the Third*, and *Queen Philippa*. In the south wall, is a stone seat, and the remains of a piscina. In the chapel, which belongs to the manor of *Buckwell*, in this parish, several of the *Moyles*, who possessed that estate for nearly two centuries, lie buried.

The manor of *Boughton-under-Blean* has formed part of the possessions of the see of *Canterbury*, from the period of the *Conquest*, or earlier. The manor of *Nash*, in this parish, has been for centuries, the seat of the Catholic family of *Hawkins*, one of whom, *Sir Thomas Hawkins*, was an early translator of *Horace*, and died in the reign of *Charles the First*. A daughter of the last possessor, is third wife of *Sir Edward Knatchbull, Bart.* The house, a respectable mansion, was rebuilt by

the first Professor of Chemistry, in the University of *Oxford*. In 1688, he was made royal historiographer to *James the Second* : in 1695, *Mowbray* herald extraordinary, and registrar of the court of honour. He died of the stone, on the 13th of April, 1696, and was buried at *Borden church*, where a neat mural monument has been erected to his memory : he left behind him several valuable writings in manuscript.

Thomas

Thomas Hawkins, Esq. who died in 1766, at the age of 92: it overlooks the Nore, and faces the famous Boughton Hill, from the brow of which the prospects are eminently fine.

The village, called Boughton Street, extends for a considerable length along the sides of the high London road, and has several good inns, and respectable modern houses. In the church, amongst numerous sepulchral memorials, are several in commemoration of the Petits of Colkins, the Farewells and Routts of Brenley, and the Hawkinses of Nash, all which places are in this parish. Against the east wall, in the north chancel, is a brick tomb, on which is a curious brass, representing the deceased in jointed armour, hinges, a very long sword, and a ruff round his neck. Over him, are the arms of the family of Hawkins; below him, is an inscription in black letter, as follows:—

“ I nowe that lie within this marble stone,
Was called Thomas Hawkins by my name,
My terme of life an hundred yeares and one;
King Henry the eight I served, which won me fame,
Who was to me a gracious prince alwayes,
And made well to spend my aged dayes.

My stature high, my body bigge and strong,
Excelling all that lived in myne age:
But nature spent, death would not tarry long
To fetch the pledge which life had layed to gage.
My fatal daye if thou desyer to knowe,
Behold the figures written here belowe.
15 Martii, 1587.”

Boughton-Malherb enjoyed the distinguished honour of giving birth to the accomplished Sir Henry Wotton,* whose ancestors were seated here in the reign of Richard the Second. Sir Edward, the first Lord Wotton, who died in 1628, inclosed a park round his mansion, at Boughton Malherb. In the early part of the 18th century, the family estates fell, by bequest, to Philip Dormer Stanhope, the witty and profligate Earl of Chesterfield, who disposed of them, in 1750, to Galfridus Mann, Esq. in whose family, they still continue. The remains of the mansion of the Wottons is now a farm-house; but the greatest part has long been pulled down, and the park thrown open. The church was the principal burial-place of the Wotton family, and several of them have monuments here; but one of the most elaborate, which had been erected in memory of Henry, Lord Stanhope, and his widow, the Lady Catharine, Countess of Chesterfield, was removed a few years ago, to make room for a new

* Sir Henry was born in the year 1658. He received his education at Winchester school, and at New College, Oxford, from whence he removed to Queen's College, where he took his degree of M.A. and read a lecture on optics. After leaving the University, he went abroad, and became so intimate with the Duke of Tuscany, that he sent him with letters to James the Sixth of Scotland, under the name of Octavio Baldi.—When that monarch came to the English throne, he conferred on him the honour of knighthood, and sent him ambassador to

altar. In the small chapel, which adjoins the chancel to the south, is a very ancient figure of a knight in armour, cross-legged, and also the effigies of a female of the same age; they are both of Bethersden marble, and are supposed to represent Sir Fulke Peyforer, and his Lady, who lived in the time of Henry the Third; and the former of whom had license to embattle his mansion-house at Colbridge, in this parish. This edifice, which was afterwards called Colbridge castle, stood below the hill, towards Egerton, and was a place of considerable strength. It is said, that the stones of the castle were used to build the seat at Chilston, or Chilson, in this parish, the property and residence of George Best, Esq. to whom it was bequeathed by his uncle, the late Thomas Best, Esq. who purchased it of the Hamiltons, and afterwards erected a new house in place of the ancient mansion, and also improved the park and grounds.

BOXLEY.]—The village of Boxley lies three miles N.E. by N. from Maidstone. A Cistercian abbey was founded here, about a mile westward from the church, by William d'Ipres, Earl of Kent, in the year 1146. This abbey afterwards obtained a grant of the manor, a weekly market, and various other privileges. On its surrender, in 1537, its revenues according to Speed, were 218*l.* 9*s.* 10*d.* The site of the abbey, with most of its estates, including the manor of Boxley, was afterwards granted to Sir Thomas Wyatt, the poet, the lineal descendant of whom bequeathed the latter to his relation, the late Lord Romney, whose son, the present Earl, is now owner. The abbey estate passed by a female to Sir Thomas Selyard, Bart. whose daughters and co-heiresses sold it to the Austens, Baronets, from whom it has passed by bequest to the Amhursts and Allens, in equal shares. “This monastery,” says Weever, “in former times, was famous for a wooden roode, by which the priests for a long while deluded the common people, untill their fraud and legierdmain was detected.” To this rood, or crucifix, which was called the Rood of Grace, and of which the mechanism seems to have been extremely ingenious, the abbey was indebted for many offerings; its curious movements being reported as miraculous, and, under that impression, great numbers of people were continually resorting hither.—The rood itself, at the period of the Dissolution, was publicly exposed at St. Paul's Cross, in London, before a prodigious multitude, by Hilsey, Bishop of Rochester, on Sunday, February the 24th,

the republic of Venice, and other states. In 1623, he was made provost of Eton, being all the reward he received for his great services. He died in 1639, and was buried in the chapel of Eton College. He wrote the “Elements of Architecture;” “Parallel between the Earl of Essex, and the Duke of Buckingham;” “Characters of some of the Kings of England;” “Essay on Education;” and Poema printed in the “Reliquiæ Wottonianæ,” 8vo.

1598; and was afterwards broken to pieces and burnt. Very little of the abbey buildings now remain. The church, which is a large edifice, contains various monuments of the Wyatt, Champney, Charlton, and Best, families. In the register are two instances of remarkable longevity: Edward Roberts, aged 106 years, died December the 18th, 1759; and Ann Pilcher, aged 100 years and eight months, buried February the 17th, 1790.

Pinnenden Heath, partly in this parish, and partly in that of Maidstone, has been a celebrated place for public meetings, from the time of the Conquest. Here, in 1076, was the famous assemblage held by order of King William, to determine the truth of the allegations brought by Archbishop Lanfranc, against the rapacious Odo, Bishop of Baieux; and at which, after a solemn enquiry of three days' continuance, the latter was adjudged to refund a great portion of his spoils. On the north side of this heath, in a very humble shed, is held the county court, monthly; and at elections for the county, here the sheriff assembles the meeting, as he does for the election of coroners.

At Grove, in this parish, is a remarkably fine vein of fullers earth, which lies about 30 feet deep, and is about seven feet thick. This earth was worked as early as the year 1690, when John Ray, merchant, of London, was sentenced to a severe fine and punishment in the star-chamber, for transporting it clandestinely to Holland. Near this vein of earth, a Roman urn was found about the year 1721, as several others have been since, with other relics of antiquity and coins; as also at Vintners, (in this parish) where the late James Whatman, Esq. erected a new mansion: most of the coins having the inscription of the Emperor Hadrian. On the different streams in this parish, are several paper-mills, the principal of which, called the Old Turkey Mills, was built by James Whatman, Esq. the father, about the year 1789, in place of the more ancient mills, which had been originally constructed for the purposes of fulling.

BRABORNE.]—In Braborne parish, five miles E.S.E. from Ashford, is the heath called Braborne Lees, upon which is a noted warren for rabbits, belonging to the Scotteshall estate. They are of a remarkably fine flavour, and Canterbury and all the neighbouring towns are plentifully supplied with them. On this heath, extensive barracks were erected, at an immense expense, during the late war. Braborne church is a large handsome building, consisting of two aisles, and two chancels, with a square tower steeple at the west end. This structure contains many ancient monuments and memorials, and there was, some years ago, a superannuated yew tree, growing in the church-yard, which being 58 feet 11 inches in circumference, bore near 20 feet diameter. A fine stately young one now flourishes in its place.

BRASTED.]—In this parish, 4½ miles W. by N. from Seven Oaks, is Brasted Place, the surround-

ing scenery of which is very beautiful. It formerly belonged to the Lords Willoughby de Broke. In Brasted church, is a magnificent monument in memory of Sir Robert Heath, Chief Justice of the Common Pleas, and King's Bench, in the reign of Charles the First, and his wife, Margaret.

BREDGAR.]—Bredgar, four miles S. S. W. from Sittingbourne, gave name to an ancient family who resided here in the reign of Henry the Third. One of this family founded a small college in the church, which continued till the Dissolution. The west door of the tower has a Saxon arch, with zig-zag ornaments, &c.

BRIDGE.]—The village of Bridge is situated on the Dover road, 3¼ miles S. E. by S. from Canterbury. It is crossed by the lesser Stoure, over which a stone bridge was built here some years ago, by the contributions of the neighbouring gentry. Sir Arnold Braems, Knt. pulled down the ancient court-lodge at Bridge, and "upon the foundation of that ancient fabric," says Philipott, "erected that magnificent pile which obliges the eyes of the passenger both to admiration and delight, and which, like a phoenix, seems to have arose more glorious out of its ruins." Of this building, there is now only one wing standing. The church displays several remains of Norman architecture. Inclosed in the north wall of the chancel, is a singular figure of a man, habited in a gown, with great sleeves; but, for whom intended, is unknown. Above this is an ancient piece of sculpture, divided into two ranges of compartments by an inscribed fillet; the subjects in the upper range are too much mutilated to be clearly made out; those of the lower range exhibit, first "the angel of the Lord expelling Adam and Eve from Paradise, with the words "Justitia Dei," on a label over their heads; second, "Adam and Eve on each side of the forbidden tree, with the devil climbing up it in the shape of a cormorant;" third, "Cain's offering;" fourth, "Abel's offering," distinguished as accepted by the flames which rise behind; and fifth, "Cain slaying his brother."

BROMFIELD.]—(See Leeds.)

BROMLEY.]—The pleasant, healthy, and respectable market-town of Bromley, lies 28 miles N. W. by W. from Maidstone, and ten S. E. by S. from London. It is said to derive its name from the Saxon words Brom-leag, signifying a field or pasture of broom; and the great quantity of that plant on the waste places near the town, sufficiently corroborates this etymology. The manor of Bromley was given to the Bishops of Rochester, in the eighth century, by Ethelbert, King of Kent, and with some slight interruptions, it has continued in their possession till the present time. These prelates had a palace here at a very early period, which was pulled down by the late Bishop Thomas, who erected the present edifice, a plain brick mansion, about the year 1777. This is now the only episcopal residence belonging to the see of Rochester. It stands about a quarter of a mile from the town, and is pleasantly situated

situated on the brow of a hill, looking towards Beckenham and Hayes. In the grounds is a chalybeate spring, called St. Blase's well, which anciently had an oratory annexed to it, dedicated to St. Blasius; it was much frequented at Whitsuntide; because Lucas, legate for Sextus the Fourth, granted an indulgent remission of 40 days enjoined penance, to all those who should visit this chapel, and offer up their orisons there in the three holy days of Pentecost. After the Reformation, the oratory fell to ruins, and the well was stopped up; but being re-opened in 1754, "was, by the bishop's orders," says Hasted, "immediately secured from the mixture of other waters; since which, numbers of people, especially of the middle and poorer sort, have been remarkably relieved by it from various infirmities and diseases."

Bromley church is a spacious building, consisting of a nave, chancel, and aisles, with an embattled tower, surmounted by a cupola at the west end: the north aisle was rebuilt in 1792; Bishop Thomas contributing 500*l.* towards the expence. Amongst the sepulchral memorials, which are numerous, is an ancient tomb in the north wall of the chancel, under a recess pointed arch, with mouldings springing from two pillars on each side, having capitals ornamented with foliage: the upper part, and east side, are mutilated. The person whose memory this was intended to commemorate, is unknown; but it is conjectured to be Richard Wendover, Bishop of Rochester, who died in 1250. Against the same wall is an inscribed monument to the memory of Bishop Zachary Pearce, D.D. who died in June, 1774, aged 84 years: and a slab in the pavement records the name and virtues of John Yonge, another Bishop of Rochester, who died in 1605.—Two other bishops of this see were also interred in this edifice; Walter de Henche, who died in 1360; and John Buckeridge, who was translated from Rochester to Ely, in 1628. Among the other memorials, are brasses of Richard Thornhill, Esq. who died in February, 1600, and his two wives, Margaret Mills, and Elizabeth Watson: they are represented in the dresses of the times. Dr. John Hawkesworth, author of the *Adventurer*, &c. who died prematurely, in November, 1773, æt. 58, has also a monument here: he was long an inhabitant of this town. The font, apparently of the Norman times, is of a square form, and the sides are ornamented with ranges of plain semicircular arches.

Bromley college was founded in pursuance of the will of John Warner, Bishop of Rochester, bearing date in 1666, for the residence and maintenance of 20 poor widows of loyal and orthodox clergymen. The original endowments have been greatly augmented by the gifts of various persons since that period. In 1756, Mrs. Helen Betenson, of Bradbourne, bequeathed the sum of 10,000*l.* for the purpose of erecting ten additional houses for as many widows of clergymen: since that a bequest of 12,000*l.* by William Pearce, Esq. for the building

ten more houses for clergymen's widows, has also fallen in. The widows on Bishop Warner's foundation have an annual allowance of 30*l.* 10*s.* each, with coals and candles: and others have 20*l.* each. The salary of the chaplain, is about 86*l.* yearly. The college buildings are pleasantly situated at the north end of the town. Here is also a charity-school for the clothing of 26 boys and girls.

The houses in the town are principally situated round the market-place, and on the high road to Farnborough and Seven Oaks. The markets are well supplied with corn, live-stock, &c. The grant for holding these was obtained by the Bishop of Rochester from Henry the Sixth, in the year 1447 or 1448. The market-house is a large old building, standing on pillars of wood. The population is about 3000.

The manor of Simpsons, now occupied as a farm, was anciently the seat of the Banquels, and afterwards of William Clarke, who had license from Henry the Fifth, "to erect a strong little pile of lime and stone, with an embattled wall, encircled with a deep moat." In the next reign, it was alienated to the Simpsons.

Among the other villas and seats in Bromley parish, is Freeland, the residence of Thomas Rackes, Esq. a Director of the Bank. Buckley, the handsome mansion of William Welles, Esq.; and Sundridge.

BROOME.]—In Barham parish, already noticed, is Broome, the seat of Sir Henry Oxendon, Bart. The house, which is of the time of Charles the First, was built by Basil Dixwell, Esq. The present possessor has expended considerable sums in improving the grounds.

CANTERBURY.]—The ancient and interesting city of Canterbury, which forms a county of itself, is situated at the distance of 55½ miles E. by S. from London. So remote is the antiquity of this distinguished station, that its origin is unknown; though there cannot be a doubt of its having been a settlement of the Britons long before the time of the Roman invasion. Its very name, indeed, as latinised by the Romans, is sufficient to indicate, that it was in existence before their arrival; for whether the term Durovernum be composed of the words Dwr-whern, a rapid stream; Dwr-avona, the river-water; Dwr-ar-guerne, the water near the fen or marsh; or Dwr-Aber, the mouth or discharge of the water, it must still be admitted to be derived from the ancient language of Britain. Geoffrey of Monmouth carries its antiquity to the time of Rudhudibras, who lived about 900 years before the birth of Christ; but his testimony has been discredited by superior authority. The Glainnaidr, or druidical beads, are stated to have been frequently found here, as well as the British weapons called celts. In the Itinerary of Antoninus, it occurs by the appellation of Durovernum; and the roads to the Portus Rutupensis, to Dover, and to Lymne, branched off from this city. Many coins and Roman vessels have

have been dug up here, with remains of buildings, and tessellated pavements of curious workmanship: in the city walls, numerous Roman bricks have been found incorporated; and three very fine semicircular arches, in admirable preservation, formed with the same materials, were standing till towards the latter end of the last century. In the time of Charles the First, some Roman arched brickwork was discovered about five or six feet below the ground, in sinking a cellar in Castle Street. At the beginning of the last century, the remains of a foundation of Roman bricks were also found in digging a cellar in the parish of St. Alphage, and several of the bricks, measuring $17\frac{1}{4}$ inches, by $11\frac{1}{4}$, were taken up whole; and "I am told," says Battely, "of a Roman pavement of mosaic work, whereof I have some of the little square stones by me, found in digging a cellar in St. Margaret's parish." In 1730, a fine Roman vase of red earth, with the inscription TARAGET DE TEVE, was found near this city, with a brass lachrymatory. Hasted mentions another Roman pavement, discovered near Jewry Lane, in 1739, not more than three or four feet below the level of the ground.

Canterbury, in the time of the Saxons, obtained the appellation of Cant-wara-byrg, or the Kentishmen's city; and Bede, speaking of it in reference to the arrival of St. Augustine, calls it "the chief place in all the dominion of King Ethelbert." On the conversion of this monarch to Christianity, he relinquished his palace here, and granted it in perpetuity to Augustine and his successors, with the lands which afterwards formed the immediate demesnes of Christ church. The apostle, having procured permission from Pope Gregory, who had invested him with archiepiscopal authority, made choice of Canterbury for the seat of the metropolitan chair, in preference to the city of London, where an archiepiscopal see is stated to have been previously fixed in the Roman times.

The vicinity of Canterbury to the isles of Thanet and Shepey, where the Danes usually wintered, was the cause of great calamities. In the year 851, the Danes landed from 350 ships, and laid the city waste: about the year 918, they had again obtained possession, but are recorded to have been besieged, and driven out by the Princess Elfreda, the magnanimous daughter of Alfred: in this siege, the city is stated to have been burnt. In 1009, the inhabitants purchased a short-lived peace of the Danes, at the expense of 30,000*l*. In 1011, the Danes again besieged Canterbury, and during a contest of 20 days, exerted every effort to overpower the inhabitants. The Danes at length forced the gates, and entering the city with loud shouts, and the sound of trumpets, commenced the work of slaughter. The streets were covered with dead bodies, and many were precipitated from the walls. Women were seen dragged by their hair through the streets; and, after being exposed to every insult, were at length thrown into the flames, arising from

their own dwellings. The very infants were torn from their mothers' breasts, and either thrown into the air, and caught on the points of spears, or laid under the wheels of carriages, and crushed to pieces. Neither age nor sex was exempted from the sword; and even when the first impulse of their rage had been satiated, the Danes, by a refinement upon cruelty, obliged the survivors to cast lots, and the tenth person only was suffered to remain alive. Thus perished nearly 8000 persons; and the few who escaped, were carried captives to the Danish camp at Greenwich. Among these was Alplage, or Elpheg, the Archbishop, who was at last barbarously put to death, for refusing to consent to the payment of an exorbitant ransom. The greater part of the city was, on this occasion, burnt to ashes, together with the cathedral to its bare walls. After the death of Edmund Ironside, and the usurped succession of Canute, the kingdom found some repose: the Danish monarch appears to have contributed towards the re-peopling of this city, and, assisted by his munificence, Ægelnoth, who had succeeded to the archbishopric, completed the repairs of the cathedral.

Canterbury now gradually recovered from the desolated state into which it had been so recently thrown, and at the time of the Domesday Survey, it had again become a considerable city. Stow affirms, that, "at the time of the Conquest, it exceeded London in its buildings." By whom the castle (mentioned in the Domesday Survey) was erected, does not appear; yet, as this fortress is not noticed in any former writing now extant, the probability is, that it was built by the Conqueror. The remains, which still exist, evince it to be a Norman building. In 1161, Canterbury was consumed by fire; and in 1174, another fire destroyed great part of the city, together with most of the churches, and the cathedral itself. Gervase, a monk of Christ church, notices another fire, by which it was much damaged in the year 1180. In 1247, St. Mildred's church, and great part of the city, were again consumed by fire: and "nowe, lately, and lastly," says Lambard, "in the reign of King Henrie the Eight, it was in some partes blasted with flame, wherein (amongst other things) divers good bookes, which a monke of St. Augustines had brought from beyonde the seas, were brought to ashes."

It was in this city, and its immediate vicinity, that the mental darkness of the Saxons was first illuminated by the light of Revelation; and the barbarism of their character meliorated by the mild tenets of the Christian doctrine. Even in the Roman times, considerable progress had been made in the conversion of the inhabitants. Various Christian churches had been erected in different cities; even as early, according to some writers, as the second century: of these, St. Martin's, on the east side of Canterbury, is said by Bede, to have been built by the "believing Romans;" or, "in ancient times, whilst

whilst, as yet the Romans inhabited Britain." This fabric was still standing when Augustine was invited to Canterbury, by King Ethelbert, and was by him again appropriated to the promulgation of the Christian worship. The mission of Augustine, is well known to have originated with Pope Gregory the First. Ethelbert, King of Kent, then the nominal head of the heptarchy, had married Bertha, daughter of Charibert, King of Paris, and niece to Chilperic, his brother and successor. Ethelbert engaged that the Princess should be allowed the free exercise of her religion, and permitted to bring over with her, a certain number of ecclesiastics. These circumstances prepared the way for the success of Augustine, who landed at Ebbs Fleet, in the isle of Thanet, in the year 596, with his forty companions; and immediately dispatched a messenger to Ethelbert, to inform him of his coming, and of the purposes of his mission. Ethelbert ordered him to await his attendance on the spot where he had landed; and, within a few days, accompanied by his Queen, he went into the isle of Thanet, where seating himself in the open air, he commanded the strangers to be brought before him, and asked them "what they had to propose?" Augustine replied with firmness and animation; and, in a long harangue, endeavoured to convince him of the truth and utility of Christianity. "Your proposals are noble," said the King, "and your promises inviting: yet I cannot resolve upon quitting the religion of my ancestors, for one that appears to me supported only by the testimony of persons who are entire strangers to me. Since, however, as I perceive that you have undertaken so long a journey on purpose to impart to us those things which you deem most important and valuable, you shall not be sent away without some satisfaction. I will take care that you shall be treated with civility, and supplied with all things necessary and convenient: and if any of my people, convinced by your arguments, desire to embrace your faith, I will not oppose it." He then, at the request of Bertha, invited the missionaries to Canterbury, and gave them permission to explain the principles of their religion in public; and for this purpose, the Queen assigned to them her own chapel, which is stated to have been that already mentioned as having been erected in the Roman times, and which Luidhard, Bishop of Soissons, who had accompanied Bertha from France, had re-consecrated, and dedicated to St. Martin. Ethelbert was ultimately converted; his conversion was the harbinger of complete success; multitudes of his subjects were baptised daily; the Pagan temples were deserted, or re-opened as Christian churches; and these becoming insufficient for the hourly increasing number of votaries, the foundation of a cathedral was laid. Ethelbert, in a pure spirit of devotion, resigned his palace to the use of Augustine, and went and resided with his court at Reculver. So eager were the Saxons to receive the Gospel, that some thousands were in one day

baptised in the river Swale. Shortly after the conversion of Ethelbert, Augustine proceeded to Arles, in France, to be consecrated a Bishop; and, on his return, he sent two of his companions, Justus and Lawrence, to inform the Pope of the accomplishment of his mission. Gregory received the accounts of his success with the utmost satisfaction; invested him with archiepiscopal authority; and gave him pre-eminence over all the prelates that either were, or should be established in Britain, during the remainder of his life.

Ethelbert's palace was converted by Augustine, into a priory of his own order; and herein, both himself, and his successors, till the accession of Archbishop Lanfranc, lived in one community, as well in respect to goods, as to other possessions. He also, in conjunction with Ethelbert, founded an abbey just without the city walls, on the east side, as a place of sepulture for himself, and his successors in the see of Canterbury; and for the King, and his successors, Kings of Kent: the practice of burying in cities being prohibited by a law of the twelve tables, which appears to been then in force. This abbey Augustine dedicated to St. Peter and St. Paul; but it was afterwards called St. Augustine's, from his own name. The cathedral, though not completed at the time of his death, he dedicated to "our Saviour Christ;" and it is still generally called Christ church; though Archbishop Lanfranc, on rebuilding it from the ground, re-consecrated it to the honour of the Holy Trinity. Augustine died in 605, and was interred within the unfinished abbey of St. Peter and St. Paul. Lawrence, the second Archbishop, endeavoured to extend the knowledge of the Christian doctrine to the remotest parts of Britain: he also went to assist in the conversion of the Scots and Irish. He died in 619. — Mellitus, his successor, whom Augustine had made Bishop of London, was a man of pre-eminent piety and merit. By him, the East Saxons had been converted to Christianity; and Sebert, their King, had, at his instance, founded the cathedral of St. Paul, in London. On the death of Sebert, however, his three sons, and successors, relapsed into Paganism, and Mellitus was driven from his bishopric, and, after a short residence in Kent, he went into France; but was invited to return by Eadbald, the successor of Ethelbert, by whose influence he probably obtained the patriarchal chair on the death of Lawrence. He died in 624. Justus, his successor, who was translated from the see of Rochester, of which he had been appointed the first bishop by Augustine, died in 627; and was succeeded by Honorius. This prelate is, by some, stated to have been the first who instituted the division of ecclesiastical districts into parishes. He died in 654. Deus Dedit, or Frithona, the successor of Honorius, was the first native of Britain that became Archbishop of Canterbury. He possessed considerable learning; and is said, by Pitseus, to have written "Memoirs of the Lives and Actions of

of his predecessors. The seventh archbishop was Theodore, a Greek; a prelate of distinguished worth, as well for learning, as for greatness of mind, and solidity of judgment.

Soon after his arrival, he visited all the English churches, and made many alterations in ecclesiastical affairs. He introduced several new doctrines and practices into the church; one of which was that of auricular confession; and, by his influence, brought all the English churches to a perfect uniformity in discipline and worship: he divided the larger bishoprics, and created new ones; and encouraged the great land-holders to erect parish churches, by declaring them, and their successors, perpetual patrons: he instituted a regular provision for the clergy, by imposing a certain tax on every village throughout the states of the Heptarchy; and by these, and other regulations, well calculated to his purpose, he obtained a complete supremacy in ecclesiastical affairs. Among his other acts, he held three councils, in the second of which, he divided Mercia into five bishoprics. He was a great patron of learning, and founded a school, or college, in this city, "wherein," says Lambard, "he placed professors of all the liberal sciences, which also was the very paterne to the scole, that Sigebert, the King of East-Angle, afterwards buildid." He died at the age of eighty-eight, in 690. Brithwald, the second Englishman that was promoted to this see, had been abbot both of Reculver and Glastonbury, and while in the patriarchal chair, held several synods for the regulation of the affairs of the church. He is stated, in the Saxon Chronicle, to have been the first who caused donations and grants of lands to religious houses to be confirmed by written charters. He is also said to have been the first that was styled *Primas Totius Britannia*, which title appears in a charter given by King Wihtred. He died in 731, having filled the see of Canterbury upwards of thirty-one years. His immediate successors were Tatwyn, a Mercian, and Nothelm, a native of London. Cuthbert, the eleventh archbishop, was the first who obtained permission to attach burial places to churches built within the walls of cities. He next procured license, that all future archbishops of Canterbury should be buried within the monastery at Christ Church, and not at St. Augustine's; and for the reception of their bodies, he erected a chapel, or church, dedicated to St. John Baptist, near the east end of the

cathedral. He died in 758; and was buried in the chapel which he had himself built. Bregvyn, his successor, who died in 762, only three years after his consecration, was buried in the same chapel. Lambert, the new archbishop, held the see about eight years. Athelard, who had been abbot of Malmesbury, and bishop of Winchester, succeeded Lambert; and, by his address and abilities, procured the dissolution of the new archbishopric of Lichfield, which Offa had founded; and also the full restoration of Canterbury to its patriarchal dignity. He died in 807; and was succeeded by Wulfred, archdeacon of Christ Church, who proved a considerable benefactor to his see, both by his industry in procuring restitution of many lands which had been unjustly detained from it, and by his own donations. On his decease, in 829, the vacant see was conferred on Fleologild, who survived only three months; and was succeeded by Ceolnoth; whose primacy was continually disturbed by the incursions of the Danes. He held the see upwards of thirty-eight years, and dying in 870, was succeeded by Athelred, whose government was also in continual peril through the Danish ravages; he died in 888. His successor was Plegmund, elected on the recommendation of the Great Alfred, to whom he had been a preceptor: he died in 923. His immediate successors were Athelm, Wlfhelm, and Odo.* Odo repaired the cathedral of Canterbury in a substantial manner, and covered the roof with lead: he died in 958. His successor, Elsgne, bishop of Winchester, who had been his inveterate enemy, was nominated by the king, from his affinity to the blood royal. He was a prelate of extraordinary learning; but his promotion proved the occasion of his death; for while on his journey to receive the pall from the hands of the pope at Rome, he perished amid the Alps through the intensity of the cold: his body was brought to England, and interred at Winchester. Brithelm, bishop of Wells, was next elected to the vacant see; but shortly afterwards he resigned his new dignity, and returned to his former charge, his disposition being too placid to permit him to manage the affairs of the archbishopric. The talents and address of archbishop Dunstan, his successor, were of the most eminent rank, and his ambition and pride were equally exalted. Ethelgar, the successor to Dunstan, was translated from the bishopric of Selsey, or, as it is now called, Chichester; but dying in about fifteen

* The latter, surnamed Severus, was of Danish extraction, but having embraced Christianity at an early period, was for that abandoned by his parents. He was afterwards patronized by a nobleman in the court of Alfred, by whose interest, and through his own abilities, and application to learning, he quickly passed through the inferior degrees of the priesthood, and was made bishop of Sherborne. His reputation was so great, that, on the death of Wlfhelm, he was chosen as the most fit person then living to fill the patriarchal chair. His aspiring mind caught new strength from his elevation, and he boldly attempted to render the authority of the church superior to all earthly

control. His famous pastoral letter, since called the 'Constitutions of Odo,' was promulgated in 943, and contains the following passage: "I strictly command and charge, that no man presume to lay any tax on the possessions of the clergy; who are the sons of God; and the sons of God ought to be free from all taxes in every kingdom. If any man dare to disobey the discipline of the church in this particular, he is more wicked and impudent than the soldiers who crucified Christ. I command the king, the princes, and all in authority, to obey, with great humility, the archbishops and bishops, for they possess the keys of the kingdom of Heaven."

months, was replaced by Siricius, who had been abbot of St. Augustine's, and was then bishop of Bath and Wells. It was by his advice that Ethelred is said to have adopted the miserable policy of bribing the Danes to quit the kingdom. He died in 994, and was succeeded by Ælfric, bishop of Sherborne, who translated part of the scriptures into the Saxon language. On his death, in 1005, Alphage, who was barbarously murdered by the Danes at Greenwich, in 1012, was translated hither from Winchester. Living, or Livingus, his successor, who had crowned Edmund Ironside King, in opposition to Canute the Dane, was so greatly affected by the calamities of the times, that he went into voluntary exile, but returned about the period when Canute became sole monarch. He died in 1020, and was succeeded by Agelnoth, a monk of Glastonbury, who is recorded to have entirely completed the repairs of the cathedral, which Livingus had begun after it had been set fire to by the Danes in the time of Alphage. In this work he was assisted by the munificence of Canute, who had a great friendship for him, and who was probably induced by his persuasions, to grant the entire revenues of the port of Sandwich for the sustenance of the monks, at the same time (anno 1023) that he took the crown from his own head, and placed it on the high altar at Canterbury. In 1037, Agelnoth crowned king Harold, at London: he died in October, the following year, and was afterwards canonized. Eadsin, bishop of Winchester, was next promoted to this see, in which he continued till his death, in 1050. His successor, Robert, a monk of Gemetica, in Normandy, who had been made archbishop by Edward the Confessor, was ejected for seditious practices in 1052. Stigand, bishop of Winchester, an Englishman, and a prelate of considerable influence and ability, was next appointed to fill the Metropolitan chair. His opposition to the conqueror excited the enmity of that sovereign, who deprived him of his archbishopric, and cast him into prison, where he ended his days. Lanfranc, a native of Pavia, in Italy, who was then abbot of St. Stephen's at Caen, was appointed to fill the vacant chair. He was a prelate of great talent, and exalted munificence. He rebuilt the Cathedral of Canterbury, which Eadmer states to have been a third time destroyed by fire, previously to Lanfranc's advancement, from the very foundations: and this example was followed by many other of the Norman bishops in their respective dioceses. Lanfranc also furnished the cathedral with many ornaments, and rich vestments. All the monastic offices, with the surrounding walls, and the archbishop's palace, were likewise rebuilt by Lanfranc. He also founded and endowed the priory of St. Gregory, in Canterbury, and the two hospitals of St. John, without Northgate, and St. Nicholas, at Harbledown; and greatly assisted bishop Gundulph in the re-construction of Rochester Cathedral; and abbot Paul, in the re-building of the Abbey church

at St. Alban's. He divided the possessions of his church, the revenues of which had hitherto been divided between the archbishop and the convent in common, into two allotments, directing the one to be for ever after applied to the distinct use of the archbishops; and the other, in like manner, to the use of the monks. He procured the restoration of twenty-five manors belonging to this see, and of many others belonging to the see of Rochester, from Odo, bishop of Baienx, and earl of Kent, who had seized, and annexed them to his own possessions. This was done in a solemn assembly held during three days on Pinnenden Heath, in presence of all the people of Kent. The conqueror repeatedly constituting Lanfranc sole justiciary of the kingdom, during the times that he went beyond sea. William Rufus, though principally indebted to the friendship of this prelate, for his crown, banished him the kingdom; but permitted him to return, on the intercession of his friends. The archbishop died in 1089, having filled this see about nineteen years. From the period of Lanfranc's death, till the year 1093, Rufus kept the archbishopric in his own hands. At length, in a severe sickness, he nominated Anselm, a native of Aoust, in Piedmont, and abbot of Bec, to this see; but after his recovery, he demanded 1000*l.* from Anselm for his own use, and oppressed him so severely, that, at last, he quitted the kingdom; and, after in vain soliciting the pope to engage in his quarrel, he retired to a monastery at Lyons. Henry the First recalled Anselm; but the prelate soon began to dispute with the king, the right of investiture of bishops and abbots; and several of those whom Henry had invested, resigned their benefices, for fear of excommunication. The king, however, steadily refused to accede to the archbishop's claims; the dispute continued with unabated obstinacy; and the archbishop again quitted the kingdom, accompanied by the bishops who had resigned, and laid his case before the pope, at Rome, whither also the king sent the archbishop elect of York, and the bishops of Chester and Thetford, to plead his cause. At length, in the year 1106, by the persuasions of Adela, countess of Blois, the king's sister, Henry was induced to have a meeting with Anselm, when it was arranged, that the king should renounce the right of investiture; but that the bishops, and abbots, should do him homage for their temporalities: to this agreement the pope reluctantly gave his consent; and the archbishop returned to Canterbury. He immediately recommenced the persecution of the married clergy: and some time afterwards called a synod, in which, at his instance, several penalties were decreed against 'all priests who lived in a state of matrimony.' Anselm died in his seventy-sixth year, in 1109; and in the reign of Henry the Seventh, was canonized, for 'his piety and sufferings,' at the intercession, and expence, of archbishop Morton. Henry kept the archbishopric vacant till 1114, when he permitted the

the monks to elect Ralph, bishop of Rochester, to fill the vacant chair. This prelate re-dedicated the church to the Holy Trinity. He was nick-named Nugax, or the Trifler; notwithstanding which, he was a great stickler for the prerogatives of his church. He died in 1122; and was succeeded by William Corboil, prior of St. Osyth's, in Essex, in whose time, anno 1130, the cathedral received some damage by fire; but having been quickly repaired at the archbishop's expence, it was once more dedicated to Christ the Saviour, in the presence of the king and queen, of David, king of Scotland, and of most of the prelates and nobility of both kingdoms. Corboil died in 1133, and was succeeded by Theobald, abbot of Bec, a staunch upholder of the prerogatives of the church. His goods were twice confiscated, by king Stephen, for disobedience; and he

was once compelled to quit the kingdom; yet he had the firmness to place the sovereign himself, as well as his whole realm, under an interdict. Being afterwards reconciled to the king, he proved the chief means of concluding the peace at Wallingford, between him and the empress Maud. He also was legate of the Apostolic see, and held a general council in London, in 1151. He died in 1161. His successor was the famous Thomas Becket, the imperious, but able coadjutor of the Roman pontiffs, in the bold design of 'fixing on the neck of the whole western world, the iron yoke of servitude,' and of reducing all its sovereigns and states, to acknowledge the pope as the supreme and independent monarch, the source of all government, the foundation of all legitimate authority.* After the confusion which the murder of the archbishop occasioned

* Becket was the son of a merchant of London, where he was born in 1119. The rudiments of education he received in the monastery at Merton, in Surrey; he then went to Oxford, where he was made chaplain to archbishop Theobald, after which he completed his studies in the Universities of Paris and Bononia. On his return he was received into the family of the archbishop, and, after various promotions, was made chancellor of England in 1151 or 1155. In this situation he became a great favourite with Henry the Second; and, by his courteous behaviour, that monarch was induced to raise him to the primacy about a twelvemonth after the death of Theobald, though in opposition to the empress Maud, and the great body of the clergy. The grand and leading feature of his disposition, was soon discovered to be a stern inflexibility; and neither gratitude, nor persuasion, nor danger, had sufficient influence on his mind, to induce him to depart from his determination. One of his first acts, was to resign the chancellorship, and that even without acquainting the king, who was then in Normandy, with his intention. Henry at length discovered, that the late supple courtier was now aiming at rendering his own power independent of all lay authority. Incensed at the arbitrary acts by which Becket was striving to advance his own supremacy in connection with that of the church, the king determined to enforce the prerogatives of his crown. He accordingly convened an assembly of the Lords, spiritual and temporal, and proposed a regulation, consisting of five articles, by which, among other things, it was declared, that "no appeal should be made to the court of Rome without the king's license; that no tenant in chief, or any other of the king's officers, should be excommunicated without the king's consent; and that all clergymen charged with capital crimes, should be tried in the king's courts." These articles were readily agreed to by the temporal lords; but Becket, and the other prelates, steadily refused their consent, unless the words 'saving the rights and privileges of God and the church' were added. Irritated at this refusal, the king suddenly quitted the assembly, and departed to Woodstock, giving the spiritual lords to understand, that 'he would take effectual measures to set bounds to their pride.' Becket, after much intreaty, was induced to agree to the proposal of sending deputies to inform the king, that himself, and his brethren, were ready to subscribe to the articles, although the saving clause should not be annexed. Henry was sensible that Becket would, if possible, recall his consent; and, to prevent that, he summoned a Parliament at Clarendon, where the articles, matured into a more legal form, were again proposed for acceptance. The lay lords immediately ratified them; and the prelates durst not openly oppose; though it was with the greatest difficulty that Becket could be persuaded to annex his signature. The pope condemned the articles, as 'prejudicial to the church, and destructive of her privileges.' Becket afterwards, declared openly, that he repented of his conduct, in signing arti-

cles so contrary to ecclesiastical rights; and declared that he could hope for no pardon for so enormous a crime, but from the pope's mercy. He therefore suspended himself as unworthy to perform the archiepiscopal duties; but, on receiving the pope's absolution, and assurances of support, he resumed the exercise of his functions. The contumacy of Becket greatly exasperated the king; and, in a great council held at Northampton, he caused him to be charged with the capital crimes of converting to his own use, 'the revenues of the archbishopric of York, of which he had the custody whilst chancellor;' and of 'embezzling 30,000*l.* of the king's money.' Becket's principal reply to these charges was, that, "being invested with the first ecclesiastical dignity in the realm, he was not bound to answer before laymen;" nor would he acknowledge the jurisdiction of the assembly. This conduct still more inflamed the indignation of the king, who, after confiscating all the archbishop's movable effects, ordered him to be accused of perjury and treason. No accusations, however, could move the inflexibility of Becket, who suffered himself to be condemned of perjury without defence; and when he found that the barons were actually assembled in the presence of the king, to determine on the charge of treason, he went, with his cross in his hand, into the midst of the court, as if in defiance of its authority; and on the archbishop of York telling him that his sovereign's weapon was sharper than his, he insolently replied, that "it was true, the king's weapon could kill the body; but that his destroyed the soul, and sent it to hell." Henry ordered the lords immediately to pass sentence on the new crime which Becket had committed; and, after a long debate, it was declared, that "he deserved to be committed to prison, and punished according to law, for insulting the king, and coming into the assembly, in a manner calculated to raise a sedition among the people." The earls of Cornwall and Chester were then sent to summon him to appear, and receive his sentence; but he refused to comply, alledging, that 'the peers had no authority to judge him, and that he appealed to the pope.'

His danger was now extreme; he felt the importance of his personal safety, and he mounted his horse, and fled. The same night he assumed a disguise, and travelling through unfrequented roads, reached Sandwich, where he embarked for Flanders. Both parties now appealed to the pope; Henry, by his ambassadors, and Becket, in person. The peculiar situation of the affairs of the papal see at that period, rendered it necessary for the pope to temporise, and he therefore delayed the hearing of the cause till a more convenient season. Henry, aware of the double game which Alexander the Third was endeavouring to play, in the warmth of his resentment forbade all appeals to the court of Rome, under the most severe penalties. He ordered the revenues of all the ecclesiastics who espoused the cause of Becket to be sequestered; he seized the revenues of the archbishopric; and he commanded the magistrates to punish

sioned in the church, and the concourse of people, which the tumult of it had brought together, had dispersed, the monks took the body, and carried it to the great altar, where it remained till the next morning, when a rumour prevailing that the assass-

sins would come, and take the body away, and throw it without the walls, as a prey to the dogs, and the fowls of the air, the prior and convent, with the abbot of Boxley, who happened to be present, resolved, after consultation, to bury it immediately. Stripping

on the spot, as traitors, all persons who should be taken with any mandates or letters about them, either from Becket or the pope, which imported the excommunication of any private person, or laid the kingdom under an interdict. The archbishop was equally determined, and immediately excommunicated every one that adhered to the 'Constitutions of Clarendon,' (the laws agreed to by the Parliament, at that place) and, in particular, several lords of the council. Henry, apprehensive that the anathemas of the church would occasion a revolt among his subjects, or induce an invasion of his kingdom by a foreign power, levied an army; a procedure which had a sensible effect on the measures of the pope; but as the king ultimately discovered that his design in sending 'legates to England to decide the quarrel,' was only to gain time, and as Becket still displayed the most froward perversity, accommodation was then impossible. At length the king proposed, in the presence of the king of France, at a meeting purposely appointed near Paris, the outline of an agreement with Becket in these words: "There have been in England, kings not so powerful as myself, and archbishops that have been great and holy men: let him but pay me the same regard as the greatest of his predecessors paid the least of mine, and I will be satisfied." Even this the archbishop refused, by an affected appeal to the pope, without whose consent, he said, as the affair was now before him, he could not agree to any thing. Shortly afterwards, Alexander sent notice to the king, that he had given power to the archbishop to revenge, with the sword of excommunication, the injuries done to the church, and to his own person; and Becket immediately began to shower his anathemas in such profusion, that the king had hardly a sufficient number of the clergy unexcommunicated to officiate in his own chapel. Henry, however, was not yet intimidated; and when he heard soon afterwards, that the archbishop of Sens, who had given protection to Becket in his own monastery, was soliciting the pope, among other measures, to excommunicate Henry himself as an obstinate heretic, he issued fresh orders, to prevent any person from entering the kingdom with mandates either from the pope or archbishop; and declared that, should any letter of interdict be published in England, all that submitted to it, "should immediately be hanged as traitors to their king and country." He also suspended the payment of the Peter-pence; and enjoined all absent clergymen to return to their benefices, under pain of forfeiture of their entire revenues.

These decided steps made the pope apprehensive, that, if he then proceeded to the extremities he had meditated, England would be wholly lost to him; he again, therefore, sought to gain time, and again left the cause undetermined.* In the mean time, Henry convened a general meeting of the chief prelates, the nobility, and all the principal officers of every county and city throughout the kingdom; and before this numerous assembly, caused Henry, his eldest son, to be crowned king, by the archbishop of York, assisted by the bishops of London and Durham; thus immediately violating one of the most acknowledged prerogatives of the archbishops of Canterbury. This gave additional umbrage to Becket, who still continued in exile, most resolutely bent on the maintenance of his claims, but still, from the peculiar situation of the pope's affairs, condemned to launch his thunders with an impotent hand. He had now passed six years an alien from his country; when Henry, in whose mind some scruples had arisen, from the near approach of death in a severe illness, once more determined to seek a reconciliation; and, in a conference held with Becket at Montmirail, in presence of the king of France, he agreed to almost every thing that the archbishop proposed. Nothing remained to adjust; when Becket, stepping forward to give

him 'the kiss of peace,' said that he was 'going to salute him to the honour of God.' Henry, who was not entirely satisfied with the archbishop's manner, refused his salute, if accompanied by those words, which he considered as superfluous; and on this ground the agreement was once more broken off. In another, held shortly afterwards at Amboise, all difficulties were surmounted: Henry, among other engagements, promised to restore the archbishop to the same state which he held before his banishment; and, in testimony of the sincerity of his professions, held Becket's stirrup whilst he mounted on horseback.

Before he quitted France, Becket obtained the pope's license to suspend the archbishop of York, and to excommunicate the bishops of London, Durham, and Exeter, who had been the most active against him. These purposes he executed in the moment he landed, notwithstanding the intreaties of the young king, who sent messengers to request him to forbear. Shortly afterwards, he solemnly excommunicated two of the king's immediate servants, as though determined to show that his late reconciliation had only been entered into, to furnish an opportunity of reviving the dispute. Henry was at this time in Normandy, whither the suspended and excommunicated prelates hastened to inform him of Becket's injustice. They threw themselves at the king's feet, and complained that the restoration of the archbishop was the cause of new troubles; and the archbishop of York added, that, whilst Becket was living, it seemed impossible that England should enjoy repose. Henry, in a fit of passionate resentment, lamented bitterly, that 'no one, among the numbers he maintained, should dare to revenge the insults he was continually receiving from a turbulent priest.' These words were not spoken in vain: four of the immediate attendants on the king, whose names were Reginald Fitz-Urse, William de Tracy, Hugh de Morville, and Richard Brito, bound themselves by an oath, either to terrify the archbishop into submission, or to put him to death. That no suspicion of their intentions might transpire, they quitted the court at different times, and, by different routes, proceeded to Saltwood castle, near Hythe, where they met on the same day, (December the twenty-eighth,) and having settled their plan, they departed on the next morning to Canterbury, with a band of resolute men, having arms concealed under their clothes. These men they stationed in different parts, of the city, to prevent interruption from the citizens; and then, with twelve others, they proceeded unarmed to the archiepiscopal palace, where they found Becket conversing with some of his clergy. After an awful silence, Reginald Fitz-Urse told him, that they were sent by the king, to command him to absolve the persons whom he had excommunicated, and afterwards to go to Winchester, and make atonement to the young king, whom he had endeavoured to dethrone. This produced a long and violent altercation, in the course of which, they hinted that his life was in danger if he refused compliance. Still Becket continued inflexible; and they departed, after charging his servants not to suffer him to flee. "Flee!" exclaimed the archbishop, with much vehemence, "I will never flee from any man living." His friends now blamed him for the roughness of his answers, which had incensed his enemies to fury, and earnestly pressed him to withdraw; but he slighted their intreaties, and answered, 'he had no need of their advice; he knew what he had to do.' In the afternoon, Fitz-Urse, and his three companions, finding that their threats had been ineffectual, put on their coats of mail, and each taking a battle-axe and sword, went again to the palace, where they sought in vain for the archbishop, who, at the first alarm at their entrance, had been hurried by those around him, across the court, and through the

Stripping it, therefore, of the hair cloth and habit of a monk, which the archbishop always wore underneath, they clothed it in his pontifical dress, and buried him in a new stone coffin, in the crypt, at the east end of the under-croft of the church." After the death of Becket, the performance of divine worship in Canterbury cathedral was suspended for nearly a year; and the church itself appears to have been left in the same dirty condition to which it had been reduced by the crowds that flocked into it, at the time, and after the murder. The suspension was at last taken off by the pope's command, and the celebration of the holy offices was recommenced by the suffragan bishops. The immense multitudes of superstitious devotees of every rank that flocked to the tomb of Becket, proved a most prolific source of revenue to the church. Even in the earliest years of his renown, the oblations were of great annual value; and in this stage, they were as usefully appropriated, as ignorantly offered; for they enabled the monks to re-build the choir, which

the cloisters, to the cathedral; the sacredness of which edifice, it was presumed, would disarm the conspirators of their violence. They would also have closed the entrance; but Becket, still undaunted, cried out, "Begone, ye cowards! I charge ye, on your obedience, do not shut the door: what! would you make a castle of a church?" It was now the time of vespers, and Becket was proceeding up the steps from the north end of the west transept, towards the choir, when the knights entering from the cloisters, the foremost of them exclaimed, "Where is the traitor? Where is the archbishop?" Becket directly turned back, and answered, "Here is no traitor: but here am I, the archbishop." William de Tracy then seized him as his prisoner; but Becket, in a scuffle, shook him so violently, as almost to throw him down: on this, de Tracy aimed a blow with a sword at the archbishop, which only slightly wounded his head, the force of it having been warded off by a priest, whose arm was nearly severed in two by the stroke. The weapons of the other conspirators, however, immediately dispatched him; and he fell dead before the altar of St. Benedict. A piece of his skull was struck off by the violence of one of the blows, said to have been inflicted by Richard Brito; and Hugh de Moraville is stated to have scooped out the brains of the dead archbishop with his sword, and to have scattered them over the pavement.

Such was the horrible termination of the perturbed life of this prelate, whose courage in death, obtained him the admiration even of his enemies, and highly contributed to that hallowed, and almost universal respect, with which his memory was revered for ages. However acceptable the death of the archbishop might be to the king, the circumstances under which it had taken place, gave him inexpressible concern; and he found it necessary solemnly to deny, that he was in anywise a participator in the guilt of the assassins. Notwithstanding this denial, the ambassadors which he sent to justify his conduct to the pope, could with difficulty obtain a hearing, and they were obliged to swear in his name, that 'he would submit to whatever penance the church should inflict,' before they could prevail on the incensed pontiff to give them an assurance, that neither their sovereign, nor his kingdom, should be laid under interdict, or excommunication.

The conspirators took refuge, for an entire twelvemonth, in Hugh de Moraville's castle, at Knarborough, in Yorkshire, which he held in right of his wife; but afterwards going to Rome, they were admitted to absolution, on condition of doing penance for life in the Holy Land. In the year 1172, the legates whom the pope had appointed to inquire into the par-

had been wholly destroyed by the fire in 1174, in a style of increased magnificence. So extensive, indeed, was the reputation which the memory of Becket acquired, that, in the quaint phraseology of Lambard, the 'name of Christ was cleane forgotten;' and the cathedral itself obtained the name of the 'Church of St. Thomas the Martyr.' The new chapel of the Holy Trinity, was completed about the end of the year 1184; and with this was afterwards annexed a small circular building, now called Becket's Crown, (probably from the Corona, or top of the skull, which the archbishop's murderers are stated to have cloven off,) which forms the eastern termination of the cathedral. Beneath the whole of this new part of the fabric, an elegant crypt was also built: the entire expences being defrayed, like those of the choir, by the offerings made at Becket's tomb.

Considerable dissensions arose between the suffragan bishops, and the prior and convent of Christ church, respecting the right of chusing a successor

particulars of Becket's murder, met the king in Normandy, and, after many delays and difficulties, and the examination of numerous witnesses, they permitted him to take a solemn oath, that he "neither commanded, nor consented to, the assassination." They would not, however, absolve him from the crime laid to his charge, till he had bound himself to an almost unconditional submission to the holy see; and engaged to lead an army within three years to the Holy Land. He also, by a private article, obliged himself to walk barefoot to Becket's tomb, and submit to be scourged by the monks of Canterbury. This last obligation he performed immediately on his return to England; and when at some distance from the city, he alighted, and, in the humble garb of a pilgrim, walked barefoot to the cathedral, where, after prostrating himself at the tomb of the new saint, in the deepest sorrow, he retired to the chapter house, where he was scourged, with much severity, by all present, "some giving three lashes, others five." The succeeding night he passed with much affliction, on the bare ground, before the tomb; and, after hearing mass the next morning, he departed from Canterbury.

This degrading humiliation of a crowned head, gave every degree of publicity to the fame of the archbishop, whose relics, according to the report of the monks, had already wrought many miracles. These were 'so well attested,' to use the language of the time, that the pope scrupled not to admit their validity, and issued his bull for the canonization of Becket, bearing date March the 13th, (anno 1172-3.) He also, in the presence of all the bishops and abbots of Campania, celebrated a solemn mass in honour of 'St. Thomas the Martyr;' and he afterwards ordained, by his Apostolical letters, that the memory of his passion should be forever celebrated in all Christian assemblies, on the 29th of December. The renown of Becket's sanctity was thus extended through the world; and his power of working miracles, according to Gervase, became as extensive as his fame. At first, says one author, 'that power reached only round his tomb; it then extended over all the crypt, next through the whole church, then over all Canterbury; after that, through the entire kingdom of England; and lastly, through France, Normandy, Germany, and, in a word, as far as the church of Christ was spread throughout the world.' Of the nature and description of his miracles, Matthew Paris has given a kind of scripture summary; he restored, says this historian, 'agility to the cripple, hearing to the deaf, sight to the blind, speech to the dumb, health to the leprous, and life to the dead: nay, even 'birds and animals' were re-vivified by his merits.

to Becket: at length, in 1174, Richard, prior of Dover, was promoted to the vacant chair. This prelate died in 1184, and was succeeded by Baldwin, bishop of Worcester, who was chosen on the recommendation of the king and bishops, but not till after great opposition on the part of the monks. This appears to have induced him to abridge their power, and diminish their wealth. With this view, he resolved to erect a magnificent church and college for seculars, at Hackington, (now St. Stephen's) near Canterbury; and having obtained the king's approbation, and also a bull from the pope, authorising his intended foundation, and granting him a fourth of all the oblations made at the tomb of St. Thomas, he commenced the new building, and carried it on with so much rapidity, that the monks became exceedingly alarmed. They made a strong appeal, to the sovereign, and to the court of Rome; and, on the advancement of Clement the Third to the papal chair, the archbishop was obliged to relinquish his design, and demolish the buildings which he had erected. In 1188, Baldwin made a journey through Wales, for the purpose of inducing the natives to assist in the crusade for the recovery of Palestine; and at the latter end of the succeeding year, he himself set out for the Holy Land, in company with Richard Cœur de Lion. He died during the siege of Acre, in 1191. Reginal Fitz-Joceline, bishop of Bath, was next elected to this see. He dying within fourteen days, and Hubert Walter, bishop of Sarum, was chosen as his successor. In 1194, this prelate was constituted chief justiciary of England; and in 1199, he was appointed chancellor: in these high offices, as well as in his immediate government of the realm itself during Richard's imprisonment, he acted with great wisdom and integrity: he died in 1205. The monks were much divided among themselves, respecting a fit person to be appointed to succeed him, and, after making choice of three different prelates, they were at last constrained, by the pope, Innocent the Third, to elect Stephen Langton, who, though an Englishman by birth, had been brought up at the University of Paris. This was highly resented by king John, who sent a spirited letter to the pope, complaining of it as an 'encroachment on his prerogative;' and stating, that 'he would never depart from the election of the bishop of Norwich;' and that, 'if the satisfaction he demanded was denied him, he would break off all intercourse with Rome.' The reply of Innocent was written in terms of apparent mildness, combined with much ironical abuse. Soon afterwards, he dispatched an order to the bishops of London, Ely, and Worcester, to persuade the king to submit to the decisions of the court of Rome; commanding them also, if they found him 'contumacious,' to put the kingdom under an interdict; and this they at length did. For several years, John steadily maintained the contest: but the superstition of the age rendered it at last so unequal, that

he was compelled, however reluctantly, to submit to the plenitude of ecclesiastical power. He laid both his sceptre and his crown at the feet of the Pope's representative; and he subscribed his signature to a charter, in which it was falsely asserted, that he resigned both his kingdom of England, and his lordship of Ireland, to the Pope and his successors, "of his own free will," and from "having no other way to atone for his offences to God and the church." Full five days did the legate retain in his own hands the emblems of royalty; and he then returned them to the self-deposed monarch, with an intimation that his conduct was expected to be exemplary, after such a signal favour had been conferred on him! In the meantime, the Barons were silently arranging the plan of a confederacy against the King, who, encouraged by the Pope's favour, appeared willing to make his dominion absolute.—At the head of this confederacy was Archbishop Langton, who, by a strange concatenation of events, from being the mere creature of the Pope, now appeared as the bold assertor of popular rights; and was himself afterwards suspended by the Pope's commissioners, for his refusal to publish the bull of excommunication against the coalesced Barons.—The distracted state to which the country was reduced, was at length terminated by the death of the King, in 1216. In 1220, the remains of Becket were removed from his tomb in the crypt, into a costly shrine, in the new chapel of the Holy Trinity. The solemnities were performed by Langton, in the presence of the King, and an immense multitude of people; and the coffin was borne from the tomb to the shrine, by the Archbishops of Canterbury and Rheims; Pandulph, the Pope's legate; and many bishops and abbots. The rejoicings at this translation were of the most splendid kind; and the expenses attending them were so enormous, that Langton is said to have entailed a debt on his see upon this occasion, which Boniface, his third successor, was hardly able to discharge.—Langton died in 1228, and was succeeded by Richard Wethershed, dean of St. Paul's; who, dying within three years, was succeeded by Edmund of Abingdon, Chancellor of Sarum. He was so affected by the oppressions which his church endured from the exactions of the court of Rome, that he went into voluntary exile at Soissy, in Pontiniac, about 1240; and he died there of a consumption brought on by too strict abstinence. In the seventh year after his death, he was canonized by Pope Innocent the Fourth; his body was soon afterwards interred in a sumptuous shrine, by Lewis, King of France; and many miracles are said to have been wrought through his merits, which occasioned him to be styled the glorious and blessed St. Edmund. Boniface, provost of Beverley, a native of Savoy, and uncle to Eleanor, Henry the Third's Queen, was the next Archbishop. He founded the hospital which Archbishop Courtney afterwards converted into

into a college at Maidstone, and also finished the stately hall in the Archbishop's palace at Canterbury, besides rebuilding a considerable part of Lambeth palace; whither he appears to have retired for security from the citizens of London, to whom he had rendered himself obnoxious by his haughty behaviour. He afterwards sought refuge in his own country, and died at the castle of St. Helena, in Savoy, in 1270. The monks of Christ church next elected their sub-prior, William de Chillendeu; but the Pope annulled his election, declaring him unworthy of the high dignity; and that the monks, in choosing him, had forfeited their right of election for that turn. He, therefore, nominated Richard Kilwardby, provincial of the Dominican friars in England. Edward the First refused to restore the Archbishop's temporalities, till he had made a public protestation, that such restitution was of his own "mere grace and favour, and not of any right," the Pope having rejected William de Chillenden, "contrary to his prerogative, to the laws of the realm, and to the liberties of the English church." In 1277, Kilwardby was created a Cardinal by Pope Nicholas the Third; upon which, he vacated his see, and went into Italy, where he died, under suspicion of poison. On his resignation, the monks elected, at the suggestion of the King, Robert Burnel, Bishop of Bath and Wells, and Chancellor; but the Pope refused to confirm him, and appointed John Peckham, or Pecham, a native of Sussex, at that time Provincial of the English Franciscans, and Palatine Reader and Auditor of the Pope's court, at Rome, to succeed to the vacant see. His exaltation, however, was not a gratuitous one; for the Pope obliged him to pay 4000 marks; and the King charged him 2000 more, for his expenses in sowing the church lands, and for the crop then growing upon them. This prelate was also at great charge in repairing the castles and mansions belonging to his see; and he also endowed the college at Wingham. He died in 1292; and was succeeded by Robert Winchelsea, Chancellor of Lincoln. His primacy was disturbed by frequent dissensions with the King; but, on the King's going to Flanders, in 1297, the guardianship of the young Prince, afterwards Edward the Second, and the custody of the kingdom, were committed to him, and the Lord Reginald de Grey. His obstinate defence of ecclesiastical claims, even after this, engaged him in a conspiracy against the King, who seized his temporalities, and banished him the realm: he also prevailed on the Pope to suspend him from his see. On the death of the King, in 1307, he was reinstated in the archbishopric, which he held till his death, in 1313. The reputation of his virtues was so great, that many oblations were made at his tomb, on which account it is said to have been destroyed at the Reformation. Walter Reynolds, Bishop of Worcester, was next appointed. He was the son of a tradesman at Windsor, and had been made Chaplain to Edward the First, and preceptor to the

young Prince, who, after his advance to the throne, made him Treasurer, Lord-Keeper, and Chancellor. In the time of his Sovereign's distress, however, the Archbishop sided with the popular party; and he crowned the young monarch, Edward the Third, whilst his father was yet living. He died in the following year, 1327, through "grief and anger," says Weever, at being "reviled, taunted, and threatened by the Pope," for consecrating James Berkley, Bishop of Exeter, at the command of Queen Isabella. His successor, Simon de Meopham, is said to have died of a fever, generated by the anguish of his mind which he experienced during a metro-political visitation, wherein the Bishop of Exeter, with a body of armed men, opposed his entering into his diocese. He died in 1333.

John, surnamed Stratford, (born at Stratford-upon-Avon) Bishop of Winchester, was chosen by the monks, on the recommendation of the King, to succeed to the vacant chair; but the Pope refused to confirm his election, till after repeated delays, and many exactions. This prelate had been promoted by Edward the Third for his generous constancy to his father. When the King went with his army into Flanders, in 1338, he was appointed sole Justiciary during his absence; he was also employed in many embassies, and on every occasion proved himself to be a most faithful and disinterested servant of the crown. Amongst other acts of liberality, he founded a collegiate church in his native town. He died in 1348, and was succeeded by John de Offord, or Ufford, Chancellor of England, who expired in 1449, in the time of the great plague.—Thomas Bradwardin, the King's confessor, called Doctor Profundus from his great knowledge, was then promoted to the vacant see; but, dying in the same year, through the fatigue he had endured on his journey to Rome for confirmation, he was succeeded by Simon Islip, the King's Secretary, and Keeper of the Privy Seal. He partly rebuilt the archiepiscopal palaces of Maidstone and Lambeth, and was the founder of Canterbury College, at Oxford. He died in 1366.

Simon Langham, Bishop of Ely, who had previously been Lord Treasurer and Chancellor of England, was next appointed to this see; which he resigned within two years, on being elected a cardinal, and went to Rome. On the decease of William Whittlesea, Bishop of Worcester, his successor, who died in 1374, Langham returned to England, and, by bribing the monks, was again elected by them to fill the vacant chair. This greatly exasperated the King, who positively refused to re-admit him to the archbishopric; and Langham returned to Avignon, where he died in 1376. Previously to this, however, in 1375, Simon de Sudbury, Bishop of London, was translated to this see by the Pope. He was a prelate of great talents, and was much employed in state affairs during the first years of the reign of Richard the Second, by whom he was appointed Chancellor of England, in 1380. In the following

following year, he was barbarously murdered on Tower Hill, by the insurgents under Wat Tyler. The west gate of the city of Canterbury, with a great part of the wall extending thence towards the north gate, was rebuilt by Sudbury: he also made considerable alterations in the west transept of the cathedral, to adapt it to the more improved style of architecture then in use; and he had the whole of the nave taken down, excepting the west front, with intent to rebuild it from the foundations, but this was prevented by his death. William Courteney, fourth son of Hugo, Earl of Devon, and, by the female line, descended from Edward the First, was next translated from the see of London to this archbishopric. He supported the pretensions of the church of Rome with a strong hand, in opposition to the disciples of Wickliff. He gave 1000 marks towards rebuilding the nave of the church; at his own cost, he rebuilt the lodgings and kitchen of the infirmary; contributed 266*l.* 13*s.* 4*d.* towards repairing the precinct walls of the monastery; and expended 30*l.* in making a new glass window in the nave of the cathedral in honour of St. Alphege.—By his will, he directed that 200*l.* or upwards, according to the discretion of his executors, should be “laid out by them for a new work, or building of one side of the cloister, to be carried on in a straight line from the gate of the palace unto the church.” He died in 1390, at Maidstone. Thomas Fitz-Alan, second son of Richard, Earl of Arundel, was next translated to this see from the archbishopric of York. In 1398, he was attainted of treason, for having executed the commission to “View the State of the Realm;” and confiding in the promise of indemnity made to him by the King, he neglected to defend his conduct, and was sentenced to banishment. Roger Walden, the King’s Treasurer, was appointed his successor, by the Pope, who had previously translated Arundel to the bishopric of St. Andrew’s, in Scotland. He held it, however, but a short time; for, after the deposition of Richard, in 1399, Arundel re-assumed the primacy. In 1407, he was a second time appointed Chancellor. He died in 1414, and was buried in the nave of the cathedral. During his primacy, the monks of Christ church proceeded with the rebuilding of the nave of the cathedral, towards the expense of which Arundel contributed 1000 marks. In his time, the rectories of Godmersham and Westwell were also appropriated to the convent, to assist them in defraying the charges of the new work, which appears to

have been finished about 1410. Henry Chicheley, the successor of Arundel, a native of Higham Ferrers, in Northamptonshire, and then Bishop of St. David’s, was a great patron of learning, and besides promoting its extension by various other means, he founded the colleges of St. Bernard, now St. John’s, and that of All Souls, at Oxford, where he had completed his education. He also built a collegiate church and hospital in his native town; and erected the great tower in Lambeth palace, called afterwards the Lollard’s tower. His donations to his own church were considerable; he enriched it with many ornaments of great value, and partly rebuilt the south-west tower, and the library, which he replenished with books. He died in 1443. His successor, John Stafford, Bishop of Bath and Wells, was an eminent statesman. He was held in much favour by Henry the Fifth, who made him Keeper of the Privy Seal; and soon after the death of that Sovereign, he was appointed Treasurer of all England. In 1434, he was promoted to the Chancellorship, which he held 18 years. He died in 1452; and was succeeded by John Kemp, Archbishop of York, who was born in the parish of Wye, in this county.*

Thomas Bourchier, Bishop of Ely, was promoted to the vacant chair on the death of Archbishop Kemp. He was educated at Oxford, was three years Chancellor of that University, was promoted to the see of Worcester, and afterwards to that of Ely. In 1455 he was constituted Chancellor of England, but resigned that office, in 1460. In 1465, he was raised to the rank of Cardinal, by the title of St. Cyriacus. In 1466, he entertained Edward the Fourth, and his Queen, Elizabeth Widville, at Canterbury, on their coming to pay their devotions at Becket’s shrine. He crowned three Kings; Edward the Fourth, Richard the Third, and Henry the Seventh; and dying 1468, was succeeded by John Morton, Bishop of Ely, the faithful adherent to the weak and unfortunate Henry the Sixth. He was a native of Dorsetshire. After the accession of Edward the Fourth, he became a great favourite with that King. In 1486, he was made Chancellor of England; and, in 1493, he was created a Cardinal, by the title of St. Anastasia. He died in 1500.† Henry Deane, or Deny, his successor, had been Bishop of Bangor, and had been employed in several negotiations. He was afterwards made Chancellor and Justiciary of Ireland; was translated to Sarum, and thence to Canterbury. He was afterwards

* He was educated at Merton college, Oxford, where he took his degree of Doctor of Laws; and was constituted Archdeacon of Durham, Dean of the Arches, and Vicar-General to Archbishop Stafford. Henry the Fifth made him Chief Justiciary of Normandy, and appointed him ambassador to treat with Ferdinand of Arragon, for a league of perpetual amity, and for the marriage of the daughter of that Prince with the King. Within five years he was appointed in succession to the sees of Rochester, Chichester, London, and York. In 1439, he was created a Cardinal, by the title of St. Balbina, which

was subsequently changed for that of St. Rufina. Before his advancement to the see of Canterbury, he was made Chancellor, which office he had twice; and in two Parliaments, in which he presided, held at Reading, in 1452 and 1453, he appeared by the style of “John the Cardinal, Archbishop of Canterbury, and Chancellor of England.” He died in 1454, having founded a college for seculars in his native parish, besides performing various other acts of munificence and charity.

† Vide MODERN PANORAMA, Vol. II. p. 208.

appointed

appointed Pope's legate, and was promoted to the Chancellorship. He died in 1502, and was succeeded by William Warham, Bishop of London, who was born at Malsanger, in Hampshire. On his decease, in 1532, the celebrated Thomas Cranmer was promoted to the vacant chair. Before his consecration in St. Stephen's chapel, Westminster, he made a solemn protestation in presence of a public notary, that "the oath he was then about to take to the Pope, should not bind him from doing whatsoever he was bound to do, to God, the Church, or the King." He was highly instrumental in promoting the Reformation; and in piety, learning, address, benevolence, and openness of heart, was never exceeded by any archbishop of this see. He was burnt as a heretic, 1555. His successor was Cardinal Reginald Pole, fourth son of Sir Richard Pole, by Margaret, Countess of Salisbury.*

Matthew Parker, a native of Norwich, who had been tutor to the Princess Elizabeth, was, on the death of Pole, recalled from the privacy into which he had been forced by Queen Mary, and promoted to this see. He was a great patron of learning; and, besides his own work, *De Antiquitate Britannicæ Ecclesiæ*, &c. he published editions of the historians, Matthew Paris, Matthew of Westminster, and Walsingham; and also the Four Gospels in the Saxon language. He repaired, and partly rebuilt, the palace at Canterbury; where in 1573, he gave a sumptuous entertainment to the Queen, during her progress through Kent. He died in 1575, and was buried in the chapel at Lambeth palace.

Edmund Grindall, Archbishop of York, a native of Cumberland, was next translated to this see.—He died in 1583, and was buried at Croydon. His successor, John Whitgift, born at Great Grimshy, in Lincolnshire, was educated under the celebrated martyr, John Bradford, at Pembroke Hall, Cambridge. In 1577, he was consecrated Bishop of Worcester, and in the next year was appointed vice-president of the marches in Wales. The Queen would have made him Lord Chancellor, but he declined that high office. He was fond of military splendour, and living at a time when invasions were

threatened, and instructions attempted, had all his domestics trained to arms, and was once accompanied to Canterbury with a train of 500 horse, 100 of which were his own servants. He died at Lambeth, in 1603, and was buried at Croydon. Richard Bancroft, Bishop of London, who succeeded him, was a native of Farnworth, in Lancashire, and had been promoted by Elizabeth, on the interest of Sir Christopher Hatton, to whom he was chaplain. He afterwards became a great favourite with James the First. The college founded by James at Chelsea, for a certain number of learned divines, was indebted for its origin to his influence; but the scheme was afterwards given up. He died in 1610, and was buried at Lambeth. His successor, George Abbot, a native of Guildford, in Surrey, was next translated from the bishopric of London to this see. In the first year of James the First, he was accused of remissness in his government of the church, inhibited from proceeding on his metropolitical visitations, and confined by order of the King to his palace at Ford, in this county; but in the next year he was received into favour. He founded an hospital in his native town, for 21 persons; and built a stone conduit at Canterbury, for the use of the inhabitants, at his own cost. He died in 1633, and was buried at Guildford.

William Laud, a native of Reading, in Berkshire,† was next exalted to the primacy. From the period of his death, in 1645, till the Restoration, the church establishment was completely abrogated.—William Juxon, who had been Bishop of London, and Lord High Treasurer, in the time of Charles the First, was then recalled from his retirement, and promoted to the metropolitical chair. He rebuilt the great hall of Lambeth palace, and made considerable repairs in the palace of Croydon. He died in 1663, and was buried at St. John's college, Cambridge, to which foundation he had bequeathed 7000*l*. Gilbert Sheldon, the successor of Juxon, was born at Stanton, in Staffordshire, and received his education at Oxford. During the civil wars, he was deprived of all his preferments, and imprisoned; after his release, he retired from public life till the Res-

* He was born at Stoverton castle, in Staffordshire; and partly educated in the Carthusian monastery at Shene, from which he went to Oxford. Henry the Eighth sent him to pursue his studies on the continent, and at Padua, where he resided several years, during which time the King made him dean of Exeter. He afterwards returned to England; but, on the agitation of divorce between Henry and his Queen again visited the continent, being unwilling to become a party in the discussion. His acknowledged learning, and high rank, rendered this impossible. He "spoke to the King his mind; which not being pleasing to him, he looked very angry on him, put his hands sometimes to his forehead hanging at his girdle, with an intention to kill him, but was overcome with the simplicity, humility, and submission of his discourse." Pole quitted the kingdom; and, after visiting several foreign cities, he again retired to Padua, where he received the King's summons to return to England; but refusing to obey it was deprived of his dignities, and declared a traitor. Soon afterwards the Pope created him a Cardinal, and appointed him ambassador to the Emperor, and

the King of France, in order to secure his influence in opposition to Henry's measures. Henry tried various ways to get him into his power; but the prudence of this prelate defeated his plans. His attachment to the Romish church was founded neither on interest nor ambition, but on principle; as was shewn by his refusal to accept the mitre of the Roman pontiff, though twice chosen Pope by the conclave, after the death of Paul the Third, on account of certain irregularities that had taken place during each election. After the accession of Queen Mary, his attainder was taken off, and he was invited to return to England; and, on the death of Cranmer, was promoted to this see. Having been invested with legantine power by Paul the Fourth, he governed the church with much mildness; and is said to have on several occasions, restrained the implacable fury of Bonner against the Protestants. He died about sixteen hours after the death of the Queen, on the 18th of November, 1558. He was the last of the Archbishops interred in Canterbury cathedral.

† Vide MODERN PANORAMA, Vol. I. p. 90.

teration, when he was promoted to the bishopric of London. He was so severe in his prosecution of the Nonconformists, that, though he appears to have acted from principle, he incurred so much odium, that he at last judged it expedient to relinquish all concern in public affairs. He erected the theatre at Oxford, at the cost of more than 16,000*l.* and gave 2000*l.* for the purchase of lands to keep it in repair. The amount of his expenditure for pious and charitable uses, in the seventeen years preceding his decease, amounted to 66,000*l.* He died in 1677, and was interred at Croydon. He was succeeded by William Sancroft, a native of Fressingfield, in Suffolk, who had been dean of St. Paul's, and was extremely active in his endeavours to promote the rebuilding of his cathedral, after the dreadful fire, in 1666. He was one of the seven prelates committed to the Tower by James the Second, for his refusal to concur in the publication of the famous declaration for liberty of conscience. After James had abdicated the crown, the Archbishop joined with the Lords spiritual and temporal, in the declaration for a free Parliament, &c. to the Prince of Orange; yet he refused to attend the convention in 1688, or to take the new oaths of allegiance, when William and Mary were established. He was in consequence, suspended from his functions; and sentence of deprivation being pronounced against him, he was ejected from his palace at Lambeth, in June, 1690. He retired to his native place, where he died in 1698. The sums which he expended in charitable uses are stated at nearly 18,000*l.* The next Archbishop was John Tillotson, dean of St. Paul's. He was the son of a clothier at Sawerby, in Yorkshire, and received his education at Cambridge. He enjoyed the primacy little more than three years, being suddenly attacked by the dead palsy, of which he died within five days, in 1694. He was buried in the church of St. Lawrence Jewry, in London, of which he had been lecturer. His successor was Thomas Tennison, Bishop of London, a native of Cottenham,* in Cambridgeshire. William Wake, Bishop of Lincoln, was next promoted to this see. He was born at Blandford, in Dorsetshire. He expended about 11,000*l.* in repairing the palaces of Lambeth and Croydon; and gave large sums to the distressed and indigent.† John Potter, Bishop of Oxford, was next translated to this see. He was a native of Wakefield, in Yorkshire, and was very early distinguished for his skill in the Greek and Latin languages. He paid great attention to the affairs of his church, and was considered

as a zealous and steady guardian of ecclesiastical rights; though neither intolerant nor bigotted. He was author of the "Antiquities of Greece;" and published editions of several ancient writers. He died in 1747, and was interred at Croydon. His successor, Thomas Herring, was born at Walsoken, in Norfolk, and having been instructed in the rudiments of learning at the school of Wisbeach, he completed his studies at Cambridge. He was translated from the see of York to Canterbury. He has the character of a great and good man. He died in 1757, and was buried at Croydon, in the same vault with his immediate predecessors. Matthew Hutton, Archbishop of York, and a native of Marske, in that county, was next promoted to this see; but died in the ensuing year. He was succeeded by Thomas Secker, Bishop of Oxford, a native of Sibthorp, in Nottinghamshire. His successor, Frederic Cornwallis, 7th son of Charles, 4th Lord Cornwallis, was next translated from the bishopric of Lichfield and Coventry to this see. He died in 1783, and was buried in the church at Lambeth. John Moore, a native of the city of Gloucester, was next appointed to this archbishopric. In his early life, he was tutor to the two younger sons of the late Duke of Marlborough; and to his connection with that family, and his disinterested conduct on a particular and important occasion, his future preferments were owing. On his decease in 1805, Dr. Charles Manners Sutton, Bishop of Norwich, was exalted to the vacant chair, which he yet fills. The Hon. Charles Manners Sutton, elected Speaker of the House of Commons, on the 2d of June, 1817, as successor to Mr. Abbot, now Lord Colchester, is the son of this prelate.

From the age of Augustine, the number of Archbishops who have had possession of this see amount to 90. The prerogatives and independent privileges of the Archbishop are still numerous, and of high interest; though far less so than in the times preceding the Reformation. His title is "Primate and Metropolitan of all England;" and he styles himself, "By Divine Providence, Archbishop of Canterbury." In Parliament, and all other assemblies of Council, he takes precedence as first peer of the realm, next to the royal family. He is a Privy Counsellor in right of his primacy; and has the privilege of crowning, marrying, and christening the sovereigns and royal family of England.—He has the power of conferring degrees in the several faculties of law, physic, and divinity; (though this prerogative is seldom exercised;) excepting

‡ He was the son of a Protestant dissenter, and received his education in different private schools, with so much quickness, that at nineteen he is said not only to have made a considerable progress in the Latin and Greek, but to have acquired a knowledge of French, Hebrew, Chaldee, and Syriac. Till the age of twenty-three, he continued to pursue the study of divinity; when some doubts arising in his mind, on particular doctrinal points, he commenced the study of physic, with intent to pur-

sue it as a profession. Having, however, satisfied his mind on those subjects of religious inquiry that had formerly perplexed him, he was induced to take orders. The warmth and benevolence of his heart always inclined him to promote every good work. His death was preceded by long continued and severe agony, occasioned by a carious thigh-bone, which at length broke, and he expired within two days afterwards. He was buried agreeably to his own directions, in a covered passage leading from the palace at Lambeth to the church there.

within the the immediate jurisdiction of two universities. His province comprehends the sees of 21 suffragan bishops; and between 80 and 90 churches, in different dioceses, are also immediately subject to him, under the appellation of his peculiars. He has the nomination of the several offices belonging to the ecclesiastical courts, over which he presides; and he has the right of conferring all vacant benefices within his province which devolve to his collation by lapse of time, under whatever circumstances, besides various other privileges in ecclesiastical affairs of the highest importance. In the Saxon times, the Archbishops had the privilege of coining money; and silver pennies of Athelard, Wulfred, Ceolnoth, and Plegmund, are still extant. In the regulations made by King Athelstan, seven mints were allowed at Canterbury, two of which were to be the Archbishop's; but, from the time of this sovereign, no metropolitan coin has ever been seen with an Archbishop's name or effigies. Archbishop Craumer was the last who possessed the privilege of coining money; all private mints throughout the realm, being afterwards suppressed by royal authority.

The mode of electing the Archbishops, since the abolition of the Papal power in this kingdom, has been as follows:—"The vacancy of the see having been notified, a *Conge d'Elire*, or license to elect, is issued under the great seal, and directed to the dean and chapter of Canterbury; having enclosed in it, a small sheet of paper, containing a recommendation of the person to be elected, under the King's sign manual. When the chapter is assembled, the license and letter of recommendation being read, another person, either one of the prebendaries, or a minor canon of this church, is nominated as a candidate with him who is recommended; but the remembrance of a *premunire*, with other cogent reasons, always renders the royal candidate successful, and that by a unanimous suffrage of the chapter; nor has his opponent ever been known, since the reign of Henry the Eighth, to have gained a single voice in his favour. After the return of this election, the royal confirmation succeeds of course, and the new Archbishop is afterwards consecrated by two Bishops, generally at his own chapel at Lambeth palace." The ceremony of the enthronization was in former times performed with great solemnity and splendour; and the Archbishops have even been honoured with the company of the sovereign, as guests at their table on the occasion; of late, this ceremony excites but little interest, the Archbishop being generally enthroned by proxy, and without pomp.—At the Dissolution, the yearly revenues of the archbishopric are stated to have been upwards of 3200*l.* but many of the possessions of the see being forcibly alienated during the reigns of Henry the Eighth, Edward the Sixth, and Queen Elizabeth, the amount of the income was proportionably decreased. From the increase in the value of lands, however, and from other sources connected with the privileges of the Archbishops, the pre-

sent annual revenues of this see are known to amount to upwards of 12,000*l.*

One of the first steps towards the dissolution of the priory of Christ church, in the time of Henry the Eighth, was to abrogate those festivals, or holidays that should occur in harvest time, which was to be accounted from the 1st of July to the 29th of September; by which the high festival of the translation of St. Thomas, annually celebrated on July the 7th, was prohibited to be observed otherwise than by the accustomed service, and without the usual formalities that were customary on high festivals, this being one of those injunctions ordered by the King, in 1536. Two years afterwards, a daring blow was directly aimed at the reputed glory of this church, and its venerated saint, St. Thomas, by not only specially prohibiting the observance of the festivals to his memory, but also enjoining the entire omission of the service instituted for his commemoration. Archbishop Craumer himself disowned all regard to this feast, by not fasting, as was the custom, on the eve of it, but supping on flesh in his parlour with his domestics. In the following year, the King sent forth a new and severe injunction, in the preamble of which Becket was declared to have been "a stubborn rebel, and a traitor to his Prince:" it enjoined that he should not be esteemed or called a saint; that his images or pictures should be pulled down throughout the whole realm, and cast down out of all churches; that his name should be razed out of all books; and the festival service of his days, the collects, antiphons, &c. should for ever remain in disuse, upon pain of his indignation, and imprisonment at his Grace's pleasure. About the same time, the shrine of Becket was despoiled of all its jewels and splendid ornaments, which were taken to the King's use; and the hallowed bones of the saint himself, according to Stow, were, by order of the Lord Cromwell, burnt to ashes upon the spot where they had been so frequently adored by superstitious multitudes. In the year 1539, the priory was resigned into the King's hands, its yearly revenues being then estimated at 2460*l.* 4*s.* 9*d.* a sum apparently far inferior to the real value of its possessions. The deed of surrender was signed by the prior, and 24 monks; but the whole number of the monks was at that time 53. Six of these, including the prior, Thomas Goldwell, were afterwards advanced to prebends on the new foundation, which Henry established here for a dean, and twelve canons, or prebendaries, with six preachers, six minor canons, six substitutes, twelve lay clerks, ten choristers, two masters, and fifty scholars, twelve almsmen, &c.—Many of the priors and monks of this church, were men of eminent talents and learning. They obtained the privilege of wearing the mitre from the Pope, but they do not seem ever to have been regularly summoned to Parliament.

Canterbury cathedral is a magnificent and noble pile, exhibiting specimens of the style of almost every age, from the arrival of the Normans to the time of the

the Dissolution; and the correctness of its proportions are, in general, of equal eminence with the richness of its decorations. It stands in the north-eastern quarter of the city, and, with the various other buildings belonging to the establishment, occupies a large extent of ground. Its general form is that of a double cross, terminating circularly at the east end, and having two massive towers at the west end: another and more elegant tower, rises from the intersection of the nave and west transept. The west front is not uniform: it consists of a centre, having a low recessed entrance in the pointed style, with a large and elegant window above, between two towers: that to the north-west is of Norman architecture, and doubtless formed a portion of Lanfranc's cathedral, though some parts of it have been altered: upon this was formerly an octagonal spire, which was taken down soon after the great storm in 1703, in which it was much damaged; and the bells were removed about the year 1726. The south-west tower, called the Chicheley steeple, is supported on the west side by two immense graduated buttresses, ornamented by niches; the upper part is embattled, and finished by four elegant pinnacles at the angles, with smaller ones between.—The west entrance opens beneath a large pointed arch, and is ornamented with various shields, and canopied niches. The large window above is finely proportioned, and is filled with richly stained glass. It consists of six ranges of cinquefoil-headed lights; three of which are larger than the others, separated by transoms, with crockets above. The south porch, which now forms the principal entrance to the cathedral, is a large and handsome fabric embattled. On each side of the entrance is a large niche; and along the face of the porch above is a range of five other arches; that in the centre having had a double canopy: all the pedestals and canopies have been elegantly wrought. The roof is vaulted with stone, beautifully groined; the ribs springing from four small columns, and the points of the intersections being carved into shields of arms, twenty-eight in number, and forming a kind of double circle. At the sides are large cinquefoil blank arches, and over them angels sustaining shields in compartments: at the outer angles of the porch, are spouts issuing from the mouths of demons. The south side of the cathedral is marked by a great diversity of character. From the south porch to the western transept, is a range of seven large graduated buttresses, having ornamental niches above the second stage, and terminating in pinnacles. St. Michael's chapel adjoins to this transept, beyond which commences the original work of Lanfranc; and the second transept, with a considerable proportion of the remainder of the building towards the east end, is of Norman architecture. In the angle formed by the east transept, is a small square tower, the upper part of which is highly enriched by ranges of ornamental Norman arches, and interlaced with net-works. In the end of the east transept, is a very large circular

window, curiously divided by bands of iron for the support of the glazing: at the bottom are two entrances leading into the crypt. Further eastward is the chapel of St. Anselm, as the lower part of another Norman tower is now called, from its having formerly contained the shrine of that saint. The cathedral precincts are here divided into two parts by an embattled wall of flint, and a Norman gateway, opening by a large semicircular arch, adorned with zig-zag and fretted ornaments. From St. Anselm's chapel, the whole eastern part of the cathedral begins to assume a circular form, which is only broken by the buttresses, and the more recent fabric called Becket's Crown; this is also circular, and terminates the building on the east. The north side of the cathedral possesses a general uniformity with the south; but cannot be so well seen from the various buildings to which it adjoins, or nearly so, as the treasury, library, chapter-house, and cloisters. The great tower, which rises from the intersection of the west transept with the nave and choir, is one of the most chaste and beautiful specimens of the pointed style of architecture in this country; its proportions, symmetry, and workmanship, are all admirable. It rises to a considerable height above the roof; and, from its summit, commands a most extensive and rich prospect of the whole of Canterbury, and the highly cultivated tract that surrounds it. The angles form octagonal columns, which rise above the battlements in high clustered pinnacles of the most elegant sculpture: a smaller column, or buttress, runs between them up the middle of each side, and also terminates above the battlements in a pinnacle, but of less height and complexity than the others. Each face of the tower displays two ranges of double high pointed arches, divided by mullions and transoms, and finely ornamented with quatrefoils, &c. in the spandrels above. In the space between the upper and lower windows, is a rich band of diamond squares, containing roses in the centre, and other tasteful ornaments: the battlements are elegantly pierced. On entering the interior of the cathedral from the south porch, the light and elegant appearance of the nave, and the beauty of its vaulted roof, never fail to excite the admiration of the spectator. The whole perspective from the west end, is, indeed, extremely fine; though it is partly terminated at the entrance of the choir, by the rich screen, and the organ above. The lower parts of the western towers are open to the aisles and nave: the vaulting of the south-west towers is wrought into very beautiful tracery, forming a circle in the centre: that of the north-west tower is also formed into a circle, but less ornamental: beneath this tower is the Archbishop's Consistory Court.—The flat on each side, and above the west entrance, is ornamented with cinquefoil headed blank arches; over which runs an embattled cornice. The great west window is filled with painted glass, mostly in good preservation, and representing ranges of single figures, as saints, apostles, sovereigns, &c. In the uppermost

uppermost light are the arms of Richard the Second, impaling those of Edward the Confessor, whom he had chosen as his patron. The figures of the sovereigns, which are thought to have formerly filled the whole of the three lower compartments, are now reduced to one range, consisting of whole-lengths of Canute, Edward the Confessor, Harold, William Rufus, Henry the First, and Stephen, standing under rich niches, fairly wrought in the pointed style: below these are various ranges of shields of arms, of the benefactors, &c. to the cathedral, of more modern origin. The nave is separated from the aisles by eight distinct piers or columns on each side, independent of the half-piers against the west wall, and of the immense pillars on which the arches of the centre tower are sustained. The aisles are nearly uniform with the nave; the windows are large and elegant, and the whole range of the building has an airy and graceful aspect. The two westernmost of the immense columns, that support the great tower, have been strengthened by the insertion of stone braces; which, however, are so judiciously placed, and are of such elegant workmanship, as to supersede all ideas of deformity or weakness. Immediately below the cornice, on the south side of the easternmost brace, is the motto and rebus of Prior Goldstone, the second of that name, cut in the stone-work in ancient characters. The motto is *Non nobis Domine non nobis, sed nomini tuo da gloriam*: the rebus is a shield charged with three stones, Or, between the letters *T. P.* This is situated after the word *nobis*, in the middle of the line.

A triple flight of steps from the area of the nave, leads up to the choir, before the entrance to which is a beautiful stone screen, and over it the superb organ that was brought from Westminster Abbey, where it had been originally erected for the commemoration of Handel. The screen is stated to have been made at the charge of Prior Henry de Eastry, or Estria, between the years 1304 and 1331; and though wrought at such a distant period, is in an excellent state of preservation. The opening into the choir, through the centre, forms a very elegant recessed, pointed arch; or rather series of arches, displaying various small hollow mouldings, sculptured with roses, vine branches, and other ornaments. Within these is a double range of rich niches, six in each, rising to the centre, and finished by tower canopies, very highly wrought: in these were formerly the statues of the apostles in silver; and just below them over the middle of the doorway, stood the figure of the Virgin Mary, in a small niche, with a rich triple-headed canopy. From the basement of the screen, on each side the centre, rise three large compartments, sub-divided into numerous small ornamental niches, and having a cornice of grapes and vine-leaves above them. Immediately over these compartments are six large niches, containing full-length statues of as many sovereigns, in cloaks and flowing robes, fastened with cordons, tasselled. Four of these statues sustain an orb, or

round: a fifth appears to have held a similar object, but the hand sustaining it has been broken off; the sixth holds a representation of a Saxon church, and probably was intended for the figure of King Ethelbert, the founder of Christ-church in conjunction with Augustine: whom the other figures were designed to represent, seems impossible to determine, as the features do not resemble those of any of our Kings whose likenesses have been preserved. The canopies under which they stand, are beautifully interlaced within, so as to form stars, &c. and the design and taste with which the upper parts are executed, and the exuberance of fancy and invention which they display are truly admirable. The summit of the screen is embattled, and elegantly decorated with various small niches, and open-work arches between them: under the cornice below these, is a range of half-angels, with extended wings, sustaining shields. The west transept is built in a style of similar elegance to the nave; and the ends of it being on the same level with the pavement of that part of the edifice, form distinct divisions; though a communication has been preserved between them by a passage leading under the ascent into the choir. The north division, from having been the place where Becket fell when assailed by his murderers, is called the Martyrdom; and here, in the time previous to the Reformation, was a small altar of wood, consecrated to the Blessed Virgin, on which was placed the point of the sword that had been broken off in committing the assassination. In the pavement of the martyrdom, is a small oblong square stone, out of which has been cut a piece about five inches square, that is said to have been sprinkled with the brains of the Archbishop, and to have been carried to Rome as a most sacred relic. The larger stones which the blood of Becket had stained, were conveyed to Peterborough by Prior Benedict, when he was chosen abbot of that monastery; a situation to which he is conjectured to have been elevated, through having it in his power to enrich his new abode with such inestimable remains. The great window at this end of the transept, as well as that at the south end, is divided by mullions and transoms into numerous lights, containing a great variety of compartments, richly adorned with painted glass. In its original state, it was far more beautiful. The destruction of the adornments of this "idolatrous window," was, however, partly confined to what, during the civil wars, were called "superstitious images;" and the portraits and arms of the family of Edward the Fourth, with three ranges of prophets, apostles, and bishops are still left to enable us to form a judgment of its former beauty.

The east side of this end of the transept, is separated by a light and elegant stone screen from the chapel of the Virgin Mary, or dean's chapel, as it is now denominated, from containing the monuments of several of the deans of this cathedral. The chapel of the Virgin, though small, is one of the most beautiful

beautiful examples of the unparalleled elegance of which the English, or pointed style of architecture is susceptible, of any in the kingdom. It was built by Prior Goldstone, between the years 1449 and 1468; in which latter year he died, and was buried here. The vaulting of the roof is highly decorated by tracery and fan-work, most excellently wrought, and in a very fine taste. The east window is also peculiarly elegant; and all the other parts of the interior of this fabric are very beautiful. The painted glass in the great window at the south end of this transept, has been mostly brought from the other windows of the cathedral, and from the want of proper arrangement, appears to disadvantage. On the east side of this wing, and corresponding in situation, though not in beauty, to the chapel of the Virgin, is St. Michael's chapel. High up over the entrance into this chapel, is a projection of wood, stated to have been erected to support an organ, and having in front the figures of St. Augustine and St. Gregory, painted in stone colour. On a level with this, above the chapel, is a room with a groined roof, formerly used as an armoury, but afterwards appropriated as a singing school for the choristers. The choir is spacious, and extends from the beautiful screen below the tower almost to the turn of the circular part of the cathedral beyond the east transept. The fitting up is very handsome, though not uniform: the stalls are of wainscot; those for the dean and prebendaries display an exuberance of rich carving, representing foliage, mitres, crowns, &c. and are divided into compartments, by fluted pilasters of the Corinthian order, supporting a bowed canopy. These are of the time of Charles the Second, soon after whose restoration, the cathedral underwent a general repair, at an expense of about 12,000*l*. The Archbishop's throne is exalted near the middle of the choir on the south: it rises to a considerable height, and has its canopy supported by three fluted Corinthian columns on each side. This was made at the expense of Archbishop Tension, about the year 1704, when the old monkish stalls, which had remained till then in double rows at the sides of the choir, were removed, and the present ranges of seats constructed in their stead. The altar-screen was executed from the designs of Mr. afterwards Sir James Borough. It is of the Corinthian order, and very lofty, having a beautiful pediment, supported on fluted columns. The central part, which was originally a blank space, has been judiciously opened, and is now glazed with plate glass, in a framing of copper, gilt, by which means a fine view of the whole eastern extremity of the cathedral is obtained from the choir.

The ascent to the altar is by a flight of six steps of veined marble: the contiguous pavement is of black and white marble, disposed in a neat fancy pattern. The side walls of the aisles of the choir, as well as parts of the east transept, are of Norman architecture, and unquestionably formed part of

Lanfranc's cathedral. The walls of both aisles display a range of squat semi-circular arches rising from short columns, with large heavy capitals, bearing a strong resemblance to those of the same age in the abbey church at St. Alban's, in Hertfordshire. The two large windows of the north aisle, and the three trefoil-headed lights above, are filled with painted glass of very vivid colouring, collected from different windows in other parts of the cathedral. The groining of the roof, though of the time of Henry the Second, is ornamented with zig-zag mouldings, as is that also of both aisles. The north end of the transept displays several ranges of small pointed arches, rising in tiers, with large capitals, curiously varied: the upper window, which is large and circular, contains some very fine painted glass, the centre representing two figures under rich canopied niches, surrounded by the cardinal virtues, and the prophets Isaiah, Jeremiah, Ezekiel, and Daniel: the east wall finishes in two large semi-circular recesses, in each of which have been altars. The sides of both aisles next the choir, are partly separated from it by a wall about eight feet high, supporting a range of elegant pierced arches, each having two trefoil-headed divisions in the lower part, and a quatrefoil above: the whole is finished by an embattlement; and on the north side, adjoining to the monument of Archbishop Chicheley, is a very handsome doorway, in a similar style, opening into the choir. On the north side of the upper end of the north aisle, are the vestry, the treasury, and the audit-room. The two former are strong vaulted apartments, apparently constructed to contain the rich vestments, and the gold and silver vessels, jewels, relics of saints, and other treasures belonging to the respective altars. In the treasury are now deposited the ancient charters and muniments of the church, in large wooden lockers, made in the shape of copes. The audit-room was rebuilt about the year 1720: here the dignitaries of the cathedral hold their annual chapter, the business being first opened in the ancient chapter-house of the priory, and afterwards adjourned hither. The vestry was anciently the chapel of St. Andrew, which corresponds in situation with that of St. Anselm at the end of the opposite aisle: the latter chapel, before it became the burial-place of Archbishop Anselm, had been dedicated to St. Peter and St. Paul: its south side exhibits a large and handsome window in the pointed style, which was made in the year 1336, at the expense of 42*l*. 17*s*. 2*d*. Over this chapel is a room having a grated window looking towards the choir, supposed to have been formerly used as a prison for the contumacious monks.—From the end of each of the choir aisles is a high flight of steps, communicating with the semi-circular aisle which surrounds the chapel of the Holy Trinity: in the midst of this chapel stood the gorgon's shrine of archbishop Becket, with a chapel dedicated to his memory. Though this portion of the cathedral was erected with the oblations made

at Becket's tomb, and consequently after the pointed style of architecture had obtained prevalence, it is mingled with semi-circular arches, and zig-zag and billeted ornaments, the undoubted characteristics of the Norman style. The pavement round the site of Becket's shrine, exhibits evident traces of the respect that was paid to his memory by the countless multitudes that came on pilgrimage to this city. The stones are on every side worn into hollows by the knees of the devotees, who appear to have been taught that the merit of Becket's blood was superior to our Saviour's, and who were so firmly impressed with the superior efficacy of his intercessions at the throne of grace, that, whilst in the course of one year, the offerings at Christ's altar were 0/. 0s. 0d. and at the Virgin's only 4/. 1s. 8d. those at the shrine of Becket amounted to 954/. 6s. 8d. The remains of Becket were at first interred at the east end of the Crypt, or Under-croft, where his tomb was visited by persons of all ranks, and of every condition. The extensive publicity which the various circumstances attending the death of Becket had given to his fame, soon attracted numerous crowds of pilgrims to his tomb, and even princes and sovereigns thought it highly meritorious to become his votaries. In 1177, Philip, Earl of Flanders, came hither with a numerous retinue, and was met by King Henry, who again visited the sepulchre of the new saint in the succeeding year, on his return from Normandy. Hither also, in the July following, came William, archbishop of Rheims, with a numerous suite: and in August, 1179, Lewis the Seventh, King of France, landed at Dover in the guise of a common pilgrim, for the purpose of paying his devotions at the tomb of Becket. Henry himself awaited his arrival; and the two sovereigns came to Canterbury together, accompanied by a great train of the nobility of both nations, and were received and entertained with much splendour, by the archbishop and his suffragans, and the prior and monks of Christchurch. Louis, on this occasion, presented a rich cup of gold, with the famous jewel called the regal of France, which, after the Dissolution, Henry the Eighth had set, and wore as a thumb-ring. He also granted to the convent of Christchurch, 100 muids, or tons of wine, annually, to be paid by himself and his successors: and the oblations of gold and silver, made during the two or three days of his continuance here, were so great, that 'the relation of them almost exceeded credibility.' In 1180, Henry the Second, on returning from Normandy, again paid his devotions at the tomb of Becket; and again in 1184, in company with Philip, archbishop of Cologne, and Philip, Earl of Flanders, whom he came hither to meet, and to invite to London. King John and Richard the First were also numbered among the early devotees at the tomb of Becket. When the remains of Becket were translated to the sumptuous shrine prepared for their reception in the new chapel of the Holy Trinity, in 1220, the solemnity was attended by a jubilee, (this

being the 50th year after the murder,) granted by a bull of Pope Honorius the Third; and this festival was regularly repeated every 50 years, till the time of the Dissolution. The concourse of people that flocked to Canterbury, during these jubilees was very great; and, in one year alone, anno 1420, there were no fewer than 100,000 persons who attended the celebration. The immense value of the shrine itself, may in some degree be estimated from the following descriptions by Erasmus, and Stow; the former of whom saw it shortly before the Dissolution; and the latter refers to its state about the same period. "They drew up," says Erasmus, "a chest or case of wood, which inclosed a chest or coffin of gold, together with inestimable riches, gold being the meanest thing to be seen there: it shone all over, and sparkled and glittered with jewels, of the most rare and precious kinds, and of an extraordinary size, some of them being larger than a goose's egg. When this was displayed, the prior, who was always present, took a white wand, and touching every jewel with it, told the name, and the value, and the donor of it: for the chief of them were the gifts of monarchs." Stow is more circumstantial: "It was builded," says he, "about a man's height, all of stone; then upward of timber, plaine; within the whiche was a chest of yron, containing the bones of Thomas Becket, scull and all, with the wounde of his death, and the peece cut out of his scull layde in the same wound. These bones, by commandement of the Lord Cromwell, were then and there brent. The timber work of this shrine, on the outside, was covered with plates of golde, damasked with golde weir, which ground of golde was again covered with jewels of golde, as rings, ten, or twelve, cramped with golde wyer into the sayd ground of golde, many of those rings having stones in them: broaches, images, angels, pretious stones, and great orient pearls. The spoile of which shrine, in golde and pretious stones, filled two great chests, such as sixe or seaven strong men could doe no more than convey one of them at once out of the church." The space immediately before the shrine, to the west, was ornamented with a curious mosaic pavement, of a fancy pattern, of which considerable parts yet remain; with a number of circular stones that have displayed the signs of the zodiac, and other figures, but are now so much worn, as to be almost unintelligible. The semicircular aisle which surrounds the chapel of the Holy Trinity, opens by a large arch to the circular building called Becket's Crown, which terminates the eastern extremity of the cathedral.—The lower part of this, to the vaulting over the first range of windows, appears to have been constructed at the same period as the Trinity chapel, and corresponds with that in its pointed arches, and zigzag mouldings. The upper part is of a later date; the monks being employed in carrying it higher at the time of the Dissolution, which at once put a stop to their proceeding; and it was left unfinished

finished till about the middle of the last century, when some part of the top was taken down, and the whole finished by a clumsy kind of embattlement. The walls have been ornamented with paintings, of which the legends of St. Christopher and St. George are yet visible; and beneath the latter has been a representation of the Saviour rising from his sepulchre. The large windows contain a great quantity of painted glass, on different subjects connected with the "passion and miracles of St. Thomas." In the middle of this part of the building stands the stone chair, in which the Archbishops of Canterbury are enthroned, apparently of great age. The admeasurements of this cathedral are as follows: whole length, from east to west, within side, 514 feet; length of the choir, 180 feet; length of the nave, to the bottom of the choir steps, 178 feet; and from thence to the screen at the entrance of the choir, 36 feet; breadth of the choir between the columns, 40 feet; extent of the east transept, from north to south, 154 feet; ditto of the west transept, 124 feet; breadth of the nave, and its aisles, 71 feet; height to the vaulting of the Trinity chapel from the pavement, 58 feet; ditto of the choir, 71 feet; ditto of the nave, 80 feet; ditto of the great tower withinside, 130 feet: extreme height of the great tower, 235 feet; ditto of the south-west tower, 130 feet; ditto of the north-west tower, 100 feet. Beneath the edifice, from the high ascent of the choir to the extremity of the building, runs a spacious and interesting crypt; the western part of which is of Norman architecture, and unquestionably of the foundation of Lanfranc; whilst the eastern part is of the time of Henry the Second, and forms a striking contrast to the other. The west end of the crypt is generally called the French church, from its having many years been appropriated to the religious services of the Walloons, and French refugees, who fled hither from the cruelties of the Inquisition in the Spanish Netherlands, in the reign of Edward the Sixth; and whose numbers were occasionally increased by new accessions of emigrants, driven from their native land by the intolerant spirit of Popery. Queen Elizabeth is stated to have granted them this crypt for their church; but the "removal of most of their descendants to Spitalfields, and the union of others with Protestant families," have reduced their numbers to a very few; and these find it more convenient to have the ordinances of their worship celebrated in a part of the crypt that had been previously used as a vestry. The transept of the crypt corresponds with the east transept in the body of the cathedral. Here, at the south end, Edward the Black Prince, in 1363, founded a chantry chapel for the "benefit of his own soul," and endowed it for two chaplains with the manor of Vauxhall, near London. Near the middle of the crypt are the remains of the elegant chapel of the Virgin, now fast mouldering into ruin. In a beautiful canopied niche at the east end, above the altar,

stood a statue of the Virgin, on a rich pedestal, sculptured in relief, with different subjects from her history: the story of the Annunciation may still be traced; but most of the other sculptures are destroyed. "This chapel," says Erasmus, "was not shewed but to noblemen and especial friends. Here the Virgin mother hath an habitation, but somewhat dark, inclosed with a double sept, or rail of iron, for fear of thieves; for, indeed, I never saw a thing more laden with riches: lights being brought, we saw a more than royal spectacle; in beauty it far surpassed that of Walsingham." The Norman piers and arches round the east end of the Virgin chapel, form a semicircular aisle; beyond which are two immense columns. Nearly opposite to the southernmost of these, is the entrance into the vestry of the French church, which is immediately beneath the chapel of St. Anselm, and has an opening into a dark semicircular apartment, which was anciently fitted up as a chapel, and has various remains of paintings yet visible upon the walls. In a compartment of the roof is a figure designed for the Almighty, seated with a wheel, the emblem of eternity, under his feet; and in his left hand an open book, in which are written the words "Ego sum qui sum." One of the altars was dedicated to the archangel Gabriel, the other to St. John Baptist, and were most probably situated within a deep semicircular arch, against the east wall: the under part of this arch is painted in nine compartments, seven of which contain the seven angels, seven churches, and seven candlesticks, of the Revelations; in the eighth, is St. John writing his Apocalypse; and in the ninth, are seven stars within a circle. The other paintings relate to the Nativity of St. John Baptist; at the sides are some cherubim standing on winged wheels, with eyes in their wings and bodies. On the north side of the crypt, in the part corresponding with this, was the altar of the Holy Innocents. About eleven yards from the east end of the Virgin's chapel, the crypt is divided by a straight wall, which, through different openings, admits a partial view to what is now called the "vaults belonging to the first prebendary," but which, in reality, is the continuation of the crypt, erected under the chapel of the Holy Trinity in the reign of Edward the Second, and which displays a series of duplicated columns like that chapel, though the ornamental parts are less complex. Its eastern extremity is a circle, about 30 feet in diameter, corresponding with Becket's crown, and having an arched roof, the ribs of which converge to the centre. All this part of the undercroft is now appropriated to domestic purposes.

Previously to the Reformation, there appear to have been, at least, 37 or 38 altars in the different parts of this cathedral, all of which were very splendidly furnished, and some of them in the most superb and gorgeous manner. "During the unhappy troubles of the great rebellion," says Hasted, "inevitable destruction seemed to threaten the whole

whole of this beautiful fabric; for, in 1641, the madness of the people raged to such a height, as prevailed beyond all resistance: the dean and canons were turned out of their stalls; the inscriptions, figures, and coats of arms in brass, were torn off from the ancient grave-stones; and the very graves themselves were ransacked for the sake of plunder; and whatever there was of beauty or decency within the church, was despoiled by sacrilegious outrages. In this forlorn state it remained till the dissolution of all deans and chapters, three years afterwards, when the government's committee took possession both of the church and its revenues. In 1649, an ordinance of the state passed for the pulling down and sale of the materials of all cathedral churches; and accordingly, among others, those of this edifice were valued, and an estimate was made of the expense of taking it down; by some means, however, it remained untouched; and at the restoration of monarchy, and the re-establishment of the church of England, in 1660, it was restored to the dean and chapter; but was found in so neglected a condition, that it became necessary to expend no less a sum than 12,000*l.* to put it into a decent state for the celebration of religious service." Some further repairs were made in this cathedral, about the year 1787; at which period also, the nave was new paved with free-stone; and on this occasion all the ancient tombs and grave-stones were removed; though many of these had covered the remains of different archbishops and priors of this church. A beautiful little chapel which stood between two buttresses, immediately under the fifth window of the south aisle, into which it opened, was pulled down about the same time, from an opinion, that it looked "unsightly," though a small sum would have been sufficient to put it into good repair. It was built as a chantry chapel, in 1447, by the Lady Joan Brencheley, widow of Sir William Brencheley, Chief Justice of the King's Bench, in memory of her husband, who died in the preceding year, and had been buried near this spot. Amongst the prelates recorded to have been buried in the nave, are the Archbishops Theobald, Islip, and Whittesley; and John Bockingham, Bishop of Lincoln. The former, who died in 1161, was at first interred in the chapel of the Holy Trinity; but, when that part of Lanfranco's cathedral was taken down, in 1180, his "body, still clad in its silken vestments," was removed, and re-interred in the south aisle of the nave before St. Mary's altar, where it was discovered in the year 1787, by the workmen who were employed in levelling the ground for the new pavement. The tombs of the Archbishops Islip and Wittesley stood between the columns at the upper end of the nave: both had been inlaid with their portraits in brass, under rich canopies; but these had been long removed. Two other archbishops, and several priors, had been buried near the steps leading to the choir, as appeared by

several grave-stones of marble, which had been once richly ornamented with brasses. The slab which covered the remains of Bishop Bockingham, was of great size, and formed part of the pavement at the lower end of the nave, where his skeleton was found entire when the new pavement was made.

Amongst the other persons who had memorials in the nave, or its aisles, were Sir William Septvans, who served in the French wars in the time of Edward the Third, and died in 1407; Sir John Guildford, one of the counsellors of Henry the Seventh, who died in 1493; Sir William Brencheley, or Bruchelle, who died "in Holborne, in the suburb of London," anno 1446; Sir Thomas Fogge, who, by his will, dated in 1407, gave 12*l.* towards the new work of the church; and Sir William Lovelace, sergeant at law, and high-steward of the liberties of Christ-church, who died in 1576. Several other monuments yet remain against the south and north walls. In the Martyrdom, or north end of the west transept, are the elegant monuments of the Archbishops Peckham and Warham, which are raised against the north wall, and adjoin to each other. The monument, or rather chapel, of Archbishop Warham, was repaired in the years 1796 and 1797, at which time, the rich tomb of the archbishop, which had previously stood at the west end of the recess formed by the canopy, was removed into the centre. In the chapel of the Virgin, or dean's chapel, six deans of this church lie buried; namely, Rogers, Fotherby, Boys, Bargrave, Turner, and Potter. The tomb of Dean Fotherby, who died in 1619, is curiously adorned with sculptures in full relief, of human skulls, and bones, heaped confusedly upon each other, as if just thrown out of a charnel-house. In the south part of the west transept, among many others, is a memorial for the learned Dr. Meric Casaubon, who died in 1671, in his 75th year, having been first canon of this cathedral during 46 years; a situation that had also been enjoyed by his father, Dr. Isaac Casaubon.

St. Michael's chapel, which opens from this end of the transept, is full of monuments, the most important of which is a very large tomb, occupying the middle of the chapel, and having on it the whole-length figures of Margaret Holland, third daughter of Thomas Holland, Earl of Kent, and her two husbands, John Beaufort, Earl of Somerset, and Thomas, Duke of Clarence, second son of Henry the Fourth. These figures are of marble, finely sculptured: both the Earl and Duke are in armour, and have collars of S.S. The Earl of Somerset, who had been admitted into the fraternity of this convent, died in 1410: the Duke of Clarence was slain in a fierce skirmish at Baugé, in France, on Easter eve, 1421. Against the north wall of this chapel is an elaborate monument in commemoration of Lieutenant-Colonel William Prude, who was slain at the siege of Maestricht, in July, 1637; and whose figure is represented, in armour, with

with one knee on a cushion. Eastward from this are several monuments of the Thornburst family. Against the east wall is the monument of Miss Anne Milles, represented by a bust of white marble. Below this is a large stone chest, partly inclosed in the thickness of the wall, on the top of which is sculptured a cross patée: this is assigned to Archbishop Langton, who died in 1228. Near it is a mural cenotaph, in memory of the brave Admiral Sir George Rooke, who died at his paternal seat at Monks Horton, in 1708, and lies buried in St. Paul's church, in this city. Against the south wall, is the cenotaph of Sir James Hales Knt. who was treasurer of the expedition to Portugal, in the reign of Elizabeth, and dying on his return to England, was committed to the waves: the inscriptions record the memory also of his wife and only son. In the south aisle of the choir are the tombs and monuments of the Archbishops Reynolds, Hubert Walter, Kemp, Stratford, Sudbury, and Meopham. The monuments of Kemp, Stratford, and Sudbury, are all of rich architecture, and have been open to the choir, though they are now shut out by the wainscotting. That of Archbishop Kemp consists of a tomb, surrounded by a most elegant canopy, rising up to a considerable height, in six divisions of clustered pinnacles and niches, three on each side, and crowned by a cornice, the summit of which exhibits shields and small angels in alternate succession. The monument of Archbishop Stratford, though less elaborate than that of Kemp, is very beautiful. Eastward from this is the monument of the unfortunate Archbishop Sudbury, the design of which displays equal fancy and elegance. The monument or tomb of Archbishop Meopham forms part of an elegant screen, which separates this aisle from the chapel of St. Anselm, and consists of five pointed arches on each side, rising from clustered pillars, and finished by a cornice and battlement. Within the chapel of St. Anselm, under the great south window, lies buried Archbishop Bradwardin, whose tomb is raised but a small height from the ground. In the north aisle of the choir, is the splendid monument of Archbishop Chicheley, and the no less beautiful one of Archbishop Bourchier. The former is of very elaborate design, and of uncommon excellence in its sculpture. The verge of the tomb below is thus inscribed:—

*Quisquis eris qui transieris rogo memorris,
Tu quod eris mihi constimilis qui post mortis,
Omnibus horribilis, pulvis, vermis, caro vilis.**

Beneath the arches surrounding the chapel of the Holy Trinity, are the monuments of Henry the Fourth and his Queen, Joan of Navarre; Edward the Black Prince; Odo Colignie; Cardinal Chas-

tillon; and Dean Wotton; and the cenotaph of Archbishop Courtney. Henry, and his Queen, habited in their royal robes, and crowned, are represented by recumbent effigies lying on a large tomb, enriched with blank arches, towered niches, pinnacled buttresses, and other ornaments. This tomb has been greatly damaged; the hands of the Queen are broken off, and the finely sculptured canopies, that surmounted the heads of both figures, are now lying in pieces. Henry died in March, 1413; and Joan of Navarre, his second Queen, in July, 1437. The north wall immediately opposite to this monument, opens into an elegant little chapel, erected soon after the death of Henry, agreeably to the directions of his will, as a chantry chapel, for two priests to pray for the repose of his soul.

The tomb of Edward the Black Prince, stands beneath the opposite arch to that of Henry and his Queen, and on it lies a very fine whole-length brass figure of the Prince, in armour, with a hood of mail and a scull-cap, encircled with a coronet, which has been once studded with jewels, but only the collets now remain. The arms of the Prince are raised in the attitude of prayer; his head is supported by a helmet, having a lion for the crest, and his feet rest on a lion couchant. The tomb is surrounded by shields of arms in compartments, displaying, in alternate succession, old France and England, quarterly, with a file of three points; and three ostrich feathers: over the former arms is the word *Houmont*; and over the latter, the motto, *Ich Dien*. The verge of the upper part of the tomb is inlaid with fillets of brass, containing a long inscription in old French; the poetical part of which has been thus translated:—

*"Whoe'er thou be that passeth by,
Where this corpse interr'd doth lie,
Understand what I shall say,
As at this time, speak I may.
Such as thou art, such was I;
Such as I am, shalt thou be.*

*Little did I think on death,
Long as I enjoyed my breath.
Great riches here I did possess,
Whereof I made great nobleness.
I had gold, silver, wardrobes, land,
Great treasures, horses, houses grand.*

*But now a caitiff poor am I;
Deep in the ground, lo! here I lie:
My beauty great is all quite gone,
My flesh is wasted to the bone.*

*My house is narrow now, and throng;
Nothing but truth comes from my tongue;
And if ye should see me this day,
I cannot think but ye would say,
That, "I had never been a Man,"—
So much altered now I am.*

** Translation.*

*"Take passenger this moral in thy way:
Whoe'er thou art, on some not distant day,
Like me thou shalt be dust, to worms a loathsome prey.*

For

For God's sake, pray to the Heavenly King,
That he my soul to Heaven may bring.
All they that pray, and make accord
For me unto my God and Lord,
God place them in his Paradise,
Where no wretched caitiff lies.

Above the tomb, extending from pillar to pillar, is an embattled canopy, and over it hangs the Prince's tabard of arms, gauntlets, &c. The sword and target of the Prince, that were formerly among these trophies, are stated to have been taken away in the time of the civil wars. The cenotaph of Archbishop Courteney is under the adjoining arch, eastward from the monument of the Black Prince. Beneath the next arch, in a rude coffin-shaped chest, plastered over, are interred the remains of Odo Coligüe, Cardinal Chastillon, who is traditionally said to have been poisoned, to prevent his embracing the Protestant religion, on his coming to England for that purpose, in the year 1671. The monument of Dean Wotton, who was a privy-counsellor to Henry the Eighth, Edward the Sixth, Queen Mary, and Queen Elizabeth, is situated beneath the next arch to that of Henry the Fourth, and displays the figure of the dean kneeling before a desk on a kind of sarcophagus. In the aisle on the south side of this chapel, and immediately opposite to the cenotaph of Archbishop Courteney, is the most ancient tomb, perhaps, which now remains in this cathedral. It is of a shrine-like form, the lower part exhibiting a range of six arches, with trefoil heads, rising from circular columns, with clumsy bases of the same form. This has been constantly assigned to Archbishop Theobald, whose remains, however, as already described, appear to have been deposited in the south aisle of the nave; yet there can be little doubt of its having been really made in honour of that prelate, and most probably as his shrine, after the rebuilding of this part of the cathedral.

On the north side of Becket's crown, within an iron railing, is a plain tomb, erected in memory of Cardinal Pole, who was buried here, in 1558.—The few monuments remaining in the crypt, are those of Archbishop Morton, Lady Mohun, and Isabel, Countess of Athol. The monument of Archbishop Morton has been greatly mutilated, but is still curious, and exhibits many traces of its former elegance.

In addition to the many persons for whom memorials are remaining in this cathedral, numerous others, of eminent rank and family, have been interred here, though their places of sepulture are for the most part unknown. Amongst these were the Archbishops Cuthbert, Bregwyn, Athelard, Wulfred, Fleologild, Ceolnoth, Athelred, Plegmund, Athelm, Wilelm, Odo, Dunstan, Æthelgar, Siricius, Elfric, Alphage, Livingus, Agelnoth, Eadsin, Lanfranc, Auselm, Ralph, Corboil, Richard, Winchelsey, and Arundel. The body of St. Dunstan, which is said, by Gervase, to have been first

buried in the under-croft, was translated by Lanfranc, into the choir, and there entombed within a new shrine, or altar; his memory being highly venerated, particularly before the assassination of Becket. The monks of Glastonbury, however, who wished to share in the benefits which his relics produced, began boldly to assert, in the reign of Henry the Seventh, that his body had been translated to their church about the year 1012; and their affirmations received so much credit, that the convent of Christchurch thought it expedient to remove every doubt of the real fact, by having the altar re-opened; which was done on the 20th of April, 1508. The remains of the saint were then found, with a plate of lead on his breast, inscribed with the words, *HIC REQUIESCIT SANCTUS DUNSTANUS ARCHIEPISCOPUS*.

The chapter-house, library, and cloisters, are connected with the cathedral on the north. The library contains a good collection of books, some valuable manuscripts, and a selection of Greek and Roman coins. Here is also a curious octagon table of black marble, inlaid with the story of Orpheus playing to the beasts. The passage which leads from the north transept towards the entrance of the library, terminates in a circular building, known by the name of "Bell Jesus;" an appellation traditionally stated to have been given to it from the dome being built in the exact model of a large bell, said to have been cast at Rome, and lost at sea on its way to England. The floor below this dome is occupied by the font, which was the gift of Dr. Warner, Bishop of Rochester, and prebendary of this church, in the time of Charles the First. The chapter-house is a spacious and elegant apartment, opening from the east side of the cloisters, and measuring 92 feet long, 37 broad, and 54 high. It was built by prior Chillenden, about the year 1400. The dean's chair, which forms the middle stall at the west end is canopied. This building is generally called the Sermon-house, from its having been fitted up for preaching in, shortly after the Dissolution. The cloisters form a noble quadrangle, inclosing a large area, to which they open by eight elegant arches, or windows, on each side; these were originally glazed, but all the glazing has been long destroyed: each of them is divided by mullions into four lights, with quatrefoils and crockets above. The vaulting of the roof is beautifully ornamented, and the points of intersection are covered with small shields, displaying the arms of the principal nobility and gentry of Kent, benefactors to this church: the number of these shields is upwards of 680.

The precincts of this cathedral and monastery occupied a very considerable area, the entire circumference of which is nearly three-quarters of a mile. This space was divided into three courts, called the Court of the Church; the Court of the Convent; and the Court of the Archbishop. On the north side of the cathedral was the court of the priory,

priory, or convent, encompassed with the buildings, lodgings, and offices, of the prior and the monks, now called the Green-court, and Brick-passage. Adjoining to this court, north-westward, was the almonry, now called the Mint-yard. On the west part was the court of the palace, or of the archbishop, where his palace was; and on the south side of the cathedral was the court of the church, now called the Church-yard, in which was the outward and inward cemetery; to the eastward of which was the convent-garden, now called the Oaks. After the Dissolution, the buildings of the priory were allotted among the dean and prebendaries, and converted into dwellings for their use, with the exception of the principal dormitory, the refectory, the convent, the kitchen, the long hall in the lodgings of the sub-prior, and some other edifices that were pulled down. The prior's lodgings, which occupied the whole east side of what is now called the Green-court, with their contiguous offices, were mostly given to the dean, and still form the site of the present deanery. The immediate apartments of the prior were destroyed by fire, about the year 1570, when the present dwelling was erected by dean Godwyn. In the deanery is a series of portraits of all the deans of Canterbury, excepting Aglionby, who was nominated by Charles the First, during the civil wars, but was never installed, through the calamitous circumstances of the times. The buildings surrounding the Green-court, which are principally occupied by the prebendaries, and other persons belonging to the cathedral, exhibit many curious specimens of ancient architecture.— On the north side, were the granary, brew-house, and bake-house: the latter is now the brew-house of the deanery, and a part of it contains the water-house, wherein is a cistern furnishing almost the whole precinct with excellent water, by pipes laid to the houses, and furnished itself by pipes from springs about a mile off. This cistern was placed in its present situation towards the beginning of the last century, having before been connected with a square conduit standing in the court-yard. Westward from this was a structure called the Dean's great-hall, which was demolished by the Puritans, the King's scholars having acted plays there. The *Domus Hospitum*, or Stranger's-hall, called, also, the *Aula et Camera Hospitum*, or the hall and chamber of the guests, is generally supposed to be the ancient pile near the northern extremity of the Green-court, a part of which is now used as the registrar's office. The hall was a very large and

lofty apartment, raised on a strong vaulting, supported by semicircular arches: its length was about 150 feet, and its breadth, 40. Under one of the arches on which part of this hall stood, has been made a low dark passage, communicating with the small court, called the Mint-yard, where formerly was the almonry, or ambry, of the convent, where the poor were daily fed with the remains of such fare as came from the refectory, and other tables kept within the monastery. Within the precincts of the almonry towards the south, the prior, Henry de Eastria, founded a chantry, or chapel, for six priests, in the eleventh of Edward the Second: this, with the contiguous buildings, has been converted into apartments for the use of the Grammar School, founded by Henry the Eighth for an upper and under master, and 50 scholars. This school, called the King's School, from its founder, is under the patronage of the dean and chapter, to whom the Mint-yard was given for its support, by Archbishop Pole, who procured a grant of the premises for that purpose from Queen Mary. Various gifts have since been bestowed for the benefit of this school; and several exhibitions to the Universities are annually made through its respective endowments. The scholars continue on this foundation five years, and each has a small annual stipend. Amongst the many eminent persons who have received the rudiments of their education here, were the celebrated Dr. William Harvey, the late Edward, Lord Thurlow, &c.

The archbishop's palace and gardens adjoined to the west side of the priory-court, and anciently composed the site of the palace of King Ethelbert, which that monarch bestowed upon Augustine, in perpetuity, as a seat for himself and his successors. Archbishop Lanfranc rebuilt the palace as a separate habitation for himself; and the greater part was again rebuilt by the archbishop, Hubert Walter, about 120 years afterwards. The latter prelate laid the foundation of the great and stately hall, which his successors completed at a vast expense, and which became famous from the many splendid and royal entertainments that were given here on different occasions.* About the year 1543, the palace suffered greatly by fire; and it appears to have continued in a dilapidated state till the beginning of the reign of Elizabeth, when it was repaired by Archbishop Parker, who, in 1573, entertained that Princess here on one of her progresses through this county. After the death of Charles the First, the whole of these premises were sold;

* In September, 1299, the nuptial feast of Edward the First, and Margaret, sister to the King of France, who were married in the Martyrdom, or north part of the west transept, was kept in this hall with great magnificence, most of the nobility of both nations being present. The sumptuous entertainments given by different Archbishops, on their respective inthronizations, of which even Kings themselves occasionally partook, were also given in this hall. The noble feast given by Archbishop Warham, has been frequently mentioned in

history, and was of such magnitude, that Parker, in his Antiquities of the British church, declares, he "was unwilling to relate the number of guests and dishes, lest he should report what could not be believed." In the time of this prelate also, in the year 1520, the sumptuous ball and supper given by Henry the Eighth, to the newly-elected Emperor, Charles the Fifth, and his mother, the Queen of Arragon, was celebrated here on one of the nights of the Whitsun week.

most part of the great hall, and other principal buildings, were pulled down for the sake of the materials; and the remainder of the palace was converted into dwelling-houses. At the Restoration, the entire demesne reverted to the archbishopric; but the buildings being found incapable of repair, the whole site and precincts of the palace were afterwards demised on a lease for 30 years; and in this manner the premises are still held, the lease being usually renewed every ten years. Part of the site is now occupied by a handsome modern dwelling: in two other houses, that have been fitted up from the remains of the palace, are some walls of great age. The ancient wall which surrounded these precincts, is still in great part remaining on the west and north sides, and was more so till within these few years: it is built of rubble-stone and flint, of great height and thickness, and seems by its appearance, to be part of that originally erected by Archbishop Lanfranc. Nearly in the middle of the west side is a large handsome gateway, built of brick, with stone ornaments, by Archbishop Parker; this was the principal entrance of the palace from Palace Street. The inhabitants of the precincts are governed by officers chosen among themselves, and maintain their own poor by a rate occasionally levied. At a short distance from the palace northward, is a small district called the borough of Stable-Gate, or Staple-Gate. This, though within the boundaries of the city, has distinct privileges, and is generally considered as the place where Augustine and his brethren were first seated when they were admitted into Canterbury, by King Ethelbert. At that time, says Thorn, it was an oratory for the King's family, who there adored and sacrificed to their gods; but the King, desirous of enfranchising this spot, and to exempt it from every exaction, granted that the inhabitants should not answer to the citizens in any tallages or assessments, or contribute any subsidy to them, but be subject to the Archbishop in all things; and to enjoy, in like manner as his palace, "uncontradicted liberty, and the privilege of being a sanctuary, and place of refuge for criminals, even after they were indicted, should they flee into this place of Stable-Gate, where they should enjoy the same privilege equally as in a church." The houses in this borough are chiefly inhabited by the lower classes, who resort hither for the sake of the greater liberty which they enjoy.

On the south side, under Christchurch gate, which stands nearly opposite to Mercery Lane, is the principal entrance to the cathedral precincts. This fabric was built by prior Goldstone, in 1517. The sculpture of this gate has been extremely elegant.

In the eastern suburbs of the city, at a short distance from the cathedral precincts, stand the venerable remains of St. Augustine's abbey, which at one period almost equalled the cathedral itself in magnificence, and continued to exist in great splen-

dour during many centuries. It was founded in 598, by Augustine, in conjunction with Ethelbert, King of Kent, who endowed it with many rich gifts. Eadbald, the son and successor of Ethelbert, founded a church in this abbey, through the influence of Archbishop Lawrence, who dedicated it to the Blessed Virgin, in the year 613; two years before which, the monks had been exempted by the Pope, from all episcopal jurisdiction. Many of the abbots were persons of eminent talents, and procured divers immunities and privileges from the papal see. William Welde, who was made abbot in 1389, had the honour to entertain Richard the Second, with his Queen, and his whole court, in this monastery, from the octaves of the Ascension to the morrow of the Holy Trinity. In this reign, the possessions of the abbey were rated at as high a sum as 1232*l.* 14*s.* 4*d.*: about the same time it appears that the abbey lands were computed to contain upwards of 11,860 acres. The last abbot was John Essex, who, with 30 of his monks, surrendered the abbey to Henry the Eighth; but not, as tradition reports, till they had been terrified into that measure by the sight of two pieces of ordnance, planted on a neighbouring hill. At that period, the annual revenues of the abbey amounted, according to the Monasticon, to 1413*l.* 14*s.* 11*d.* the nett amount was 1274*l.* 10*s.* 10*d.* Among the privileges possessed by this foundation, was that of coinage, which had been originally granted by King Athelstan, but which seems not to have been exercised subsequently to the reign of Stephen. On the day of the translation of St. Augustine, in the year 1271, during a violent tempest of thunder, lightning, and rain, which lasted a whole day and night, the buildings of the abbey were greatly damaged, and would have been quite overwhelmed by the floods, according to the opinion of the chronicler, had not "the virtue of the saints who rested there, withstood the force of the waters." Soon after the Dissolution, the principal buildings were stripped of their lead, and some of them left to perish by degrees; but the destruction was accelerated by entire edifices being occasionally pulled down, and the materials converted to different uses. The great gate, with the adjoining buildings to the south, and some others, were, however, kept standing; and Henry the Eighth is said to have converted them into a palace for himself, and his successors; and to have had the abbey lands, which immediately adjoined to the precincts, inclosed as a park for "deer and beasts of chase." Queen Mary granted the abbey demesnes to Cardinal Pole, after whose death, they reverted to the crown; and, in the year 1564, were given to Henry, Lord Cobham, by Queen Elizabeth, who kept her court here for several days during her "royal progress," in the year 1573. On the attainder of Lord Cobham, in 1603, James the First granted this demesne to Robert Cecil, afterwards Earl of Salisbury, at the annual rent of 20*l.* 13*s.* 4*d.* The next possessor

was Edward, Lord Wotton, who was owner at the time of the nuptials of Charles the First with the Princess Henrietta, which were consummated in this abbey, on the 13th of June, 1625. This estate was, on partition, allotted to Anne, youngest daughter of the late Lord Wotton, who married Sir Edward Hales, Bart. of Woodchurch, in this county; and their descendant, the present Sir Edward Hales, Bart. of St. Stephen's, is now the proprietor. The immediate precincts of the abbey included a circumference of about 10 acres, the walls surrounding which are mostly entire. St. Augustine's gate, which was the grand entrance, is a very elegant structure; but the interior is woefully dilapidated, having been converted into a brewery. The large room over the entrance, has been converted into the city cock-pit; and we find a fives-court, a bowling-green, a skittle-ground, an hospital, and a gaol, within the circuit of the walls. The other entrance, called the cemetery-gate, from its communicating with the ancient burial-ground, has been much altered, to adapt it to the purposes of a modern dwelling, and now presents a most incongruous aspect. The remains of the abbey church furnish an unquestionable specimen of early Norman architecture, of a rich and elegant kind. The west end has the name of Ethelbert's tower; though from what cause, unless in veneration of his memory, is unknown. When Augustine and King Ethelbert founded this abbey, it was with the intention that it should be made the place of their own sepulture, and also of their successors for ever; yet this design was completely frustrated before the expiration of 160 years. The Kings of Kent interred in this fabric, were Ethelbert, Eadbald, Ercombert, Lothaire, and Withred; and among the females of the blood-royal, were the Queens Bertha and Emma; and the Princess Mildreda, daughter of Lothaire. Many other persons of eminent rank have been buried here, though not a single memorial is now left to distinguish the places of their interment. Before the Dissolution, the numerous buildings of this abbey covered a great extent of ground. On the south side was the common cemetery, the greater part of which has been demised to the Kent and Canterbury hospital, erected here by public subscription, between the years 1791 and 1793. In digging the foundations of the hospital, the workmen were much impeded by considerable quantities of human bones: and some years previously to this, several stone coffins were discovered in a search purposely made: they were found mostly at the depth of seven feet, and contained perfect skeletons, which, from the remains of the envelopes, were conjectured to be those of ecclesiastics. It seems probable that this was a burial-ground in the Roman times; and Leland mentions a heart with an urn in it, that had been dug up near St. Pancras chapel. This chapel, which is a small edifice, measuring about 30 feet by 21, and standing near the eastern extremity of the cemetery,

has been long considered as an object of interest, through the Roman bricks, which appear in its walls.

The Kent and Canterbury hospital is a respectable brick edifice, containing eight wards for the reception of patients, with convenient apartments and offices for the attendants. The original promoter of this establishment was William Carter, Esq. M. D. whose plans being liberally seconded by the gentlemen of the county, the first stone was laid in June, 1791.

In the eastern part of the abbey precincts, a new county gaol has been recently erected on an ingenious plan, by which the different classes of prisoners are kept separate.

The ruins of the castle are situated on the south-west side of the city, near the entrance from Ashford. Kilburne, whose authority is very questionable, asserts, that Julius Cæsar erected a castle on this spot, and that it afterwards obtained the name of "Lodia's castle," from a Saxon governor; by which appellation, he continues, "it was excepted by Ethelbert out of the grant of lands made to St. Augustine for the foundation of his monastery."—There can be no doubt, however, that the present fortress was erected by the Normans; and most probably by the Conqueror, as it was standing at the time of the Survey. The outer walls included an extent of somewhat more than four acres, and were surrounded by a ditch; but the former have been mostly pulled down, and the ditch filled up. The present remains, which are those of the keep, evince a similar degree of ingenuity, and cautious policy, as the keep at Rochester; though the ground-plan of this fortress is essentially different. Its form is nearly square; its length being 88 feet, and its breadth 80: the present height of the walls is about 50 feet; but of what height it originally was, is uncertain. The interior was divided into three parts, by two strong walls, which were continued from the foundations to the roof: the middle division appears to have been open; those at the sides contained the apartments. The communications between the different parts were maintained by galleries, formed in the thickness of the walls, and going round the entire fortress. The state apartments appear to have been on the third floor, where the architecture is more ornamental; and the openings, or windows, larger than in any other part: the floors below this were lighted only by small loop-holes. The original entrance seems to have been at the west end of the north-east side. Here, as at Rochester, was a well of very neat masonry, ascending to the top of the keep, and communicating with every floor by open arches. An extensive malt-house, and other buildings, have been erected on the site of the wall and ditch, and other parts of the castle-yard: the north-western division of the castle has been for some years occupied as a depot for military stores. The principal walls are eleven feet in thickness. In the time of Edward

Edward the First, this castle was used as a common gaol; and it continued so to be so appropriated till the latter end of the reign of Elizabeth; and the assizes for the county were frequently held here.—James I. granted this castle, and its appurtenances, to a family named Watson; and they have since had several possessors. The present owner is Mr. Thomas Cooper. The new road to Ashford, made by public subscription, about the year 1790, crosses what was formerly the castle-yard, and passes over the site of the ancient Roman arch, called Worthgate, which was then removed.

To the S.E. about 300 yards from the castle, is a high artificial mount, of a circular form, bounded on the south by the city wall, which seems to have been here formed into an angle, purposely to include this eminence. Its origin has been generally assigned to the Danes; but it may be presumed to be the work of a more distant period. During the years 1790 and 1791, the sides of the hill were cut into serpentine walks, to admit of an easy ascent to the summit; and were also connected with a terrace formed upon the top of the high rampart within the wall, extending to the length of upwards of 600 yards. Additional walks were made in the adjacent field, and a double row of limes planted at the sides of the principal one, which is about 370 yards long, and unites with the terrace-walk at each end. These alterations were executed at the sole cost of the late James Simmons, Esq. bookseller and banker of this city, whose general conduct had so secured to him the approbation of his fellow-citizens, that he was returned without opposition to Parliament, as one of the burgesses of Canterbury. For several years previous to his decease, however, he had relinquished every concern with this estate, through a disagreement with the guardians of the poor; and for some time, the plantations and walks were utterly neglected. At length, about 1892, they were repaired at the expense of the corporation, by whom they were then appropriated in perpetuity to the public, and endowed with the sum of 60*l.* annually, payable out of the city chamber, for the constant "support and maintenance of the terrace, walks, and plantations."—In the following year, a stone pillar was erected on the top of the mount by subscription, as a memorial of the public services of Mr. Simmons, and particularly of his "generosity," in adapting this "field and hill" to the public use. Several Roman and other ancient coins were found in filling up the ditch; with a spear-head, and some brass or bell-metal spurs. The views of the city, and surrounding country, from the summit of this mount, are extremely fine, as well as from the terrace, which occasions this spot to be much frequented in fine weather; and it has now become the most fashionable promenade in Canterbury. Immediately opposite to this hill, on the south, and abutting on the high road, which runs close to the city ditch, is the manor of Dane John, or Dungeon, so called

from time immemorial. Here, also, are some remains of ancient fortifications, which seem to have formed a kind of outwork for the better defence of the hill.

The original city walls appear to have been constructed by the Romans; but, from the numerous alterations which have taken place, few remains of their workmanship can now be traced. Whether they underwent any changes in the Saxon times, is not recorded. Queen Eleanor, mother of Richard the First, gave orders that this city should be fortified "with ditches, walls, and fortresses," in the time of the captivity of that Prince when on his return from the Holy Land, and commanded that "all the inhabitants should be compelled to labour in the work;" but as this command was thought to infringe on the privileges of the monks of Christchurch, she issued her letters, stating, that "the vassals or servants of the prior did not labour from right or custom, but at the earnest intreaties of the Queen," and that their so doing, "should never be construed to the injury or disadvantage of the church." In the reign of Richard the Second, the walls were again repaired, the King himself giving 250 marks towards the expenses. A more extensive reparation was made in the reign of Henry the Fourth; and some partial repairs were subsequently made; but the whole is now, and has long been, in a dilapidated and ruinous state, excepting that part which connects with the cathedral precincts, and has been repaired by the dean and chapter. The ditch, which was 150 yards wide, has been partly filled up, and the site built on; other parts have been converted into garden-grounds, which are held under leases granted by the corporation, to whom the whole belongs. The walls included a circumference of nearly one mile and three-quarters: they were defended by 21 square and semicircular towers, of considerable strength, though now mostly in a state of ruin. In some parts, the walls are almost wholly of chalk, faced with flint; in others, they are constructed with a grout-work of chalk and stone intermixed. The general thickness is from six to nine feet. The principal entrances were by six gates, named West Gate, North Gate, Bur Gate, St. George's Gate, Riding Gate, and Wincheap Gate; the latter having been built in the room of the ancient Worth Gate, which had been long stopped up prior to its late removal. Of these, only the West Gate is now standing: through this fabric, erected at the expense of Archbishop Sudbury, in the reign of Richard the Second, passes the high London road; it is a lofty, spacious, and well-built structure of stone, and consists of a centre, flanked by round towers, which have a very stately and dignified appearance. The western branch of the Stour, which flows in front of this gate, and in the bed of which the foundations of the towers are partly laid, is here crossed by a bridge of two arches, belonging to the Archbishop. From the time of Henry the Sixth, this

this gate has been used as the city prison, both for criminals and debtors: various alterations and repairs were made in the interior about the year 1794. The Riding Gate, which was pulled down a few years ago, and the place of which is now occupied by a modern arch, crossed by the terrace-walk that was formed on this part of the city wall, in the year 1700, immediately adjoined to an ancient arch of Roman brick, beneath which ran the ancient Watling Street. St. George's Gate was built about the year 1470, as a more direct entrance into the city from Dover: in its general form, it was similar to West Gate, and had been long appropriated to contain the large reservoirs from which the city was supplied with water. It was wholly levelled with the ground, in 1801. Bur Gate, which had been rebuilt with brick, with stone quoins, in the year 1475, had been mostly demolished a few years before. North Gate forms the principal entrance from the isle of Thanet. In addition to these entrances, there were several posterns, at different parts.

There were many other religious houses and hospitals within the walls and suburbs of this city.—The house of the Grey, or Franciscan friars, was situated in the meadows on the bank of the Stour, at a short distance southward from St. Peter's Street: some low walls and ruined arches of the buildings still remain. These friars were settled here soon after their arrival in England, about 1220. On the opposite side of St. Peter Street was a convent of Black or Dominican friars, founded by Archbishop Langton and Henry the Third. The original charter granted by the King, is dated in 1236; and was the first that was ever made to this order of friars in England. The buildings originally formed a quadrangle; but the hall, which is now a Baptist meeting-house, is almost the only part that remains. In the church, which was demolished in the reign of Elizabeth, was buried the famous Sir Simon Burley, Lord Warden of the Cinque Ports, and Governor of Dover castle. On the south side of St. George's Street, nearly opposite to Canterbury Lane, was a house of White or Augustine friars, who settled here about the year 1325. The gateway fronting the street is yet standing, and forms a private residence.

On the same branch of the Stour on which the convents of the Grey and Black friars were situated, is the hospital of East Bridge, called also the hospital of St. Thomas the Martyr, from a tradition which ascribes its origin to Thomas Becket. Archbishop Stratford, in the year 1342, framed a new set of statutes for its government, in which, after stating, that this hospital was built "for the reception and sustenance, of poor pilgrims that should come to Canterbury," he ordains, that there shall "be twelve beds, convenient to lodge the pilgrims in, constantly kept under the care of a woman of honest report;" that fourpence a day

shall be regularly expended for the sustenance of the pilgrims, who, if in good health, shall be entertained only for one night;" and that, "if there should not be a sufficient resort of pilgrims in one day to require expending the whole fourpence, the remaining part shall be laid out freely on another day, when the resort of pilgrims shall be greater; so that for every day of the whole year, the entire sum of fourpence shall be carefully and faithfully expended." As early as King John's time, the revenues of another hospital, founded by William Cokyn, on the opposite side of St. Peter's Street, were consolidated with its own, by a grant of the founder. From the return made by the commissioners of Henry the Eighth, it appears, there was a neat chapel in this hospital, dedicated to the Virgin Mary, which was stated to be "a parish church;" and it was probably from this circumstance that it then escaped suppression. In the time of Elizabeth, Archbishop Parker framed a new set of ordinances for its government, in which, instead of providing for poor pilgrims as formerly, he directed that the hospital should be opened for the reception of "poor and maimed soldiers, who should pass backwards and forwards through Canterbury."—He also ordained that a free-school should be kept within the hospital; and that two scholarships should be founded out of its revenues, in the university of Cambridge. These exertions of Archbishop Parker proved insufficient to protect this foundation; for soon after his death, a grant of it was obtained from the Queen under false pretences, by one of her gentlemen pensioners, who quickly alienated the whole estate for the sum of 550*l.* and the release of a debt. Shortly afterwards, however, it was recovered by Archbishop Whitgift, who procured an act of Parliament for appropriating its revenues according to new ordinances drawn up by himself, under which they still continue to be expended. The management of the hospital is vested in a master, who must be in holy orders, and has the privilege of appointing a schoolmaster to instruct 20 poor children to "read, write, and cast accompts;" and it is ordered that, instead of providing beds for "poor soldiers," as formerly, the hospital should be fitted up for permanent reception of five in-brothers, and five in-sisters; and that, after the expiration of the 20 years next ensuing, part of the revenue should also be applied to the maintenance of an equal number of out-brethren and out-sisters.—In Spital Lane, eastward from Stour Street, is Maynard's hospital, called so by corruption from its founder, Mayner le Riche, who dedicated it to the Blessed Virgin, and endowed it for the support of three brethren and four sisters, in the year 1317. The present edifice was rebuilt with brick, by charitable contributions, in the year 1708; the ancient hospital having been blown down in the great storm in November, 1703.

In Lamb Lane, which forms the continuation of
Stour

Stour Street towards the north, is the city workhouse, formerly an hospital for poor priests, founded by Simon Langton, Archdeacon of Canterbury, and brother to the Archbishop of that name, about the year 1210. The present fabric was built in 1373, by Thomas Wyke, the then syndic, or master. Queen Elizabeth granted it to the mayor and commonalty of Canterbury, in 1574; and it was afterwards converted into the city bridewell, to which use one part of the building is still appropriated. In the year 1729, however, the whole hospital, with all its appertaining estates, was, with the consent of the mayor, &c. vested, by act of Parliament, in the guardians of the poor, for the purpose of forming it into a general workhouse; the said guardians being at the same time obliged to maintain and educate 16 poor Blue-Coat boys that had been previously kept here at the expense of the city. In the suburb without Northgate, stood the priory of St. Gregory, and the hospital of St. John, both of which were erected by Archbishop Lanfranc, in 1084. Soon after the Dissolution, the possessions of this priory were given to the see of Canterbury, in exchange for St. Radigund's, near Dover; and they continued to belong to the archbishops till the end of the last century, when they were alienated under the act for the redemption of the land-tax, and sold to the late George Gipps, Esq. During the late war, the garden-ground and cemetery belonging to this foundation, were covered with buildings for the use of the soldiery belonging to the cavalry barracks.

St. John's hospital, which is situated on the opposite side of the road, is styled the "twin brother" to that of Harbledown, as it has the same master, and is governed by the same ordinances. The establishment consists of a prior, a reader, 18 in-brothers and sisters, and 22 out-brothers and sisters: the annual revenues are upwards of 300*l*. Only a small part of the original building is still remaining; the rest having been destroyed by fire, in the reign of Edward the Third. Jesus hospital, also situated in this suburb, was founded under the will of Sir John Boys, in 1612, for eight poor men and four women. The warden, or principal brother, is, by the will of the founder, ordered to teach "freely, 20 boys to read, write, and cast accompts." The number was, in 1787, increased to 26; and at the same time an additional brother was added to the original number: the buildings form three sides of a square.

Smith's hospital, so called from its founder, John Smith, Esq. who endowed it for eight poor men and women, each of whom has a stipend of about 8*l*. yearly, stands in the suburbs, or borough of Longport. On the east side of Chantry Lane, are some remains of a building called Doge's Chantry, from its founder, Hamon Doge, official to the archdeacon of Canterbury, in the reign of Henry the Third. About a quarter of a mile south-eastward, on the south side of the Watling Street, is St.

Lawrence House, formerly the site of an hospital, founded by the abbots and monks of St. Augustine, in 1137, for a priest, or chaplain, a clerk, and 16 brethren and sisters. It was intended for the reception of such of the inmates of the abbey as should become leprous, or contagiously diseased, &c. and it continued subordinate to that house till the Dissolution. Sir William Rooke, who became possessed of this estate about the time of Charles the Second, was father to the gallant Admiral, Sir George Rooke, who retired here in the latter years of his life, and gave it the fanciful appellation of "the Rook's Nest."

Still nearer to the city, upon this road, stood the nunnery of St. Sepulchre, founded by Archbishop Anselm, about the year 1100, for sisters of the Benedictine order. The convent became famous about the period of the Reformation, from the pretended inspiration of one of the nuns, named Elizabeth Barton, but more generally called the Holy Maid of Kent, who being tutored by the monks, affected to be endowed with the gift of prophecy, and endeavoured to excite a spirit of insurrection against the measures which the King was then pursuing in respect to his divorce, and to the suppression of religious houses. For this offence, she and her accomplices were attained of treason, in 1533, and herself, with seven others, were executed at Tyburn. The entrance gateway, and some small remains of the buildings are now standing.

Between Dover Street and Riding Gate, are alms-houses for six poor women, built in 1778, by the Rev. W. D. Byrche, but not endowed; and in Wincheap Street, are Harris's alms-houses, so called from Mr. Thomas Harris, hop-merchant of Canterbury, who, in 1726, devised five dwellings in trust, for the reception of five poor families for ever; and for whose support he bequeathed a farm then rented at 21*l*. per annum. In St. Peter Street, is Cogan's hospital, which had been the residence of Mr. John Cogan, of this city, who, in 1657, bequeathed it for the habitation of six poor widows of clergymen. Some other almshouses have also been established in this city.

Within the walls of Canterbury, the number of churches, independent of the cathedral, is eleven; formerly there were several others; but they have been pulled down, and the parishes to which they were attached united to others. Four of the parishes, the churches of which are now standing, were united to four others, in 1641. Holy Cross church, just within Westgate, is a low but spacious edifice, with a square tower at the west end. It was built in the time of Richard the Second.—James Six, Esq. F. R. S. an ingenious naturalist and astronomer, was buried here: he died in 1793. St. Alphage church is a spacious and respectable building, containing many sepulchral memorials.—In the small church of St. Mary Bredman, was buried Sir Paul Barrett, Knt. Sergeant at Law, who died in 1685. In St. Margaret's, was interred the

learned William Somner, the historian, who was born at Canterbury, in 1606. He was the author of "The Antiquities of Canterbury," and a "Saxon Dictionary." He died in 1669. In this church, is a handsome monument in commemoration of Sir George Newman, LL.D. commissary to the Archbishops Whitgift, Bancroft, and Abbot, and Judge of the Cinque Ports almost 30 years: he died in 1627. St. Andrew's, a brick structure, has been erected since 1764, in place of the more ancient church of the same name. Among the rectors of this parish, who were buried in the old church, and the memorials of whom were removed hither, were the Rev. Thomas and William Swift, the great great grandfather, and great grandfather of the celebrated dean Swift. St. Mary Breding, or Bredin, is a small ancient structure, stated to have been built in the time of the Conqueror. In St. Mary Magdalen's church is a sumptuous monument in memory of John Whitfield, Gent. a liberal benefactor to the poor of this city: he died in 1691. St. Mildred's is a spacious and well-built fabric, near the end of Stour Street, at a little distance from the castle. It was erected in place of a church that was destroyed by fire in 1247. Near the altar-rails, adjoining to the south wall, is a large tomb, covered with a black marble slab, sculptured, with the arms and quarterings of the deceased, in memory of Sir Francis Head, Bart. who died in 1716. Above this is an elegant mural monument of white marble on a black ground, in memory of William Jackson, Esq. of this city. It was executed by the late J. Bacon, R.A. On the north side of the altar, is a mural tablet, in commemoration of Thomas Cranmer, Esq. son of Edmund, Archdeacon of Canterbury, and nephew of Archbishop Cranmer: he died in 1604. On the south side, is a cenotaph in memory of Sir William Cranmer, Knt. (also a relation of the Archbishop,) who was born in this parish, but buried in St. Leonard's, Bromley, Middlesex. On the north side of the chancel is a mural monument designed by the late Captain Riou, in memory of several individuals of the Bridger family. On the south side is a neat mural monument for the Lady Margaret Hales, who died in 1577, having been married in succession to three knights; viz. Sir William Mantel, Sir William Haute, and Sir James Hales. At the bottom is a genealogical tree, bearing her shield of arms, with impalements.

The other churches within the walls contain little remarkable: they are dedicated to St. Peter, All Saints, and St. Margaret. The churches in the suburbs, are those of St. Dunstan, St. Paul, and St. Martin. St. Dunstan's is situated near the entrance of the city, on the London road. In this church was a chantry for two chaplains, founded in the reign of Henry the Fourth, by John Roper, Esq. of Place House, or St. Dunstan's Place, in this parish, and from a younger branch of whom descended the Ropers, Lords Teynham. In the vault beneath the chantry chapel many of this fa-

mily are deposited: and here also is preserved the scull of the celebrated Sir Thomas More, whose favourite daughter, Margaret, was married to William Roper, Esq. and is also interred here. She is stated to have secretly procured the head of her father after its exposure on London Bridge, and to have kept it by her till the time of her death, after which it was placed near her coffin, in a niche in the wall, secured by an iron grate. In the chapel are several monuments of the Ropers, with a helmet, sword, tabard, and other trophies.

In St. Dunstan's Street, on the north side, is the gaol for the eastern division of the county: and on the same side, somewhat nearer to Westgate, is a Jews' synagogue. The number of the Jews is about 400, most of whom reside in this part of Canterbury. In St. Paul's church, in the eastern suburb, without Burgate, is a mural monument in memory of Sir William Rooke, Knt. of St. Lawrence, who was imprisoned for several years for his loyalty; but, after the Restoration, was made a deputy-lieutenant of this county, and was also high-sheriff of Kent for several years in the reigns of Charles the Second, and James the Second: his son, Sir George Rooke, was also buried here. On a slab in the pavement, are brasses of a male and female. St. Martin's church, situated on a rising ground, at a short distance beyond the precincts of St. Augustine's abbey to the east, appears to have been constructed with the ruins of a former building, the walls being composed of a confused mixture of flints, stone, and tile. The font is curious, and apparently of Norman workmanship. Before the altar-rails is a marble slab, inscribed to the memory of Sir Henry Palmer, Knt. of Howletts, in this county, who died in 1659. On another slab is a well engraved brass in memory of Thomas Stoughton, Gent. of Ash, who died in 1591. On a third slab, are brasses of a male and a female, with a group of six children. Against the south wall, is a large tomb and mural monument, in memory of John Lord Finch, Baron of Fordwich, who died in 1660.

On the eastern branch of Stour, just within the city wall, is a spacious and lofty flour-mill, called Abbot's Mill, from its having been erected either on, or immediately contiguous to, the site of an ancient mill of the same name, so denominated through having been granted to the abbots of St. Augustine's, by King Stephen. This structure was erected at the charge of the late Mr. Simmons, and Mr. Royle. The plans were furnished by the late Mr. J. Smeaton, and the whole building exhibits an incontestible proof of the pre-eminent talents of that celebrated mechanic and engineer. Though the greatest fall of water here never exceeds five feet three inches, this mill is so powerful as to be capable of grinding and dressing into flour, 500 quarters of corn weekly. The Stour is supposed to have anciently covered a great part of the valley in which Canterbury is situated. At present, it is only navigable to Fordwich, about two miles below the

the city; though several attempts have been made to render it navigable.

Canterbury, in the Saxon times, was governed by a præfect. Early in the eleventh century, the chief officer seems to have been styled *Præpositus Regis*. In the reign of Henry the Third, the government of the city was intrusted to two bailiffs, who, by a charter granted by the King, in his 18th year, were to be elected by the citizens annually. By the same charter, the King granted the city to the citizens in fee-farm, at the yearly rent of 60*l*. Various new charters, with additional privileges, were bestowed by succeeding sovereigns, and all of them were confirmed by a new charter, given by Edward the Fourth, in August, 1461, in which also, amongst other new privileges, he remits a third part of the annual rent, and ordains that from that period the city should be wholly separated from the county of Kent, and be constituted a county by itself, and so continue for ever. Previously to this, in 1448, Henry the Sixth had granted to the citizens and commonalty, the liberty of choosing a mayor annually in place of the two bailiffs, and this continued to be the appellation of the chief officer to the present time. Other charters were granted by Henry the Seventh and Eighth, Edward the Sixth, Queen Elizabeth, and James the First. The charter granted by the last-mentioned sovereign, is that under which the city is now governed: it directs that the corporation should in future consist of a mayor, a recorder, twelve aldermen, including a chamberlain, 24 common councilmen, including the sheriff of the city, a town-clerk, a coroner, and various inferior officers. A court of burghmote, for the business of the city, is held on every fourth Tuesday, and is called by summons, and by the blowing of a horn. The arms of the city are, argent, three Cornish choughs, proper, two and one; on a chief, gules, a lion passant guardant, Or. The three Cornish choughs were a part of the arms borne by Archbishop Becket, who was long considered as the tutelar saint of Canterbury. This city has been regularly represented in Parliament by two burgesses ever since the 23d of Edward the First.

* On Christmas day, 1647, many of the inhabitants having assembled to celebrate divine worship, were interrupted by the Puritans, and, at the instigation of the more violent, were treated with insult and personal violence. This was resented; and, as a measure of security, the insulted persons seized on the magazines, and placed guards at each of the city gates; they would probably have proceeded further, had they not been influenced by the persuasions of Sir William Mann, Counsellor Lovelace, and Alderman Savine, who, jointly with the mayor, a zealous Puritan, drew up articles, by which it was agreed, that "no man should be molested or questioned for any thing which had been done," provided that he "retired in peace to his own habitation." The Parliament, however, who probably thought that its own authority was involved in the dispute, sent down a regiment of foot soldiers, who, entering the city in a hostile manner, took down the wooden gates, and burned them; and also made several breaches in the city wall, on the west side. Many persons were then taken up on suspicion of being

The right of election is in the freemen, amounting to about 1600; of these, about 920 are resident, and 680 non-resident. When it was customary to give wages to the members of the House of Commons, the pay of the burgesses of Canterbury was fixed (anno 1411) at two shillings a day for each, while such burgess was absent from his family attending his duty. In 1443, the wages were no more than twelve-pence a day: two years afterwards they were increased to sixteen pence; and in 1503, had again been raised to two shillings. In Queen Mary's reign, the corporation refused to continue this payment any longer, and the wages of the members were then levied by assessment on the inhabitants at large, and so continued till payments of this nature altogether ceased.

In the year 1271, or 1272, was a most violent storm of thunder and lightning, accompanied by a sudden inundation, which drowned many of the inhabitants of this city, and swept away many of the houses and other buildings. In 1361, in a terrible wind here, many trees were overturned, and roofs and steeples blown down. Another tremendous storm of wind occurred in the autumn of 1785, when various houses and barns in the environs of the city, were overthrown, and the greatest part of the hop plantations in its neighbourhood were destroyed. Several shocks of earthquakes have, at different times, been felt in this city. On the 21st of May, 1382, many windows of churches, and other buildings, were shattered in an earthquake, that is said to have extended throughout all England: another earthquake of some violence, occurred in September, 1692. The plague has also at various times, extended its ravages to this city: the years 1544, 1564, 1593, 1595, and 1635, are particularly recorded in the registers of its occurrence.

The association of the Kentish men in favour of Charles the First, which terminated with the siege of Colchester, and the deaths of Sir Charles Lucas, Sir George Lisle, and Lord Capel, had its commencement in the city of Canterbury.*

The dissolution of religious houses greatly checked the

concerned in the late disturbance, and among them were the three gentlemen, by whose particular exertions it had been quelled, who, with several others, were committed prisoners to Leeds castle, near Maidstone, where they were confined upwards of two months, but were then admitted to bail. They were at length ordered for trial, under a special commission, in the castle of Canterbury; but the Grand Jury returned a verdict of ignoramus, to the great displeasure of the Judges; and being ordered out to reconsider the bill, again came to the same decision. Some sharp observations were consequently made on the conduct of the jurors, which excited so much displeasure, that the latter immediately assembled, and drew up a petition to the Parliament, requesting in the name of all the inhabitants of the county, that the "King might be admitted to treat with both houses in safety and honour;" that the army might be disbanded; that the "subjects of the realm be governed and judged by their undoubted birthright, the known and established laws of the kingdom;" and that property be

no

the prosperity of this city; and the inhabitants, no longer enriched by the expenditure of pilgrims, and other strangers, whom the celebrity of its monastic institutions had attracted for centuries, began to experience the evils of poverty. The population consequently decreased, and many of the buildings became ruinous; nor was it till after the persecution of the Protestants in the Low Countries, under the Duke of Alva, in the latter part of the reign of Edward the Sixth, that its business began to revive. Many of the inhabitants of Brabant and Flanders then sought refuge in England, and settled in different parts of the country. Those who were weavers in silks and stuffs, made choice of Canterbury for their habitation, where they might have the benefit of the river, and an easy communication with the metropolis: for this purpose, they had the Queen's letters of license in her third year, directed to the mayor, for such of them as should be first approved by the archbishop, to remain here for the purpose of exercising their trades, so that they did not exceed a certain number therein mentioned, and as many servants as were

no longer invaded by impositions and taxes." This petition was approved by most of the gentry and clergy throughout Kent; and intimation was given that all who wished to attend the presenting it to the House, should assemble for that purpose, at Blackheath, on the morning of the 30th of May. Before this could be accomplished, the Speaker of the House of Commons was ordered to send letters to the lieutenants of the county, and others, authorising them to suppress it, and to seize all those who were active in its support. These measures excited a strong ferment; and the supporters of the petition resolved to maintain their claims by force of arms; the Parliamentary committees having already issued orders for the trained bands of the county to assemble at their respective places of rendezvous. With this intent they seized on several depots of ammunition; and, in a well attended meeting held at Canterbury, on the 23d of May, it was resolved, that they had a right to state their grievances to Parliament; and that, if circumstances required it, they should march with the "sword in one hand, and the petition in the other." A general council was then formed, and commissioners were appointed for the more safe and effectual accomplishment of these designs. Two regiments were ordered to be raised; the one of horse, under the command of Colonel Hatton, and the other of foot, under the command of Colonel Robert Hammond: large subscriptions were at the same time made for the payment of the officers and soldiers. Nearly all the principal inhabitants of East Kent had now engaged in the association: and their dependants and partizans assembling in formidable numbers, they soon found themselves sufficiently strong to take possession of the castles of Deal and Walmer: they also endeavoured to secure the castle of Dover, but in this they did not succeed. The day appointed to present the petition being now at hand, the commissioners assembled at Rochester, where they received notice, that the House of Commons had issued orders to the Lord Fairfax to march against them with his army: a general council was then held in which it was determined, that all the forces in the interest of those engaged to support the petition, should rendezvous on Barham downs, about midway between Rochester and Maidstone: this they accordingly did to the number of about 7000, when George Goring, Earl of Norwich, was declared General. They afterwards advanced to Blackheath, in expectation of reinforcements; but hearing that the Parliament army was in motion, they retreated in two bodies, one of which took post at Maidstone, and was surprised, and totally routed on the

necessary to carry on their business. Those who were then permitted to settle in Canterbury, consisted of only 18 housekeepers, besides children and servants. The Queen, as a further mark of her favour, in 1561, granted to them the under-croft of the cathedral church, as a place of worship for themselves and their successors. The persecution still continuing, the number of these refugees multiplied so, that, in 1634, the number of communicants in the Walloon church was increased to 900; and there were calculated to be of these refugees in the whole kingdom, 5213, who were employed in instructing the English in weaving silk, cotton, and woollen goods; in combing, spinning, and making different kinds of yarn, worsted, crewels, &c. About the year 1665, there were in Canterbury 126 master-weavers, their whole number amounting here to nearly 1300, and they employed 759 English; so that the King thought proper to grant them a charter in 1676, by which it appears, that their number here was then but little short of 2500. By this charter they were enabled to become a company, by the name and description of the Master, War-

following night, by Lord Fairfax. In this exigency, the Earl of Norwich held a council of war, in which it was decided, that the main army should again march on towards London, as, by so doing, they should be continually drawing nearer to the counties of Sussex and Essex, the inhabitants of which had engaged to join in the association. In pursuance of this plan, they marched on to Dartford, where they arrived about midnight, and where the General was informed by a messenger from Essex, that that county was ready to join him, 2000 men having been already assembled at Bow, and more at Chelmsford. The design was now formed of providing boats to convey the army across the Thames; but the General first wishing to be assured whether the aspect of affairs in Essex was so favourable as the messenger had represented, crossed himself into that county, and was much surprised to find, on his arrival at Bow, that no troops were assembled there, or in the vicinity, excepting such as were in the interest of the Parliament. He therefore rode on to Chelmsford, that he might determine in what degree he could confide in the promises of support which had been given him. During his absence, however, from his troops, who had a second time reached Blackheath, and were but ill supplied with provisions, such various contradictory reports were spread, that the soldiers began to steal away privately, and retire to their own homes, by which means their numbers were greatly reduced. The remainder, though in great confusion, found means to cross the river under the conduct of Major-General Compton, and marched forward over Bow Bridge to Stratford, where they met the Earl of Norwich on his return: he immediately ordered them what refreshment the place afforded, and having posted strong guards on the different passages of the river, directed them to quarter at Stratford till further orders. Here they continued five days, awaiting the decision of the Essex gentry, many of whom were at length prevailed on, by the exertions of Sir Charles Lucas, to aid their design. The Kentish men were then ordered to march to Chelmsford, and were joined in their way, by several parties of horse and foot. At Chelmsford, their numbers were increased by the party of Lord Capel, from Hertfordshire; yet, even with these additions, the whole body scarcely amounted to 4000 men. This force being wholly insufficient to withstand the army of Lord Fairfax, which was rapidly advancing, it was now determined to retreat to Colchester, where, after enduring a siege of eleven weeks, and sustaining almost every kind of privation, they were compelled to surrender.

dens,

dens, Assistants, and Fellowship, of Weavers.—The revocation of the edict of Nantz, in 1685, occasioned a fresh influx of refugees into this country, and great numbers of them again settled at Canterbury, where they considerably improved the condition of the labouring classes, who now found full employment in the fabricating of lustrings, brocades, satins, &c. Since that period, the silk trade has gradually declined, chiefly from the rapid extension of the cotton branch, through the inventions in machinery of Sir Richard Arkwright, and others. The manufacture of cottons was introduced into this city, about the year 1789, by the public spirit of Mr. John Callaway, Master of the Weaver's Company, who also discovered a method of fabricating the piece goods, called Canterbury and Chamberry muslins, damasks, &c. This manufacture still flourishes. Hasted computes, that about 1000 men, women, and children, are here employed in the different branches of the silk, cotton, and wool trades.

The hop plantations (in which numbers of the inhabitants are engaged) within the circuit of two miles and a half round Canterbury, include upwards of 2000 acres.

This city is supposed to have been first paved in the reign of Edward the Fourth. Within the last 40 or 50 years, it has undergone great alterations, and been much improved. A new act for paving, lighting, and watching the city, was passed in 1787; and since that time, the entrances both from Ashford and Dover, have been altered, by making new and more convenient roads. A thoroughfare, leading from the High Street to Palace Street, by which Mercery Lane, forming the principal outlet to the isle of Thanet, is left for the exclusive use of foot passengers, has recently been made. The houses in Mercery Lane are mostly ancient buildings, each story projecting over the one below; and on the west side of it are remains of the Old Chequers Inn, which Chaucer has mentioned as one of those frequented by the pilgrims.

The town-hall, a respectable edifice, has been partly rebuilt. It contains several good portraits. The shambles, which range backward from the north side of the High Street, were erected in 1740, in place of the more ancient shambles which stood in the middle of the street itself. The butter-market, where also poultry, fruits, &c. are disposed of, occupies the site of the ancient bull-stake, where the city butchers were accustomed to bait their bulls previously to killing them. Here also stood a cross, built in 1446, and taken down in 1645. The old building at the butter-market, erected by Mr. John Somner, brother to the antiquary of that name, the upper part of which had been long used as a theatre, was taken down in 1789, by order of the corporation, who, in that and the following year, erected the present structure for the convenience of the market people. It chiefly consists of a circular roof, supported by wooden

pillars. The cattle market is just without St. George's gate, upon the site of the city ditch, where it has been held from time immemorial.—Provisions are plentiful, though not so reasonable as formerly.

The assembly-rooms, in the High Street, were partly erected by subscription of the gentry of East Kent: the ball-room is a large and elegant apartment. Beneath it is a public Bank: a second Bank has been also established at a little distance. The Canterbury Theatre, a handsome edifice, in Prince of Orange Street, was first opened in 1790.

The population of Canterbury has greatly increased since the commencement of the war of 1793, and the erection of permanent barracks for the military, on the high road to Thanet, about half a mile from Northgate. The royal cavalry barracks were built of brick, in 1794, at the expense of about 40,000*l.* including the purchase of 16 acres of ground. They form three sides of a quadrangle: the centre building contains the apartments for the officers; those at the sides contain the lodgings for the privates, with ranges of stabling, &c. The front is left open for the purpose of exercise, and the whole is surrounded with a lofty pallisade: the situation is pleasant and healthful. Additional barracks, for 2000 infantry, were erected in 1798, and have since been made a permanent station for detachments of the Royal Horse and Foot Artillery.

An Agricultural Society was established here in January, 1793, by the name of the "Kent Society for the Encouragement of Agriculture and Industry;" under the auspices of which a wool fair has been established at Ashford, and premiums to the amount of some thousands of pounds, have been distributed in promoting the ends of the association.

Some remarkable circumstances have been recorded relating to the police of this city. In 1258, the King, Henry the Third, granted a free pardon to Frances de Balsham, "for that she was hanged for felony at Canterbury, from nine o'clock on Monday to the rising of the sun next day, and yet escaped with life." In 1571, the sum of nine-pence was paid for "writing papers for witches;" and the Grand Jury present "Mother Hudson, of the parish of St. Mary Dungeon, for that they vehemently suspect her to be a witch." In 1580, the Grand Jury present three persons dwelling in St. Andrews, "for keeping open shop, they being unmarried, and under the age of 30 years." In 1656, one John Alcocke was found guilty of murder; but execution was staid on his declaring himself to be a clerk, and craving the benefit of clergy. "Thereupon comes James Lamb, clerk and ordinary, and the book being delivered unto the said John Alcocke he did read as a clerk:" he was therefore only burned in the left hand, according to the statute. In 1650, several persons were executed here for witchcraft. A new ducking, or cucking-stool, is recorded to have been provided in 1520; and the Grand Jury, in 1537, "present the wife of John Tyler,

Tyler for living viciously, and for the which her husband had forsaken her; and the Jury desire she might be banished by the feast of St. James next, under pain of open punishment in the ducking-stool."

Amongst the celebrated natives of this city are enumerated Dr. Thomas Linacre;* William Somner, Esq. the antiquary already mentioned; and Mrs. Afra Behn.†

CHALK.]—The parish of Chalk is composed of the two villages of East and West Chalk, 2½ miles E.S.E. from Gravesend. Some singular sculptures on the church porch, referring to the ancient practice of celebrating "Ales," in churches, and supposed to be connected with a "Give-Ale," bequeathed by William May, of this parish, in 1512, are entitled to notice. Immediately over the entrance arch, is a grotesque figure, in a short jacket, holding a flaggon, squatted beneath the base of a neat recess, above which, on the cornice below the gable, is an antic or scaramouch grinning from between his own legs, and on each side of him is a human head: "on the faces of the latter, as well as on the visage of the jovial tipler, the sculptor seems to have bestowed such an indelible smirk, that, however they have suffered from the corrosions of time and weather, nearly to the loss of features, it is yet visible." The inside of the church contains little else remarkable, besides a stone seat and piscina, some ancient recesses for tombs, &c.

CHARING.]—At Charing, seven miles N.W. from Ashford, are some considerable remains of a palace, which belonged to the Archbishops of Canterbury. Anciently the whole village belonged to Christchurch, in Canterbury, but was taken from it by King Offa, and it remained in the hands of the Mercian Kings till Archbishop Athelard, in the year 799, persuaded King Kenulph to restore it to the church, and it continued in the possession of

* Dr. Thomas Linacre was born in the year 1460. He was taught the rudiments of education by the prior of Christchurch, William Selling, whom he accompanied on his embassy to the court of Rome, in 1490, where he acquired an extensive knowledge of the Greek and Latin languages. After his return, he was appointed tutor and physician to the young Prince Arthur: he afterwards became physician to Henry the Seventh; and, on his death, was continued in the same situation by the new King. Dr. Linacre projected the plan of incorporating the physicians of London, and he obtained a patent for the purpose, by an application to Cardinal Wolsey. The meetings were at first held at the Doctor's house, in Knight-riders Street; and he himself filled the office of president till the time of his death, in 1524. Some years previously to this, however, he commenced the study of divinity, and having entered into holy orders, was promoted to a prebend, both in the cathedral of Wells and of York. He died at the age of 64, and was buried in St. Paul's cathedral, where an outline of his life and character, written by the famous Dr. John Caius, was inscribed on his monument.

† Afra Behn, whose maiden name was Johnson, was born about the year 1642, and when very young, was carried to the West Indies, her father having been appointed Lieutenant-Governor of Surinam; he died on his passage; but his family proceeded to that settlement; and there his daughter became

the archbishops, till Cranmer exchanged this manor with Henry the Eighth, by which means it came to the crown. The church is a handsome building. The tower, with a small beacon turret, at one corner, is at the west end. In 1590, this church was consumed by fire to the very stones of the building, which happened from a gun discharged at a pigeon, then upon its roof.

CHARLTON.]—The pleasant well-built village of Charlton, is situated on the edge of Blackheath, eight miles E.S.E. from St. Paul's cathedral. It was formerly notorious for a very disorderly fair, not yet quite extinct, holden only on St. Luke's day, October 18, when the mob having horns on their heads, took the grossest liberties, and the lewd and vulgar amongst the women, gave a loose to all manner of indecency. It was called Horn Fair, and is traditionally said to have originated as follows:—King John, who had a palace at Eltham, in this neighbourhood, being hunting near Charlton, was separated from his attendants; when, entering a cottage, he admired the beauty of the mistress, whom he found alone, and debauched her; her husband, however, suddenly returning, caught them in the fact, and threatening to kill them both, the King then found himself under the necessity of discovering who he was, and of purchasing his safety with gold; besides which he gave him all the lands from thence as far as the place now called Cuckold's Point, and likewise bestowed on him the whole hamlet, establishing a fair as a condition of his holding his new demesne, in which horns were both to be sold and worn.

Charlton church was rebuilt of brick, between the years 1630 and 1640, by the executors of Sir Adam Newton, lord of the manor. It is neatly fitted up; and in the windows of the chancel, and north aisle, are various shields of arms, in stained glass, for the families of Newton, Puckering,

acquainted with the American Prince Oroonoko, whose adventures she afterwards related in a novel of that name. On her return to England, she married a Dutch merchant, named Behn, and having been introduced at court, was thought to possess sufficient address for state intrigues; and was, in consequence, employed as a spy in Holland, about the commencement of the Dutch war. She fixed her residence at Antwerp; and, by means of a gallant, she discovered the intention of the Dutch to sail up the Thames, and burn the English shipping: this intelligence being disbelieved by the court, occasioned her to relinquish her employment in disgust; and, after some time, she returned to London, where she "devoted herself to pleasure and the muses! She possessed a lively fancy; and her conversation is said to have been particularly interesting and witty. Her poems, and other writings, partake of the licentious character of the times in which she lived; yet they display a powerful genius, and an exuberance of invention and language, which more attention would easily have conducted to excellence. Besides various histories and novels, she wrote seventeen plays, and three volumes of miscellaneous poems: she also translated Fontenelle's *Plurality of Worlds*, and *History of Oracles*. She died in April, 1689, and was buried in Westminster Abbey, where a monument has been erected to her memory.

Blount,

Blount, &c. Amongst the monuments in the chancel, is one in memory of the Hon. Brigadier-General Michael Richards, Surveyor-General of the Ordnance to George the First, who died in 1721. In the north aisle of the chancel, is a plain monument, of black and white marble, inclosed by iron rails, in commemoration of Sir Adam Newton, Bart. and Catherine, his wife, youngest daughter to Sir John Puckering. The former was tutor to the "illustrious Prince Henry;" and after his death, passed most of his time in retirement at Charlton. He died in 1629. Another monument commemorates Lady Grace, Viscountess of Armagh, second daughter of John, Earl of Rutland, and her second husband, Sir William Langhorne, Bart. owner of this manor. Among the tombs in the church-yard, are those of James Craggs, Esq. father of the Right Hon. Secretary of that name; Sir John Lambert Middleton, Bart. &c. John, second Earl of Egmont, with many others of his race, were also buried here, though no monuments have been erected to their memory. Amongst the entries is this: "Faith, Hope, and Charity, born at one birth, three daughters of Peter Newill, were baptized April 14, 1678:" two of them were buried a few days afterwards.

Charlton House, the residence of Lady Wilson, is pleasantly situated at a short distance from the church, on the south, and exhibits a good specimen of the style of building during the reign of James the First. The saloon is richly ornamented; the ceiling is in its original state, as finished by Sir Adam Newton, and exhibits the royal arms, and ostrich feathers: the chimney-piece is of the same age, and has on one side the figure of Vulcan, in alabaster, and on the other, that of Venus. In a room joining to the saloon, is a chimney-piece, "with a slab of black marble so finely polished, that Lord Downe is said to have seen in it a robbery committed on Blackheath: the tradition adds, that he sent out his servants, who apprehended the thieves." The gallery on the north side of the house, was also fitted up by Sir A. Newton, and measures 76 feet, six inches, by 16 feet, six. In the windows is some painted glass, of the arms of the Ducies, formerly lords of the manor, and their alliances. In this gallery are portraits of Henry, Prince of Wales, and Thomas Wilson, LL.D. Secretary of State to Queen Elizabeth; and also a large and valuable collection of natural history, made by Lady Wilson, consisting of insects, minerals, extraneous fossils, and other subjects: among the fossils are a great variety of those found in this parish. The park and pleasure-grounds comprise about 70 acres, and include some beautiful scenery. Before the court-yard is a row of cypress trees, of great age.

Near the church, on the east side, is an elegant villa, erected about five-and-twenty years ago, by Earl Cholmondeley, in a situation of much picturesque beauty. It stands at the western extremity of Hanging Wood, near a chalk-pit, in which

echini, and other extraneous fossils, are found.—Through the wood is a very pleasant walk to Woolwich; and at the further end is a very large and deep sand-pit, containing immense quantities of extraneous fossils.

CHARTHAM.]—Chatham, the Certelham of Domesday, lies $3\frac{1}{2}$ miles S.W. by W. from Canterbury, on low ground bordering on the Stour. The manor was given to the priory of Christchurch, by Duke Elfrid, in 871. In the reign of Edward the First, the monks had a vineyard here. Henry the Eighth granted the manor to the dean and chapter of Canterbury, to whom it still belongs. The priors of Christchurch had a residence here. Their seat is now called the Deanery, having been for some time a country residence of the Deans of Canterbury. Since the time of the Commonwealth, it has been held by different persons under lease. The house, which stands about half a mile south-westward from the church, on the opposite side of the river, was greatly altered and enlarged between 30 and 40 years since.

Chartham church is a spacious edifice, in the form of a cross, with an embattled tower at the west end. The east window is particularly fine; and the others are filled with painted glass. Amongst the sepulchral memorials, is a large slab in the chancel, inlaid with a brass as large as life, of a knight, cross-legged, in mail armour, with a surcoat above, a shield on his left arm, a lion at his feet, and a long sword hanging pendant from a very rich girdle. This figure, as appears by the wheat screens, or fans, on the shield and surcoat, was intended for one of the ancient family of the Septvans, one of whom, Sir Robert Septvan, was with Richard the First at the siege of Acre. A monument, finely executed by Rysbrack, in 1751, records the memory and virtues of the late Sir William Young, Bart. and Sarah, his first wife, daughter of Charles Fagg, Esq. Sir William is represented standing, in a Roman dress, and leaning his left hand on the shoulder of his lady: near them is Hymen with his torch inverted on a scull. Sir William died at St. Vincent's, in the West Indies, in 1788; and was brought hither, "pursuant to his constant wish, and last request," and interred near the remains of his first wife, who died in 1746, aged only eighteen years.

In 1668, in digging a well within thirty yards of the river, at the depth of about nineteen feet, "the workmen turned up a parcel of strange and monstrous bones, some whole, some broken, together with four teeth (grinders) perfect and sound, but in a manner petrified, and turned into stone, each tooth weighing something above half a pound, and some of them almost as big as a man's fist."

On Chartham downs, extending along the south side of the high road between Ashford and Canterbury, are numerous barrows, of different sizes, scattered over the ground, which, in ancient deeds of the adjoining estates, is described by the name of

of Danes Banks. Several of these have been opened at different times, and the remains of bodies, both male and female, with various trinkets, &c. have been found in them. On the contiguous plain, called Swadling Downs, to the south, and in the road under Dengewood, are several other entrenchments.

Mystole, in the parish of Chartham, is the paternal inheritance of Rev. Sir John Fagg, Bart. whose ancestor purchased it about the time of Charles the Second, of the Bungeys.

CHATHAM.]—The large and populous, but irregular and ill-built market-town of Chatham, adjoining to the east side of Rochester, and extending along the banks of the Medway, and up Chatham Hill, is eight miles N. by E. from Maidstone, and 30½ E. by S. from London. The manor, in the time of the Confessor, belonged to Earl Godwyn. William the First granted it to Bishop Odo, and subsequently to Haman de Crevecœur, or “*de crepito corde*,” a Norman Knt. the founder of the potent and illustrious family of the Crevecœurs, who frequently styled themselves “*Domini de Cetham*,” and made this the head of their barony, till the erection of Leeds castle, by Robert de Crevecœur, fourth in descent from Haman. His grandson joined with the barons against Henry the Third, when this manor was seized; and, though Crevecœur himself was restored to favour, Chatham was retained by the crown. It has since passed through the hands of numerous possessors.

The importance of the town of Chatham has entirely arisen from its dock-yard and arsenal, which occupies an extensive area on the north side of the town, nearly a mile in length, and defended on the land side by strong fortifications. The original dock, formed in the time of Elizabeth, is now the Ordnance Wharf: James the First finding it too small and inconvenient, had the present dock made further to the north. This was enlarged and improved by Charles the First; and since his time, many alterations have been made, and additional buildings erected. The dock-yard is surrounded by a high wall; the entrance is by a spacious gateway, flanked by embattled towers. The houses of the commissioner, and principal officers, are large and handsome buildings; and the various offices for managing the different departments of the yard, are neat and commodious. The store and masts-houses are of great extent: in the former, one of which is 660 feet in length, are deposited prodigious quantities of sails, rigging, hemp, flax, pitch, tar, rosin, and all other necessities for the equipment and building of ships. The principal masts-house is nearly 240 feet long, and 120 wide. The rope-house is 1140 feet in length: in this building, cables of all dimensions are twisted, the labour of making them being partly executed by machines. The sail loft is upwards of 200 feet long, and the other workshops are of proportionable extent. The wet-docks, four in number, are sufficiently capa-

cious for first-rates: here, also, are six slips, or launches, for building on. The smith's shop contains upwards of 20 forges, where anchors of all sizes are made. The number of artificers, &c. employed here is between 3 and 4000. The Royal Sovereign, a first rate of 100 guns, was built here just before the restoration of Charles the Second, who visited the dock, for the purpose of seeing that ship. Several first, second, and third rates have also been built here, besides frigates, &c.

The Ordnance Wharf occupies a narrow slip of land below the chalk-pit, between the church and the river. Here great quantities of naval ordnance, ammunition, &c. are deposited.

Previously to the reign of George the Second, the defence of Chatham was entrusted to the guard-ships stationed in the river, and to the several forts erected on its banks. In 1758, when the country was threatened with invasion, a new act was passed for the purchase of additional lands, and the erection of such works as might be necessary to secure this important arsenal from the attempts of an enemy. The extensive fortifications, called the Lines, were then commenced, and were continued from the banks of the Medway, above the Ordnance Wharf, round an oblong plot of ground, measuring about half a mile in width, and a mile broad, to beyond the extremity of the dock-yard, where they again join with the river. Within this area, besides the naval establishments, are included the upper and lower barracks; the church of Chatham, and the hamlet of Brompton, containing about 500 houses, pleasantly situated on the summit of the high ground to the south-east of the Yard. The lower barracks are spacious and uniform buildings of brick, inclosing a large quadrangular area. The upper barracks, near Brompton, are also of brick, spacious, and convenient. The garrison consists of five companies of soldiers, and a battalion of artillery. The lines are strengthened by ramparts, palisadoes, and a deep broad ditch; and are also defended by a strong redoubt, made on the summit of the hill towards the south-east. This was constructed during the American war, when the fortifications were repaired and augmented at a great expense. Various important additions have been since made. From the variety of Roman remains that were dug up in forming the lines, &c. it seems probable that the Romans had a *castrum æstivum* in this vicinity: that they had a burial-place here is certain. Mr. Douglas, who was a Captain in the Engineer Company, at the time of making the fortifications, opened upwards of 100 graves. Many of them were found near the south-eastern extremity of the lines, towards Upberry Farm; and the appearances of several of them excited a suspicion that the ground had been originally covered with small tumuli, which, in subsequent times, might have been levelled by the plough. In these graves many human skeletons, of both sexes, were found entire; with swords, spear-heads, beads of various colours

colours, the umbo of a shield, different pieces of armour, a bottle of red earth, an urn, filled with ashes, great numbers of Roman coins, the impressions mostly obliterated, and other antiquities. On the breaking up of the ground, for constructing the redoubt, in 1779, the workmen met with a strong foundation of a building, only a few inches below the surface. This was discovered to be the outer wall of a range of small apartments, the largest not exceeding ten feet square: the floors were about four feet and a half below the surface of the ground. The inner walls were done in fresco, with red, blue, and green spots; and, among the rubbish, were fragments having broad red stripes, and others with narrow stripes of different colours. The foundations of a large building were also discovered on the west-south-west side of the former. Numerous Roman coins were met with; one of the Empress Faustina, and another of the Emperor Claudius. An Athenian coin of silver was also found, having on one side, a curious head of Minerva, armed with a skull-cap; on the reverse, an owl, with a sprig of laurel, and the letters AΘE, for Athenæ, or Athens. Pieces of Roman tile, spear-heads, human bones, fragments of urns, pateræ, lachrymatories, &c. were also dug up. The urns were formed of different kinds of earth, of red and other colours.

St. Mary's church, which stands on the chalk-cliff, rising above the Ordnance Wharf, was almost entirely rebuilt in 1788; the expenses being partly defrayed by brief, and partly by parochial contributions. It is a neat edifice of brick, nearly square: the west wall formed part of the ancient Norman church, and still exhibits, on the inside, some remains of semicircular arches, with zig-zag mouldings. In the old chancel, on the south side, was a most elegant triple stone seat. Amongst the sepulchral memorials, is an inscription for Steven Borough, one of the four principal Masters in Ordinary of the Navy, in the reign of Elizabeth. In 1553, he discovered the northern passage by St. Nicholas to Russia, with "the coasts therto adjoining, to wit, Lappia, (Lapland,) Nova Zembla, and the country of Samoyeda. At his setting fourth of England, he was accompanied with two other shippes, Sir Hugh Willobie beinge Admirall of the fleete, who, with all the company of the said two shippes, were frozen to death in Lappia, the said winter." Another inscription records the memory of Sir John Cox, Knt. an eminent naval commander against the Dutch, who was Captain of the Duke of York's ship in "the expedition against the Hollanders, in the year 1672; and there, in fight with the said enemy, on the 2d of May, was unhappily slain by a great shot, in the 49th year of his age." Against the north wall, is the monument of Sir Edward Gregory, Knt. a Commissioner of the Navy, who died in 1713.—He bequeathed 100*l.* for the use of the poor. With this sum, South Sea stock was purchased in 1714; and six years afterwards, the trustees having suffi-

cient discernment to secure the advantage they had obtained by the general infatuation, sold out at the very advanced rate of 750*l.* An estate of 32 acres, called Pett's Farm, in the parish of Barham, was then purchased, the rent of which is annually distributed among the necessitous poor. In digging a grave in the church-yard, in the year 1772, a petrified human hand was found, grasping the brass hilt of a sword. The hand was partly mutilated, and all the other parts of the body were perished, as well as the blade of the sword: it was afterwards deposited in the Leverian Museum; an interesting establishment, which was broken up some years ago.

In the year 1078, an hospital was founded at Chatham, on the south side of what is now the High Street, by the celebrated Bishop Gundulph, for the reception of poor and leprous persons of both sexes. The endowments were but small; and though they were afterwards augmented by different benefactors, the proceeds were seldom sufficient to support the inmates, who were accustomed to be supplied with provisions from the priory at Rochester. These lepers, though poor, appear to have formed a distinct corporate body, were possessed of a common seal, and demised their estates in a corporate capacity. The hospital itself has been long demolished; but there are still four persons, styled brethren, two of whom are in orders, supported by the revenues. The east end of the chapel, originally built for the lepers, in the reign of Henry the First, now forms part of a chapel of ease, which was enlarged in 1743, at the expense of William Walter, Esq.

On the opposite side of the street is an hospital for decayed mariners and shipwrights, founded about the year 1592, by the brave Admiral, Sir John Hawkins. In 1594, Queen Elizabeth incorporated this establishment by charter, vesting its management in 26 persons, styled "the Governors of the Hospital of Sir John Hawkins, at Chatham," who were empowered to receive or purchase lands to the yearly value of 100 marks; being within a few shillings of the annual amount of the estates which Sir John soon after conveyed to them for the purposes of the charity. He died in the following year; and the governors having framed a set of ordinances for the conduct of the pensioners, twelve persons were admitted into the hospital; but the funds proving insufficient for their proper support, their number was reduced to ten in the year 1609, and has continued such till the present time. Each pensioner has a small weekly allowance, with a chaldron of coals, annually, &c. No person is eligible to this charity, who, whilst in the service of the royal navy, has not been maimed, disabled, or otherwise brought to poverty. The present hospital is a respectable and convenient building, erected on the site of the old one about 80 years ago, with a bequest of 500*l.* left by a former governor for the purpose. The original endowments were in-

increased by a legacy made by Robert Davis, "an honest, upright seaman, who was slain in battle, in 1692; and who, by his will, left the whole of his effects to this hospital; the produce of which, amounting to 60%, was paid by his sole executrix, dame Elizabeth Narborough, afterwards the wife of Sir Cloudesley Shovel.

Sir John Hawkins is also generally considered to have been the means, in conjunction with Sir Francis Drake, of the establishment of the chest at Chatham; a noble charity, but which, having been greatly mismanaged, was removed to Greenwich, a few years ago, on the recommendation of the Commissioners of Naval Inquiry. This institution was established about the year 1590, when the seamen in the service of Queen Elizabeth, agreed to allow a portion of each man's pay for the relief of their fellow sailors that had been wounded in the defeat of the Spanish armada; and for similar purposes for ever.

The Victualling Office stands near the entrance of the town from Rochester. This is composed of several extensive ranges of building, appropriated to the various important concerns of victualling the royal shipping lying at Chatham, Sheerness, and the Nore.

Further, on the same side of the High Street, is an ancient mansion, which formerly belonged to the Petts, the celebrated ship-builders, in the reigns of James the First, Charles the First, and Charles the Second. The chimney-piece in the principal room is of wood, very curiously carved. On the back of the grate is a cast of Neptune, standing erect in his car, with Tritons blowing conches, &c. and the date 1650.

On the south side of the High Street, the path for foot passengers, is raised between 20 and 30 feet above the carriage-road, in three divisions, called St. Margaret's Banks, from being within the parish of St. Margaret, and liberties of Rochester. These banks command a beautiful prospect of the river Medway, the shipping in the harbour, the adjacent country, &c.

James the First knighted many gentlemen here, in 1604; and in 1606, he again visited this town, accompanied by his Queen, Anne of Denmark, her brother Christian the Fourth, Prince Henry, the chief officers of state, privy-counsellors, and many of the nobility. The Elizabeth-James had been magnificently decorated to receive the royal guests, who dined on board; the provisions being dressed in a "great hoy, called the Kitchen." On the departure of the royal visitors, a tremendous salute was fired from nearly 1200 pieces of ordnance, simultaneously discharged.

An act was passed in 1772, for the paving, lighting, &c. of this town; previously to which, it was one of the most disagreeable in Kent. Many improvements have been since made; but the streets are still irregular and narrow. Most of the houses have been erected since the reign of Elizabeth.—The inhabitants are chiefly employed in the dock-

yard, or in trades connected with maritime pursuits. Their number, as returned under the act of 1811, was 12,652.

CHEVENING.]—At Chevening, 3½ miles N. W. from Seven Oaks, the family of the Chevenys were settled as early as in the reign of King John.—Cheveney Place, in the time of Henry the Sixth, became the property of the Lennards, an eminent family, afterwards raised to the peerage, by the title of Lord Dacre. Richard, second Lord Dacre, rebuilt Chevening House, from a design by Inigo Jones. The estate subsequently came by purchase, into the Stanhope family; and Charles, the late Earl Stanhope, who died on the 15th of December, 1816, passed much of his time here.

In Chevening church are some fine monuments of the Lennards, of Chevening Place; and of the Cranmers, of Chepsted Place, another ancient seat in this parish, about a mile south-east from the church. The tomb of John Lennard, Esq. prothonotary, and custos brevium, of the Common Pleas, in the reign of Elizabeth, is of alabaster, and has on the top, the recumbent figures of himself, and of his wife Elizabeth, finely sculptured. Nearly opposite to this is another stately monument, in commemoration of Sampson Lennard, Esq. son of the above, who died in 1615; and Margaret, his lady, sister and heiress to Gregory Fiennes, Lord Dacre, of the South, obiit. 1611.

Chepsted Place, which we have just mentioned, became the property of the Cranmers, in the reign of Queen Elizabeth. It is now, or was lately, the property and residence of George Polhill, Esq. whose ancestor, David Polhill, Esq. purchased it in 1658. The Darent bounds the grounds on the north; and on the south, runs the high road from Westerham to Maidstone.

At a little distance, south-eastward from Chepsted Place, is Montreal, so called by the late Jeffery, Lord Amherst, K.B. in memory of his success in the reduction of Montreal, in Canada, in the year 1760. This nobleman erected the present elegant mansion, near the site of the ancient residence, which had the name of Brook's Place, and is supposed to have been built by one of the Colepepers, with materials brought from the suppressed hospital of St. John, in this vicinity. The achievements of the British troops in North America, during Lord Amherst's continuance there, are recorded on a triumphal column or obelisk, in the circumjacent grounds.

Kippington, another ancient seat in this parish, belonged to the Cobhams, of Sterborough castle, Surrey, from whom it passed through various families to the learned Thomas Farnaby, A. M. one of the most eminent schoolmasters that ever lived. He flourished in the reign of Charles the First, and being imprisoned for his loyalty, he died in confinement at Ely House, in June, 1647. The estate now belongs to F. M. Austen, Esq.

CHIDINGTON.]—The manor of Chidington, 6½ miles

miles W. by S. from Tunbridge, belongs to H. Streatfield, Esq. who is proprietor also of the manors of Burghersh Court, and Bore Place, in this parish. In the village, which is called High Street, from its elevated situation, is High Street House, the residence of the Streatfields, from the time of James the First. The church is a spacious and handsome fabric. On the south side of the chancel, is a chantry chapel, built by Sir Richard Read, of Bore Place, Lord Chief Justice of the Common Pleas, and one of the executors to the will of Henry the Seventh. He lies buried here, with Sir Thomas Willoughby, who had married his eldest daughter and coheirress. Among the Streatfields, who have memorials here, are two, whose graves are covered by iron plates. Here is a somewhat remarkable stone, standing upon a base of two steps in a farmyard, on the south side of the High Street, called the "Chiding Stone."

CHILHAM.]—The village of Chilham lies six miles W.S.W. from Canterbury; and, immediately adjoining to Godmersham Park, on the north, is Chilham Park, now, or recently, the seat of James Wildman, Esq. of whom it was purchased of the late Thomas Heron, brother to Sir Richard Heron, Bart. This gentleman, under the authority of an act of Parliament, had himself purchased the honour, manor, and castle of Chilham, with their appurtenances, from the Colebrookes, who, in 1724, had bought them of Colonel Thomas Digges, who erected the present mansion about the year 1616. It is a venerable brick edifice, but singular in its form, which is that of an irregular polygon. The upper windows command some fine views over the vale of the Stoure, and adjacent country. At a short distance from the house, towards the north-west, stand the remains of Chilham castle, concerning the origin of which much hypothetical argument has been advanced, by the late Edward King, Esq. in his *Munimenta Antiqua*. That it was built upon a site which had been previously occupied by the Romans, and, perhaps, antecedently, by the Britons, is extremely probable; but that that the present keep was ever the residence of King Lucius, or Hengist, or Widred, is an assertion which the construction of the edifice itself completely refutes. Camden's opinion, "that Julius Cæsar encamped here in his second expedition, after he had driven the Britons from their entrenchments," seems equally erroneous, as the distance of Chilham from any part of the sea coast is considerably more than that where Cæsar himself states the battle to have been fought. The advantageous position of this post would, however, doubtlessly occasion it to be very early occupied; and that the Romans had some building upon this spot is in some degree evinced by a passage in *Phillipott*. Harris says, that "during the time of the heptarchy, this castle was under the care of the Kings of Kent; and King Wighred, in particular, fortified it, and made it a place of strength and defence; but it was afterwards sacked and demolish-

ed by the Danes, in their incursions into these parts." In the time of Edward the Confessor, Cilleham, as it was then called, was held by a noble Saxon, called Sired de Cilleham, who fought on the side of Harold, at the battle of Hastings; but it does not appear that any castle was then standing here. The Norman William first granted the manor to Bishop Odo, and then to Fulbert, surnamed De Dover, who made it the head of his barony, and who was one of the knights associated with John de Fiennes in the government of Dover castle. This Fulbert de Dover is said to have built Chilham castle. Henry the Eighth conveyed the honour, castle, lordship, and manor of Chylham, to Sir Thomas Cheyney, to hold in capite by knight's service; and his grant was confirmed by Edward the Sixth. His son, Henry, Lord Cheyney, in the 10th of Elizabeth, alienated all his estates here, to Sir Thomas Kemp, from whose daughters and coheirresses Sir Dudley Digges obtained them. The outer walls of the castle are greatly dilapidated, but seem to have formed an irregular parallelogram, including an area of several acres, and being surrounded by a broad ditch, which, towards the north-west, is still very bold and deep. The form of the keep is singular, being an irregular octagon of three stories, the uppermost of which appears to have contained the state apartments.—The walls, which are venerably mantled with ivy, are from ten to twelve feet in thickness, exclusive of a square addition on the east side, in the midst of which is a circular staircase. The view from the platform is very extensive and beautiful. The whole building seems to have been faced with squared stone: the inner parts of flints, chalk, and stone intermingled. The supply of water was obtained from two wells; one of which is within a small inclosure attached to the keep itself: and the other in the outer area: the latter is still in use.

Northwards from the castle, at a little distance, are the village and church of Chilham. The north end of the transept is separated by a high partition from the rest of the church, and used for a school and vestry. On the north side of the chancel is the splendid mausoleum of the Colebrookes, which was built under the direction of the late Sir Robert Taylor, about the year 1755. The interior forms a circle of nearly 24 feet diameter, independent of the basement, which projects 18 inches. It is divided into eight compartments by Ionic columns, which support a broad entablature and cornice, crowned by a rich dome and cupola. In the soffit of the arch, which forms the entrance, and occupies one of the compartments, is a brief commemorative inscription. Each of the other compartments contains six recesses for coffins, made in the thickness of the wall, which measures from eight to ten feet. This mausoleum occupies part of the site of an ancient chantry chapel, out of the remains of which have been formed an arched recess, containing a curious altar monument, erected by Sir A. Palmer, K. B. in

in memory of Margaret, Lady Palmer, sister to Sir Dudley Digges, who died in 1619. Sir Anthony himself lies buried within the altar-rails.— On the south side of the chancel is a chapel, or monument-room, built by Sir Dudley Digges, in the reign of James the First, and in the vault beneath which he himself lies buried, with many of his family. Many other sepulchral memorials are in this church. In the windows of the north aisle, are some remains of painted glass.

Immediately opposite to Chilham Park, on the brow of the chalk hill, but on the other side of the river, is a very large long barrow, vulgarly called Julliberry's Grave, noticed by Camden as follows: "Below this town (Chilham,) is a tumulus covered with green turf, under which they say, many ages since, was buried one Julliber, whom some fancy a giant, others a witch. For myself, as I think some ancient memorial concealed under this name, I am almost persuaded that Laberius Durus, a military tribune, was buried here, who was slain by the Britons in the march from the fore-mentioned camp, and that from him the tumulus was called Jul-laber." Camden's surmise has not obtained general credit; and Dr. Battely, in his *Antiquitates Rutupinæ*, after arguing against it with some success, has advanced his own opinion of this being the tumulus of a Saxon named Cilla; and that the term Jul-laber, is a corruption from Cilla-byrig, anciently pronounced Chilla-byri. The same author states that Heneage Finch, Esq. who became Earl of Winchelsea, in 1712, had this barrow opened, but without finding any thing by which its origin could be ascertained.

At Old Wives' Lees, formerly Oldwood's Lees, from an owner of that name, in this parish, is an annual race between young maidens and bachelors, "of good conversation, and between the ages of 16 and 24;" the two victors, a maid and a bachelor, being entitled to the sum of 10*l.* each, under the will of Sir Dudley Digges. The race is run on the 19th of May, and is generally attended by a large concourse of people.

CHISLEHURST.]—This parish, bounded by Bromley, Orpington, Paul's Cray, Foot's Cray, Eltham, and Mottingham, lies 11½ miles S. E. from London. It was anciently an appurtenance to Dartford, and descended, with that manor, to Sir Thomas Walsingham, of Scadbury, in this parish. Lord Sydney, the present owner, occasionally resides at Frogna, now called Sydney Lodge, a pleasant seat near Foot's Cray. The church is dedicated

St. Nicholas, and contains various monuments of the Walsinghams, Betensons, Berties, and other eminent families. The monument of Sir Edmund Walsingham, in the north aisle, consists of a table tomb, richly ornamented with roses, acorns, and foliage, gilt: above, are two arches, supported by pillars of the Corinthian order, within one of which is the following inscription:—

"A Knight, some tyme of worthie fame,
Lyeth buried under this stony bower,
Sir Edmund Walsingham was his name,
Lieutenant he was of London Tower;
Serving therein twenty-two yeares space,
Continually in his Prince's good grace.
The 9th of February, 1549, fully runne,
The soule from the body parted was,
Leaving three daughters and one soune,
Marie, Alis, Ellinor, and Thomas,
Which Thomas, now Knight, this erected the rather,
In memory of Sir Edmund his father."

Sir Philip Warwick, Knt. who, in 1646, was appointed one of the commissioners to treat for the surrender of Oxford, and Sir Richard Adams, Knt. Baron of the Exchequer, who died in March, 1774, have also memorials in this church.

Scadbury has been long dilapidated, and the estate is occupied as a farm. Sir Francis Walsingham, youngest son of William Walsingham, Esq. by Joyce, daughter of Sir Edward Denny, and Sir Nicholas Bacon, Lord-Keeper to Queen Elizabeth, were born at this seat.

Camden Place, in Chislehurst parish, had its name from the famous William Camden, who is said to have composed his *Annals of Elizabeth* on this estate, in his latter years. He died here in November, 1623; and was carried hence with great solemnity to the place of his interment in Westminster abbey. Earl Camden is the present owner of the estate.

CLIFFE.]—Cliffe, five miles N. by W. from Rochester, called Clive, and Bishop's Clive, in ancient writings, has been conjectured, by some, to be the place named Cloveshoe, where several synods or councils, were held in the Saxon times. Others, however, with more probability, have assigned Abingdon, in Berkshire, which was anciently called Sheovesham, as the place appointed for the meetings of these councils. Whatever may be the fact, Cliffe was of more importance anciently than it is now; and the rector still exercises several branches of ecclesiastical jurisdiction, either by himself or surrogate, which mark an independent authority. Every year, "he holds a court soon after Easter, for taking the oaths of the churchwardens on their entrance into office; and he grants licenses for marriages, probates of wills, and letters of administration."—At an annual court also, a borsholder is elected for each of its six subordinate hamlets of West Street, Rose Street, Wood Street, Reed Street, &c.

Cliffe church, standing on the brow of the chalk eminence which bounds the marshes, is a large handsome fabric, with an embattled tower at the west end. The windows have been richly ornamented with painted glass. In the chancel, behind the screen, eastward of the present altar, in the south wall, is a piscina, and three very elegant stone seats. Opposite to these, is an ancient tomb, under an obtusely-pointed arch, supported by episcopal heads. Amongst the communion plate, is a very curious patine,

and ancient patine, which, when the Roman Catholic religion prevailed here, covered the chalice, or contained the consecrated wafers at the sacrament of mass. It is of silver gilt, and six inches in diameter. In the centre, most beautifully embellished with blue and green enamel, is represented the Deity, sitting with his arms extended, and supporting his Son on the cross, with an olive branch in the left hand, and the Gospel in the right.—Round the verge, or rim, is the following inscription, in the ancient text letter, curiously ornamented with sprigs of roses between each word, alluding to the subject.

Benedicamus. Patrem. et Filium. cum. Spiritu. Sancto.

COBHAM.]—Five miles W. from Rochester, stands Cobham Hall, the ancient seat of the once illustrious, and far-spreading family of Cobham. It is now, with its surrounding estates, the property of Earl Darnley. During nearly four centuries, from the reign of King John to that of James the First, Cobham was the head of the barony of this noble race, which for a long period maintained pre-eminence in this country, and with whom, perhaps, the ancient nobility of Kent may be said to have expired. The mansion, though not externally grand, retains sufficient remains of its ancient baronial splendour to excite considerable interest.—It is built in the form of a half H; the extremities of the side wings are terminated by octagonal towers, and with the centre, and a sunk wall in front, inclose a quadrangular lawn, ornamented by statues, vases, &c. The centre of the building was planned by Inigo Jones, and was new cased with brick, and sashed, by the late Earl of Darnley; so that its appearance is not uniform with the wings, which formed part of the residence of the Cobhams. In these are projecting entrances of stone, extending to the roof: that to the south, has the arms and supporters of the Cobhams, sculptured in bold relief, in the upper compartment.—The vestibule, which opens from the lawn, is partly fitted up in the Turkish, and partly in the Italian manner. The chimney-piece is of marble, and extremely elegant; having in front, a sculpture of a bacchanalian subject, and being surrounded with beautiful statues, &c. The small figures of Hercules, and the Vatican Apollo, which stand above, and the group of Cupid and Psyche below, are in the finest style. This apartment opens into the music-room, magnificently fitted up and furnished; its length is 50 feet; its breadth, 36; and its height, 32. The ceiling, designed by Inigo Jones, is divided into various square and circular compartments, with a deep oval in the centre; all superbly gilt, and enriched by appropriate ornaments. The lower part of the sides are lined with grey-veined marble, between pillars of scagliola, in imitation of yellow orbique marble, supporting a rich fascia and cornice. In the compartments above, are repre-

sentations of musical instruments, hanging in festoons, and most richly gilt. At each end is a gallery, supported by four columns, cased like the pilasters, and having bases and capitals of Parian marble, exquisitely sculptured. The chimney-piece has full length marble statues at the sides; and, in front, a sculpture from the Aurora of Guido.—Above, in a gorgeous frame, are portraits by Vandyck, in his finest manner, of Lord John and Lord Bernard Stuart, sons of Esme, and brothers of James, Dukes of Richmond and Lenox: over this, beneath a massive gilt curtain, are the arms, supporters, and coronet, of Lord Darnley. The furniture is equally splendid with the decorations; amongst the other ornaments are eight alabaster vases, on pedestals; with full-length statues of the Venus de Medicis, and other antiques. A few years ago, the interior of the north wing underwent a complete repair, under the direction of the celebrated Wyatt; and a new entrance on this side, by a Gothic arched gateway, was erected. This communicates with a vaulted passage leading to the grand staircase, which has also been recently altered in the Gothic style, and has on the ceiling an ornamental compartment, containing a shield, charged with the arms of Stuart, Duke of Richmond and Lenox, copied from Inigo Jones's ceiling. This leads to the gallery, a very noble apartment, filled with pictures: its length is 134 feet. The chimney-pieces, which are four in number, are elaborately wrought in black and white marble, as are all the others in the ancient parts of this edifice; and though very large, and in some respects heavy, they have a striking and sumptuous appearance: on one of them are the arms of the Lords Cobham, with the date 1587. In an apartment contiguous to this, Queen Elizabeth was lodged during her visit to William, Lord Cobham, in the first of her reign; and her arms are still remaining among the other ornaments on the ceiling. On the basement story is the dining-parlour; the chimney-piece of which exhibits a full-length statue of Pomona in the centre, with fruits, &c. at the sides; and beneath the cornice, is an outline engraving of Moses striking the Rock. Amongst the numerous fine paintings in this mansion, is a large picture of the Death of Cyrus, by Rubens, for which Lord Darnley has refused 2000 guineas; a spirited sketch of the Lion Hunting, by the same artist: the Call of Samuel, by Sir Joshua Reynolds; a Nativity, with a great variety of figures, finely grouped and coloured; Judas betraying Christ; and a large piece of Fishermen in a Storm, by Salvator Rosa; the figures and colouring of the sky in which are of uncommon excellence.

Cobham Park, which includes 1800 acres, and is nearly seven miles in circumference, is beautifully diversified, and abundantly wooded. The oaks are particularly luxuriant. On the south side, leading from the house, is a noble avenue of lime trees, consisting of four rows, and extending to the length

of upwards of 1000 yards. On an elevated site towards the southern extremity of the park, is an extensive building, erected as a mausoleum, or chapel, at an expense of 9000*l.* under an injunction in the will of the late Earl, and designed for the sepulture of the family. The basement story, which is rusticated, contains a vault and sarcophagus, surrounded by recesses for interments. The floor over this was intended for a chapel, and is crowned by a dome, supported by eight Corinthian columns.—The exterior part of this story has four wings with duplicated columns, sustaining sarcophaguses, and is terminated by a pyramid.

Cobham college, which nearly adjoins the church on the south side, is a neat quadrangular building of stone, 60 feet by 51. It contains a hall, and convenient apartments for 20 persons, with a garden to each. Over the south portal, are the arms and alliances of Brooke, Lord Cobham, the founder, within a garter; and beneath, an inscription recording his name and titles, and the date of the erection of the college, which was “finished in September, 1598.” This fabric was built on the site of the old college founded by John de Cobham, in 1362. The endowments of the old foundation were very ample, and were given, with the college itself, by Henry the Eighth, at the period of the Dissolution, to George, Lord Cobham. Some small remains of the old building still exist; but the mass of the materials was probably used in the new fabric. By an act, (39th of Elizabeth,) the wardens of Rochester Bridge, for the time being, were made a body corporate, and declared to be perpetual presidents of the new college; the government of which was to be wholly vested in them, and their successors. The first presidents under this act, were Sir John Leveson, Knt. and the Kentish antiquary, William Lambard, Esq. who were also two of the executors of Lord Cobham; and, by them, a series of excellent rules and ordinances were drawn up for the management of the college, which, with very little alteration, has continued in force till the present time. The number of inmates is limited to 20, but without restriction either to sex, or state: they are to be chosen from Cobham, and the adjacent parishes of Shorne, Cowling, Stroud, Hoo St. Werburgh, Cliff, Chalk, Hingham, St. Mary’s Hoo, Cookstone, and Halling. The annual revenues of the college amount to about 120*l.*

In the chancel of Cobham church, which is very spacious, is a series of brasses in memory of the Cobhams; some of which, for their antiquity, richness, and high preservation, have been considered as unrivalled. Twelve of these are inlaid on grave-stones, which measure upwards of eight feet long, each by three feet broad, and are ranged in two rows in the pavement before the altar: the 13th, and last, which is the grave-stone of Ralph de Cobham, has been removed from its place, to make room for a more recent memorial for the late Earl of Darnley.

COLDRED.]—This place, $4\frac{1}{2}$ miles N.W. by N. from Dover, is said to derive its name from Coeldred, King of Mercia, to whom also an ancient fortification, within the area of which stands the village church, has been attributed. Coeldred entered this county to assist the Kentish men against the oppression of Ina, King of the West Saxons, and fought a battle with him at Woodnesborough, in 715. The fortification is divided into two parts by the high road, in the middle of which a well was discovered some years ago, by the falling in of the earth.

COWLING.]—Anciently Curlinge, lies $4\frac{1}{2}$ miles N. by E. from Rochester. Of Cowling castle, which formerly occupied a low situation, at a short distance from the church, little more remains excepting the gateway, and a mass of ruins. The body of the castle was quadrangular, flanked by towers, and environed by a moat, which still contains water, though partly filled up. At the south-east corner, are remains of a circular tower, mantled with ivy; in the front of the eastern tower is an engraved plate of brass, in imitation of a deed or grant, having an appendant seal of the Cobham arms, and inscribed as follows:

*Knoweth that both and shall be,
That I am made in help of the Centre,
In knowing of which thing
This is charter and witnessing.*

Tradition states that this was fixed up by John de Cobham, the builder, who in 1380, obtained a licence to fortify his dwelling, but fearing that the strength of his castle might give offence to the court, took this method to escape censure. Cowling church has a tower at the west end, with a square turret at the south-east angle. In the south wall is a curious double piscina and credence.

COXHEATH.]—Ajoining the parish of Linton, is Coxheath, a pleasant and elevated tract, about three miles in length, and one in breadth. It was the scene of several encampments, during the last century; and, consequently, was a place of great resort.

CRANBROOK.]—The market-town of Cranbrook, 14 miles S. by E. from Maidstone, and 48 S.E. by E. from London, was anciently the centre of the clothing trade; a manufacture established here by some Flemings, who were patronised by Edward the Third. The town consists principally of one large street, about three-quarters of a mile in length, with another branching from it at right angles.—The population, in 1811, was 2994. Part of the church, which is a large and well-proportioned building, fell down in 1725: it was repaired at an expense of about 2000*l.* and re-opened in 1781. The chancel contains various military trophies of the Roberts family, who were seated at the manor of Glastonbury, in this parish, upwards of 400 years. Amongst their sepulchral memorials is a pyramidal

pyramidical monument of white marble, inscribed with a complete pedigree of the family from the time of Walter Roberts, Esq. who was sheriff of Kent, in 1489, and who died in 1522, down to Jane, daughter and heiress to Sir Walter Roberts, Bart. and late Duchess of St. Alban's, who was buried here in the family vault, in 1778. In the south aisle is another pyramidical monument, in memory of the Bakers, of Sissinghurst, another manor and seat in this parish. The east window of the church contains some fine painted glass, in tolerable preservation.—Here are four places for religious worship, erected by dissenters of different denominations. A writing-school for poor children, and a free grammar-school, for "all the boys in the parish," were founded here in succession, in the years 1573, and 1574.

The manor of Sissinghurst, already mentioned, in this parish, with some smaller appendant manors, came into the Baker family, which had been seated at Cranbrook from the time of Edward the Third, in the reign of Henry the Seventh. Sir John Baker, says Phillpott, "raised that magnificent pile within the park, which now charms with so much delight the eyes of the spectators." Sir Richard Baker entertained Queen Elizabeth here, during her progress through Kent, in 1573. John, his youngest son, was father to Sir Richard Baker, the English chronicler, who was born at Sissinghurst, about 1568; and died in the year 1645.—On the decease of Sir John Baker, Bart. in 1601, these estates were divided among his four daughters and co-heiresses; but they have since been united, and are now the property of Sir Horace Mann, Bart. The ancient mansion, which occupied a secluded situation near a branch of the Rother, amidst woodlands, having been long uninhabited, was, during one of the late wars, made use of as a French prison, and from this circumstance, acquired the name of Sissinghurst castle. The greatest part has been since pulled down, and, with the exception of a small portion, that has been since fitted up as the parish poor-house, the remains are crumbling to dust.

CRAY.]—St. Mary Cray, the most considerable of the cluster of villages which derive their name from their situation on the Cray, lies about 13½ miles S. from London. It had a market as early as the reign of Edward the First; but the market-house having been blown down in the great storm in November, 1703, it has never since been held. The greater part of St. Mary Cray is an appendage to the manor of Orpington. In the church, are various memorials for the Manning family, who, for several generations, resided at Kevington, in this parish.

On the north side of Foot's Cray, a small village, two miles N. by E. from St. Mary Cray, is Foot's Cray Place, which was purchased about the middle of the last century, by Bouchier Cleve, Esq. who

in 1752, having pulled down the old mansion, built an elegant villa of free-stone. He also inclosed, and embellished the park. Elizabeth, his daughter, conveyed this estate in marriage to the Right Hon. Sir George Yonge, Bart. K. G. who, in 1775, sold it to Benjamin Harenc, Esq. In Foot's Cray church, under a low obtuse arch, in the north wall, are the mutilated effigies of Sir Simon de Vaughan, and his Lady, of the time of Edward the Third.—The font is Norman.

North Cray Place, a pleasant seat of about 90 acres, is held on lease from the Deerhurst family.

CRAYFORD.]—The market-town of Crayford—the Crecauford of the Saxons—also derives its name from its situation on the Cray. It is 22 miles N.W. by N. from Maidstone, and 13 E. by S. from London. Some writers have assigned the Noviomagus of the Itinerary to this spot. In the year 457, Hengist defeated the Britons under Vortimer, in a decisive battle at this place.

A few years ago, the manor of May Place, in this parish, was occupied by Lady Ferimanagh: the mansion, of the time of James the First, is large, but it has been deprived of its original character, by modern alterations and additions.

Crayford church contains many sepulchral memorials, for respectable families: various others were destroyed by an accidental fire, which burnt down part of this fabric. In the north chancel, is a mural monument, displaying full-length effigies of William Draper, Esq. and Mary, his wife, lord and lady of this manor, who died in the time of the Protectorate. In the south chancel, is an obelisk of black marble, under a white marble canopy, in commemoration of dame Elizabeth Shovel, relict of Sir Cloudesly Shovel. Near the above is another handsome mural monument, in commemoration of the Hon. Robert Mansel, who married Anne, one of the daughters and co-heirs of Sir Cloudesly Shovel.

The population of Crayford, in 1811, was 1553. The houses are disposed in a narrow ill-built street, about half a mile long. The river Cray, in its course from Crayford to Dartford creek, supplies water to two large manufactories for printing calicoes, to a mill for flattening, and slitting iron to make hoops, &c. There are "now to be seen," observes Hasted, "as well on the heaths near Crayford, as in the fields and woods hereabout, many artificial caves, or holes in the earth; some of which are 10, some 15, and others, 20 fathoms deep. At the mouth, and thence downward, they are narrow, like the tunnel or passage of a well; but at the bottom they are large, and of great compass; insomuch, that some of them have several rooms, or partitions, one within another, strongly vaulted, and supported with pillars of chalk." These still remain, and are by some supposed to have been merely chalk-pits; but their general appearance contradicts this opinion. Hasted apprehended them to have been excavated

cavated by the Saxons, in imitation of the customs of their German ancestors; but others have conceived them to be the works of the Britons, "because Diodorus Siculus expressly tells us, that the Britons did lay up their corn in subterraneous repositories."

DARENT.] — Darent, or Darenth, deriving its name from the river Darent, lies $2\frac{1}{4}$ miles S.S.E. from Dartford. In 1195, Archbishop Hubert gave this manor to the prior and convent of Rochester, in exchange for Lambeth, in Surrey; and a few years afterwards, here seems to have been a priory of Benedictine monks, subordinate to Rochester. It now belongs to the dean and chapter of Rochester.

Darent church is a small structure, supposed to be of Saxon workmanship. The font is circular, and very curiously wrought: it consists of a single stone, excavated to the depth of 17 inches; its internal diameter is 27 inches. Round the outside, are eight compartments, with semicircular arches above, supported by columns, alternately circular and angular. In each compartment are sculptures in relief, conjectured to exhibit a mixture of the heathen mythology with the Christian religion. — "The first sculpture appears to be intended for a King robed, and crowned with an olive branch; the second, a wivern; the third, David playing on the harp; the fourth, Sagittarius; the fifth, a griffin; the sixth, a lion rampant; the seventh, an aged man, holding in one hand a club, and in the other, the tail of some animal, which is behind him; the eighth, and last, a male and female immersing an infant in a font, intended to represent baptism."

In the hamlet of St. Margaret at Helles, formerly a distinct parish, are the ruins of a very ancient chapel; curious, from the layers of Roman brick that are to be seen in the walls.

DARTFORD.] — The pleasant little town of Dartford, seated on a narrow valley, in a ford of the Darent, whence originates its name, is 20 miles N.W. by N. from Maidstone, and 15 E.S.E. from London. The manor was ancient demesne of the Saxon Kings; and, in the Domesday Survey, it is described as having "a church worth 60s. and three chapels." Lambard imagines, that "there was some faire house of the King's, or of some others," in this town in the reign of Henry the Third, as Isabella, the King's sister, was married here by proxy, in 1235, to the Emperor Frederic, who had sent an embassy with the Archbishop of Cologne, for the purpose. Edward the Third held a tournament at Dartford, on his return from France, in 1331. The most remarkable historical event, however, connected with the history of this town, was the insurrection under Wat Tyler, in the fifth of Richard the Second; the particulars of which are well known to every historical reader.

Edward the Third founded a nunnery here, in 1355, and committed its government to the order of

Friars' Preachers. Richard the Second increased the possessions of the nuns; and Edward the Fourth confirmed the former grants, and gave them a new charter. At the Dissolution, their annual revenues, according to the Monasticon, were 380*l.* 9*s.* 0*d.* according to Speed, to 400*l.* 8*s.* — Henry the Eighth fitted up the buildings as a royal palace; but Edward the Sixth granted it, with the manor of Dartford, and its appurtenances, and his park in Dartford, called Washmeade, to Anne of Cleves, in exchange for lands in Surrey. When she died they reverted to the crown. Queen Elizabeth, during her progress in Kent, in 1573, resided "in her palace at Dartford," two days. Sir Edward d'Arcy, who had a life lease of the priory, gave it the name of Dartford Place, by which appellation, and that of the Place, or Place House, it has ever since been known. The remains are of brick, and consist of a large embattled gateway, with some adjoining buildings on the south, now used as a farm-house; the garden and stock-yard occupy the remaining part of the site of the priory, which was of great extent.

Dartford church, near the river, in the north-east part of the town, is a spacious edifice, consisting of a nave, chancel, and aisles, with a tower, embattled at the north-west side. It was repaired in 1793. In the chancel, on the north side, is a mural monument, in commemoration of Sir John Spilman, or Spielman, a German, who first introduced the manufacture of paper into this kingdom. This was in the reign of Elizabeth, who granted him the subordinate manor of Portbridge, or Bycknore, anciently an appendage to the priory. Here he built a mill, for the making of writing paper; and in the 31st of Elizabeth, who knighted him, and to whom he was jeweller, he obtained a license for the sole gathering for ten years, of all rags, &c. necessary for the making of such paper. He died in 1607; his effigy, with that of his Lady, are exhibited on the monument, kneeling at a desk. In different parts of the church, are several slabs, curiously inlaid with brass. Here also are several memorials for the Beers and Twistletons, of Horseman's Place, in this parish, and for other respectable families. In the principal church-yard, which, from its situation on the hill above the town, to the east, overlooks even the tower of the church itself, was a chantry chapel, dedicated to St. Edmund the Martyr; and the road leading up to it is, in old deeds, called St. Edmund's Hill. A hermitage is recorded to have been established here, in 1235. The charitable benefactions for the use of the poor, are numerous: an alms-house was founded here, under a license from Henry the Sixth; and in ancient rental, it is called the Spytell House.

In 1565, Dartford contained 182 inhabited houses, six persons lacking habitation, four quays, or landing-places, seven ships and boats, viz. three of three tons, one of six, two of ten, and one of fifteen, and persons

persons for carriage from Dartford to London, and so back again, fourteen." At that time, and so late as the reign of James the First, there was a fishery at Dartford Creek, the rent of which was six salmons, worth 40s. annually. The population of Dartford, in 1811, was 3177; and, from the establishment of the different mills near it on the Darent, the town is now in a very flourishing state.—The original paper mill, erected by Sir John Spilman, about half a mile above the bridge, occupied the site of the present gunpowder mills; and another mill, at a short distance below it, for the manufacture of paper, stands where Geoffrey Box, of Liege, erected a mill for slitting iron bars into rods, &c. supposed to have been the first of the kind in England, as early as the year 1590. The bridge is now a commodious structure, but was very narrow and dangerous, till between 30 and 40 years ago, when it was altered at the expense of the county. It is supposed to have been originally built soon after the fourth of Edward the Third.

About the same period that the bridge was repaired, the old market-house and shambles were taken down, and new buildings for the purpose, erected in a less inconvenient situation: the road through the town was also amended, and new pavements made. Corn is sold here in great quantities, annually: below the town is a good wharf. The houses are chiefly disposed in one principal street, through which passes the high road, and two smaller ones, branching off at right angles. On Dartford Brent, an eminence above the town, on the east, Richard Plantagenet, Duke of York, lay encamped with his army, in 1452, at the time that Henry the Sixth was encamped on Blackheath. This place was the rendezvous also of General Fairfax's army, in 1648.

DAVINGTON.]—North-west from Faversham, about a mile and a half, is the little village of Davington, near which was formerly a nunnery of the Benedictine order, founded in 1153. The original number of the nuns was 26; but, from the poverty of the house, they were reduced to 13, in the reign of Edward the Third; and in 1343, they stated, that "from their great poverty, they were unable to supply the King's public aids without depriving themselves of their necessary subsistence." From their extreme poverty, they acquired the name of the "poor nuns of Davington." In the reign of Henry the Seventh, the priory, then quite deserted, escheated to the crown, and was afterwards granted to Sir Thomas Cheney. The church still remains, with the sisters' house, which adjoins it on the south, and is now inhabited by a farmer. The church is a small low building. The west entrance has a recessed semicircular arch, richly ornamented with sculpture of foliage, &c. springing from three columns on each side. On Davington Hill, the Romans appear to have a burial-place, from the many urns, coins, &c. found here, when the foundations

of some offices belonging to the royal powder mills, were laid about half a century since.

DEAL.]—The maritime town of Deal, the Addeham of Domesday, is 43 miles E. by S. from Maidstone, and 73½ E. by S. from London. Lying immediately opposite to the Downs, a general place of rendezvous for shipping, the constant influx of people, and the necessity of providing regular supplies of ship stores and provisions, render it a flourishing situation for traders, especially in the time of war. In Leland's time, Deal was only a small "fissher village, half a myle fro the shore of the sea;" the houses standing in the part now called Upper Deal. Lower Deal has wholly arisen during the two last centuries. In an ordinance of Henry the Third, dated in 1229, Deal is enumerated as a member of the Cinque Port of Sandwich. Before this, it is supposed to have formed a part of the county at large. In 1699, after a strenuous opposition from the corporation of Sandwich, the inhabitants of Deal succeeded in obtaining a charter, by which their town was constituted a "free town and borough of itself;" and its local government vested in a mayor, 12 jurats, 24 common councillors, a recorder, a town-clerk, and inferior officers. There is nothing, however, in the charter of Deal, that abrogates the prescriptive rights of the magistrates of Sandwich respecting Deal; and it is understood that they have a concurrent jurisdiction with the magistrates of Deal, in all juridical matters whatsoever: the inhabitants serve on juries at Sandwich as before the charter. The great increase in the extent and population of Lower Deal, about the beginning of the last century, and its distance from the parish church, occasioned the inhabitants to commence the building of a chapel of ease, by subscription, in 1707. This undertaking was aided by a duty of two shillings upon every chaldron or ton of coals, or culm, brought into the town till the 1st of May, 1727. The chapel was consecrated in June, 1716. The expense of erecting it, and inclosing the burial-ground, was 2554*l.* 12*s.* 4*d.* It is a brick building, 80 feet by 50: the roof is of timber-work. Dr. Nicholas Carter, father to the celebrated Mrs. Elizabeth Carter, was curate of this chapel more than 56 years: he died here in 1774.

The town of Lower Deal stands close to the sea shore, which is a bold open beach, defended from the violence of the waves by an extensive bank of beach stones and pebbles thrown up by the sea. It principally consists of three long streets, running parallel with the sea, and connected by others, either more or less narrow: the houses are mostly of brick, and irregular; but in the buildings that have been erected of late years, greater attention has been paid to uniformity. Some of the inhabitants are engaged in smuggling, though by no means to great an extent as before the passing of Mr. Pitt's bills for the prevention of unlawful commerce. The entire population of the parish, in 1811, amount-

ed to 7351. Here, as at Dover, and in the Isle of Thanet, is an establishment of pilots for the more safe conveyance of shipping into and out of the Downs, and up the rivers Thames and Medway.— Here is also a naval storehouse, under the direction of a clerk of the cheque and storekeeper; and an office of the customs, under a collector, comptroller, &c. When the fleets of the royal navy, and the East and West Indies, lie in the Downs, the sea prospects from the beach are eminently beautiful, especially at sun-rise. Between 3 and 400 sail are sometimes at anchor in the Downs at one time; the town is then particularly full, and the bustle and traffic are very great.

Various improvements have been made in the town since the year 1700, when an act was passed for paving, lighting, and cleansing it. Convenient accommodations for visitors in the bathing season have also been made.

In the month of August, 1648, Prince Charles made an attack on a body of the Parliament's forces in this town, but was repulsed with much loss. A considerable shock of an earthquake was felt here in September, 1692, as well as at Dover, Sandwich, and other places on the coast. Several chimneys were thrown down; and the walls of Deal castle, though of immense thickness, were shaken so violently, that the people within expected the building would fall upon their heads.

Deal castle stands at a little distance from the naval storehouse at the south end of the town, and is built on a similar plan to that of Sandown. Near this fortress, in Walmer parish, extensive barracks have been erected, both for cavalry and infantry; and a royal military and naval hospital.

Upper Deal is a pleasant village, about a mile W. from Lower Deal. In the church is a mural monument to the memory of Thomas Boys, Esq. of Fredville, in Nonnington parish; a gentleman who attended Henry the Eighth, at the siege of Boulogne.*

Deal was the birth-place of the celebrated Mrs.

* William Boys, Esq. F.A.S. and F.L.S. was born in September, 1735, and for many years practised as a surgeon at Sandwich, where he made his "Collections" towards a history of that town, published in one volume, quarto. He died in 1803.

† Elizabeth, the eldest daughter of the Rev. Nicholas Carter, was born December 17, 1717. To the superintendence of her father, she was indebted for that early expansion of mind, and rapid acquirement of learning, which laid the basis of her future fame. Her translation of Epictetus, from the original Greek, was her principal work, and is acknowledged as the best version of that author in the English language. Her poems are also much celebrated. She particularly delighted in Greek; Hebrew and Latin she understood well; and Arabic enough to read it tolerably. She was acquainted with French, Italian, Spanish, German, and Portuguese. Her knowledge of ancient and modern history was exact and extensive: of the sciences, astronomy was her favourite study. Her humility and benevolence were equal to her learning; and in her breast,

Elizabeth Carter, and of her brother, John Carter, Esq.†

The road-stead, or anchorage-ground, called the Downs, is immediately opposite to Deal, its southern boundary being formed by the Goodwin Sands. Its width is about six miles, and its length about eight: its general depth varies from eight to twelve fathoms. In particular states of the wind, nearly 400 sail of shipping have rode at anchor here at one time. The Carlisle, a fourth rate, one of Sir George Rooke's squadron, was blown up in the Downs, in 1699, and great part of the crew were lost.

The Goodwin sands, in all easterly winds, serve as a pier, or break-water, and greatly mitigate the force and immensity of the waves, which, in stormy weather, would otherwise roll upon this shore with unabated fury. "These sands extend in length, about ten miles, the north sand-head being nearly opposite to Ramsgate, and the south sand-head to Kingsdown. The danger of striking upon them arises from their nature, which Smeaton describes as that of "a quicksand, clean and unconnected, yet lying so close, as to render it difficult to work a pointed bar to the depth of more than six or seven feet. Their ingurgitating property is so powerful, that in a few days, even the largest vessel driven upon them would be swallowed up, and seen no more. At low water they are in many parts dry, and parties frequently land on them; but when the tide begins to flow, the sand becomes soft, and is moved to and fro by the waves. Some years ago, in order to prevent the many accidents which happen to shipping on these sands, the corporation of the Trinity House, formed the design of erecting a light-house on them; but, after the sand had been penetrated by boring augers to a great depth, the scheme was given up as impracticable, as no solid foundation could be obtained. A floating light, however, has been since placed on the east side of the north sand-head, and has proved of signal benefit."‡

In

the Christian virtues were enshrined. She died in London, in February, 1806

John Carter, Esq. her brother, died at Deal, on the 22d of August, 1810, at the age of 87. He possessed much learning, and general information; produced many pamphlets and papers of a political nature; was a man of elegant and prepossessing manners; and died, universally lamented, one of the oldest magistrates of the county.

‡ Tradition, grounded upon some monkish annals, has represented these sands as having been formerly an island belonging to the great Earl Goodwin, or Godwin, and that it "sonke sodainly into the sea," as a mark of the vengeance of heaven against the sins of that nobleman. Lambard accounts for their origin as follows: "Silvester Giraldus, in his Itinerarie of Wales, and many others, doe write, that, about the end of the reign of William Rufus, or the beginning of that of Henrie the First, there was a sodaine and mighty inundation of the sea, by the which a great part of Flaunders, and of the Low Countries thereabout was drenched and lost, so that many of the

In the year 1775, a curious piece of old ordnance was dragged out of the sea, near the Goodwin sands, by some fishermen who were sweeping for anchors in the gull-stream. It was seven feet ten inches long; and from some of the ornaments, was supposed to have been cast about the year 1370.—It was so contrived as to be loaded at the breech, and though extremely unwieldy, had evidently been used as a swivel gun. In the month of May, 1817, two guns, apparently three-pounders, and an anchor, were also brought on shore at Dover, by two fishing-vessels, which had fished them up in their trawls off the Galloper. They were supposed to have belonged to some vessel of the Spanish armada, or to the fleet of the Dutch Admiral, Van Tromp.

DENE.]—(See Wingham.)

DENTON.]—The manor of Denton, nine miles S.S.E. from Canterbury, was purchased of Lady Markham, by the present Sir Samuel Egerton Brydges, M.P. &c. a gentleman distinguished by his literary genius and taste. Denton Court, the mansion, rebuilt by W. Boys, Esq. in 1594, had been then sometime untenanted, and was falling to decay; but it has since been repaired, and the grounds improved, at a great expense. The architecture is of the Elizabethan age. It has a noble gallery, the entire extent of the front; a lofty hall, dining-parlour, library, &c.

Almost close to the mansion stands Denton church; against the north wall of which is a memorial for John Boys, Esq. the first of that name who possessed this manor. Here are also memorials of some other families.

DEPTFORD.]—Deptford, anciently denominated West Greenwich, lies $5\frac{1}{2}$ miles S.E. by E. from St. Paul's cathedral. From a small fishing village, it has risen to a large, flourishing, and populous town. The situation of this place, on the banks of the Ravensbourne, gave rise to its present name, originally spelt Depeford, from the deep ford, which has been superseded by a bridge over that river.—It was also named Deptford Strond; an appellation afterwards solely appropriated to what is now called the Lower Town, included in the parish of Deptford St. Nicholas: the upper town is in that of Deptford St. Paul, which was constituted a distinct parish, in 1730. A royal dock was established here, by Henry the Eighth, in the beginning of his

reign. Since that period, the town has progressively increased; its population having augmented in the proportion of 20 to one, within the last two centuries; though it experienced a considerable check, in 1665, and 1666, when nearly 900 persons died here of the plague. The manor was given, by the Conqueror, to Gilbert de Magnimot, who made it the head of his barony, and erected a castle here, every part of which has been long since buried in its own ruins. After passing through the hands of numerous possessors, the manor was resumed by the crown, at the Restoration. The manor-house, with its surrounding estate, which had obtained the name of Sayes Court, from its having been long held by the Says, became, in 1651, the residence of John Evelyn, Esq. the celebrated author of the Sylva; and to him, in 1663, Charles the Second granted a new lease, at a reserved annual rent of 22s. 6d. This gentleman passed much of his time in retirement, "at this his favourite spot." His gardens are said to have been the wonder and admiration of the greatest men of his time: in the life of Lord Keeper Guidford, they are described as "most boscaresque; being, as it were, an exemplar of his book of forest trees."† The severe frost of the winter of the year 1682, did considerable damage here; but a more complete destruction was made by Peter the Great, to whom Mr. Evelyn lent his house and grounds, whilst he was obtaining a knowledge of the science and practice of naval architecture in the adjoining dock-yard, in 1698.—Mr. Evelyn died in 1706. The house and gardens were afterwards entirely neglected; and there is not now the least trace of either: the present work-house was built on the site of the former, in the year 1729. The estate, however, which includes the site of the present Victualling House, and of Dudman's dock-yard, is still vested in the Evelyns; and Sir Frederic Evelyn, Bart. of Wotton, in Surrey, is the present proprietor.

A lamentable fire happened at Deptford, in 1652; and 19 years afterwards the lower town was inundated by a great flood, which rose to the height of ten feet in the streets near the river, so that the inhabitants were obliged to retire to the upper town in boats. The adjoining marshes were also overflowed, and about 700 sheep, with a great number of oxen, cows, &c. were destroyed. Sir Thomas Wyat

the inhabitants being thereby repulsed from their seats, came over into England. Now at the same time that this happened in Flanders, the like barme was done in sundry places, both of England, and Scotland also, as Hector Boethius, the Scottish hystoriographer, most plainly writeth, affirming, that, amongst others, this place, being sometyne of the possession of the Earl Godwine, was then first violently overwhelmed with a light sande, wherewith it not only remayneth covered ever since, but is become withall (*Navium gurgis et vorago*), a most dreadful gulfe, and shippe swallower." Somner conjectures, that the overflowing of the low countries mentioned above, occasioned the sands to emerge above the ocean, through the decrease of the depth of water in these parts, and that they

had previously been entirely covered, even at low tides, to a sufficient depth to admit the sailing of vessels over them.

† In one of the later editions of the Sylva published in 1704, Mr. Evelyn speaks with enthusiasm, of an "impregnable hedge of holly, 400 feet in length, nine feet high, and five in diameter," which, he continues, "I can still shew in my now ruined garden at Sayes Court, (thanks to the Czar of Muscovy,) at any time of the year, glittering with its armed and varnished leaves; the taller standards, at orderly distances, blushing with their natural coral! It mocks the rudest assaults of the weather, beasts, or hedge-breakers.—*Et illum nemo impune laccavit.*"

lay a night and a day at Deptford, with his army, in the year 1553.

The Royal Dock, or King's Yard, has been greatly enlarged and improved since its original establishment. It is managed under the immediate inspection of the Navy Board: the resident officers are a clerk of the cheque; a storekeeper; a master shipwright, and his assistants; a clerk of the survey; a master attendant; a surgeon; and various inferior officers. The number of artificers and labourers now employed here is about 1500: even in times of peace, the general number is upwards of 1000.—The whole extent of the yard includes about 31 acres, which are occupied by various buildings; two wet docks, a double and a single one, three slips for men of war; a bason, two mast ponds; a model-loft; mast-houses; a large smith's shop, with about 20 forges for anchors; sheds for timber, &c. The old storehouse is a quadrangular pile, and appears to have consisted originally only of the range on the north side; where, on what was formerly the front of the building, is the date 1513, together with the initials H. R. in a cypher, and the letters A. X. for Anno Christi. The buildings on the east, west, and south sides of the quadrangle, have been erected at different times; and a double front, towards the north, was added in 1721. Another store-house, parallel to the above, and of the same length, having sail and rigging lofts, was completed a few years ago: and there is also a long range of smaller store-houses, that was built under the direction of Sir Charles Middleton, afterwards Lord Barham, about the year 1780. The other buildings consist of various workshops and houses for the officers. The Queen Charlotte, pierced for 110 guns, to carry 120, was launched from this yard on the 17th of July, 1810.

On the north of the King's Yard, stands the Victualling Office, sometimes called the Red House, from its occupying on the site of a large range of storehouses constructed with red bricks, which was burnt down in July, 1639, together with all its stores. Being re-built, it was included in the grant of Sayes Court, to Sir John Evelyn, in 1726; and was then described as 870 feet in length, 35 feet wide, and containing 100 warehouses. These premises were for some time rented by the East India Company; but being re-purchased of the Evelyns by the crown, a new Victualling House was built on the spot in 1745, to replace the old Victualling-Office on Tower Hill. This new building was also accidentally burnt, in 1749, with great quantities of stores and provisions. The immense pile which now forms the Victualling Office, has been erected at different

times since that period; and consists of many ranges of building, appropriated to the various establishments necessary in the important concern of victualling the navy.

In addition to the royal dock, here are two large private yards for ship building, belonging to Messrs Barnards and Roberts, where men of war, of 74 guns, are sometimes built. Here is also a large and commodious commercial dock, which was opened on the 30th of June, 1809. It was intended principally for the reception of foreign merchantmen engaged in the Baltic trade. It was formerly known by the name of the Greenland Dock; in which several alterations and improvements were made, and an entirely new range of store-houses was erected. The Lord Mayor's barge, handsomely decorated, was the first to enter; the whole ceremony was conducted with much pomp and splendour; and, as a close of the proceedings, a party of about 150 persons, partook of an elegant dinner in one of the store-houses.

The town of Deptford contains two churches; the oldest is dedicated to St. Nicholas, from time immemorial the patron of sea-faring men; and the other to St. Paul. St. Nicholas church consists of a nave, chancel, and aisles, with an embattled tower of flint and stone, of a date long prior to the body of the fabric; which was rebuilt in 1607, on account of the great increase of inhabitants. In the chancel, against the north wall, within the recess for the altar, is the monument of Captain Edward Fenton, who accompanied Sir Martin Frobisher in his second and third voyages, and had himself the command of an expedition for the discovery of a north-west passage. Near this is a tablet inscribed to Henry Roger Boyle, eldest son to Richard, Earl of Corke, who died at a school in Deptford, in 1615; and a neat mural monument to the memory of George Shelvocke, Esq. Secretary of the General Post Office, and F.R.S. who, at a very early period of life, attended his father in a voyage round the world. The tomb of Captain George Shelvocke is near the east end of the chancel, on the outside; he was descended of an ancient Shropshire family, and bred to the sea service under Admiral Benbow. Against the east wall, to the north of the altar recess, is the monument of Peter Pett, Esq. a master shipwright in the King's Yard, whose family were long distinguished for their superior talents in ship building; and who was himself the first inventor of that useful ship of war, a frigate: he died in 1652. On the opposite wall, is a mural monument, with a long inscription, in memory of Sir Richard Browne, Knt. of Sayes Court, who

* On the 4th of April, 1581, Queen Elizabeth visited the celebrated Drake, whom Lloyd quaintly describes as "one of the first that put a sea-girdle about the world," at Deptford; and having dined on board his ship, conferred upon him the honour of knighthood, and gave him the *world in a ship*, for his arms. His vessel was afterwards laid up in this yard,

by the Queen's orders, in memory of his having first encompassed the globe; and it remained here many years; but was at length broken up; and part of the timbers being formed into an elbow chair, it was given to the university of Oxford, where it is yet preserved.

was "Governor of the United Netherlands, and was afterwards, by Queen Elizabeth, made Clerk of the Green Cloth, in which honourable office he continued under King James, till the time of his death, in May, 1604, aged 65 years;" of Christopher Browne, Esq. his son, who died in March, 1645, at the age of 70; of Sir Richard Browne, Knt. and Bart. only son of Christopher: and of their respective wives. Many other monuments and inscriptions are in this church: among them a slab in the pavement of the north aisle marks the burial-place of Mr. John Benbow, eldest son of the gallant Admiral Benbow, who died at the age of 27, November, 1708.* The register of this parish, records the following instances of longevity: Maudlin Augur, buried in December, 1672, aged 106; Catherine Perry, buried in December, 1676, "by her own report, 110 years old;" Sarah Mayo, buried in August, 1705, aged 102; and Elizabeth Wiborn, buried in December, 1714, in her 101st year.

The church of St. Paul is a handsome stone fabric, erected under the provisions of certain acts passed in the ninth and tenth years of Queen Anne, for the building of 50 new churches in and near London. It has a well-proportioned spire at the west end: the roof is sustained by columns of the Corinthian order; the pews are of Dutch oak, and the whole interior is neatly fitted up. On the north side of the altar, against the east wall, is an elegant mural monument, by Nollekins, in memory of James Sayer, Esq. Vice-Admiral of the White, son of John Sayer, and Catherine, his wife, one of the daughters and coheirs of Rear-Admiral Robert Hughes, and Lydia, his wife, who all lie buried in the old church of this town, with many of their issue. On the south side of the chancel is a sumptuous monument, displaying a sarcophagus, surmounted by a large urn of statuary marble, partly covered with a mantle, in memory of Matthew Finch, Gent. who died in 1745; and, on the north side, is another splendid monument in commemoration of Mary Finch, daughter of the above, and wife to Richard Hanwell, of Oxford, Gent. who died in 1754. Among the tombs in the church-yard, is one in memory of Margaret Hawtree, a famous midwife, who died in 1734, inscribed as follows:—

She was an indulgent mother, and the best of wives:
She brought into this world more than three thousand lives!

Mrs. Hawtree gave a silver bason, for christenings, to this parish, and another to that of St. Nicholas. Mr. Isaac Blight, ship-breaker, of Greenland dock, who was killed by a pistol-shot, as he was sleeping in his chair in his back parlour, was also buried in this church-yard. His tomb bears the following

* This gentleman wrote a large work, intituled "A complete Account of the South Part of the Island of Madagascar," on which island he was shipwrecked whilst a mate on board the VOL. III.—NO. 101.

Inscription.

"This tomb was erected to perpetuate the memory of Mr. Isaac Blight, who was inhumanly shot in his own house at Rotherhithe, by the hand of a perfidious domestic, the 23d of September, 1805, in the 49th year of his age.

"Have you not seen, beneath a darken'd sky,
Swifter than thought, the vivid lightning fly?
Equally swift was the insidious blow,
That pierced my heart, and laid my head thus low.
Merciful God! thou glorious God of heaven,
Forgive the deed, and may I be forgiven!"

A man of the name of Richard Patch, who had been taken into the employment of the deceased, out of motives of charity, about three years before, and was his confidential servant, was tried on suspicion of the murder, convicted upon a chain of the most satisfactory evidence, and executed on the 8th of April, 1806. For a long time, great interest was excited by the trial and execution of this man. The register records the burial of Margaret Haley, who died in March, 1739-40, aged 100, and upwards. The rectory-house is a handsome edifice. This parish contains about 1900 acres of land; of which from 900 to 1100 are marsh and pasture; about 550, arable; and 250, occupied by market-gardeners, who are famed for the growth of asparagus, and onions. Here are several meeting-houses for Methodists, Independents, Quakers, Anabaptists, and other sects. In this parish, stands one of the telegraphs which communicate with the Admiralty and Dover. The Surrey and Croydon canals also pass through and communicate with each other in this parish.

The corporation or society of the Trinity-House, the meetings of which are now held in a handsome building on Tower Hill, was originally established at Deptford, in the reign of Henry the Eighth, and incorporated by the name of "The Master, Warden, and Assistants, of the Guild or Fraternity of the most glorious and undivided Trinity, and of St. Clement, in the Parish of Deptford Strond." The ancient hall, in which the members continued to assemble at this place, was pulled down about the year 1787, on the erection of the Trinity House, in London; but here are still two hospitals belonging to the corporation. The old hospital, which adjoins to St. Nicholas church-yard, was founded in the time of Henry the Eighth, and originally contained 21 apartments; but, on its being pulled down and rebuilt in 1788, the number was increased to 25. That called Trinity hospital, which stands in Church Street, was erected towards the end of the 17th century, on a piece of ground given for the purpose, in 1672, by Sir Richard Browne, the younger, Bart. of Sayes Court, who was an elder brother, and

Degrave East Indiaman, in 1702, and "obliged, after many dismal and dangerous adventures, to live with, and after the manner of, the Indians."

2 x

master

master, of the Trinity House. It consists of fifty-six apartments, forming a spacious quadrangle, in the centre of which is placed a statue of Captain Richard Maples, who, in 1680, bequeathed 1300*l.* towards the building. The pensioners in both hospitals consist of decayed pilots, and masters of ships, or their widows: the annual allowance to the widows and single men, is about 18*l.* the married men receive about 28*l.* yearly.

Here are numerous charitable establishments. In those founded previously to the year 1730, both parishes have a joint interest. In Butt Lane is a Charity School, under the direction of twelve trustees, endowed for the education and clothing of 100 boys and girls, who are apprenticed out. The school house was erected about the year 1722, on a piece of ground given for the purpose, by Mr. Robert Gransden, whose daughter, Mrs. Mary Gransden, in 1719, bequeathed 80*l.* towards the building; and also gave a farm in Essex, and the ground rents of two tenements in St. Bartholomew's Lane, London, (since sold to the Directors of the Bank for 1300*l.*) towards the endowment of the school: the whole expense of the building amounted to about 740*l.* Besides the children educated in this school, between twenty and thirty others are taught elsewhere, with the produce of different benefactions. A bequest of 200*l.* was made by Mr. John Addey, a master builder in the King's yard, in the year 1606, for the purchase of land. With this sum the Gravel-pit field, Deptford, was bought, the annual rents of which now amount to more than 280*l.*

The Gun Tavern in this town is said to have been the residence of the Earl of Nottingham, Lord Admiral to Queen Elizabeth, whose arms, encircled by the garter, are carved in wood over the chimney piece of a large dining-room. Sir Thomas Smith, who was sent ambassador to the court of Russia by James the First, had a magnificent house at Deptford, which was burnt down on the 20th of January, 1613. Cowley, the poet, was also a resident here for a considerable period.

In the year 1753, an act was passed for paving and cleaning the streets, and for the better relief and employment of the poor. The bridge over the Ravensbourne, which was formerly of wood, but rebuilt of stone at the sole cost of Charles the First, in 1628, has been rendered more commodious of late years, at the expense of the parishioners. Here, previously to the battle of Blackheath, in the reign of Henry the Seventh, was a skirmish between Lord Dawbeney's troops and 'certaine achers of the rebelles; whose arrowes, as is reported, were in length a full yerde.'

The population of this town are chiefly employed in the Dock-yards, or engaged in maritime pursuits. The number, in both parishes, as returned under the act of 1811, was 19,833. An extensive manufacture of earthen ware, called Deptford ware, is successfully carried on here.

DETLING.} — Detling, formerly a chapelry to Maidstone, is remarkable for the women having

twin children. This place anciently gave name to a knightly family, distinguished by its chivalrous exploits, in token whereof, a massy lance, wreathed with iron plate, used to be preserved in the church.

DOVER.} — Dover, long celebrated as a sea-port, enjoys a romantic situation, 15 miles S. W. from Canterbury, 40 E. by S. from Maidstone, and 71½ E. S. E. from London. It lies in a pleasant valley, the only one about the coast where water is admitted inwards of the cliff, which is very high, and has a beautifully picturesque appearance. The castle is situated on a hill, which rises with a bold abrupt ascent to the northward of the town. The banks of a small river which runs through the valley, are covered with the pleasant villages of Charlton, Buckland, Crabble, and River. The river passes through great part of the town, enters the harbour, and from thence empties itself into the sea. Dover is supposed to derive its name from the British word *Difyrha*, which signifies a steep place, whence the Saxons called it *Dorpa*, and Antoninus in his Itinerary *Dubris*, and the Watling Street, one of the ancient Roman roads which crossed the kingdom here, going over Barham downs, (where it is very perfect,) straight to Canterbury. Dover consists of two parts nearly of equal size, connected by a long narrow street, called Snaregate street, from the lofty rocks which hang over it, and seem to threaten those who pass below with destruction. The upper and most ancient part is called the town, the lower part the pier. Dover was anciently walled in, and had ten gates. Eastbrook-gate stood under the east cliff, near Mansfield-corner; towards the south-west St. Helen's-gate; near the bridge the Postern or Fisher's gate; towards the south opened Butcher's-gate; towards the south-west Snare-gate; the site of which (now called the Bench) was converted into a pavement for the merchants' meeting; over which was the Custom house: south-west towards the pier, Severus's-gate, said to have been built by the Roman Emperor Severus. On the lower side of the hill, on the west part, Adrian's-gate, called Upwall, Common-gate, or Cow-gate; as the way leading to a common, where the cows belonging to the town were driven, passed through it: St. Martin's, called also Monks-gate, and Postern-gate, leading towards the hill; Biggen-gate, which took its name from the street which ends there; it was formerly called North-gate. The situation of only four of these gates is now exactly known: Snare-gate, removed long since; Severus's or Pier-gate, taken down about a century ago; Biggen-gate, removed in 1762; and Cow-gate, in the year 1776: no trace of the others can now be found.

The passage from this port to France being the nearest and safest for travellers, merchants, and pilgrims, there was formerly a law, that none should go to the continent but from Dover.

This town was in a flourishing condition in the reign of Edward the Confessor, who made it a corporation, by the stile of mayor and commonalty, and

and the townsmen were called burgesses; amongst whom the mayor chose assistants for the year, who being sworn to faithful service, were called jurats; which name and office is now common to all the cinque ports, and some of the towns their dependents. In the reign of Edward the Third, this charter was renewed. The last charter of Dover was granted by Charles the Second.

Though in the Confessor's days the town was governed by its own magistrates, Goodwin, Earl of Kent claimed a right of protection and superiority over it, which he asserted in taking upon him to revenge the murder of nineteen inhabitants, whom the Earl of Bologne's servants had slain in a tumult. He thus incurred the king's displeasure, who for such an encroachment on his supremacy, banished this potent and formidable vassal.

Dover castle, though of great antiquity, is erroneously ascribed to Julius Cæsar. It is probable, however, that a fortress might have been erected in the time of Claudius. It was formerly esteemed the lock and key of the whole kingdom: it is very extensive, containing upwards of thirty-five acres within the walls. It exhibits various specimens of the Roman, Saxon, and Norman architecture. The Roman fortifications, upon the hill, are bounded by the deep ditch which encloses that space in which the church and octagonal watch tower are placed; and it would be a vain attempt to search after any Roman military work in the castle beyond it. The form of the camp, the ditch, and the octagonal building, all point out the hand of the Roman engineer and the Roman architect. Where the ground would admit of it, the Romans would commonly make their camp in the form of a parallelogram, with the angles rounded off, with a deep ditch and a high parapet to secure it. This appears to have been the original plan of the Roman camp on this hill. The historians, who have ascribed this work to Julius Cæsar, did not attend to the place of his landing, the time he was here, nor the difficulties he had to encounter to fill up time, without employing himself with building castles and towers. There are several reasons, however, why the hill at Dover was fixed upon by the Romans for a camp on their first settling on our island. The garrison could not only defend the small works they cast up here against a superior force, but it could command the harbour for receiving a reinforcement from the continent, or securing a retreat to it, if necessary, by the assistance of their ships. It is therefore probable that Aulus Plautius, in the reign of Claudius, fixed his colony of veterans here, before forts were built in the interior parts of the country. Besides, Dover is the nearest part of Britain to the opposite shore. The foundation of the castle may thus be dated (at least so much of the ground plan as appears to be Roman work,) between the years of Christ 43 and 49. As the Romans seemed now determined upon the conquest of Britain, and were obliged frequently to cross and recross the sea, it was necessary, that

their passage to and from the continent might be safe for their ships, to erect a light house upon the high lands on each side the channel. It may therefore be concluded that the octagonal building at the west end of the church, was originally designed for a Roman light house, and watch tower; and that it was either erected by Aulus Plautius or Publius Ostorius Scapula. Its foundation is in a bed of clay, a method which the Roman masons usually practised. The tiles are of the usual thickness of Roman tiles, but of different dimensions, and some of them appear to have been cast in a mould peculiar to the makers of them at this place. The ground has been raised several feet since the first building of this tower. The form of it, without, is octagonal, but square within, and the sides of the square and of the octagon are each about fourteen feet. The thickness of the wall to the marks of the first floor is 10 feet. In four of the sides of this building are openings in the wall about four feet wide, and three of them of nearly equal heights, or about 13 feet six inches within side, with semi-circular arches turned with Roman tiles, and either a stalactitical concretion, or a composition made and used by the Romans instead of stone. The pieces of this natural or factitious production, applied in turning the arches, are wedge-shaped, about four times the thickness of the tiles, and placed alternately between them, with a thin laying of mortar of a reddish colour. Though it be uncertain whether this tower were ever used by the Romans as a place of defence, there can be little doubt of its having been applied to that purpose by the Normans. The masonry on each side the openings within the building is very different from the original work; and the spaces left in the wall for what are now called the windows, are much wider at the bottom than the old arch on the top. If they were intended at first only to give light, they were afterwards converted to loop holes, which were left almost close under the arch, and there were steps from the bottom to ascend to them. This alteration was probably made upon Gundulph's plan of defence, soon after the Normans undertook to fortify Dover Castle. The arch over the original entrance, on the east side, is about six feet wide, and still perfect. The other arches, which are damaged, have suffered more from violence, and an idle curiosity in breaking off pieces of the materials to try their hardness, than either by age or the effects of the weather. The walls of the tower were originally built of the same kind of natural or artificial production used by the masons in turning the arches, cut or formed into blocks, about seven inches deep and a foot in length. The work was carried up with the first seven courses of these blocks, and then the two courses of tiles: and this method was continued to the top of the tower.

As stalactitical concretions abound in lime-stone countries, and are so light as well as durable, they were very proper materials for the Romans to transport in their small vessels to places where they could

not

not find stone for erecting towers of strength. This furnishes a strong presumptive proof of the antiquity of this building, and that it was raised by Romans upon their settling in Britain; for if they had waited till they had been better acquainted with the country they would have found stone much nearer the place. This tower has been cased over, probably in the reign of Henry the Fifth, Erpingham being then lord warden of the castle, whose arms (two bars and a canton) are placed on a stone on the north side of it. The casing is dropping off, which again exposes the old work to the weather, and time, which has been for so many ages eating into this work, is crumbling it into ruins.

Contiguous to this Roman pharos, or watch-tower, are the ruins of an ancient church, traditionally stated to have been built by King Lucius in the second century. Whatever may be the fact as to a Christian edifice having been founded here at that early period, the remains of the building are evidently of much later date. Roman tiles, however, have been worked up in the walls, particularly of the tower. These remains, with the pharos, and the foundations of a building, supposed to have been a Roman bath, which have been several times laid open in digging graves near the west end of St. Mary's Church, are all the vestiges of Roman occupation that are now known in this town. The Saxons are stated, by Darell, to have very early made themselves masters of Dover; and very soon after their conversion to Christianity, the ancient church within the walls of the castle, is said to have been re-consecrated by St. Augustine, at the request of King Ethelbert, whose son and successor, Ead-bald, founded a college near it for secular canons, under the government of a Provost. Widred, King of Kent, having, in the latter part of the following century, extended the fortifications of the castle, removed the canons into the town of Dover, where he had built a new church for their use, upon that very spot, says Darell, where 'before the reign of Arviragus, ships used to ride at anchor.' He also fortified the town with a wall on the side towards the sea.

To the Roman works of the castle, the Saxons made many additions, and extended them towards the land, which after their manner was raised and levelled on the top, and encompassed by a deep broad ditch. The first tower known to have been built in the exterior walls before the Norman Conquest, was built by order of Goodwin, Earl of Kent, and governor of Dover Castle, and probably the Saxon keep was soon afterwards surrounded by walls and towers. The gateway faced the Roman camp, proceeding from this gate, formerly called Palace Gate, (because it immediately led to the palace now called the keep;) the first tower to the right hand was called the Duke of Suffolk's Tower; the others are in the following order: the Old Arsenal: the King's Kitchen, and other offices; King Arthur's Hall, on the east side of the keep, where a

mess-room and buildings have been erected for the use of military officers; and in the hall on this side the quadrangle are four other towers, exclusive of one on each angle; but their particular names are now unknown. The King's Gate and bridge next follow. These were formerly secured by two strong gates and a portcullis. On each side of the gateway there is an access in the wall, open in front, after the manner of some of the Saxon fortifications. These recesses were designed for retreats for their women and children; for repositories for their arms; and for places whither their officers and men might retire to rest. This gate was strengthened with an out-work, constructed so as to command the vallum on each side the bridge; the walls of this work are about ten feet thick at the gateway by the foot of the bridge. These walls are faced with flint, and the space filled up with rubbish and mortar. The three next towers were called Magminot Towers; and the last, which is next the palace gate, was called Arthur's smaller hall, or Queen Guonobour's bed-chamber. Henry the Eighth made a magazine of Guonobour's royal bed-chamber to deposit his stores in, when he went with Anna Boleyn to France. It is not improbable that they were a part of these stores which were afterwards shewn for the wine, salt, and beef, left here by Julius Cæsar. These towers are not to be perceived within the quadrangles, the present building having been erected so as to cover them on the inside. It is recorded, that Henry the Second, about the year of Christ 1153, the year in which he came from Normandy for the relief of Wallingford Castle, and immediately preceding his succession to the throne, built this keep or palace, and enclosed it with a new wall. This noble tower is built after a plan by Gundulph, Bishop of Rochester, who was employed by William the Conqueror to draw designs for his castles. The present entrance is on the south side, and by a grand flight of steps you ascend round the eastern side to the third story, on which, in Gundulph's castles, were the royal or governor's apartments.—The rooms are large and lofty, but they have little at this time, except strength and security, to recommend them to the taste of our times. This grand flight of stone steps was formerly secured by three strong gates. By the first vestibule on the right hand going up, is a room which was probably designed for the person who guarded the first gate. Opposite to this is another, adorned on every side with beautiful arches, richly embellished with zig-zag and other work. This, it is probable, was the chapel. The artist has been more lavish of his skill in these arches than in those over the door and on the side of the wall in the vestibule. Above this room is another, richly ornamented in a similar manner. Beneath the chapel and the first vestibule, was the dungeon for prisoners; several persons of distinction have been confined here at different times, but it is now only made use of as a prison for soldiers when they are under

under close confinement. There are galleries built in the walls, with loop holes to annoy the besiegers; and they are so contrived, that it would have been next to impossible for them to hurt the besieged in any of the rooms by shooting at them. The second floor was intended for the use of the garrison, and that on the ground for stores. Just without the Duke of Suffolk's gate are barracks for the soldiers; and also the wells which supply the garrison with water; they are each of them 370 feet deep.

So well was the importance of Dover Castle known to William the Norman, that, when he was taking measures to ensure to himself the possession of England, he refused to permit the departure from Rouen, of Earl Harold, whom he had sometime held in forcible restraint, till he had bound the latter by a solemn oath, to deliver up to him, after Edward's death, "the Castle of Dover, with the Well of water in it." Harold's violation of this oath, may be considered as having cost him his life. The existence of the well here mentioned, had been long known; but it had been so very carefully arched over, that its precise situation had, until the summer of the year 1811, eluded the most diligent investigation. It was then discovered, in the keep, by Mr. Mansell, of Dover. It is situated in the thickness of the N. E. wall, near the top of the building, and exhibits a fine specimen of the masonry of our ancestors, having been steamed to the bottom with the greatest regularity and compactness. It is about five feet in diameter, and upwards of 400 feet deep.

After the battle of Hastings, the Conqueror, before he quitted the coast, judged it necessary to secure a retreat to, and open a communication with Normandy, by the assistance of his fleet in case he should meet with a repulse. Dover Castle was the place fixed upon; and, as it was even then a noted fortification, he marched his army to besiege it, and it surrendered to him after a very feeble resistance. The Conqueror, thinking it of too much consequence to him to suffer it to be retaken by any neglect or surprise, appointed Odo, Bishop of Bayeux (his brother, whom he created Earl of Kent,) justiciary of England, regent, and governor of Dover Castle, with a strong garrison, to defend it for him against any attack that might be made upon it. This prelate falling into disgrace, John Fienes, a trusty Norman, was appointed governor of the fortification, and he had the lands given him, which he held of the crown, to secure and defend their works. It was by his order and under his inspection, that the two exterior walls were joined to the Saxon fortification, and continued down to the very edge of the high perpendicular cliff. He selected eight tried and approved Norman warriors to assist him in this work. The names of these commanders were, William de Albranche, Fulbert de Dover, William Arsic, Jeffery Peverel, William Maimsmoth, Robert Porth, Robert or Hugh Crevequer, and Adam Fitzwilliam. These had among them one hundred

VOL. III.—NO. 101.

and twelve knight's fees, and were not only obliged to find a number of soldiers in proportion to the knight's fees they held of the crown, but they were bound by the nature of their tenure, to build a tower for the defence of the castle, and for their own particular residence, and to place their arms in the front of it. The names of the towers in the exterior wall of the castle, beginning at the side of the cliff next the town, are:—Cannons, or Monk's Gate, where at present is a battery; Albrancis, or Rokesley's Tower; Chillham, or Chaldescot's Tower; Hurst Tower; Arsic or Say Tower; Gatton Tower; Peverel, Beauchamp, or Marshal's Tower; Port, Gastling, or Mary's Tower; Fienes, or New Gate, or the Constable's Tower; Clopton Tower; Godsoe Tower; Crevequer, or Cranville, or Earl of Norfolk's Tower; Fitzwilliam's, or St. John's Tower; Avaranche's, or Mansel's Tower; Veville, or Pincester Tower; Earl Godwin's Tower; and Ashtesfordian Tower. Of these towers the most worthy of notice at present are: first, Chilham, or Chaldescot's Tower, the third from the edge of the cliff. This was built by Fulbert de Lucy, whose family came over from Normandy with William the Conqueror; and he being selected by John Fienes to assist him in defending the castle, he changed his name for Dover. But the tower was named after the manor, and they who held Chilham were obliged to keep it in repair. Chaldescot succeeding to the command here, the tower was called by his name. In the front of this building is a house for an officer under the Lord Warden of the Cinque Ports, called the Bodar of Dover Castle. The ancient title is retained; but the original duty of his office is very little known to the inhabitants of the Cinque Ports, and their ancient towns. The bodar of Dover Castle has also another title annexed to his office, which is sergeant at arms. By this post he has the power from the Lord Warden to take into his particular jurisdiction crown and other debtors under arrest, and to shut them up, and keep them in safe custody, in a prison belonging to Fulbert de Dover's Tower.—The next tower of note is Fienes, or Newgate, or the Constable's Tower, still used as the governor's apartments.—This noble building, which is raised upon the site of a more ancient one, is after the designs of Gundulph, who first introduced the high portal, and secured the passage with drawbridges, portcullisses, and massy gates. The residence of the constable or governor of the castle was in the apartments of these towers after the Norman conquest; and it was here they heard and settled all disputes and controversies relative to the pay and the regulations of the garrison. The porter generally stands at the door of a room under the arch, on the left hand going into the castle, to invite travellers to see the ancient keys of the castle, and a few antique pictures which are kept there.

They have an old horn, of which the tradition is, that it was used by the Romans, at the building of the castle, to give notice to the workmen by the sounding

sounding of it, when to begin, or to leave their work. It was an ancient custom with the feudal lords, for the centinel to sound a horn for a signal at the gates of the castles upon their estates: this no doubt was one of the horns used by the centinels here to sound the alarm, to give notice of the approach of strangers, or to convey during the night from post to post, any alarm or other notice. Crevequer, or Canville, or Earl of Norfolk's Tower, built by one of the associated captains, is situated opposite the north entrance into the quadrangle of the keep. Near it are several other towers, which have neither names nor lands assigned them; and the origin of which is uncertain. Near Crevequer's tower you descend by a flight of stone steps into the main sally port, which is wide and lofty, and part of it is cut through the solid rock. Near the entrance of this passage is a turning to the right hand, by which you proceed to a stone door-case, near the foundation of the wall of the castle, where there is another flight of steps, by which you again descend several feet, till you arrive at a passage, to the right and left, in the bank without the wall. The passage to the right is nearly filled up with rubbish. On the left of the flight of steps, you proceed in a subterraneous vault, which forms several angles, and the direction is guided by the foundation of the towers. The arch being stopped up, it is not easy to trace it to the place where it originally opened; but, it led into a tower, near the main sally-port.

By some, the tower in the ditch and the adjoining subterraneous works, are supposed to have been built by Hubert de Burgh, while the castle was besieged by the Dauphin, in the reign of King John. This does not appear probable; as it cannot be supposed that the besiegers would have suffered the besieged to have carried on such a work, when they could have so easily prevented them. If Hubert de Burgh raised this tower and the barbican, it must have been in the interval of the Dauphin's quitting the siege and returning to it again. Lord St. John had a grant of Burleigh and Pising in Kent, and Popeshall in Hertfordshire, to repair and defend this tower. There were several gates in the different parts of the barbican, secured by strong bolts and bars, to prevent or retard an enemy from proceeding into the castle, if they happened to force an entrance. Passing from the guard-house towards the hospital, the first tower in the wall is Fitzwilliam's or St. John's tower. Adam Fitzwilliam, the first commander of this tower, attended William Duke of Normandy into England, as marshal of his army; and, for his valour in the battle of Hastings, the Conqueror gave him his scarf from his own arm. There was anciently a noble and spacious sally-port from this tower: the entrance to it in the castle was in the Saxon ditch, on the right hand: and this, like the subterraneous work at Crevequer's tower, was originally intended not for foot only, but for cavalry. In this passage, under ground, there

was a gate and portcullis. The sally-port was continued from the back of the tower across the ditch, between the two walls, which were arched over. An arch was turned in the mason's work in the ditch, which, whilst it supported the side walls, left a passage through from one side to the other; and above, between the two walls, the pass appears to have been made good by a draw-bridge between the tower and the bank, on the opposite side of the ditch. This bridge was necessary to stop the progress of an enemy, in case they had forced the work beyond it. In the part of the sally-port which is in the high ground beyond the ditch, there was a large gate, which moved upon two pivots, fixed in sockets in the wall, and was hoisted up by a pulley fixed in the top of the arch: by slackening the gate suddenly, the weight of it would have driven every thing before it, if there had been any resistance made by the enemy in a close pursuit. It has been generally supposed that there were formerly a subterraneous passage from Crevequer's tower, to this, and from this to Avaranche's or Maunsel's tower, where, according to some authors, it turned, and passed on to Pincester's tower, and thence to the Roman camp. Avaranche's, or Maunsel's tower, in the angle near the hospital, is one of the noblest remains of the Norman towers in the castle. It appears to have been built entirely for defence, as it had not the convenience even of a temporary residence within it for a commander, unless there were another story, more than is left in the remaining ruins. The first floor was a kind of vault arched with stone, open in front; and in the wall, round part of this vault, was a passage, with stone steps, in which passage the archers might stand, one above another, and command the ditch on each side of the building through the loop holes, as well as the approaches to it, from each side of the curtain. By this gallery or passage they ascended to the top of the first vault, and came out upon a platform over it, which was also partly surrounded by a wall, but not near so thick as that below. From this platform there is a circular staircase of stone leading to the top of the tower. Exactly over the passage in the wall below was another passage, covered with an arch supported with piers; opposite the interval between each pier were loop holes in the walls of the tower which commanded the ditch; and near the end of the passage there was a machicolation in the wall for pouring out scalding water, burning sand, melted lead, &c.

Veville, or Pincester's tower, is the next in the other angle. Earl Godwin's tower, was built by Earl Godwin about the time of Canute the Great or Edward the Confessor. He held by grant Goodnestone, near Sandwich, where for this particular purpose he had his seat. At the back of this tower was a postern, through which was a way under ground that came into the castle upon the vallum which joined the Roman and Saxon work. Stephen Pincester

Pincester led his reinforcement, which enabled Hubert de Burgh to withstand the Dauphin, in the reign of King John, through this sally-port.

The summit of the Keep, or Palace tower, already mentioned, is embattled; and at each angle is a turret, as at Rochester. When Major General Roy, and the members of the Academy of Sciences at Paris, were estimating the distance between the observatories of Greenwich and Paris, they fixed upon the north turret as one of the points of observation; and from the report made on this occasion, it appears that this turret rises nearly ninety-two feet from the ground on which it stands; and that the whole height above low-water mark, spring tide, was 465 feet and three quarters. The most remarkable objects seen from the turret, are the point of the North Foreland beyond the light-house, Ramsgate, Sandwich, Richborough Castle, Reculver and Minster churches, Dunkirk, Calais, the hills beyond Calais and Boulogne, and Dungeness Point and Light-house. During some of the wars in the last century, this keep was made a French prison, through which the timbers of the floors were destroyed, and other dilapidations made. Without the inner court, towards the south, is Arthur's or North Gate, and three towers, Armourer's Tower, the Well Tower, and Harcourt's Tower. Harcourt Tower is built over a gateway, and had its name from the Harcourts of Stainton-Harcourt, in Oxfordshire, which manor was granted to defend and keep it in repair. Outside of this tower are several ranges of barracks, and another wall, which, taking a circular course, goes round the upper summit of the hill, including within it the ancient church and light-house. In this wall is Colton's Tower, where the chaplain of the garrison was accustomed to lodge; and Clinton's Tower, which was to be kept in repair by the barons of that name, or their successors in the manor of Folkstone. In the old church, the roof of which is entirely destroyed, several personages of family and rank have been interred. Amongst them, was Sir Robert Ashton, Knt. Constable of Dover Castle, Lord Warden of the Cinque Ports, an Admiral of the Fleet, Chief Justice of Ireland, Lord Treasurer, and one of the executors to the will of Edward the Third. Here also were buried Lieutenant Governor William Copeldike, who died in the reign of Henry the Eighth; and Henry Howard, Earl of Northampton, Lord Warden of the Cinque Ports, who died in 1614, and whose body and monument were afterwards removed to the hospital, called Norfolk College, which this nobleman had founded at Greenwich. The ground on the southward of the church, is the general place of burial for the soldiers who die in the garrison. Formerly there were three chaplains to this castle; and, on account of the an-

tiquity and dignity of the place, they were permitted to wear the habit of prebends. The first said mass to the governor at the high altar; the second, to the marshalsmen and officers, at the altar of the Virgin Mary; and the third, to the soldiers, at the north end of the Chapel of Relics. In the time of Henry the Eighth, these chaplains were reduced to one; and though the church has long been in ruins, and no divine worship performed, the ancient salary is continued.

In most of our civil commotions, this fortress was an object of contention between the rival parties. So recently as the time of Charles the First, it was attempted and taken by surprise by a few men in the night. One Drake, a merchant, and a zealous partizan in opposition to the king, formed a plan to seize the garrison, and the 1st of August, 1642, about midnight, was the time fixed upon to put it into execution. Every thing being prepared for the attempt, he with ten or twelve men, by the assistance of ropes and scaling ladders, reached the top of the high cliff, with their muskets, undiscovered. Having reached the summit unmolested, they immediately proceeded to the post where the sentinel was placed, and, after securing or killing him, they threw open the gates, and the garrison, being few in number, and in the confusion of the night concluding he had a strong party with him, the officer on command surrendered up the castle to them. Drake immediately dispatched a messenger to Canterbury with the news of his success, and the Earl of Warwick being there, he sent him fifty men, and the city seventy to guard and defend the castle.

At a little distance from the edge of the cliff stands a beautiful piece of brass ordnance, twenty-four feet long, cast at Utrecht in 1544, and called Queen Elizabeth's Pocket Pistol, it having been a present from the States of Holland to that Queen: it carries a twelve pound shot. The touch-hole is gold, and has suffered considerably by the hand of violence, in endeavouring to pick it out: it is entirely unfit for use. There are several curious devices upon it, and the following lines in old Dutch:

*Breeck secret al mure ende wal
Bin ic gheten
Doer Berch en dal bbert minen bal
Van mi gesmeten.**

It was from the edge of the cliff, near this cannon, that Messrs. Jefferies and Blanchard ascended when they took their celebrated aeronautic flight in a balloon across the channel to France, on the 7th of January, 1785. On the hill opposite the castle, was anciently a pharos, or watch tower, called the Devil's Drop, and Bredonstone. The site of it is now occupied by a guard house. At the Devil's

* Translation:—

O'er hill and dale I throw my ball:
"Breaker," my name, of mound and wall.

Drop

Drop the constable of Dover Castle and Lord Warden of the Cinque Ports is sworn into office.

Subsequently to the recommencement of hostilities, in the year 1803, the heights on the western side of Dover were strongly fortified, agreeably to the modern system. The immense works erected on that part of the Kentish coast, immediately opposite to Boulogne, which cannot be considered under the protection of the shipping in the Downs, were completed about the year 1810. They begin with Dover Castle; in the immediate vicinity of which have been constructed subterraneous works, consisting of three tiers of batteries, casemates, &c. &c. with barracks for 10,000 men. The height opposite the barracks is also regularly fortified by flanking redoubts, bastions, &c. &c. There is also a citadel with a ditch and draw-bridge, and barracks for 5,000 men; a shaft of a most beautiful and commodious description, having four different stair cases (round an open area which both lights and ventilates) communicates with the town, the height of which is upwards of 300 feet. By this shaft it is calculated that 20,000 men might pass from the height to the town, or *vice versa* in half an hour. There are also four other batteries, called Guildford's, Townshend's, Amherst's, and Archcliffe, so that Dover is now the most completely fortified (excepting Malta and Gibraltar) of any place in the British dominions, and forms a most novel and interesting spectacle to the eye of the stranger.*

A melancholy accident occurred here, on the 14th of December, 1810. An immense quantity of the cliff adjoining the castle leading to the Moats Bulwark, fell, with a dreadful crash, into the ordnance timber-yard beneath, in which was situated the house of a Mr. Poole, the foreman of the carpenters, which was entirely destroyed, and himself, his wife, five children, and a niece, were buried in the ruins. It was supposed, that the cliff had cracked, and given way, from the quantity of rain which had fallen. Although the greatest exertions were made, by a vast number of soldiers, to remove the rubbish—amounting, it was supposed, to upwards of 2000 cart loads of chalk—Mr. Poole was the only individual of his family whose life was preserved. At the time the cliff fell, he had just risen, to look

after the workmen; and, on crossing the threshold of his door, he was buried breast deep. The horses in the stable were not hurt, a rafter of great strength having sustained the incumbent chalk. A few days afterwards, the inhabitants were greatly alarmed by the unexpected falling of the cliff, which extended along the houses on the north-west side of Snargate Street. The total quantity of land, lost by the fall of the cliff between Dover and Folkestone, was estimated at six acres.—It deserves to be recorded, as an extraordinary instance of the tenacity of animal life, that a hog, which was buried in the ruins, at the same time that Mr. Poole's unfortunate family were destroyed, was found alive by the workmen, in removing the rubbish, five months and nine days after the accident! At the time of his interment, the animal weighed about 140 pounds; but, when discovered, he was wasted to about 30 pounds; notwithstanding which he was likely to do well.

About the time of Henry the Seventh, the harbour of Dover had become so choaked up, as to demand the immediate attention of government, to prevent its total ruin; and accordingly great sums were expended for its preservation. It was found however, that all that had been done, would not answer the end proposed, without the building of a pier to seaward; and one was constructed in the reign of Henry the Eighth, composed of two rows of main-posts, and great piles, which were let into holes hewn in the rock underneath, and some were shod with iron and driven down into the main chalk, and fastened together with iron bands and bolts; the bottom being first filled up with great rocks of stone, and the remainder above, with great chalk stones, beach, &c. Previously to the reign of Elizabeth, this noble work had fallen to decay, and the harbour was again nearly choaked up. An act was therefore passed for granting towards the repair of the harbour, a certain tonnage from every vessel above twenty tons burthen passing by it, which then amounted to 1000*l.* per annum. After many different trials, a safe harbour was at length formed, with a pier and different walls and sluices. During the whole of the reign of Elizabeth, the improvement of the harbour continued without intermission, and

* From Dover to Folkestone no works of defence are necessary, as the cliff is inaccessible. From Folkestone to Dungeness, forming an open bay of about twenty miles in breadth, a great number of martello towers are constructed, which are of a circular form, bomb proof, and having one gun of very large calibre on the top; they are so distributed that no part of the coast which is assailable is without the range of their shot; 30 men in each might defend themselves as long their as provision lasted in perfect security. The old castle of Sandgate has also been greatly enlarged, and now contains a number of guns.

A redoubt, consisting of bomb proof towers and very formidable outworks, has also been erected at Brockman's Barn. At Shorncliffe there is a battery called by that name; and at Hythe, Sutherland, and Moncrief, batteries which, with three others at Dungeness, complete the line of coast. In addition

to the above, a military canal has been cut from Shorncliffe to near Rye. Much difference of opinion has arisen as to the utility of this canal, as a defensive military work, but thus much is certain, that it opens an easy communication with that part of the country (the Weald of Kent,) which, from the badness of its roads, and consequent difficulty of getting its produce (consisting of timber) to market, had been cut off from intercourse with the rest of the county, which this canal will most effectually obviate. It is also of essential service for the conveyance of troops and baggage; regiments now passing from Rye to Hythe, a distance of 25 miles, without fatigue; and immediately after landing, a distance of 15 miles farther by land, without halting, thereby performing a distance of 40 miles in one day, saving a great expense to government, and relieving the inn keepers, who are very thinly scattered in that neighbourhood, from an oppressive burthen.

several

several more acts were passed for that purpose; but the future preservation of it was owing to the charter of incorporation, of the governors of it in the first year of James the First, by the name of the Warden and Assistants of the harbour of Dover, the warden being always the lord-warden of the Cinque Ports for the time being, and his assistants, his lieutenant, and the mayor of Dover for the time being, and eight others, the warden and assistants only making a quorum. And the King only granted to them his land, or waste ground, or beach, commonly called the pier or harbour ground, as it lay without Southgate or Snargate, the rents of which are now of the annual value of upwards of 300/. Under the direction of the corporation, the works and improvements of the harbour have been carried on, and acts of Parliament have been obtained in almost every succeeding reign to facilitate their measures.

In the reign of Edward the First, the town of Dover was incorporated by the name of mayor, jurats, and commonalty of the town and port of Dover, and before by the name of Barons of the town and port of Dover. Elizabeth, in the year 1577, granted the town a new charter of incorporation, in which the manner of chusing the mayor, jurats, and commoners was new modelled, and several further liberties and privileges granted, and those by the charter of Edward the First, confirmed. Subsequent charters were also obtained from Charles the Second, and James the Second; but none of these charters being at present extant, Dover is now held to be a corporation by prescription, by the style of the mayor, jurats, and commonalty of the town and port of Dover. It consists of a mayor, twelve jurats, and thirty-six commoners or freemen, with a chamberlain, recorder, and town-clerk. The mayor is coroner by his office: he is chosen by the resident freemen. The jurats are nominated from the common-council by the jurats, and appointed by the mayor, jurats, and common-councilmen by ballot. Besides the jurisdiction which the corporation has within the town and port of Dover, it extends over several places as members of this Cinque Port, not being incorporated: viz. of Margate, alias St. John's; Gousand; Birchington; Wood, alias Woodchurch; and St. Peter's; all in the Isle of Thanet: and Kingsdowne and Ringswould in this county.

The ancient town was defended by a strong embattled wall, which enclosed a space of about half a mile square; and in which, as already stated, were ten gates. The form of the town is singular, and from the hills above, its appearance is highly interesting and romantic. Apparently, it consists of three long streets, extending in contrary directions, as east, south-west, and north, and meeting at one point in the centre. From the old Maison Dieu, or present Victualling Office, to the further houses at the pier, its extent is upwards of a mile. That part called Snargate Street, lies immediately below the cliffs. The town is now separated into the two

parishes of St. Mary the Virgin, and St. James the Apostle; but it was formerly divided into six, each having had its distinct church; all of which have long been destroyed, with the exception of St. Nicholas, and St. Martin-le-Grand, which was considered as the mother church; and such was its superiority over the other churches, that none of the priests were permitted to sing mass till St. Martin's priest had begun, which was notified by tolling the great bell. All annual pensions were paid, and almost all offerings made here. After the suppression of the college of Secular canons by Henry the First, this church became only parochial, and was used as such till 1546, when it was all taken down, excepting the tower. In the old church-yard belonging to it, lie the remains of the poet and satirist, Churchill, who died in 1764, and to whose memory an inscribed stone has been put up in St. Mary's church.—The church of St. Martin-le-Grand, founded by King Widred for the secular canons whom he had removed from Dover castle, in 691, and whose numbers he increased to 22, and endowed them as prebends. These canons were suppressed by Henry the First; but, in their place, a priory of Benedictines was subsequently founded. Great part of the priory buildings still remain; but they have been long converted into a farm, and for many years occupied by a family of the name of Coleman. They stand in a very pleasant situation, near the entrance of the town, where the road turns off to Folkestone; and the whole precinct is still surrounded by a stone wall. The gateway and refectory are still entire: the latter is upwards of 100 feet long, and is now used as a barn. A portion of the church, also is yet standing, with many remains of other buildings; but the ruins are much intermixed with more modern structures. This priory was, for a long period, called the Newark, (New-work,) to distinguish it from the old foundation from which it had its origin.

The Maison Dieu, or hospital on the left of the entrance to the town, was built and endowed by Hubert de Burgh, the great Justiciary of England, about the beginning of the reign of Henry the Third. Henry the Eighth took this hospital into his own hands; and at the Dissolution, the annual revenues were valued at 159l. 18s. 6½d. Queen Mary converted it into an office for victualling the navy, to which use it is still appropriated. In this hospital, when our sovereigns were accustomed to reside at Dover, on their way to and from the continent, the King's Chancellor, and his suite, usually took up their abode; whilst the sovereign himself was lodged either in the castle, or in the priory. The buildings still evince the Maison Dieu to have been an extensive and splendid establishment. Another hospital, connected with this town, though standing in the adjoining parish of Buckland, was built for lepers, at the joint expense of Henry the Second, and the monks of St. Martin's priory, to whom it was subject. It was dedicated to St. Bartholomew; and though

though not a vestige of the building is now remaining, an ancient fair is kept on the spot on the anniversary of that saint. St. Martin's fair is held in the market-place in Dover, near which the original priory stood. This fair, which appears to have been originally granted to King Widred's foundation, is very numerous attended.

St. Mary's church is a spacious and curious edifice, consisting of a nave and aisles, with a tower at the west end; its length is about 120 feet, and its breadth 55. It is said to have been built by the priory and convent of St. Martin, in the year 1216; yet, as much of the architecture is of a prior age, it seems probable that this was one of the three churches in Dover, which the Domesday Book records as being subject to St. Martin's, and of course its origin must have been earlier than the date mentioned. The monuments are very numerous: the most observable is that to the memory of Philip Eaton, Esq. who died in January, 1769, in his 49th year, and "whose remains are here deposited with his ancestors, inhabitants of this town of Dover for ages past:" the upper part is filled with numerous emblems, and the arms of the deceased. Here is also a memorial for the celebrated comedian, Samuel Foote, Esq. who died at the Ship Inn, at Dover, and had a grave prepared for his remains in this church, but was afterwards conveyed to London, and buried there. A very fine organ was put up here in 1742: the galleries are very large, and the church is well-paved; yet the accommodations are insufficient for the number of inhabitants. Two years after the Dissolution, this church, which had belonged to the Maison Dieu, was given to the parishioners by Henry the Eighth, who was then at Dover; and every housekeeper, paying scot and lot, has now a right to vote in the choosing of a minister. In this church, King John is stated by some of our historians, to have resigned his crown, and other ensigus of royalty, to Pandulph, the Pope's legate, in the presence of many Earls and Barons: but it seems more probable, that that degrading ceremony took place in the house of Knights Templars at Swingfield, as the original instrument, by which King John agreed to submit to the Pope's authority, is dated "apud domum militum Templi juxta Doveram."

St. James's church is an irregular structure, and its interior, which is kept particularly neat and clean, displays its origin to have been Norman. Here are memorials for Mr. Simon Yorke, who died in 1682; and Philip Yorke, Esq. town-clerk of Dover, who died in 1721; the father and grandfather of the Lord Chancellor Hardwicke, both of whom were buried here. This church anciently belonged to Dover castle; and within it are still held the Courts of Chancery and Admiralty for the Cinque Ports, and their members, at which the Lord Warden, or his deputy presides.

Besides the churches, here are meeting-houses for Baptists, Methodists, Quakers, and other sects.

The two members of Parliament, as well as the mayor, are elected in St. Mary's church, by the whole body of freemen, resident and non resident. The freedom of the corporation is acquired by birth, marriage, servitude, and burgage tenure: the acquired franchise by marriage, ceases with the death of the wife, and that by tenure, with the alienation of the freehold.

The trade of this town is extensive; and in times of peace, the general business is very great, this being still the principal place of embarkation for the continent. The inns are numerous, and in several of them, the accommodations are in the first style. A new and handsome Custom House has recently been erected, but on a less eligible-spot than the old one; and a handsome hospital has been built for the soldiery, near Archcliff Fort. A "fellowship of Trinity Pilots" was established here in 1515, under the direction of the Court of Load-Manage, whose business was to pilot vessels into the Thames.—King William, in 1689, restored to the pilots their ancient right of choosing a master and wardens from their own body, and appointed the lord warden and his deputy for the time being, the mayors of Dover and Sandwich for the time being, the captains and lieutenants of Deal, Walmer, and Sandown castles for the time being, commissioners of Load-Manage. In 1716, the pilots obtained an act, authorising an establishment of 50 pilots at Dover, 50 at Deal, and 20 in Thanet; since that time, the mayor of Sandwich has lost his commission; but the other commissioners are the same as before.

In the year 1778, an act was obtained for the better paving, cleansing, lighting, and watching the town; and duties of sixpence in the pound on every house, a shilling on every chaldron of coals, and a toll on all carriages, equal to that given by the turnpike act, payable at the gate on the London road, were granted to defray the requisite expenses. The upper road to Folkstone having become dangerous from the falling of the cliffs, a new one has been made, passing through the valley by Maxwell and Farthingloe, and joining with the upper road about three miles from Dover. In 1784, an act of Parliament was passed for the recovery of small debts above 2*l.* and under 40*l.* in the liberties of Dover, and Dover castle, and the parishes of Charlton, Buckland, River, Ewell, Lydden, Coldred, East and West Langdon, Ringwold, St. Margaret's at Cliffe, Hougham, Capel-le-Ferne, Alkham, and Whitfield.

Dover has, of late years, particularly in the bathing season, become a favourite summer residence of many respectable families. Here is an assembly-room, and a theatre. The population, according to the returns of 1811, amounted to 9074; exclusively of the garrison, &c.

Below the castle hill, on the sea beach, is a remarkable villa belonging to Sir W. Sidney Smith, by whose father, Captain Smith, Aid-de-Camp to Lord Sackville, at the battle of Minden, it was erected

erected. It is composed of flints and chalk, and consists of different low buildings, inclosing a small court. In its general aspect, it resembles a fort. The roofing is composed of inverted sea-boats, of the largest size, strongly pitched over.

Amongst the distinguished natives of Dover, may be mentioned Dr. White Kennet, Bishop of Peterborough;* and Philip Yorke, Earl Hardwicke.†

Downe.]—The little village of Downe, six miles S.S.E. from Bromley, occupies a very elevated and salubrious spot. The church, a small structure, contains several monuments of the Peltees, lords of the manor, from Edward the Third to Henry the Eighth. Downe Hall was lately the property and residence of Mr. Parry.

Downs.]—(See Deal.)

EASTRY.]—At Eastry, an ancient demesne of the Saxon Kings, 2½ miles S.W. by S. from Sandwich, the two cousins of Egbert, King of Kent, are said to have been murdered by Thunor. Here was a royal palace. In the court-lodge, which was repaired about 30 years ago, Becket is said to have concealed himself for eight days, previously to his retreat to France, in November, 1164. The church, which is a spacious edifice, exhibits some remains of Norman architecture.

EASTWELL.]—Eastwell, 3¼ miles N. by E. from Ashford, anciently gave name to a family; but it has passed through many others; amongst which may be mentioned those of Hales, Moyle, Finch, Heneage, Hatton, &c. George Finch Hatton, Esq. the present owner, had the family mansion, called Eastwell Place, rebuilt a few years ago, under the direction of Bonomi. "It is a large edifice, without exterior ornament, standing in an extensive park, well furnished with deer, and rendered interesting by a bold and commanding inequality of ground.—In the north-west part, is a high hill, clothed with fine woods, through which eight avenues, or walks, called the Star-walks, branch off in opposite directions, from an octagon plain on the top of the hill. The views from this quarter are extremely fine, and of very great extent."

* Dr. Kennet was born in August, 1660. He was skilled in the Saxon, and other northern languages. In 1692, he wrote an account of William Somner, the celebrated antiquary, which was printed with the "Treatise of the Roman Ports and Forts of Kent." In 1700, he was appointed rector of St. Botolph, Aldgate, in London; and he became distinguished for his conduct in the polemic disputes of the day. In 1707, he was appointed Dean of Peterborough; and, in 1718, bishop of that diocese. He died in 1728, leaving a numerous collection of historical and antiquarian MSS. which subsequently came into the possession of Lord Shelbourne.

† This nobleman was born in 1690. He acquired considerable celebrity at the bar; and afterwards filled the important situations of Solicitor and Attorney-Generals. In 1733, he was appointed Lord Chief Justice of the King's Bench; and was soon afterwards raised to the dignity of a Baron, by the title of Lord Hardwicke, Baron of Hardwicke, in the county of Gloucester. In 1736-7, he was made Lord Chancellor; and during a period of almost 20 years, he continued to exercise the functions of that high station with such undeviating fidelity, that

Eastwell church has an embattled tower, the window of which is ornamented with painted glass, as is that also of the chancel. On the south side of the chancel, is the burial chapel of the Finches, in the middle of which is a very large table monument, surrounded by an iron railing, in memory of Sir Moyle Finch, Bart. and his Lady, Elizabeth, Countess of Winchelsea. Their fourth son, Sir Heneage Finch, sergeant-at-law, and recorder of the city of London, is also commemorated by a good bust over a mural tablet against the north wall. Here is a tradition that a natural son of King Richard the Third, named Richard Plantagenet, fled hither from Leicester immediately after the fatal battle of Bosworth, fought in 1485, in which the King lost both his life and crown, and that he lived here in a mean capacity, having leave given him, by Sir Thomas Moyle, as soon as he was discovered by him, to build for himself a small house, in one of his fields near his mansion of Eastwell Place, in which he afterwards lived and died. This is corroborated by an entry of his burial in the parish registry. He died in 1550, aged, as is supposed, about 81. The entry in the parish register is as follows, under the article of burials:—"Richard Plantagenet, December 22, 1550." Against the north wall of the high chancel, is an ancient tomb, without inscription, with the marks of two coats of arms, the brasses gone, said to belong to this Richard Plantagenet. The tomb, however, appears to be of an earlier date. Prefixed to an entry, in the register, is a mark resembling the letter V; a mark which is also placed before the name of every person of noble blood mentioned in the register.‡

ECHING STREET.]—"Near Echings Street," observes Hasted, "a little to the southward of the village of Liminge, is a spring or well, called Lintwell, which runs from thence southward below Newington, towards the sea: and on the opposite or north side of that street rises another spring, which takes a directly contrary course, running through the valley northward towards North Liminge, where it is joined by two springs, which

only three of his decrees were ever appealed from, and even those were eventually affirmed by the House of Lords. He died in March, 1764. It is said, that when pleading as a very young barrister, before Judge Page, the latter endeavoured to browbeat him, by ironical commendation of his wit, and telling him, he soon expected to hear that he had turned Coke on Lyttleton into verse. "Yes, my Lord," replied he, with admirable readiness, "you are right; and I will give your Lordship a specimen.

"He that hath lands in fee,
Need 'neither quake nor quiver;' (a)
'For look ye, do ye see,' (a)
'I humbly do conceive,' (a)
'Tis his, and his heirs for ever."

(a) Expressions customary with the Judge.

‡ Peck's "Desideratio Curiosa," Vol. II. lib. vii. p. 13, contains copious and curious particulars, relating to this supposed Plantagenet.

rise

rise in Liminge village, at a small distance north-east from the church, gushing out of the rock at a very small space from each other: the lowermost, which is called St. Eadburg's well, never fails in its water. These united springs, in the summer time, seldom flow further than Ottinge, about one mile from their rise; yet they occasionally burst forth, even in the midst of summer, and form the stream of the Nailbourne; and with a great gust and rapidity of water, flow on to a place called Brompton Pat, which is a large deep pond, a little above Wigmore, having a spring likewise of its own, which hardly ever overflows its banks, excepting at those times, when, congenial with the others, it bursts forth with a rapidity of water, about three miles and half north from Liminge, and having jointly with those springs overflowed its bounds, takes its course on by Barham, into the head of the Little Stour, at Bishopsbourne."

ELTHAM.]—Eltham, 6½ miles N.N.W. from Folkestone, was anciently a market-town of considerable note. The manor, or honour, now belongs to Sir H. Oxendon, Bart. of Broome. Eltham Park, mentioned in records of the time of Henry the Third, is now overgrown with wood. The east window of the church has been very large and handsome.

ELTHAM.]—This town, 8½ miles S.E. by E. from St. Paul's cathedral, had formerly a market and fairs. It is still a considerable village, on the high road to Maidstone, extending about three-quarters of a mile in length. Its ancient name was Ealdham, the old mansion or dwelling. The markets appear to have been discontinued in the time of James the First, when the royal palace, the remains of which stand about two furlongs southward from the village, ceased to be visited by our Kings.—This palace was for several centuries a favourite retreat of the English sovereigns, to which probably its vicinity to the metropolis, not a little contributed. In the Saxon times, the manor belonged to the crown. William the Conqueror granted it to Odo, Bishop of Baieux, his half-brother, after the confiscation of whose possessions by William Rufus, this manor was divided, part of it being retained by the sovereign, and part of it given to the noble family of the Magnavilles. Edward the First granted his moiety to the powerful Baron, John de Vesci, who afterwards obtained the whole by exchange with Walter de Magnaville. His son, William de Vesci, had a natural son, to whom he devised this manor; but having appointed Anthony Bec, Bishop of Durham, a trustee under the will, that prelate fraudulently obtained possession of Eltham for himself. He bestowed great cost on the buildings here; and here also he died, in 1311. The manor subsequently went to Queen Isabel, consort to Edward the Second. Since that period it has been occasion-

ally granted for terms of years to various persons, and is now held under a lease from the crown, by Sir John Gregory Shaw, Bart. When the palace was originally built is unknown, but it must have been before the year 1270, as Henry the Third then kept a grand public Christmas here. Edward the Second frequently resided here; and in 1315, his Queen was delivered of a son in the palace, afterwards called John of Eltham. Edward the Third held a Parliament here in 1329, and another in 1375. Most of the succeeding sovereigns, to the time of Henry the Eighth, resided much in this palace; but on the rise of Greenwich, it was gradually deserted. Edward the Fourth was at great expence in repairing the palace; and here, in 1483, he kept his Christmas in a very magnificent and costly manner, 2000 persons being daily fed at his charge. Three years afterwards, his daughter Bridget, who became a nun at Dartford, was born here. The change which this structure has undergone, is exceedingly striking. It is now a farm; and the beautiful great hall, in which Parliaments were held, and entertainments given in all the pomp of feudal grandeur, is now used as a barn for the housing and threshing of corn. The area in which the buildings stand, is surrounded by a high stone wall, that has been partially repaired, and strengthened by arches, &c. of brick, and a broad and deep moat, over which are two bridges, nearly opposite to each other, on the north and south sides. The hall is a noble remain, 100 feet in length, 56 broad, and about 60 high.—The windows, which have been extremely elegant, are now bricked up. The roof is of timber, curiously wrought in the manner of that at Westminster Hall, and richly ornamented with finely carved pendants. Three parks, well provided with deer, and including together upwards of 1200 acres, were formerly connected with this royal mansion.

The church contains various monuments, but none of them very remarkable. Under the north aisle, is the burial-place of the Shaws, Baronets; by the first of whom, Sir John Shaw, this part of the edifice was built in 1667; he also rebuilt the roof of the nave, which had fallen in whilst the workmen were employed in digging the family vault.* In the church-yard is the tomb of the celebrated George Horne, D.D. Bishop of Norwich, who died in 1792, containing the following

Inscription.

"Here lie interred the earthly remains of the Right Rev. George Horne, D. D. many years president of Magdalen College, in Oxford; Dean of Canterbury, and late Bishop of Norwich; in whose character, depth of learning, brightness of imagination, sanctity of manners, and sweetness of temper, were united beyond the usual lot of humanity. With his discourses from the pulpit his hearers, whether of the university, the city, or the country parish, were edified and delighted. His

* He was created a Baronet, in 1665, in reward for his having lent large sums to the King before the Restoration: he was also appointed one of the farmers of the customs; and dying in

1679-80, was brought from London with great funeral pomp, was interred here; as his widow, Bridget, Countess of Kilmurray, was afterwards, in 1696.

commentary on the Psalms will continue to be a companion to the closet till the devotions of the earth shall end in the hallelujahs of heaven. Having patiently suffered under such infirmities as seemed not due to his years, his soul took its flight from this vale of misery, to the unspeakable loss of the church of England, and his sorrowing friends and admirers, January, 1792, in the 62d year of his age.

The parish register records the burials of Thomas Dogget, the eminent low comedian, who, dying in 1721, bequeathed a coat and badge to be rowed for annually, on the 1st of August; and of Sir William James, Bart. who distinguished himself at the taking of Severndroog castle. Eltham Lodge, is a respectable mansion, standing in the great park, which formerly belonged to the palace, and including an area of two miles in circumference.

ERITH.]—About 2½ miles N. from Crayford, is the little village of Erith, on the banks of the Thames, and lying open to the upper part of Long Reach, where the East Indiamen, in their passage up the river, discharge a part of their cargoes.—Lambard supposes its name to be derived from the Saxon *Ærre-hythe*, the old haven; but in ancient records, it is written *Hliesnes*; and in the Domesday Survey, *Loisnes*; an appellation which, softened into *Lesnes*, was afterwards exclusively appropriated to *Lesnes* abbey. The manor-house is seated about a mile S.W. from the village, on the edge of Northumberland Heath.

According to Lambard, Erith was anciently incorporated. The buildings are chiefly ranged in one street, leading down to the water-side; and a second, branching off towards the church on the west. Great quantities of corn and wood are annually shipped from the wharfs here. The marsh lands belonging to Erith contain about 1500 acres, which are commonly ploughed for corn, and bear very exuberant crops. Here is an establishment of the customs, consisting of a surveyor, and two watermen.

Erith church is a very ancient structure, consisting of a nave, chancel, a south chapel, and a south aisle, with a tower and spire at the west end. It has several ancient monuments and brasses; among which is an alabaster tomb, in the chapel, in memory of Elizabeth, Countess of Shrewsbury, who is represented in her robes and coronet, lying on a mat, with her head on a cushion. There are various shields of arms upon the sides of the tomb, with numerous quarterings, displaying the intermarriages and alliances of the family. The countess died in the year 1567.

EVINGTON.]—At Evington, in the parish of Elm-

* At Elmington, in the parish of Eythorne, was born, in July, 1740, Captain John Harvey, who commanded the *Brunswick*, of 74 guns, in the engagement between the English and French fleets, on the 1st of June, 1794. *Le Vengeur*, a ship of superior force to his own, was sunk through the superiority of his prowess; and *L'Achille*, which had borne down to her assistance, was reduced to a complete wreck; as was a third ship

stead, eight miles E. by N. from Ashford, the Honeywood family has long been settled. The grounds are confined, and the house is a mean old structure.

EWELL.]—About 2½ miles N.W. from Dover, is the mean little village of Ewell, remarkable for having been the residence of the Knights Templars, who had a grand mansion here, which was probably situated about half a mile to the right, where now is a place called the Temple. It was here that the pardon of Archbishop Langton was signed. The principal stream of the Dour, or Idle, rises in this parish.

EYNESFORD.]—Six miles and a half S.E. from Foot's Cray, are the remains of Eynesford castle, thought to have been raised in the Norman times, by the family of Eynesford, or Ainsford. The outward walls, inclosing about three-fourths of an acre, appear to have been built of squared flint, and are nearly four feet thick. They are entire for nearly 40 feet in height. The circuit of these walls is of a very irregular form; and, in the centre, is a strong keep, or dungeon. The surrounding moat has been filled up, and converted into garden-ground.

Eynesford church contains several ancient monuments, and presents some curious specimens of Norman architecture.

EYTHORNE.]—This parish, which lies 5½ miles N.N.W. from Dover, is divided into Upper and Lower Eythorne. In the former is a villa and small farm, belonging to Peter Fector, Esq. of Dover.—Its situation is very pleasant, commanding a fine view of Waldershare Park, and the surrounding country, together with a distant sea view.*

FARLEIGH.]—East Farleigh lies 2½ miles S.W. by W. and West Farleigh three miles W.S.W. from Maidstone. These parishes are celebrated for their abundant produce of fruit and hops. The churches are both of Norman origin, and are not without interest to the antiquary. The churchyard of West Farleigh contains some fine yew-trees.

FARNINGHAM.]—The font of Farningham church, (six miles S.E. by E. from Foot's Cray,) is a very remarkable one: "its form is octagonal, its height nearly four feet three inches: the diameter of the base is 10½ inches; its depth, ten inches. It is divided by mouldings into three stages, the lowermost ornamented with Gothic roses; the middle one, slightly cavettoed; and the uppermost displaying a series of eight subjects, exhibiting the Catholic ceremonies of Baptism by immersion, Confirmation, Confession, the administration of the Eucharist, the elevation of the Host, Marriage, &c. the figures,

also, that engaged in the tremendous conflict. His arm was shattered before the battle was decided; yet he would not quit the deck, until he had given strict orders, that in no event should his flag be struck whilst his ship floated. He died of his wounds at Portsmouth, and was interred in Easry church, on the 5th of July following.

though of rude sculpture, and ill-drawn, are not destitute of expression." In this church are also several curious brasses.

Farningham, still a considerable village, anciently enjoyed the privilege of a market. It stands on the main road between London and Maidstone; and it is intersected by the Darent, over which it has a good four-arched, brick built bridge.

FAVERSHAM.]—The sea-port and market-town of Faversham, lies 19 miles E.N.E. from Maidstone, and 47½ E. by S. from London. Its origin is remote; but it is thought that the Saxons had a palace here, and that a market, with other privileges, had been granted to the inhabitants long before the Conquest. The name of this town is undoubtedly of Saxon origin; but there is reason to suppose that it had a being in the time of the Roman power in Britain. A Roman burying-ground was found some years ago adjoining the town, where many urns were dug up of various sizes, and several medals of Roman Emperors, from the reign of Vespasian to that of Gratian. The Saints Crispin and Crispianus, are said to have found an asylum in this town, where they were bound apprentices to a shoemaker. The altar in the church is dedicated to these two saints. So early as the year 811, it was denominated "the King's Little Town, of Fefresham," in which King Cenwulf granted a charter to Wulfred, Archbishop of Canterbury. Athelstan, King of the West Saxons, and Kent, in 839, conveyed East Lenham to one Wernedus; in the year 892, King Alfred gave title to the hundred in which it is situated; and in the year 930, King Athelstan and his great council of Parliament, archbishops, bishops, &c. met here to enact laws, and to constitute methods for the future observance of them, which shews the town to have been a place of considerable traffic and resort. Stephen, his Queen, and family, were so pleased with this town, that they built here an abbey, where their royal remains might be interred, in the year 1147, and dedicated it to our Saviour. None of the extensive buildings of this abbey now remain entire; its two gates were sometime since taken down, after many fruitless attempts to preserve them. The external walls are nearly all that are left. At the Dissolution, the clear yearly revenues of this monastery, amounted to 284*l.* 13*s.* 5½*d.* and a quarter and a half of barley. The greatest part of these estates was soon after disposed of to different persons, but the manor, and the most considerable part of the site, and its demesnes, continued in the crown till the reign of Charles the First; who, in his fifth year, granted them to Dudley Digges, of Chilham castle, master of the Rolls, by whose will they came to his son, John Digges, Esq. who soon after conveyed them to Sir George Sondes, K. B. afterwards created Baron of Throwleigh, Viscount Sondes, and Earl of Faversham: in whose family they still remain.

Faversham is situated on a navigable arm of the Swale, into which runs a beautiful rivulet rising in

the parish of Ospringe, which affords a necessary back-water to the haven. The town principally consists of four streets, of considerable length, spacious, and well-paved, somewhat in the form of an irregular cross, in the centre whereof stands the market-place. "Faversham," says Leland, "is included in one paroch, but that ys very large. Ther cummeth a creke to the town that bareth vessels of xx tunnes; and a myle fro thens north-east, is a great key, called Thorn, to discharge bygge vessels. The creke is fedd with bakke water that cummeth from Ospringe." In the survey of maritime places in Kent, made in the reign of Elizabeth, this town is stated to have 380 inhabited houses; 18 ships, or vessels, from five to 45 tons burthen, and of persons occupied in merchandise and fishing, 50. The quay, mentioned by Leland, called the Thorn, has been out of use many years; but three new quays, or wharfs, have been made close to the town, where all the shipping belonging to the port, take in and discharge their cargoes. The navigation of the creek has also been greatly improved; and vessels of 100 tons burthen, can now come up to the town at common tides; whilst, at spring tides, the channel is deep enough for ships drawing eight feet water. The management, and preservation of the navigation are vested in the corporation, the expences being paid out of certain port dues. Upwards of 40,000 quarters of corn are shipped here annually for the London markets; considerable quantities of hops, fruit, wool, oysters, &c. are also from this port, to which 30 or 40 coasting vessels belong, besides fishing-vessels, of from 40 to 150 tons burthen each: the imports are principally coals, and fir timber, iron, tar, &c. from Sweden and Norway. A branch both of the excise, and of the customs is established in this town; the former under the direction of a collector, surveyor, and other officers; the latter under a supervisor, &c.—The oyster-fishery here is a very extensive concern; the number of families wholly supported by it, are upwards of 100. As at Milton and Rochester, the native broods are far inferior to the consumption; and vast quantities of spat are annually collected from the different parts of the surrounding seas, even as distant as the Land's End in Cornwall, and the coasts of Scotland and France, and placed in the beds belonging to this fishery, there to increase and fatten. The company of the "Free Fishermen, and Free Dredgermen, of the Hundred and Manor of Faversham," are under the immediate protection and jurisdiction of the lord of the manor, as tenants of the same; and he appoints a steward to hold two courts, called Admiralty Courts, or Water Courts, annually, where all the necessary regulations for the benefit of the fishery are made. The right of the fishery was anciently an appurtenance to the manor of Milton, but was separated from that manor by King John, and granted, with the property of the grounds, to Faversham abbey: on that occasion, the Company of Free Dredgers of Faversham, are first

first mentioned; though no doubt is entertained, but that it had then existed from time immemorial. In the time of peace, great quantities of Faversham oysters are exported to Holland, to the yearly amount of between 3 and 4000/.

Gunpowder is the only manufacture carried on in the vicinity of Faversham. It is under the superintendence of a branch of the ordnance established here. The various mills, store-houses, &c. are chiefly situated on the stream that flows from Ospringe, and forms several small islands in its course to the Faversham creek. This manufacture is supposed to have been established here before the reign of Elizabeth; but it continued in private hands till about the year 1760, when the respective works were purchased by government, and within a few years afterwards, were rebuilt in a more substantial and safe manner. Not all the care, however, that can be exerted, is sufficient to prevent accidents, by the occasional ignition of the powder; though such events are now less frequent than formerly. A dreadful explosion occurred, in April, 1781, when the corning-mill, and dusting-house, were torn to atoms by the blowing up of about 7000lbs. weight of powder, which, by its explosion, so impregnated the air with sulphur, for many miles round, as greatly to affect respiration. The noise was heard at 20 miles distance; even at Canterbury, eleven miles off, it gave the sensation of an earthquake; and the pillar of flame and smoke caused by it, ascended to such a height in the air before it expanded, that it was seen in the Isle of Thanet. All the surrounding buildings were in a great measure destroyed; the boughs of large trees were torn off, and the trunks left bare; and the ground itself was so furrowed as to have the appearance of being fresh ploughed. The houses in the westernmost part of the town suffered most; and it was supposed that the whole would have been destroyed, if the wind had set directly towards it. The sufferers were afterwards relieved by Parliament; and, under the provisions of an act passed for the greater safety of the powder works, the stoves were removed into the marsh, at a considerable distance below the town.—Another dreadful explosion, however—the third that had happened within seven years, occurred in the month of January, 1810. Of the six men employed in the building at the time, four were blown to pieces, and their bodies and limbs were scattered to a distance of upwards of 100 yards from the site of the building. One of the arms was found upon the top of a high elm tree. The fifth man was taken up alive. The sixth, the foreman of the work, singular to relate, was found alive also, sitting in the midst of the smoking ruins, with his clothes burning, but he was otherwise not much injured. At the door of the corning-house was standing a tumbril, or covered waggon, with two horses and a driver. The waggon was blown to pieces, and the driver and horses were killed. Of three horses employed within the

building, two perished.—The quantity of powder annually manufactured here, is computed to amount to between 12 and 13,000 barrels: the number of persons employed about 400. The mills are constantly at work, night and day, the men relieving each other in sets or parties. The mills, stoves, &c. are so situated in relation to each other, that the manufacture of powder is gradually completed as the ingredients are conveyed down the stream.

Mary, Queen of France, sister of Henry the Eighth, passed through Faversham, in May, 1515; and the expence of the “brede and wine” given to her, are stated at 7s. 4d. Henry the Eighth and his Queen, Catherine of Arragon, were here in 1519, with Cardinal Wolsey, and the Archbishop of Canterbury, when the “spiced brede and wine” for the latter, came to 5s. 4d.; the “spiced brede, wine, and capons,” for my Lord Cardinal, to 18s. 9d.; and the “spiced brede, wine, beer, and ale,” to the King and Queen, to 1l. 6s. 5½d. Henry was again at Faversham in 1522, with the Emperor, whom he was conducting to Greenwich, and a numerous retinue, when the expenses of his entertainment were entered at 1l. 3s. 3d. exclusive of a “gallon of wine” to the Lord Archbishop, which cost one shilling! In 1545, Henry was once more in this town, where he lay one night, and was presented with “two dozen of opouns, two dozen of cheikins, and a seive of cherries,” all of which are recorded at 1l. 15s. 4d. In 1573, “Queen Elizabeth came here, and lay two nights in the town, which cost the town 4l. 10s. 8d. including a silver cup presented to her, which cost 27l. 2s. 0d.” Another item in the Chamberlain’s accounts, states, that Charles the Second visited, and dined with the mayor here, in 1660, and that the “expence of his entertainment was 56l. 6s. 0d.”

Faversham church is a spacious and handsome fabric, built of flint, in the form of a cross, and quoined with stone. It has a light tower at the west end, ornamented with pinnacles, and terminated by an octagonal spire, 73 feet high. The outer walls are sustained by strong buttresses, and appear of the age of Edward the Second, or Third; but the interior parts of the west were rebuilt in the year 1755, from the designs of the late George Dance, Esq. at the expence of about 2500/. The tower and spire have been erected since. In the former church were two chapels, respectively dedicated to St. Thomas, and to the Holy Trinity; besides various altars and obits. At the west end of the south aisle, to which it formerly opened by semicircular arches, is a large room, now used as a school; and beneath this is a crypt or chapel, divided in the centre by three round pillars, sustaining pointed arches. Adjoining to the north side of the tower is a square apartment, fitted up with strong timbers, and otherwise secured; this is supposed to have been the “treasury,” where the altar-vessels, vestments, &c. were kept. Various ancient brasses, and tombs, remain in different parts of this fabric. The organ, built at the

the charge of the corporation, cost upwards of 400/.

Here is a Free Grammar School, founded in 1575, and endowed with certain lands then in the possession of the crown, the annual produce of the endowments is about ninety pounds; the whole of which, after deducting the expense of repairs, &c. is paid to the master. Here are also two small Charity Schools, established in 1716, for the instruction and clothing of poor boys and girls. The Market House, or Guildhall, was built in the year 1591, of timber, having an open space between the pillars beneath. At a little distance from the bridge at the bottom of West Street, is a strong chalybeate spring.

Faversham has been greatly improved within the last forty or fifty years. In 1773 it was laid open to the high London road, by a spacious avenue; and all the contiguous roads have been since widened, and improved. The streets also were paved and lighted under the provisions of an act of Parliament, obtained in 1789. Many of the houses are large and handsome; and the inhabitants have an assembly room, and a theatre. The population of Faversham, as returned under the act of 1811, amounted to 3655.

FOLKESTONE.]—Folkestone, the *Lapis Populi* of the Romans, the *Folcestane* of the Saxons, and the *Fulchestan* of Domesday, is situated on the English Channel, 87½ miles E. S. E. from Maidstone, and 71½ E. S. E. from London. "The towne shore" observes Leland, "be al lykeliod, is mervelusly sore wasted with the violence of the se; yn so much, that there they say that one parochie chyrch of Our Lady, and another of St. Paule, ys clene destroyed and etin by the se." The Domesday Book mentions five churches in Folkestone, besides three others, that were within the hundred. "Hard upon the shore ys a place cawled the *Castel yarde*, the which on the one side ys dyked, and ther yn be great ruines of a solemne old nunnery, yn the walles whereof yn divers places apere great and long Briton brikes (more probably Roman tiles). The Castel yard hath been a place of great burial, yn so much as wher the se hath woren on the banke, bones apere half stykyng owt. The parochie chyrch ys thereby, made also of sum newer worke of an abbey: ther is St. Eanswide * buried; and alate therby was a visage of a priory. Lord Clynton is Lorde of the towne of Folkestone; and this Lord Clynton's grandfather had there of a poore man, a boote almost ful of antiquities of pure gold and silver."

* It is mentioned, in the "Perambulation of Kent," that the author of "Nova Legenda Angliæ" "reporteth many wonders of this woman; as that she lengthened the beame of a building three foote, when the carpenters missing in their measure, had made it so much too shorte: that she haled and drew water over the hills and rocks against nature from Sweeton, a mile off, to her oratorie at the sea-side: that she forbad cer-

Folkestone has an establishment of the customs, belonging to the out-port of Dover, of which it is a member.—The old harbour being small, and its repairs expensive, an act of Parliament was obtained, about the year 1807, for the construction of a new one; the expense of which was estimated, by Mr. Jessop, the engineer, at 22,000/., which was raised by 440 shares, of 50/ each, payable by instalments of not more than 15/ per annum. The new harbour comprises nineteen acres of land, and is capable of containing 500 vessels, of from 400 to 500 tons each, and of sheltering them from the strong southerly winds which are here prevalent. The pier-heads are naturally formed by two clumps of rocks, placed at a distance of 290 feet, forming the channel through which vessels enter the harbour. At no time of the tide is there less than 12 feet water here. The most difficult part of the work was completed by the summer of 1810, at the very slight expense of only 8,400/. The harbour dues commenced in 1810, and it was said, that the first year's receipt paid full 10/ per cent on the expenditure. Since the return of peace, the dues for passage boats and merchandise—Folkestone being the nearest point of communication with the Continent—have been immense. The extensive and increasing fishing of the port is also exceedingly productive. Every hundred of mackarel, and every last of herrings, pays a proportionate harbour due, exclusively of vessels of every description, belonging to the town, which pay from one to ten guineas each annually.—In addition to mackarel and herrings, here is an abundance of superior scate, plaice, conger-eels, whittings, soles, &c.

The corporation of Folkestone consists of a mayor, 12 jurats, 24 common-council-men, a recorder, chamberlain, town clerk, &c. Their seal bears the figure of St. Eanswith, her head encircled by a coronet; in one hand a pastoral cross; and in the other ten fish on a half hook.—The streets are generally narrow and ill-built; but several improvements have been effected in the town of late years. The market-house has been re-edified at the expense of Lord Radnor. The market, which was first granted by King John, is now very poorly attended.—According to the returns of 1811, the population of this town was 4232.

Folkestone church is in the form of a cross, with a tower rising from the intersection, supported on large piers, from which spring pointed arches with plain mouldings. The west end formerly extended to a greater length; but part of it having been blown down in December, 1705, it was contracted, though

taine ravenous birdes the country, which before did much harm thereabouts: that she restored the blinde, cast out the divell, and healed innumerable folkes of their infirmities; and therefore after her death, she was, by the policy of the Popish priests, and follie of the common people, honoured for a saint."

previously

previously it had been insufficient for the accommodation of the inhabitants. In the north wall of the chancel is a very curious ancient tomb; but the person whom it is intended to record, is not known. Against the east wall of the south aisle is a curious altar monument, of variegated marble, in memory of the Herdsons, once lords of this manor. Amongst the other memorials, is one of the Rev. William Langhorne, curate of Folkestone, who died in 1772. It bears an epitaph, written by his brother, the poet. A brass plate, in the pavement of the nave, records the name and character of Joan, wife of Thomas Harvey, and mother to the celebrated Dr. Harvey, who died in her fiftieth year, in November, 1605.

Amongst the distinguished persons, indebted for their birth to Folkestone, may be mentioned Dr. W. Harvey, who discovered the circulation of the blood;* and John Philipot, the Somerset Herald, and author of *Villare Cantianum*, &c.†—Dr. Harvey left 200*l.* to be bestowed, at the direction of Sir Eliab Harvey, on the poor of this his native place; who accordingly, by a deed of trust, dated March 28, 1674, founded a school for twenty boys, and endowed it with a farm, called Coom, in the parish of Lympre.

On the heights, north of the town, are some remains of Roman encampments.

FORD.]—(See Sturry.)

FORDWICH.]—Fordwich is situated two miles E. by N. from Canterbury, on the river Stour, over which it has a bridge. This town is a member of the port of Sandwich, and was anciently incorporated by the name of the barons of the town of Fordwich, but more lately by the name of the mayor, jurats, and commonalty, who enjoy the same privileges as the inhabitants of the Cinque Ports, but it has at present neither market nor fair.

FRINDSBURY.]—Frindsbury, anciently called *Æslingham*, which is now a distinct manor in Frindsbury parish, is situated two miles north-west from Rochester, to the see of which it was given, in the eighth century, by Offa, King of Mercia. The church occupies a commanding eminence, rising from the Medway, over which the prospect is extremely fine. It has a substantial tower at the west end, from which rises an octangular spire. Some parts of this building are very ancient; but

the sepulchral monuments are not entitled to particular notice.

Upnor castle is in this parish. It was erected by Queen Elizabeth, to defend the passage of the Medway; but it is now made use of as a powder magazine, for the security of which, there is an establishment, of a governor, store-keeper, clerk of the cheque, master gunner, &c. with an officer's guard of soldiers: the latter are lodged in barracks behind the castle; and at a little distance, is a good house, with gardens, for the store-keeper. The castle, which is environed by a moat, consists of an oblong centre building, with a round tower at each end. The only period at which this fortress proved of any utility, was in 1667, when the Dutch Admiral de Ruyter, appeared at the mouth of the Thames, and detached his Vice-Admiral, Van Ghent, to sail up the Medway, and destroy the shipping. Van Ghent took the fort of Sheerness, and made dispositions to proceed up the river. Monk, Duke of Albemarle, made every possible effort to render his attempt abortive: he sunk several ships in the channel of the river, and drew a chain across, behind which he placed three large men of war. The Dutch, who were advancing very fast, passed through the sunken ships, and broke the chain. Van Ghent continued to advance, till, with six men of war, and five fire ships, he came opposite to Upnor castle; but he here met with so warm a fire from Major Scott, commandant in the castle, and Sir Edward Spragge, who directed the batteries on the opposite shore, that he thought it best to draw off, his ships having sustained considerable damage.

GAD'S HILL.]—Gad's Hill, immortalised by Shakespeare, as the scene of the exploits of Sir John Falstaff, is crossed by the high road to Rochester and Canterbury, about 26 miles from London. It was formerly a noted place for robbing of seamen after they had received their pay at Chatham.—It was here, that a famous robbery was committed about the year 1676. About four o'clock in the morning a gentleman was robbed by one Nicks, mounted on a bay mare, just on the declivity of the hill, on the west side. Nicks proceeded to Gravesend, and (as he afterwards confessed) from the difficulty of procuring a boat, was de-

* William Harvey was born on the 2d of April, 1578. After pursuing the study of physic about five years at Cambridge, he travelled to Padua in Italy, where he took up the degree of doctor, as he did likewise at Cambridge, upon his return to his native country. In 1607, he was elected fellow of the college of physicians; and about eight years after, was chosen reader of the anatomy and surgery lecture, founded by Dr. Richard Caldwell. In these lectures, he first opened his grand discovery, of the Circulation of the Blood. He was made physician to King James the First, and King Charles the First; and in 1651, published his treatise on the Generation of Animals. He died in June, 1657, without issue, leaving his estate to the College of Physicians, where a commemorative speech in Latin in honour to his memory, and that of their other benefactors, is annually delivered on the 18th of October. The present Ad-

miral Sir Eliab Harvey, Bart. M. P. &c. is a collateral descendant of this family.

† Of this gentleman, few particulars are known. He suffered in the cause of Charles the First, and was for a short time imprisoned in London, about the year 1644. He possessed a good knowledge of antiquities; and, besides the *Villare Cantianum*, he wrote a 'Catalogue of the Chancellors of England, &c.' and, 'Additions to Camden's remains concerning Britain.' He bore the same arms as Sir John Philipot, Lord Mayor of London, knighted by Richard the Second, for his conduct in the insurrection headed by Wat Tyler; and had afterwards a coat of augmentation granted to his paternal arms, for his bravery in attacking and vanquishing the pirate, John Mercer, who had greatly infested the narrow seas. He died in 1645.

tained there nearly an hour, which was a subject of considerable uneasiness to him—he however availed himself of the time and baited his horse: from thence he rode across the county of Essex, to Chelmsford: here he stopped about half an hour to refresh his horse, and give him some balls; and proceeded on to Braintree, Bocking, and Wethersfield; then over the Downs to Cambridge, and from thence, keeping always the cross roads, he passed to Godmanches-ter and Huntingdon, by Fenny and Stratford, when he baited his horse, and took some refreshment, and slept about half an hour. Keeping the north road, and riding at full speed, he arrived in York the same afternoon; here he changed his dress, and mixing with company as an inhabitant of the town, he went to the bowling green, where among other gentlemen was the mayor of the city. He immediately singled out his lordship, and contrived to do something particular, in order that the mayor might remember him; he then took the opportunity to enquire of his lordship, the hour of the day: the latter pulling out his watch, told him the hour, which was a quarter before, or a quarter after eight at night. On being prosecuted for the robbery, the whole merit of the case turned upon this single point; the person who had been robbed, swore to the man, to the place, and to the time, when the act was committed; yet as Nicks had the evidence of the mayor of York, to prove that he was in York at a certain time, the jury acquitted him, on the supposition that it was impossible a person could be in two places so remote, on the same day.

GILLINGHAM.]—Gillingham, the Gelingham of Domesday, is a pleasant village, a mile and a half E. by W. from Chatham. It is principally inhabited by persons belonging to the dock-yard, or by those who have retired from the service. A sharp battle was fought here between Edmund Ironside, and Canute, the Dane. This place appears to have been formerly of considerable note: in a survey made in 1565, it is returned as having four quays, and twenty-seven ships and boats: the largest of these vessels, however, was only of twenty tons. On the edge of the marshes, skirting the Medway, below the village, a small fort was built for the defence of the river in the reign of Charles the First; but this, though enlarged, and sometimes dignified with the name of Gillingham Castle, was never of material service. The manor formed part of the ancient possessions of the Archbishops of Canterbury, who had a splendid palace here, and one of whom, John Stafford, in 1336, procured a grant of a weekly market, and an eight days' annual fair; but these have been long discontinued. The manor is now held under Lord Somers. The palace, which adjoined the south side of the church yard, was an extensive building; but scarcely any remains are left, excepting foundation walls, and what is supposed to have been the hall, now used as a barn and granary. This is chiefly built of flints, and has pointed windows.

The church is a spacious fabric, consisting of a nave, aisles, and chancel, with a chapel on each side the latter, and a square tower at the west end. The east window is large and handsome. Over the pointed arch of the west entrance, is the niche in which stood the statue of our Lady of Gillingham, whose fame was so great in the Catholic times, that many pilgrimages were made to her shrine. Most of the windows were formerly adorned with rich painted glass, the gift of the family of Beaufitz, Lords of Twydiall, in this parish. The chancel displays some slight remains of Norman architecture. The font is also Norman. In the north chapel, are brasses of a knight and his lady, John Beaufitz, and Alice, his wife; the former of whom died in 1438. In the south, or Grange chapel, are several memorials for the families of Bamme, and Haward, or Hayward, formerly Lords of Grange, a manor in Gillingham parish.

William of Gillingham, a learned Benedictine monk of Canterbury in the time of Richard the Second, who wrote a history of Britain, and another of his own monastery, was born in this town. Another native of Gillingham, was William Adams, an enterprising seaman, and "the first," says Hasted, "of any Englishman who discovered Japan effectually, to which remote island he began his voyage in 1598: he died about 1612."

The manor of Grange, mentioned above, lies about half a mile E. from Gillingham, and includes about 120 acres. It has always been accounted a member of the Cinque Port of Hastings, in Sussex; and, as such, in the reign of Edward the Third, it furnished one ship, and two able and well armed men, for the king's service for 40 days. Matthew de Hastings, who died in 1276, held the manor, by the service of finding one oar whenever the king should sail towards the port of Hastings. It was afterwards the property of John Philipot, Esq. Lord Mayor of London, in 1378, who afterwards opposed Wat Tyler's insurrection, in Smithfield. He built a small chapel here, part of which is yet standing, and now used as an out-house.

GODINGTON.]—The manor of Godington, situated in the parish of Great Chart, (half a mile W. by S. from Ashford) was anciently held by a family of the same name; from which it passed, successively, to the Champneys, Goldwells, and Tokes; the last of whom trace their descent from Robert de Toke, who fought by the side of Henry the Third, at Northampton, in 1264. John Toke, Esq. sheriff of this county in 1770, greatly improved the house and grounds, which are pleasantly situated near the north side of the Stour. The north front of the mansion is modern. The hall contains a good series of family portraits, several of which are by Cornelius Jansen. Among them are those of Captain Nicholas Toke, who was sheriff in 1663, and Diana, his wife, daughter to the Earl of Winchelsea. The former, who appears to have been of a strong athletic make, died in 1680, at the advanced age of ninety-

ninety-three. It is reported of him, that he walked from Godington to London, only a short time previously to his decease, in order to pay his addresses to a sixth wife. The stair-case is curiously carved; and in the windows, is a display of painted glass, exhibiting the arms, quarterings, and alliances of the family. In the drawing room, which is also wainscotted with carved oak, is a singular representation of the exercise and manœuvres of the ancient militia, with their arms, accoutrements, &c. in compartments formed round the upper part of the room. Several of the chimney-pieces are of Rethersden marble, sculptured with arms, &c.

A severe shock of an earthquake was felt in the parish of Great Chart, on the night of the 1st of May, 1580. The church is a handsome fabric, consisting of a nave, aisles, and chancel, with a chapel on each side the latter; and at the west end, a well built tower, surmounted by a spire. This edifice was repaired, and partly rebuilt, about the time of Edward the Fourth, by James Goldwell, Bishop of Norwich, who was principal secretary to that king. The bishop, who was born in the family mansion at Goldwell, was also the founder of the Chantry chapel, which adjoins the chancel on the south; and a licence for that purpose, was granted him in 1471. In Weever's time, the portrait of this prelate was to be seen on the eastern window of the chapel, in a kneeling posture; and in every quarry (pane) was painted a golden well, or fountain, with this devise, his rebus. He died about the year 1493 or 1499. Between the chancel and the north chapel, is an old altar-tomb, on which, were brasses in memory of William de Goldwell, and his wife Avice, the bishop's parents. The north chapel has long been the principal burial place of the Tokes of Godington. In the pavement are several slabs inlaid with curious brasses.

GODMERSHAM.]—The manor of Godmersham (6½ miles N. E. by N. from Ashford) is amongst the possessions of the dean and chapter of Canterbury. The court lodge, or manor house, now called the priory, is situated near the church. It was a residence of the priors of Canterbury, and still retains many vestiges of its ancient character. A statue, supposed to be that of Prior Fynch, in an episcopal dress, with a pastoral cross in one hand, and the other upraised in the attitude of benediction, is yet remaining in a small niche over the entrance porch. The church is a small fabric, and had formerly a chantry connected with it, on the south side. The chantry has been rebuilt, and converted into two seats, appropriated to the manors of Ford and Eggar-ton, both of which are in this parish.—Godmersham park enjoys a charming situation, on the west side of the high road, between Canterbury and Ashford. The mansion, which is a handsome edifice, was built in the year 1732, by the late Mr. Knight, who also inclosed the park.

In the parish of Godmersham, about the close of the 17th, or commencement of the 18th century, a

large Roman urn was found, of capacity to hold half a bushel. Within it was a shallow earthen pan, in which stood a small urn of fine red earth, but no remains of either ashes or bones. The large urn was covered with a broad flat stone, and fenced round with a wall of flints for its preservation. In the year 1703, on the acclivity of Trenworth Down, in the adjoining parish of Crundal, a Roman burying place, crossed by a waggon way, was accidentally discovered; and various skeletons, and human bones, with several small urns, and other vessels, have been found here at subsequent periods. Here also, in the years 1757 and 1759, the late Rev. Brian Fausset, of Heppington, discovered many Roman antiquities, which now form part of the valuable collection at Heppington.

GOUDHURST.]—At the little market town of Goudhurst, 13 miles S. by W. from Maidstone, and 44 S. E. by E. from London, are two Free Schools. Its population, in 1811, was 2082.—The church is a large and handsome structure, consisting of a nave, aisles, and chancel, with a low massive tower at the west end, which was formerly crowned by a high spire; but the spire having been set fire to, and greatly damaged, in a dreadful storm of thunder and lightning, in 1637, it was afterwards taken down. In the church-yard is a remarkable yew tree, measuring 27 feet in circumference. The church contains several memorials of the Colepepers of Bedgebury, the rapid fall of whose family appears to have been occasioned by their associating with Sir Thomas Wyatt, in the ill-fated insurrection excited by him against Queen Mary. Here also are several monuments of the Campions, lords of the manor of Combwell, in this parish, and the site of the priory there, from the reign of Queen Elizabeth to the present time. The priory at Combwell, was of Austin canons, founded in the reign of Henry the Second.

Bedgebury, another manor in Goudhurst parish, was anciently the seat of an eminent family of the same name, by an heiress of which it was carried in marriage to the Colepepers, who were scattered for many ages over several parts of Kent. Sir James Hayes, who purchased this estate in the reign of Charles the Second, erected a new mansion, at a short distance from the more ancient one, which was pulled down. It afterwards passed to the late John Carter, Esq. sheriff of Kent, in 1789, who made several improvements in the house and grounds. The demesne is nearly surrounded by extensive roads: great part of it was formerly included in Bedgebury park, which was thrown open many years ago.

GOODNESTON.]—At Goodneston (two miles E. by N. from Faversham) is the seat of Sir William Egerton Brydges, Bart. whose progenitors have been seated here more than a century. They are a branch of the Brydges of Barton-Seagrave in Northamptonshire. The house, which is not ancient, is situated in a park, diversified with gentle swells, and

and surrounded by plantations. From Bonnington, in this parish, the Boys family spread its numerous branches through the eastern parts of this county, but kept possession of their original seat, till the death of Sir John Boys, the brave defender of Donnington castle: he died in 1664, and was buried in the church at Goodneston, which appears to have been partly built by his ancestors. Here are numerous monuments of the Boys and Engham families. On a flat stone, bearing the figures, in brass, of a man in armour, and his wife, with those of two sons and four daughters, and the arms of Engham above, is the following

Inscription.

" By doleful dynt of death's dyre dart,
Lo! here the corps of twayne,
Byrest of lyfe in age unripe
In natyve soyle remaine;
In person not in zeale distinct,
These twayne while they had lyfe,
Both Thomas Engham late Esquier,
And Elizabeth his wife,
Who lyving died to lyve,
Who dead yet lyve by fame,
With men in yearth, with God in spryte
Devoid of future blame.
" The said Thomas Engham dyed the of October,
A. D. 1558.
" And Elizabeth hyssaid wyfe the 4th of October then
laste paste."

GOODWIN SANDS.]—(See Deal.)

GRAINE.]—The Isle of Graine lies two miles W. N. W. from Sheerness: the manor is appendant to that of Gillingham. This island, says Hasted, is in size about $3\frac{1}{2}$ miles long, and $2\frac{1}{2}$ miles wide, and contains only one parish, called St. James's. It lies very flat and low: the greatest part of it consists of pasture and marshes; and the vast tracts of the latter, in the neighbourhood, with the badness of the water, render it a very unwholesome spot. The salt works are on the S. E. side of the island, on the estate belonging to Mr. Dayeupport. The population is only about 200. The land is kept from being overwhelmed by the sea, by strong embankments of earth.—Off the end of this isle, is the Nore Light, placed here to enable the mariner to avoid the long and narrow sand-banks, which lie in parallel ranges, in the estuary of the Thames.

GRAVENY.]—The church belonging to this village (three miles N. E. by E. from Faversham) contains some very ancient memorials for the respective lords of the manor. Several of the inscriptions are singularly curious, from their containing the words; "post conquestum Angliæ," which seem to relate, from the inscriptions themselves, to some event of the year 1421. It has been conjectured, indeed, that the expression, post conquestum Angliæ, was intended to indicate the dissatisfaction felt by some portion of the people, at the provisions of the treaty called the peace of Troye, signed in May, 1420, and ratified by the English Parliament in May,

1421; the twenty-fourth article of which was particularly offensive to British feeling.

GRAVESEND.]—The market town of Gravesend, 16 miles N. N. W. from Maidstone, and $22\frac{1}{2}$ E. by S. from London, is situated on a declivity leading to the Thames; and is partly in the parish of Milton, which adjoins to that of Gravesend on the east side. Gravesend is written Graves-ham in the Domesday Book, and Gravesænde in the Textus Roffensis; Lambard supposes it to have derived its name from the Saxon word Gerefæ, a ruler or portreve, and to signify the end or limit of his jurisdiction; but more probably signifying the Ham, or Dwelling of the Greve, or Reve. Others have derived it from the Saxon Graef, implying a coppice, or small wood, which, compounded with ænde, forms Graef'sænde, and thus signifies the place at the Woodend.

In the reign of Richard the Second, the French and Spaniards, sailing up the river, burnt and plundered Gravesend, and carried off most of the inhabitants. As early as the year 1293, the watermen of Gravesend were in possession of the sole and exclusive right to the ferry between Gravesend and London; and they were then ordered to take in future "but one half-penny of a person passing," as they had done formerly, and not to extort "fares hurtful to, and against the will of the people." However, to enable the town to recover the loss inflicted by the French and Spaniards, the abbot of St. Mary-le-Grace, of Tower hill, having the manor of Gravesend in his possession, obtained of King Richard the Second, a grant to the men of Gravesend and Milton, of the exclusive privilege of conveying passengers from thence to London, on the conditions that they should provide boats on purpose, and carry all persons, either at two-pence per head with their bundles, or the whole boats's fare should be four shillings. This charter has been confirmed by succeeding kings, and is still enjoyed under proper regulations. The boats are now large and commodious, and the sum paid by each person is one shilling and six-pence. Five of the tilt boats are licensed by the mayor; these sail regularly to and from London with every tide. Within the last two or three years, also, since steam-packets have been introduced into almost general use, one or two of these conveyances were established between London and Gravesend, but the use of them were successfully opposed by the Waterman's Company.

Besides the ferry just mentioned, here is one to Tilbury, in Essex, which lies immediately opposite to Gravesend. To obviate the inconveniences which attend this ferry, at which all horses, carriages, cattle, troops, &c. are obliged to pass hence into Essex, a plan was proposed, in the year 1798, by an engineer, named Dodd, to form a circular passage, or tunnel, under the bed of the Thames, between Gravesend and Tilbury, sufficiently capacious for all the purposes of land commerce, and to

be

be lighted, so that an uninterrupted communication might be preserved. This scheme being warmly patronised, a subscription was opened to defray the expense, and the work was commenced on the Gravesend side. The water, however, soon began to impede the workmen, and increasing in quantity with every yard excavated, occasioned the concern to be relinquished.

The cod and haddock fishery furnishes employment to about 18 or 20 smacks belonging to Gravesend; and most of the Dutch turbot vessels lie off this town, and send their cargoes to the London market in small boats, &c.

In the year 1567, the parishes of Gravesend and Milton were incorporated by letters-patent, dated at East Greenwich; but Charles the First, in 1632, granted the principal charter. The chief officer had previously been called the Portreve, but by this charter he was styled Mayor, and in him, 12 jurats, 24 common-councilmen, a seneschal, or high steward, and other inferior officers, the government of the town is now vested. At the same time, the liberty of holding two additional markets weekly, and a four days' annual fair was granted, with a full confirmation of the privilege, exclusively, of conveying passengers and goods by water to London.

To the left of Gravesend, in a field, was the site of the ancient church: it is still called Church Field, and is now glebe land. The ruins of the buildings are often turned up by the plough, and also the bones of persons buried in the adjoining cemetery. The inhabitants residing near the Thames, finding the church was placed at a very inconvenient distance, obtained a licence to build a chapel, or oratory, dedicated to St. George the Martyr, and the lane leading from the West Street it is still called Chapel Lane. The church, being burnt down, was rebuilt and consecrated by Bishop Fisher, in 1510. In 1522, the churchwardens having neglected to ring the bells, a mark of respect due to the diocesan when he visits a parish, the same bishop prohibited the celebration of divine offices in that church. On the delinquents pleading, that, on the day of the visitation, not only the churchwardens, but all the parishioners were summoned to appear before the King's officers, on a commission of array against the Scots and French, the interdict was relaxed. The prelate, however, averred, that the parish had been as remiss at his last triennial visitation; and he admonished them to be, in future, more attentive and obedient. This church being afterwards dilapidated by neglect, was taken down, and the chapel of St. George became the parochial church. This was destroyed, with the greatest part of the town, by a fire which happened in August, 1727. Between the years 1731 and 1733, the present church was erected on the old site, under an act of the 4th of George the Second, which granted for the purpose 5000*l.* from the duties on coals and culm, levied under the acts of the 9th and 10th of Queen Anne, for building 50 new churches in and near London.

VOL. III.—NO. 102.

It is a plain brick structure, with stone quoins, cornices, &c. The interior consists of a spacious nave, and chancel, on the north side a large gallery, and at the west end, an organ-loft, furnished with a fine organ. It does not contain any monuments, no person having been allowed to be interred here since the erection of the church.

This town has been greatly improved since the year 1764, when a new town-hall was erected, having an open space beneath, where the poultry-market is kept. In 1767, a new wharf, crane, and causeway, were made, the expense of keeping which in repair is reimbursed by small tolls for cramage and wharfage. In 1773, an act was passed for paving, cleansing, and lighting, the principal streets, &c.; under the respective clauses of which, material improvements have been effected. For the purpose of shortening the high road to Rochester, a new road from Northfleet was made a few years ago.

In 1811, the population of Gravesend amounted to 3110. The inhabitants are chiefly engaged in maritime pursuits or employments. A small manufactory for cables and robes is carried on here; and about 40 years ago, a yard for ship-building, which had long been disused, at the north-western extremity of the parish, was hired by a Quaker, named Cleverly, and several men of war and frigates, besides smaller vessels, have been since built here.—Most of the outward-bound ships in general, are supplied with live and dead stock at Gravesend; and also with vegetables; about 80 acres of ground, in the two parishes, being cultivated for that purpose, and for supplying the London markets with asparagus, which is in particular request for its size, and fine flavour. The inns and public-houses are numerous. In the summer season, additional visitors are attracted by a new bathing-house, erected by a subscription, in 1796. Some fossils are found in the neighbouring chalk-pits, similar to those of Greenhithe.

This town gave name to an ancient family, of whom Sir Stephen de Gravesend occurs in the list of knights who accompanied Edward the First to Scotland, in his 28th year. The celebrated French mathematician, Gravesand, is supposed to have been descended from this family.

Henry the Eighth erected a strong battery, or platform, at Gravesend, to repel any desultory attack from the French; but it has been suffered to fall to ruin, and its exact situation is not with certainty known. About 1778, a new battery of 16 guns was raised on the east side of the town, near the new tavern, which had been formed from the buildings of an ancient chantry, belonging to the parish of Milton, and which was then converted into apartments for the ordnance and artillery officers. Another battery, of sixteen guns, has been since raised in a situation somewhat nearer to the town.

GREENHITHE.]—(See Swanscombe.)

GREENWICH, BLACKHEATH, COMBE, WOODLANDS, &c.]—These places are so connected with each other,

8 c

other, that instead of assigning to each a separate head, we have thought it preferable to notice them together:—Greenwich, the first in order, as of importance, lies $6\frac{1}{4}$ miles E.S.E. from St. Paul's cathedral. It was called Grenewic, by the Saxons, and subsequently East Greenwich, to distinguish it from West Greenwich, or Deptford. It is pleasantly situated on the banks of the Thames, which is here from 220 to 300 yards broad, at low water. This part of the river has been very commodious for shipping from the earliest periods; and it was chosen as the station of the Danish fleet, during three or four years of the inglorious reign of King Etheldred.—The Danish army, at the same time, lay encamped on the eminences above the town, where various vestiges of entrenchments may yet be traced.—While the Danes had their chief station at Greenwich, they made frequent incursions into the interior of the country, particularly in the year 1011, when they laid siege to Canterbury, and having taken and plundered that city, massacred nine-tenths of the inhabitants. The prisoners, with Elpheg, or Alphage, the Archbishop of Canterbury, they conveyed to their camp, where they kept the Archbishop prisoner during seven months, demanding a large sum for his ransom, which he refused to pay, alleging, that the peasants of his church would be ruined by it. From his continued refusal to gratify their cupidity, he ultimately fell a victim to the barbarians. The citizens of London bought his body with a large sum of money; and he was buried in St. Paul's, London; but eleven years afterwards, his body was taken up by Canute, and conveyed with much pomp to Canterbury, where it was reinterred with great solemnity. The Archbishop was afterwards inrolled among the Romish saints; and on the spot where he fell at Greenwich, a church was consecrated to his honour. The site is now occupied by the parish church, which is dedicated to St. Alphage.

The manor of East Greenwich, anciently an appendage to that of Lewisham, was, with its principal, obtained by Henry the Eighth, in exchange for the monastery of Bradwell, and other lands; and this was afterwards called the Honour and Manor of East Greenwich. After the decapitation of Charles the First, it was reserved for the use of the state; and at the Restoration, it reverted to the crown. Besides this principal manor there was a subordinate manor in Greenwich, which came into the possession of the crown at a much earlier period. Henry the Fifth granted it, for life, to Thomas Beaufort, Duke of Exeter, who died in 1417; soon after which it was granted to Humphrey, Duke of Gloucester, uncle to Henry the Sixth, who, in 1433, gave the Duke license to fortify and embattle his manor-house, and to make a park of 200 acres.—Under this license, the Duke of Gloucester rebuilt the palace, and inclosed the park; and in the latter erected a moated tower, on the spot where the Observatory now stands. From the pleasantness of

the situation, he also bestowed the name of *Placentia*, or the manor of Pleasaunce, on this estate; an appellation which it retained for a long period. After his death, in 1447, it reverted to the crown: and Edward the Fourth made it a favourite residence, and was at considerable expense in enlarging and finishing the palace. Henry the Seventh is said, by Lambard, to have “beautified the palace, by the addition of a brick front towards the water-side.” Henry the Eighth, who was born here, enlarged the buildings considerably; and during his reign, Greenwich became “one of the principal scenes of that festivity for which his court was celebrated.” Leland, who was an eye-witness of the sumptuous festivals given at the palace, has elegantly described its beauties, in some Latin verses, which have been thus translated by Hasted:—

“Lo! with what lustre shines this wish'd-for place,
Which, star-like, might the heavenly mansions grace.
What painted roofs, what windows charm the eye!
What turrets, rivals of the starry sky!
What constant springs! what verdant meads besides!
Where Flora's self in majesty resides;
And beauteous, all around her, does dispense,
With bounteous hand, her flow'ry influence.
Happy the man whose lucky wit could frame,
To suit this place, so elegant a name,
Expressing all its beauties in the same!”

The marriage of Henry with Catherine of Arragon, was solemnized at Greenwich, in 1510. On May-day, 1511, and the two following days, here were held grand tournaments. In 1512, the King kept his Christmas here, and again in 1513. At the latter celebration was introduced the first masquerade ever seen in England, which Hall has thus described in his Chronicle:—“The Kyng this yere kept the feast of Christmas at Grenewiche, wher was such abundance of viandes, served to all comers of any honest behaviour, as hath been fewe times seen: and against New Yeres night, was made, in the hall, a castle, gates, towers, and dungeon, garnishe with artillerie, and weapon, after the most warlike fashion: and on the frount of the castle was written, *Le Fortresse Dangerus*: and within the castle wer six ladies clothed in russet satyn, laide over with leves of golde; and every owde knit with laces of blewe silke and golde: on their heads, coyfes and cappes all of golde. After this castle had been carried about the hall, and the Quene had beheld it, in came the King, with five other apparaled in coates, the one halfe of russet satyn, spangled with spangles of fine gold, the other halfe rich clothe of gold; on ther heddes cappes of russet satyn, embroudered with workes of fine gold bullion. These six assaulted the castle: the ladies seying them so lustie and couragious, wer content to solace with them; and upon farther communicacion, to yeld the castle: and so thei came down, and daunced a long space. And after the ladies let the knights into the castle, and then the castle sodainly vanished out of their sightes. On the daie of the Epiphanie,

Epiphanie, at night, the King with XI other, wer disguised after the manner of Italie, called a Maske, a thing not seen afore in Englande: thei wer appa- raled in garments long and brode, wrought all with gold, with visers and cappes of gold; and after the banket doen, these maskers came in with six gen- tlemen disguised in silke, bearing staffe torches, and desired the ladies to daunce: some were content; and some, that knew the fashion of it, refused, be- cause it was a thing not commonly seen. And after thei daunced and commoned together, as the fashion of the maske is, thei took their leave and departed; and so did the Quene, and all the ladies."

The Princess Mary, and the Princess Elizabeth, Henry's daughters, were both born at Greenwich palace; the marriage of Charles Brandon, Duke of Suffolk, with Mary, Henry's sister, and Queen- Dowager of France, was publicly solemnized here. In 1217, a splendid tournament was held at Green- wich; and, in 1521, 1525, and 1527, the King kept his Christmas here. In the last-mentioned year, he received at this place, the French embassy, which consisted of eight persons of the highest quality and merit in France, attended by a retinue of 600 horse. On May-day, 1536, Ann Boleyn, was arrested here by the King's order, at the conclusion of a solemn just, wherein she is said to have betrayed an adul- terous passion, by some inadvertent levity. In 1537, and in 1548, Henry again spent his Christmas here. On the latter occasion, he entertained 21 of the Scottish nobility, whom he had made prisoners at the battle of Solway moss, and afterwards gave them their liberty without ransom. Edward the Sixth kept his Christmas here, in 1552-3, and here he expired on the 6th of July following. Queen Elizabeth was particularly fond of this palace, and made it her summer residence: she also visited it at other seasons of the year, passing the festive hours of that romantic period, in various gay diversions, attended with tilts and tournaments, in which the gallant knights of her court exerted their utmost skill. On the 2d of July, 1539, Elizabeth was en-

tertained by the city of London, with a muster of 1400 men, in Greenwich Park; the gunners wore shirts of mail; the others were arrayed in coats of velvet and chains of gold, armed with morris pikes and halberds, and bearing flags. A mock fight was exhibited; which the Queen viewed from the gal- lery over the park gate, with a splendid train of ladies, and accompanied by the foreign embassa- dors. "Three onsets," says Strype, "were given in every battle, the guns discharged on one another, the morris pikes encountered together with great alarm; each ran to their weapons again, and then they fell together as fast as they could, in imitation of close fight." These feats of arms greatly pleased the Queen, who "showed herself very merry;" and on her thanking the citizens for the diversion, "immediately was given the greatest shout that ever was heard, with hurling up of caps." On the 10th of the same month, there was tilting before the Queen; "a goodly banquetting-house being set up in the park, made with fir-poles, and decked with birch branches, and all manner of flowers, both of the field and garden, as roses, july-flowers, mary- golds, and all manner of strewing herbs and rushes." The evening concluded with "a mask, a great ban- quet, and great casting of fire, and shooting of guns, till twelve at night." In June, 1585, Elizabeth was here offered the sovereignty of the Low Countries, by the Dutch deputies. In May, 1586, she received the Danish ambassador at Greenwich; and, in July, 1597, the ambassador from the King of Poland.*

James the First was often resident at Greenwich; and the Princess Mary, and others of his children, were born here. His Queen, Anne of Denmark, added to the buildings, and laid the foundation of the "House of Delight," in the park, afterwards the ranger's lodge. This was finished by Henrietta Maria, Queen of Charles the First, who employed Inigo Jones as the architect: and Horace Walpole characterizes it as "one of the most beautiful of his works." The ceilings were painted by Horatio Gentileschi; and the whole house was completed so

* Hentzner, a German traveller, who visited England in 1598, has given a curious and interesting description of Elizabeth's court at Greenwich. The presence chamber, he observes, "was hung with rich tapestry; and the floor, after the English fashion, strewed with hay." When the Queen came out of her apartment to go to prayers, "she was attended in the fol- lowing manner:—First went gentlemen, barons, earls, knights of the Garter, all richly dressed, and bareheaded; next came the Chancellor, bearing the seals in a red silk purse between two, one of which carried the royal sceptre, the other the sword of state, in a red scabbard, studded with golden fleurs de lis, the point upwards: next came the Queen, in the 65th year of her age, as we are told, very majestic; her face oblong, fair, but wrinkled; her eyes small, yet black, and pleasant; her nose a little hooked; her lips narrow, and her teeth black, (a defect the English seem subject to from their too great use of sugar:) she had in her ears two pearls with very rich drops; she wore false hair, and that red: upon her head she had a small crown, reported to be made of some of the gold of the celebrated Lüneburgh table. Her bosom was uncovered, as all the En- glish ladies have it till they marry, and she had on a necklace of exceeding fine jewels: her hands were small, her fingers

long, and her stature neither tall nor low; her air was stately, her manner of speaking, mild and obliging. That day she was dressed in white silk, bordered with pearls of the size of beans, and over it a mantle of black silk, shot with silver threads; her train was very long, the end of it borne by a marchioness: in- stead of a chain, she had an oblong collar of gold and jewels. As she went along in all this state and magnificence, she spoke very graciously, first to one, then to another, whether foreign ministers, or those who attended for different reasons, in English, French, and Italian; for, besides being well skilled in Greek, Latin, and the languages I have mentioned, she is mistress of Spanish, Scotch, and Dutch: whoever speaks to her, it is kneel- ing; now and then she raises some with her hand: wherever she turned her face as she was going along, every body fell down on their knees. The ladies of the court followed next to her, very handsome, and well-shaped, and for the most part dressed in white. She was guarded on each side by the Gentlemen Pensioners, 50 in number, with gilt battle-axes. In the anti- chapel next the hall, where we were, petitions were presented to her, and she received them most graciously, which occa- sioned the acclamation of "Long live Queen Elizabeth:" she answered it with, "I thank you, my good people."

sumptuously,

sumptuously, that Philipot says, "it surpassed all others of the kind in England." Charles the First, who was frequently at Greenwich, before the breaking out of the civil war, quitted it, for the last time, in 1641, when he set out with the resolution of taking his journey northward. On the passing of the ordinance for the sale of crown lands, the palace, then called Greenwich House, with part of the park and lands were sold; but, on the Restoration, they again devolved to the crown; and the King finding the whole building in a decayed and ruinous state, ordered it to be pulled down, and commenced a new and magnificent palace of free-stone on the same spot. The architect was Webb, son-in-law to Inigo Jones; from whose papers the designs are said to have been made. One wing, however, was all that was completed, at an expense of 36,000*l.* and herein the King occasionally resided. In the early part of the reign of William the Third, a project was formed for providing an asylum for aged and disabled seamen; and, in the year 1694, the King and Queen granted the palace, with other buildings, and certain parcels of land adjoining, for this truly noble purpose. The foundations of the first new building, called the Bass Building, were laid on the 3d of June, 1696, and the superstructure was completed in two years afterwards. It has, however, since received numerous additions and improvements.*—The government of this hospital was originally vested in the commissioners appointed by the crown; but it was not till the year 1775, that the commissioners became a body corporate, by a charter of his present Majesty. The Commissioners and Governor of Greenwich Hospital appointed under the charter, are, the archbishops, the lord chancellor, the lords of the Privy Council, all the great officers of state, the twelve judges, the flag-officers, and commissioners of the navy; the master, and five senior elder brethren of the Trinity-House; the mayor, and three senior aldermen of London; the

governor, the deputy-governor, the directors, and other officers, of the hospital; all for the time being. The principal officers are, a governor, a lieutenant-governor, four captains, eight lieutenants, a treasurer, secretary, auditor, surveyor, clerk of the works, clerk of the cheque, two chaplains, a physician, surgeon, steward, and various assistant and inferior servants. The governor's salary is 1000*l.* that of the lieutenant-governor is 400*l.* the captains have 230*l.* each per annum; the lieutenants, 115*l.* each; the treasurer, and surveyor, 200*l.* each; the secretary, clerk of the cheque, and steward, 160*l.* each; the auditor, 100*l.* the physician, 182*l.* 10*s.* the chaplains, 130*l.* each; and the clerk of the works, 91*l.* 5*s.* The officers are allowed a certain quantity of coals and candles in addition to their salaries, and 1*s.* 2*d.* per day, instead of rations.

In its present state, the hospital consists of four distinct quadrangular piles of building. The grand front opens on a terrace, skirting the southern bank of the Thames, and extending 865 feet, in the centre of which, is a descent to the river, by a double flight of steps. The ground-plot of the whole edifice forms nearly a square, of which, King Charles's building occupies the north-west angle; Queen Anne's, the north-east; King William's, the south-west; and Queen Mary's, the south-east. The interval between the two first-mentioned buildings, forms a square, 270 feet wide, in the middle of which, is a statue of George the Second, sculptured by Rysbrach, out of a single block of white marble, that weighed eleven tons, and was taken from the French, by Admiral Sir George Rooke. This statue was presented to the hospital by Sir John Jennings governor from 1720 to 1743. The space between the two other buildings, which include the hall and chapel, forms a lesser square, apparently terminated by the ranger's lodge in the park, above which, on a commanding eminence, appears the royal observatory, rising from the midst of a grove

* In the same year that the new buildings were begun, the Parliament passed an act, that sixpence per month should be paid out of the wages of every mariner in the King's service, for the use of the hospital; and by another act, passed in 1712, all seamen in the merchant's service were subjected to the payment. In 1699, the funds were further augmented by a grant from the King, of 19,500*l.* which had been levied on certain merchants for smuggling; and in the same year, 600*l.* was obtained by a lottery, called the Charitable Adventure. In 1700, Henry, Earl of Romney, made over his grant of the tolls of Greenwich market to the new foundation. In 1705, the endowments were increased by the gift of Queen Anne, of the effects of Kid, the pirate, which amounted to 6472*l.* 1*s.* In 1707, the moiety of an estate, valued at 40,000*l.* was bequeathed to the hospital, by Robert Osbaldeston, Esq. with the profits of his unexpired grant of the North and South Foreland Light-houses, which grant has been since renewed for 99 years. In 1708, by an act of Queen Anne, all forfeited and unclaimed shares of prize and bounty money were given to the hospital. In 1710, 6000*l.* per annum was granted towards the building of the chapel, &c. out of the new duty on coals and culm; and, in 1728, the House of Commons voted 10,000*l.* in aid of the funds of the hospital; and a similar sum was granted annually during many years afterwards. In 1735, the Commons, on a

message from the King, resolved, that the rents and profits of the forfeited estates of the Earl of Derwentwater, should be applied towards the completion of the hospital, and afterwards to the maintenance of the pensioners. Other benefactions have been made, for the use of the hospital, by different persons, at various periods, both of money and estates; and about the year 1806, a considerable addition was made to its revenue, by the act which grants an increase of pay to the officers and men of the royal navy. The allowance to the out-door pensioners was also increased, and some other arrangements made for the better relief of aged and infirm seamen. The "Chest at Chatham," too, in the management of which various abuses were discovered by the Commissioners of Naval Inquiry, was, on their recommendation, removed to Greenwich. The Derwentwater estates produce considerable sums annually; for being principally situated in Cumberland and Durham, they include many valuable lead and other mines. These mines, in the year 1766, 1767, and 1768, produced 61,830 hynges of ore, which at the valuation of each hyng in those years, at 2*l.* 15*s.* amounted to the vast sum of 170,000*l.* The other revenues of the hospital arise from such of the grants above-mentioned, as were of a permanent nature; for fines for fishing with unlawful nets, and for other offences committed on the Thames; from the half-pay of those of its officers who have regular salaries, &c.

of trees. The two squares are intersected by a spacious avenue, leading from the town through the hospital, and forming, with the areas, a kind of cross. The buildings immediately fronting the Thames, and bearing the name of King Charles, and Queen Anne, have a general correspondence in style and arrangement. King Charles's building contains the apartment of the governor, and lieutenant-governor, the council-room, 15 wards for the pensioners, and others, differently appropriated.—In the council-room, among others, is a painting of George the Second, in his robes; half-lengths of King William, and Queen Mary, by Sir Godfrey Kneller; Edward, first Earl of Sandwich, who was killed in the battle of Solebay, half-length, by Sir Peter Lely; Lord Viscount Torrington, whole-length, by Davison; Robert Osbaldeston, Esq. whole-length, by Degard; Admiral Sir John Jennings, whole-length, by Richardson; Captain Clements, an oval, by Greenhill; John, late Earl of Sandwich, whole-length, by Gainsborough; and the head of John Worley, a venerable old man, who was the first pensioner admitted. Some of the original sketches, by Sir James Thornhill, for the paintings in the great hall, are also preserved in this room. In the anti-chamber, are two large sea-pieces, presented by Philip Harman, Esq. representing the exploits of his ancestor, Captain Thomas Harman, in the *Tyger* frigate, in the time of Charles the Second: in one of these he appears engaged with eight Dutch privateers, (from whom his bravery preserved a large fleet of colliers;) and in the other, with a Dutch man of war, which he took in the Bay of Bulls. Here is also a series of six small pieces, representing the loss of the *Luxembourg* galley, which was burnt by accident, in her passage from Jamaica to England, in 1727; and the subsequent distresses of part of her crew, who escaped in the long-boat, and were at sea twelve days before they could make the land, without either a morsel of victuals, or a drop of liquor.*

Queen Anne's building was chiefly erected between the years 1698, and 1728: it contains various apartments for the officers, and 24 wards for the pensioners. The two southernmost ranges of building, which bear the names of King William and Queen Mary, have, like the former, a general conformity to each other, though differing in the parts and ornaments. That part of King William's building which contains the great hall and vestibule, was designed and erected by Sir Christopher Wren, during the years 1698 and 1703. The north and south fronts of this building, are of stone; the west front, which was finished by Sir John Vanbrugh, is of brick, but has a tetrastyle frontispiece in the centre, of the Doric order, with columns of Portland stone, nearly six feet in diameter. Over the doors in the

vestibule, are compartments in *chiar oscuro*, recording the names of the benefactors to the hospital, and the amount of the donations. Here is also the model of an antique ship, found in the *Villa Mattea*, presented by Lord Anson. From the vestibule, a high flight of steps leads into the great hall, or saloon, 106 feet in length. This hall was painted by Sir James Thornhill, who was about six years in completing it. The sum paid him for his labour, was 6685*l.* being after the rate of 3*l.* for the ceiling, and 1*l.* for the sides, per square yard. "The ceiling displays a very large and deep oval frame, in the centre of which, King William and Queen Mary are represented seated on a throne, under a rich canopy, and surrounded by personifications of the cardinal virtues, the seasons, the four elements, the signs of the zodiac, and various other emblematical and symbolical devices. At each end of the oval, the ceiling is raised in perspective, and exhibits a gallery with an elliptic arch, supported by groups of stone-coloured figures: these galleries display various appropriate naval embellishments, with the English rivers, and the arts and sciences relating to navigation: in one of them are introduced the portraits of Flamsteed the astronomer-royal, and his pupil, the ingenious Mr. Thomas Weston, accompanied by Copernicus, and Tycho Brahe. The sides of the hall are adorned with fluted pilasters, trophies, &c. and in recesses on the north side, which correspond with a double row of windows on the south, are allegorical figures, in *chiar oscuro*, of the more liberal virtues, as Hospitality, Generosity, Benignity, &c. From the saloon, a second flight of steps leads to the upper hall, which is also ornamented by paintings. The ceiling represents Queen Anne, with her consort, Prince George of Denmark, accompanied by various figures; and round them, the four quarters of the globe, with the arms of England, Scotland, France, and Ireland. The side walls display the Landing of the Prince of Orange at Harwich, and of George the First at Greenwich: the upper end is ornamented by a large painting of George the First, and his family, with numerous emblematical figures; among which, Sir James Thornhill has introduced his own likeness." The wards in this building, are eleven in number.—Queen Mary's building contains the chapel, one of the most elegant specimens of Grecian architecture in this country, erected from the classical designs of the late James Stuart, Esq. This chapel was erected on the site of a former one that was destroyed by a dreadful fire, on the 2d of January, 1779, with part of the adjoining colonnade, the great dining-hall, several wards, &c. The vestibule before the entrance is octangular, and is adorned with colossal statues, in niches, of Faith, Hope, Charity, and Meekness, designed by West, and executed in arti-

* The whole number that escaped into the boat, was 23; of these, six only survived the distresses of the voyage, one of whom, Captain William Boys, was afterwards lieutenant-governor.
VOL. III.—NO. 102.

nor of this hospital, and in memory of his remarkable deliverance, was accustomed to pass as many days annually in fasting and prayer, as he had spent in the boat.

ficial stone, by Coade. The chapel, which is 111 feet in length, is capable of conveniently accommodating 1000 pensioners, nurses, and boys; exclusive of the seats for the directors, and other officers. The folding doors are of mahogany, highly enriched by carving. The interior of the chapel is fitted up with great taste and elegance. Many of the ornaments are naval; even the pavement reminds the spectator of the destination of the building, the stones being so disposed, as to represent the anchor, the mariner's compass, &c. Above the lower range of windows on each side, are small oval paintings, in chiar oscuro, representing the principal events in the life of our Saviour, by De Bruyn, Catton, Milburne, and Rebecca. Over the galleries, standing on a richly carved stone fascia, are ranges of pilasters, of the composite order, with scagliola shafts, in imitation of Sienna marble, corresponding with those of the eight grand Corinthian columns which support the roof. The ceiling is curved, and divided into compartments, ornamented in the ancient style. The organ gallery is supported by six fluted columns, with Ionic capitals and bases, crowned by an entablature and balustrade: in front of the gallery, is a small basso-relievo of Angels sounding the Harp, by Coade; and on a tablet beneath, is an appropriate inscription: the organ, by Green, is a very fine instrument.

The finest work of art, however, which decorates this structure, is the altar-piece, representing the Preservation of St. Paul from Shipwreck on the Island of Melita, by West. The principal group consists of St. Paul shaking off the viper, which had fastened on his hand, into the fire, attended by the brethren who had accompanied him, the friendly centurion, and a band of Roman soldiers. The figure of the apostle, though considerably smaller than many of the others, and removed to a greater distance, preserves its proper dignity of principal, not only from its situation in the middle of the picture, but also from the painter having contrived to throw the reflection of the fire full in his face, which beams with an awful benignity. The group in the fore-ground represents various mariners and prisoners, bringing on shore different articles, saved from the wreck; and near them, a female, in a mourning cloak, intended for a Roman lady, clasping, with affection, an urn, supposed to contain the ashes of her deceased husband, who had fallen in the wars of Judea. An aged, infirm man, is also depicted here, as borne from the wreck, by two robust younger ones. The uppermost group consists of the hospitable islanders lowering down fuel, and other necessities, from the summit of the rocks, for the relief of the sufferers: the sea, and the wrecked vessel, appear in the distance. This picture, 25 feet in height, and fourteen in width, is inclosed in a superb frame. On each side of the arch above, is an angel, in statuary marble, sculptured by Bacon; one bears the cross, the other the emblems of the eucharist. The altar-table, pulpit,

and reader's desk, are designed in the same elegant taste as the other parts. The wards in Queen Mary's building, are 13 in number.

The money received from visitors for viewing the chapel, and other parts of the building, is devoted, after a deduction of one-fourth for the persons who shew them, towards the support of the school.—The receipts from this source, with mulcts, absences, cheques, &c. of the pensioners, and the nurses; profits on provisions purchased of the pensioners; sale of household stores, and unclaimed property of deceased pensioners and nurses, have proved more than adequate to the expenses of the establishment. At first, ten boys only were admitted into the school: in 1731, they were increased to 60; and at length, to 200. "These boys," observes Lysons, "must be, at the time of their admission into the school, between eleven and thirteen years of age; objects of charity, of sound body and mind, and able to read; they are lodged, clothed, and maintained, three years; during which time, they are instructed in the principles of religion, by the chaplains, and in writing, arithmetic, and drawing, if they shew any genius for it, by the schoolmaster. Each boy has a Bible and Prayer-Book given him, on his entrance into the school, and is supplied, during his stay there, with all necessary books and instruments, which he is allowed to take with him, when he leaves the school: he is then bound out for seven years to the sea-service. The master, who is appointed by the directors, has a salary of 150*l.* per annum, and a house." The school-house was erected near the hospital, but without the walls, in the year 1783, from a design by the late James Stuart, Esq. Its length is 146 feet, and its breadth, 42; exclusive of a Tuscan colonnade in front, intended as a play-place for the boys in bad weather, 180 feet long, and 20 broad. The school-room is 100 feet long, by 25; and in the two stories above it, are dormitories of the same extent, furnished with hammocks; the adjoining apartments are appropriated to the guardian, nurses, &c.

When the hospital at Greenwich, was first opened for the reception of pensioners, in January, 1705, 52 only were admitted; and, from that time to the present, their number has been progressively augmented, in proportion to the extension of the funds, to about 2500. At first, only the aged and maimed seamen belonging to the royal navy, were admitted; but those disabled in the merchant service, had the same privilege allowed, by Queen Anne, in 1710. Three years before that, all foreigners who had served in the British navy two years, were invested with the same rights as natives: marines are considered the same as seamen. Every pensioner has an allowance, per week, of seven loaves, weighing 16 ounces each; three pounds of beef, two of mutton, a pint of peas, a pound and a quarter of cheese, two ounces of butter, fourteen quarts of beer, and a shilling for pocket-money; the latter sum is increased to 1*s.* 6*d.* for the boatswain's mate, and 2*s.* 6*d.* for

for the boatswain. The clothing allowed to every pensioner is a blue suit, a hat, three pair of blue yarn stockings, three pair of shoes, and four shirts, five neckcloths, and two night-caps, every two years; besides bedding, great-coats for the aged and infirm, and watch-coats for those on guard.—The bread and beer are made by persons belonging to the establishment. The widows of seamen, who are provided for in this charity, have the exclusive privilege of being appointed nurses in the hospital. They are provided with clothing, diet, and lodging, and allowed 8*l.* annually as wages. The total number of nurses admitted into this hospital, since its foundation, is from 7 to 800; that of pensioners, from 18 to 19,000.

In pursuance of an act passed in 1763, 1400 out-pensioners were appointed to receive 7*l.* per annum each: their numbers having gradually decreased by death, or admission into the hospital, 500 additional ones were appointed in 1782; and the same number in the succeeding year: the present number, on the establishment, we believe, is upwards of 3000.

The infirmary, which was erected without the walls, in 1763 and 1764, from designs by Stuart, is 198 feet long, and 175 broad. It consists of two stories, and is divided into two principal parts, appropriated respectively to those whose cases require surgical, or medical aid. The number of rooms is 64, all of which are fitted up to accommodate four persons; each having a fire-place and a ventilator. Within the building, are apartments for the physician, surgeon, matron, and attendants; with hot and cold baths, a surgery, dispensary, hall, chapel, &c.—In the burial-ground of the hospital, is a mausoleum, containing, amongst others, a memorial of Lieutenant Pierce Welsh, who was the first lieutenant of this institution. The inscription records his having lost his lower jaw, and part of his tongue, in an engagement with a part of the Dunkirk squadron; “after which he lived six years, four months, and twelve days, by liquids only:” he died in 1709. Here also was buried the Rev. Nicholas Tindal, the translator and continuator of Rapin’s History of England.—He was appointed chaplain to Greenwich hospital, in 1738, and died in 1774.

The park, which was disjoined from the palace, when the latter was converted into an hospital, still continues vested in the crown. It contains 188 acres, and was walled round by James the First.—The upper part is considerably elevated; and from One Tree Hill, and the Observatory, the prospects are uncommonly fine, particularly of the metropolis, the county of Essex, the Thames, shipping, &c. The park, which itself affords much rich scenery, was laid out by Le Notre, in the time of Charles the Second. It is planted chiefly with elms, and Spanish chesnut. In one part are remains of various ancient barrows, most of which were opened, in 1784, by Mr. Douglas, author of the “*Nenia Britannica*.” Among the articles found in them were spear-heads, knives, human bones, and hair, frag-

ments of woollen cloth, lumps of iron, and broad-headed nails, with decayed wood adhering to them. The tower, which had been erected by Humphrey, Duke of Gloucester, was re-built or repaired by Henry the Eighth; and again enlarged and ornamented by Henry, the learned Earl of Northampton, to whom it had been granted by James the First, and who made it his chief residence. Charles the Second, in 1675, had it pulled down, and on its site founded the present Royal Observatory; a foundation, observes Lysons, “which owed its origin to the following circumstance:—Monsieur de St. Pierre, a Frenchman, who came to London, in 1675, having demanded a reward from Charles the Second, for his discovery of a method for finding the longitude, by the moon’s distance from a star, a commission was appointed to examine into his pretensions.—Mr. Flamsteed, who was appointed one of the commissioners, furnished St. Pierre with certain data of observation, by which to calculate the longitude of a given place. This he was unable to do, but excused himself by asserting, that the data were false. Flamsteed contended that they were true, but allowed that nothing certain could be deduced from them, for want of more exact tables of the moon, and more correct places of the fixed stars, than Tycho’s observations, made with plain sight, afforded. This being made known to the King, he declared that his pilots and sailors should not want such an assistance. He resolved, therefore, to found an Observatory, for the purpose of ascertaining the motions of the moon, and the places of the fixed stars, as a means of discovering that great desideratum, the longitude at sea.” The spot was chosen on the recommendation of Sir Christopher Wren, and Flamsteed was appointed the first astronomer-royal, on the advice of Sir Jonas Moore. The materials of the old tower were employed to construct the new building, towards the expense of which the King gave 500*l.* and as many bricks as were wanted, from a spare stock at Tilbury Fort. It was completed in August, 1676, and Flamsteed being put into possession, began to make “observations” in the following month. He resided here many years, doing ample justice to the royal choice. He died here in December, 1719, and was succeeded by Dr. Halley, who principally directed his attention to the motions of the moon: he died at the Observatory, in 1742. Dr. Bradley, his successor, made many important “observations:” and in his time, some very valuable additions were made to the instruments at the Observatory. Dr. Bradley died in 1762, and was succeeded by Nathaniel Bliss, M. A. whose decease, in 1764, made room for the advancement of Dr. Nevil Maskelyne, who conducted the business of his situation with eminent ability. After his appointment, the Observatory was furnished with an excellent achromatic telescope, of 46 inches, focal length, with a triple object-glass, &c. by Dollond; and the whole astronomical apparatus was greatly improved by Dollond, Nairne, and Arnold. The observations made here

here, since 1767, have been published annually, under the inspection of the Royal Society, who visit the Observatory once a year. Within the building is a deep dry well, formed for the purpose of admitting observations to be made on the stars in the day-time. Nevil Maskelyne, D.D. F.R.S. died at the Observatory, on the 9th of February, 1811, having held the situation of astronomer-royal, with the highest credit to himself, and the happiest results to the maritime world, for the long period of 46 years. On the death of Dr. Maskelyne, without waiting for applications, or running the risk of solicitations from any quarter, the Prince Regent sent for the president of the Royal Society, the Right Hon. Sir Joseph Banks, and desired to be informed who was the fittest man in point of science, and all other qualifications, to succeed Dr. M. ?—Sir Joseph Banks replied, Mr. Pond :—and he was accordingly appointed astronomer-royal. This gentleman has distinguished himself by a very able translation of Laplace's celebrated work on astronomy, and other scientific publications.

The building, formerly denominated the Ranger's Lodge, and now (having undergone numerous alterations and enlargements) appropriated as the Royal Naval Asylum, was begun by Anne of Denmark, and completed with much magnificence, by Henrietta Maria. The history of the noble institution, by which it is now occupied, is thus given by Mr. Lysons :—

"The Royal Naval Asylum, lately established at Greenwich for the education and maintenance of orphans, and other children of his Majesty's sailors, and mariners, originated, as good frequently does, out of evil, in a fraud upon the public, by a man, who in the year 1798, collected considerable sums under the pretence of supporting an institution of this nature, at Paddington, which he called the British Endeavour. Some circumstances having occurred to excite suspicion, His Royal Highness, the Duke of Sussex, who had been a subscriber to his institution, resolved, with the assistance of the Rev. Dr. Clarke, (now auditor to the Naval Asylum,) and some other gentlemen, to investigate the matter.—A meeting of the subscribers was convened, the fraud which had been practised became apparent, the manager of the "British Endeavour" was committed to prison, and a prosecution commenced against him. The professed intention of the late undertaker, being of such apparent utility, it was resolved to establish an institution of a similar nature, under better auspices; and as the Duke of York had signified his intention of establishing a Military Asylum, it was determined, at the suggestion of Dr. Clarke, to confine this institution to the children of seamen and marines, and to call it, the Naval Asylum. The Duke of Sussex going abroad for the benefit of his health, the Duke of Cumberland graciously accepted the office of President; and, under his protection, aided by the exertions and zeal of the committee, the new institution continued for

some years to flourish at Paddington, the place of its original establishment; but the number of children never exceeded 70; being as many as the premises then occupied for that purpose, could contain.

"In consequence of the papers relating to the Naval Asylum having been laid before the Right Hon. William Pitt, then prime minister, and the communications made by him to his Majesty, his Majesty declared his inclination to make it a royal foundation for 1000 children; and the necessary arrangement having been made for that purpose, it became such on the memorable day of the battle of Trafalgar. It is now managed by a board of commissioners, consisting of some of the distinguished officers of state, the navy, and the marine forces. In the year 1807, an act of Parliament passed, by which his Majesty, who had graciously signified his intention of so doing, was empowered to grant the palace in Greenwich Park, commonly called the King's House, Queen's House, or Ranger's Lodge, to the commissioners of the Royal Naval Asylum. This is the same building which has already been spoken of, as begun by Anne of Denmark, and finished by Queen Henrietta Maria. It was at a later period, the residence of those brave officers, Matthew Lord Aylmer, and Sir John Jennings, who successively held the double appointment of ranger of the park, and governor of the hospital, and was afterwards the occasional retirement of the Right Hon. Henry Pelham, when prime minister, his wife, Lady Catherine Pelham, being the ranger.

"The Queen's House, or Ranger's Lodge, on the front of which is still preserved the name of Queen Henrietta Maria, with the date 1635, now forms the centre of the Naval Asylum, and contains the apartments of the principal officers, and the school-room, and dormitories of the girls: the great hall, a cube of about 54 feet, remains as before, surrounded by a gallery. The wings, which are intended to be about 30 feet in front, and about 318 feet in depth, are united with the original building by colonnades of nearly 180 feet each: these wings, one of which is nearly finished, are intended for the school-rooms and dormitories of the boys, who are to be 800 in number, and apartments of some of the officers.

"The children were removed to Greenwich, in the month of November, 1807, at which time there were about 70 children, of which about one-third were girls. The complement of girls is now complete; but, as yet, there are only 100 boys.

"In the selection of children for this asylum, the general system is, to prefer, first, orphans, who have no mothers, and whose fathers have fallen in his Majesty's service; secondly, orphans of such fathers, whose mothers are living; thirdly, children, whose fathers have been wounded or maimed on board his Majesty's fleet, are incapable of further service, and whose families are numerous, and in need; fourthly, children, whose fathers are actually employed in his Majesty's

Majesty's fleet, in distant service, and whose mothers have died during the father's absence; and fifthly, children, whose fathers are actually employed in his Majesty's service, and whose families are numerous, and in need. The children must be free from mental and bodily infirmity; they must not be under the age of five years; the girls must not exceed ten years, nor the boys twelve years of age.—At a proper age, the children are to be bound apprentices, except such of the boys as shall be placed, with their own consent, as sailors in his Majesty's service. The boys are instructed in rope-making, which was carried on with great success at Paddington, and in other trades, for which convenient buildings are appropriated.

"The officers who hold commissions under his Majesty, for the government and care of the Royal Naval Asylum, are the governor, Captain Dacres; the secretary, Lieutenant Baynes; the auditor, the Rev. Dr. Clarke; the chaplain, the Rev. William Morgan; the surgeon, Mr. William Gladstone; and the steward, Mr. Charles Brewer; there are also a matron, deputy-matron, and other inferior officers, besides the school-master and school-mistresses.—Upon the first establishment of the Naval Asylum as a royal foundation, the committee of the patriotic fund offered to give the sum of 40,000*l.* towards its support, on certain conditions, which were approved of by his Majesty's commissioners; in consequence of which the committee of that fund are entitled to recommend children to the Asylum. Under the act already mentioned, a house within the park, at the foot of Maize Hill, sometime in the occupation of Admiral Braithwaite, and afterwards in that of Sir Douglas, Knt. was granted to the commissioners of the Asylum, and is the residence of the surgeon of the establishment: another house, not far from the Ranger's Lodge, which had been occupied by the maitre d'hotel of Her Royal Highness the Princess of Wales, was included also in the same grant, and has been improved, and appropriated to the residence of the Rev. Dr. Clarke, the auditor, to whose unremitting zeal and exertions, from the first moment of its original establishment, this noble national institution has been under the highest obligation."

Since the preceding account was written, the establishment has been perfected, and is now in a very flourishing state. By death and retirement, however, some necessary changes have taken place in the list of officers mentioned above.

Two religious houses are understood to have existed in Greenwich, in ancient times; but, of their remains, there are now not the slightest vestiges.—The old church of St. Alphage, having become very ruinous, the roof fell in, about midnight, on the 28th of November, 1710. It was consequently provided, by the act for erecting 50 new churches, in and near London, that one of them should be in the parish of Greenwich. The new church is a handsome stone fabric; it was completed in 1718, by an architect named John James. At the west end is a square

tower, with a cupola above, supported on Corinthian pillars, and over that, a small spire: the interior is fitted up in the Grecian style, and pewed with oak. Against the north wall, hangs a painting on board, representing a monumental effigy of Queen Elizabeth; on the south wall, is a picture of Charles the First at his devotions; and, on the east wall, are portraits of Queen Anne, and George the First.—In the old church, was a portrait, on glass, of Humphrey, Duke of Gloucester, and various other monuments and memorials; amongst which were several brasses: one was in memory of Thomas Tallys, the father of the collegiate style of music, and musician in the chapel, in the reigns of Henry the Eighth, and his three immediate successors. His epitaph is thus printed, in Strype's Circuit Walk, annexed to Stow's Survey of London:—

"Entered here doth ly a worthy wyght,
Who for long time in musick bore the bell,
His name to shew was Thomas Tallys hyght,
In honest vntuous life he did excell.
He served long tyme in chappell with great prayse,
Fower sovereynes reygnes, a thing not often seen,
I mean Kyng Henry and Pryne Edward's dayes,
Queene Mary, and Elizabeth our Queene.
He maryed was, though children he had none,
And lyved in love full thre and therty yeres
With loyal spouse, whose name yclypt was Jone,
Who here entomb'd him company now bears.
As he did lyve, so also did he dy,
In myld and quyet sort, O! happy man!
To God full oft for mercy did he cry,
Wherefore he lyves, let Death do what he can.

Here was also a monument to commemorate the learned Kentish antiquary, William Lambard, Esq. In this building also was a chantry, dedicated to the Holy Cross, belonging to a guild or fraternity in Greenwich, of that name.

In the register of this parish, are recorded the names of many eminent and remarkable persons who have been interred here, but for whom no memorials have been placed in either of the churches. Among them, are those of Major-General James Wolfe, who fell in the moment of victory, in Sept: 1759, and was buried here, near his father, Lieutenant-General E. Wolfe, in the November following: Lavinia, Duchess of Bolton, the celebrated Polly Peachum, who was buried in February, 1760.—Amongst the other remarkable entries in the register, are the two following:—"Francis North, son of Samuel, North, (being born without arms, his hands growing out of his shoulders,) baptised July 4, 1619."—"November 18, 1685, John Cooper, of this parish, almsman in Queen Elizabeth's college, aged 108 years, and Margaret Thomas, of Charlton, in Kent, aged 80 years, married by license of the Lord Bishop of Rochester, and leave of the governors of the Drapers."

In addition to the charitable foundations already noticed, are two hospitals, or colleges, for poor people; the more ancient of which, was founded in 1576, by William Lambard, Esq. the celebrated Kentish antiquary. This is said to have been the first hospital

pital erected by a Protestant. It was endowed for the maintenance of 20 poor persons, either male or female; called the "College of Queen Elizabeth;" and consigned to the direction of the Master of the Rolls, and the Drapers' Company. The original allowance to each pensioner, was six shillings per month; but this has been increased to fifteen shillings monthly, and a chaldron and a half of coals yearly. A preference is directed to be given to the aged, the maimed, the blind, to those impoverished by casualty, to those afflicted with any continual sickness, not contagious; and to those burthened with a numerous family: a man is also to be preferred before a woman, the married to the unmarried, &c.—The second hospital, called Norfolk college, stands near the river, at the east end of the town. This was founded in 1613, by Henry Howard, Earl of Northampton, brother to the Duke of Norfolk, and governor of Dover castle. He endowed it with lands and revenues, for the support of a warden and 20 pensioners; of whom 12 must be parishioners of Greenwich, and eight of Shotisham, and Castle Rising, in Norfolk. The management of this institution he vested in the Mercers' Company, who allow the inmates eight shillings weekly, for commons, besides clothes, lodging, and salaries, which are varied at the discretion of the Company. The chapel contains a monument by Stone, (for executing which, that artist was paid 500*l*.) in memory of the founder of the college. In the east window of this chapel, is a painting on glass, of the Crucifixion; and also some coats of arms, exhibiting the early alliances of the Howard family.

The Grey Coat School, in which 60 boys are clothed and educated, was founded by a bequest from Mr. John Roan, who, in 1643, gave the reversion of all his land and houses in Greenwich, to trustees, for that purpose. The Green Coat School was founded and endowed by Sir William Boreman, in 1672, for 20 boys, who are clothed, and instructed in writing, accounts, and navigation. This school is under the direction of the Drapers' Company. A new school-house was built for the boys, about 30 years ago. Another school, for the education and clothing of girls, was instituted here about the year 1700, and is supported by an annual subscription from the ladies, aided by a collection, at a charity sermon.

Two burgesses were returned to Parliament, by the inhabitants of this town, in the year 1557, but this was the only time of their exercising that right. The assizes were held here, in 1558, 1561, and 1562.

Below Norfolk college, is a spacious iron wharf, now, or recently, belonging to Millington, and Co. but formerly to the Crawleys, to which the various articles manufactured at their immense iron works at Swalwell, Winlaton, Winlaton Mill, and other places on the banks of the Derwent, in Durham, as described in our account of that district, are forwarded for the convenience of the home trade.

This town was the landing-place of the Princess Augusta, of Saxe-Gotha, the mother of George the Third; and the first interview between that Lady and Frederic, Prince of Wales, her destined husband, took place in the balcony of the Ranger's Lodge, fronting the Park. Her Royal Highness, the present Princess of Wales, also landed here, previously to her marriage. Another memorable event, of a different nature, was the landing of the remains of Lord Nelson, who fell in the battle of Trafalgar, on the 21st of October, 1805. Having been decreed a public funeral, the body lay in state, in the hall of the hospital, on Sunday, January 5, 1806, and the two following days; about 80,000 persons being admitted into the hall each day. On the 8th of January, the body was conveyed, in solemn procession, by water, to the Admiralty, preparatory to its interment in St. Paul's cathedral, on the 9th. The remains of Nelson were conveyed to the cathedral on a splendid funeral car, which was afterwards presented by the Lord Chamberlain, the Earl of Dartmouth, to Greenwich hospital; "there to remain as a permanent memorial of the gratitude, which a generous nation is ever willing to shew to those heroes, who have fallen gloriously in its naval service." The car is preserved in the upper part of the great hall. On the decease of Lord Collingwood, Nelson's noble second in the glorious battle of Trafalgar, his remains also, previously to their interment at St. Paul's, were deposited in the great hall, near the funeral car of his brother in arms.

The affairs of "the Chest at Chatham," are managed by the officers of Greenwich hospital, in a building erected for the purpose, near the western entrance of the hospital, about the year 1806.

The streets of Greenwich are very irregular, and the whole town is intersected, as it were, by the hospital and its adjuncts.

On the south of the town lies Blackheath, situated partly in this parish, and partly in those of Lewisham and Charlton. Its name is derived either from the appearance of the soil, or the bleakness of its situation. The Watling Street led across this heath, in its course from London to Dover; and various Roman antiquities have been found here, especially on the side nearest to Greenwich. Where the roads to Dover and Lee separate, are remains of three barrows, in one of which some bones have been found. In 1710, there were dug up here a number of urns; two of them of an unusual form, the one globular, and the other cylindrical, of fine red clay. The cylindrical one, about 18 inches in length, contained a great quantity of ashes, and six or seven coins; on two of which, the names of the Emperors, Claudius and Gallienus, could be distinguished. The globular urn, about six feet three inches in circumference, in its widest part, also contained ashes; and below the rim, at the mouth, were the words *MARCUS AURELIUS* in rudely scratched. A glass urn is also mentioned by Dr. Plot, to have been found on this heath, in a bed of hard gravel.—Blackheath,

heath has frequently been the station of a military force. In 1381, Wat Tyler, Jack Straw, and their associates, were encamped here. Jack Cade twice occupied the same station, in 1540. In 1452, Henry the Sixth pitched his tent upon Blackheath, when preparing to withstand the forces of the Duke of York, afterwards Edward the Fourth; in 1471, the Bastard, Falconbridge, encamped there with his army; and, in 1497, Lord Audley, and the Cornish rebels, pitched their tents upon Blackheath, where they awaited the arrival of Henry the Seventh, and his army. A battle ensued; the rebels were overthrown, and their chiefs taken and executed. Blackheath has been the scene also, of several triumphal processions, and ceremonial meetings. In 1400, Henry the Fourth, with great parade and magnificence, met here the Emperor of Constantinople, Manuel Palæologus, when he arrived in England, to solicit assistance against Bajazet, Emperor of the Turks. Here, in 1415, the mayor and aldermen of London, with 400 citizens, met their victorious monarch, returning from the field of Agincourt. Here, in 1416, the citizens met the Emperor Sigismund, who came to mediate a peace between France and England, conducting him hence to Lambeth, where he was met by the King. In 1474, the citizens met Edward the Fourth here, as he returned from France. In 1519, a solemn embassy, consisting of the Admiral of France, the Bishop of Paris, and others, with 1200 persons in their train, was met by the Lord Admiral of England, attended by a numerous retinue. The same year, Cardinal Campeius, the Pope's legate, was received here by the Duke of Norfolk, and a number of prelates, knights, and gentlemen, who conducted him to a rich tent of cloth of gold; then he arrayed himself in his Cardinal's robes, and rode thence in much state to London. A still more magnificent procession, was that which appeared upon Blackheath, at the meeting between Henry the Eighth, and the Lady Anne of Cleves, on the 3d of January, 1540-1.* In April and May, 1585, the city militia, to the number of 4 or 5000, mustered before Queen Elizabeth, at Greenwich, completely armed, for six or eight days: during this period, they encamped on the heath.—On the 1st of May, 1645, "Colonel Blunt, to please the Kentish people, who were fond of old customs, particularly May games, drew out two regiments of foot, and exercised them on Blackheath, representing a mock fight, between the Cavaliers and Roundheads. The people," says the writer of the Diurnal, whence this extract is taken, "were as much pleased, as if they had gone a maying." Of late

years, several military reviews have taken place on this heath.

The Paragon, and one or two of the mansions in South Place, which nearly adjoins it, on the south part of the heath, are modern brick edifices, tastefully ornamented by colonnades. These buildings occupy a part of the estate called Wricksmarsh, which formerly belonged to Sir Gregory Page, Bart. who purchased it about the year 1721, after the death of the widow of Sir John Morden, Bart. the founder of Morden college. Sir Gregory having pulled down the old mansion, erected a very magnificent structure of brick, faced with stone, consisting of a centre, and two wings, united by a colonnade. He died in 1775, having bequeathed this mansion and estate to his great nephew, Sir Gregory Turner, Bart. in tail male, who assumed the name of Page; and in 1781, obtained an act of Parliament, to enable him to alienate. He accordingly sold Wricksmarsh House and Park, to John Cator, Esq. of Beckenham Place, in 1784, for the sum of 22,550*l*. Three years afterwards, this gentleman sold the house, by auction, in lots, to be taken down.

Morden college, so named from its founder, Sir John Morden, Bart. a Turkey merchant, who had been settled at Aleppo, and on his return, erected this structure for the reception of decayed merchants, lies at a short distance from the Paragon, on the east. When the buildings were completed, in 1695, he placed in them twelve decayed Turkey merchants. By his will, he endowed his college with the reversion, after his lady's decease, of various estates, the annual rental of which is now about 1600*l*. The pensioners, the number of whom is now 30, must be upwards of 50 years of age, and either bachelors, or widowers: the allowance of each, is 40*s*. per month, with coals, candles, washing, medicines, &c. There is also a treasurer and chaplain; the former has a salary of 50*l*. and the latter of 60*l*. per annum. The management of the college is vested in seven trustees, of the Company of Turkey Merchants. The college is of brick, with stone quoins and cornices; it forms a spacious quadrangle, having a piazza surrounding the inclosed area. Over the entrance, are full-length statues of Sir John and Lady Morden; and in the hall, are their portraits, with that of Queen Anne: in the chapel, are the arms of the founder and his lady; and a record of benefactions which have been made to the college, since its original endowment, amounting to nearly 3000*l*.

Immediately adjoining the west side of Greenwich Park, are several respectable villas, one of which, an irregular brick building, whitened over,

* The Chronicles tell us, that she came down Shooter's Hill, at twelve o'clock; and alighted at a tent of cloth of gold, prepared on the heath for her reception. The King went through the Park to meet her, attended by most of the nobility, bishops, heralds, foreign ambassadors, &c. The procession from the heath, to Greenwich palace was attended by those in the King's

and the Princess's train, in number 600, by 1200 citizens, and others, clad in velvet, with chains of gold, by most of the female nobility, and a great number of ladies. All the city barges were on the water, near the palace; and the procession was saluted with peals of artillery from the tower in the Park. The marriage ceremony was performed in the chapel at Greenwich.

was, for some years, the residence of Her Royal Highness, the Princess of Wales; who, in 1806, was made Ranger of Greenwich Park; an appointment which she not long since resigned. This house had been previously inhabited by the Duke of Buccleugh, and prior to that, by the late Duke of Montagu.

Chesterfield House, nearly adjoining, was enlarged by Philip, the late Earl of Chesterfield. It was occupied for some years by the late Duchess of Brunswick, by whom the lease was purchased, in 1807. Another of these villas was formerly inhabited by Major-General Edward Wolfe; occasionally by his son, the conqueror of Quebec; and more recently, by the Hon. Mr. Lyttleton. Several other villas are situated on the opposite part of Blackheath, towards Lee and Lewisham, some of which are on the estate of the Earl of Dartmouth. In digging into the Earl's garden, in 1803, several Roman urns were found.

Ascending the hill, from Deptford to Blackheath, between 2 and 300 yards from the road, on the north, a singular cavern was discovered about the year 1780. The entrance is on the side of the hill, by a flight of steps, descending about 50 feet; this leads into a range of seven irregular chambers or apartments, cut out of a stratum of solid chalk, and communicating with each other by smaller avenues.—The apartments vary in extent, from 12 or 15, to 36 or 40 feet, both in length and width. In the furthest chamber is a well, 27 feet deep, which formerly supplied very fine water. The extreme depth of the lower part of this cavern from the surface of the ground, is supposed to be about 170 feet; and its length, from the entrance, is nearly the same.

On Maize, or Maze Hill, just without the walls of Greenwich Park, on the east, is an irregular castellated brick structure, erected by Sir John Vanbrugh. It commands some fine views of the Thames. At a little distance, are Vanbrugh's fields, where, in an elevated situation, is a house of a similar character, and by the same architect, called the Castle.

East Combe manor, which has passed for several centuries, with the manor of Greenwich, and in 1613, was settled on Anne of Denmark, for her life, belonged a few years ago, to Henry Goodwyn, Esq. an eminent brewer.—Between East Combe, and West Combe, is Woodlands, the beautiful seat of John Julius Angerstein, Esq. who laid out the grounds, and erected the mansion, about the year 1772. The interior is tastefully fitted up, and contains a small, but well-chosen collection of pictures. Among them is the celebrated portrait, by Sir Joshua Reynolds, of Garrick, between Tragedy and Comedy. The botanic garden is said to contain one of the most extensive collections of curious plants, and heaths, in England.

West Combe was alienated, about the year 1553, to John Lambard, Esq. whose son, William Lam-

bard, the scholar of Nowell, and the friend of Camden, made it his chief residence. Here also he appears to have arranged the materials for his "Perambulation of Kent;" and most probably composed a great part of his other works. His great grandson, Thomas Lambard, Esq. sold this manor about the year 1648, to Hugh Forth, who conveyed it to the Biddulphs, from whom it was purchased, about 1718, by Sir Gregory Page, Bart. who erected the present mansion at a little distance from the old site. The lease came afterwards into the possession of Charles, third Duke of Bolton, who resided here several years, with the celebrated Polly Peachum, afterwards Duchess of Bolton. The house commands some fine prospects.

GROUMBIDGE.]—(See Speldhurst.)

HACKINGTON.]—The parish of Hackington, or St. Stephen's, lies a mile and a half N. from Canterbury. Hales Place, the seat of Sir Edward Hales, Bart. who is owner of the principal part of this parish, was purchased by his great grandfather, (a Colepeper,) in the reign of Charles the Second. The ancient mansion, or Place House, of St. Stephen's, was pulled down by the late baronet, who in 1768, erected a more extensive building, in a pleasanter situation. It stands on a commanding eminence, and consists of a spacious body, and two wings for offices, built of brick, in the Ionic order, with stone jambs and cornices. Many improvements have also been made in the park and grounds, which occupy a considerable extent, and include some fine scenery. St. Stephen's church is built in the form of a cross, with a tower, surmounted by a low spire, at the west end. The principal part was erected about the close of the 12th century. The south cross was rebuilt by Sir Roger Manwood, lord of the manor, who lies buried here, in a large vault, made in his lifetime: on his tomb, which he mentions in his will, to "have alsoe newe made there," is his bust in his baron's robes, and cap, with the figures beneath, of his two wives and five children, kneeling, &c.

HALLING.]—At this place, $3\frac{1}{4}$ miles S.W. by W. from Rochester, the bishops of that see formerly had a palace, which was rebuilt in the 12th century.—Of this edifice there are still some remains. The bishops formerly had a fine vineyard here, now a meadow. Lambard, the Kentish historian, passed several years at Halling, after he had married his second wife, Silvester, the daughter of Richard Deane, Gent. The memory of this lady is still recorded in the church by a brass plate.

HALSTOW.]—High Halstow is $4\frac{1}{4}$ miles N.N.E. from Rochester; and Lower Halstow is four miles N.W. by W. from Milton. The church of the latter is a small mean edifice, standing on a mound, on the borders of the marshes, but somewhat remarkable, from the numerous pieces of Roman tile that are worked up in the lower parts of the walls. In this parish is Standgate creek, the lower part of which, near its junction with the Medway, is the station which has been assigned for the performance of quarantine.

rantine. Here all vessels arriving from foreign countries, infected with the plague, or other contagious disorders, are obliged to stop; and the respective crews of the detained vessels are prohibited from going on shore, till the expiration of the time assigned by government.

HARbledown.]—At the little village of Harbledown, a mile and a quarter W. S. W. from Canterbury, is an hospital, dedicated to St. Nicholas, for female lepers, founded in the year 1084 by Archbishop Lanfranc. The additions which have since been made to the original endowment, by private grants of individuals, have increased the revenues of this institution to 250*l.* per annum. There are at present twenty-six inmates, who enjoy the privilege of freeholders. A master, fifteen in-brothers, and the like number of sisters, form the establishment. The chapel, or church, appears to be the original Norman fabric, and is of curious structure. It consists of a nave and chancel, with aisles opening to the nave, and a square tower at the south-west angle. In the window of the north aisle, is a good painting of St. John Baptist, with a banner, displaying the Agnus Dei. The font is ancient. Harbledown church is dedicated to St. Michael: it consists merely of a nave and chancel, opening to each other by a semi-circular arch; the windows seem to have been of the lancet form. There is a marble tablet on the south-wall, in memory of G. Gipps, Esq. who represented the city of Canterbury in four Parliaments. His residence was at Hall Place—so called from the manor of Hall—in this parish.

HARRIETSHAM.]—At Harrietsham, seven miles E. by S. from Maidstone, is a pleasure ground, &c. of about six acres, in which are several beautiful cascades.—Harrietsham Place, now or lately, the residence of W. Baldwin, Esq. is pleasantly situated on the commanding eminence of Slede Hill—so called from the Slede family, anciently lords of the manor.—Harrietsham church is of the Elizabethan age.

HARTY.]—The channel, or “fleet,” which divided this isle ($4\frac{1}{2}$ miles N. from Faversham) from that of Shepey, is now nearly filled up, and may easily be crossed, excepting at high tides, &c. “The island of Harty,” observes Hasted, “lies opposite to the parish of Ore in this county, the waters of the Swale flowing between them, over which there is a ferry, called Harty Ferry. The grounds are entirely pasture, on which are constantly feed-

ing about 4000 sheep. The centre of it is a rising ground. The church stands nearly in the middle of it. There is no village, and only six Lookers’ cottages in the whole of it; these people, about 20 in number, being the only inhabitants; the unhealthiness of the air, deterring others from settling here. It is about two miles in length, and one and a half in breadth, and consists of one parish, of the same name as the island itself.”

HAWKHURST.]—The populous parish of Hawkhurst, extending into the county of Sussex, lies five miles S. S. W. from Cranbrook. As an appendage to the manor of Wye, it anciently formed part of the possessions of Battel Abbey, and enjoyed the privilege of a market and fair. Near the church is an ancient family seat, called Elsfords, belonging to the Boys family. The church was founded in the reign of Edward the Third, by the Abbot of Battel. The windows were anciently adorned with painted glass, of which there are still some slight remains. In the north chapel lies buried, Richard Kilburne, Esq. author of the ‘Topographie, or Survey of the county of Kent,’ who died in 1678; having been for many years an inhabitant of a mansion called Fowlers, near the east end of the hamlet of Highgate, in this parish. The seat, called Tongs, near Fowlers, belonged to the Dunks, eminent clothiers in this neighbourhood. Sir Thomas Dunk, in 1718, bequeathed 2000*l.* for the building and endowment of a Free School, and an Alms-House for six decayed house-keepers of both sexes, in Highgate. Subsequent donations have greatly increased the revenues of these establishments.

HAYES.]—The charming little village of Hayes, anciently Hese, two miles S. from Bromley, is the site of several agreeable villas. Hayes Place, formerly a seat of the Scotts, was, about the middle of the last century, purchased by the late Earl of Chatham, who erected the present mansion, which, during an alienation of about two years, to the Honourable Thomas Walpole, was cased over with white brick, and afterwards reconveyed to the earl. Here, after his retirement from public affairs, he spent much of the evening of his days.

During the first part of his residence here, was born (May 28, 1759) his second son, William, a statesman, who, by many, is regarded as “greater than his father.”*—Since the decease of Lord Chatham, the estate has had many owners: it was recently the property of Philip Delaney, Esq.

Sir Vicary Gibbs, the present Lord Chief Justice

* Our limits preclude us from entering into any details of the life of that distinguished statesman, William Pitt; but a brief record of dates will probably be acceptable to the reader. His mother was Hester Grenville, sister of Richard, late Earl Temple. He was placed under the tuition of Dr. Wilson, since canon of Windsor, but the earl, his father took upon himself the important charge of forming his mind—and at a proper season he was sent to Pembroke Hall, Cambridge, where he studied under the superintendence of Dr. Turner and Dr.

Pretyman. On leaving the University, he was entered at Lincoln’s Inn, and shortly afterwards was called to the bar, but he followed the profession only a short time, politics being the field where his talent and his inclination directed him, and where he was afterwards destined to perform so conspicuous a part. He was first returned to Parliament for the borough of Appleby: his first display of oratory and talent, was on the side of opposition, against Lord North, in the American war. In 1782, he brought forward a motion for an enquiry into the state of

tice of the court of Common Pleas, has a villa on Hayes Common.

Hayes church contains the banners that were borne at the public funeral of the great Earl of Chatham. Among the sepulchral memorials are several brasses in commemoration of different rectors of this parish; one of which is inscribed as follows:—

"Who faine would lyve, he must not feare to dye; death is the waie
That leades to lief, and glorious ioies, that triumphes over claie
Come poore, bewaile this want; come friend, lament and saie with me,
This man did dye to lyve, and lyves though dead his body be.
Ffull xxiij yeeres a Rector here he was, and then John Hoare,
Unwedd, deceast, one thousand yeeres fyve hundred eighty-four,
" the xi daie of februarie,
When he had lyvd lx (probably lxv) score and three."

HEPPINGTON.]—(See Nackington.)

HERNE.]—The village of Herne, which lies five miles N. E. by N. from Canterbury, is supposed by Duncombe, whose antiquities of 'Reculver and Herne,' were published in the Bibliotheca Topographica, to have derived its name from the number of Herons that frequented these parts; though Hasted has deduced it from the Saxon Hyrne, or Hurne, signifying a nook or corner. The church is a large and spacious edifice. Several of the Fineux and Milles families lie buried here. Among the ancient brasses in this church, is the figure of Lady Philip, wife of Matthew Philip, Lord Mayor of London: she died in 1470, and is represented with a gold chain, in the dress of the times. In the old register of this parish, is the following singular entry under the date of 1565: "John Jarvys had two woemen children baptised at home, joyned together in the belly, and having each the one of their arms lying at one of their shoulders, and in all other parts well proportioned children: buried Aug. 29." The pious Ridley, afterwards Bishop of Rochester and London, held this living for several years. At Herne Bay is a small bathing place. Two Hoys, each about sixty tons burthen, sail alternately to London every week, with corn, hops, flour, &c. Several colliers also frequent this haven. In the channel nearly opposite to "Herne Bay," is the Pan Rock, so called from the abundance of fragments of Roman earthen-ware, and some entire pans, which have been found here by the oyster-dredgers, and which, according to a tradition prevailing in these parts, formed part of the

of Parliamentary representation, which was rejected only by a small majority. On the death of the Marquis of Rockingham, and the consequent change of ministry, Mr. Pitt was appointed Chancellor of the Exchequer. The Shelbourne administration, and that of the coalition, having successively given way, a new cabinet was formed in the winter of 1783, when the important offices of first Lord of the Treasury, and Chancellor of the Exchequer, were conferred upon Mr. Pitt. He ultimately succeeded in carrying a new bill for the better government of India; he formed a commercial treaty with France; and he framed a new and beneficial scheme for extinguishing the national debt, by a sinking fund. He held his high situation,

cargo of a vessel anciently wrecked here. This rock is thought by some to have been the site of a Roman pottery.

HEVER.]—In this village, which is $7\frac{1}{2}$ miles W. by S. from Tunbridge, are the venerable remains of Hever Castle, the ancient seat of a family of that name. The castle was erected in the reign of Edward the Third, by William de Hever, who had obtained the king's licence to 'embattle his manor-house,' &c. The estate afterwards came into possession of the Cobham family, who sold it to Sir Geoffrey Boleyn, a wealthy mercer of London and Lord Mayor of the city. He was great grandfather to Ann Boleyn the unhappy consort of Henry the Eighth. The Boleyns made this their principal residence, and it was here that the stern tyrant, during the halcyon days of courtship, is said to have spent some of his happiest days. Tradition states, that on his visits to the castle, he would wind his bugle-horn as soon as he came within sight of its towers, in order to announce his approach. On the demise of Sir Thomas Boleyn, father of the unfortunate Anne, Henry claimed the estate, in right of his wife; which he afterwards considerably extended. Ann of Cleves, after her divorce, had this and the adjoining manors settled upon her for life, at the yearly rent of 93*l.* 13*s.* 3*d.* She made Hever castle her principal residence; and died here in 1556, or 1557. The estates were then sold by commissioners, to Sir Edward Waldegrave, Lord Chamberlain to the Queen's household, who, on the accession of Elizabeth, was divested of his employments, and committed to the Tower, where he died in 1561. The manors of Hever Cobham and Hever Brocas, have since passed to the Medleys of Sussex. The castle has a moat, and drawbridge. Its entrance is embattled and defended by a portcullis. The inner buildings form a quadrangle, inclosing a court. The hall still retains vestiges of its ancient splendour. The great stair-case communicates with various chambers, and a long gallery having a curious ceiling in stucco. On the windows of the stair-case, there is a display of various shields, with the arms and alliances of the Boleyns. A small recess, opening from the gallery, is said to have been occasionally used by Henry, as a council-chamber. At the upper end of the gallery is a trap door, which leads by a gloomy descent to the moat or dungeon. In Hever church there is a stately tomb of dark

during the whole of the first revolutionary war with France. In the year 1800, he accomplished the union of Great Britain and Ireland, soon after which he retired from office. In 1804, he returned to power; but so disastrous was the progress of public affairs, that his constitution, naturally delicate, eventually sunk beneath the pressure, and he closed his earthly career, at Putney, on the 23d of January, 1806. He was honoured with a public funeral, in Westminster Abbey, where his remains were deposited along with those of his father. In addition to his high political offices, Mr. Pitt was warden of the Cinque Ports, governor of the Charter House, master of the Trinity House, and high steward of the University of Cambridge.

marble,

marble, in memory of Sir Thomas Boleyn, who died in March 1538; and is represented by a full sized brass, in the robes and collar of the order of the garter, his head reclining on a helmet, and his feet on a wyvern. There are likewise some memorials of the Cobhams, of Stuborough castle, in Surrey, the ancient lords of the manor.

HIGHAM.]—At Higham, or Lillechurch, the Hec-ham of Domesday, $4\frac{1}{2}$ miles N. N. W. from Rochester, King Stephen founded a benedictine nunnery, about the year 1151, of which his daughter Mary, afterwards abbess of Rumsey, became the first prioress. The site of the nunnery, of which there are yet some slight remains, is now a farm house and offices, situated at a short distance eastward from the church. Towards the latter part of their residence here, the nuns had become dissolute; and in 1513, were accused before the bishop, of scandalous and licentious conduct. They do not appear to have denied the charge, but requested that their punishment might be commuted to imprisonment in their own abode. An ancient causeway leads across the marshes in this parish to the banks of the Thames, whence there was formerly a ferry into the adjoining county.

Higham church is divided into two parts by four large pointed arches. Over the communion table, is a tablet in memory of Sir Francis Head, Bart. who resided at the Hermitage, in this parish, where he rebuilt the mansion, and much improved the grounds. In the south wall of the north chantry is a piscina, and almerie above; and in the north-east corner, is a large ancient tomb, of grey marble, without inscription or date; supposed to be that of the prioress Joane de Hadloe, buried in 1328. Above it, against the wall, is a brass plate, thus inscribed:—

All those that for my Soule doth pray,
To the Lorde that dyed on Good Friday,
Graunte theym & me by their petition,
Off othere offences to have remission:
Ye may Perceiue now yn every Age,
Thys lyft ys but A pylgrymage
Toward heven that ys Eternall;
Wherian to God bringe us all amen.
Here lyeth Robert Hylton late Poman of,
Garde to the high and mighty Prince of most
famous memory Henry the sixth; which
departed out of this present lyfte the iij day
of december Anno Dni M.cccc.lxii.

The pavement exhibits some ornamented tiles. The font is square, and is supported on a circular column in the centre, and on four others at the angles.

HINXHILL.]—In the parish of Hinxhill, $2\frac{1}{4}$ miles E. by S. from Ashford, a singular phenomenon occurred in the month of August, 1727: a field was observed to be on fire, and continued to burn nearly six weeks, till it had consumed about three acres of

ground to ashes. It yielded a smoke and strong smell like a brick-kiln. The soil was of a marshy, peat-like texture, and generally moist; but, this year, it was less so than usual.

HOLLINGBOURN.]—This village (the Hoilinge-borde of Domesday) lies six miles E. by S. from Maidstone. The church is a handsome building, and stands near the bottom of the chalk hills. It contains some fine monuments of the Colepepers, among which are two of the Lords Colepeper. Here are also some memorials of the Duppa family; the mansion, a handsome building, was erected by Baldwin Duppa, Esq. between the years 1717 and 1722. In this church are also the remains of the pious and learned Grace, Lady Gethin, who died in October 1697 at the age of twenty-one. The altar-cloth, pulpit-cloth, and cushion, were presented by the daughters of Sir John Colepeper; they are of purple velvet, and beautifully adorned with figures of grapes and pomegranates in gold.

HOO.]—In the church of Hoo, St. Werburgh, $3\frac{1}{4}$ miles N. E. from Rochester, are some remarkable brasses: one, of an aged woman, for Dorothy Plumly, who died in 1615; two others of vicars who died in 1402; and the figure of a knight, son of John Cobham, the third Baron Cobham, in curious plate armour, and his lady, Matilda, with an inscription, recording their death in the year 1465.—Within the manor of Hoo—formerly of great extent—there were at one time six churches; three of which were those that now belong to the distinct parishes of High Halstow, All-hallows, and St. Mary's; St. James's, in the Isle of Graine, is supposed to be a fourth; that of Merston, formerly a distinct parish, but now incorporated with Shorne, a fifth; and the present parish church of St. Werburgh is the sixth.—In this parish, in the winter of 1809, an instance of horrid barbarity, coupled with gross superstition, occurred. A farmer having in his possession, a duck which layed dun eggs, he was desirous to dispose of the bird, it being considered unlucky. About this time, a distemper broke out among the farmer's cattle, which was attributed to the omnivorous bird. A female servant, whose cruelty equalled her superstition, to avert the threatened disaster, formed the resolution to destroy it. With this intent, she one morning precipitated the creature alive into an oven, and repeated this inhuman process three successive mornings, until the bird died. When the circumstance transpired, the girl was threatened with a severe punishment, which operated so strongly upon her, that she fell into violent convulsions.

HORSTED.]—Horsted, a farm, about three miles from Rochester, is traditionally said to derive its name from Horsa, the Saxon chief, whose remains are also thought to have been interred in a wood, at a little distance from the farm. Several celts, old swords, and other antiquities, have been found in the neighbourhood.

HORTON.]—Kirby Horton is four miles S. by E. from

from Dartford; Monks Horton is five miles N. N. W. from Hythe. At the former, near the banks of the Darent, are the massive ruins of a castle founded by the Rosses, who held this manor at the period of the Domesday Survey. Roger de Kirkby acquired the estate by his marriage with Lora, heiress of the Rosses, about the twentieth of Edward the First, and he re-edified the castle, and also the mansion of Kirkby court, which, after having passed through various families, has at length come into the possession of Queen's College, Oxford. The castle demesne is now a farm. In Horton church, there are several monuments of the Bathurst family, who resided at Franks, a venerable mansion in this parish, on the west side of the Darent, erected towards the latter part of the reign of Elizabeth. Reynolds Place was another eminent seat at Horton, so called from a family of that name, but it is now a farm.

At Monks Horton, a priory was founded for Cluniac Monks, at the beginning of the reign of Henry the Second, and made subordinate to the priory of the same order at Lewes, in Sussex. The priory estate has been held from the time of Edward the Sixth, by the Mantells; and being held under a crown entail, is not subject to alienation. It is now tenanted as a farm, and the dwelling occupies a part of the monastic buildings, having adjoined to it, a small, but beautiful piece of ruin of the west entrance to the priory church. The mouldings are singularly curious. The situation is very secluded.

In this parish is Mount Morris, much noticed, as having been, for many years, the residence of the celebrated and eccentric Lord Rokeby,* into whose family it came by marriage. The mansion was built about a century ago, by Thomas Morris, Esq. whose family were seated here in the time of Elizabeth. It is a large square brick edifice, built from designs by Gibbs. The great stair-case is of fine oak. The apartments are lofty. In a pannel of the book room is a curious picture of the celebrated Mrs. Montagu, author of the "Essay on Shakespeare," &c. when young, executed by Hoare, of Bath. The park is well wooded, and contains nearly 1000 acres, of which between 2 and 300 of the lower parts are very rich pasture. The late Lord Rokeby took great delight in attending to his flocks and herds here. At his death, 13,000 guineas, and upwards, were found in his house; which, the day after his burial, were carried to Canterbury, and distributed between the two banks in that city. His lordship had a horror of paper circulation; and, always predicting that the bank would stop payment, wished to be provided against that hour.

From the brow of Hampton Hill, which rises above

* Matthew Robinson, who, in 1794, succeeded to the Irish Barony of Rokeby, was born in 1713, and educated at Trinity Hall, Cambridge. Possessed of a strong and original mind, he was eager in investigating, and profoundly conversant in, the politics of his country. Throughout his life, he was a staunch

the grounds on the north, is an extensive prospect of sea and land, comprehending all the intermediate country to Boughton Hill, and the hills of Sussex, with the coast of France, and the contiguous channel. The manor, and ancient seat of the Rookes—from whom descended the celebrated Admiral Sir Geo. Rooke—near the church, have been laid into Lord Rokeby's park.

HOTHFIELD.]—Hothfield, three miles N. W. by W. from Ashford, is the hereditary seat of the Tufsons, Earls of Thanet. The house, a square edifice, of Portland stone, was built by the late earl, on the site of the old mansion: it occupies a commanding situation near the edge of the heath. The south-east side of the grounds are skirted by that branch of the Stour which rises at Westwell; and are also watered by a rivulet which flows through them from the north.

Hothfield church, which stands near the manor house, was partly destroyed by fire in the reign of James the First, but was soon afterwards re-edified by Sir John Tufton, Bart. On the tomb of Sir Jhon, and his lady, on the north side of the chancel, lie their effigies at full length.

HUNTON.]—The parish of Hunton, 4½ miles S. W. by S. from Maidstone, lies below Coxheath, to the south, just within the northern borders of the Weald. The inclosures are mostly broad hedge-rows, mingled with large and venerable oaks. It formerly had a weekly market.

Hunton church exhibits some memorials of the Fanes, a branch of the ennobled family of that name, who purchased the manor and seat of Burston, in this parish, in the beginning of the reign of Elizabeth. The mansion of the Fanes is now a farmhouse; and the chapel which belonged to it, has been desecrated. In the register are the following entries of Great Storms. "1746. On Midsummer day this year, happened the greatest storm of thunder and lightning, wind and rain,; was ever known in the memory of man."—"1703. On the nineteenth day of August this year, happened a much greater storm of thunder, wind, hail, and rain, than that in the year forty-six; the hail-stones being six and seven inches round." The rectory of Hunton, which is a peculiar of the archbishops of Canterbury, has been held by several eminent men. The parsonage-house is most delightfully situated.—At a short distance, is a pleasant seat, called Jennings, now, or lately, the property and residence of the Dowager Lady Twysden.

HYTHE.]—The little maritime and market-town of Hythe lies 33 miles S. E. by E. from Maidstone, and 67½ E. S. E. from London. In Saxon, "Hythe," or "Hithe," signifies a port, or haven. This is one

whig. Amidst many other peculiarities, he, for the last eight or ten years of his life, wore a long and flowing beard. He died on the 30th of November, 1800, and was buried in Monks Horton church. He was succeeded by his nephew, Morris, the present Lord Rokeby.

of the principal cinque ports, and a place of considerable antiquity. According to Leland, it was a town of great length, and had four churches, and an abbey. In the reign of Edward the Second, upwards of 360 houses were destroyed by an accidental fire, which was followed by a dreadful pestilence.—Its present population is about 2500.

Hythe is supposed to be indebted for its origin to the ancient ports of Limne, and West Hithe, successively; the harbours of which became choked up with sand. It has itself suffered the same fate, and at present scarcely deserves the name of a port. In the latter part of the reign of Richard the Second, above 200 houses were destroyed by fire.—Five of the ships belonging to the port were lost, and 100 men were drowned; by which misfortunes the inhabitants were so much impoverished, that they had thoughts of abandoning the place, and building themselves a town elsewhere; but King Henry the Fourth, by his timely interposition, prevented this, relieving them for some time, from their service as a cinque-port. Elizabeth, in the year 1574, granted the townsmen a charter of incorporation, by the style of the mayor, jurats, and commonalty of the town and port of Hithe. The corporation consists of the mayor and 12 jurats, 24 common-council-men, two chamberlains, and a town-clerk. The town is very pleasant and healthy on the side, as well as at the foot of the Quarry Hill, where the principal street runs, which is of a handsome breadth, and from the bridges at the extremities of it, about half a mile in length. The court-hall and market-place are nearly in the centre of the town; the latter was built by Lord Strangford, who represented this port in Parliament, in 1671. All the houses, on the side of the hill, have an uninterrupted view of the sea southward, Romney Marsh, and the adjacent country. The houses are mostly modern built, and the whole has a neat and cheerful appearance. In one of the streets, leading to the beach, is a small theatre. As one of the cinque-ports, this town has returned members to Parliament, ever since the 42nd of Edward the Third.

Here are two hospitals for the maintenance of the poor; one called St. Bartholomew's, and the other St. John's. The former, founded by Haims, bishop of Rochester, about the year 1336, is situated at a short distance south-westward from the church.—There are ten poor persons in it, five men and five women. There are about 100 acres of land belonging to it, of the yearly value of 120*l*. It is under the management of three trustees, now called wardens, chosen by the mayor and corporation. The other hospital, of St. John, is situated at the east end of the town. Its revenues are derived from 54 acres of land. It is under the management of trustees, who are in general members of the corporation. The number and qualifications of the poor relieved, is at the discretion of the trustees, and there are six apartments for their accommodation. The building stands on the south side of the High Street.

VOL. III.—NO. 103.

Hythe church is a handsome structure, consisting of three aisles, a north and south cross, and three chancels, with a tower and steeple at the west end. It stands on a high and steep hill, a considerable height above any in the town. The room over the porch is the town hall, where the mayor and other members of the corporation are chosen yearly. The church contains a great number of monuments and memorials. In the crypt, or vault, under the east end of the middle chancel, is piled up a vast quantity of human skulls and bones, 28 feet in length, and eight feet in height and breadth. They are supposed to have been the remains of the Britons, slain in a bloody battle fought on the shore, between this place and Folkstone, with the retreating Saxons, in the year 456; and to have attained their whiteness, by lying some time exposed on the sea-shore. Several of the skulls have deep cuts in them, as if made by some heavy weapon, probably the Saxon battle-axe.

In the church yard, rises a spring of good water; and two small streams run across the town at each extremity; the one descending from Saltwood, and the other separating this parish from that of Newington. On the beach, in this vicinity, several small forts are to be seen, in addition to the Martello towers along the coast; they were constructed soon after the commencement of the last war. There are some very extensive barracks for infantry, on the heights immediately above Hythe; and in the vicinity of these, several mud-walled cottages, for the wives and families of the soldiers. There are other barracks, of a temporary kind, within the town.

IGHTHAM.]—Ightham, or Eightham, as it was formerly called, is a mile and a half S.W. from Wrotham. It derived its name from the eight hams, or boroughs,—Eightham, Redwell, Ivyhatch, Borough Green, St. Clere's, the Moat, the Beaulies, and Oldborough,—which lie within its verge. Ightham Court Lodge, the manor-house, is a respectable old mansion. St. Clere's, formerly called Oldham St. Clere, gave name to the family of Oldham, one of whom was with Richard Cœur de Lion, at the siege of Acre. William Glanvill Evelyn, Esq. was recently the owner. The moat, now the property and residence of Thomas Selby, Esq. was purchased by Sir William Selby, Knt. of Branxton, in Northumberland, in the time of James the First. On the top of Oldborough Hill, are the remains of a considerable entrenchment, of Roman origin. It is now so much overgrown with wood as to make it difficult to trace its lines. It is of an oval form, and comprises 137 acres. On the brow of the hill is an entrance into a cave, which has long been filled up by the sinking of the earth, so as to admit a passage but a very small way into it; but, according to tradition, it was of considerable extent.—In Ightham church, are some curious monuments of the Selbies; and also the tomb and effigies of Sir Thomas Cawne, the owner of Nulcombe, an estate in Seale parish, in the reign of Edward the Third.

3 a

KENARTON.]—

KENARTON.]—At Kenarton, or Kenardington, seven miles E. by S. from Tenterden, below the hill on which the church stands, and adjoining to it on the south-east, are the remains of some ancient fortifications of earth, with a breast-work, thrown up, and a small circular mount, and in the adjoining marsh, below it, is another of a larger size, with a narrow ridge or causeway, seemingly leading from one to the other. These works seem to have been thrown up during the wars between King Alfred and the Danes, perhaps about the year 803, when a division of them sailed up the river Rother.

KESTON.]—In the parish of Keston, five miles S. by E. from Bromley, stands Holwood House, which was purchased of the Burrows family by the late Right Hon. Mr. Pitt. In the recess of public business, this was his favourite retreat; the beauty of the situation compensating for the smallness of the mansion. Mr. Pitt enlarged the house, by the addition of a good sized room, with a spacious bow window towards the south: the grounds were improved by Repton. On the west side of Holwood Hill, on Keston Down, are the vestiges of an immense encampment, which Horsley conjectures are Roman. Its form is elliptical, and it is surrounded by treble ditches, and vast ramparts, and measures nearly two miles in circumference. The banks and ditches on the north side are thickly covered with wood: those to the west side are bold and deep. The inclosed area is intersected by several roads. The situation is very commanding. Towards the north, at a short distance from the outer ditch, is the source of the river Ravensbourne; from this spring, the soldiers were supplied with water, and the path which leads to it, may still be traced. The south-east part of the area composes a lawn: other parts are in tillage. There are various conjectures respecting the origin of this post: the most probable is, that Aulus Plautius encamped here while waiting the approach of the Emperor Claudius. Dr. Harris says, "I am fully persuaded it is Roman; not only from its form, but also from the Roman bricks, tiles, and other remains that have been turned up hereabout by the plough." Hasted adds, "that coins of the Middle and Lower Empire, have been frequently picked up by those whom curiosity have led to the spot."

KINGSTON.]—The manor of Kingston, five miles S.E. by S. from Canterbury, belongs to Sir S. E. Brydges, Bart. At a little distance from the village, is a small villa, belonging to Edwin H. Sandys, Esq. a lawyer, who is descended from the celebrated Sir Edwin Sandys, of Northbourne, the author of *Europæ Speculeum*. In this parish is Ileden, the seat of Thomas Watkinson Payler, Esq.

KNOWLE.]—(See Sevenoaks.)

KNOWLTON.]—The parish of Knowlton, containing only about 430 acres, $4\frac{1}{2}$ miles S.E. from Wingham, nearly all belongs to Sir Narborough D'Aeth, Bart. whose grandfather obtained it in marriage with the daughter of Admiral Sir John Narborough, who

had purchased this manor of the Peyton family, formerly of Peyton Hall, in Suffolk. This gentleman erected the present mansion in Knowlton Park; but considerable alteration has been made in it by Sir Thomas D'Aeth. The Park is ornamented by many fine trees, particularly about the house. In the church, are various monuments of the families who have successively inherited this estate.

LAMBERHURST.]—In the parish of Lamberhurst, 14 miles S.W. by S. from Maidstone, are large tracts of coppice wood, in which are several furnaces, for melting and manufacturing iron ore, with which the soil abounds. The only one of them in that part of the parish, within the county of Kent, is called Lamberhurst, or Gloucester furnace, in honour of the Duke of Gloucester, Queen Anne's son, who in 1698, visited it from Tunbridge Wells. The iron rails round St. Paul's Church-Yard, London, were cast at this furnace.

LANGDON.]—East Langdon, with the hamlet of Marton, is $3\frac{1}{4}$ miles N.N.E. from Dover. At West Langdon, in a delightfully secluded situation, are the remains of an abbey founded in the reign of Richard Cœur de Lion, by Sir William de Auberville, the elder, for Premonstratensian canons, who were brought hither from Leyston, in Suffolk. The site of the abbey demesnes is still called the Abbey Farm; but the principal building has been new fronted with brick, and other alterations have been made.

LEE.]—This respectable little village, which is inhabited chiefly by genteel families, the occupants of several pleasant mansions, lies seven miles S.E. by E. from St. Paul's cathedral. The manor is the property of Lord Sondes. Lee Place was upwards of a century the seat of the Boone family, who founded an almshouse and school here, and endowed it with lands and rents, producing between 70/. and 80/. annually. On the acclivity of the eminence, to the north, is the pleasant villa formerly inhabited by the Fludyers. Beyond this is the church, in which may be seen a curious brass, in memory of Nicholas Ansley, Esq. serjeant of the cellar to Queen Elizabeth; and a handsome monument of his son, Bryan Annesley, Esq. gentleman pensioner to that queen: the effigies of the latter, with his wife, the one in armour, and the other in the dress of the times, lie under an elliptic arch, ornamented with a mosaic pattern, studded with roses. Beneath the brass plate of Nicholas Ansley, Esq. is the following

Inscription.

"When the Quene Elizabeth full five yeres had rain'd,
Then Nicholas Ansley, whos corps lyes here interred,
At fyve and twenty yeres of age was entertayned
Into her servis, where well himselfe he carred
In eche man's love, till fifty and eight yeresould,
Being sergant of her seller, death him controul'd."

In the church-yard are the tombs of Dr. Edmund Halley, the astronomer; Sir Samuel Fludyer, Bart.; the Right Honourable T. C. Roper, Baron Dacre; William Parsons, Esq. the comedian; and the late
John

John Charnock, Esq. F.S.A. author of the "History of Marine Architecture," &c.

The Papillons of Acrise retain their hereditary villa in this parish.

Lee, a charming residence in the parish of Ickham, two miles W. from Wingham, was greatly admired by Lord Orford. The house, observes his Lordship, "which was but indifferent before, has been, by the skill and art of Mr. Wyatt, admirably improved in the disposition of the apartments: amongst them is a very beautiful library, finished in the most perfect style of Gothic taste. The three fronts of the house convey the idea of a small convent, never attempted to be demolished, but partly modernized, and adapted to the habitation of a gentleman's family; and the gently spreading trees, and the adjoining rivulet, seem to correspond with it, and to form a site selected by monks, with a view to retirement and meditation; while, at the same time, no distant prospects tantalised them with views of opulence, and busy society. The little library has all the air of an abbot's study, except that it discovers more taste." Amongst the pictures, is the celebrated original miniature by Holbein, of Anne of Cleves, the flattering air of which led the way to the marriage of that Princess with Henry the Eighth. The name of this seat was anciently written Legh, and it belonged to a family of that name, one of whom is thought to be commemorated by an ancient tomb, in the north wall of Ickham church. The estate was purchased by Sir Paul Barrett, Knt. Sergeant at Law, in the time of Charles the Second. His descendant, Thomas Barrett, bequeathed it to his nephew, Thomas Barrett Brydges, eldest son of Sir S. E. Brydges, Bart.

LEEDS.]—The village of Leeds or Leeds Street, lies 5 miles E. by S. from Maidstone. It is situated on a small stream, which flows into the Len, and consists of a long row of straggling houses, extending towards Langley. The church is spacious, and has a remarkably low tower at the west end. In the chancel is a piscina, and three stone seats. A handsome mural monument may be seen at the east end of the south aisle, in memory of Sir Roger Meredith, Bart. of Leeds abbey, who died in 1738. There is another elaborate monument commemorative of Jane, the daughter of Sir Thomas Palmer, relict of Sir William Meredith.

Leeds castle, which forms a very prominent feature in the central division of the county, is partly in this parish, and partly in that of Bromfield. The site is rather low, with reference to the grounds to the south and east; but to the north-west, it commands an extensive view over a finely diversified country. The castle is surrounded by a broad moat, abundantly stocked with fish, and supplied with water by the Len rivulet. The entrance is towards the west by a stone bridge of two pointed arches, communicating with a strong gateway, of considerable depth, and still in good preservation, with deep grooves for portcullises. Another gateway, appar-

rently of great strength, which defended the entrance of the bridge, is in ruins. The inner gate opens into a spacious court, in which are two ranges of building embattled, of different ages, containing the principal apartments, offices, &c.; to the former a modern front has been added, with sashed windows, but in the pointed style. The family rooms are few, and comparatively mean. Amongst the few paintings in the lower apartments, is a large one of the Battle of Lepanto; and portraits of Lord Fairfax, the Parliamentary General, and George the First. Up stairs, is a marble statue of Fairfax, usually styled Black Tom, from the darkness of his complexion. The walls beyond this part eastward, are flanked by round towers; and towards the north, is the more ancient and gloomy pile which formed the keep; the foundations of which rise immediately from the water, and are of immense strength. The ancient communication with this, was by a drawbridge, but is now by a bridge of two arches, covered over, and built upon. The Park, which contains some fine timber, is very agreeably diversified. Kilburne says, "touching the foundation of this castle, I finde that one Ledian, a chief counsellour of King Ethelbert. the Second, about 800 years since, raised there a pile or fort for his safety, which was afterwards wasted by the Danes, and so continued till the time of King William the Conqueror." No mention, however, of a fortress, is made in the Domesday Survey. After Bishop Odo's disgrace, this manor was granted to the Crevequers, by one of whom, the present castle was founded, and afterwards made the head of his barony. The next possessors were the Leybornes, who finding that the strength of the fortress excited the jealousy of Edward the First, resigned it to that King, whose successor, Edward the Second, granted it in exchange, in his eleventh year, to Bartholomew, Lord Badlesmere, who was afterwards styled the rich Lord Badlesmere, of Ledes, and who having joined the discontented barons, was eventually hanged at Canterbury, for treason. Previously to this, the castle was besieged by the King's troops, and being at length given up, the castellan, Thomas Colepeper, was hanged; and the Lady Badlesmere, and her family, sent prisoners to the Tower.

Richard the Second is known to have resided here at different periods; and Henry the Fourth was also resident here in his second year, in consequence of a dreadful plague which then raged in London. Archbishop Arundel afterwards procured a grant of this castle; and, in the year 1439, Archbishop Chicheley sat in the process against Eleanor, Duchess of Gloucester, for sorcery and witchcraft. Edward the Sixth granted the manor and castle of Leeds to Sir Anthony St. Leger, Lord Deputy of Ireland. His son, Sir Warham St. Leger, who was killed in a skirmish in Ireland, in 1599, alienated this manor and castle to Sir Richard Smyth, of Westenbanger, whose son and successor, dying without issue, in 1632, his two sisters became his coheirresses; and their

their husbands joined in the sale of their demesnes to Sir Thomas Colepeper, from whose family they passed in marriage to the Lords Fairfax. The late Lord Fairfax, dying without surviving issue, in 1793, his estates in this county devolved on his nephew, the late Dr. Denny Martin, who had assumed the name of Fairfax, and whose ancestors had for some time, resided in the adjoining parish of Loose. His brother, General Martin, and his sisters, lately held the estate, and resided in the castle.*

Leeds abbey, founded in the reign of Henry the First, for regular canons of the order of St. Austen, stood about three-quarters of a mile south-westward from the castle. The endowments made by the Crevequers, were considerable; but they do not appear to have been much increased by subsequent benefactions, till the reign of Henry the Seventh, when the monks, being much embarrassed by debts, were so liberally assisted by James Goldwell, Bishop of Norwich, that they seem to have acknowledged him as a second founder, and at his request, in return for the relief bestowed, instituted a chantry of one priest in the conventual church, to pray for the repose of his soul. The site of the priory, with the house, orchards, gardens, demesne lands, &c. were afterwards granted to Sir Anthony St. Leger, K.G. of Ulcombe; which passed from thence into the hands of Sir William Meredith, Bart. in 1606, and was the residence of his family till 1758. About 1765, these estates were purchased by the late John Calcraft, Esq. and are now occupied by his son. The abbey church, said to have been a magnificent structure, was consumed by fire, shortly after the Dissolution; and the ruins of the abbey itself were wholly removed in the year 1790.

LEIBOURNE.]—Leibourne, or Leybourne, which gave name to a knightly and noble family, of whom Sir Roger de Leybourne accompanied Richard the First to Palestine, in whose time they had a castellated mansion here, is five miles N. by W. from Maidstone. The manor, castle, and advowson of Leybourne are now vested in Sir Henry Hawley, Bart. of the Grange, in this parish. The remains of the castle are principally confined to a ruined gateway, machicolated, and flanked by round towers, and some remains of walls and arches: the whole has been surrounded by a moat: and within the site, stands a more modern mansion, now a farm-house,

* The late Lord Fairfax was buried in the family vault in Bromfield church, which is a small edifice, neatly fitted up, but without a single monument. His Lordship, after much extravagance, had requested to be buried as a pauper; and, agreeably to his desire, he was carried to the grave almost as such. He had been long resident at Leeds castle; and before his accession to the title, on his brother's death, had the honour of entertaining their present Majesties, from the evening of November the 3d, 1779, till the morning of the 5th. In the same vault with him, lie buried his two wives, and his sister, Margaret, who married the Rev. Dr. D. Wilkins, the celebrated antiquary. In the parish register are several items of the baptisms of the St. Legers, Scots, Crofts, and Colepepers, and many of the Fairfaxes. The village of Bromfield consists of only a few scattered

houses; and a large building of brick, erected by the late Lord Fairfax, for the use of the hop-pickers. The property of this manor has descended in the same way as that of the manor of Leeds. The present Lord Fairfax is a clergyman, and came from North America, to claim his peerage and seat in the House of Lords, which having obtained in 1800, he returned to the United States. The Fairfaxes had immense possessions in America, partly derived from their alliance with the Colepepers, and forming together one of the largest private estates in the world; but the greatest part was lost through the American revolution. The Martins had also considerable estates in that country, which were sold by Colonel Martin, brother to the General

LENHAM.]—The little market town of Lenham, $4\frac{1}{2}$ miles N. W. by W. from Charing, and $44\frac{1}{2}$ S. E. by E. from London, has been mistaken, by some of our antiquaries, for the Durolevum of Antoninus; a station which may, with more probability, be assigned to Judde Hill, at Ospringe. The town, which has greatly sunk in importance, has now a population of little more than 1500. The manor of West Lenham is the property of George Best, Esq. of Chilston; that of East Lenham forms part of the estates of Sir Edward Knatchbull, Bart.

Lenham church consists of a nave, chancel, and north aisle, with a small chapel, which seems to have been called St. Edmund's; and at the west end, a square tower. In the south wall of the chancel is a piscina of singular form; and near it a stone seat, beneath a cinquefoil-headed arch. On the north side, is an ancient figure of a man, inclosed in the wall, with his head resting on pillows. Here is also a marble tablet in memory of Dame 'Alicia Colepeper, daughter of Sir William Colepeper, of Preston Hall, and relict of Sir Thomas Colepeper, of Hollingbourn,' who died in April, 1737, in her ninety-third year; and a brass plate inscribed for Robert Thompson, Esq. who died in 1642, æt. forty-seven: "he was grandchild to that truly religious matron, Mary Honywood, wife of Robert Honywood, of Charing, Esq. who had, at her decease, lawfully descended, 367 children; sixteen of her own body, 114 grandchildren, 228 in the 3d generation, nine in the fourth; whose renown lives with her posterity, whose body lies in this church, and whose monument may be seen at Mark's Hall, in Essex, where she exchanged life for life."

LESNES.]—At Lesnes, Lessness, or Westwood, a mile and three quarters N. N. W. from Crayford,

houses; and a large building of brick, erected by the late Lord Fairfax, for the use of the hop-pickers. The property of this manor has descended in the same way as that of the manor of Leeds. The present Lord Fairfax is a clergyman, and came from North America, to claim his peerage and seat in the House of Lords, which having obtained in 1800, he returned to the United States. The Fairfaxes had immense possessions in America, partly derived from their alliance with the Colepepers, and forming together one of the largest private estates in the world; but the greatest part was lost through the American revolution. The Martins had also considerable estates in that country, which were sold by Colonel Martin, brother to the General

stood

stood Lesnes Abbey, which was founded in the year 1178 by Richard de Lucy, Chief Justice of the realm, for canons of the order of St. Augustine. This nobleman, who had been appointed Regent, during the absence of Henry the Second in France, bade adieu to temporal honours, and retired into his own monastery. He survived this event but a few months, and was buried with great pomp in the choir of the church. The church of this abbey was dedicated to St. Mary, and, what is rather remarkable, also, to St. Thomas à Becket; for the prelate had not been dead eight years, and he had, moreover, excommunicated De Lucy, for 'being a contriver of those heretical pravities, the Constitutions of Clarendon.' The original endowments consisted of the western moiety of Erith parish, including West-Wood, now called the Abbey Wood; hence its ancient name, the Abbey of West-Wood. The estates were subsequently augmented by different benefactors. This abbey was dissolved in 1524, under a commission for suppressing the smaller monasteries, in order to endow the colleges of Ipswich and Oxford, under the patronage of Wolsey; and its estates were placed at the disposal of the cardinal, for that purpose. After his disgrace, they reverted to the crown, and were subsequently the property of various individuals. In the year 1630, Sir John Hippesley, Knt. says Weever, "appointed certaine workemen to digge amongst the rubbish of the decayed fabricke of the church (which had laine a long time buried in her owne ruines, and growne over with oke, elme, and ashe-trees) for stones, and these happened upon a goodly funerall monument; the full proportion of a man, in his coate armour, his sword hanging at his side by a broad belt, upon which the flower-de-luce was engraven in many places: (being, as I take it, the rebus, or device, of the Lucies:) this, his (Sir Richard Lucie's) representation, or picture, lay upon a flat marble stone; that stone upon a trough, or coffin, of white smooth hewn asheler stone: in that coffin, and a sheet of lead, (both being made fit for the dimension of a dead body,) the remaines of an ashie drie car-kasse lay enwrapped, whole, and undisjointed, and upon the head some haire, or a simile quiddam of haire, appeared: they likewise found other statues of men in like manner proportioned, as also of a woman in her attire and habiliments, with many grave-stones and bones of the deceased; to see all which, great confluence of people resorted, amongst which number, I was not the hindmost." The relics, which were supposed to be those of the founder, were reinterred by order of Sir John Hippesley, who planted on the spot, a bay tree. He soon afterwards sold the estate, which has since been bequeathed to St. Bartholomew's Hospital. The site of the abbey, and its surrounding demesne, is now a farm; and nothing remains of the ancient edifice, except the outer walls. The bay tree, which Dr. Stukely (who visited this abbey in 1753,) describes as being the 'finest of the kind he had ever seen,' and which

VOL. III.—NO. 104.

Hasted represents, as 'wholly withered and decayed,' is now said to be very flourishing. The ancient stocks of chesnut in the abbey wood, strongly favour the opinion, that this tree was indigenous in Britain.

In a delightful situation, about one mile from the Thames, and nearly the same distance between Lesnes Abbey and Erith, stands Belvidere, the seat of Sampson Gideon, Lord Eardley. The grounds, though small, are agreeably diversified, and well wooded: and on the east side is a flourishing plantation. The shipping which pass continually, and in full view of the mansion, add greatly to the charms of the scenery, and render it uncommonly animated. The interior of the mansion is ornamented with taste, and contains a choice collection of pictures.

LEWISHAM and SYDENHAM.]—The populous village of Lewisham, 6½ miles S. E. from St. Paul's Cathedral, extends nearly a mile in length. The manor, now the property of Lord Dartmouth, was given by Elthrua, niece of King Alfred, to the abbey of St. Peter, in Ghent; subordinate to which, here was a benedictine priory, supposed to have been founded in the Saxon times.—Lewisham church, which was rebuilt about the year 1774, forms a parallelogram, with a small semicircular recess at the east end, for the altar. At the west end, is a good organ, on each side of which, is a handsome monument of the Petrie family. One of these monuments, in memory of Anne, wife of John Petrie, Esq. who died in 1787, was executed in Italy; it includes a fine bas-relief in statuary marble, representing the deceased on her death-bed, with her husband and children lamenting round her. The other, commemorative of Margaret, relict of the Rev. Robert Petrie, was sculptured by Banks: it represents Mrs. Petrie, dying in the arms of Religion, and supported by Faith and Hope. Most of the old monuments were thrown carelessly into the vault, when the church was rebuilt. Amongst the numerous monuments in the church-yard, that to the memory of the unfortunate Thomas Dermody—a name that will ever be dear in the recollections of genius—is entitled to notice. 'This ill-starred youth, whose life seems to have been spent in repulsing the efforts of fortune and of benevolence to serve him, expired in this neighbourhood, in a state of the most abject poverty, on the 15th of July, 1802, at the early age of 28. The monument, which was erected by his generous friends, bears the following inscription, from one of his own poems, entitled, "The Fate of Genius."

" No titled birth had he to boast;
Son of the desert; Fortune's child;
Yet not by frowning fortune cross'd,
The muses on his cradle smil'd.

" He joy'd to con the fabling page,
Of prowess'd chiefs, and deeds sublime;
And e'en essay'd in infant age,
Fond task! to weave the wizard rhyme;

" And

3. H

" And though fell passion sway'd his soul,
By prudence seldom ever won,
Beyond the bounds of her control,
He was dear Fancy's favour'd son.

" Now a cold tenant does he lie,
Of this dark cell, all hush'd his song;
While friendship bends with streaming eye,
As by his grave she wends along;

" On his cold clay, lets fall a holy tear,
And cries, though mute, there is a poet here."

In the parish register of Lewisham, amongst many entries of burials of aged persons, are the following: 'Alice Baylis, alias Pheasant, widow, aged 106 years, May 14, 1726; Jane Willoughby, aged, as on the coffin, 110, buried Ap' 4, 1729; Jane Tilt, from Sydenham, aged 109, Ap' 6, 1794.'—A Free Grammar School was founded here by the Rev. Abraham Colfe, rector; and who, by will, in 1656, bequeathed a large property to the Leather-sellers' Company, for charitable uses. The will contains many curious regulations for the government of the school, and conduct of the master, and directs, that it shall be for the education of thirty-one boys, of the several parishes therein named; one scholar yearly to be sent to either of the Universities. Mr. Colfe also founded an English school at Lewisham, for thirty-one boys; and an Alms-house for five 'poor godly householders.'

The hamlet of Sydenham is on the south-west side of Lewisham, adjoining Surrey, and on the edge of Sydenham Common, from the upper part of which is an extensive and beautiful prospect. Sydenham is celebrated for its mineral springs, the waters of which are of a mild cathartic quality, nearly resembling those of Epsom. They were discovered in 1640, and have all been conducted to the same well. Before this discovery, Sydenham contained only a few cottages, scarcely worthy of mention.—"In the year 1806, some Roman antiquities were found by a labourer, as he was digging in a gravel pit, on Sydenham common; the most remarkable were two fragments of inscribed tablets of copper, containing part of a decree of the Emperor Trajan, in favour of the veterans of the auxiliary cohorts, serving in Britain."

LIMNE.]—Limne, or Lympe, is 2½ miles W. from Hythe. At this place, upon the side of a hill, are the remains of an ancient fortress (now called Stutfall Castle) which included ten acres of land, and the ruins of a Roman wall may be seen almost to the bottom of the hill. This is a noble piece of antiquity, and was doubtless the Portus Lemanis of the Romans, though the port is now choaked up with sand; the horn and mace are however still to be seen, with other signs of ancient grandeur. The remains of this Roman work, hang, as it were, upon the side of the hill, the descent being pretty steep, and form an irregular square, without a ditch. A brook, which rises from a rock on the west of the

church, flows along the east side of the wall, and after passing through it, glides by a farm-house at the bottom. The composition of the walls, is similar in appearance to those at Richborough: they are twelve feet thick, and in some places, upwards of ten feet high. The real harbour is thought by some, to have been a little to the eastward, and most probably, the ancient town belonging to it, as old foundations have been frequently discovered at the side of the hill, and several Roman coins, and other antiquities have been dug up in its neighbourhood. In addition to this, a field adjoining the church-yard of Limne, is called the Northern Tower, which has borne this name beyond the recollection of the oldest inhabitants. We are informed by Dr. Stukeley, that the road between this place and Canterbury, is out in a straight line on a solid rock of stone, whence the town appears to derive its name, as *Lla*, in the British tongue signifies a way, and *Maen* a stone. About half a mile eastward from Limne church, is a spot called in ancient records, Shipwey Crosse, or Shipway, only, where, according to Lambard, the pleas and assemblies of the Cinque Ports were anciently held, and the lord wardens sworn into office. This place gave its name to the lathe of Shipwey; though now "brought to decay and obscuritie:" and it was here that "Prince Edward, the sonne to King Henrie the Third, exacted of the Barons of the Five Portes, their oth of fidelity to his father, against the maintainers of the Barons warre."

In this parish is the manor—anciently, also, a chapelry—of Street, formerly Courtup-Street, "wher," says Leland, "the Nunne of Cantorbury wroughte al her fals miracles," under the name of Bellirica, or Belcaire, and where, "the commune voice saeth that the towne hath bene large, and they shoe now theyr signa prætoriana, that is to say, a horne garnished with brasse, and a mace;—but the lykelyhod ys, that they longed to Lymne, sumtyme a notable towne and haven.—Hard by the chapel apere the old ruines of a castelet." This is now an insignificant place, consisting of only two or three houses. The chapel, which was dedicated to the Virgin, and known by the name of "Our Lady at Court-up-Street," was, at the time of the Reformation, brought into great notice by the pretended inspiration of Elizabeth Barton, the Holy Maid of Kent, who was a servant girl in the adjoining parish of Aldington. Warham, Archbishop of Canterbury, induced, observes Lambard, "by the fame of this marveyulous maiden," directed a commission of seven persons, among whom was Dr. Bocking, and four other monks of Canterbury, "to examine the matter, and inform him of the truth.—These men opposed her of the chiefe points of the Popish believe, and finding her sounde therein, not onely waded no further in the discoverie of the fraude, but gave favourable countenance, and joyned with her in setting forth of the same; so that at her next voyage (journey) to Our Lady of Court-up-Street, she entred the chappell with Ave Regina Cælorum in pricksong,

pricksong, accompanied with these commissioners, many ladies, gentlemen, and gentlewomen, of the best degree, and three thousand persons besides of the common sort of people in the country. There fell she eftsoones into a marvellous passion before the image of Our Lady, much like a bodie diseased of the falling evill, in the which she uttered sundry metrical and ryming speeches, tending to the worship of Our Lady of Court-of-Strete, (whose chapell there shee wished to be better maintained, and to be furnished with a daily singing priest,) tending also to her owne bestowing in some religious house; for such, said shee, was our ladies pleasure; and tending finally and fully to the advancement of the credite of such feined myracles as were then reported." She was afterwards admitted into the nunnery of St. Sepulchre at Canterbury, when the plot began to thicken; and the effect which her divination and foretelling had upon the common people, was by the monks employed to counteract the measures, which the king was then pursuing, with regard to his divorce, and to the reformation. Henry however, was not a man to be so diverted from his purpose: the privy council were ordered to examine into the facts, and on their report, an act of attainder was passed against the nun and her immediate accomplices, who shortly afterwards expiated their offence at Tyburn.

LIMINGE.]—At Liminge, 4½ miles N. from Hythe, formerly stood a nunnery, which was founded by Ethelburga, daughter of King Ethelbert. The church stands on high ground; and, over the entrance to the tower, are the arms of the see of Canterbury, impaling those of Archbishop Warham, in whose time the tower was rebuilt. The nave is open to the aisle by three elegant obtuse arches. In a window of the chancel is an episcopal head, in stained glass. In the valley extending through Liminge towards Elham, is a very large barrow, on which are several trees, the whole forming a conspicuous object. At Sibton, in this parish, is a small residence, formed out of a farm-house, belonging to William Honeywood, Esq.

LINSTED.]—Linsted is three miles S. E. from Sittingbourn. Linsted (or Teynham) Lodge is a large building, the seat of the Lords Teynham, erected in the reign of James the First. Great part of the park has been converted into farming land.

LINTON.]—The little parish of Linton, four miles S. from Maidstone, is famous for the excellence of its hops. Linton Place is a seat of the Mann family. The house, which commands from behind a rich prospect over the Weald, was erected about the middle of the last century, by Robert, grandfather of the present Sir Horace Mann, Bart. a great army clothier, who realised an immense fortune by contracts with government, under the patronage of Sir Robert Walpole, with whom he appears to have lived in habits of particular intimacy. The church is a small neat building, and contains several monuments, the most conspicuous is one of G. Mann, Esq. from

a design of the late Lord Oxford, of various coloured marble, inclosing an arched recess, with an urn, which has a short Latin inscription, tributary to friendship. The late Sir Horace Mann, Bart. K. B. who died in Italy, in 1786, was also buried in this fabric.

LOOSE.]—This charming little village, 2½ miles S. from Maidstone, is situated near a small stream, which flows into the Medway, and is called the Spa of Kent, from its resemblance to the German Spa. On the stream are several paper and corn mills; and much tanning and fulling, are here carried on. In the church, is a mural cenotaph for Richard Beale, merchant, who died at Hamburgh in 1702 and bequeathed 500*l.* to augment the curacy of this parish.

LUDDESDON.]—The small parish of Luddesdon is 5½ miles W. by S. from Rochester. In the church is an altar-tomb, in commemoration of James Montacute, natural son of Thomas Montacute, Earl of Salisbury, who was killed at the siege of Orleans, in 1428. He was owner of the manor.

LULLINGSTONE.]—The parish church of Lullingstone lies 5½ miles S. E. by S. from Fooks Cray. At Lullingstane, formerly a distinct parish, but now united to Lullingstone, was a small church, built with flints and Roman bricks, now exhibiting merely a pile of ruins. Near this spot, have been ploughed up, Roman bricks, coins, and instruments of various descriptions; and a little farther to the south of the ruins, part of a tessellated pavement was discovered. This estate belongs to Sir John Dixon Dyke, Bart. and is the residence of his family. The park and grounds, as also the mansion, have been greatly improved by the present owner and his predecessor. Lullingstone church is a small edifice. The interior is extremely neat, it is paved with black and white marble, the ceiling stuccoed, and the windows are ornamented with fine painted glass, both ancient and modern. Here are some splendid monuments, in memory of the Rokesle, Pechie, and Hart families; a curious brass, representing a knight in complete armour, with a lion at his feet, is commemorative of Sir William Pechie, who died 1487. On the south side of the altar may be seen a splendid tomb of Sir Percyval Hart, and his lady. On the opposite side, is the elaborate monument of Sir John Pechie, the lord deputy, who is represented by a knight in armour, in a recumbent posture. Below the east window of the north chapel is the tomb and effigies of Sir George Hart, second son of Sir Percyval, and his lady, the former in armour, and the latter in the dress of the times. The west side of the chapel exhibits a rich monumental screen, in stucco, in the Gothic style, a memorial of "Percyval Hart, Esq. the munificent repairer and beautifier of this church," who died in 1738. On the north side is an elegant mural monument, in memory of Dame Ann Dyke, and her two husbands, John Bluet, Esq. and Sir Thomas Dyke, Bart. Among the painted glass are representations of the martyrdom

martyrdom of St. Amphibalus, St. George and the Dragon, St. Botolph, St. Agnes, St. Ann instructing the child Jesus, St. Elizabeth, and a variety of other saints, with small historical illustrations, and various arms of the successive owners of this manor. The nave is divided from the chancel by a finely carved Gothic screen in wood, embattled, and supporting the rood-loft, which is still in a perfect state.

LYDD.]—Lydd is a small market town, with a population of about 1500, 86½ miles S. E. by E. from Maidstone, and 71½ S. E. by E. from London. It occupies a low site, near the south-west extremity of the county, where a point of land forms the Bay of Dengeness. It is a corporation by prescription, and is governed by a bailiff, jurats, and commonalty. Fishing and smuggling constitute the chief employment of the inhabitants. The church is a large edifice, consisting of a nave, chancel, and aisles, with a massive tower, and contains numerous monuments. The holm trees, or sea hollies, mentioned by Leland, still flourish on the beach.—On the point of land called Dengeness, is a light-house, which is built partly on the model of the Edystone light-house. This point is defended by a fort, and several ranges of barracks, which were erected in the vicinity, during the first war of the French revolution.

MAIDSTONE.]—Maidstone, the county town, is 34½ miles E. S. E. from London. The houses rise immediately from the eastern banks of the Medway, and extending up the acclivity towards the north, are, in the upper parts of the town, very considerably elevated above the valley. The soil (mostly a loam, with an under stratum of shattery lime-stone, in which oyster, and other shells, are frequently found,) is peculiarly favourable for hops, fruit orchards, and filbert plantations, which abound in this neighbourhood.

By some, Maidstone has, though erroneously, been considered as the *Vagniacæ* of Antoninus. Several writers have conjectured, that this was the *Caer Meguiad*, or *Megwad*, of Nennius's catalogue of British cities. The Saxons named it *Medwege-stun*, from its situation on the *Medwege*, middle river, or *Medway*, as it is now called. In the Domesday book, it occurs by the appellation of *Meddestane*; and in records of the time of Edward the First, it is frequently, according to Harris, written *Maydenestane*: from the latter, Maidstone was an easy transition. The manor formed part of the estates of the see of Canterbury at a very early period. After the dissolution, it continued in the crown till Edward the Sixth gave it to Sir Thomas Wyatt. Charles the First, bestowed it on the Lady Elizabeth Finch, whom he had created Countess of Winchelsea, and whose descendants continued to possess it till 1720, when Heneage, the fourth earl, alienated it to Robert, Lord Romney, in whose family it still remains.

The rebellion of Sir Thomas Wyatt, and the bat-

tle fought here in 1648, between the Kentishmen in the interest of Charles the First, and the troops of the Parliament under Fairfax, are the chief historical events relating to this town. It was at "the Bear-ingle, by the Little Conduit," that Wyatt (who then resided at the Mote) first proclaimed his design, and had sufficient influence to engage the inhabitants in his scheme. After the defeat of the insurgents, Wyatt was executed on Hay Hill, near what is now Berkeley Square, in London; but some others, were hanged in this town; and, as a general punishment for the inhabitants, Queen Mary deprived the borough of its charter, which had been granted by Edward the Sixth. Several respectable Protestants were burnt here, in the King's Mead, during the reign of Mary. In the battle between the Loyalists and Fairfax, the forces were unequal, and the former experienced a signal overthrow.

Maidstone, a borough by prescription, was anciently governed by a Portreve and twelve brethren. Edward the Sixth, in 1549, incorporated the inhabitants by the style of "Mayor, Jurats, and Commonalty;" and, in 1552, they returned two members to Parliament. Queen Elizabeth, in her second year, granted a new charter, with additional privileges. Some of its clauses having occasioned doubts as to their precise meaning, James the First, in 1604, granted an explanatory charter; and afterwards, in 1619, a second: by these charters the town was governed till 1682, when a new one was issued, and continued in force till the revolution, when the ancient ones were again resorted to, and acted on till 1748. In that year, the corporation being dissolved by a judgment of Ouster, pronounced against the acting jurats, on an information of *Quo Warranto*, a new charter was granted by George the Second, by which the government of Maidstone was vested in a mayor, twelve jurats, forty common councilmen, a recorder, two serjeants at mace, and other officers.

From the maritime survey made in 1565, it appears, that here were then 294 inhabited houses, twenty-two persons engaged in merchandise, four landing places, and five ships and hoys, of from thirty to fifty tons burthen. About three years afterwards, the manufacture of linen thread, &c. was introduced into this town by the Walloons. This manufacture is still continued; and the flax spun for the thread-men, is vulgarly denominated Dutch-work. The great source of the wealth of Maidstone is, however, in the cultivation of hops; and the erection of many paper, corn, and other mills, in this and the adjoining parishes, has contributed to augment the wealth and population of the town. "The produce of these mills, which is conveyed to London, Rochester, Chatham, &c. by water, greatly increases the carrying or barge trade; and the number of hoys, barges, and small craft, employed upon the Medway, and belonging to the inhabitants of this town, is very great.

great. From the Weald of Kent, and its vicinity, much timber is brought hither by land-carriage, and afterwards sent down by water to Chatham dock, and other places more distant. Here are, also, large warehouses, and stowage rooms for hops, and several wharfs for coals, timber, &c. so that the banks of the Medway continually present a very busy scene." A distillery of English spirits, or Maidstone Geneva, established by the late Mr. George Bishop, has been carried on here to a great extent, for several years. Here are also two very considerable breweries, for porter, &c.

In the years 1593, 4, and 5; 1604, 1609, and 1666, 7, and 8, the plague committed dreadful ravages here. The Pest-house is yet standing at Tovel.

Mr. Lysons states, that, in January, 1795, through the melting of the preceding snows, "the ice about Teston coming down in large sheets with the current, choked up the arches of that bridge, and destroyed Bow bridge. The furious current, with its loaded surface, carried away the wooden bridges of Barnjett and St. Helen's at Barming; resisted by that of East Farleigh, until its parapet walls gave way, the whole contents floated with rapidity down the river, damaging the locks, and threatening Maidstone bridge; but at length the loaded water, increased by the back river, rising higher than the walls, the whole of the ice passed on: fortunately the frost of the ensuing night arrested the water on its way, and a more gradual thaw removed it without further mischief. Those who lived in the houses near the river, were compelled to use boats in the street, and take to their upper rooms, as their houses were several feet deep in water. The fields had a very extraordinary appearance, from the vast sheets of ice which lay upon them, and had bent and kept down trees of considerable thickness. It was justly compared to the breaking up of the great frosts in North America."

In this town, the archbishops of Canterbury had a palace as early as the reign of King John. On the site of the old mansion, which was pulled down by Archbishop Ufford, about the year 1348, was built a new palace, by Islip. Considerable additions were afterwards made by Archbishop Courteney, who died here in 1396; and further alterations, and considerable repairs, were made in the time of Henry the Seventh, by Archbishop Morton; but in the next reign, Cranmer exchanged this palace, the manor of Maidstone, &c. with the king. Queen Elizabeth granted the palace, with other demesnes, to Sir John Astley, Knt. who afterwards became master of the revels to James the First. This family alienated this, and all their other estates, in the neighbourhood, to the Lords Romney, about the year 1728, or 29. The remains of the palace are still considerable, and form an agreeable residence, close to the Medway, in the south-east part of the town.

Maidstone church consists of a nave, aisles, and

chancel, with an embattled tower, on which formerly stood a spire, about eighty feet high, that was destroyed by lightning in November, 1780. The side walls are also embattled. The windows are large, and divided by mullions, into several lights, with rich tracery above. "This is one of the largest parochial edifices in the kingdom: its entire length within is 227 feet; of which the chancel includes sixty-three and a half: its breadth is ninety-one feet; that of the chancel and its aisles, sixty-four." The chancel (perhaps the whole of this fabric) was rebuilt in the time of Richard the Second, by Archbishop Courteney, who, in 1395, obtained the king's licence to make this church collegiate, for the use of the warden, chaplains, and other members of the new college which he was then building, close to the southern side of the cemetery. He was buried in the middle of the chancel, where his skeleton was found in 1794; a discovery which terminated the contention that had long been carried on, respecting the real burial place of Courteney.

On the south side of the chancel, are the remains of four very elegant stone seats, displaying the arms of Courteney, and of Arundel. Here also are the ancient wooden stalls used by the master, brethren, and other persons belonging to the college; and beneath the seats, are various carvings of human heads, grotesque figures, and other devices. On the north side of the chancel is an ancient tomb, wherein was buried one of the Woodvilles, or Widvilles, ancestors to Edward the Fourth's queen, (probably her great-grandfather,) who were sometime seated at the Mote. In the vaults within the communion rails, several of the ennobled families of Astley and Marsham lie buried. Many other monuments and sepulchral inscriptions appear in this fabric. The church is well pewed, and furnished with large galleries, and a good organ.

Archbishop Courteney's college was an extensive pile of stone; most of the buildings are yet standing; but they have long been converted into a dwelling house, with its offices, stowage rooms for hops, oats, &c. Of the several masters of this college, who were of literary eminence, the learned William Grocyn, prebendary of Lincoln, the tutor and friend of Erasmus, is recorded as the principal. On the suppression of this college, in the first of Edward the Sixth, its gross annual income was estimated at 212*l.* 5*s.* 3*d.* The estate is now the property of the Earl of Romney. The chapel, and some other parts of the hospital founded by Boniface, still remain in the West-Borough; the cemetery belonging to it, is now a garden. Another ancient foundation, called the priory, or friary, is now a dwelling, at the corner of East Lane, fronting to the High Street, which has its lower or ground floor vaulted with stone, with a Gothic door-case, the top of which, from the town being very much raised since the fourteenth century, is now so low, as to run parallel with the pavement. This is supposed to have been the house of a Convent of Franciscan or Grey Friars.

founded at Maidstone, in 1331, by Edward the Third, and John, Earl of Cornwall, his brother, but afterwards removed to Walsingham, in Norfolk. St. Ezith's chapel, of the history of which, but few particulars are known, appears to have been long used for Divine worship. The remains of the chancel have been divided, and converted into a boarding-school, and an assembly-room; and the cemetery has become a nursery-ground, and a garden.

Near the river, at the end of Earl Street, is the Free Grammar-School, where many eminent literary characters have received their early education. The school-room, &c. were originally the chapel and lodgings of the "fraternity of Corpus Christi," founded by some inhabitants of Maidstone, and professing the rules of St. Benedict. When this fraternity was suppressed, the buildings then called the Brotherhood-hall, &c. were purchased by the mayor and commonalty of Maidstone, who established the Free Grammar-School. Various donations have, at different times, been made to this school, the principal of which was bequeathed, in 1618, by the Rev. Robert Gunsley, rector of Titsey, in Surrey, for the purpose of founding an exhibition for four scholars to University college, Oxford; two of them to be chosen from this establishment, and two from the Free-School in Rochester. Here are also two charity-schools, and two ranges of almshouses, each for six persons of both sexes. The poor-house, a brick building, standing near the church, was built about the year 1720, by Thomas Bliss, Esq. a native of Maidstone.

In the year 1791, an act was obtained for the purpose of new paving and lighting this town: its different market-places have been repaired, and the fish-market rebuilt, since that period. The river also, which is crossed by an ancient stone-bridge of seven arches, has been much improved by the building of a large lock beyond Allington castle. The grant for the weekly markets, was obtained from Henry the Third, through the influence of Archbishop Boniface; that, for the monthly ones, from George the Second. The fairs are principally held in a meadow of 16 acres, and in the High Street.

The shire hall is a good modern structure, erected at the joint expense of the corporation of Maid-

* Three persons of this town, most probably natives, obtained considerable notoriety during the civil wars. These were Andrew Broughton, recorder, and twice mayor of Maidstone; Thomas Trapham, M.B. who was surgeon both to Fairfax and Cromwell; and Thomas Read, Gent. who, on the trial of Charles the First, deposed that he had seen that monarch at "the head of a guard of horse" between Lostwithiel and Fowy. Broughton was one of the two clerks, and also secretary of the "High Court of Justice," and in that situation, he read both the charge preferred, and the sentence passed, against the unfortunate Charles. Excepted from the bill of indemnity, at the Restoration, he fled privately to the continent, and took refuge in Switzerland, with Ludlow, Say, Deady, Lisle, and some others. He died at Vevay, in that country, of "old age alone," in 1687.—Trapham, who was admitted a bachelor of

stone, and of the justices for the western division. Near to it is a prison called the Brambles, now belonging to the corporation, but anciently to the archbishops. The gaol, a spacious stone building, in East Lane, has been erected since the year 1741, in place of the more ancient prison, which stood in the centre of the town. It has been since much enlarged, and strengthened at a great expense; and some excellent regulations have been made for its government. The conduit, which forms the principal reservoir for supplying the inhabitants with water, stands on the upper end of the High Street; it was built about 1624, and cased with free-stone. Another reservoir is contained in a new octagon building, stuccoed, in the lower part of the town; also used as a butter-market. The water is conveyed by pipes laid under the Medway, from an inclosed spring, called Rocky Hill, in the West Borough. The corn-market is a circular space, having a roof supported on pillars, and surmounted by a gilt wheatsheaf. In Earl Street is Earl's Place, an ancient stone mansion, having a large oriel window filled with painted glass, in which are various birds, represented in different actions; and also the arms of Archbishop Stafford, repeated six times.

This town, extending from north to south, about a mile, and from west to east, somewhat more than three quarters, consists chiefly of four streets, intersecting each other, with smaller ones branching off at right angles. The High Street is spacious, and for the most part well built: on the west side is a small but neat theatre. Nearly half the inhabitants are supposed to be dissenters from the establishment, principally Presbyterians and Anabaptists. Here are extensive barracks, both for infantry and cavalry, in the road to Rochester, at a short distance beyond Week Street. The buildings are of wood, painted white, and forming a hollow square, with a riding-school towards the river.

This town has given birth to several eminent men,* particularly of a family surnamed De Maidestan, of whom Sir Walter had license, from Edward the Second, to embattle his mansion here.† We may also enumerate Dr. Edward Lee, Archbishop of York, from 1531, to 1544, when he died, and was buried in his own cathedral; John Jenkyns, a celebrated musician and composer, in the reigns of

physic, in 1648, was "a bitter enemy," observes Newton, "to Charles the First, to whose body, after his decollation, he put his hand to open and embalm: when that was done, he sewed his head to his body; and that being done also, he brutally and insolently said to the company, that he had 'sewed on the head of a goose.' Afterwards he was surgeon to Cromwell, at Worcester fight, was a great man among his party, and got what he pleased."

† Ralph de Maidestan, who was Bishop of Hereford between the years 1234 and 1239, is celebrated by Matthew Paris, as "a man of excellent learning, and holiness of life." He resigned his bishopric in the latter year, and became a Franciscan friar at Gloucester, where he died, and was buried in 1245. Walter de Maidestan was consecrated Bishop of Worcester, in 1303; and others of his family became ecclesiastics of note.

Charles

Charles the First and Second; the Rev. William Newton, vicar of Gillingham, in Dorsetshire, who published the "History and Antiquities of Maidstone," in 1751; and the admirable engraver, Woollet.*

The Mote, the seat of the Earl of Romney, stands about a mile S.E. from the town. This estate was anciently the property of the Leybournes, who had a castellated mansion here, from the moat surrounding which, most probably, it derived its present name. It afterwards passed through the families of Shofford, Ditton, Burghersh, and Woodville, or Widville; of whom Richard de Widville, K. G. Earl Rivers, and Lord of the Isle of Wight, was father to Elizabeth, Edward the Fourth's Queen. "When this good man," observes Philipott, "was miserably massacred by Robert Ridisdale, Captain of the lewd people of Northamptonshire, who took him at Edgcot-field, and struck off his head at Northampton, (their will being their law, and mischievous minister to their wild designs,) all his seven sons who survived him died without issue, and then Sir Thomas Wyatt, grandfather to Sir Henry Wyatt, afterwards his successor in the possession of it, became owner of this place." After his attainder, Queen Mary granted the estate for a term of years to her kinsman, Archbishop Cardinal Pole; but having again become vested in the crown, it was finally granted out by Elizabeth, and it afterwards passed through different families, by descent and purchase, to the Tuftons, Baronets. Sir John Tufton, Bart. bequeathed it to his niece, by whom it was soon alienated to the learned Sir John Marsham, Bart. Sir Robert Marsham, Bart. was created a peer by the title of Baron Romney, in June, 1724; and his grandson, a Viscount and Earl, in June, 1801.—The old mansion, a venerable but rambling building in the lower part of the Park, and embosomed in trees, was taken down about 17 or 18 years ago; the Earl having previously erected a new and more splendid structure on a knoll, commanding some fine views. The principal apartments are spacious, and magnificently fitted up, containing some good family portraits, and other paintings. A broad piece of water, crossed by a handsome

bridge, has been formed in front of the mansion.—The Park, which is extensive, contains some very fine oak, and other timber.

Park House, a handsome structure, agreeably situated about half a mile from Maidstone, is the property of Sir Henry Calder, Bart.

MALLING.]—The market of West (or Town) Malling, lies $5\frac{1}{2}$ miles W.N.W. from Maidstone, and $29\frac{1}{2}$ miles S.E. by E. from London. The village of East Malling, on the opposite side of the Medway, is $4\frac{1}{2}$ miles W.N.W. from Maidstone.—The population of West Malling, in 1811, was 1154; that of East Malling, 1256. The manor of West Malling, according to Lambard, was given "to Burchicus, Bishop of Rochester, by King Edmund, brother of Athelstane, under the name of the three Plough-lands, in Mealinges." After a temporary alienation, it was restored to the bishops of this see." A Benedictine nunnery was soon afterwards founded here, by Bishop Gundulph, who endowed it with the manor, church, and other estates. The bishop presided, in person, over the nuns, and at his decease, directed that an abbess should be ordained, subordinate, however, to the Bishops of Rochester. In 1190, the abbey, and also the village, suffered considerably by fire. Several valuable privileges were granted to this abbey by King John and his successor; its annual revenue, at the period of its spoliation by Henry the Eighth, was estimated at 245*l.* 10*s.* 2*d.* The manor and abbey-buildings, after having passed through various hands, now rest in the possession of Sir John Honeywood, Bart. of Elmsted, whose predecessor rebuilt the abbey-house, which is at present the residence of George Talbot Hatley Foote, Esq. Many parts, however, still remain of the original pile, and also a portion of the west end of the abbey-church, a beautiful relict of Norman architecture. Some stone coffins have been dug up here, with rings, and other trinkets. Over a doorway, is a heart, goutté de sang, transfixed by a spear; and on the gateway, a shield ermine, a crosier in bend sinister. The abbey grounds were well watered by a clear stream of water, flowing from Nether Well, where may be seen the ruined tower of St. Leonard's cha-

* William Woollet, of humble, yet respectable origin, was born in August, 1735. Having been placed under Tinney, an engraver of some eminence, in London, he very early distinguished himself. When a young man, he was employed by Boydell, to engrave the Niobe from Wilson's celebrated picture; and the masterly manner in which the engraving was finished, at once established his fame, and evinced the increasing superiority of his talents. This print now bears a very high price; for, as a representation of a land storm, it ranks with the very finest. Woollet's first historical plate was the Death of General Wolfe, from West. This was received with general admiration; and Woollet was appointed engraver to the King. He next exhibited his talents in portrait engraving, and executed a much admired likeness of Rubens, from a picture by Rubens himself. Of all his works, however, that perhaps, which has obtained the highest professional approbation, is The Fishery, in which a man of war is represented as coming into port in a

heavy gale of wind. This bears a greater price than either the Niobe, or Death of Wolfe. Woollet was cut off prematurely, yet not till he had exhibited a vigour of taste, a depth of judgment, and a power of handling, fully equal, if not superior, to any engraver that ever lived. From his early years, he employed every opportunity to improve himself in drawing; and it has been mentioned as a fact, that when on a journey by the stage to Maidstone, he prevailed on the coachman to stop till he had sketched a very fine dock, then growing by the road side. His death was accidental; he ruptured his groin in crossing a stile; and his delicacy preventing him from getting proper assistance in sufficient time, he died within a few months in extreme agony, on the 23d of May, 1785, in his 50th year. Four days afterwards, he was buried opposite to the west end of St. Pancras church, near London, where an upright grave-stone records his memory. A monument to his genius has also been erected in the cloisters of Westminster abbey.

pel.—The church of Town Malling is a large handsome fabric, with a Norman tower at the west end. Here are some ancient and curious brasses. A small free school was built here: but it is without an endowment. The houses are of red brick; and, in general, good buildings, forming a street of about half a mile in length. The salubrity of the air, and the charms of the situation, have induced many genteel families to fix their residence in this neighbourhood.

Bradbourne, in East Malling, is the seat of Sir John Papillon Twysden, Bart. a descendant of the upright Judge Twysden, who purchased this estate about the year 1650. His great grandson, Sir Roger Twysden, greatly improved this seat, which forms one of the most delightful residences in Kent. A small rivulet flows through the park, which falls into the Medway, near Mill-Hale, a hamlet of Aylesford. Some portraits of Judge Twysden are to be seen in Bradbourne House.

MARGARET'S.]—St. Margaret's, or St. Margaret at Cliffe, is situated on a small bay, near the South Foreland, five miles N.E. from Dover. It stands within a quarter of a mile from the edge of the cliffs, which are here of considerable height. The manor-house of West Cliffe, now a farm, was formerly the residence of the Gibbons, a family which gave birth to the historian of the Decline and Fall of the Roman Empire; and by the female line to Lord Chancellor Hardwicke. The church is an ancient structure, of Norman origin. The angles of the tower were formerly ornamented with turrets; but one of them having fallen, the others have been taken down. St. Margaret's Bay is only frequented by fishing craft, to defend which, a small pier, or jetty, was made here in the time of Archbishop Morton. Lobsters, small, but finely-flavoured, are caught here.

MEOPHAM.]—This village, 6½ miles W. by S. from Rochester, was the birth-place of Archbishop Meopham, who, about the time of Edward the Third, is said to have rebuilt the church; the east window of which displays an archiepiscopal figure, commemorative of this prelate.

MERSHAM.]—Mersham is 3¼ miles S.E. from Ashford-Hatch, in this parish, has been the seat of the Knatchbull family nearly three centuries. The mansion is a spacious brick edifice, with wings. The burial-place of the Knatchbulls is in Mersham church: the principal monument is that of Sir N. Knatchbull, and Bridget, his second Lady, daughter to J. Astley, Esq. The former, who died in 1636, is commemorated by a full-length effigy in white marble, leaning on his right elbow; above which, under a canopy, is the figure of his Lady, kneeling.

MEREWORTH.]—The manor of Mereworth, five miles S. E. from Wrotham, lent its name to an ancient family, a representative of which, Sir William de Mereworth, accompanied Richard Cœur de Lion in his expedition to Acon. It has since passed through various families, and is now the property of

Sir Thomas Stapleton, Bart. under the title of Baron Le Despenser. His splendid residence, Mereworth castle, was erected by the late Mildmay Fane, eighth Earl of Westmoreland, after a design by Colin Campbell, from a beautiful building in Italy.—From its having been erected on the site of an old embattled mansion, it is called, though not in strict propriety, a Castle. It consists of a centre, and two wings, for offices, of equal elegance. The principal front is towards the north, and the entrance opens under a portico, ascended by a grand flight of steps. The great hall, from which all the principal apartments diverge, is lighted up by a dome and cupola. The rooms are in general small, but are fitted up in a style of great splendour. The grounds behind the house are agreeably diversified; and, in front, is a broad sheet of water. The parsonage-house is a handsome edifice, and presents a good object from the castle. An avenue of three miles in length has been cut by his Lordship through the Hurst Woods, to communicate with the London road. Wild swine were found in the woods so lately as the reign of Queen Elizabeth, and among the quarry hills, the martin cat may still be seen. The church is built on the plan of St. Paul's, Covent Garden, but is more splendid, and has an elegant spire. Here are no pews, but seats, as on the continent: the pillars are an imitation of marble. In the east window, is some fine painted glass, representing the arms and alliances of the Earls of Westmoreland. The remains of the Fanes, removed from the old church, were re-interred in a chapel at the west end. In the register, are various items of baptisms, and burials of this family.

Yates, the property of Mrs. Masters, is another handsome seat in this parish, about one mile west of the castle.

MILTON.]—The ancient market-town of Milton—Midletun, or Middleton—part of the demesnes of the Saxon Kings, lies twelve miles N.E. by E. from Maidstone, and 39 E. by S. from London. The greater part of the town is built on the acclivity of a hill, about half a mile from the high road, sloping down to a small creek which falls into the Swale. The streets are narrow, and badly paved. The inhabitants are chiefly engaged in maritime pursuits, and fishing. The vicinity of this town to the Swale, caused it to be frequently plundered by the Danes, in their piratical incursions. It was here that the veteran chief, Hastings, endeavoured to establish himself, in the time of Alfred; and the remains of his encampment, may be seen in the marshes of Kemsley Downs.

Milton appears to have shifted considerably from its ancient site, the church being now at a distance to the north of the present town. It was a place of considerable importance in the time of William the Conqueror; who, according to the Domesday Book, held the manor, in which were "309 villeins, with 74 borderers, having 160 carucates." There were also "six mills of 30s.; 27 salt-pits, of 27s.; 32 fisheries,

fisheries, of 22s. 8d.; and wood for the pannage of 120 hogs." A market was granted to this town, by Isabella, Queen of Edward the Second, with the liberty of holding a four days' fair annually. The town is governed by a portreeve, who is chosen annually. The market-house and shambles are situated in the centre of the town: at a small distance from these, is an old timbered building, called the Court House, where the manor-courts are held: and beneath this, is the town gaol. The population of Milton, in 1811, was computed at 1746. The church is a large handsome fabric, consisting of two aisles, and two chancels, with a massive embattled tower at the west end. Some ancient monuments may be seen here.

The oyster fishery has been, for centuries, the principal source of employment to the inhabitants of this town. The right of fishing in the manor and hundreds of Milton, was granted by King John, to the abbey at Faversham: at the Dissolution, it reverted to the crown; and it is now held on lease, by a company of Free Dredgers, who are governed by their own particular rules, or bye-laws, made by ancient custom, at the Court Baron: the oysters from this fishery are in great request, under the name of Native Miltons. There are four wharfs here, and considerable shipments of corn are annually made for the London markets. In the western part of this parish, are several acres of coppice-wood, which are interspersed with numerous stumps of old chesnut-trees, whence these woods are usually called the Chesnut-woods: many of the trees have a venerable appearance, and seem to have served as boundaries for the parishes, and also for private property.

Northwood, an extensive manor in this parish, was granted to Stephen, son of Jordan de Shepey, who lived in the reign of Richard the First, and King John: he built here a mansion-house, to which was added a park well stored with deer, and wild boars; he erected, likewise, a free chapel.—The estate was continued in a direct male line in the family, till the reign of Henry the Eighth, when the family became extinct, and the manor was allotted to a co-heiress, the wife of Sir John Norton, Knt. who became possessed of it, in her right—His descendant, Sir Thomas Norton, Knt. sold the manor to Manasses Northwood, Esq. of Dane Court, Thanet, who was descended from a collateral branch of its ancient owners. His son sold it to Sir William Tufton, of Hathfield, Bart. in the reign of Charles the First, since which it has had numerous owners.

MONGEHAM.]—Great Mongeham lies two miles, and Little Mongeham two miles and a half W.S.W. from Deal. The former was given to the church by Eadbert, King of Kent, for a supply of diet and apparel to the monks of St. Augustine's, and upon the dissolution of the convent, it was annexed to the revenue of the crown. Henry the Eighth, in the third year of his reign, granted it to the dean and

chapter of Christchurch, Canterbury. Barville lies partly in this parish, and was in the possession of the Crayfords, for some centuries. Little Barville was joined to Great Barville, about the latter end of the reign of Elizabeth.

MOTTENDEN.]—At Mottenden, or Modinden, a priory of Trinitarian friars was founded, by Sir Michael de Ponynghes, Knt. about the year 1224. The site of the priory, granted by Henry the Eighth, to Thomas, Lord Cromwell, lately belonged to J. Curteis, Esq. Mottenden is in Headcorn parish, nine miles W.S.W. from Charing.

MURSTON, &c.]—The village of Murston is one mile E. of Milton; that of Bapchild, is a mile and a half E.S.E. and that of Tong, is a mile and three-quarters E.N.E. from Sittingbourne. Their churches, though small, are all very ancient, and exhibit some striking specimens of Saxon and Norman architecture. The exterior walls of Tong church are of more modern date than the inside of the fabric. Bapchild church consists of a nave and north aisle, with two chancels, and a square tower, crowned by a spire. Widred, or Withred, King of Kent, is recorded to have assembled a great council of the nobility and clergy, in the year 694, at Bapchild.—Another council is said to have been held in this place, in the year 798, by Archbishop Athelard.—The parish of Tong, according to tradition, derived its name from Thwang-ceastre, a fortress belonging to Hengist, which he is said to have built here, on receiving from Vortigern a grant of land, of the extent that might be encompassed with an ox-hide; which he ingeniously cut into thwangs, or thongs. This story may, perhaps, rest upon no solid foundation, and its close resemblance to that of the origin of Carthage, will raise considerable doubts in the mind of the classical reader as to its truth. The name is more probably borrowed from Thong castle, in Lincolnshire; as it was there the Saxons obtained their first victory. The site of Tong castle is about a quarter of a mile to the north of the high road; a high mount, surrounded by a deep moat, are the only vestiges of the ancient fabric. Several urns, a brass helmet, a sword, &c. have at various times been dug up within the area of the castle. The large tract of marsh land which extends through this neighbourhood, renders the situation extremely unhealthy.

"He that will not live long,
Let him dwell at Murston, Tenham, or Tong,"

has long been a proverbial phrase.

NACKINGTON.]—The village of Nackington is two miles S. from Canterbury. Nackington House was purchased by the Milles family, about the year 1730. Heppington, another seat in this parish, belongs to the Fausset family; one of whom, the Rev. Bryan Fausset, formed here a curious collection of Roman antiquities.

NETTLESTEAD.—Nettlestead, 5 miles W.S.W. from Maidstone, was the ancient seat of the Pimpes, who held

held this manor under the Clares, Earls of Gloucester, in the time of Edward the First. This family becoming extinct, in the reign of Henry the Seventh, Nettlestead fell under the patrimony of John Scott, of Scott's Hall, and now belongs to Lord Barham. In the church, are two monuments of the wives of Sir John Scott, son of the celebrated Sir Thomas Scott. The windows are adorned with painted glass, illustrative of Scriptural subjects, with the arms and alliances of the Pimpes, &c.

NEWENDEN.]—Newenden, anciently Anderida, or Caer Andred, is situated on the brow of the high ground above the Rother, where that river divides Kent from Sussex, $4\frac{1}{2}$ miles S.W. by S. from Tenterden. Caer Andred was totally destroyed, about the year 491, by the Saxon chief, named Ella, who had invaded England, with a large body of forces, on the invitation of Hengist. After a very vigorous resistance, all the inhabitants were massacred, and the walls themselves razed to the ground, in which desolate state it remained for many ages. Dr. Harris imagines, that the exact site of the ancient city, is a raised point of land, called the "Castle Toll," containing 18 or 20 acres, situated between the river Rother and Haydon sewer, about a mile and a quarter, east-north-east, from Newenden Street, and which, "on the east side, has the remains of a deep ditch and bank, which seems to have been continued quite round it." The manor of Newenden, with other lands, was granted, by the name of Andred, to the monks of Christ-church, Canterbury, for the feed of their hogs, "ad pascua porcorum." The village now consists of only a few cottages surrounding the church, in which is a fine old stone font, standing on four pillars, with capitals of flowers, and ancient Saxon ornaments round the top. In the marshes near the river, is a strong Chalybeate spring.

The manor of Losenham, in this parish, was long the seat of a younger branch of the Auchers, but was at length carried, in marriage, to the Colepepers. Sir Thomas Fitz-Aucher founded a priory here, for Carmelite friars, in 1241.

NEWINGTON.]—There are two parishes of this name, in Kent; one, two miles and a half N.E. by N. from Hythe; the other, three miles W. N. W. from Milton. At the former, Roman coins have been dug up; and, at Milkey Down, in this parish, three human skeletons were found, in 1760, with remains of necklaces, composed of glass, coral, and other beads, of various colours, and sizes. The manor is now the property of J. D. Brockman, Esq. of Beachborough, a descendant from Henry Brockman, whose great-grandson, Sir William, highly distinguished himself in the defence of Maidstone, against General Fairfax, in 1648. The house is situated among most romantic grounds, with conical hills rising in front, clothed with a smooth sheep pasture: on one of the hills, is an octagon summer-house, commanding a very extensive view over the

adjoining country, and of the coast of France.—Blackwose, or Canons Court, in this parish, derived its latter name from a cell of Premonstratensian canons, founded here, and made subordinate to the priory of that order, at Lavenden, in Buckinghamshire.

The other place, named Newington, is thought to occupy the site of a more ancient town, inhabited by the Britons, and subsequently by the Romans. The Watling Street crossed this parish, near the spot now occupied by the village. About a mile further to the west, is Key-Col Hill, from *Caii Collis*; and, about a mile beyond that, is Key Street, from *Caii Stratum*. The second field, on the north of the high road from Key-Col Hill, has also long been noted under the appellation of Crockfield, from the abundance of Roman vessels dug up therein. In another field, adjoining, on the south-west, is a large artificial mount, with remains of a broad and deep ditch. About the beginning of the reign of Charles the First, many hundreds of Roman pots, urns, &c. of all sizes and fashions, were dug up in Crockfield; containing nothing, however, but bones and ashes. Round the upper part of one of them, of a globular form, was an inscription, partly defaced, of which the words *Severianus Paler*, could be traced. The last Earl of Winchelsea searched here several times with success, and had a numerous collection of these urns. This place was probably a common burial-place for the Romans. In the reign of Elizabeth, a weekly market was held at Newington; but it has long been discontinued.

Newington church is situated on a rising ground, about a mile and a half from the village, on a kind of bay, surrounded by finely-wooded hills. It has an embattled tower, at the west end, constructed of square flints and rag-stone alternately. The principal chancel is separated from another, on the north, by two plain, pointed arches; the pier between which, exhibits, in mouldings and capitals, a curious specimen of Roman architecture, and the mixed style which succeeded. In the south chancel, is a curious coffin-shaped tomb of freestone, covered with a slab of dark grey marble: on each side, are five deeply recessed pointed arches, with trefoil heads: one of the arches is open into the tomb. It is not known for whom this tomb was raised. The font is one of the few remaining of the beaufet kind. Several of the Hasted family have been buried here.

NONINGTON.]—Nonington is $4\frac{1}{2}$ miles S. from Wingham, of which it was anciently a chapelry.—In the church, are several memorials of the Hammond and Boys families; and some quaint, though not very curious epitaphs. The following, however, appear to be worth transcribing:—

" In Kent and Essex, where she came,
She left behind her such a name
For virtues wreathed one in one,
For sweet behaviour, and religion,
For modest wisdom, and sobriety,
True marriage love, unstained chastity,

In

In life and death, I count her blest,
Which so could live, and so did rest."

"Here lyes her corps which living held a spiritt,
That zeal and modesty did still inheritt,
Till God, who knewe the virtues that she had,
Saw her too good to live with us, so bad;
Her earthly part lies here involv'd in dust:
Her heavenly sowle a saint among the just."

"If piety to God, and love to saintes,
If pity to the poor, in their complayntes,
If care of children's godly education,
If modest caryage meritt estimation,
All these, and more, shall this good lady have,
To kepe her ever from oblivion's grave,
God he will crowne her with eternal blisse,
The church doth honour her, the poore her misse,
Her godly offspring treading in her wayes,
To their succeeding age commend her prayse,
Such honor she, such honor may they find,
That unto Syon beare a loving mynd."

The manor of Fredville, in this parish, which was, for nearly two centuries, the principal seat of the Boys family, now belongs to Mr. Plumtree, who has added to the house, which was built by Miss Brydges, sister of the late Brook Brydges, Bart. and paled in a large circuit of ground, which he has ornamented with plantations. At short distances from the front of the mansion, are three remarkable oaks, one of which is of vast size, and immemorial age: it has the name of Majesty; and, at eight feet from the ground, its circumference is more than 28 feet. The other two are called Beauty, and Stately: the former is a very fine tree, the stem going up straight and clean, to the height of about 70 feet, and the girth at four feet from the ground, being nearly 16 feet: the circumference of the latter, at the same height, is rather more than three yards.

St. Alban's Court, also in this parish, was anciently called Estwall, or Esole: its present name was derived from its having been granted to the church and monastery at St. Alban's. William Hammond, Esq. is the present owner. From a younger branch of this family, sprung James Hammond, the elegiac poet. The original front of the house was to the south-east, as appears by a porch, with the Hammond arms, bearing date in 1556: but a façade was added to the north-east, about the year 1665. This mansion contains a large collection of family portraits, some of which are remarkable as examples of the best style of Cornelius Jansen, who, about the year 1636, resided at Bridge, for the purpose of painting for the family of Sir Dudley Digges, of Chilham castle; Sir Anthony Aucher, of Bourne Place; and Sir William Hammond, of St. Alban's Court; between which families a close degree of consanguinity existed.

NORTHBOURNE.]—At Northbourne, 2½ miles W. from Deal, in the time of Henry the Eighth, were ruins of an old stone building, thought to have been King Egbert's palace. Leland states, that in break-

ing down a wall, a dark cell was discovered, in which were the skeletons of two children, one of which had a large pin stuck through its skull. It has been consequently imagined, that the young kinsmen of Egbert were murdered here, rather than at Eastry.

NORTHFLEET.]—Northfleet, one of the peculiars of the Archbishop of Canterbury, lies a mile and a half W. from Gravesend. The north-west of this parish is a low marsh, formerly covered by the Thames, and now crossed by a high causeway, and bridge, with flood-gates, to prevent the tides flowing beyond it, and also to give an issue to the freshes. The village is irregularly built round Northfleet Green, and on the sides of the high road. The chalk works here employ numerous hands, and extend from the northern side of this village to the Thames. The church is one of the largest in the diocese: it consists of a nave, aisle, and chancel, with a low tower erected within the site of the foundation walls of the former tower, and not correspondent with the rest of the building. Octagonal columns, which spread off into pointed arches, without the intervention of capitals, separate the nave from the aisles. In the chancel, are some remains of ancient oak-stalls, and in the south wall of the south side are three stone seats. On a slab, in the pavement of the church, is a full-length brass figure of a priest, standing beneath a rich ornamental canopy, and round the verge of the slab, is an imperfect inscription of the date of 1370. About 35, or 40 years ago, the grave beneath this stone was opened, and the body of Peter de Lucy found wrapped in leather, according to the ancient method of interment. On the south side of the chancel, is a piscina, under a neatly ornamented pointed arch; and on a carved wooden screen, of the time of Queen Mary, which separates the chancel from the nave, is a range of heads, of the Saviour and twelve apostles, much defaced. Another piscina is in the north chantry: and, on a grey marble slab, are small whole-length brasses of a knight and his lady, with two escutcheons above, one of which displays the arms of Rykeld, a family long seated in Frindsbury parish. The knight is in close-armour, standing on a lion, with a long sword at his left side, and a dagger at his right: his lady is in a long cloak, the folds elegantly disposed, with a necklace and rose, and a small dog, collared, at her feet.

OFFHAM.]—The ancient little parish of Offham is 3½ miles S.E. by E. from Wrotham. It stands on high ground, and is nearly surrounded by woods. The houses are scattered round a broad green, on which stands a quintin, opposite to the dwelling-house of the estate, which is bound to keep it up. This relic of ancient custom "is formed by an upright post of wood fixed in the ground, with the upper part rounded so as to receive the socket of a cross-piece, one end of which is expanded like a fan, and pierced full of holes: to the other end is attached

attached a bag of sand, which swung round, with a force proportionate to the blow given to the broad part of the transverse, when the game of the quintin was played." This diversion, now almost forgotten, is supposed to have been borrowed from the Romans. There is a tradition, that Jack Straw was born at, and assumed his surname from, a small cottage at Pepingstraw, in the parish of Offham.

ORPINGTON.]—At the village of Orpington, 2½ miles S. by W. from Foot's Cray, are the remains of an ancient seat, called Bark Hart; an appellation bestowed by Queen Elizabeth, who was entertained here by Sir Percival Hart, in 1573, with the exhibition of a sea-fight, &c.

OSPRINGE.]—Ospringe, sometimes called Ospringe Street, lies three-quarters of a mile W.S.W. from Faversham. On the stream, which flows through the village, and afterwards falls into Faversham creek, are extensive gunpowder works, some of which belong to government. A neat range of barracks, for infantry, was built in this village, during the late war. Close to the stream, here was anciently an hospital, founded by Henry the Third, about the year 1235, for a master, and three regular brethren, of the order of the Holy Cross, and two secular clerks. In the reign of Edward the Fourth, the house was entirely forsaken by its inmates, in consequence of an infectious disorder breaking out among the brethren; and, hence, the establishment was neglected: through which, its possessions escheated to the crown, and were, by Henry the Eighth, granted to St. John's college, Cambridge. The remaining buildings of the hospital have long been converted into dwelling-houses. Ospringe church is an ancient fabric, and stands about half a mile to the south of the village: it had formerly a circular tower, at the west end, built of flints, which fell to the ground, while the bells were ringing, in celebration of King William's return from Flanders, on the 11th of October, 1695.

On Judde Hill, in this parish, was a Roman camp, probably the Durolevum of Antoninus.—Within the area, on the summit of the eminence, is a respectable mansion, called Judde's House, or Judde's Folly, built by Daniel Judde, about the year 1652. The camp was of a square form, surrounded by a broad and deep ditch, parts of which are still entire: within the area, was a high artificial mount. In the gardens of Judde House, several Roman coins have been found; and, westward of the hill, were discovered fragments of culinary ware, and a medal of Vespasian, intermixed with oyster-shells. The estate is held, at present, by Colonel Achmuty, on lease, under the dean and chapter of Rochester. At a short distance from Judde Hill, are several breastworks across the field opposite the west, and at the foot of the hill, are the ruins of Stone chapel, in which, Roman bricks are intermixed with flints. Within the south wall, is a separate piece of Roman building, about a rod in length, and three feet high, composed of Roman

tiles, and layers of hewn stone. Various Roman remains have been found, likewise, in the neighbourhood of Faversham; and, on Davington Hill, a Roman burial-place has been discovered.

OTFORD.]—The parish of Otford lies three miles N. from Seven-oaks. The Archbishops of Canterbury had a palace here, with two parks, and other large possessions. St. Thomas a-Becket is said to have been particularly fond of this retirement; and here, also, he was reported to have performed many miracles. Amongst others, tradition records the following:—While he resided here, at Otford, he found considerable inconvenience from the want of water. To remedy the defect, he struck his staff in the ground, at the spot which is now called St. Thomas's Well; and, immediately, a stream of water sprung up, which has continued plentifully to supply the house with water to this day. It is also reported of him, that one day, while walking in the park, and employed in prayer, the sweet melody of a nightingale, which had placed herself on a neighbouring tree, greatly interrupted him in his devotional exercises: in the power of his holiness, he straightway commanded, that no bird should thenceforth presume to sing in that neighbourhood. It is further said, that a blacksmith, who lived in the town, having spiked his horse, he ordained, that no smith should, from that time, ever thrive within the parish. Another saint, called Bartholomew, the Apostle, was also held in great veneration at Otford, and his feast day was joyfully celebrated here. This man was purveyor of poultry to the parson of the parish, and was consulted by the neighbourhood, on account of a very singular faculty he possessed. By presenting him with a cock or a hen chick, pregnant women were enabled to have their wishes gratified, whenever their partiality inclined them either to a male, or a female, child. The cocks and hens continued under contribution to this cunning fox, until Henry the Eighth, who had made an exchange with the archbishop, for the manor of Otford, arrived here, and being informed of St. Bartholomew's practices, ordered him into confinement.

Edward the First was entertained at Otford, in the year 1300. Henry de Dene made additions to the buildings, and his successor expended upwards of 30,000*l.* upon them, and was frequently visited by Henry the Eighth, to whom Archbishop Cranmer surrendered the manor and palace. The latter afterwards fell to decay, and is now a pile of ruins. Two great battles were fought in this vicinity, in the time of the Saxons; vestiges of which are discernible. The first battle was in the year 773, between Aldric and King Offa, the latter being victorious, after a severe contest. The latter battle was in the year 1016, when Canute was defeated by Edmund Ironside.

OTHAM.]—Otham is 2½ miles S.E. by E. from Maidstone. This neighbourhood is celebrated for its hops. The manor of Otham, with that of Gore Court, in this parish, has been several years in the family

family of the Hornes, of which the late Bishop of Norwich (see Eltham,) was a distinguished member.

OTTERDEN.]—Otterden is $3\frac{1}{2}$ miles N. from Charing. The church was rebuilt with brick, in the years 1753, and 4 :—it contains several monuments for the Lewins and Curteises, formerly lords of the manor. In the old church, were some ancient memorials for the Auchers, who resided at Otterden Place, a large Elizabethan mansion, now the seat of the Wheelers.

PATRICKSBOURNE.]—Patricksbourne, $3\frac{1}{2}$ miles S.E. by E. from Canterbury, belonged, at the time of the Norman Survey, to the Bishop of Baieux; but, after his disgrace, it was divided into the two moieties of Patricksbourne Cheyney, and Patricksbourne Merton. The latter was given to the priory of Beaulieu, in Normandy; and a cell of Augustine canons, subordinate to that foundation, was established here. It was subsequently alienated to the priory of the same order, at Merton, in Surrey; and it was granted, at the Dissolution, to Sir Thomas Cheyney, K.G. of Shurland, who thus became possessed of the whole manor, the moiety, called Patricksbourne Cheyney, having descended to him, from Sir Alexander de Cheyney, to whom it had been given, by Sir William de Say, in the reign of Henry the Third. After passing through several intermediate possessors, it was purchased, about the year 1704, of — Braems, by John Taylor, Esq. who had been previously settled at Bifrons, a seat near Patricksbourne church; and, from him, it descended to Edward Taylor, Esq. M.P. The great uncle of this gentleman, was the celebrated Dr. Brook Taylor, author of a Treatise on Lineal Perspective, who died in 1731: his brother, Colonel Herbert Taylor, was private secretary, and aid-de-camp, to the Duke of York, and afterwards private secretary to the King. Bifrons was so called, from a house, with a double front, built by the Bargraves, which was taken down about 40 years ago, by the Rev. E. Taylor, who erected the present mansion, a respectable brick structure, nearly on the same site. The situation is rather low, but the grounds are beautifully laid out.

The church is a small fabric, of Norman origin, consisting of a nave and chancel, with a square tower, surmounted by a spire on the south side, and a small chapel adjoining to it, opening into the nave. The principal entrance, which opens from the tower on the south side, is most highly enriched with sculpture, great part of which is in fine preservation.—Wyverns, winged monsters, and animals, birds, human heads in various positions, encircled by foliage, and foliage of divers kinds, are all combined in the embellishments of this entrance. The space above the transom contains two ranges of stones, the uppermost sculptured with a representation of God the Father, in the centre, with angels at the sides; and the lowermost with dragons, a dog couchant, foliage, &c. Over the outer moulding of the arch, the work is carried up pyramidically, having, in the centre, a semicircular arched niche, containing a

mutilated figure of the Lamb. In the side of the tower, at some distance above this, but more modern, is a square stone framing, the centre of which has the twelve hours in relief. In the window of the chapel, appropriated to the owners of the manor, are two small paintings on glass; one of them, of the Crucifixion, and the other, of the Woman washing Christ's feet. Here are several memorials of the Taylor and Denne families; and in the churchyard, between the buttresses of the chapel, is the tomb of Mary Taylor, eldest daughter of John Taylor, Esq. who died in March, 1771, in her 91st year.

The villa of Higham, in this parish, is the property of James Hallet, Esq. The situation is very pleasant and commanding.

PECKHAM.]—East, or Great Peckham, lies $5\frac{1}{2}$ miles N. E. by E.; and West, or Little Peckham, 4 miles N.E. from Tunbridge. The manor of West Peckham was held in the time of King John, by the service of bearing one of the King's goshawks beyond sea, when demanded, from the feast of St. Michael to that of the Purification. One part of the manor is now the property of Lord le Despenser, and the other of the Earl of Torrington. On the latter estate, was formerly a preceptory of Knights Hospitallers. Oxenoath, in this parish, is the property and residence of Sir William Geary, Bart. It anciently belonged to the Colepepers, and was held of the manor of Hoo, near Rochester, by the "yearly payment of a pair of gilt spurs." On a rising ground, is seen the house, an old brick mansion, which commands a good prospect over the Weald.

PENSHURST.]—The pleasant little town of Penschurst, the name of which is derived from the old British words, "Pen," signifying head, or top, and "Hurst," a wood, is $4\frac{1}{2}$ miles W.S.W. from Tunbridge. It has been much and justly celebrated as the seat of the Sydney family, who resided here for two centuries; and the estate is still occupied by one of their descendants, John Shelley Sydney, Esq. by the female line. It was anciently the seat of the Pencesters, or Peuchesters; and, having passed through several other families, it was granted, by Edward the Sixth, to Sir William Sydney, one of the heroes of Flodden Field. The church is a large and handsome structure, consisting of a nave, aisles, transept, and chancel. Amongst the sepulchral memorials, which are numerous, are various tombs and monuments for the Sydneys, most of whom lie buried here; with various brasses for other families. The upper half of the figure of Sir Stephen de Penchester, who was interred here, in the south chancel, or chapel, still remains. He appears to have been represented as completely armed, with a shield on his left arm, and his right hand grasping the hilt of his sword; his head incased in a hood of mail, is resting on a pillow: the tomb is wholly destroyed.

The family mansion, situated at the south-west angle,

angle of the park, is an extensive pile of building; it is one of those castellated dwellings, which succeeded to the gloomy residences of the thirteenth and fourteenth centuries. The chief buildings form a quadrangle, inclosing a spacious court, and comprehending a great hall, and chapel, with numerous apartments. The state rooms are splendid, and are adorned with the portraits of the Sydneys and Dudleys, and the monarchs who patronised them, some of which are by Holbein. There are, in addition to these noble ornaments, several other pictures, portraits, and historical subjects, well worthy of attention. "In the midst of the old hospitable hall, (observes King, in his *Observations on Ancient Castles*;) still remains the great fire-hearth, with the old frame of iron, big enough, and strong enough to hold vast piles of wood; and almost sufficient to sustain the trunk of a tree. The steps, in some parts of the house, are vast blocks of solid oak; and the floor of the first state room, and of many others, are formed of huge thick planks of oak, that seem rather to have been hewn out with a hatchet, or adze, than to have been either sawn or planed."

Penshurst Park, though considerably reduced in extent, since the decease of the last Earl of Leicester, of the Sydney family, includes more than 400 acres of ground, finely diversified by eminences, lawns, and woods. It is nearly approached, on the south-east side, by the united streams of the Eden, and the Medway; and within it, is a fine piece of water, called Lancup Well. Above the well, at a short distance, stands a famous oak, said to have been planted at the birth of Sir Philip Sydney, and now upwards of 22 feet in girth. Both Ben Johnson and Waller celebrated this tree; and, in a poem called Penshurst, by E. Coventry, are some elegant lines, in reference to its connection with the natal day of Sydney. The oak, beech, and chesnut-trees, are mostly of fine character, and luxuriant growth.

About half a mile S. from Penshurst, is Ford Place, which was the seat of the Sydneys, before they had the grant of Penshurst. It is now the property of Richard Allnutt, Esq. whose grandfather purchased some of the Sydney estates, and erected a good house, at South Park, so called from its relative situation to Penshurst Park, which is now the residence of the family.

Adjoining Penshurst Park, on the west, is the little seat of Red Leaf, which formerly belonged to the Spencers, a branch of the ancient family of that name, at St. Alban's, Herts. Abraham Spencer, Esq. devised it to the Harveys, of Tunbridge, by whom it is still held.

Hall Place, in the neighbouring parish of Lyghe,

* The Rev. Basil Kennet, younger brother of Bishop White Kennet, was born at the vicarage-house, at Postling, in October, 1674. He was educated at Corpus Christi college, Oxford. In 1696, he published his *Romæ Antiqua Notitia*, or the *Antiquities of Rome*, 8vo. a book of great utility. The following year, he was chosen fellow of his college, and published the

or Leigh, adjoins Penshurst, on the north. It belongs to James Harbroc, Esq.

PLUCKLEY.]—This parish, which forms part of the northern boundary of the Weald, lies four miles S.W. from Charing. The church was erected by Sir Richard de Pluckley, who lived in the reigns of Stephen, and Henry the Second. Adjoining the chancel, is the burial-chapel of the Denings, in which are several family memorials. A brass, representing a knight in armour, is commemorative of John Dering, Esq. who obtained Surrenden by marriage. Another brass, represents his son, Richard Dering, Esq. and his two wives. Some other curious brasses may be seen here for other branches of this family, and also for the Malmayns.

PLUMSTED.]—The village of Plumsted, which formerly had a weekly market, lies ten miles E. by S. from St. Paul's cathedral. The court-lodge, or manor-house, is a neat building, inhabited by the lessee of the manor-farm. The church is in a ruinous state; one part at present remains, with a neat tower of brick, embattled at the north-west angle. Among other monuments, is one in memory of Dr. Benjamin Barnett, prebendary of Gloucester, and vicar of Plumsted, who died in 1707; and also an elegant mural monument of John Lidgebird, Esq. of Shooter's Hill, who died in 1771. The parish embraces a considerable extent of land, which is of a various nature—the market gardens are large and numerous. The marshes were originally enclosed, in the reign of Edward the First, by the monks of Lesnes abbey; frequent commissions have since been issued to inspect the banks, and repair the breaches. Notwithstanding these precautions, upwards of 2000 acres of land in this, and Erith parish, were, in the time of Henry the Eighth, wholly inundated, and the injury was not fully repaired till the reign of James the First. A school-house was built here, in 1797, at the expence of Henry Lidgebird, Esq. and in the year 1807, a donation of 1000*l.* was made to the parish, by William Cole, Esq. of Dulwich, to endow a sunday-school.

POSTLING.]—The little village of Postling is three miles N. by W. from Hythe. The church has much excited the attention of antiquaries, from the circumstance of a small stone with a latin inscription, in old Saxon characters, having been affixed against the wall of the chancel, mentioning the period when the church was dedicated to the Virgin Mary. The original has disappeared, but an engraved copy may be seen in Pegge's *Sylloge of Ancient Inscriptions*.*

PRESTON.]—There are two parishes of this name, in Kent: one, amile and three-quarters N. from Wingham; the other, half a mile S.E. from Faversham.

Lives of the Grecian Poets. In 1706, he was appointed chaplain to the English factory at Leghorn; where, becoming obnoxious to the Inquisition, his life was endangered. In 1714, he returned to England, and commenced his degrees of D.D. but survived this only a few months. He published some sermons, and several translations.

The

The latter was given to the church of Canterbury, by Kenelph, King of Mercia, by the name of Coppan-stone, and it still belongs to the dean and chapter. The church consists of two aisles and a chancel, with a small tower and spire, rising from the east end of the south aisle. In the chancel, is a sumptuous, but dilapidated table monument, on which lie the full-length effigies of Roger Boyle, Esq. and Joan, his wife, daughter of John Naylor, Gent. of Canterbury, whose descendants were ennobled by the titles of Earls of Burlington, Cork and Orrery, Viscounts Carleton and Boyle, and Lords Carleton and Clifford. On a slab, in the pavement of the chancel, are brasses of Valentine Baret, Esq. and his wife, Cicely; the former died in 1440; the latter, in 1442. He is represented in complete armour, with spurs; and, at his feet, a lion: his lady is in the dress of the age. This branch of the Barrets resided at Perry Court, in Preston parish. On another slab, before the altar, is a brass figure, in armour, with a long sword hanging before him, but without helmet, or spurs; and, on a slab, in the nave, is a curious brass, in memory of Bennet Finch, of this parish.

RADIGUND'S ABBEY.—On an elevated spot, about three miles S.W. of Dover, are the remains of Bradsole, or St. Radigund's abbey, founded for Premonstratensian canons, about the year 1191. The walls of the out-buildings, gardens, &c. cover a considerable extent of ground; and the whole appears to have been surrounded by a broad ditch and rampart, inclosing an extensive circular area. The walls of the entrance gateway, of great strength and thickness, are yet nearly entire, and finely mantled with ivy. The north and west sides of the chapel, with part of the dwelling occupied as a farm-house, are also standing. In the farm-yard, is a large broad pond, said to have been anciently of greater extent, and to have given the name of Broadsole to this manor and abbey; the word sole, or soale, being a Kentish provincialism for a pond. There are said to be some extensive subterraneous passages beneath the parlour of the farm-house.

RAINHAM.—Rainham, 3½ miles E. S. E. from Chatham. This parish is chiefly the property of the Tuftons, Earls of Thanet, whose ancestors possessed lands here, as early as the reign of Henry the

Third. The church has been the chief burial-place of this family, since the time of Charles the First. The body of this fabric consists of a double nave, separated by columns and arches; and two chancels, divided by a screen of wood, curiously ornamented with foliage, human heads, dragons, rabbits, parrots, fish, a harp, a bugle-horn, &c. In the principal, or south chancel, are three graduated stone stalls, with pointed arches; and, on a slab in the pavement, is a singular brass of a male figure, in a short furred gown, with large sleeves, and a scrip, or purse, appendant to his girdle. Beneath, is an inscription, recording the sepulture of William Bloor, Gent. who died in 1529, and whose family resided at Bloor's Place, in this parish, for several generations. In the north chancel, are several monuments of the Tufton family.

Part of the mansion of Bloor Place, mentioned above, which was rebuilt in the reign of Henry the Eighth, is now occupied as a farm-house. The estates of the Bloors have long been united, by marriage, with those of the Tuftons.

In the adjoining parish of Hartlip, numerous foundations of ancient buildings have, at different times, been discovered.

RECVLVER AND RICHBOROUGH.—These places have, for "many a long-past age," held so close a relationship with each other, that we cannot describe them better than by noticing them under the same head. Reculver, which was anciently a member of the town and port of Sandwich, and also a hundred of itself, lies ten miles N.E. by N. from Canterbury; Richborough is a mile and three-quarters N.N.W. from Sandwich. "The wide estuary," observes a modern writer, "which, in former ages, separated the isle of Thanet from the main land, was, in the Roman times, an important haven, and was the general passage for shipping between the Downs and the mouth of the Thames. Its name is variously spelt by ancient writers: Tacitus calls it, Portus Rutupensis; Ammianus, Rutupia; and Antoninus, Ritipus Portum. The appellation, Rutupia, as appears from the manner in which it has been used by other authors, applies not only to the haven, or port itself, but also to the castles of Reculver and Richborough, which defended its different entrances."*

Reculver

* The Rev. John Battely, Archdeacon of Canterbury, in his *Antiquitates Rutupinae*, says:—"This haven has two mouths; the one open to the north, the other to the east. The castle of Regulbium (Reculver) was built near the former; the castle of Rutupium (Richborough) near the latter; by which, well garrisoned, the haven was formerly closed on each side. From these, as from watch-towers, the ships of invaders and pirates might be seen at a great distance, and their entrance prevented, while the Roman fleets were securely drawn on shore. A wide valley, or level, now lies between these castles, in which I think the haven of Rutupia must have been placed; for though meadows now intervene, and a rivulet, confined within a very narrow channel, flows between them, yet if we recollect the old face of the country, as it is drawn by ancient writers, and view it

with the eye of the mind, we shall soon discover the port Rutupia, the most celebrated in all Britain. The drought, or scantiness of water, which now appears, was not of old: for Solinus, the first Roman writer who mentions the isle of Thanet, says, that it is washed by the Straits of Gaul, and separated from the continent of Britain, by a small estuary. But this estuary, which Solinus calls a small one, Bede says, was 'about three furlongs in breadth.' For these are the words of that venerable writer: 'On the eastern coast of Kent is Thanet, no small island, containing, according to the measurement used in England, 600 families, (or hides,) and separated from the continent, by the river Wantsumu, which is in breadth about three furlongs, and is passable only in two places, for both its mouths extend into the sea.'—The charter of King Eadbert has transmitted to us, the

Reculver castle, which defended the northern entrance of the Roman haven, has been remarkably encroached upon by the sea; whilst that at Richborough, has, on the contrary, been deserted by the waves, and is now considerably within the land. Many houses have been overwhelmed within memory; and even within the last 12 or 15 years, several dwellings have fallen a prey to the violence of the waves. Part of the station itself has been washed away; and, it is probable, that the village church, which stands near the middle of the station, and its high spires, which form an important sea-mark to mariners, will be included in the wreck, at no very distant period.

Mr. Battely has justly observed, that the antiquity of Reculver, is "irrefragably proved by the internal evidence of the abundant remains there discovered; for what can be more certain tokens of the remotest antiquity, than the consular denarii; the coins of almost all the Emperors, from Julius Cæsar, to Honorius; and, in particular, the brass coins of Tiberius and Nero, sharp, and, in appearance, fresh from the mint?" The name, *Regulbium*, he observes, "may, I think, be derived from the old British word *Rhag*, which signifies, 'before,' and *Gwylfa*, 'watching:' these words joined, form *Rhagwylfa*, or the 'former watch-tower:' but if, instead of *Gwylfa*, we compound *Rhag* with *Golen*, it will be *Rhag-golen*, 'the former light,' or 'light-house:' and either of these, besides the similitude of sound, agrees exactly with the situation and convenience of the place; for Reculver was the first watch-tower seen on the Kentish coast, by ships sailing out of the Thames. The castle also commands a view, not only of the open sea, but of the mouths of those noble rivers, the Thames and Medway; on which account, it was used as a watch-tower, to discover the approaches of an enemy; and

the names of both these passages, and admirably illustrates and confirms the narrative of Bede. These are the words of that Prince: 'I give,' says he, 'the income of two ferry-boats, at the place, whose name is *Serr*, in the same manner as a tax was long also granted by *Ethelbald* and *Offa*, Kings of the Mercians, at a place whose name is *Lundenwic*.' These are the two passages into the island, mentioned by Bede; of which the former now communicates with *Sarr*, by a small wooden bridge; and the latter at *Lundenwic*, or *Sandwich*, is passable only in boats. We read, in our annals, that an English fleet, such as is now where mentioned in the history of any other King, sailing to *Sandwich*, continued there; that *Turkill*, with his fleet, came to England, and being joined by another innumerable fleet of Danes, entered the haven of *Sandwich*; that the fleet of *Harold*, after ravaging the eastern coast of Kent, proceeded from *Sandwich* to *Northmuth*, and from thence towards London. And here, by the way, it seems strange, that *Somner* and *Gibson* should conjecture, that *Northmuth* was at the mouth of the Medway; for, in the first place, who is ignorant, that the passage by sea to London, lies through the mouth of the Thames, not of the Medway? In the map of *Lambard*, the name of *Northmuth* is given to the northern mouth of the *Wantsume*, or *Stour*. *Harrison*, in his accurate description of Britain, is of the same opinion, and says, that 'Northmuth is seven miles distant from *Sandwich*.' Lastly, the boundaries of the lands, granted by King *Eadred* to the mo-

nastery of Reculver, which are published in Saxon, place *Northmuth* also in the district of Reculver. These, I trust, are sufficient proofs, that the fleet of *Harold* steered between the isle of Thanet and the continent of Britain, and sailed from *Sandwich* towards London, through the northern mouth of the river *Wantsume*, or *Northmuth*. So large was the river! A most irrefragable argument, that the level, through which it flows, was formerly navigable! After this, it is needless to quote the description of this island, by *Simeon of Durham*, which, he says, is surrounded by the sea on every side; as it appears, in an old drawing, engraved in the *Monasticon*; or to introduce the monks of *St. Augustine's*, at *Canterbury*, who, in the year 1313, claimed all wrecks in their manors of *Menstre*, *Chistelet*, and *Stodmersch*; that is, in the very level of which I am speaking. This disquisition shall conclude with the testimony of *John Twine*, who died in the year 1581, and who says, that, in his time, 'eight credible men were living, who affirmed, that they had seen not only small boats, but large loaded vessels, frequently pass and repass, between the island and the continent.' And let it also be remembered, that a little farther, he asserts, that 'there was a naval station at *Sarr*, about the midway between *Richborough* and *Reculver*;' but whether he learned it in writings of the ancients, or from common reports, or conjectured it from the anchors there dug up, I am at a loss to discover."

Reculver, on the subjugation of Kent, by the Saxons, became a principal seat of the Saxon

Kings,

Kings, under the name of **Raculf**, and **Raculfoes-ter**; and hither King **Ethelbert** retired with his court, after his conversion to Christianity, by **Augustine**. It afterwards obtained the name of **Raculf-minster**, from a Benedictine abbey, founded here, by **Bassa**, a priest and noble, to whom some lands were given for the purpose, by King **Egbert**, as an atonement for the murder of his two nephews; and, in 949, the manor, including the parish, with all its appurtenances, was granted by King **Edred**, to the abbey of **Christchurch**, **Canterbury**. Subsequently to this, the title of the superior of the abbey of **Reculver** was changed from that of abbot to dean; yet, previously to the Norman conquest, the whole society appears to have been either removed, or dissolved. In the time of **Lanfranc**, this manor was assigned to the archbishop; and it still forms part of the possessions of the see of **Canterbury**. The parishes of **All Saints**, **Herne**, **St. Nicholas**, and **Hoth**, were originally chapelries to **Reculver**. **Edward the Second**, in 1313, granted a weekly market to this manor; but it has been long since disused, and the village now consists of only mean houses, scarcely 40 in number.

The church of **Reculver**, observes **Mr. Mott**, a gentleman who wrote in the year 1809, "was situated near the centre of the area formed by the castle walls; and is supposed to have formed part of the abbey, which was founded, by **Egbert**, in 669; though several parts of it are certainly of a much later date; if, indeed, any part of it is as ancient as the date of **Egbert**. It consists of a nave, high chancel, and north and south aisles, with two square towers at the west end, crowned with lofty leaded spires. In the northernmost tower, is a ring of four bells. The north entrance has a very fair Saxon arch; which was, evidently, the style of the original building; the nave and chancel being still in that mode. Length of the nave, 66 feet; width, 24 feet. The nave is separated from the side aisles, by four square pillars, on each side, with beads at the angles; the arches on these pillars, are pointed. The pillars are three feet ten inches, by two feet nine inches. The chancel, which is separated from the nave by one large, and two smaller semicircular arches, is 44 feet long by 24 feet wide, and is enlightened by a triplet of lancet windows, at the east end, and four single ones on each side; there is an ascent of several steps from the nave to the chancel. The side aisles are 50 feet five inches long, by eight feet nine inches wide. The appearance of the whole is venerable and commanding. The west front is peculiarly striking; the whole width, including the towers, is 65 feet; the square of the towers is 22 feet; within-side, 12 feet. Over the west door is a triforium. The ascent to the spires is by 38 stone steps; a ladder of 22 rounds; a second, of 16; a third of four; and the fourth, of eight; making, together, a height of 69 feet 10 inches. If a hope could remain, that this sacred edifice would be preserved from the imminent, nay, immediate, danger

of total destruction, many would lament the dilapidated state in which it now appears. The trifling, though the only, repairs it has experienced for many years, have been such as tend to obliterate its once harmonising beauties. The fine and appropriate lancet windows, on each side of the chancel, have long since been stopped up with brick work; apparently with no other intention than to save the expence of glazing! and no light afforded to the most sacred part of the edifice, but by the triplet at the east end. Several of the windows of the aisles have received a similar kind of repair! Many of the battlements are down; and the leading of the spires, in several places, blown off, and lies on the roof of the church; though the timber of the spires is still sound, and as capable as ever of receiving and bearing the weight of its proper covering. But why these croaking observations? is not the whole fabric devoted to destruction? alas, it is! and with an apathy more than stoical! Blush, ye bearers of the Christian name! if it be possible that a blush can suffuse the cheeks of those, who, while they exert every nerve to defend their neighbouring lands from the attacks of the devastating foe, abandon the temple of their God to its unpitied, and, perhaps, by many, to its wished-for fate! Strong language this: but, perhaps, not more strong than just. Did not, more than a twelvemonth since, the cruel, not to say profane, decree pass, 'Secure your lands on each side; but let the * * * * * go?' And, if such a command existed, did it not originate in the consideration, that as the site on which the edifice stands, then formed a promontory, of course caused the water to fall the heavier on the adjoining shores? and therefore, who will not say 'the sooner it is gone the better?'

"But a few months since, there was more than a probability, that, for a trifling expence, compared to the high estimation of the object saved, a defence might have been made, as the strand, for a long distance was, and, indeed, still is, strewn with stones proper, and in number sufficient, to have completed the necessary work, and saved the cemetery from the inroads of the merciless waves! But now, alas! they have made their approach to within 12 feet of the basis of the north tower; and the remains of the silent dead are scattered on the strand, or hang exposed from the side of the cliff. As a convincing proof, that no attempts are made to save the sacred fane, even the stones above alluded to, which nature had deposited there, as a last resource to preserve the sacred structure, have been disposed of; but, as they are not yet removed, oh! that some lovers of their Maker, and religion, admirers of such structures, would make one bold essay, arouse the few remaining friends of antiquarian faues, and stimulate those, whose duty it is, to attempt the preservation of this far-famed house of God! And as the **Sister Towers** have, for ages, and, thank God, do still guide the mariner through the trackless deep, surely a proper application to the Right Honourable

nourable Master, and Worthy Brethren of the Trinity House could not fail of its due effect. These hands but united, and we should have the pleasing reflection, that the abbey-church of the ancient Regulbium, or rather of the Raculfcester, would remain to prove, to ages yet unborn,

‘The tale of legendary lore.’”

We regret to state, that, since the above was written, much additional injury has been sustained, by this venerable church. In several of the windows, are some small remains of painted glass; and the brasses and ancient tombs, are very numerous. A few years since, there was a wooden tablet at the east end of the south aisle, where it is supposed a monument to the memory of Ethelbert stood, with this inscription:—

“ Here, as historiographers have said,
St. Ethelbert, Kent's whilome King was laid,
Whom St. Augustine with the Gospel entertained,
Who, though by cruel Pagans he was slain,
The crown of martyrdom he did obtain.
Who died on the 24th of February,
in the year 616 ”

At the ends eastward of the north and south aisles, are two portions, 14 feet 6 inches long, and 9 feet 2 inches wide, which are partitioned off, and have been shut up many years, which evidently were oratories or chantries; as in the northernmost is remaining a handsome piscina, and a cupboard for the pix; in the other a piscina only. There were doors of access from each to the chancel, but they have been so long closed up, that there was no remembrance of the chantries by the oldest inhabitants. One of them, however, is ascertained to have been founded by Thomas Nave, vicar of the parish, A. D. 1354. At its suppression, in 1548, its annual revenues were valued at 14*l*.—On the south side of the chancel, on a small tablet of black marble, in an alabaster compartment, beneath the portrait of Ralph Brooke, Esq. in his herald's habit, neatly engraved and coloured; is the following

Inscription.

HERE UNDER GUILT OF WORLDLY MISERIES,
RALPHE BROOKE, ESQ. LATE YORKE HERALD LIES:
FIFTEENTH OF OCTOBER HE WAS LAST ALIVE,
ONE THOUSAND SIX HUNDRED TWENTY AND FIVE;
SEVENTY THREE YEARES BORE HE FORTUNES HARMES,
AND FORTY-FIVE AN OFFICER OF ARMES.
HE MARRIED THOMASIN, DAUGHTER OF MICHAELL COBE, OF KENT,
SERJANT AT ARMES, BY WHOM TWO DAUGHTERS GOD HIM LENT;
SYR VYVINGE, MARY, WILLIAM DICKIN'S WIFE,
THOMASIN, JOHN EXTON'S—HAPPY BE THEIR LIFE.

Within the altar-rails, against the wall, is an altar-monument of alabaster, in memory of Sir Cavalliero Maycote, and Dame Marie, his wife; the latter died in 1606: the figures of the deceased, with their children kneeling, are represented on the monument.

Richborough, or Rutupium, which guarded the southern entrance of the Roman haven, is generally supposed to be the first station that the Romans formed in this country. There can be little doubt but that, at the time of the existence of the Roman Haven, the eminence on which the city and castle of Richborough were situated, was a small island; an opinion which is maintained by the principal writers on this subject, even though the same persons are decidedly at variance as to the real situation of the Urbs Rutupiæ, which Ptolemy describes as one of the three principal cities of Kent. The period when Rutupium was deserted by the sea, was probably between the fourth and sixth centuries, as about that time the name of Sandwich begins to occur in ancient writings as a frequented port. The site of the castle, is a kind of promontory of high ground, projecting into the marshes, between one and two miles north-west from Sandwich. Richborough Hill is indeed entirely surrounded by marsh land, and undoubtedly was an island when the bay existed. On this insulated mount stands the remains of the famous castle of Rutupi, exhibiting a more perfect specimen of Roman architecture than exists any where else in Britain. The castle has been a regular parallelogram; but a great part of the east wall does not appear, having been undermined by the sea; enough of it, however, remains to point out its direction and situation. The whole site occupied six acres, one rood, and eight perches of ground; the area within the walls measured five acres, three roods, and eight perches.—The walls were flanked by round projecting towers at the angles, and by square ones at irregular distances along the sides. There are marks of two of these in the west wall, and of two others, besides the Porta Decumana, in the north wall, and of two more in the south wall; in which undoubtedly was a third, that has fallen down the bank. These square towers, projecting about eight feet from the wall, were solid, nearly eight feet from the foundation, and afterwards hollow. Near the middle of the north wall is the oblique entrance, or Porta Decumana: it is narrow; and from the holes remaining in the walls, it appears to have been furnished with good timber defences. The Roman coins, and other antiquities, that have been found either within the area, or near this station, are very numerous; and in the villages about Sandwich, and in Thanet, are continually dug up, British Roman, and Saxon money. The remains of a Roman Amphitheatre, about 480 yards from the castle, are still visible, though the banks are in part, levelled by the plough. It appears to have been of a circular form, and about seventy yards in diameter; the present depth is from seven to eleven feet.

The ‘parochie church’ of St. Augustine, of which Leland makes mention, appears to have been formerly a Chapel of Ease to Ash, in which parish Richborough stands. The site of this castle was

in

in the estates of the Veres, Earls of Orford, but it has since belonged to several families. Peter Feotor, Esq. of Dover, is the present owner.

RINGWOLD.—This place, formerly called Ridlingswold, is a member of the town and port of Dover, situated $3\frac{1}{2}$ miles S. S. W. from Deal. It formerly had a three days' fair, and a weekly market.

RIPPLE.—The delightful village of Ripple, or Ripley, lies three miles S. W. by W. from Deal. It formerly belonged to the abbey of St. Augustine, in Canterbury, from which, in the reign of Henry the Eighth, it went to the crown. Queen Elizabeth granted it to Sir John Hall; and it has since passed to a Mr. Gokin.

ROCHESTER.—The ancient city of Rochester is situated on the banks of the Medway, $8\frac{1}{2}$ miles N. from Maidstone, and 29 E. by S. from London. The Medway, from the rapidity of its stream, in this part of its course, was called, in British, Dwr-brif; a name which was subsequently transferred to the city itself, in the Latinised form of Durobrivæ, or Durobrivis. In the decline of the Roman empire, the name was contracted to Roibis; and by the Saxons, it was altered to Hrof-ceastre, from a chief named Hrof, whence Rochester, its present name. This was one of the Stipendiary cities of the Romans; and here, and in the neighbourhood, numerous coins, and other Roman antiquities, have at different times been discovered.

Rochester attained no historical celebrity till the conversion of Ethelbert, the Saxon King of Kent, in 597, soon after which, that prince caused the church of St. Andrew to be erected, and raised the city into a bishop's see. It was, however, principally considered as a military station. In 676, Ethelred, King of Mercia, invaded Kent, and destroyed Rochester. The Danish invaders, who were frequent visitors, in 889, sacked the place, and committed unheard-of cruelties. In 885, the inhabitants bravely withstood them, till they were driven to their ships by Alfred. In 986, King Ethelred, who had taken umbrage at the haughtiness of the Bishop of Rochester, found himself unable to subdue the city, but he laid waste all the lands belonging to the see. Twelve years afterwards, the city was again pillaged by the Danes, nor did it subsequently attempt any resistance.

William the Norman granted Rochester to his half-brother, Odo, Bishop of Baieux; and after his disgrace, it continued in the crown for a long period. Henry the First farmed it out to the citizens, at the yearly rent of 20/. He also granted to Bishop Gundulph, and the church of Rochester, an annual fair, with various rights and immunities. In May, 1180, while Henry, the Archbishop of Canterbury, &c. were at Rochester, on account of the consecration of the Cathedral church then recently finished, the city was nearly laid in ashes by a dreadful fire. A similar misfortune befel it in the year 1187; and again in April, 1379.

The Cathedral received some damage, in both the latter fires. These calamities greatly retarded the growing consequence of the city.

Rochester continued loyal to the crown during the Barons' wars: and Henry the Third, in the fiftieth year of his reign, confirmed some former charters, and, in recompence for "the faithful services of the citizens," granted, "that they should be exempt from toll, lastage, stallage, and murage, throughout England and the sea-ports, and should have a free market within their city, and the return of all writs whatsoever;" besides other privileges, which were confirmed by Edward the Third, and Richard the Second. Henry the Sixth granted, "that the bailiff, the citizens, and their heirs, should have the passage called the Ferry, below the city and the town of Stroud, and from the town of Stroud to the city, the king's bridge on the other side of the water being broken; and also the space of the bridge, together with the house called the Barbican; and that they should have an annual fair on St. Dunstan's day, with all its privileges, &c." In the year 1440, Bishop Lowe, and the prior and convent of Rochester, came to an agreement with the bailiff and citizens, concerning the limits and privileges of the city and the church precincts, in which, among other matters, it was determined, "that the bailiff, and his successors, might cause to be carried before them, by their sergeants, their mace or maces, and the sword likewise, if the king should ever give them one, as well to and in the parish church, as in the cathedral and cemetery, especially on festival days and processions, and solemn sermons, and at the reception and installation of the bishops, and at all other fit times; but that they should make no execution or arrest, or any thing belonging to the law, within the precinct of the monastery and palace of the bishop, unless the same should be specially required of the bishop or prior." Edward the Fourth, in 1460, granted a new charter, confirmed to the inhabitants all their former charters, and granted that they should thenceforth be styled "the mayor and citizens of Rochester; and so to purchase, plead, &c." By the same charter, he extended the metes and bounds of the city, and granted many new and important privileges to the citizens. Henry the Eighth, and his successors to the time of Charles the First, confirmed all the preceding charters; and the latter monarch, in 1630, constituted, in addition, that "the corporation should consist of a mayor, twelve aldermen, (of which latter number the mayor was to be one,) twelve assistants or common-council, a recorder, and town clerk, two chamberlains, a principal sergeant at mace, a water-bailiff, and other inferior officers." By this last charter the city is now governed; the mayor being elected annually, on the Monday before St. Matthew's day. The seal of the corporation is of considerable antiquity: on one side is St. Andrew on the cross, and on the other, the castle of Rochester: round the former

are

are the words *Sigillum Commune Civitatis Roffensis*; and round the latter, *Sigillum Civium Roffensis*.

That the castle was not built by Cæsar, as conjectured by some, may be presumed, from the shortness of the time which he continued in Britain; but that it was founded by the Romans, the coins that have been found within the walls clearly prove. After the Danes had obtained possession of Rochester, the castle was much dilapidated; but it appears to have been repaired, and garrisoned with 500 men, by William the Conqueror. Gundulph, Bishop of Rochester, expended 60*l.* in the repair of the castle, and in building a new 'Tower of stone' within the walls. In 1126, Henry the First granted to William Corboyl, Archbishop of Canterbury, and to his successors, the custody of this castle, with the office of Castellan, and free liberty to build a tower in it for his own residence. The keeping of the castle was resumed by Henry the Second. In 1215, the Barons, exasperated at King John's perjury, in endeavouring to falsify the oath he had taken at Runnymede, seized on the castle of Rochester, and entrusted its defence to William de Albini. The king, convinced of the importance of this fortress, immediately besieged it. The Barons deputed Robert Fitz-Walter to its relief; but John had taken such measures of security, that Fitz-Walter was compelled to leave the besieged to the mercy of the sovereign, who, in order to strike terror, in cases of future resistance to his tyrannical projects, commanded, that, excepting the cross-bow men, all the common soldiers should be hanged.

Lewis, Dauphin of France, having been invited to the assistance of the Barons, landed at Sandwich, in the following year, and reduced this castle after a short siege. On the death of King John, it again submitted to the crown; and Henry the Third granted it for life to Hubert de Burgh, Earl of Kent, and justiciary of England. Hubert, however, was dispossessed; and several other persons were in succession appointed governors of the castles of Rochester and Canterbury. About the year 1264, the king greatly strengthened the fortifications of this castle. Shortly afterwards, Simon de Montfort, Earl of Leicester, the chief of the associated Barons, proceeded to besiege Rochester. On his arrival at the west bank of the Medway, he found an army ready to dispute the passage of the bridge; and on the opposite side a pallisade and breast-work thrown up, with a strong body of the inhabitants ready for the contest. After being twice repulsed, he set fire to the wooden bridge, and tower upon it; and the hurry and confusion which this occasioned, gave him an opportunity to make good his passage; and he entered the town, and spoiled the church, and what was left of the priory; Roger de Leyborne, the chief constable, having before burnt down all the suburbs, as well as part of the city, and the priory, in defence. He next assault-

ed the castle; but was resisted with such ardour and resolution, that, after a siege of seven days, he was not able to penetrate further than the out-works. The castle, however, must have surrendered, had not Henry called off the attention of the baronial army, by threatening the safety of London. The Earl left a few troops to continue the siege, but they were soon put to flight. The battle of Lewes, and the subsequent treaty, taking place, little more occurs in the history of this castle.

Edward the Fourth was the last monarch who seems to have paid attention to the structure. He repaired the walls both of the castle and city, about the year 1471; but from that period they have been totally neglected. Many estates in this county are held of Rochester castle, by the ancient tenure of castle guard. "On St. Andrew's day, old stile, a banner is hung out at the house of the receiver of rents; and every tenant who does not then discharge his arrears, is liable to have his rent doubled, on the return of every tide of the Medway, till the whole is discharged."

The situation of this fortress was very favourable for defence: standing at the south-west angle of the city, on an eminence rising abruptly from the Medway, that river preserved it from any attack on the west; whilst its south, east, and north sides were environed by a broad and deep ditch. The outward walls, which formed an irregular parallelogram of about 300 feet in length, were strengthened by several square and round towers, embrazured, and provided with loop-holes, and machicolations: but these, with the walls themselves, are now verging to a state of ruin. Those in the best preservation are on the east side, and at the south-east angle. On the north-east was the principal entrance: this was defended by a tower gateway, with outworks at the sides. In the wall of one of the towers, which might have been designed to command the passage of Rochester bridge, is a hollow, or funnel, descending perpendicularly to the Medway, to which it opens under a pointed arch, the crown of the latter being considerably below high water mark. This was probably intended for two purposes; for a sally port at low water; and to procure water from the river when the tide was in. The keep, erected by Bishop Gundulph, is still nearly perfect as to its outward figure, which is quadrangular. It is one of the most interesting and curious specimens of Norman military architecture now remaining in England. About the beginning of the 18th century, an attempt, originating in sordid motives, was made to destroy this venerable fabric; but, through the solidity of the walls, it was found to be too expensive an enterprize, and was therefore abandoned.

The see of Rochester, though one of the most ancient, is one of the smallest in England; and those only of Gloucester and Oxford are stated as inferior to it in value. It was founded about the year 600, by Ethelbert, King of Kent, with a priory of secular

secular canons, in honour of St. Andrew, to whose powerful intercession was ascribed many signal instances of divine favour. Augustine, the apostle of Britain, and first archbishop of Canterbury, on the completion of the Cathedral church, which Ethelbert had founded, (anno 604,) conferred the episcopal dignity on Justus, a prelate of eminent learning and integrity, who had been sent from Rome to assist in the conversion of the Saxons to Christianity.

From this period the see of Rochester has been held in succession by ninety-three bishops, many of whom have been famous for their talents, piety, benevolence, and extensive learning. The possessions of the bishops, and of the secular priests, were occasionally increased by new grants from the Saxon kings; yet the many losses sustained during the wars between the states of the Heptarchy, and in the subsequent destructive incursions of the Danes, caused such a considerable defalcation in their respective revenues, as to leave them scarcely sufficient for a decent maintenance. At the time of the Conquest, the church was in such a state of poverty, that Divine worship was entirely neglected in it; and even the secular canons, though reduced to four or five in number, were obliged to depend for a portion of their sustenance on the alms bestowed by the pious. Gundulph proved an active agent in the re-establishment of this see; and the estates granted by the Conqueror to Bishop Odo, having been recovered by Lanfranc in a solemn assembly, held during three days at Pinenden Heath, he determined to rebuild the church, which was now in a state of complete ruin. The Cathedral erected by Gundulph, if a judgment can be formed from the remains of his building, still apparent in the nave, and west front, must have been a magnificent and spacious edifice. His friend, archbishop Lanfranc, advanced large sums towards its erection; and it appears, also, that he was assisted by gifts from William the Conqueror, William Rufus, and Henry the First. Gundulph had the pleasure of nearly completing his own church; yet

it was not entirely finished till several years after his death, which occurred in 1107-8; as the solemn dedication of the structure did not take place till ascension-day, 1130; when it was performed in the presence of the king, by Corboyl, Archbishop of Canterbury, assisted by eleven English and two Norman Bishops.*

Ralph, the successor of Gundulph, was the compiler of the *Textus Roffensis*, a work which contains much valuable information on matters of antiquity, though its immediate object was to ascertain the rights of the church of Rochester. He also was distinguished by his knowledge in architecture. Walter, Archdeacon of Canterbury, and brother to Theobald, the archbishop, who filled this see, assisted at the coronation of Henry, eldest son of Henry the Second, in 1170; for which he was afterwards excommunicated by Thomas à Becket. During his prelacy, a fire (anno 1179) is stated to have consumed the whole city, together with the cathedral. The bishop's palace was rebuilt by Gilbert de Glanville, during his prelacy; and he also erected a cloister of stone for the monks, and furnished the cathedral with an organ. The dissensions, however, which prevailed with the monks during his time, retarded the re-construction of those parts of the church which the conflagration had destroyed; and it was not till the year 1227, that the new choir was sufficiently completed for the performance of divine service. The re-edified fabric did not receive its final dedication till the year 1240.†

On the dissolution of religious houses, the priory of Rochester was surrendered to the king, in April, 1540; its revenues were then valued at 486*l.* 11*s.* 5*d.* The last prior was Walter Phillips, surnamed de Boxley; who was appointed dean of this cathedral, in June, 1542. By this charter the church, and part of the estates of the dissolved priory of St. Andrew, with other possessions, were vested for ever in the new establishment, which was to consist of 'a dean, six prebendaries, six minor canons, a deacon, a sub-deacon, six lay-clerks, a master

* Gundulph is stated to have been confessor to Queen Matilda; and it has been thought, that many of the gifts and privileges bestowed by her royal partner on the priory, (among which was the privilege of coining,) were obtained by her influence. The literary acquirements of Gundulph were not brilliant; but his skill and judgment as an architect, were of the first order. In the time of the Conqueror, he was employed to construct the White Tower in the Tower of London; and in the reigns of William Rufus, and Henry the First, he built the greatest part of the cathedral and the castle at Rochester; and founded a nunnery for benedictines at West-Malling, the buildings of which are also attributed to him. He was interred in his episcopal vestments, before the altar of the crucifix, which was always 'raised at the intersection of the cross which divided the nave from the choir.' His festival was celebrated by the monks with peculiar pomp.

† The subtlety of the monks led them to improve an accidental event which happened in May, 1201, to their own advantage. "A benevolent Scotchman, a baker by profession, named William, had been induced to undertake a pilgrimage

to Jerusalem; but when on the road to Canterbury, a little beyond Rochester, he was murdered by his servant, and plundered of his property. His remains were brought back to this city, and interred in the church, where, according to the report of the monks, various miracles were wrought at his tomb. What these miracles were does not appear upon record; yet the superstition of the age was such, that the sepulchre of the murdered pilgrim attracted great crowds of visitors, and the oblations made by them became to the monks a source of considerable affluence. The whole expence of re-building the eastern part of the church, from the west transept, is recorded to have been defrayed by the riches thus acquired; and the fame of William was at length completed by his canonization in 1254, through the solicitations of Bishop Laurence de St. Martin, who was then at Rome. At the same time, the Pope, Innocent the Fourth, granted indulgencies to all who should visit, and make offerings at the shrine of the new saint. This occasioned a new ferment among the superstitious devotees of the age; many pilgrimages were made to his tomb, and St. William maintained his reputation till a late period.

of the choristers, eight choristers, one grammar master, twenty scholars, two sub-sacrist, and six poor bedesmen; with inferior officers.

Rochester Cathedral stands at a little distance to the south of the High Street, and east from the castle. It is in the form of a double cross; and consists of a nave and aisles, two transepts, and a choir, with a low tower, and spire, rising from the intersection of the nave and west transept. It exhibits specimens of the architecture of at least four distinct eras. The nave, and west front, with some exceptions, were the work of the Norman, Gundulph; also the massive bell-tower, between the transepts on the north side, which still bears his name. The north side of the west transept was built by the monks, Richard de Eastgate, and Thomas de Mepeham, subsequent to the fire in 1179; and the south side, by the monk Richard de Waledene, about the commencement of the following century. The choir, and upper transept, were erected in the reigns of King John, and Henry the Third, by the sacrist, William de Hoo, with the produce of the oblations made at the shrine of St. William. Approaching the western entrance, the magnificence of design, and richness of decoration, which, notwithstanding the ravages of time, and the innovations of modern architects, are observable throughout, forcibly strike the beholder. The principal door-way opens in the centre, under a beautifully recessed semicircular arch, consisting of a variety of mouldings, supported by three entire columns, and a semi-column on each side. The capitals are composed of wreathed foliage, from which proceed the heads of birds, and of quadrupeds. The bodies of two of these pillars are wrought into whole-length statues of Henry the First, and his Queen Matilda; the former sustaining a sceptre in his right hand, and in his left, a book; the latter holding a scroll. The mouldings of the arch are decorated by sculptures. In the space above is a representation of the Saviour, seated; with a book, open, in one hand, and the other raised, as in the act of benediction: and on each side is an angel inclining towards him, together with the symbols of the Evangelists. Many of the recesses beneath the other arches, as well as the spaces between the different ranges, are decorated with net work, and other ornaments. It seems, from various representations, that this front had originally four octagonal towers, which rose above the roof to the height of two stories of small arches, and terminated in pyramids: only one of these is now standing; that nearest to the centre, on the north side, was probably re-built in a different form, at the same time when a considerable portion of the middle of this front was removed to make room for the spacious pointed arched window, which now occupies it, and which consists of sixteen larger lights, and numerous smaller ones in the ramifications of the arch above. The two other octagonal towers, which occupied the extremities to

the north and south, have been removed within the last 50 years; the northern tower was pulled down to the foundation, and re-built in a style intended to resemble the original. A whole-length statue of Gundulph, standing on a shrine, in pontificalibus, with his crozier across his breast, was carefully preserved, and fixed up in front of the new tower. His mitre has been broken off; and his right hand, stated to have held a representation of a church, is also gone.

The remaining exterior part of the cathedral is extremely plain. The ends of the west transept, and the chapels of St. Mary and St. Edward, are supported by graduated buttresses: this is not the case with the choir, the ponderous roof of which has been suffered to depend entirely on the thickness of its walls, aided by a collateral support from the several towers of its transept, and east end. From the west door is a descent of several steps to the nave. The first five columns on each side, and half of the sixth, are in the massive Norman style, supporting semicircular arches, decorated with zig-zag mouldings, &c. The columns are dissimilar, not any two in the same range being exactly alike; though the opposite columns in the respective ranges correspond. Above the arches, sustained on these columns, is a second story of arches, corresponding both in size and ornament. On the face of the wall, between the smaller and upper arches, is a great variety of curious net works, with central crosses, quatrefoils, trefoils, wreaths, &c. Beneath these arches is a triforium, or gallery, which communicates with the circular stair-cases in the angles of the west front. Above are two tiers of windows, each divided into three lights, under flat pointed arches. The roof is of timber, with knees, supported on corbels, the fronts of which are carved into the figures of angels, sustaining shields, on which are painted the arms of the city, see, and priory, of Rochester, as well as those of the archbishopric and cathedral of Canterbury. The west wall appears to have been divided into ranges of niches, some of them crowned with small arches. The traces of the innovation made in Gundulph's design, by the introduction of the present west window, are clearly to be seen in the abrupt termination of different ranges of these niches. The two easternmost arches of the nave, on each side, are in the pointed style, with rich grooved mouldings, rising from clusters of slender pillars.

The great tower is sustained by four obtusely pointed arches, resting on pieces of solid masonry: the latter are environed by slender columns of Petworth marble. The low octagonal spire above was taken down, and re-built in 1749. The west transept is in the pointed style. In the upper part of the north end is a triforium, behind which are lancet windows, each having a screen in front, divided into three arches, of unequal heights: these rest on slender shafts of Petworth marble, with plain capitals and bases. The vaulting is of stone, groined, with

with a plain grooved moulding: all the other mouldings are similar, excepting a bead of quatrefoils, which goes round the arches of the screens. Many of the smaller pillars, and imposts of arches, are supported by corbel heads, chiefly of monks, and some in cows. In the east wall, is a recess, under a large pointed arch, in which formerly stood the altar of St. Nicholas. The south end of this transept, like the other, has a triforium in the upper story, with lancet windows behind screens. The roof is of timber frame-work, in imitation of vaulting. Under a large arch, on the west side, is an opening into the chapel of St. Mary, a structure probably of as late a date as the reign of Henry the Seventh. It is about 30 feet wide, and 45 long. The south and west sides exhibit five spacious windows. In this chapel, the consistory court is held. On the east side of this end of the transept is a small door, which opens into a strong, close, room, illuminated by only one small window, well secured. This apartment was designed for the safe custody of the valuables which belonged to the altars.

From the nave, a flight of ten steps leads through a plain arch, in an unornamented stone screen, to the choir. On the screen rest the organ gallery and organ: the latter is of handsome workmanship; the case, and the fronts of the gallery, are of mahogany, carved in the pointed style. The pipes of the organ are formed into clusters of columns, and the whole is crowned with pinnacles and finials, which produce a very pleasing effect. From the entrance of the choir to its eastern extremity, the style of the building has a uniform character; neat, lofty, and solid, but not heavy.

The east transept is divided into two aisles, over the easternmost of which, in both divisions, are apartments, ascended by circular winding staircases in the wall: in these were nightly deposited, the vestments, jewels, sacred vessels, and other valuables, which appertained to the altars and shrines of St. William, St. Paulinus, and others, which stood in the different parts of the choir. The extremities of this transept were formerly shut out from the choir by screens of Gothic work. The northern part is denominated the chapel of St. William, whose remains are there enshrined; and to the number and value of the oblations made at whose altar, the present choir owes its origin. The avenue by which pilgrims entered this chapel, was a small dark aisle, opening from the north transept, and passing between the choir and Gundulph's tower. Across the middle of this aisle, is a flight of steps, almost worn into an inclined plane, by the concourse of visitors to this shrine. The vaulting of both the nave and transept is of stone. The choir was newly paved, and pewed, about the year 1743: stalls for the dean and chapter, a throne for the bishop, and an altar-piece, were at the same time added. In the centre of the altar-piece, is a painting, by West, of the Angel appearing to the Shepherds. The altar, in Catholic times, was at a distance from the

east wall; and its exact situation is ascertained, from the triple stone seat under the third window, in the south wall: on the front of this seat, are the arms of the see of Rochester; of Christchurch, Canterbury; and, as supposed, of the priory of Rochester.

The crypt, extending beneath the whole of William de Hoo's edifice, has been erroneously thought to be of Norman origin. Its doors, from without, are under pointed arches, as are the windows through which it was lighted: the latter, before they were stopped up, were capacious enough to transmit sufficient light for the service and ceremonies of the nine altars, that formerly stood here. Some slight remains of painting are still visible in that part of the crypt which is below St. William's chapel. In a circle, is a representation of a vessel sailing, with large fish in the water in front, and on one side, the upper part of a monk, with his hands uplifted as in prayer.

The chapter-house, which contains the library, is a long room, parallel with the south side of the choir. The entrance is near the south end of the east transept, through an elegant pointed arched doorway, now walled up to the size of a "common square-headed architrave door, inserted in the centre." The sculpture is very rich. In a large hollow, between the inner mouldings, is a range of human heads, and flowers, in alternate succession. At the sides, rising above each other in detached recesses to the centre of the arch, are whole-length figures. The two lowermost have been thought to represent Henry the First, and his Queen, Matilda. Above, on each side, are two figures seated, in episcopal, or monkish garments; conjectured to represent the Bishops Gundulph, Ernulph, Laurence de St. Martin, and Hamo de Hethe; to the latter of whom, the erection of this entrance is attributed.—Over the uppermost bishops, are angels, rising from clouds, two on each side, apparently singing praises, and glorifying the Saviour, who is represented by a small figure, naked, standing beneath a canopy in the centre of the arch. The library is contained in presses occupying the north side of the chapter-room. Amongst the manuscripts, are those curious and valuable compilations, the *Textus Roffensis*, and the *Custumale Roffense*: the latter is said to have been written, or collected, chiefly by John de Westerham, a monk, and prior, in this church, in the time of Hamo de Hethe, and who died in 1320. It was first published, from a transcript by Dr. Thorpe, in 1788. It contains many curious particulars relative to the ancient tenures, services, rents, villeinage, &c. of the manors within this diocese, which belonged to the priory; with the valuation of the Peter Pence payable to the Pope, from the cathedral churches in this country.

Rochester cathedral, from east to west, is 306 feet in length: the length of the nave from the west door to the steps of the choir, is 150 feet; that of the choir itself, 156 feet. The length of the west transept

transept is 122 feet; that of the east transept, 90 feet. The breadth of the nave, and side aisles, is 75 feet; the breadth of the nave only, between the columns, is 33 feet; that of the choir is the same. The width of the west front is 94 feet; the height of the great tower, 156 feet. The monuments now remaining, are respectable for their antiquity, and curious from their workmanship. A very plain stone chest, in the south-east corner of the choir, has been supposed to contain the remains of Bishop Gundulph. Under the adjoining window, westward, is another stone chest, on the top of which, in high relief, beneath a trefoil-arched canopy, is the portrait of a bishop in pontificalibus. This is supposed to contain the bones of Thomas de Inglethorpe, the 44th bishop of this sec. In a recess opposite to this, on the north, is a third stone chest, with a figure in a similar habit, under a canopy more highly ornamented: this is thought to contain the remains of Bishop Laurence de St. Martin, who obtained the canonization of St. William. The adjoining recess, westward, contains a shrine-like monument, which, notwithstanding the disaffection of the monks to the Bishop, Gilbert de Glanville, is supposed to have been erected as an honourable tribute to his memory. In the south wall of the eastern transept, were two stone chests of Petworth marble, (supposed to contain the remains of two priors,) only one of which is now to be seen. In the north wall of the eastern transept, is another stone chest, imagined, by some, to be the shrine of St. William; yet, it is hardly probable, that the bones of that saint were ever deposited in so plain a receptacle; particularly as the pavement of this chapel, still shews the precise spot where his shrine stood, by a slab in the centre of a square, formed of variously figured mosaics. Westward from this, on an altar-tomb, beneath a double-pointed arched canopy, is a full-length portraiture, in red veined marble, of Bishop Walter de Merton, the celebrated founder of Merton college, in Oxford. This monument was executed at Linoges, in France. The expense of erecting it, was 67*l.* 14*s.* 6*d.* The lower part was almost destroyed at the time of the Reformation; and the present monument, which appears to be surmounted by the original canopy, was erected in the year 1598, at the expense of the master and fellows of Merton college. He died in 1277. On the south side of St. William's chapel, is an altar-tomb of very hard grey marble, in memory of Bishop Lowe. The eastern aisle of this chapel, which is uniformly paved with black and white marble, and separated from the other part by an iron railing, contains the tombs of Bishop John Warner, and two others of his family. The former founded a college, or almshouse, for twenty widows of clergymen, at Bromley, in this county. On the north side of St. Edmund's chapel, near the entrance into the crypt, are the remains of another figure, supposed to be that of Bishop John de Bradfield, who died in 1283. In

the narrow dark aisle, which leads to St. William's chapel, is the monument attributed to Bishop Hamo de Hethe. It has evidently been broken open; a fate which all the ancient tombs within the cathedral underwent, during the government of the Parliament, after the death of Charles the First. In the south part of the western transept, is the monument of Richard Watts, Esq. who was recorder of this city, which he represented in Parliament, in the reign of Elizabeth. He died in 1579, and by his will directed the foundation of an almshouse in Rochester, for "six poor travellers, or way-faring men, being neither common rogues, nor proctors." This monument, erected by the mayor and citizens, in 1736, exhibits a real bust of the deceased, executed during his life-time, and afterwards presented by Joseph Brooke, Esq. whose family had become possessed of Mr. Watt's house, called Satis, by purchase. Against the wall of the south aisle, are the monuments of the late John, Lord Henniker, and Dame Ann Henniker, his Lady; the former by Mr. J. Bacon; the latter in Coade's artificial stone. Amongst the other memorials are inscriptions in memory of William Streaton, Esq. who was nine times mayor of Rochester, and died in 1609; Dr. Augustus Cæsar, who died in 1683; Sir Richard Head, Bart. who died in 1689; the Rev. John Denne, D.D. 'archdeacon and prebendary of Rochester,' who died in 1767; and was father to the late Rev. Samuel Denne, the learned compiler of the "Memorials" of this cathedral, inserted in the *Custumale Roffense*. In different parts of the pavement of this edifice, are the brassless grave-stones of five bishops: three of these appear to have had the effigies of the deceased, in pontificalibus, with mitres and croziers, placed under highly decorated screens, having triple-headed towered canopies; and, at the sides, various saints in niches.

The remains of the ancient chapter-house and cloister, which adjoin the cathedral on the south, exhibit a beautiful series of Norman arches and ornaments, though now greatly mutilated. The area of the cloister is now connected with a large piece of ground, and forms part of a prebendal garden.—Immediately adjacent to the north side of the cathedral, and standing between the transept, is Gundulph's tower, the walls of which are ten feet in thickness, though the whole building forms a square of only 40 feet on the outside.—The precincts of the cathedral appear to have occupied nearly half the area contained within the walls of the city. There were three gates leading into it; the cemetery gate, which opened from the Market Cross towards the west end of the church; St. William's gate, which led from the High Street to the north transept door; and the Prior's gate, which opened into the vineyard towards the south. The last, which is embattled, and the cemetery gate, are still remaining. Scarcely any thing remains of the various offices of the dissolved monastery, but parts of walls, which are now wrought up in other edifices. The porter's lodge,

lodge, is a small embattled tower, opening under a pointed arch.

The site of the bishop's palace, originally erected by Gundulph, and afterwards successively re-edified by the Bishops Glanville and Lowe, is now occupied by a neat and pleasant row of modern houses. On the site of the prior's chambers stands the present deanery; the grounds ranging to the south-east of which were anciently the gardens, &c. of the prior and convent, who, among their other pleasures, had the enjoyment of a vineyard. The space which this occupied, immediately without the city walls, is still called the Vine Field.

Rochester formerly had four churches, independent of the cathedral; respectively dedicated to St. Nicholas, St. Margaret, St. Clement, and St. Mary. The last is entirely destroyed, and its site forgotten: St. Clement's continued to be used till after the Reformation, when the parish was united to that of St. Nicholas, and the church itself was dilapidated: the remaining walls are still to be found in some houses on the north side of the High Street.

St. Margaret's church is pleasantly situated on an eminence, to the southward: the tower is well built and embattled. In the chancel is a mural monument in commemoration of Captain Percy, a descendant of the Earls of Northumberland, who served in the navy during 47 years, and escaped from many imminent dangers in sea-fights, &c. between the years 1700 and 1740. The parish of St. Nicholas, though the oldest on record, does not appear to have had a distinct place of worship, till upwards of three centuries after the Norman descent. The parishioners, however, had an altar in the northern division of the west transept, and, perhaps, an exclusive right to the performance of Divine service in that part of the cathedral. In 1421, the parishioners removed to a church which they had then recently completed for themselves, in the cemetery, on the north side of the cathedral. This building is yet standing, and consists of a nave, aisles, and chancel, with an embattled tower at the north-west angle. Over the west door, is an inscribed tablet, purporting that this church was rebuilt in the year 1624; but, although this account is corroborated by an entry in the register, the appearance of the building itself, as well as the brief, issued for its repair, evince its fallacy.

St. Catherine's hospital, a grammar-school, an alms-house for the relief of poor travellers, and a free-school, are the principal establishments in this

city. The hospital was founded and endowed in the year 1316, by Simond Potyn, who was master of the Crown inn, and appears to have represented this city in seven Parliaments. It was intended for persons afflicted with the leprosy, whether male or female, "or suche other diseases that longe to impotence." The present hospital, which was erected in 1717, contains twelve apartments, occupied by the same number of poor people, who have a certain allowance of coals, candle, and money, annually, out of the proceeds arising from the original endowments, and from donations that have since been made. The grammar-school was founded by Henry the Eighth, for 20 scholars, to be called "King's Scholars," with an upper and under master, to be paid by the church; with four exhibitions to the Universities, each of the yearly value of 5/.—A bequest of 60/. per annum, connected with this school, and with the free-school at Maidstone, was made in 1618, by the Rev. Robert Gunsley, rector of Titsey, in Surrey, for the maintenance of four scholars at University college, Oxford; to be selected from both schools, and to be allowed chambers, and 15/. each annually. The alms-house, endowed for the relief of poor travellers, stands on the north side of the High Street, near the upper end, appears to have been built in the reign of Elizabeth. It was appropriated and finished, under the will of Richard Watts, Esq. who lies buried in the cathedral, and who devised his principal house, called Satis,* with its appurtenances, &c. to be sold for the purpose of providing "six good matrices, or flock beds, and other good and sufficient furniture, to harbour or lodge poor travellers, or way-faring men, being no common rogues, nor proctors;† and they, the said way-faring men, to harbour and lodge therein no longer than one night, unless sickness be the farther cause thereof: and these poore folkes there dwelling, to keep the same sweet, and courteously intreat the said poor travellers: and every of the said poor travellers, at their first coming in, to have fourpence; and to warm them at the fire of the residents within the said house, if need be." His other estates and property he bequeathed, after the decease of his widow, and the payment of a few legacies, to the mayor and citizens, for the purpose of supporting the alms-house, and purchasing "flax, hemp, yarn, wool, and other necessary stuff, to set the poor of the city to work." The yearly revenues are now upwards of 1000/. and are continually augmenting as the leases fall in.—

* The origin of this appellation is curious. Mr. Watts had the honour of entertaining Queen Elizabeth here, in 1573, during one of her progresses. He is said to have apologised, at her departure, for the smallness and inconvenience of his residence; to which she replied only by the Latin word, "Satis." Little of the old building remains, though the mansion that occupies its site, still bears its name. It stands on Bully Hill, at a short distance from the castle southward.

† It was formerly considered, that Mr. Watts's motive for

fixing this stigma on the legal profession, was, that when on the continent, he was afflicted with a severe illness; and, having employed a proctor to make his will, found, on his unexpected recovery, that the advocate, instead of recording the intentions of his employer, had made over all his estates to himself. An ingenious writer, however, has suggested, that the word Proctor, or Procurator, was the designation of those itinerant priests, who, in the reign of Elizabeth, had dispensations from the Pope, to absolve her subjects from their allegiance.

The alms-house was repaired at a considerable expense, in 1771, at which time the following inscription was affixed, in front of the edifice :—

RICHARD WATTS, Esq.
By his will, dated 22 August, 1579,
Founded this Charity
For Six poor Travellers,
Who not being ROGUES, or PROCTORS,
May receive gratis, for one Night,
Lodging, Entertainment,
And Four pence each.
In Testimony of his Munificence,
In honour of his Memory,
And Inducement to his Example,
NATH^l. HOOD, Esq^r. the present Mayor,
Has caused this Stone
Gratefully to be renewed
And inscribed.
A.D. 1771.

No travellers, however, are now lodged here ; but the groats are paid on application to the mayor.—The residue of the income is appropriated in aid of the poor's rates. The free-school was founded and endowed under the will of Sir Joseph Williamson, Knt. who had thrice been a member of Parliament for this city, in the reign of William the Third.—He bequeathed the sum of 5000*l*. for the purchase of lands and tenements to support the new foundation.

Rochester Bridge, over the Medway, appears to have been originally built of wood, resting on strong piles, in the reign of King Edgar, who, with Dunstan, Archbishop of Canterbury, the Bishop of Rochester, &c. contributed to defray the expense ; and also subjected certain lands and manors to keep it in repair. This bridge crossed the river, about 120 feet more to the northward than the present one, and in a direct line with the principal streets of Rochester and Stroud. At the west end, was a draw-bridge and barbican ; and, at the east end, a wooden tower, built with "marvellous skill," and intended to secure this entrance of the city. Soon after the taking of Calais, in 1347, it was recorded, "that the traffic on this road was so great, and the number of carriages and burthens so considerable, that the bridge appeared insufficient to support them with safety." It was still, however, kept up, till the reign of Richard the Second, when Sir Robert Knolles, and John de Cobham, erected the present bridge of stone, at their own expence. It was completed about the year 1393 ; and, in the year 1398, a patent was obtained for incorporating the wardens and commonalty of the contributory lands ; with license to receive and hold in mortmain, lands and tenements to the value of 200*l*. per annum, in aid of supporting the said bridge. Soon afterwards, John de Cobham granted in perpetuity, for its maintenance and repair, a large estate ; and his example was followed by others ; so that the holders of the lands, anciently subjected to defray the charges of the bridge, have, from this time, in a great mea-

sure, been relieved from the burthien, though they are considered as still liable. The bridge has been much improved : both entrances having been widened, and three of the arches new built. The length of the bridge is nearly 570 feet : the sides are defended by a parapet and balustrade ; and it has altogether eleven arches. The bridge-chamber, or record-room, which stands opposite to the east end of the bridge, is a neat building, of Portland stone, with a portico beneath, occupying the site of the western porch of a chapel, or chantry, that was founded by the potent Baron, John de Cobham, at the time of the building of the bridge. He designed it principally for the use of travellers, and appointed three chaplains to officiate in it, who were to have a salary of 6*l*. each per annum, payable from the revenues of the bridge estates, and were to pray for the souls of the founder and his lady ; of Sir Robert Knolles, and his lady : the other benefactors to the bridge ; and of all "faithful people deceased." The chapel has, for many years, been inhabited as a dwelling-house.

The town-hall stands on the north side of the High Street, and was erected about the year 1687. It is built with brick, and is supported on duplicated stone columns, of the Doric order. The hall itself is a lofty room, 47 feet by 28 ; its rich ornamented ceiling, displaying the arms of the city, and of Admiral Sir Cloudesly Shovel, at whose expence it was executed, amidst trophies of war, flowers, &c. Against the wall, at the upper end, are full-length portraits of William the Third, and Queen Anne, by Sir Godfrey Kneller ; at the lower end, are those of Sir Joseph Williamson, and Richard Watts, Esq. and, at the sides, of Sir Cloudesly Shovel, Sir John Jennings, Sir Thomas Colby, Sir John Leake, Sir Thomas Palmer, and Sir Stafford Fairborne. In the space below the hall, the markets are held ; and adjoining to the back part of the area, is the city gaol.

The clock-house occupies the site of the ancient Guildhall, and was built at the sole charge of Sir Cloudesly Shovel, in the year 1706 : the front is of brick, and of excellent workmanship, the joints being scarcely discernible : the clock was also the gift of the same gallant officer.

This city has returned two members to Parliament ever since the year 1295. The Treasury nominates one member. Numerous improvements have been made here, since the year 1760, when an act was obtained for paving, lighting, and watching the streets, &c. the charges to be defrayed by a small rate levied on the inhabitants and landlords. By a clause in the same act, the commissioners were empowered to make a new road from East Gate to Chatham Hill ; and, since its completion, the old road, which lay through Chatham, has been entirely deserted. The houses are mostly respectable buildings, forming the principal, or High Street, through which passes the grand thoroughfare

fare to Canterbury and Dover. The inhabitants are principally engaged in trade, and maritime occupations: and at a short distance from the east end of the bridge, on the north side, is a commodious wharf or quay. Here is an establishment of the excise, and another of the customs. The oyster fishery on the several creeks and branches of the Medway, is managed, under the direction of the mayor and citizens of Rochester, by a Company of Free Dredgers, who principally reside at Stroud. Great quantities of the Medway oysters are sent into Holland in the time of peace.

RODMERSHAM.]—Rodmersham is two miles S. E. by S. from Sittingbourn. The south chancel of the church belongs to the Lushingtons, lords of the manor; and in its south wall, it has two very ancient arches. In the principal chancel is an ancient wooden seat; the back of which is a screen of gothic open-work, with an over-hanging canopy. In the west window of the north aisle, is a small mutilated figure, of Edward the Confessor in stained glass.

ROLVENDEN.]—This place, 2½ miles S. W. by W. from Tenterden, was anciently the residence of many distinguished families; but the mansions, in which they resided, are now converted into farm houses. Among these, Halden Place, from the Haldens, in the reign of Edward the Third, stands conspicuous. Hole, another estate in Rolvenden, has been, for many ages, the patrimony of the Gibbons, who were settled in this parish so early as the year 1320, and may be considered as the original stem, from which the various families of that name in Kent, have branched. Kingsgate House, a seat of the Wallers, in whose family it has long remained, is also worthy of attention: it was the residence of the late Admiral Waller, who died here in 1772.

ROMNEY.]—Romney marsh, which has been already slightly noticed, is thought to have been once covered with the sea; and, being very unhealthy, is not so well peopled as other parts of the county. The Parliament used annually to allure men hither by exempting them from the subsidies levied in other places. It has two towns and 19 parishes, which were incorporated in the reign of Edward the Fourth, by the name of the bailiff, twenty-four jurats, and commonalty of Romney marsh. They have a court every three weeks, to hold pleas for all causes and actions, and a power to chuse for justices among themselves (besides their bailiff) who are vested with the same authority, and have the execution of all the king's writs, the benefit of all fines and forfeitures, privileges of leet, law day, and term; exemption from toll and tax, scot and lot; and many other privileges and exemptions, which no other place in England has; nor has the king any waste here, or title to wrecks, they being all appropriated to the several manors next to the sea. In this marsh, large trees are frequently found lying at length under ground, as black as

ebony, but fit for use when exposed to the sun's rays.

The market town of New Romney is situated on the English Channel, 37 miles S. E. from Maidstone, and 71½ S. E. by E. from London. Its population, in 1811, was 841. Old Romney is a member of the tower and port of New Romney, from which it is distant two miles W. The name is supposed to be derived from the Saxon *Rumen-æa*, words signifying a large watery expanse, or marsh. Old Romney, in the Domesday Survey, is noticed by the appellation of *Romenel*, and was then held by Robert, surnamed *De Romenel*. New Romney, as well as Old Romney, was anciently a maritime town; and it is yet considered as one of the Cinque Ports, though the Haven has for many ages been filled up, and become dry land. It arose on the ruins of Old Romney, the privileges of which were most probably transferred hither when the port began to decay; probably about the period of the Norman invasion, as, previously to that, Earl Godwin, and his sons, are recorded to have entered the Haven, and to have carried away all the vessels then harboured here. The total destruction of the Haven is stated to have been effected by a dreadful tempest, in the reign of Edward the First, which entirely altered the course of the Rother; destroying not only men and cattle, but whole towns and villages.

Romney is a borough by prescription; but the inhabitants were incorporated in the reign of Edward the Third, by the style of the Barons, &c. of the town and port of New Romney. A charter was also granted by Elizabeth, under the general provisions of which, though the charter was surrendered by order of Charles the Second, and never returned, the town is now governed. The corporation now consists of a mayor, nine jurats, and eleven commoners, or freemen, in whom, also, is vested the right of sending the two barons to Parliament; the nomination being possessed by Sir Edward Dering, of Surrenden.

New Romney church is a spacious edifice, consisting of a nave, aisles, and chancel, with a large and curious tower at the west end, the lower part of which is of Norman architecture; as is also the chief part of the nave, and its aisles. On a tomb in what is called the north chancel, are small brasses, in the habits of the times, of Thomas Smyth, a jurat of this town, who died in 1610, and Mary, his wife. On another slab is a brass in memory of Thomas Lamberd, who died in 1510. This church was anciently appropriated to the abbey of Pontiniac, in France, the convent of which founded a small priory, or cell, here, subordinate to their own house. An hospital for lepers was also founded here, about the end of the reign of Henry the Second; but the revenues being very small, it was afterwards re-founded as a chantry. There are yet some small remains of both these buildings.

In New Romney, the houses are chiefly of brick, ranged

ranged in a principal street, with a small one crossing it, in which stands the hall, or brotherhood-house. This was rebuilt, a few years ago, as was also the market house. Near the side of the road leading from Dymchurch towards Romney, are extensive ranges of barracks both for cavalry and infantry. Old Romney is now a very inconsiderable place, consisting of only a few houses surrounding the church, which is of considerable antiquity.

ROYDON.]—In East Peckham, already noticed, stands Roydon-hall, formerly the seat of the Roydon family, but now, that of Sir William Twysden, Bart. whose family acquired it by marriage. Sir Roger Twysden, born in 1597, obtained license from Charles the First, to inclose a park here.

SALTWOOD.]—A mile and a quarter N. by W. from Hythe, is the village of Saltwood, the greater part of the church of which, was built in the reign of Edward the Third. It contains various old brasses; and in the chancel is a curious and ancient chest of oak, with much elaborate carving.

The original foundation of Saltwood castle, has been attributed, though perhaps erroneously, to the Romans. Anciently it formed a strong seat of the Archbishop of Canterbury; but it was alienated from that see by Archbishop Cranmer, and is now the property of Sir S. E. Brydges, Bart. The outer wall has towers and battlements, and a deep ditch within, and on one side stands the main body of the building. Here are two large and lofty towers at the gate, over which are the arms of Archbishop Courtenay. The inner work has a stronger and higher wall, with a broad embattled parapet at top. Within is a court, but the lodgings are all demolished. The floor of the ruinous chapel is strongly vaulted. In the middle of the court is a large square well. Anchors are said to have been dug up near this place, and that the sea formerly came up to it. Others, however, contend that the Romans had an iron forge at this spot.

SANDGATE.]—Westward from Folkestone, about a mile and a half, is the little bathing village of Sandgate, which has been formed within the last 25 years, and is now much frequented. A castle, similar to those of Deal and Walmer was erected here by Henry the Eighth, about the year 1530, most probably on the site of a more ancient one. This castle has been greatly altered within these few years; and a large Martello tower built up in the centre, to combine with other Martello towers on the neighbouring hills. During the American war, several frigates were built at Sandgate. The houses stand partly in the parish of Folkestone, and partly in that of Cheriton; through which the jurisdiction is divided between the Cinque Ports and the county.

SANDLING.]—Towards the west, about half a mile from Saltwood, is Sandling, the seat of William Deedes, Esq. It is a large mansion, built a few years ago, under the direction of Bonomi, on a

hill which commands fine views of the sea, and some beautiful rural scenery.

SANDOWN.]—Sandown castle stands upon the sea shore, about a mile to the north of Deal, and was built by Henry the Eighth. It consists of four lunettes, of very thick stone arch work, with port-holes for great guns, and in the centre is a noble round tower, having at the top a cistern, and underneath, an arched cavern, bomb proof. The whole structure is surrounded by a fosse, over which is a draw-bridge. This fortress is under the government of the Lord Warden of the Cinque Ports. The Sand-Downs extend from Peperness to Deal, a distance of about five miles, and are in general a quarter of a mile in breadth.

SANDWICH.]—Sandwich, a market town, and one of the Cinque Ports, is situated at the distance of 40 miles E. from Maidstone, and 68 E. by S. from London. It is generally considered, that the decay of the Portus Rutupensis, occasioned the rise of Sandwich, though at what period is uncertain. The name, SOND-wych, is clearly of Saxon origin, and indicative of its low situation, on the sea-sands. It is also said to have been called Lunden-wich, either as situated at the entrance to the port of London, or from being the place of general resort of the merchants, trading to and from that metropolis. The Saxon chronicle mentions a battle to have been fought here, both by sea and land, in 851, or 852; when the Danes were put to flight, and nine of their ships taken. Shortly afterwards, the Danes again landed from 350 ships, and pillaged Lunden-burgh (thought to be Sandwich) and Canterbury. In 993, or 994, Anlaf, the Dane, with upwards of ninety ships, came to Sandwich, 'spoiling all the coast.' In 1006, or 1007, another Danish fleet arrived here, and all the coasts both of Kent and Sussex were ravaged 'with fire and sword.' In 1008, the fleet assembled by Etheldred the Second, to oppose King Sweyn, rendezvoused at Sandwich: and here, also, Sweyn himself, with a strong fleet, remained for some days in July, 1013, before he made sail to the northward. In 1014, Canute, when leaving England, touched at this port, and set on shore all the 'English hostages, after depriving them of their hands, ears, and noses;' and on his return, in 1016, he landed here with a numerous army. In 1028, he granted the port of Sandwich, and all its revenues, to the monks of Christ Church, Canterbury. He is also said to have partly rebuilt the town, which now became very flourishing; and its importance was increased by its being made a principal Cinque Port, and constituted a hundred of itself. Edward the Confessor, in 1040, resided here a considerable time; and in 1052, fitted out a fleet here to oppose Earl Godwin and his sons; who in the same year, came into this harbour, and afterwards sailed through the channel of the Wantsume towards London. In the Norman Survey, Sandwich is described as a 'borough held by the Archbishop

bishop of Canterbury for the clothing of the monks, and as yielding the like service to the king at Dover. The town was partly destroyed by fire, by the Dauphin of France, in 1217. Henry the Third granted to the inhabitants a weekly market, and other privileges; and Edward the First fixed the staple for wool here. In 1369, Edward the Third granted to the monks other lands in Essex, in exchange for "all their rights, privileges, and possessions, in this town and port." During the French wars in the reign of this king, Sandwich was the general place of rendezvous for his fleets and armies. In 1357, Edward the Black Prince landed here with his prisoners, John, King of France, and his son Philip; and in 1372, Edward the Third assembled at this town and port, an army of 10,000 archers, and 3000 lancers, with a fleet of 400 sail, and embarked for the relief of Thouars, &c. In 1384, a royal order was issued for inclosing and fortifying this town, which was then considered as a principal object of French vengeance. The French were preparing to invade England; and, to protect their troops from the English archers, they constructed a wall of wood, 3000 paces in length, and twenty feet high, having a tower ten feet higher than the wall, at the distance of every twelve feet, and every tower being sufficiently capacious for ten men. In 1385, part of this wall was taken in two large vessels, and brought to, and set up in this town, 'to our great safetie,' observes Lambard, 'and their repulse.' In 1437, and 1456, the French landed here, and plundered the greatest part of the town. Desirous of destroying the town entirely, they landed in the night, in 1457, to the number of 4000, under the command of the Marshal de Breze. After a long and bloody conflict, they succeeded in getting possession of the place, and having wasted it with fire and sword, slew many of the inhabitants, and then re-embarked. Soon afterwards, it was again ransacked by the Earl of Warwick. Edward the Fourth "new walled, ditched, and fortified the town with bulwarks; and gave, besides, 100*l.* yearly out of the Custom-house here, which, together with the industry and efforts of the merchants, who frequented this haven, in a very short time restored it to a flourishing state; insomuch that, before the end of that reign, the clear yearly receipt of the customs belonging to the king, amounted to upwards of 16 or 17,000*l.* and the town had ninety-five ships belonging to it, and above 1500 sailors." The walls were ordered to be kept in repair, by a duty upon all wool shipped at this port. About this time, the harbour began to decay, 'by the aboumdance of the light Sande' driven in by the sea. The measures resorted to for its restoration, were insufficient for the purpose; and the destruction was in some respects accelerated by Cardinal Morton, and others, who began to enclose and wall in the marshes on each side of the upper part of the Wantsumme, by which means the water was deprived of its usual course. Several attempts were made, in the reigns

of Henry the Eighth, Edward the Sixth, and Elizabeth, to obtain the assistance of the government in preserving the haven, but without success. The decay of the haven would, in all probability, have occasioned the total ruin of Sandwich, if the persecutions in the Low Countries had not induced multitudes of Protestants to quit their native homes, and take shelter in those states, whose laws were administered on principles of enlightened toleration. Under the Queen's Letters Patent, dated at Greenwich, in July, 1561, the workers in sayes, baize, flannel, &c. fixed themselves in this almost depopulated town, with their families, to the number of 406 persons: in the same year, they were admitted to hold two markets weekly, for the sale of their baize, &c. Amongst these strangers, was a small body of gardeners, who finding the adjacent grounds extremely favourable to the growth of all esculent plants, began to cultivate them, to great advantage. Flax, teazle, and canary, were also cultivated by the same people. The settlement of the Flemings at Sandwich, was probably the cause of the visit made by Queen Elizabeth to this town, in 1573. She arrived on the 31st of August, and continued here three days, highly pleased with her reception and entertainment. In the time of James the First, the trade of this town had increased so much, that the customs amounted to about 3000*l.* annually: but they afterwards experienced a considerable defalcation, through the establishment of the Company of Merchant Adventurers; and though the descendants of the Dutch and Walloon manufacturers still continued here, they entirely discontinued the manufactures which they had originally carried on, and mixed with the rest of the inhabitants in the general occupations of the town. A gradual increase, however, both in the population and buildings, has since taken place; and, though the haven can now be regarded as little more than the outlet of the Stour, the exports and imports are considerable. The exports are corn, grain, flour, seeds, hops, wool, malt, apples, pears, leather, oak-bark, ashes, &c. The imports are grocery, furniture, linen, woollen, and other shop goods, from London; iron plank, spars, timber, lead, coals, salt, wine, spirits, glass, grindstones, &c. from Wales, Scotland, Sweden, Norway, and the Baltic. Here are also some establishments for ship-building, rope-making, &c.

Several smart shocks of an earthquake were felt at Sandwich, in the months of April and May, 1579. The plague has, at different times, ravaged this town with considerable violence. The great storm of November, 1703, did damage in Sandwich, to the estimated amount of 3000*l.* The town is very irregularly built, and has an appearance of greater antiquity, perhaps, than any other town in this county. The streets and lanes are narrow and inconvenient; though some considerable improvements have been made, under an act passed in 1787, for new paving, lighting, watching, &c. The town was formerly divided into eight wards; but, from the year 1437,

it has been divided into twelve wards, or districts, each under the jurisdiction of a jurat, who nominates a constable, and a deputy constable. Great part of the walls still remains; and, till of late years, five gates of entrance, Canterbury Gate, Woodnesborough Gate, New Gate, Fisher Gate, and Sandown Gate, were also standing. Fisher Gate, the only one that now remains, is an ancient mean-looking fabric, opening towards the water, at a short distance from the bridge, which has a draw-bridge in the centre.

Here are three parishes: St. Clement, St. Peter, and St. Mary. St. Clement's church is a spacious edifice, consisting of a nave, chancel, and aisles, with a massive tower, of Norman architecture, rising from four semicircular arches in the centre of the building. The font is octagonal, and consists of a shaft and base, raised on two steps. The faces of the bason are charged with shields of arms and roses, in alternate succession; and the shaft is surrounded by eight niches, between graduated buttresses. The angles of the mouldings are sculptured with grotesque faces, satyrs' heads, flowers, foliage, &c. Some ancient wooden stalls remain here. The sepulchral inscriptions are numerous. This church was formerly appropriated to the use of the Dutch residents. St. Peter's church has been erected at different periods: the south aisle was destroyed by the fall of the steeple, which occurred in October, 1661: the present tower was built, with the old materials, to the height of the roof of the church; but, above that, it was carried up with bricks made of the haven mud. Under an obtuse arch, in the wall of the demolished aisle, was the tomb of Sir John Grove, of Grove, in Staple, who flourished in Henry the Sixth's time, and whose effigies, arrayed in armour, was placed on the top: what remains of this figure is now in the church.—Under an arch, in the north wall, are also two figures, greatly mutilated, of a male and female, in dresses apparently of the fourteenth century. In the north wall, also, are two other ancient tombs under arches, the sculpture of which has been well executed. St. Mary's church is a large fabric, consisting of a nave, chancel, and north aisle; the south aisle has been destroyed. From the Sandwich manuscript, quoted by Boys, it appears, that William, Lord Clinton, was interred in this church, in the reign of Edward the First, under a gilded arch in the south wall. Here, also, were buried, in a chantry chapel, dedicated to our Saviour, Sir Edward Ringeley, Knt. and Elizabeth, his wife. At a short distance, southward from this structure, was a chapel dedicated to St. James, now entirely destroyed; but the cemetery belonging to it, is still used as a burial-place. At the south-west corner was a hermitage.

A priory for Carmelites, or White Friars, was founded at Sandwich, in 1272, by Henry Cowfield, a German; but, from some of his endowments having been augmented by William, Lord Clinton, that

nobleman was afterwards considered as the founder. The buildings, which were extensive, have been long destroyed.—There have been three hospitals founded in this town; St. John's, St. Thomas's, and St. Bartholomew's. St. John's hospital was pulled down a few years ago; and, on its site, six small brick dwellings were erected for the reception of six poor persons, generally females, selected by the mayor. St. Thomas's hospital was founded and endowed about the year 1392, by Thomas Ellis, or Elys, a wealthy draper of Sandwich, who lent 40*l.* to Richard the Second, to supply his necessities in the first year of his reign. The number of inmates is twelve; eight men, and four women. St. Bartholomew's hospital is an ancient foundation, on the south side of the town. Leland says, it was "fyrst ordeined for maryners desesynd and hurt." It has been generally supposed, that it was founded about the year 1244, by Sir Henry de Sandwich, whose figure, in a hauberk of mail, with a heater shield, and a broad-sword, is sculptured on a marble slab, covering an altar-tomb in the chapel here. Its origin, however, is proved to have been at least 30 or 40 years earlier. The number of residents is 16, who are appointed by the mayor and jurats, as patrons, governors, and visitors of the hospital.—They consist both of brethren and sisters, each of whom, on admission, pays 7*l.* 5*s.* 4*d.* which sum is immediately divided among the whole. The annual allowance to each, was about 19*l.* besides perquisites; but, the rental of the estates having been much increased, a considerable addition has been made to the stipend.

A free grammar-school was founded here, in the reign of Queen Elizabeth, by a subscription promoted among the inhabitants, by Sir Roger Manwood, Chief Baron of the Exchequer, when Recorder of Sandwich, in 1568. Four exhibitions from this school were subsequently founded in Lincoln college, Oxford, under the will of Joane Trapps, wife of Robert Trapps, citizen and goldsmith, of London. At a charity-school, founded here, about the year 1711, and principally supported by regular subscriptions and occasional contributions, 30 boys, and 30 girls, are educated.

This town was first incorporated by Edward the Third, by the style of the Mayor, Jurats, and Commonalty, of the town and port of Sandwich. The charter under which it is now governed, was granted by Charles the Second, in his 36th year. The corporation consists of a mayor, twelve jurats, 24 common-councilmen, a steward, recorder, town-clerk, and inferior officers. All the municipal elections, decrees, and ordinances, are made by the whole corporate body, at a common assembly, convened by the sound of a "brass horn," of great antiquity. The earliest return of two barons to Parliament, from this town, bears date in the 42nd of Edward the Third.

The guild-hall, or court-hall, was built in 1579: the lower apartment is the proper court-hall: on the

the first story is the council-chamber: in the upper story, were kept the armour for the trained bands, the cucking-stool, and the wooden mortar, formerly used in this town for the punishment of scolds.—Several entries in the records quoted by Boys, mention this instrument of punishment: one of them, under the date of 1637, occurs in these words:—“A woman carries the wooden mortar throughout the town, hanging on the handle of an old broom upon her shoulder, one going before her, tinkling a small bell, for abusing Mrs. Mayoress,” &c. The same records, under the date of 1494, mention that a house was appointed for common women, “as hath been accustomed.”—The execution of felons, condemned to death, within this hundred, in the 14th and 15th centuries, and probably much earlier, was by drowning; and, in the year 1315, complaint was made against the prior of Christchurch, for “that he had directed the course of a certain stream, called the Gestlyng, so that felons could not be executed for want of water.” In 1630, a woman was hanged without Canterbury Gate, for witchcraft: in 1644, another woman was executed for the same imaginary crime; and, in 1695, a third woman was condemned for a similar alleged offence, but escaped punishment in consequence of the act then passed for a general and free pardon.

In the reign of Henry the Second, an eminent and respectable family took its name from this town, and continued to flourish till about the end of the reign of Richard the Second. Sir Ralph de Sandwich, custos of London, in the reign of Edward the First, and Henry de Sandwich, elected Bishop of London, in 1262, were both of this family. Sir Roger Manwood, Chief Baron of the Exchequer, was born here, in 1525. Sir Henry Furnese, Bart. an eminent merchant, in the reigns of William and Mary, and Queen Anne, was the son of a grocer and tallow-chandler of Sandwich, where he was born in 1658. He represented the town in six Parliaments. Sir George Ent, president of the College of Physicians, in London, was also born here, in 1604. Josiah Burchett, Esq. Secretary to the Admiralty, in the reigns of Queen Anne, and Kings George the First and Second,

* This gentleman was born on the 17th of March, 1750. His father, who followed the profession of the law, was deputed by the Cinque Ports, at the coronation of their present Majesties, to support the King's canopy, in conformity to ancient custom. His mother died while he was an infant. Dr. Simmons was educated in France: from thence he proceeded to Edinburgh, and afterwards completed his medical studies at Leyden, where he was admitted M.D. The subject of his inaugural dissertation was the measles. He afterwards visited the principal universities of Germany, and cultivated the acquaintance of men of letters. After having spent a short time in Switzerland, he proceeded to Montpellier, and returning homeward though Bourdeaux and Paris, arrived in London. In 1778; he was admitted a member of the college of Physicians—he was made F.R.S. in 1779, and F.S.A. in 1791—he was also admitted an honorary member of the Literary and Philosophical Society at Manchester, and of the Royal Society of Medicine at Paris. In the year 1710, he was elected physician to the Westminster General Dispensary, a situation he held

and author of a Naval History of Great Britain, was likewise born at Sandwich, and represented it in several Parliaments. The late Admiral Peter Rainier, was also born here; as was the late Samuel Foart Simmons, M.D. F.R.S. and A.S. physician-extraordinary to the King.*

SEALE.]—This place, which is a chapelry to Kem-sing, is 2½ miles N.E. from Sevenoaks. It was, in the latter part of the reign of Richard the Second, the property of Sir William de Bryene, who lies buried in the church, or chapel of the village. His portraiture, as large as life, in brass, is inlaid on a slab in the chancel: he represented in complete plate armour, with a shirt of mail; his hand resting on a helmet: a bugle-horn for his crest: at his feet, a lion.

Wilderness, anciently called Stidylfe's Place, in this village, is a pleasant seat belonging to Lord Camden.

SEVENOAKS.]—The market-town of Sevenoaks, or Sevenoke, the Seovanacca of the Textus Roffensis, lies 16 miles W. by N. from Maidstone, and 23 S.E. from London. It is said to derive its name from seven large oaks which stood upon the eminence on which it was founded. The manor, which Archbishop Cranmer conveyed to Henry the Eighth, has since become the property of the Dukes of Dorset, with the manors of Kemsing and Seale, by the trustees under the will of the benevolent Henry Smith, Gent. citizen and alderman of London; who, by deed and otherwise, had appropriated a great portion of his estates to charitable uses; and who had purchased these manors, with that of Knole, &c. The town is not ancient. Lambard says, I find “not in all hystorie, any memorable thing concerning it, save onely, that, in the time of King Henry the Sixth, Jack Cade, and his mischevous meiny, discomfited there Syr Humphrey Stafford, and his brother; two noble gentlemen, whome the King had sent to encounter them.” The church is a large and handsome building, conspicuous for several miles round. Here was, anciently, a chantry. In the chancel, are several memorials of the Farnaby family. In the north aisle, is the mural monument of the Kentish antiquary, William Lam-

for several years. His appointment shortly afterwards to St. Luke's hospital induced him to decline general practice, and to devote himself chiefly to the study of mental disorders. With this view, he published several small works relative to the subject. His works upon various departments of medicine are numerous, and rank him high in his profession. In 1803, Dr. Simmons had the care of his sovereign, for nearly six months, and the appointment of one of the physicians extraordinary, was a testimony of his Majesty's approbation. In 1811, when the unfortunate malady returned, Dr. Simmons again attended; the same year he resigned the office of physician to St. Luke's, after having officiated 30 years. He was afterwards elected governor of the charity; and, on his account, solely, the office of consulting physician was created. On the evening of the 10th of April, 1813, he was seized with a sickness, and vomiting of bile, so violent as to resist all the efforts of medicine, and he expired on the 23d, in the arms of his son. He was buried at Sandwich.

bard, which was brought from Greenwich, in 1733. His family have long had a seat, now possessed by Multon Lambard, Esq. at a short distance from the church.

Rumsted, in this parish, was the inheritance of a knightly family of that name. Sir William de Rumsted, who lived in the reign of Edward the Third, is said to have been the foster-father of Sir William de Sevenoke; who, according to Lambard, was deserted by his parents, and found lying in the streets of this town. He was consequently named after the place. He was afterwards apprenticed to a grocer in London, and he rose, by degrees, to be Lord Mayor of that city. He was also knighted; and he represented the city in Parliament. He bore, for his arms, seven acorns. He founded an almshouse and free-school in this town, in grateful acknowledgment of the treatment he had here met with in his infancy. The presumed annual income of the school, is now between 7 and 800*l*. The school-house was rebuilt in 1727; and the almshouse was substantially repaired. The latter is appropriated to the residence of 32 elderly tradespeople, &c. who have a small weekly stipend; and a similar sum is allowed to 16 out-pensioners.

The old market-house stands near the middle of the High Street. The assizes were several times held here in the reign of Elizabeth, as they have also been twice or thrice since. The population of Sevenoaks amounted, in 1811, to 1922. Many of the houses are large and respectable mansions, chiefly situated in two wide streets, at the north end of the easternmost of which is an open space, called Sevenoke Vine, where many grand matches of cricket have been played. So late as the reign of Elizabeth, wild boars were found in Whitley Scrubs, or Forest, in this parish.

Knole, or Knowle Park, the residence of the Duke of Dorset, and formerly of the Archbishops of Canterbury, nearly adjoins Sevenoaks, on the south-east side. Thomas Bouchier, Archbishop of Canterbury, inclosed the park, and made great additions to the ancient edifice, which, in 1486, he bequeathed to the see of Canterbury, and it became the principal archiepiscopal residence. After continuing in the crown some years, it was granted to the Protector, Somerset; and, afterwards, to John Dudley, Earl of Warwick, afterwards Duke of Northumberland, who was beheaded for upholding the pretensions to the crown of his daughter-in-law, Lady Jane Gray. Queen Mary granted Knole, with Sevenoaks, &c. to her kinsman, Cardinal Pole. Elizabeth granted this manor and park to Robert, Earl of Leicester; and, subsequently, to Thomas Sackville, Lord Buckhurst, K. G. who, on the death of Burleigh, was raised to the post of Lord High Treasurer. James the First created him Earl of Dorset, in 1604. His grandson, Richard, the third Earl, who married the celebrated Anne Clifford, greatly wasted his fortune by his splendid manner of living, and was at length constrained to dis-

pose of most of his estates, including Knole, of which, however, he reserved a lease to himself, and his heirs.

The mansion, a noble structure, exhibits specimens of the style of different ages; but the greater part is of the times of the Archbishops Bouchier and Morton. The principal buildings form a spacious quadrangle, with smaller ones behind, chiefly in the castellated style, with numerous square towers, and two large embattled gateways. The space occupied, is upwards of five acres; "an extent, which, combined with the feudal character of the pile, most forcibly recalls to memory the distant days of baronial splendour and romantic chivalry. Nor is the charm broken as the admiring visitor enters the ancient hall, still undefaced by modern alterations, and reflects upon the genuine hospitality of Lord Buckhurst, whose family, during the last 20 years of his life, consisted of from 200 to 220 persons. Many of the apartments are splendidly fitted up; but the chief attraction springs from the invaluable collection of paintings by which they are ornamented.—The portraits are numerous, and in good preservation; comprising many of the principal nobility and statesmen who lived in the reigns of Henry the Eighth, and his children: some of them are by Holbein. Amongst the other pictures, are some of the finest productions of Titian, Corregio, Vandyck, Rembrandt, and Sir Joshua Reynolds. In a corridor, on the south-west side of the edifice, is a fine collection of antique busts, mostly purchased in Italy, by the late Duke of Dorset. The park, which is between five and six miles in circumference, presents a richly diversified surface, abounds with beautiful timber, and is well-stocked with admirably fine-flavoured deer.

SHELDWICH.]—In the parish of Sheldwich, 2½ miles S. by W. from Faversham, is Lees Court, the seat of George John Watson, Lord Sondes: it was long the residence of an ancient family, surnamed *Atte-Lese*, who flourished in the reign of Edward the First: from them it was transferred to the Nortons, and, in the reign of James the First, was alienated to Sir Richard Sondes, whose son, Sir Georges Sondes, in the succeeding reign, experienced great persecution from his devotion to the royal cause, which was aggravated by severe domestic afflictions. He had two sons: the younger of whom, aged 19, murdered his elder brother, as he was sleeping in bed: for this deed of horror he was convicted, and soon after executed on Pennenden Heath. Sir George nearly rebuilt, and greatly enlarged the old mansion at Lees Court, during the protectorate. Upon the Restoration, in reward for his loyalty, he was created Earl of Faversham, Viscount Sondes, and Baron Throwley. He died in 1677, and the estate has passed to the Monsons, now Lord Sondes.

SHEPEY.]—"The island of Shepey," observes Hasted, "is separated from the rest of the county of Kent, by a narrow arm of the sea, called the Swale.

Swale. Its circumference, including the little adjoining isles of Elmeley and Harty, which lie at the south-east side of it, and include about two-eighth parts of the whole of it, measures upwards of 30 miles. It is about 13 miles in length, and about six at its greatest breadth. The greatest part of the island consists of grass land, most of which is very rich and fertile; the remaining, or upland part of it, towards the northern side, in the parishes of Minster and Eastchurch, is equally fertile in corn, the inclosures of which are small, and surrounded with thick hedge rows of elm, and the whole face of the country exceedingly pleasant in fine weather, being interspersed with much small hill and dale, and frequent houses and cottages. The roads throughout the island are very good all the year, owing to the great plenty of fine gravel in it, and the prospects are very pleasing and extensive on every side. There is hardly any coppice wood throughout the whole of it. Fresh water is very scarce, and what there is of it, is brackish. The air is very thick, and much subject to noxious vapours, arising from the large quantity of marshes, in and near it, which make it very unwholesome. The usual passage to it is by a ferry, commonly called King's Ferry, by which carriages, horses, cattle, and passengers, pass and repass to and from the island. It contains, within its bounds, the parishes of Minster, with the villæ of Sheerness, Queensborough, Eastchurch, Warden, Leysdown, Elmely and its isle, and Harty and its isle. The whole of this island is within the division of East Kent." The Swale, which is still navigable for vessels of 200 tons burthen, was, in ancient times, the usual passage for shipping coming round the North Foreland, into the Thames. When the Wantsum, which separated the isle of Thanet from the rest of Kent, was also navigable, this channel, besides being the most sheltered, must have been the most direct way, also, from the Downs to London; but, as that water became progressively choked up by the sands, and as the increase in the size of ships enabled them the better to withstand the violence of the waves, the Swale was gradually deserted, and is now only used by the vessels immediately employed in the trade of this part of Kent. The island was called by the Saxons, *Sceapige*, from the great numbers of sheep which it depastured. The cliffs, extending about six miles, are principally composed of a loose friable marl, abounding in pyrites, and fossils, both native and extraneous: their greatest height, which is on the north side, is about 90 feet. At the east end, is a long beach, called Shellness, from being entirely composed of the fragments of shells thrown up by the sea. The cliffs belong to the manors of Minster, Shurland, and Warden; the owners of which let them to the copperas-makers, who employ the poor inhabitants to collect the pyrite, or copperas-stones, which are continually washed out of the cliffs by the force of the waves. Animal, as well as vegetable remains

VOL. III.—NO. 105.

have been found here of many different kinds; as the thigh-bones, tusks, and grinders of an elephant; two species of the tortoise; the teeth and vertebrae of sharks, &c.

The roads in this island are good, owing to the large quantities of fine gravel, procured from the pits on the sea beach. The isle is entered on the land side, by means of three ferries, two of which are for foot passengers and cattle; the other is for carriages, horses, &c. The latter is called the King's Ferry; and, as already stated, is the passage commonly frequented, it being cost-free to all travellers, excepting on Sundays, on Palm-Monday, Whit-Monday, St. James's day, Michaelmas day, and after eight o'clock at night. The expense of maintaining it, together with the sea wall, and wharf, and the highways through the marshes, is defrayed by assessments made on the occupiers of lands, &c. The ferry-boat is moved forward by means of a cable about 150 fathoms in length, which crosses the water, and is fastened on each side. The ferry-keeper has the exclusive privilege to dredge for oysters, within the distance of 60 fathoms on each side of the cable. The predatory Danes made this island their accustomed place of rendezvous, in the ninth century; at which time, the inhabitants were few, and resident chiefly in the neighbourhood of Minster, where Sexburga, widow of King Ercombert, had founded a nunnery. The large tumuli in the lower or southern part of the isle, termed Coterels, by the country people, are supposed to cover the remains of the Danish chiefs, who were slain in battle. Canute is said to have collected the scattered remains of his army here, after his defeat in the vicinity of Otford, by Edmund Ironside, A. D. 1016.

The market-town of Sheerness, $7\frac{1}{2}$ miles N. E. by N. from Maidstone, and $46\frac{1}{2}$ E. by S. from London, is the principal place in the island. In the reign of Charles the First, it was a mere watery swamp; but, being judged essential to the security of the Medway, it was fortified soon after the restoration of Charles the Second. The King is stated to have himself undertaken the erection of a strong fort here; and actually saw the work commenced. The new works, however, were in a very unfinished state, when the Dutch made their memorable attempt upon the shipping in the Medway, in 1667.—A regular fortress was built immediately afterwards, and mounted with a line of large and heavy cannon; and several smaller forts were constructed on the different sides of the Medway, higher up. Since that period, the fort of Sheerness has been greatly augmented and strengthened, new works have been added, and many improvements made; so that no enemy's ship can now pass, without the hazard of being sunk, or blown out of the water. The garrison is commanded by a governor, a lieutenant-governor, a fort-major, and other inferior officers. The ordnance branch established here, is under the direction of a storekeeper, a clerk of the obsequy, and a clerk

3 a

a clerk of the survey. Adjoining to the fort is the king's yard, or dock, which was principally intended for the repairing of ships, and for the building of frigates, and smaller vessels. During the summer of 1817, however, nearly 1000 convicts were employed, in making immense excavations, for the purpose of forming a new and commodious dock, upon a large scale. This work is expected to occupy several years in its completion. The chapel is a modern edifice, erected for the use of the garrison; but all marriages, burials, &c. are performed at the church of Minster.

Several old ships of war have been stationed on the shore as break-waters, the hulls of which are occupied by about seventy or eighty families, and present a singular appearance; the chimnies being raised of brick from the lower gun-decks. The entire population of Sheerness is estimated at about 1700.

The garrison and inhabitants of Sheerness formerly experienced a scarcity of fresh water, the chief supply being brought in vessels from Chatham; but it was at length determined, that an attempt should be made to sink a well within the fort. The boring, to ascertain the different strata, was begun in April, 1781; and the sinking of the well was commenced in June. At length, the workmen came to an immense stratum of chalk, which prevented the further necessity of steining. They went on, with great caution; and having dug to the depth of 328 feet, the augur, with which they were trying the strata, dropt down, and the water rushed up with such velocity, that the workmen could hardly be drawn out with sufficient haste to escape drowning. In six hours it rose 189 feet; in a few days it was within eight feet of the top; and it has ever since produced an abundant supply. The quality of the water is fine and soft; its temperature somewhat warmer than that which is usually obtained from other wells. From this well, with that at Queenborough, the garrison, and the inhabitants, and also the shipping which lie at anchor at the entrance of the Medway, are supplied.

The little borough town of Queenborough, with a population of scarcely more than 800, chiefly employed in fishing and oyster-dredging, lies about two miles and a half south from Sheerness. It was anciently called Cyningburg, from belonging to the Saxon kings, who had a castle here, near the western entrance of the Swale, which was afterwards denominated the "Castle of Shepey." Edward the Third commenced a new, more extensive, and magnificent castle here, in 1362, and it was finished about six years afterwards. The architect was the celebrated William of Wykeham, afterwards Bishop of Winchester. Edward resided in the castle several days, during which, he made this a free borough, and ordered it to be called Queenborough, in honor of his consort, Philippa of Hainault. He conferred sundry privileges on the Burgesses, and empowered them to elect a mayor, two bailiffs, &c. annually,

which officers were to take their oath of allegiance before the constable of the castle, and to act as justices of the peace within the liberty of the corporation. He also granted them the liberty of holding two markets weekly; and three years afterwards, he appointed Queenborough a staple for wool. The castle was repaired in the years 1484, 1536, and 1593. In 1650, it was stated to consist of "twelve rooms of one range of buildings below, and of about forty rooms from the first story upward; being circular, and built of stone, with six towers, and certain out-houses; the roof being covered with lead: that, within the circumference of the castle, was one little round court, paved with stone; and in the middle of that, one great well; and without the castle, was one great court surrounding it: both court and castle being surrounded with a great stone wall, and the outside of that moated round, the whole containing upwards of three acres of land." It was also stated that "the whole was much out of repair, and no ways defensive of the Commonwealth, or the island on which it stood, being built in the time of bows and arrows; and that as no platform for the planting of cannon could be erected on it, and it having no command of the sea, although near unto it, it was not fit to be kept, but demolished; and that the materials were worth, besides the charge of taking down, 1702*l.* 12*4d.*" The castle was soon afterwards sold, and demolished; but the moat and well still remain to point out its site. On clearing out the well, in 1725, it was found to be nicely steined with Portland stone to the depth of 200 feet, the diameter being four feet eight inches. It has been computed that the bottom of this well is 160 feet, and of that at Sheerness, upwards of 290 feet, below the deepest part of the adjacent seas. The church consists of a nave and chancel, with a tower at the west end. It was originally a chapel to Minster, but has long been parochial. The houses form one wide street, principally of modern buildings.

Minster, $3\frac{1}{2}$ miles E. by N. from Queenborough, derives its name from the Minstre founded here for nuns by Sexburga, about the year 673. It was richly endowed through the interests of the foundress, who placed in it seventy-seven nuns, and became the first abbess. This foundation was nearly destroyed, by the Danes; but, after their invasions had ceased, it was again tenanted by a few nuns, and continued to exist till 1130, when Corboyl, Archbishop of Canterbury, re-edified the buildings, and replenished them with nuns of the Benedictine order.

Scarcely any remains of the conventual buildings are now standing, but a gate house, and part of the church: the latter consists of two aisles, a chancel, and a neat chapel, with the lower part of a square tower at the west end, crowned by a kind of pent-house spire, and opening to the north aisle by a pointed arch. The entrance from the south porch, is under a semi-circular arch, with Norman mouldings.

ings. "In the south wall of the chancel is an ancient tomb, under a high pointed arch, having a range of cinquefoil arches below the inner mouldings, rising from short columns, the bases of which are lions couchant. Upon the tomb is the effigies of a Knight Templar, reclining on his banner and shield, with his hand resting on a helmet, and at his feet an armed page, much mutilated. Behind the knight, towards the back of the recess, is a perfect horse's head, emerging from the waves, as if in the action of swimming: the pinnacles and finials, which crowned the upper part of the tomb, are broken off. This monument is stated to have been erected in commemoration of Sir Robert de Shurland, Lord of Shurland, in the parish of Eastchurch, who was created a Knight Banneret by Edward the First, for his gallant conduct at the siege of Carlaverock, in Scotland. His tomb, says Philipott, 'is become the scene of much falsehood, and popular error; the vulgar having digged out of his vault, many wild legends and romances, as namely; that he buried a priest alive; that he swam on his horse two miles on the sea to the king, who was then near this isle on ship-board, to purchase his pardon; and having obtained it, swam back to the shore, where being arrived, he cut off the head of his said horse, because, it was affirmed, he had acted this by magic; and that riding a hunting a twelvemonth after, his horse stumbled, and threw him on the skull of his former horse, which blow so bruised him, that from that contusion, he contracted an inward impostumation, of which he died.' This tale of Philipott's has several variations, the principal of which is, 'that, after the knight returned from obtaining the king's pardon for his crime, he recollected a prediction, that the horse which he then rode would occasion his death, and, to prevent this, he drew his sword, and slew the faithful animal that had carried him through the waves; but that long afterwards, seeing the bones bleaching on the ground, he gave the skull a contemptuous kick; and having wounded his foot by so doing, the wound mortified, and his death followed.' That the horse's head on the tomb, alludes to some particular circumstance in the knight's history, is extremely probable, though these wild relations obscure the truth. Philipott imagines it to have arisen from his having obtained a grant of various liberties for his manor of Shurland, among which were the right to 'wrecks of the sea;' which right 'is evermore esteemed to reach as far into the water, upon a low ebb, as a man can ride in and touch any thing with the point of his lance.' It should be observed, that the figure of a horse's head is also displayed by the vane on the top of the spire of the church." On the pavement

before the altar, are brasses of a knight and his lady; commemorative of Sir Roger de Northwood, and Bona his wife, who died in the reign of Henry the Third. Beneath the arch which separates the chancel and north chapel, is the altar-tomb of Sir Thomas Cheyney, Knight of the Garter, and Lord Warden of the Cinque Ports, who died in 1559. In the north wall, under an obtusely pointed arch, is another altar-tomb, on which is a recumbent figure in white marble, dressed in the armour of the sixteenth century. This appears to be the effigies of a Spanish general, taken prisoner by Sir Francis Drake, probably on the defeat of the Invincible Armada.

Eastchurch, $5\frac{1}{2}$ miles E. by S. from Queensborough, derived its name from its situation with respect to Minster. It consists principally of the three manors of Shurland, Northwood, and Kingsborough; the first of which gave name to the ancient family of the Shurlands, of whom Sir Jeffrey de Shurland was constable of Dover castle in 1224. Sir Thomas Cheyney, Knight of the Garter, rebuilt the old manor house of the Shurlands. The remains of this mansion evince it to have been a large and splendid edifice: it was situated about half a mile eastward from the church, and was built in the form of a quadrangle, the front of which, now modernized, and converted into a farm house, with the north-west side, and some of the out buildings, are yet standing. Northwood was the ancient estate and residence of the Northwoods, who afterwards resided at Northwood, in Milton. Kingsborough, granted by Queen Elizabeth to Henry Cary, afterwards Lord Hunsdon, has since had a variety of owners. The church is a spacious and handsome embattled edifice, with a square tower at the west end. Here is a handsome monument in commemoration of Gabriel Livesey, Esq. sheriff of Kent in 1620, and his wife Anne, daughter of Sir Michael Soudes, of Throwley.

The churches of Elmly and Warden, now in ruins, display nothing remarkable: that of Leysdown, is a small, neat modern building, a little to the east of the remains of the former tower, which having declined nearly seven feet from the perpendicular, was taken down to within eight feet of the surface of the earth.

SHIPBOURNE.]—Shipbourne, $3\frac{1}{2}$ miles N.N.E. from Tunbridge, was the birth-place of Smart, the poet.* Partly in this parish, and partly in that of Wrotham, is Fairlaws, recently the seat of J. Simpson, Esq. but formerly the property of the Vanes, Lords Barnard, and Viscounts Vane, who resided here. Several of this family lie buried in Shipbourne church, which was rebuilt by Christopher, first Lord Barnard, at

* Christopher Smart, born in 1722, was educated at Pembroke Hall, Cambridge, where he several times obtained the Seatonian prize for the best poem on the Being and Attributes of God. He afterwards wrote the 'Hop-Garden,' in three cantos, an ingenious and much admired production. He was

a man of considerable vivacity, and talent; but becoming embarrassed in circumstances, grew disordered in mind. His insanity shewed itself in an ungovernable predilection to prayer, without distinction of time, place, or circumstance. He died in 1771.

the commencement of the last century. The mansion was partly rebuilt by the Lord Vane, noticed in Smollett's *Peregrine Pickle*, in whose time one of the wings was twice burnt.

SHOREHAM.]—Shoreham is $4\frac{1}{2}$ miles N. from Sevenoaks. The church contains various memorials of the Borretts, of New House, in this parish, a handsome mansion, erected by John Borrett, Esq. a prothonotary of the court of Common Pleas, in the time of George the First. It was purchased by Sir Walter Stirling, who was created a baronet, in 1800. Nearly adjoining to the south-east side of Lullingstone Park, close to the Darent, stood Shoreham castle, latterly called Lullingstone castle. The demesne is now a farm. The farm-house appears to have been constructed with the materials of the fortress, which was in ruin in Leland's time. This castle, if not built by, was certainly very anciently in the possession of the family of Aldham, of Aldham St. Clere, one of whom was castellan of this place, in the year 1223.

SHORN CLIFFE.]—During the late war, an extensive range of barracks was built at Shorn Cliff, on the hill above Sandgate; and, for several years, a summer encampment was held there. Directly under Shorn Cliffe, within half a mile from Sandgate, commences the new military canal, which was cut as a barrier against an enemy, in the event of a landing being effected. It extends from the parish of Cheriton, in a direct line, along the coast, as far as Hythe, where it crosses the Romney road, and, after a devious course, terminates at Cliffe End, in Sussex; a distance of 23 miles. It is about 30 yards in breadth, and six yards deep, and has a raised bank to cover the soldiers, and enable them to oppose a greater resistance to the invaders. A long range of martello towers, built at short distances from each other, has been superadded; they are constructed of brick, and extend from Eastmere Bay to the neighbourhood of Dymchurch. The largest is at Burmarsh, and is contrived so as to contain many others within it. They are of circular form; the walls of vast thickness; and the roofs, bomb proof. Two or more guns are mounted upon each tower, on a revolving frame, so that they may be pointed in every direction, and the men are secured from danger by a high parapet. The entrance into them, is through a narrow opening, at a considerable distance from the ground, by means of a ladder, which is drawn up. The store chambers are below, and are likewise bomb-proof.

SHORNE.]—Shorne, $3\frac{1}{2}$ miles S.E. from Gravesend, was ancient demesne of the Saxon Kings. It became, at length, the property of George Brooke, Lord Cobham, whose grandson, Henry, forfeited it to the crown; and it has since passed through several families, by descent and purchase.

Randall, or Roundall, a subordinate manor in this parish, and now the property of Lord Darnley, was an ancient estate of the Cobhams, and is said, by Philipott, to have been their seat before, upon its

decay, they were transplanted to Cobham Hall.—In Shorne church, was buried Sir Henry de Cobham, sheriff of Kent, in the years 1300, 1301, 1307, and 1315. His tomb, now defaced and mutilated, is in the Roundall chapel; it formerly had an inscription in Saxon characters. His effigies is represented in plate armour, with a shirt of mail, and lying cross-legged: his head rests on a helmet; at his feet, is a lion. On a slab in the pavement, near this tomb, is a brass of a female in a dress of the time of Richard the Third; and, on the same stone, are indents for a Knight, a son, and two daughters, with shields for arms at the corners. In the chancel, are several monuments for the Pages; and, on a slab, in the pavement, beneath a brass chalice, containing the holy wafer, is an inscription for Thomas Elys, a vicar of this church, who died in March, 1519. The font is octangular, and similar, in its form and ornaments, to that at Southfleet: the principal variation is in the compartment, containing the angel with the balances, who has here a good, and an evil spirit, in the opposing scales; while those at Southfleet are empty: the bishop, also, is exchanged for St. Peter, who holds a key in his left hand, and a church in his right.

Somewhat more than 20 years ago, a small battery was raised in the marshes bordering on the Thames, in this parish; and, at the Lower Hope Point, in the parish of Cliffe, one of a similar size, was raised at the same time.

SHOOTER'S HILL.]—This place, on the south side of Woolwich common, was formerly much dreaded by travellers; the steepness and narrowness of the roads, and the harbour which the neighbouring coppices afforded to the robbers, rendering it a fit place for their depredations. Measures had been taken for improving the highway on this hill, so early as Richard the Second's time, but they proved ineffectual; and it was not till the year 1733, that any very material improvement was made, when a road of easier ascent, and of great width, was laid out at some distance from the old one. The difficulty, however, which carriages continually experienced, in ascending this great elevation, has long been complained of, and it has frequently been a matter of surprise, that one of the most frequented roads in the kingdom should lead directly over the summit of so high a hill. Sometimes stage coaches have taken the circuitous route of Eltham and Bexley, to avoid the painful ascent. In the summer of 1817, however, numbers of workmen were employed in lowering the most elevated part of the road, which they cut away, so as to make it 14 or 15 feet lower than it was before. The rubbish, thus taken away, is thrown on the road towards the declivity of the hill, giving it a corresponding height.

On the summit of Shooter's Hill, which is 410 feet, in perpendicular height, above the low-water mark at Woolwich, is a mineral spring. There was a beacon, on this eminence, in the reign of Elizabeth.

On

On the northern brow of the hill, rising, as it were, from a thick wood, appears Lady James's Tower, a lofty triangular building of brick. This was raised in commemoration of Commodore James, the captor of Severndroog. Lady James, his widow, possessing considerable taste, resolved to effect her purpose, in a manner that should not fail to attract the notice of travellers. Accordingly, in the year 1784, the year after the death of her husband, she caused a castellated building to be erected, from a design by Mr. Jupp, the summit of which is upwards of 140 feet higher than the cross of St. Paul's cupola. It consists of three stories, and is surmounted by battlements. The inside is fitted up in an appropriate manner, with arms, partisans, shields, daggers, javelins, &c. proper to the various nations of the east; and the whole is so contrived, as to impress the mind with the belief, that it is the identical armoury appertaining to Angria. In the room above this, the naval actions and enterprises of the Commodore, are beautifully painted on the ceiling; and, from the windows, there is an admirable view of London, the Thames, the shipping, and the adjacent country. This monument of Lady James's affection, may be seen, in a clear day, from many parts of the metropolis, and from the tops of most of the public buildings. The spot on which it has been placed, possesses so commanding an aspect, that it has been selected for the site of a telegraph, which communicates, on one side, with the Admiralty, and, on the other, with the flag-ships at the Nore.

On a tablet over the entrance of the building, which is generally known by the appellation of Lady James's Tower, is the following inscription:—

This Building was Erected
M.DCC.LXXXIV.
By the Representative of the Late,
Sir William James, Bart.

To commemorate that gallant officer's achievements in the East Indies, during the command of the Company's marine forces in those seas; and, in a particular manner, to record the conquest of the castle of Severndroog, on the coast of Malabar, which fell to his superior virtue, and able conduct, on the 2d day of April, M.DCC.LV.

Sir William James, and his lady, resided at Park Place Farm, near Eltham. Their daughter and heiress married the late Lord Ranelagh, whose son, the present Lord, is now owner of this tower, and the estate on which it stands.

SHOTTINGTON HILL.—In the parish of Selling, four miles S.S.E. from Faversham, stands Shottington Hill, which commands a very extensive, and richly diversified prospect. Here are traces of an ancient camp; the centre of the area of which, is now occupied by a windmill. About half a mile northward from this eminence, is a large tumulus, now planted with beech.

VOL. III.—NO. 106.

SITTINGBOURN.—The large and respectable town of Sittingbourn, with a population of about 1400, and containing several excellent inns, is situated 13 miles N.E. by E. from Maidstone, on the high road to Canterbury. "The inhabitants," observes Hasted, "boast much of John Northwood, Esq. of Northwood, having entertained King Henry the Fifth, on his triumphant return from France, at the Red Lion Inn, in this town; and, though the entertainment was plentiful, and befitting the royalty of his guest, yet, such was the difference of the times, that the whole expence amounted to only 9s. 9d. wine being then sold at two-pence a pint, and other articles in proportion." Several others of our Kings have also been entertained here; and, at a respectable family house, near the middle of the town, then the property of the Lushingtons, of Rodmersham, George the First, and Second, constantly lodged, during their progress to, and return from, their German dominions. Queen Elizabeth incorporated Sittingbourn; granted the inhabitants a weekly market, and two fairs annually; and empowered them to return two members to Parliament. The chief privileges of this charter, however, were never exercised; and the market was soon discontinued. The church is a spacious edifice, consisting principally of three aisles, a chancel, a north and south chapel, and a tower at the west end. Excepting the tower, it has been rebuilt since the year 1762, when an accidental fire, occasioned by the neglect of some plumbers, consumed all the other parts of the church, to the bare walls. Most of the monuments were destroyed, and the grave-stones on the floor broken. In the north wall of the north chapel, which belongs to the manor of Bayford, is a curious ancient monument, consisting of a table slab of Bethersden marble, having over it an obtusely-pointed arch, ornamented with quatrefoil compartments, containing heads, shields, fleurs-de-lis, &c. In the recess, beneath the table, is an emaciated figure of a female, in a winding sheet; one hand is placed upon her left breast, which is greatly enlarged; and, across her body, lies an infant swathed: at her feet, are two skulls. For whom this was intended, is unknown; but, it is conjectured, that the peculiarity of sculpture refers to some particular event, or disease, which led to the death of the person represented. The font is octagonal, the angles being ornamented by buttresses. The upper compartments are decorated with flowers, or foliage, and shields in alternate succession.—Henry de Sandford, Bishop of Rochester, whilst preaching here, in 1231, "braste forth," says Lambard, "into great joye, as a man that had beene rapt up into the third heven;" and averred, that it had been then, for the third time, revealed to himself and another man, that of late, three persons had, on the same day, been freed from purgatory: and that those persons were King Richard the First, Archbishop Langton, and one of his grace's two chaplains.

3 R

Lewis

down in the year 1638. To the admirers of ancient architecture, this tower presents a curious specimen of the skill displayed by our ancestors in the construction of what is denominated Gothic churches. The west side is supported by two buttresses of considerable strength: the south, east, and north sides, resting upon arches. This mode of construction would have endangered the tower and its spire, had not the ingenuity of the architect devised two light flying buttresses which shot across the north and south aisles, and form one arch with that on which the east side of the tower rests. The east side is abutted at the angles by two tiers of arches; thus this tower remains as firm, and as upright, as on its first erection. In the pavement of the chancel, is a slab about six feet in length, inlaid with a very curious brass, of a priest, in canonicals, standing in the centre of a cross. Above his head, a scroll, pointing from the breast, contains the following:—"Miserer' mei deus sedem magnam un-antuum." The chapel, adjoining the chancel, was built by Sir John Willshyre, Knt. proprietor of Stone castle, and comptroller of the town and marches of Calais, in the 21st of Henry the Seventh. He died in 1526, and lies buried here, with dame Margaret, his wife, and over their remains, is a rich altar-tomb. Several memorials may be seen, in the church, for the lords of Stone castle, and other families of note.

Stone castle, mentioned above, formerly belonged to Sir John de Northwood; and, afterwards, to the family of Bonevant. Dr. Thomas Plum, arch-deacon of Rochester, bequeathed this estate, in 1704, to trustees, for the purpose of augmenting small benefices within his diocese, and for other uses. Excepting a small tower, at the east end, the mansion exhibits no appearance of a fortress.

In this part of the county, several strata of marine shells have been found; one of which lies near the south-east boundary of the parish of Stone, at a place called Shell Bank, and is a foot in depth: the shells resemble the *Tellina Rugosa*, of Pennant.

STROUD.]—Stroud, originally a chapelry to Frindsbury, is half a mile N.W. from Rochester, of which it is generally regarded as a suburb. It consists, principally, of one narrow street, extending along the high road, to the west end of Rochester Bridge. Its inhabitants are mostly supported by maritime occupations, and by fisheries on the Medway, of which that of oysters is the chief. The church, 100 feet in length, and fifty in breadth, consists of a nave, chancel, aisles, and south chapel, with a tower, surmounted by a low spire, at the west end. On a slab, in the nave, are small whole-length brasses of a man, with three females, in memory of Thomas Glover, and his wives, Agnes, Alicia, and Joane: he died in 1444. Dr. John Harris, F.R.S. prebendary of Rochester, and author of a History of Kent, was curate of this parish. The manor, which

was given, by Henry the Second, to the Knights Templars, was subsequently granted to the Knights Hospitallers of St. John, of Jerusalem. After the Dissolution, it came into the possession of the Lords Cobham, and has since passed through several families. An hospital was founded in Stroud, in the reign of Richard the First, by Gilbert de Glanville, Bishop of Rochester, for a warden, and several priests, who were to "relieve and cherish therein, the poor, weak, infirm, and impotent; as well neighbouring inhabitants, as travellers from distant places." This hospital was afterwards called the Newark, probably from having been rebuilt. The Temple-farm, about half a mile from the village, on the south, was the site of the ancient manor-house, of the Knights Templars; the cellar, with a groined roof, and a vaulting of squared chalk, is still remaining beneath the present dwelling.

STURREY.]—This parish, containing the hamlets of Bloxland, Buckell, Butland, Calcot, Common, Hoth, and Sturrey Street, is 2½ miles N.E. from Canterbury. The manor is the property of Robert Foote, Esq. of Bishopsbourne. Sturrey Street consists of about 150 houses, on the high road to the isle of Thanet, on the north-east of the Stour. The church, a large, handsome fabric, consists of a nave, chancel, and aisles, with a lofty spire. The palace of Ford, partly situated in the hamlet of Hoth, and partly in the parish of Chislet, was one of the most ancient residences of the archbishops of this see. It was demolished about the year 1658. Archbishop Cranmer frequently resided here; and, in 1544, gave entertainment and lodging to Henry the Eighth, when that sovereign was proceeding to Dover, on his way to the continent. Some fragments of walls, and part of the gateway are now standing. The park, which comprised about 170 acres, still retains its name; as does the Vineyard; though both have long been otherwise appropriated.

SUMMERHILL.]—Summerhill, a mile and a half S.E. from Tunbridge, on the Lamberhurst road, is a handsome seat, the property of William Woodgate, Esq. The surrounding district was formerly a chase or forest, belonging to the Earls of Clare; and Summerhill is said to have been the residence of the Earl's bailiffs. Richard de Burgh, Earl of Clanrickard, afterwards Baron of Summerhill, becoming possessed of these estates, in right of his Lady, the Countess of Essex, widow to the unfortunate Earl of Essex, he erected the venerable mansion of Summerhill House, in the reign of James the First. It is a good specimen of the style of building at that period, though the uniformity is, in some respects, destroyed by injudicious alterations. It has a very interesting appearance, standing upon an eminence, in the command of much picturesque and romantic scenery. In the civil wars, these estates were confiscated, and a grant of them was made to Robert, Earl of Essex, the Parliamentary General; and, afterwards, to the celebrated President,

dent, Bradshaw. At the restoration, they were restored to Margaret, daughter and heiress to the Marquis Clanrickard; who, from pecuniary embarrassments, was compelled to alienate several portions of the estate. She dying in 1698, Summerhill House was sold by her son, and it became the property of the Woodgates, about the year 1712.

SUNDRIDGE.]—The parish of Sundridge, or Sundrish, lies $3\frac{1}{4}$ miles W. by N. from Sevenoaks. At the time of the Norman survey, this manor was held by the Archbishop of Canterbury; at which period, there were a church and three mills. In the present church, are various monuments of the Isley and Hyde families. The Place House was pulled down about five and forty years ago; and the surrounding demesne is now a farm. In Sundrish, is a neat cottage belonging to the Bishop of London, who formerly enjoyed this benefice, by gift, from Archbishop Secker.

Croomb Bank, in this parish, was anciently possessed by the Isleys, and is now the property of Lord Frederick Campbell, third son of the Duke of Argyle. The house was partly destroyed, by fire, in June, 1807. Lady F. Campbell, who was in her 70th year, fell a victim to the flames. Philipott informs us, that a few years ago, on digging in the neighbourhood of Coomb Bank, several Roman urns were discovered of a curious shape.

SURRENDEN.]—There are two seats, or manors, of this name: one, in the parish of Bethersden; the other, in the parish of Pluckley. The former is called Old Surrenden, from its being the more ancient seat of the Surrenden family, who possessed the estate as early as the reign of King John; but, alienated it, in the reign of Henry the Sixth, to Cardinal Archbishop Kemp. It afterwards passed to Philip Choute, Esq. who was standard-bearer to Henry the Eighth, at the siege of Boulogne.—George Best, Esq. of Chilston, is the present owner of the estate.

Surrenden, in Pluckley, has, for nearly three centuries, been the seat of the very ancient family of the Derings; one of whom, is mentioned in the *Textus Roffensis*, and in the *Domesday Book*, as holding lands at Farningham, in this county, in the Saxon times. The manor was anciently called Pluckley, and was held by the Archbishops of Canterbury. The ancient manor-house was rebuilt by John de Surrenden, who flourished in the reign of Edward the Third, and his grand-daughter carried the estate, in marriage, to the Derings. Sir Edward Dering, who was created a baronet in the reign of Charles the First, founded the magnificent Manuscript Library at Surrenden, forming a rare and curious collection of books, manuscripts, charters, and documents, of various descriptions; among the latter, are several which relate to the family of the Derings. At the breaking out of the civil war, Sir Edward joined the popular party, but afterwards declared for the King; in consequence of which his estates were sequestered: he died in

in great poverty, in the year 1644, at one of his own farm-houses. The estate was restored to the family, and has descended, in a direct line, to the present Sir Edward Dering. The mansion has a good appearance, and is pleasantly situated; and there is some fine timber on the estate.

SUTTON.]—Sutton Valence, or Town Sutton, lies $4\frac{1}{4}$ miles S.E. by S. from Maidstone; East Sutton, a chapelry of Town Sutton, is six miles S.E. from Maidstone; and another parish, of the name of Sutton, part of the church of which was thrown down by an earthquake, on the 6th of April, 1580, lies four miles S.W. by W. from Deal. The first of these places derived its name, observes Philipott, “from formerly owning William de Valence, Earl of Pembroke, to be the lord of the fee, who certainly instituted that castle, that now, even in its relics and fragments, with much of venerable magnificence, overlooks the plain.” The ruins of Sutton castle are very picturesque; they lie on the brow of the hill, a little distance from the village, on the east, and occupy a commanding situation. The mouldering walls, which were probably those of the keep, are overgrown with ivy, and the scattered fragments intermingled with brush wood, &c. the upper parts no longer remain.

The manor of East Sutton has been in the family of the Filmers, from the eighth of James the First; of whom, Sir Robert Filmer suffered considerably in the civil wars, from his devotion to the royal cause. The Rev. Sir E. Filmer, Bart. is the present owner of the estate. Many sepulchral memorials of this family may be seen in East Sutton church. Among them, is a monument of Robert Filmer, Esq. prothonotary to Queen Elizabeth, in the Common Pleas. This gentleman was the first of the family who settled in the parish, having purchased the manor of Little Charlton. A curious brass records the memory of his son, Sir Edward Filmer, who died in 1629, together with his lady, and 19 children, all engraved on the metal, with their arms, &c. Another inscription commemorates the virtues and endowments of Dorothea, wife of the late Sir B. Filmer, Bart. who died in October, 1793, and was buried in a vault in the cemetery.

SWANSCOMBE.]—This place is four miles E. by S. from Dartford. It was the *Suinescamp* of *Domesday*, so named from the Danish King Sweyn, or Svein, who, says Philipott, “erected a castle here, to preserve a winter station for his ships;” the ruins of which were to be seen in his time. Its chief celebrity, however, is derived from another source; this being recorded as the spot, where William the Conqueror was constrained to yield to the demands of the Kentish men, in confirming to them, their ancient rights. The manor of Swanscombe, which had anciently belonged to William de Valence, and his heirs, became the property of the Mortimers, Earls of March; and, in the person of Edward the Fourth, became vested in the crown. Queen Elizabeth granted it to Anthony Weldon, Esq.

Esq. whose descendants sold it, in 1731, and was a short time afterwards vested in the Child family. This manor is held of Rochester castle; the owner being anciently considered as one of the chief Captains of the fortress. In the church, are interred many of the Welden family.

On the banks of the Thames, at a place called Greenhithe, in this parish, is a ferry into Essex, for horses and cattle. At a short distance from this spot, the range of chalk hills, which bound the marshes as far as Cliff and Cawling, first meet the eye. The chalk-pits behind Greenhithe and at Northfleet, are immense excavations; presenting, in many places, a perpendicular descent of 100 to 150 feet. The chalk forms a considerable branch of commerce; and wharfs are placed along the shore, for the convenience of shipping. The flints, which are intermingled with the chalk, furnish a material ingredient in the composition of our Staffordshire ware, and vast quantities are also exported to China, doubtless for the same purpose. In some parts, the chalk works are considerably below the level of the Thames, which exhibit a very grotesque appearance.

In this neighbourhood, is the beautiful seat of Henry Roebuck, Esq. called Ingress, formerly Ince-Grice. It occupies an elevated situation rising from the Thames, and commands a fine view of the river, and the opposite parts of Essex. This estate belonged to the nuns of Dartford, and became vested in the crown, at the Dissolution.—Queen Elizabeth granted it out. It has since passed through various families, and was purchased, in 1788, by John Desney Roebuck, Esq. Considerable improvements have, at different periods, been made by its possessors, both in the house and the grounds; the latter having been much enlarged, and adorned with plantations. In an elegant summer-house, built in a cavity of the chalk cliffs, is a valuable collection of Roman altars, brought from Italy, and arranged by the Earl of Besborough, its then possessor: who also ornamented the garden with statues, and other specimens of Roman sculpture. The grounds are uncommonly beautiful, and the house commands some delightful prospects.

SWANTON.]—In the parish of Lydden, 4½ miles N.W. from Dover, stands Swanton Court, now a farm-house belonging to Sir S. E. Brydges, Bart. but formerly a seat of the Monings family. The windows, &c. exhibit some remains of Gothic tracery.

SWINGFIELD.]—Swingfield is five miles N. from Folkstone. Here was anciently a preceptory of Knights Templars, founded previously to the year 1190; but, by whom, is unknown. After the suppression of that order, it came to the Knights of Malta, whose arms may still be seen on the front of the farm-house. The annual revenues of this foundation were, at the Dissolution, valued at 87*l.* 3*s.* 3½*d.* Henry the Eighth granted it to Sir

thony Aucher, and it now belongs to Sir Samuel Egerton Brydges, Bart. The remains of the ancient preceptory is now a farm-house; the eastern wall, which constituted part of the chapel, exhibit three very early lancet windows, with three small circular ones above; and, in the western part, are two apartments with fire-places, the stone-work of which has various sculptures: foundations of the ancient fabric may be traced in different parts of the farm-yard. Many circumstances favour the opinion that this was the scene of King John's humiliation, when he made a surrender of his crown to the Pope's legate, in the house of the Knights Templars. The park, connected with the estate, included about 200 acres, and is entitled to particular observation, from its being once the property of the celebrated Algernon Sydney; and it is now held under a mortgage, which he suffered to be foreclosed. Swingfield church, consists of a nave and chancel, with a square tower. In the south porch, is a very ancient coffin lid, sculptured with a cross fleury: the interior of the church displays nothing remarkable. This parish gave name to an ancient family, a member of which Robert de Swingfield was Bishop of Hereford, in the 14th century.

TENHAM.]—Tenham, or Teynham, four miles E. from Sittingbourn, was anciently annexed to the monastery of Christchurch, Canterbury, and continued on that foundation till after the Conquest, when it was allotted to Archbishop Lanfranc, and his successors, Archbishops of Canterbury. These prelates had here a palace, and the splendour in which they lived, often excited the envy of Kings. In the year 1349, Edward the Third visited this place, and was entertained, for several days, with great pomp, by Archbishop Stratford, in the palace. The privilege of a weekly market, and a three days annual fair was granted to the manor, by Henry the Third, but the former has been long discontinued. The manor continued to belong to the see of Canterbury till the reign of Henry the Eighth, who became possessed of it by an exchange with Archbishop Cranmer. In the reign of James the First, the manor was granted to John Roper, Esq. afterwards Lord Teynham, in whose family the property still remains. On a rising ground, at a short distance from the marshes, stands the church, a large handsome edifice, in the form of a cross, with an embattled tower at the west end. The east window is divided into five trefoil-headed lights, with several smaller ones above: the rest are chiefly in the lancet form; the glass exhibits some scriptural subjects, and various legendary representations.—On a slab, in the pavement of the chancel, are curious brasses of William Palmer, and Elizabeth, his wife, who both died in 1639: their effigies are in the dresses of the times. In the south end of the transept, which is called the Frogenhall chancel, several of the Frogenhalls lie buried, among whom, John Frogenhall, who died in 1444, is represented by a brass, exhibiting a knight, in armour, with a collar round

round his neck. Tenham is stated to have been the place where Richard Harrys, fruiterer to Henry the Eighth, planted 105 acres of rich land, about the year 1533, with cherries, pepins, and golden-reynets, which he had procured, at great expence, from abroad; these fruits having, from length of time, greatly degenerated in England: in this stock, we see the origin of the cherry-garden, and apple-orchards of Kent. Until the cultivation of hops became an object of attention, this neighbourhood abounded in orchards; but, since their introduction, many of the latter have been destroyed, to make room for a more profitable production.

TENTERDEN.]—The little market-town of Tenterden, with a population of about 2800, is agreeably situated on a rising-ground, 18 miles S.S.E. from Maidstone, and 56 S.E. by E. from London. It was incorporated, by letters-patent, in the reign of Henry the Sixth, and annexed to the town and port of Rye, in Sussex, in which jurisdiction it still continues. A new charter was granted to the inhabitants, by Queen Elizabeth, vesting the government of the place in a mayor, twelve jurats, twelve common-councilmen, a chamberlain, and town-clerk. The town-hall having been destroyed by fire, a new one was built in 1792. The market-house, an insignificant wooden building, is now little frequented. Many of the private houses have a respectable appearance, and are principally the residence of persons who have retired with considerable fortunes, from the grazing business. A free-school is said to have been anciently founded, and endowed here; but, from the neglect of the trustees, who are the mayor and jurats of the place, it is now sunk in complete decay, and disuse. The church is a large and handsome fabric, consisting of a nave, north aisle, chancel, &c. with a well-built tower at the west end. This tower, from its lofty elevation, may be viewed at a great distance, and it formerly served as a beacon for ships. There are two chapels for dissenters here.

The chapelry of Small Hithe, in this parish, is said to have been, formerly, a place of considerable importance; but, at present, it exhibits only a few houses and cottages. The chapel was licensed, in 1509, by Archbishop Warham; and was dedicated, by superstition, to St. John the Baptist, that under the protection of this tutelary saint, the inhabitants might proceed, in safety, to the parish church, during the season of floods. Not far from this place, is the little hamlet of Reading Street, where Philip-pott informs us, the castle of Anderida formerly stood, a fortress of considerable importance in its time. Extensive barracks have been erected on this hill. The dreadful earthquake, which visited Lisbon in 1755, seems to have been felt, in an alarming degree, in this parish, and the neighbourhood; several ponds were in a state of great agitation; and the waters of some were driven with violence over the banks, with a noise resembling the roaring of the tide.

TESTON.]—The parish of Teston is four miles W. by S. from Teston. It is a small, but delightful, and highly cultivated spot, rising gently from the banks of the Medway. It was anciently the property of the Crevequers; but, being in the barons' war, was afterwards given by Eleanor, Queen of Edward the First, to the priory of Christchurch, Canterbury. Henry the Eighth gave it to Sir Thomas Wyatt, from whom it passed, in a grant, to Sir John Baker, Attorney-General to Queen Mary, whose descendants alienated it during the civil war. In the reign of Charles the Second, it was purchased by Sir Oliver Boteler, and his heirs continued to reside here, till the death of Sir Philip Boteler, Bart. in 1772: this gentleman greatly improved the seat, and gave it the name of Teston House: at his decease, he devised all his estates in Teston, to Mrs. Elizabeth Bouverie: from this lady, they passed to Admiral Sir Charles Middleton, afterwards Lord Barham, of Barham Court, and First Lord of the Admiralty, who made several improvements in the house and grounds. The situation is extremely fine, and the gardens and plantations are very flourishing. Here is a good library, and a choice collection of pictures; among the latter, is a fine portrait of the first Villiers, Duke of Buckingham. Teston church was enlarged by the late Sir Philip Boteler, though still but a small building; and, it is remarkable, that no monument, or inscription stone of the family is to be seen, though many of them lie buried here.

THANET.]—"The isle of Thanet," says Hasted, "is surrounded by the sea, on the northern and eastern sides; along which, the chalk cliffs extend, from a little westward of Gon-end, on the Louth, round the eastern side to Cliff-end, about a mile and a half south-west beyond Ramsgate. It is bounded, on the south, by the river Stour; and, on the west, by the water called the Nethergong. It is, in shape, a long oval, being about nine miles long, from east to west, and about five miles broad, from north to south. It is divided into the two manors of Minster and Monkton, which are separated by a bank, or lynch, which goes quite across the island, and is commonly called St. Mildred's lynch, as will be further mentioned below. It is computed to contain nearly 41 square miles, and little less than about 27,000 acres of land, including Stonar. It contains, within its bounds, part of the parish of St. Laurence, the parishes of Minster, Monkton, and Stonar, and part of the parish of St. Nicholas, and all the churches of those parishes. Two constables have jurisdiction over this hundred. The remainder of this island is within the jurisdiction of the Cinque Ports, containing the corporate town of Margate, including the parish of St. John, Birchington, with Gousend; Wood, alias Woodechurch, and St. Peter's, all members of, and within the jurisdiction of the port of Dover; the ville of Ramsgate, and the ville of Sarre, now esteemed in the parish of St. Nicholas, both members, and within the

the jurisdiction of the port of Sandwich." It is remarkable, that the derivation of the name of this isle has never been distinctly traced: the Britons called it Ruim, or Ruochium, from the contiguity of its situation to the port of Richborough; Solinus calls it Athanatos, or Thanatos, which probably gave origin to the Saxon appellation Tenet, or Tanet-lond; and Lewis traces it from Tene, "a fire, or beacon;" supposing the isle to have been so named on account of the beacons or fires which were here kept, to give notice of Danish or other pirates, to whose ravages it was greatly exposed.

We shall commence our description of the respective parishes, &c. in the island, with that of Monkton, situated $5\frac{1}{2}$ miles W. from Ramsgate. It has evidently taken its name from the monks of Christchurch, to whom the manor was given by Queen Edith, in 961. Soon after the Dissolution, Henry the Eighth bestowed it on the dean and chapter of Canterbury, to which it still belongs. Henry the Sixth granted the privilege of a weekly market here; but it has been long discontinued, and the village contains only a few houses of an inferior description. The church now consists of a nave and chancel only, with a tower at the west end. In the nave, is an ancient brass of a priest; and, in one of the north windows, is the head of a prior. There was a church here, at the Norman conquest, with a fishery and a salt-work, long since lost.

The village of St. Nicholas, or St. Nicholas-at-Wode, $6\frac{1}{2}$ miles S.W. from Margaret, is small, but pleasant: it has a good church, and contains several respectable houses. This place, formerly a chapelry to Reculver, was made parochial, A. D. 1300. The church consists of a nave, chancel, and aisles, with a square tower at the south-west angle, and a small chapel, or burial-place, adjoining the chancel on the north, belonging to an estate called Frosts. A corresponding chapel, on the south side, is used as a school-room. This fabric presents an interesting specimen of Norman architecture. The sepulchral memorials are numerous: one of them, a slab in the north chapel, displays small whole-length brasses of "Valontyne Edvard, Gent." and his two wives, Agnes and Joane, and their respective children, in two groupes; with a similar brass of Thomas Parramore, second husband of the "sayde Joane:" the dresses are of the time of the Commonwealth. About 40 years ago, a small manufactory of blocks, for the use of paper-stainers, from the wood of the pear-tree, was established here.

Birchington is agreeably situated on an elevated ground, about half a mile from the sea, and $3\frac{1}{2}$ miles W. by S. from Margaret. The church consists of a nave, chancel, and aisles, with a high tower, and a shingled spire. The east window is large and handsome. Adjoining to the chancel, on the north, is the Quex chapel, so called from belonging to the manor of Quex, the ancient inheritance of a family of that name, which was con-

veyed to the Crisps, by an heir-female, in the 15th century. Among the memorials of these families, are several small whole-length brass figures.

A convenient poor-house was built here, a few years ago, for the reception of the poor of Sarre, Birchington, and Acole, for whose employ a manufactory of coarse sheeting, and sacking, has been established.

The ancient seat of the Quex family is about half a mile south-eastward from Birchington. Henry Crispe, Esq. an infirm and aged man, was in August, 1657, forcibly seized, at his seat, in the night-time, by Captain Golding, of Ramsgate, a staunch royalist, and sent a prisoner to Bruges, in Flanders, where he was detained eight months, till the sum of 3000*l.* was paid for his ransom. The family mansion was a large and ancient structure: great part of it has been pulled down, and the remainder modernized, and converted into a farm-house.

Dandelion, a delightful rural spot, surrounded by venerable elms, about a mile and a half south-west from Margate, was the seat of the ancient family of Dent de Lyon, who flourished here, in the time of Edward the First. The last male heir of this family, died in 1445, when his estates were conveyed by the marriage of his only daughter, to the Petits, whose descendants sold Dandelion to Henry Fox, Lord Holland, who transferred it to the late Right Hon. C. J. Fox, since which it has become the property of William Roberts, Esq.—The gate-house of the ancient residence is yet standing, and in tolerable preservation. It is embattled, and built with alternate courses of bricks and flints, having a small square tower at each angle. Over the greater entrance, is a shield of the arms of Dandelion; viz. sable, three lions rampant, between two bars, dancette, argent; and at the spring of the arch of the lesser entrance is a demi-lion rampant, with a label issuing from his mouth, inscribed Dandelion, in Saxon characters. The grounds belonging to this ancient seat have been partly converted into a tea-garden, and place of resort for the summer visitants to Margate and Ramsgate: for whose entertainment a public breakfast is given every Wednesday throughout the season, followed by dancing, &c. The walks command some very fine marine and rural scenery.

Margate, $72\frac{1}{2}$ miles E. from London, and 44 E.N.E. from Maidstone, is one of the most fashionable, and best frequented watering-places in the kingdom. It has obtained its principal celebrity within the last 50 or 60 years, before which it was only "a small fishing town, irregularly built, and the houses generally old and low." It has been a member, however, of the town and port of Dover, from a remote period; and, even in Leland's time, there was a pier "here for shippes," but "sore decayed;" the time of building which is unknown. In the year 1565, the number of houses in Margate, was 108; "persons lacking proper habitation, eight; boats, and other vessels, fifteen; viz. eight of one ton,

ton, one of two, one of five, four of eighteen, and one of sixteen: the persons belonging to these boats, occupied in the carrying of grain, and fishing, were sixty." The population is now between 6 and 7000.

On the site of the pier, was anciently a small creek, which probably gave rise to the town, from the shelter it afforded to fishing vessels, &c. The land, on each side of this creek, was wasted by the sea; and the inhabitants were obliged to construct a pier to prevent the town from being overflowed, and to defend that part of it which lies next the water, by piles of timber and jetties. In Elizabeth's reign, this pier was maintained by certain rates, paid by corn and other merchandise, shipped and landed here. Through the neglect of the persons employed, the pier went to decay; and, in 1662, complaint was made to James, Duke of York, the then Lord Warden of the Cinque Ports, on the subject. In 1724, the pier wardens and inhabitants petitioned Parliament for an act to enable them more effectually to recover the ancient and accustomed droits for the maintenance and support of the pier; and an act was accordingly passed for that purpose. Under that act, the pier was maintained till the year 1787, when a second act was obtained; and, in 1799, another act was passed to amend the former, by increasing the rates and duties, that the commissioners might be enabled to make further and necessary improvements. Under these acts, the pier has been rebuilt with stone, and extended so as to enlarge the harbour, and to form a more complete security for shipping. The improvement of the harbour, and the great resort of company, have occasioned a considerable increase in the number of fishing and other craft; so that the town is not only sufficiently supplied with fish for its own consumption, but considerable quantities are sent to the metropolis: such as skate, wraiths, small cod, haddock, turbot, whittings, soles, mackarel, lobsters, oysters, &c. The number of packets, hoys, &c. which belong to this port, is 70, or upwards; two or three of which are worked by steam. The hoys are chiefly employed in the conveyance of corn, &c. to the London markets.

The town is a large and straggling place, on irregular ground; part of it being very elevated, while the other part is situated in a bottom descending to the sea. The houses are principally of brick, and many of them are large and handsome buildings. As the number of visitors increased, the buildings for their accommodation were rapidly augmented. Among the landholders who took the lead on this occasion, were Mr. Cecil, Sir Edward Hales, and Sir John Shaw, from the first of whom, Cecil Square, which was built about the year 1769, received its name. At the south corner of this square stand the assembly-rooms, which form a handsome building of the Ionic order, with Venetian windows, entablature, and cornice: on the ground-floor, are billiard, coffee, and dining-rooms, and a piazza,

VOL. III.—NO. 107.

supported by a range of duplicated Doric pillars.—On the first floor, are the tea, card, and ball-rooms: the last is a very elegant apartment, 87 feet in length, and 43 in breadth. On the upper story, is an extensive suite of lodging rooms. Contiguous to this building, is the Royal Hotel, suitable for the reception of the first company. The bathing-rooms are on the western side of the High Street, near the harbour. The terms of bathing are as follows:—A lady taking a machine, guide included, 1s. 3d.; two or more ladies, guide included, 1s. each; child taking a machine, guide included, 1s. 3d.; two or more young children, guide included, 9d. each; gentleman taking a machine, guide included, 1s. 6d.; gentleman bathing himself, 1s.; two or more gentlemen, guide included, 1s. 3d. each; two or more gentlemen bathing themselves, 9d. each; warm baths, 3s. 6d. each, or 1l. 1s. for seven persons.—The bathing-place is a fine level sandy shore, which extends under the cliffs for several miles, and at certain times of the tide, forms a delightful walk. The most fashionable promenade, however, is the pier; which, being finished by a parapet, breast high, is perfectly safe, and is the general resort of the company before and after bathing. In the words of the poet,

"Here music, love, and poetry combine,
Arts, wisdom, war, (the wars of love) entwine.
Without the homage, which to thrones, is due,
We here enjoy what they are strangers to:
Peace, health, contentment, pace these happy shores,
And lavish on us unexhausting stores."

The parish of St. John the Baptist, Margate, was anciently a chapelry to Minster, but made parochial A.D. 1290. The church, a spacious edifice, on an elevated spot, on the south-east side of the town, consists of a nave, chancel, and aisles, with a square tower at the north-west angle. The monuments are numerous, and several of them ancient. On a slab in the chancel, is a full-length brass of a knight of the Dandelion family, in plate armour, with a skull-cap, a long sword, and a dagger.—Amongst other brasses, is a small figure, in armour, with a long sword, and a ruff, but without helmet; over which, are the arms of Claybrooke, a family which purchased Nash Court, a manor in this parish, early in the reign of James the First. Another brass represents a ship in full sail, inscribed to the memory of Roger Morris, "sometime one of the six principall M: of Attendance of his Maj: Navye Royall:" he died in 1615. On a plain stone, is an inscription for Ann Dowdeswell, who died in 1763, aged 100 years. This church is well-pewed, has a large gallery, and a good organ, the gift of F. Cobb, sen. Esq. of this town, opened in 1795. The church-yard is large, and crowded with memorials of the dead. Here are places of worship for Baptists, Arminian and Calvinistic Methodists, and Roman Catholics. Several charitable benefactions have been made for the use of the poor; and, in

3 T

1787,

1787, a charity-school was built near Hawley Square, for 80 boys and girls, who are educated, and clothed, by the voluntary contributions of the inhabitants. A general sea-bathing infirmary was established at Westbrook, near Margate, by subscription, the first stone of which building was laid on the 21st of June, 1792, by the late Dr. Lettsom, assisted by the committees which had been formed, in London and Margate, for carrying the establishment into effect. It consists of a centre and two wings, and is sufficiently large for the reception of about 90 patients, who are boarded in the house; adults paying 5s. and children 2s. 6d. each, per week. Another charitable institution is Draper's hospital, an alms-house erected on a piece of ground, called Draper's, about a mile eastward from Margate church, in 1709, in pursuance of the will of Michael Yoakley, a Quaker. It consists of ten comfortable tenements, one of which is for an overseer; the others for decayed housekeepers, (widows). They are allowed coals, and a yearly stipend; and, to each, is allotted a small piece of ground for a garden.

Above the town, to the north, is a battery of three guns, occupying a piece of ground, anciently called the Fort, which was defended, on the land side, by a wide and deep ditch, and a strong gate. The views, from this spot, are very fine.

The markets here are, in general, well supplied with butcher's meat, poultry, fish, and vegetables. Many improvements, in Margate, have been made under an act, passed in 1787, which not only provided for the re-building and maintenance of the pier, but also for the paving, lighting, cleansing, and widening the streets, and other purposes; which removed some portion of the inconveniences attending the police, through this town being a member of the Cinque Port of Dover. In 1787, a respectable theatre was built near the east corner of Hawley Square, at the expense of about 4000/. Other sources of public amusement are found in the libraries, of which there are several. Besides the respective hotels, and inns, for the reception of visitors, here are many private boarding-houses, where company are well accommodated, on moderate terms. Several of our sovereigns have embarked, or landed, at Margate, when on their way to or from the continent. The great Duke of Marlborough generally chose this as the place of his embarkation and landing; and here, also, the present Duke of York embarked, and re-landed, on his way to and from Holland, in 1793.

Salmstone Grange, a manor in St. John's parish, was part of the ancient possessions of St. Augustine's abbey. The chapel and infirmary are still nearly entire; one of them is now a barn, and the other a granary. In the infirmary, is a ludicrous, but well-executed antique carving of a human face.

Here are also some remains of Dene chapel, which was erected under a license granted by Robert, Abbot of St. Augustine's, A.D. 1230.

Nash Court, in St. John's parish, was anciently the property of the priory of Christchurch. The mansion has been large, occupying a retired situation; the hall still displays some remains of ancient magnificence.

St. Peter's, two miles N. from Ramsgate, formerly a chapelry to Minster, is a pleasant village, on elevated ground, surrounded with trees. The church is handsomely fitted up, and consists of a nave, chancel, and aisles, with an embattled tower of flint, &c. On the east and west sides of the tower are the marks of a rent, or fissure, said to have been occasioned by an earthquake, in the reign of Elizabeth. Here are several large tombs, brasses, and other sepulchral memorials.

About a mile and a half north-eastward from this church, is the North Foreland, supposed to be the Cantium of Ptolemy. "It projects into the sea, nearly in the form of a bastion, and being somewhat higher than the contiguous coast, has had a light-house erected on its summit for the general safety of mariners, particularly to enable them to avoid striking on the Goodwin Sands. The first light-house built here, was of timber, with a glass lantern: this was burnt, by accident, in 1683, and a strong octagon building, of flint, was afterwards erected in its stead, having an iron grate on its summit, open to the air, in which a blazing fire of coals was continually kept during the night. In 1793, the building was repaired, and heightened by two stories of brick work. The coal fire was also changed for patent lamps, having magnifying lenses, each 20 inches in diameter, in a small room, or lantern, under a dome, coated with copper, to prevent fires. These lamps are regularly lighted every evening at sun-set, and continue burning till day-break; and are so brilliant, that in clear weather, the light is visible at the Nore, a distance of 30 miles. A gallery surrounds the light room, from which the views are very extensive and beautiful; particularly when the Downs are full of shipping. This light-house, as well as those at the South Foreland, belongs to Greenwich hospital; and every British vessel sailing round this point, pays two-pence per ton, towards its support, and every foreign vessel, four-pence per ton." Between the light-house and Kingsgate, are two large tumuli, called Hackendon, or Hackingdown Banks, said to have been raised over the graves of some of those who were slain in a bloody battle, fought near this spot, between the Danes and the Saxons.

Kingsgate derives its name from a narrow passage, or gate, cut through the chalk cliffs to the sea-shore, for the convenience of the fishery; and, from the landing here of Charles the Second, when on his way to Dover, in June, 1683. This estate was the property of Robert Whitfield, Esq. of whom it was purchased, by the late Lord Holland, as a place of retirement during his declining years. "The mansion was built on the model of Tully's Formian villa, on the coast of Baiae, under the superintendence

perintendence of Sir Thomas Wynne, Bart. It is a low building fronting the sea, and sheltered by the cliff: the centre is of the Doric order; the wings are built with squared flints, and over the doorways, are two basso-relievos in white marble. The principal apartment is a detached saloon, the ceiling of which is painted with the story of Neptune, and supported by columns of scagliola marble, in imitation of porphyry, executed by Bartoli and Richter. The garden is neatly laid out; and, at the upper end, is a small column of Kilkeuny marble, inscribed in memory of Margaret of Kildare, late Countess of Hillsborough, who died at Naples, in 1767. The whimsical congregation of buildings round this seat, is composed of chalk and flints: they consist of a convent, with the remains of a chapel and cloister, a castle, a bead-house, now an inn, a temple of Neptune, a small fort, &c. Near the road leading to Margate, is Harley Tower, a column dedicated to the honour of Thomas Harley, Lord Mayor of London, in 1768. This estate passed to the late Right Hon. C. J. Fox, from whom it went to the Robertses.

Broadstairs, or Bradstow, two miles N.E. by N. from Ramsgate, has become a thriving and fashionable watering-place. About the time of Henry the Eighth, a small wooden pier appears to have been built here, for the safety of the fishing craft; probably by the Culmer family, who fortified the gate or way leading down to the sea-shore, by an arched portal, defended by a portcullis and strong gates, to prevent the inhabitants from being plundered by the sudden incursions of privateers. An act was obtained, in the year 1791, for granting public aid to repair the pier and harbour. Near the pier, are some remains of a small chapel, now a dwelling-house, which was dedicated to the Virgin Mary, and in which was her image, called Our Lady of Broadstairs, formerly held in "so great veneration, that the ships, as they sailed by this place, used to lower their top-sails to salute it." Here are two, or more libraries, and other accommodations, such as warm baths, &c.

East Cliffe Lodge, between Broadstairs and Ramsgate, erected by the late Benjamin Bond Hopkins, Esq. now belongs to the Right Honourable Lord Keith, K. B. The principal front is open to the sea; the summit is embattled; and the whole building forms a respectable specimen of modern Gothic. The grounds, comprising about thirteen acres, extend to the verge of the cliff; in one part, there is a spacious subterranean passage, 500 yards in length, extending to the sea: this is well-lighted by means of apertures cut through the chalk.

Ramsgate, 43 miles E. by N. from Maidstone, and 74 E. by S. from London, though now a place of considerable consequence, was formerly only a little fishing hamlet, consisting of a few mean and indifferently built dwellings. After the revolution of 1688, the extension of trade with Russia, and the eastern countries, was of considerable advan-

tage to this place, as the inhabitants had engaged in it, with much success; and the buildings were, in consequence, improved, and greatly increased in number. The chief augmentation, and consequent importance of this town have arisen, however, from the improvements made in the harbour, since the middle of the last century. A pier existed here, at least, from the time of Henry the Eighth; but it was, by no means, adequate to afford security to the numerous vessels that were driven on this coast, in tempestuous weather; and the public attention being attracted to the subject, by a dreadful storm, in December, 1748, it was determined, by the Parliament, early in 1749, that a sufficient harbour should be made here for the reception of ships of and under 300 tons burthen, &c. Accordingly, in the beginning of 1749-50, the new harbour was commenced, from the designs of William Ockenden, Esq. one of the trustees, and Captain Robert Brooke: the east pier, designed by the former, was to be of stone; and the west pier, of wood.—Enormous expence was incurred, and great difficulties were encountered; to obviate which, it was at length resolved, in 1787, that an advanced pier should be carried out, in a south-easterly direction, from the head of the east pier, as the most experienced seamen and pilots of Ramsgate had formed an opinion, that such a work would highly conduce to the quiet of the harbour. This was accordingly commenced in the following year, under the direction of Mr. Smeaton, and was successfully pursued till its completion. "Between the years 1792, and 1802, several additional buildings were made: a new light-house of stone, with Argand lamps and reflectors, was erected on the head of the west pier. The bason wall was widened so as to form a wharf for the landing and shipping of goods: a low edifice was constructed on the head of the advanced pier, as a watch-house, and to deposit hawsers in, for the assistance of ships in distress: a convenient house was built for the harbour-master; and, adjoining to it, a very handsome structure for the meetings of the trustees, committees, &c. On the top of the latter, is a cupola; which, when in a line with the light-house, forms the leading mark for vessels making the harbour. A large warehouse has also been erected. The timber pier, which extended 550 feet from the cliff, in a straight direction, has been rebuilt with stone; and a military road, for the embarkation of troops, &c. for which service this pier is peculiarly favourable, was completed, during the late war. The sums expended in constructing this haven, are stated to amount to between 6 and 700,000*l.* but this bears a very small proportion to the property saved by its means, which probably is not less than 50,000,000*l.* besides many hundreds of valuable lives. The area of the harbour, which is nearly circular, comprehends about 46 acres. The piers, bason, &c. are chiefly constructed with Purbeck and Portland stone. The entire length of the east pier, including its flexures, or

or angles, amounts to nearly 2000 feet : that of the west pier, is about 1500 feet : the width of the entrance is 240 feet. The general breadth of the piers is 26 feet, including a strong parapet, which defends the outer sides next the sea. What is called the East Channel, is formed by the passage between the East Pier and a large bank of sand, which nearly crosses the harbour as far as the bason, and is of considerable use for ships to bring up upon in a hard gale, when driven into the harbour without anchors or cables. Near the north end of the west pier, is a massive frame-work of timber, including a staircase, called Jacob's Ladder, forming a communication from the top to the bottom of the cliff. This was erected in 1754. In the bathing season, the piers are frequently crowded with company, particularly the east pier, which then becomes a favourite promenade. The sea views are very fine, especially when the Downs are full of shipping : in good weather, the cliffs of Calais may be seen, though at the distance of 30 miles ; and, when tinged by the western sun, give a most delightful distance to the prospect. The home views include the towns of Sandwich and Deal, with some striking rural scenery. The duties payable towards the maintenance of this harbour, are collected from all vessels passing through the Downs, under an act, passed in 1794, by which all former acts, for the same purpose, were repealed. All ships, whether navigating on the east or west side of the Goodwin Sands, are now charged : vessels between 20 tons, and 300, pay two-pence per ton : every chaldron of coals, and every ton of stones, are rated at from three-pence to three-pence halfpenny.

The "ville," or town of Ramsgate, though in the parish of St. Lawrence, maintains its own poor ; notwithstanding which, it is assessed to the church, in common with the rest of it. The inhabitants, however, have the privilege of chusing one churchwarden from among themselves, and raising only a portion of the church cess. It is an ancient member of the town and port of Sandwich, and within the jurisdiction of the justices of that place. The great influx of visitors, of late years, has occasioned the erection of several large and respectable houses, besides various detached buildings. A spacious chapel was opened in 1791 : here are also two meeting-houses for Presbyterians, and Anabaptists. The streets have been paved, watched, and lighted ; and a market has been established, within the last thirty, or five-and-thirty years. The accommodations are similar to those at Margate ; though, perhaps, not quite so numerous, or splendid. The assembly-room and tavern, are in a large building, near the harbour, elegantly fitted up, and containing convenient tea and card-rooms, a billiard-room, and a coffee-room. Here are also good inns, bathing-rooms, libraries, boarding-houses, &c. The bathing-place is a fine sandy shore, beneath the cliffs, to the south of the pier. The Ramsgate hoys, or packets, are principally employed in the convey-

ance of luggage, goods, &c. as the frequent difficulty of weathering the North Foreland, generally induces those who prefer a sea-trip, to sail in the Margate packets. Since the completion of the harbour, the shipping trade has been much improved ; and some vessels now belong to this port, which are constantly employed in the importation of coals from Newcastle and Sunderland. Boat-building, and the repairs of shipping after heavy gales of wind, are also carried on here, occasionally, to a considerable extent. The population of Ramsgate was, in 1811, 4221.

The little estate of Ellington, about half a mile westward from Ramsgate, was anciently the seat of a family of the same name, who, towards the end of the reign of Edward the Fourth, were succeeded by the Thatchers.

The village of St. Lawrence, was anciently a chapelry to Minster, but made parochial, in 1275. It occupies the brow of the hill immediately above Ramsgate, the houses forming a long and winding street on the high road to that town. The church is a large edifice, consisting of a nave, aisles, and three chancels, with a square tower rising from four massive columns between the nave and principal chancel. The tower, and part of the body, are of Norman architecture. Among the numerous sepulchral memorials, are several in memory of the Spracklings, of Ellington. At a short distance, eastward, are some remains of a chantry chapel, long since converted into a small dwelling. Richard Joy, who, in the reign of William the Third, was so celebrated for his extraordinary strength, as to obtain the name of the English Sampson, or the Strong Man, of Kent, was born here. "In 1699, his picture was engraved, and round it several representations of his performances : as pulling against an extraordinary strong horse ; jumping ; breaking a rope that would sustain 35 hundred weight ; lifting a weight of 2240 lb. &c."

Southward from St. Lawrence church, about a mile, is Pegwell Bay, above which a neat villa was erected some years ago, by the present Sir William Garrow. Between Pegwell and Ramsgate, is another handsome villa, called Belmont, erected by Joseph Ruse, Esq. and purchased by Lord Darvelly, 14 or 15 years ago.

Manston Court, about two miles north-west from St. Lawrence, was, anciently, the seat and inheritance of a family, of whom Richard de Manston was one of the recognitores magnæ assise, in the reign of King John. The mansion has been converted into a farm-house ; but it still retains many vestiges of its ancient splendour. Towards the north end are the ivy-mantled ruins of the chapel.

Minster, 4½ miles W. by S. from Ramsgate, has its name from a church and nunnery founded here, about the year 670, by Domneva, who having been married to Merwald, son of Penda, King of Mercia, afterwards took the vow of chastity. St. Mildred,

the

the daughter and successor of Domneva, was held in high repute for her great holiness, both in that and in succeeding ages. "This woman," say the monks, as his authority, "was so mightily defended with divine power, that, lying in a hote oven three hours together, she suffered not of the flame. She was also endued with suche godlyke virtue, that, coming out of France, the very stone whereon she first stepped at Ippedsflete, in this isle, received the impression of her foot, and retained it for ever; having, besides this propertie, that whether so ever you removed the same, it woulde within short time, and without helpe of mans hande, returne to the former place againe." Edburga, a daughter of King Ethelbert, succeeded St. Mildred in the government of this abbey; and she rebuilt all the conventual offices on a more extensive plan. The new 'Temple' was dedicated to St. Peter and St. Paul; and hither, about the year 750, Edburga translated the body of St. Mildred, who 'seemed more like a lady in her bed, than one lying or resting in a sepulchre or grave;' and even 'her garments had continued unchanged.' The Danes at length entirely destroyed the monastery with fire, with all the nuns, the clergy, and many of the people, who had fled hither for sanctuary. Through all these ravages, the monks assure us, the remains of the holy St. Mildred were preserved by miraculous interposition; and were afterwards given, by Canute, to the abbey of St. Augustine's at Canterbury, with all the possessions of the foundation over which she had presided. The great estimation in which this saint was held, obliged the abbot and his brethren to proceed with considerable caution in procuring the removal of the venerated reliques; which they at last effected in the night-time; though not so secretly, but that the inhabitants were alarmed, and pursued the abbot, and his comrades, with 'swords and clubs, and a great force of arms.' The monks, however, having got the start, secured the ferry-boat, and had almost crossed the river, before the men of Thanet could reach it, who were therefore obliged to give up the pursuit.

The manor, with the court lodge, part of the demesne lands, royalties, &c. is now the property of Lord Conyngham, who derives it from the marriage of his ancestor, Colonel Henry Conyngham, with the heiress of Sir John Williams, Bart. to one of whose family, in conjunction with Sir Philip Carey, and W. Pitts, Esq. afterwards knighted, the entire estate had been granted by James the First.

The church, a large edifice, exhibiting some curious specimens of different styles of architecture, is in the form of a cross; and it consists of a nave, aisles, transept, and chancel, with a square tower, surmounted by an octagonal spire at the west end. In the north wall of the transept, under a pointed arch, is an ancient tomb, in memory of Edile de Thorne. Here also are several memorials for the Paramores. In the chancel is a plain stone, inscribed in memory of the Rev. John Lewis, the

VOL. III.—NO. 107.

historian of this isle, who was vicar of this parish, and died in 1746. The learned Henry Wharton, A. M. the compiler of the *Anglia Sacra*, was also a vicar of Minster. The court house appears to have been built as a kind of grange to St. Augustine's abbey. The views from the high ground, in the northern part of this parish, including a great part of Kent, the coast of Essex, the Downs, the Cliffs of Calais, and the British Channel, are uncommonly fine.

The manor of Thorne, in this parish, was anciently possessed by a family, of whom Henry de Thorne was inhibited, in the year 1300, from causing mass to be publicly celebrated in his oratory or chapel here, which he had previously done 'to the prejudice of the mother church, and giving an ill example to others:' the remains of the oratory are now used as a barn and granary.

In the south-eastern part of the parish, is Ebbs-Fleet, formerly called Hypwines-fleete, and Ipyids, or Wippids-flete, which, in the early Saxon times, appears to have been the usual place of landing in this isle from the continent. Here the Saxon leaders, Hengist and Horsa, landed with their forces in the fifth century, when invited to the assistance of the Britons. This was the landing place of St. Augustine, and his companions, when on their mission to convert the Saxons to Christianity: and here also St. Mildred is stated to have first stepped on shore when returning from France, whither she had been to receive instruction in monastic discipline.

STONAR.]—Stonar, anciently Eastanore, $3\frac{1}{4}$ miles N. by E. from Sandwich, was given, by Canute, to the abbey of St. Augustine's, the abbots of which, in the twelfth century, procured the grants for a five days' annual fair, and a weekly market, to be held here. Notwithstanding frequent disputes and litigations, this manor was considered as within the jurisdiction of the Cinque Ports, till the year 1773, when the then owner, Lord Viscount Dudley and Ward, procured a confession of judgment at a common assembly, held at Sandwich, that "Stonar was not within the jurisdiction of Sandwich, but in the county at large;" and this was immediately entered upon record in the court of King's Bench. For three centuries succeeding the Conquest, Stonar appears to have been a considerable place; but it now contains only nine or ten houses, and about 50 people. In 1365, it was almost destroyed by a terrible inundation of the sea, which overwhelmed a space of ground about three miles in length. But "the utter ruin and subversion of the town," happened in the year 1385, "at which time the French, with eighteen sail of gallics, designing to infest the maritime parts of Kent, landed, and laid this town of Stonar in ashes." In a manuscript of Dr. Plott's, written about the year 1693, it is said, that "the ruins of Stonar, till within the memory of man, took up many acres of ground; but were lately removed, to render the ground fit for tillage." Lewis the Dauphin landed here with his troops, in the reign

of King John; and Edward the Third lodged here on his way to Calais, in the year 1359. Some extensive salt walks have been established here, near a new cut made for the more speedy drainage of the levels in seasons when the rains and floods have been excessive.

THROWLEY.]—At this place (four miles S. W. by S. from Faversham) a priory of Benedictines, subordinate to the abbey of St. Bertin, at St. Omer's, was founded in the reign of King Stephen; after the suppression of the Alien Priories by Henry the Fifth, its revenues were granted to the Carthusians of Sion, in Middlesex. Some remains of foundations, and flint walls, at a short distance from the parsonage, still point out the site of the priory.

Belmont, the seat of General Harris, in this parish, was erected about the year 1769, by Edward Wilks, Esq. storekeeper of the royal powder mills at Faversham. The situation is elevated, and commands an extensive prospect. The apartments are constructed on a very judicious plan, and the entrance is in Wyatt's best style. The present proprietor has purchased several contiguous estates, and made many improvements in laying out the grounds, and planting.

THURNHAM.]—Thurnham, or Thornham, the Turnham of Domesday, is four miles N. E. by N. from Maidstone. The manor was anciently possessed by a knightly family, of whom Robert de Thurnham accompanied Edward the First to the Holy Land, where "he offered up his life as an oblation to the justice of that cause which he had before so generously asserted." It now belongs to the Derings of Surrenden. About half a mile north-eastward from the church, adjacent to Binbury Wood, are the ruins of an ancient castle, formerly called Godard's Castle, conjectured by some, to borrow its name from Godardus, a Saxon; others say, that it was founded by Sir Leonard Goddard, in King Stephen's reign. The walls which remain, are of rude flint, honey-combed, and almost eaten up by the weather, and length of time. The area contains about a quarter of an acre. On the east side was the keep, being an artificial mount, in the middle of which is a hollow, as though the ground had fallen in, and filled a cavity underneath. This is supposed to have been an exploratory tower of the Romans; and Roman urns, and other remains, are said to have been found on the hill on which it stands. In the southern part of this parish, are large sand-pits, whence a fine white sand, called Maidstone sand, is obtained. This has been much used in our glass manufactories.

TROTTESLIFFE.]—At Trottescliffe, or Trosley, two miles N. E. by E. from Wrotham, are some immense blocks of stone, supposed to be the remains of a druidical temple. Here also were discovered, some years ago, several copper swords, and a few pieces of British coin, with other articles also supposed British. The manor of Trottescliffe was, in 788, given by King Offa, to the priory at

Rochester; but after the Conquest, it was allotted to the bishops of that see, who had a small palace here, which Bishop Glanville rebuilt about the year 1185.

TUNBRIDGE.]—Tunbridge, or the "town of bridges"—so called from having five bridges; one, over the Medway, and four over different branches of that river—is 13 miles W. S. W. from Maidstone, and 30½ S. E. from London. This town is situated in an extended tract, called the "Lowy" of Tunbridge, a term derived from the Norman-French, and signifying an exempt jurisdiction round the castle, chief mansion, or religious house, to which it appertained. In the Domesday Survey, this district was included under the name of Haslow, and was held by 'Ricard de Tonebridge,' of Odo, Bishop of Baieux, who had detached it from the possessions of the see of Canterbury, to which it was ordered to be restored by the assembly at Pinnenden. This Richard de Tunbridge, otherwise Fitz-Gilbert, and afterwards Earl of Clare, was kinsman to the Conqueror, and, for his great services at the battle of Hastings, he had granted to him numerous lordships. Unwilling to relinquish his possessions here, he prevailed on the archbishop to exchange this district for that of Brienne (of which he was earl) in Normandy; and it was agreed, that the land at Brienne should be surrounded by a string, and that the same string should be the measure of the estate to be granted to Richard at Tunbridge. As the Domesday Book makes no mention of a castle at Haslow, (now the borough of Hadlow) though it notices a church and two mills, it seems probable, that it was not erected when that survey was made; though it certainly was in existence shortly afterwards. It was built by the Richard Fitz-Gilbert already mentioned, and under the protection of this fortress the town grew up. He was slain at Aber-gavenny, fighting against the Welsh in favour of the usurper Stephen. Previously to his death, however, he had dropped the surname de Tonebrige; and taken that of Clare, of which he was created earl; the title, passing through many of his descendants, the latter of whom had also the earldoms of Gloucester and Hertford, ended in the male line at the beginning of the fourteenth century. "Tunbridge castle was alternately the scene of war and the abode of pleasure, but ever of consequence. Gilbert, surnamed Rufus, Earl of Clare, Gloucester, and Hertford, joining the rebellious Barons against their sovereign Henry the Third, was besieged by Prince Edward, the king's son, during which the garrison set fire to and burnt the town, to prevent its being useful to the prince; who, however, took the castle, and the Countess of Gloucester, but gave her liberty: he nevertheless put a garrison in the castle. Some time afterwards, Gilbert, convinced of the badness of the cause in which he was engaged, joined the royal standard; and, in reward for his returning loyalty, received again the possession of this castle. Here it was that he entertained

tained Edward, then become his sovereign, upon his return from Palestine. The reception was splendid; and though the king was desirous of reaching his capital, yet he remained here many days; and so acceptable did he become to the king, that, having divorced his wife for her ill conduct, Edward gave him his own daughter, Joan of Acres; who, as part of her jointure, had this castle settled upon her, which she made the place of her residence in her widowhood, and on her second marriage, with Ralph de Monthermer; a private gentleman in her service, whose presumption, in marrying a princess, at first drew upon him the vengeance of offended majesty; but, by the intercession of the Bishop of Durham, Edward received him into favour; and his merit was such, that he obtained his confidence and affection. From this second alliance have descended many noble houses. We must here observe, that Prince Edward, afterwards Edward the Second, also resided at Tunbridge in the twenty-second year of his father's reign, when he was left supreme governor of the kingdom, whilst the elder Edward was in Flanders. Upon the death of Gilbert de Clare, the last Earl of Gloucester of this family, in the partition of his vast estates to his three sisters and coheirs, Tunbridge castle and manor came to Hugh de Audley, in right of his wife Margaret, the second of them, till joining with some discontented Barons, this castle was seized by Edward the Second, who made Bartholomew de Badlesmere governor: but he also traitorously joining the malcontents, gave the custody of it to Henry de Cobham, whose deputy, Crevequer, intending to follow the standard of revolt, and deliver up his charge to the rebels, was ordered to be hanged, and this castle, the scene of his treason, to be razed to the ground: it fortunately escaped, having been one of the four which Edward soon after fixed upon as safe receptacles to deposit the records and charters of the kingdom in; and in the following reign, Hugh de Audley was restored to favour, had the earldom of Gloucester in right of his marriage given him, and was permitted to re-enjoy this castle. Margaret, his only daughter, took the castle and manor of Tunbridge to Ralph Lord Stafford, created Earl of Stafford, and elected Knight of the Garter, who died here. His descendants rose to a rank that eclipsed every other subject, having the earldoms of Buckingham, Hereford, Stafford, Northampton, and Perch, with many baronies vested in them, and at length were raised to ducal honors, and made hereditary constables of England. This castle was afterwards forfeited to the crown at the ruin of the last Stafford, Duke of Buckingham, when this family, every way so great, fell, to rise no more." Queen Elizabeth granted the lordship, manor, and castle of Tunbridge to her cousin, Henry Carey, Lord Hunsdon, from whose family they descended by an heiress to the Berkeleys, but were soon alienated. Francis Woodgate, Esq. is now the proprietor. The remains of the castle are princi-

pally confined to an entrance gateway, flanked by round towers, and tolerably perfect, (supposed to have been rebuilt in the fourteenth century,) and the artificial mount on which the keep stood. It was environed by three moats, within the compass of the outermost of which, the then ancient town was principally confined. The ruins are picturesque; though much of this venerable remain was dilapidated by the late proprietor, Mr. Hooker, to build a residence attached to the entrance, in a style not at all corresponding with the original.

Tunbridge castle stands on the south-west side of the town; and at a little distance was a priory of Austin Canons, founded by Richard de Clare, first Earl of Hertford, about the latter end of the reign of Henry the First. The priory buildings were destroyed by an accidental fire in 1351; but were soon afterwards re-edified. This was one of the houses suppressed in 1525, to endow Wolsey's intended colleges at Ipswich and Oxford. From the foundations, yet visible, this priory seems to have been very extensive; only a few fragments now remain, besides the refectory, or hall, which is used as a barn. In the priory church, was buried 'the heart' of the founder, with several of his noble successors.

The town, which is kept particularly clean, principally consists of one long and wide street, containing many respectable houses. At the entrance from London is a stone causeway, the gift of John Willford, citizen of London, in 1528. The principal bridge was erected in 1775, at the expense of £1007. from a design by Milne: near it is a wharf for the reception of timber. The church, which is a large handsome fabric, was new pewed and ornamented, with a bequest of 500*l.* made by the late J. Hooker, Esq. It contains some good monuments. The principal charitable foundation is the Free Grammar School, a capacious structure, at the north end of the town, which was founded and endowed by Sir Andrew Judde, Knt. a native of Tunbridge, and Lord Mayor of London in 1552. Sir Thomas Smith, Knt. who had married Alice, daughter and heiress of Sir Andrew Judde, considerably increased the original endowments, and founded six exhibitions to the university; and several others were afterwards endowed by different persons. The Company of Skinners, who are the governors, visit this school every year in May, when honorary rewards are distributed to the best scholars. The present master is Dr. Vicesimus Knox, well known for his literary productions. Opposite to the school, is the seat of George Children, Esq. to whose family a very large and valuable tract of land belongs.

The population of the town, according to the act of 1811, amounted to 5932. The neighbouring roads have of late years been much improved; particularly that leading from the town to the wells, by a laborious excavation on Quarry Hill, by which the formerly steep ascent over it has been reduced to an easy draught. On Quarry Hill, here mentioned, is the seat of James Burton, Esq. erected with the materials.

materials of the country, as the fragment of a castle, but replete with modern conveniences. The undulating woods, and romantic scenery, render it a very desirable and pleasing residence. Within a mile on the same road, in Bidborough parish, is Bounds park and house, the property of Lord Darnley. The grounds are capable of much improvement. The demesne surrounds the park, and consists of about 1000 acres of land, well-wooded and picturesque.

TUNBRIDGE WELLS.]—This is the general name for a series of scattered villages and houses, within five or six miles from the town of Tunbridge; 18 miles S. W. from Maidstone, and 35 S. E. by S. from London. "The hamlet of Tunbridge Wells," observes Hasted, is situated partly in Tunbridge and Speldhurst parishes in this county, and partly in Farnt parish in the county of Sussex, and consists of four little villages, named Mount Ephraim, Mount Pleasant, Mount Sion, and The Wells, which all together form a considerable town, but the last is the centre of business and pleasure, for there, besides the Wells themselves, the market, the assembly rooms, the public parades, the chapel, &c. are situated."—The discovery of the medicinal waters at Tunbridge, is universally ascribed to Dudley Lord North, a distinguished courtier in the reign of James the First. This nobleman having deeply injured his constitution by fashionable excesses, was advised as a last resource, to retire into the country. Having fixed his residence at Edridge house, about two miles off, he remained there some time, with little improvement in his health. Determined to leave this sequestered spot, and to return to London, fortunately for him, his way lay through a wood, when he observed the water that has since become so famous, with a mineral ferruginous scum on its surface, and an earthy sediment at bottom. His happy genius suggested to him, that this might furnish the tonic his case required, and, on consulting his physicians, they advised a trial. In the space of three months after he commenced the use of the waters, his lordship's health was perfectly restored, and his debilitated frame so completely invigorated, that he lived to eighty years of age. So wonderful a restoration made a great impression upon the public mind. Lord Abergavenny, procuring the consent of Mr. Weller, of Tunbridge, the lord of the manor, came down personally to inspect the place, and to see it cleared of all its incumbering brushwood. He then had wells sunk, paved with stone, and enclosed with rails in a triangular form. Hither came the afflicted, and returned healthy: but as no accommodations were nearer than the town of Tunbridge, the number was few. The beautiful Henrietta-Maria, Queen to Charles the First, being much indisposed after the birth of the prince, afterwards Charles the Second, stayed here six weeks; but as no house was near, suitable for so great a personage, she and her suite remained under tents pitched upon

Bishop's-down. The splendid court formed a fine contrast to the country, every where rude, and in the hands of nature. In honour of her majesty, the wells changed their name from Frant to that of Queen Mary's Wells: both have given place to their present one, Tunbridge Wells; though the springs evidently rise in the parish of Speldhurst. Pleasure uniting with health, first neat cottages, afterwards handsome lodging-houses, were erected; and, that trade might be an attendant, retailers took their stands, with various wares, under a row of planted trees in the road which the company were accustomed to take when they went to drink of the limpid stream. Southborough and Rust-hall, the one two miles, the other one, from the Wells, soon had houses for the use of visitants. During the civil wars, the wells were neglected, and almost forgotten; but, on the restoration of legal government, they shone forth with redoubled splendour. "Hence we may date the assembly room, bowling-green, and other appropriate places at Rust-hall; and another bowling-green, and a coffee-house, at Southborough. Lord Muskerry, of Summersfield, made many improvements here; and the surrounding country caught the happy enthusiasm of the young peer. Much of the celebrity of the Wells at this period (1664,) arose from the circumstance of the queen being ordered hither to drink the waters after her dangerous illness in the preceding winter; and probably with a latent hope, that they would be found efficacious in removing her lamented sterility. The circumjacent wilds were spotted with neat rural habitations; until whim, and some altercations between the lord of the manor and the tenants, soon varied the scene. Rust-hall was now deserted for Mount Ephraim, and that for Southborough, which again was eclipsed by the new favourite, Mount Sion. Many of the houses were at this time wheeled upon sledges from one site to another, as the caprice or interest of the owners dictated. The town of Tunbridge was now left to its original quiet; for the Wells became a complete village, with houses sufficient to lodge all the visitants. About this period (Charles the Second,) a chapel, and a school, were erected by subscription; and the former, being found too small for the increasing congregation, was enlarged a few years afterwards. A Presbyterian, and a Methodist meeting-house have since been built. Many persons of rank and respectability now have houses here for occasional or constant residence. The trade of Tunbridge Wells is similar to that of the Spa in Germany, and consists chiefly in the manufacture of a variety of toys in wood of different kinds, as holly, beech, sycamore, yew, and plum-tree.

The air of Tunbridge Wells, which is very pure and salubrious, probably tends to the restoration of health in an equal degree to the waters, which are of the Chalybeate kind, nearly of equal strength to those of the German Spa. They are considered to be of great use in removing complaints arising from
sedentary

sedentary occupations, weak digestion, and nervous and chronic disorders: their utility in cases of barrenness, is also stated to be very great. The New Bath is a handsome edifice. The rides in the neighbourhood include a variety of interesting and picturesque scenes. The Wells, properly so called, form the centre of the place; near which are the markets, the medicinal water, chapel, assembly-rooms, and public-parade called the Upper and Lower walks; the Upper Walk was formerly paved with brick, but in 1793 with Purbeck stone, at an expense of 710*l.* the other is unpaved, and used chiefly by country people and servants. On the right of the paved walk, in the way from the Wells, is the public parade, on which is one of the assembly-rooms, the library, coffee house, post-office, Tunbridge ware, milliners', and different kinds of toy-shops. A portico extends the whole length of the parade, supported by Tuscan pillars, where the company occasionally walk. On the left is a row of large flourishing trees, which has a gallery in the centre for music; the whole being divided from the Lower Walk by a range of neat palisadoes. In this place are three principal taverns; the Sussex, Kentish, and New Inn Tavern. The Angel Tavern and Inn is by the road side, on entering the place, and near the mineral spring. They are all extremely well attended. There are clusters of houses on Mount Zion, Mount Pleasant, Mount Ephraim, and Bishop's Down: the first is by far the most charming, combining all that a romantic situation, aided by taste, can afford. On these different eminences are dispersed some elegant seats. That of the celebrated essayist and dramatist, the late Richard Cumberland, Esq. stands on Mount Zion, and was his retreat for many years before his death.

About one mile and a half south-westward from the Wells, on the Sussex side, are the high rocks, which are much celebrated. They form a very romantic and striking picture, though inferior to the rich scenery of Mallock. This spot is said to have been first brought into repute by James the Second, who, when Duke of York, came hither with his wife and two daughters.

TUNSTALL.—Tunstall, anciently the property of Oswald, a Saxon nobleman, now of Sir John Hales, Bart. lies 2½ miles S. W. by W. from Sittingbourn. On this manor, in 1738, were found several hundred broad pieces of gold, which were thought to have been concealed in the civil wars by an ancestor of Sir John Hales. The last Sir James Cromer,

then lord of the manor, had formed the design of rebuilding the ancient manor-house on a grand scale; but his death arrested the progress of this plan, and the materials were afterwards sold. The church was the burial place of the Cromers, on the windows of which are various coats of arms of the family and its alliances. Among the monuments, are those of Sir James Cromer, Knt. his lady and four daughters; Sir Edward Hales, Bart. who died in 1654; and Dr. Robert Cheke, a member of the ancient family of the Chekes, of Blood Hall, in Suffolk, who died in 1647.*

ULCOMBE.—The little parish of Ulcombe, 6½ miles S. E. by E. from Maidstone, was the ancient seat of the St. Leger family, which accompanied the Conqueror to England. Previously to the Reformation, here was a guild, or brotherhood, called the fraternity of Corpus Christi. The church contains numerous memorials of the Clarke and St. Leger families.

WALDERSHARE.—Waldershare, anciently, and for many ages, the seat of the Monings, lies four miles N. by W. from Dover. Adjoining the church, which is a small, mean building, are two cemeteries, or monument rooms, one on each side the chancel; that on the north contains a costly, but tasteless pyramidal monument, in memory of Sir Henry Furnese, Bart. and others of his family, formerly lords of the manor. In the south cemetery is a large altar-tomb, on which lie the effigies of the Honourable Peregrine Bertie, and his wife Susan, fourth daughter of Sir Edward Monings, of Waldershare, in the formal dresses of the reign of King William. The manor house was left to his son, the prime minister, with an adjoining estate of about 5000*l.* per annum. The mansion was built by Sir Henry Furnese, Bart. after a design by Inigo Jones. He also inclosed a spacious park, planted it with long avenues, and furnished it with deer. The Earl of Guildford, into whose family the estate came by marriage with that of Furnese, is now the proprietor.

WALMER.—The village of Walmer, or Walmer Street, is two miles S. from Deal. It is composed chiefly of good houses, which, from their fine situation, are generally inhabited by respectable families. This manor was anciently held by the De Aubervilles, who conveyed it in marriage to the Criols, or Keriells, the last of whom was killed at the battle of St. Alban's. The ruins of the ancient manor-

* At Tunstall rectory, January 1730, was born Edward Rowe Mores, M. A. and F. S. A. author of "The History and Antiquities of Tunstall," and of several other learned works on antiquity and topography, now in MS. He received the early part of his education at Merchant Taylors' School; and in June, 1746, was admitted a commoner of Queen's College, Oxford. He was distinguished for learning and application, and was indefatigable in making collections; but in the latter part of his life, his habitual industry gave way to pursuits of dissipa-

tion, which are supposed to have shortened his days. He died at Low Layton, Essex, in November, 1778. He was descended, on the female side, from Sir Thomas Rowe, Lord Mayor of London in 1563. The Equitable Society for assurance on lives and survivorship, Bridge Street, Blackfriars, owes its existence to this gentleman; the idea of it having been previously suggested by Mr. James Dodson, Mathematical master at Christ's hospital.

house still remain near the church-yard, in which several stone coffins were found some years ago, supposed to have belonged to the Criols. The church, in its doorways, &c. displays some curious specimens of Norman architecture. Walmer castle stands close to the sea-shore, at some distance from the village, and commands a beautiful view of the Downs, and coast of France. This fortress is appropriated to the Lord Warden of the Cinque Ports. The late Mr. Pitt, who held that office, used frequently to pass a part of his summer vacations here.

WATRINGBURY.]—In the register of this parish (five miles W. by S. from Maidstone) are some amusing entries of illegitimate children born towards the latter end of the sixteenth century, who are mentioned as “Sent of God;” “Filius Populi,” or “Filius Mundi.” Here also is recorded the death of Thomas Boothe, buried March 24, 1562, aged 112; and of Henry Fiveash, aged 104, buried July 24, 1677.

Watringbury church contains several good monuments of the Style family; and in the church-yard is a costly one in memory of Sir Oliver Style, Knt. who, “whilst resident at Smyrna, was at dinner with the lady whom he had engaged to marry, and a party of friends, when the apartment they were in was swallowed up by an earthquake; and he himself was the only person of the whole that escaped the yawning gulph: he died unmarried in 1703, at the age of forty-six.” His predecessor, Sir Thomas Style, who was buried in the church the preceding year, was a marrying justice of peace during the Protectorate; and was much trusted by his party.—The manor, and a seat called the Place, were purchased, in the reign of James the First, by Oliver Style, Esq. in whose family it still remains. The mansion contains some good family portraits, and some fine painted glass, which was brought from Langley, in Beckenham.

WESTERHANGER.]—Westerhanger, or Ostenhanger, is $3\frac{1}{2}$ miles N. W. from Hythe. “Westerhanger,” observes Hasted, “is an eminent manor here, which was once a parish of itself, though now united to Stanford. Its ancient and more proper name, as appears from the register of the monastery of St. Augustine, was *La Hanger*, yet I find it called, likewise, in records as high as the reign of Richard the First, by the names both of Ostenhanger, and Westenhanger, which certainly arose from its having been divided, and in the hands of separate owners, being possessed by the two eminent families of Criol and Auberville.”—The Rev. W. H. B. Champneis is now, or was recently, the owner. The ancient grandeur of the mansion is still apparent through the devastation which its remains exhibit. It occupies a low situation on the banks of a small rivulet, which formerly supplied the deep moat that encompassed the buildings. The parks were well stocked with timber; and traces

of a long walk, bordered by a double row of trees, may yet be distinguished, leading up towards the principal entrance from the south. Dr. Harris, who describes it as it was before its demolition in 1700, remarks, that “the walls were very high, and of great thickness; the whole of them embattled, and fortified with nine great towers, alternately square and round, having a gallery reaching throughout the whole from one to the other. It had a drawbridge, a gatehouse, and a portal, the arch of which was large and strong, springing from six polygonal pillars, with a portcullis to it. One of the towers, with an adjoining gallery, 160 feet long, was called the prison and gallery of Fair Rosamond. In the mansion itself, over the entrance to which was a statue of St. George on horseback, were 126 rooms. The hall was fifty feet long, and thirty-two wide, having a music gallery at one end, and a cloister at the other, which led to the chapel. The chapel was built by Sir Edward Poynings, as appeared by an inscription in the French language, inscribed on two stones, and was ornamented with statues of St. Anthony, St. Christopher, &c. The court within the great gate was 180 feet square, and in the middle of it had once a fountain.” The chief remains are the outer walls and towers on the east and north sides, which are probably of the time of Edward the Third. The moat is here broad and deep, but on the other sides, it has been partly filled up. The ancient chapel has been destroyed; and its materials are said to have been employed in the construction of the great barn, which stands to the north-westward of the principal entrance. Human skeletons and bones have been frequently dug up, on the site. The small chapel within the court is now used as a stable. Near it, towards the south, are large fragments of other buildings. The present dwelling has been partly erected from the ruins. The font, which was in the old chapel, is now in the church of Stanford.

WESTERHAM.]—The pleasant and salubrious little market-town of Westerham, with a population of about 1500, lies $5\frac{1}{2}$ miles W. from Sevenoaks, and 22 S. E. by S. from London. The manor was given, by Edward the First, to the abbey at Westminster, with the subordinate manor of Eatonbridge, for the performance of certain religious services for the repose of the soul of Queen Eleanor. Henry the Eighth conveyed these estates to Sir John, younger brother to Sir Thomas Gresham, the founder of the Royal Exchange. One of his descendants sold this manor to the Wardes, of Squerries, a seat in this parish; and John Warde, Esq. is now owner. The church, a spacious edifice, contains numerous sepulchral memorials; amongst which, are several brasses, and a neat cenotaph, in commemoration of the brave Major-General James Wolfe, “son of Edward Wolfe, and Henrietta, his wife,” who was born here, January 2, 1727, and died in America, September 13, 1759.

13, 1759.* Dr. Benjamin Hoadley, Bishop of Winchester, was also a native of Westerham.†—Some remarkable land slips have happened in this parish. In 1596, near Oakham Hill, a mile and a half southward from the town, about nine acres of ground continued in motion for eleven days; some parts sinking into pits, and others rising into hills. Another slip occurred at Toy's Hill, about a mile and a half eastward from the town, in 1756, where a field of about two acres and a half, underwent considerable alterations of surface, from an almost imperceptible motion, which continued some time. In the neighbouring parish of Eatonbridge, a slight shock of an earthquake was felt, on the 24th of January, 1758; and three years previously, on the same day that the great earthquake happened at Lisbon, the waters of a pond here, covering about an acre of ground, were considerably agitated.

Valons, a seat, now called Hill Park, between Westerham and Brasted, was much improved by the late Earl of Hillsborough, who resided here till the death of his Lady, in 1780. It is now the property of J. H. Barrow, Esq.

WESTWELL.]—Westwell, 2½ miles E.S.E. from Charing, was an ancient possession of the priors of Christchurch, who had the liberty of a weekly market for the manor: they had also a park here. It became the property of the Tuftons, Earls of Thanet, in the reign of Charles the Second, and has since continued in that family. The church is a spacious edifice, with a tower at the west end, surmounted by a shingled spire. The interior is light and elegant.

Ripley Court, a manor in Westwell parish, was anciently the property of a family of that name, and it afterwards passed, successively, to the Brockhills, and the Idens, the latter a family of considerable antiquity, which had been long seated about Iden, in Suffolk, and Rolvenden, in this county. The Earl of Thanet is the present owner of the estate.

WHITSTABLE.]—The parish of Whitstable is situated at the entrance of the Thames, 5½ miles N.N.W. from Canterbury. The small, but populous village of Whitstable street is partly in this parish, and partly in that of Sea-Salter. It is principally inhabited by persons engaged in the oyster fishery, &c. employing 70 or 80 boats. The bay of Whitstable is also frequented by colliers, which supply the neighbouring inhabitants with

coals; and by three or four boys, engaged in the conveyance of goods to and from the metropolis. The adjacent salt marshes have been drained, and converted into arable land. Here are several copperas-houses, and some salt-works. In 1761, a remarkable sea-eel was caught in a shallow water upon this coast, six feet in length, and twenty inches round; its weight was upwards of thirty pounds. The church stands on an eminence, about half a mile eastward from the village, and gives the name of Church Street to the adjacent houses. On the flats, in the adjoining parish of Sea-Salter, a live whale was driven on shore, in December, 1763, about 56 feet in length. In the Domesday Book, Sea-Salter is called a small borough, and is described as having a church, and eight fisheries. The manor belongs to the dean and chapter of Canterbury, who have an oyster fishery near the shore, the grounds of which are leased by free dredgermen.

WICKHAM.]—East Wickham is 3¼ miles W. by N. from Crayford; and West Wickham is 2¼ miles S.W. by S. from Bromley. The former was part of the estates of the ancient family of the Burnells, of Shropshire; and Robert Burnell, Bishop of Bath and Wells, who died in 1292, had liberty of a free warren here. Since that period, it has passed through various hands, and is now the property of the Rev. J. L. Bennet. The old manor-house, a building of the age of Elizabeth, has been pulled down. The church is a small ancient building of flint and stone, with a shingled turret rising from the west end of the roof. On a slab, in the chancel, is a cross fleury, inlaid in brass, containing small busts of a male and female, in ancient French dresses. On another slab, are brasses of a man, and his three wives; and, beneath, are inscriptions, in black letter, informing us, that he was a "young man of the garde, who died in 1568."

West Wickham, in the reign of Edward the Second, was the property of the Huntingfields. It had a weekly market granted in 1318: but it has long been discontinued. Sir Henry Heydon, in the reign of Henry the Seventh, rebuilt the manor-house and church: from his family, it afterwards passed to the Lennards, and was lately the property of Sir John Farnaby, Bart. The manor-house retains much of its ancient character, notwithstanding the many alterations it has undergone. It is a square building, with a small octagonal tower at

* This lamented officer was early introduced to the military life; and, during the war, which terminated by the peace of Aix-la-Chapelle, his skill and talents became conspicuous. The great abilities he had displayed at the taking of Louisbourg, were followed by his appointment to the chief command of the expedition against Quebec; in which service he displayed the most heroic intrepidity, united to consummate professional judgment. He was mortally wounded at the moment when the bravery of his troops had achieved the victory; and his last words, when informed that the French run, were, "I thank God; I die contented." A fine monument has been erected to his memory, in Westminster abbey.

† He was born in 1676; and was educated at Cambridge, where his rivalry with his fellow-student, Sherlock, is said to have originated. He commenced his controversial career by observations on a funeral sermon preached by Dr. Atterbury, with whom he had afterwards a more famous controversy on the doctrine of non-resistance. On the accession of George the First, he was made Bishop of Bangor; and afterwards, successively, of Hereford, Salisbury, and Winchester. He died in 1761. His brother, Dr. John Hoadley, died Archbishop of Armagh, in 1746.

each corner. The windows of the church are ornamented with painted glass, representing various figures of saints, &c. In this church, are deposited the remains of Gilbert West, Esq. the learned author of "Thoughts on the Resurrection," "Translations of Pindar," &c. West Wickham was many years the place of his residence, where he was frequently visited by Pitt and Littleton, who in the recesses of public business, found this an agreeable retreat.

WINGHAM.]—Wingham, 34 miles E. from Maidstone, was part of the possessions of the see of Canterbury, from the Saxon times, till the Dissolution; when it came to the crown. Charles the First granted the site called Wingham Court, with the demesne lands of the manor, in trust, for the city of London, and they were shortly afterwards purchased by Sir William Cowper, Bart. His descendant, the present Earl Cowper, now holds the estate, but has no residence here. The archbishops of Canterbury had formerly a palace at Wingham, where several of our Kings, at various times, were sumptuously entertained. The village had, in the reign of Henry the Third, the privilege of a market, but it has long been disused.

Wingham college was founded, in the year 1286, by Archbishop Peckham. The foundation was dissolved in the reign of Edward the Sixth, who afterwards granted the site to Sir Henry Palmer, in whose family it continued until the death of Sir Thomas Palmer, Bart. who died in 1723. The mansion of the Palmers, now called the College, appears to have been the Provost's lodge. The church contains several monuments of the Palmers, and the Oxendens.

Deane, or Dene, gave its name to a family who held this manor, by Knight's service, under the Archbishops of Canterbury. In the reign of Henry the Sixth, it became the property of the Oxendens, who resided here till the death of Sir George Oxenden, Bart. in 1775. This gentleman greatly improved the grounds, and made some additions to the house, which is a respectable looking mansion, of the age of Queen Elizabeth. It is situated in a vale, and is surrounded by trees.

WOODNESBOROUGH.]—Woodnesborough, or Wodensborough, a mile and three-quarters W.S.W. from Sandwich, is supposed to have derived its name from the Saxon god, Woden, who probably had a temple here. At this place, is a large artificial mount, or tumulus; but whether of Roman or Saxon origin, is uncertain. Near the surface, however, some sepulchral remains have been found, with fragments of Roman vessels, &c.

WOOLWICH.]—Woolwich is nine miles E. by S. from St. Paul's cathedral. Its name was anciently written Hulvez, Woolwiche, Wollewic, Wlewic, &c. so that its etymology cannot be distinctly traced. Hulvez, according to the authority of Hasted, signifies the "dwelling on the creek." The parish is but small, comprehending, in its

whole extent, no more than 700 acres: of these, 380 are marsh lands, on the Essex side of the river. How this latter tract should have been connected with Kent, it is difficult to ascertain. "Probably," says Hasted, "Haimo, vice-comes, or sheriff of Kent, in the time of the Conqueror, being possessed of Woolwich, as well as those lands on the other side of the river, procured them, either by compensation or grant, from the King, to be annexed to his jurisdiction, as a part of his county, and then incorporated with it." In reference to this, there is also a tradition, that a native of Woolwich having been found drowned on the Essex shore, opposite, was refused burial by the parish in which he was found; upon which, he was buried by the parish of Woolwich, who, in consequence of this, claimed the land whereon the body was discovered. Harris speaks of an old manuscript, which he had seen, stating, that the parish of Woolwich had 500 acres, some few houses, and a chapel of ease on the Essex side of the river. The manor of Woolwich, with all other parts of the parish, is subordinate to the royal manor of Eltham. In whose reign it became an appurtenance to Eltham, is unknown; but it was certainly before the time of Edward the First. The neighbouring marshes were so deeply overflowed by a sudden rise of the Thames, in 1286, that many of the inhabitants were drowned, with a great number of cattle; in the reign of James the First, another inundation laid many acres under water, some of which were permanently lost.

This place, like Deptford, was originally of little note, inhabited by fishermen; and, like Deptford, Woolwich owes its consequence to the establishment of a royal dock, in the reign of Henry the Eighth. It has gradually attained its present size; but its progress has been more rapid during the past century, since the augmentation of the royal artillery, and the establishment of the royal arsenal; the increase of population having been in the proportion of six to one, within the last hundred years. The dock-yard, which has been progressively enlarged, to its present state, includes about five furlongs in length, by one broad. It comprises two dry docks, several slips, three mast-ponds, a smith's shop, with forges for making anchors, a model-loft, store-houses, of various descriptions, mast-houses, sheds for timber, dwellings for the different officers, &c. It is under the immediate inspection of the Navy Board. The resident officers are, a clerk of the cheque; a storekeeper; a master shipwright, and his assistants; a clerk of the survey; a master attendant; a surgeon, &c. The number of artificers and labourers employed here in time of war, is between 3 and 4000; in time of peace, 1500.

Woolwich church is a spacious edifice of brick, with stone copings, window frames, &c. It consists of a nave, chancel, and aisles, with a plain square tower at the west end. It was rebuilt between the years 1726 and 1740, at an expence of about 6500*l*. The interior is fitted up in the Grecian

cian style; and, on the north, south, and west sides, are galleries, supported on Ionic columns. The sepulchral memorials are neither numerous nor important. Against the north wall, is an inscription for Captain Richard Leake, Master Gunner of England, and Elizabeth, his wife; the parents of the celebrated Admiral Sir John Leake.

Here are six meeting-houses, for Presbyterians, Anabaptists, Calvinistic and Arminian Methodists, &c. The principal charitable establishments are an alms-house and two schools: the alms-house was founded for five poor widows, by Sir Martin Bowes, previously to the year 1562. The girls' school was built and endowed from a bequest made by Mrs. Ann Withers, in 1753, of 100*l.* in money, and 1100*l.* South Sea Annuities; for the purpose of teaching 30 poor girls to read, work, &c. The other school was founded under the will of Mrs. Mary Wiseman, who, in 1758, left 1000*l.* Old South Sea Annuities, for the educating, clothing, and apprenticing six poor orphan boys, sons of shipwrights, who have served their apprenticeship in the dock-yard: the original endowment has been augmented to 1750*l.* by vesting some part of the interest in the funds, and the number of boys has consequently been increased to eight.

The military and civil branches of the office of ordnance, established at Woolwich, since the accession of George the First, have occasioned a rapid increase both in its population and extent, particularly during the late war.* The arsenal, formerly

* The original foundry for brass ordnance belonging to government, was in Upper Moorfields, London, near the spot where the chapel erected for the late Rev. J. Wesley now stands; and which, from the circumstance of his having before preached for many years in the foundry itself, is occasionally called by that name. Many persons, even of the higher ranks, frequently attended to see the process of running the fluid metal into the moulds. About the year 1716, when Colonel Armstrong was surveyor-general of the ordnance, and George Harrison, Esq. superintendent of the foundries, it was determined to re-cast the unserviceable cannon which had been taken from the French, in the ten successful campaigns of the Duke of Marlborough. This becoming generally known, from the long time that the cannon had been publicly exposed, excited more than usual interest; and many of the nobility, general officers, &c. for whose reception galleries had been prepared near the furnace, assembled to view the operation.

A native of Schaffhausen, in Switzerland, named Andrew Schalch, then travelling for improvement, was attracted to the place at an early hour, and was suffered minutely to inspect the work then going on. Colonel Armstrong was present, when Schalch, alarmed at some dampness which he had observed in the moulds, addressed him in French; and, after explaining his reasons for believing that an explosion would accompany the casting of the metal, warned him to retire from the impending danger. The Colonel, who at once comprehended the importance of Schalch's remarks, interrogated him, with respect to his knowledge of the art, and found him perfectly conversant with all its principles: he therefore resolved to follow his advice, and quitted the Foundry with his own friends, and as many of the company as could be prevailed on to believe that danger really existed. Scarcely had they got to a sufficient distance, when the furnaces were opened, and the metal rushed into the moulds; the humidity of which, as Schalch had intimated, immediately occasioned a dreadful ex-

called the Warren, from occupying the site of a rabbit warren, includes nearly 60 acres, and contains various piles of brick building, among the oldest of which are the Foundry, and the late Military Academy; these were erected by Sir John Vanbrugh, and have the date 1719, on the upper part of the leaden pipes which convey the water from the roofs. In the foundry, are three furnaces, and a machine for boring cannon: the largest furnace will melt about 17 tons of metal at one time. From the improvements which have been made in the operation of casting, all danger of explosion is avoided, the moulds being made red-hot, before the metal is suffered to run into them. The time requisite to perform the operation of boring, varies in proportion to the size of the piece, a twelve-pounder taking about five days. In another quadrangular range of building, at a short distance from the foundry, are two other boring machines, and various work-shops, where the ordnance, after being proved, are properly finished for service. Brass ordnance only, are made here. They are wholly formed of a composition of tin and copper. The foundry is under the direction of an inspector, a master-founder, and an assistant-founder. Nearly adjoining the foundry, is the laboratory, where fireworks and cartridges, for the use of the army and navy, are made up; and bombs, carcasses, grenades, &c. charged. This is under the care of a comptroller, a chief fire master, two assistant fire masters, an inspector of gunpowder, &c. The

plosion; the water was converted into steam, which, by its expansive force, caused the liquid fire to dart out in every direction, so that part of the roof of the building was blown off, and the galleries fell. Most of the workmen were dreadfully burnt; some lives were lost, and many persons had their limbs broken: A few days afterwards, an advertisement appeared in the newspapers, stating, that, "if the young foreigner, who, in a conversation with Colonel Armstrong on the day of the accident at the Foundry, in Moorfields, had suggested the probability of an explosion from the state of the moulds, would call on the Colonel at the Tower, the interview might conduce to his advantage." Schalch, in consequence, waited on Colonel Armstrong, who, after some preliminary discourse, told him, that "the Board of Ordnance had in contemplation to erect a new Foundry, at a distance from the metropolis, and that he was authorised, through the representation which he had made of his own conviction of his (Schalch's) ability, to offer him a commission to make choice of any spot within twelve miles of London, for the erection of such a building, having proper reference to the extensive nature of the works, and carriage of the heavy materials, and also to engage him as superintendent of the whole concern." This advantageous proposal was readily accepted by Schalch, who, having inspected various spots, at length fixed on the warren at Woolwich, as the most eligible situation. Here the new Foundry was erected; and the first specimens of ordnance cast by Schalch, were so highly approved, that he was fixed in the situation of Master Founder, and continued to hold that office for about 60 years, when he retired to Charlton, having been assisted during the latter part of that term, by his nephew, Lewis Gaschlin; who was, for many years, employed in the arsenal, as principal modeller for the Military Repository. Schalch died in 1776, when about the age of 90, and was buried in Woolwich church-yard. Some of the largest mortars now remaining in the arsenal, were cast under his direction, and have his name upon them.

other structures in the arsenal, consist of store-houses, work-shops, and offices of various descriptions. The chief officers of the arsenal, are a clerk of the cheque, a clerk of the survey, a storekeeper, &c. The number of artificers, labourers, and boys, employed in the various departments during war, is about 3000; exclusively of the convicts belonging to one of the hulks, stationed on the river, opposite to the arsenal: the other hulk lies before the dock-yard. The convicts, about 900 in number, are generally employed in the most laborious offices, as pile driving, &c.

The Royal Military Academy was erected about the year 1719; but the establishment does not appear to have been finally arranged till 1741. Since that period, various improvements have been made in the institution, which has been particularly fortunate in the abilities of its mathematical professors; amongst whom, the names of Derham, Simpson, and Hutton, are conspicuous. The pupils, called Cadets, amount to about 300. The academy is under the direction of the master-general, and board of Ordnance a lieutenant-governor; an inspector; a professor of mathematics, and three masters; a professor of chemistry; a professor of fortification, and two masters; two masters in arithmetic, two French masters, three drawing masters, a dancing master, fencing master, and others: the master-general of the ordnance is captain of the cadets' company. The young gentlemen are of the most respectable families; and, on the completion of their studies, are regularly commissioned either in the artillery or engineers' service. The New Military Academy is situated about a mile southward from the town, on the upper part of Woolwich common. It is in the castellated form, from designs by Wyatt, and consists, in front, of a centre, and two wings, united by corridors, with a range of building behind, containing the hall, servants' offices, &c. The centre forms a quadrangle, with octagonal towers at the angles, and contains the teaching-rooms, four in number: the masters' desks are situated in the towers, the floors of which are somewhat elevated above the general level. The wings contain the apartments for the cadets, and chief officers, the latter being in the middle of each wing, which is more elevated than the extremities; these have octangular turrets at the angles. The whole edifice is embattled, and built with brick, whitened over; its length is somewhat more than 600 feet. The principal front is to the north. The hall is a well-proportioned room, with a timber roof, in the general style of the college halls. This academy is appropriated to the senior department of the institution; and was first opened on the 12th of August, 1806.

About 40 years ago, a piece of ground, of 50 acres, was taken by government, on lease, and spacious barracks were erected for the accommodation of the officers and privates. Many alterations have since been made, and many additional buildings

have been raised. The artillery barracks, with their subordinate ranges of stabling, offices, &c. are now a most extensive concern; the principal front comprehending an extent of about 400 yards. "It consists of six ranges of brick building, united by an ornamental centre of stone, having Doric columns in front, and the royal arms, and military trophies above, and four other lower buildings filling up the divisions between each range: the latter have also stone fronts, with Doric colonnades, and a balustrade above each. These contain a library, and book-room, for the officers, a mess-room, a guard-room, and a chapel, large enough to contain 1000 persons. At a little distance from the back part of the chapel, is a new riding-school, erected of brick, from designs, by Wyatt, on the model of an ancient temple. Its appearance is grand: its length is about 50 yards, its breadth 21, and its height proportionable. The whole depth of the buildings, from the front of the barracks, which runs nearly parallel with the New Military Academy, is about 290 yards. The parade is in front of the barracks, and the soldiers are frequently exercised in throwing shells, for which the open space on the common, affords sufficient room. On the east side of the barracks, on the descent leading to the arsenal, are the military hospitals; the largest of which affords accommodation for 700 men. Here is also a new guard-house, and a veterinary hospital. On the west side of the barracks, is a piece of water, where experiments with gun-boats, &c. are occasionally made. A new road leads from this quarter towards Charlton.

WOOTTON.]—The parish of Wootton lies $8\frac{1}{2}$ miles S.E. by S. from Canterbury. The mansion, called Wootton Court, is delightfully situated on a bold hill, nobly crowned with wood, on the north-east side of the Dover road. The grounds are picturesque, and have abundance of timber. Here Leonard and Thomas Digges, father and son of Sir Dudley Digges, pursued their mathematical studies, in the reign of Queen Elizabeth. In the house, is an original portrait of the Lord Chancellor Egerton.

WROTHAM.]—Wrotham, or Wortham, the Wroteham of Domesday, said to take its name from the abundance of "worts" which grow in its neighbourhood, is $10\frac{1}{2}$ miles W.N.W. from Maidstone. Now a respectable village, it was formerly a market-town, given to the priory of Christchurch, Canterbury, by King Ethelstan, in 964. This manor was afterwards allotted to the Archbishops of Canterbury, who had here a palace, which was afterwards taken down, by Archbishop Islip, to furnish materials for a palace at Maidstone. Archbishop Cranmer resigned Wrotham to Henry the Eighth; and, in the succeeding reigns, it became the property of individuals: the James family are the present occupiers. The church is a large well constructed edifice, consisting of a nave, aisles, chancel, and transept, with an embattled tower at the

the west end. The monuments are numerous; among which are several curious brasses, commemorative of the Peckham family, and also of the Rayners. A gateway, and a substantial stone building, are the principal remains of the archiepiscopal palace.

WYE.]—The "royal manor" of Wye, four miles N.E. from Ashford, which was confirmed to the abbey of Battle, by different sovereigns, is now in the Hatton family.

At the little hamlet of Withersden, in this parish, is a holy well, or fountain, which formerly bore the name of St. Eustace, from Eustachius, Abbot of Flai, who came to England, about the year 1200. Respecting him, Matthew Paris relates, the following story:—"At a certain village, not far from Dover, called Wye, he began his office of preaching; and, in that place, he blessed a spring, which in consequence, was of such virtue, that from merely tasting it, all distempers were cured. A dropsical woman implored help of the saint: "Be confident," said he, "and go to your native fountain of Wye, which God hath blessed, drink, and you shall be well." The woman did as she was directed, and immediately becoming sick, there issued from her mouth, in the sight of many who came to the fountain for cure, two large and black toads, which were soon changed into dogs, and soon afterwards into asses: the terrified woman screamed; but he who kept the fountain, sprinkled some of the water between her and them, and the monsters directly vanished into air."

Wye church consists of a nave, aisles, and chancel, with a large embattled tower at the south-east angle. The ancient steeple suffered considerably by lightning, in July, 1652, and was afterwards restored. In the year 1686, soon after the conclusion of Divine service, it fell with a dreadful crash, beating down the greatest part of the east chancel, and nearly all the south and north chancels, together with a pillar of the church. The east end was afterwards boarded up, and continued in that state till the year 1703, when it was restored to its present form, and a new tower built on the south-east side. The nave of the church is separated from the aisles by four pointed arches, on each side, rising from clustered columns: the chancel was rebuilt soon after the commencement of the last century. At the east end of the chancel, is a mural tablet, inscribed in memory of the Lady Joanna Thornhill, daughter of Bevette Granville, who fell at the battle of Lansdown, sister to John, Earl of Bath, and second wife to Robert Thornhill, of Ollantigh, in this parish, commander of a troop of horse, which he raised, at his own expence, for the service of King Charles the First. She survived her husband 52 years, which she spent in the most devout and religious widowhood, and died at the age of 74, in the year 1708, having been lady of the bedchamber to Charles the Second's Queen. In the nave, is an ancient slab, much broken, inlaid with brasses,

of two men, and a woman, with a groupe of children.

The ancient college, now the grammar-school, was founded, in 1447, by Archbishop Kemp, a native of this parish. He endowed it for a provost, and six fellows, two of whom had an additional stipend for the duty of the church, and care of a grammar-school, in which all scholars, both rich and poor, were to be instructed gratis. The chief possessions of the college were granted to Walter Buckler, and his heirs, after the Dissolution, on condition, that "he should, at all times, provide, and maintain, a sufficient schoolmaster, capable of teaching boys, and young lads, in grammar, without fee or reward, in this parish. Another school was instituted here, about the year 1708, under a bequest of Lady Joanna Thornhill, who, among other charities to the poor of Wye, directed that the residue of her estates should be applied to the improvement of their children in learning: to this donation, Sir George Wheler, prebendary of Durham, about the year 1724, annexed the gift of the college, of which he was then owner, as "a residence for the master of the grammar-school, and for the master and mistress of Lady Thornhill's school." He also bequeathed 10*l.* annually, as an exhibition to Lincoln college, Oxford; and this was, about 40 years afterwards, increased to 20*l.* yearly, by his son, the Rev. Granville Wheler.—The grammar-school has nearly degenerated to a sinecure; but, at the other, from 80 to 100 children are educated; the boys in reading, writing, and arithmetic; and the girls in reading, writing, and needlework. The college forms an exact quadrangle, inclosing an open court: the lower part is composed of stone and flint, in the pointed style; but the upper part has been rebuilt with brick, and modernised. The old hall is a large vaulted apartment, now used as the school-room; and the ancient commons-room is the present kitchen. Cloisters, of open arches, rising from piers of brick work, surround the inner court; these were erected in place of the more ancient cloisters, which were pulled down about 70 years ago. Some of the windows, in the south part of the college, have been ornamented with the arms of Archbishop Kemp, and the crest of Edward the Sixth, when Prince of Wales, with the initials E. P. and the date 1546.

The houses in Wye parish are principally ranged round a green, and in two parallel and two cross streets, at a little distance from the Stour, over which is a stone bridge of five arches, erected at the expense of the county, in 1638. Dr. Harris mentions a tradition, that the original site of the town was in the bottom, or valley, between Wye Down and Crundal, where Pett Street now is; and that several deep wells were still remaining there.

At Ollantigh, in this parish, the ancestors of John Kemp, the cardinal archbishop of Canterbury, were seated as early as the reign of Edward the Fourth. It is most probable, that the archbishop was born here,

here, in 1380; and here, towards the end of his life, he built a chapel or oratory.*—Ollantigh continued in the possession of the Kemps, till 1607, when, on the death of Sir Thomas Kemp, without issue male, it devolved to his four daughters, co-heiresses, by whose respective husbands it was soon afterwards conveyed to Sir Timothy Thornhill. It was afterwards conveyed to Jacob Sawbridge, Esq. who was deeply engaged in the iniquitous South Sea scheme, in the reign of George the First. His grandson, the late John Sawbridge, Esq. alderman and representative of the city of London, in three successive Parliaments, was born here, in March, 1732; and, on his death, in 1795, he was buried in Wye church. He expended large sums in altering the mansion, which had been erected by Sir Thomas Kemp, K. B. towards the end of the reign of Henry the Seventh, and in improving and extending the grounds. His sister, the late well-known Mrs. Catherine Macaulay Graham, was also a native of Ollantigh, her birth occurring at this seat, on the 23d of March, 1731. The present possessor of Ollantigh is Samuel Elias Sawbridge, Esq. son of the alderman. The house occupies a low situation near the banks of the Stour, which has been altered and extended so as to form a noble ornament to the grounds.

YALDING.—The low, but populous village of Yalding, is situated at the confluence of the Bewley and Theyse, with the Medway, 5½ miles S.W. by W. from Maidstone. This place has been several times afflicted by the plague, particularly in 1510, 1603, 1604, 1609, and 1666. Jennings Court, an estate in this parish, belonging to Brazen Nose College, Oxford, is held on lease. The Rev. George Amhurst, some time vicar of Yalding, was grandfather of the poet, Nicholas Amhurst, who was born either here, or at Marden. He was the principal author of the "Craftsman;" and also wrote the Satires published under the title of *Terræ Filius*, against the Oxford university, to which he was excited through having been expelled from college. He died in 1742.

FAIRS.—*Askhole*, May 30, toys.

Acrise Mill.—October 16.

Alesford.—June 29.

Apledore.—January 11, June 22, pedlary and cattle.

Ash.—April 5, October 10, pedlary.

Ashford.—First Tuesday in every month, cattle; May 17, August 2, wool; September 9, October 23, horses, cattle, and pedlary.

Babbington.—August 24.

* This prelate was educated at Merton college, Oxford; and having been successively made archdeacon of Durham, dean of the arches, and vicar-general to archbishop Chicheley, he was appointed chief justiciary of Normandy, by Henry the Fifth. He was advanced to the see of Rochester, in 1419. Two years afterwards, he was translated to Chichester: in 1424, he was made Archbishop of York; and, three years after that, was promoted to the Chancellorship. In 1454, he was trans-

Badlesmere.—September 9, October 24, November 17, linen and toys.

Benenden.—May 15, August 4, horses and cattle.

Bethersden.—July 31, pedlars' ware.

Biddenden.—Old Lady Day, April 5, November 8, cattle and horses.

Billington.—July 5.

Blackheath.—May 12, October 11, bullocks, horses, and toys.

Boughbeach.—Whit-Tuesday.

Boughton.—July 2.

Brasted.—Ascension Day, horses, and all sorts of commodities.

Bromfield.—June 4.

Bromley.—February 14, August 5, horses, bullocks, sheep, and hogs.

Brompton.—May 22.

Brookland.—August 1, October 10, pedlars' ware.

Canterbury.—May 4, toys; October 10, cattle and pedlary.

Chalk.—May 15.

Challock.—October 8, horses, cattle, and pedlary.

Charing.—April 29, cattle, &c.; October 29, horses, cattle, and pedlary.

Charlton.—October 18, toys.

Chatham.—May 15, October 20, horses, bullocks, and all other commodities.

Chevering.—May 16.

Chilham.—November 8, cattle.

Chiselhurst.—Wednesday in Whitsun-week, toys.

Church Whitfield.—July 5, lemons, oranges, and toys.

Cliff.—September 28.

Cobham.—August 2.

Cowden, near East Grinstead.—May 3, August 2, oxen and pedlary.

Cranbrook.—May 30, September 29, cattle and horses.

Crayford.—September 12.

Dartford.—August 2, horses and bullocks.

Deal.—April 5, October 10, cattle, and pedlary.

Dover.—November 22, wearing apparel, and haberdashery.

Dulwich.—Monday after Trinity Monday.

Eastchurch.—May 31, toys.

Eastling.—September 14.

East Malling.—August 6, pedlary.

Eastroy.—October 2, cattle.

Edenbridge.—May 6, cattle, and toys.

Elham, near Wye.—Palm-Monday, Easter-Monday, Whit-Monday, horses, cattle, and pedlary.

Elmstead.—July 25.

Farnborough.—September 12.

lated to Canterbury; and made a cardinal bishop, by the title of St. Rufina, as he had before been a cardinal priest, by the title of St. Balbina. He died in 1453, and lies buried under a sumptuous tomb, in Canterbury cathedral. His nephew, Thomas Kemp, Bishop of London, is also thought to have been born on this estate. He died in 1489, and was interred in St. Paul's cathedral.

Farningham.—

- Farningham*—October 15, a shew of horses, colts, and cattle.
- Faversham*—February 25, August 12, linen, woollen-drapery, and toys.
- Folkestone*—June 28, September 25, pedlars' ware.
- Frittenden*—September 3, pedlars' ware.
- Gillingham*—March 27.
- Goodnesborough*—September 25, cattle.
- Gouldhurst*—August 26, cattle.
- Gravesend*—April 23, toys, &c.; October 24, horses, cloth, toys, &c.
- Great Chart*—First Monday in April, horses, cattle, pedlary.
- Green Street*—September 23, cattle.
- Groombridge*—May 17, September 25, cattle, and pedlary.
- Hadlow*—Whit-Monday, cutlery, &c.
- Hanstree*—May 14, horses, cattle, and pedlary.
- Harrietsham*—July 5, horses, &c.
- Haxhurst*—August 10, cattle, and pedlary.
- Hearn*—April 16.
- Hedcorn*—June 12.
- Horsemanen*—July 26.
- Hythe*—July 10, December 1, horses, cattle, shoes, cloth, and pedlary.
- Kennington*—July 25, pedlars' ware.
- Lamberhurst*—April 6, May 21, cattle.
- Lenham*—June 6, cattle, and horses.
- Leigh*—July 25, toys.
- Lidd*—First Monday in September, cattle, &c.
- Littleburn*—July 5, toys.
- Lyminge*—July 5, pedlary.
- Maidstone*—First Tuesday in every month, cattle, &c.; February 13, May 12, June 20, second Tuesday in October, great market for horses, bullocks, and all sorts of goods.

- Mersham*—Friday after Whitsun-week, horses, cattle, and pedlary.
- Milton*—July 24, toys, cattle, &c.
- Minster*—Palm-Monday, toys, cattle, &c.
- Mongham*—October 29, cattle, and pedlary.
- Monkton*—July 22, hogs, &c.; October 11, toys.
- Newenden*—July 1, pedlars' ware.
- Newenham*—June 29, linen, and toys.
- Orford*—August 24, pedlary.
- Orpington, near Bromley*—Holy Thursday, toys.
- Ospringe, near Sittingbourn*—May 29, toys, &c.
- Oxted, near Westerham*—May 1, toys.
- Peckham, near Tunbridge*—Whit-Tuesday, pedlary.
- Penshurst*—June 26, pedlary.
- Pluckley*—December 6, pedlary.
- Preston*—May 23.
- Queenborough*—August 5, toys.
- Rochester*—May 30, December 11, horses, bullocks, and various commodities; fourth Tuesday, in every month, cattle.
- Romney*—August 22, pedlars' ware.
- St. Lawrence*—August 10, toys.
- St. Peter's*—April 5, July 10, toys.
- St. Margaret's, near Dover*—July 31, pleasure fair.
- St. Mary's Cray*—June 24, Midsummer Day, toys.
- Sandwich*—December 4, drapery, haberdashery, shoes, and hardware.
- Sandhurst*—May 25, cattle, and pedlary.
- Sarr*—October 14, toys.
- Seale*—June 6, toys.
- Sellinge*—May 21, October 11, horses, cattle, and pedlary.
- Scvenoaks*—July 10, October 22, hogs and toys; Tuesday, in every month, cattle.
- Shoreham*—May 1, toys.
- Sittingbourn*—Whit-Monday, Tuesday, and Wednesday, linen and toys; October 10, linen, woollen-drapery, and hardware.
- Smarden*—October 10, pedlars' ware.
- Smith*—May 12, September 29, horses, cattle, and pedlary.
- Staple*—July 25, edge-tools.
- Stirling*—Ascension Day, November 12, horses, cattle, and pedlary.
- Stockbury*—August 2, toys.
- Stone*—Ascension Day, pedlars' ware.
- Stroud*—August 26, toys.
- Tenterden*—First Monday in May, cattle, and pedlary.
- Tunbridge*—Ash-Wednesday, July 5, October 11, statute; October 29, bullocks, horses, and toys; first Tuesday in the month, cattle.
- Warborn*—October 2, horses, cattle, and pedlary.
- Waldershare*—Whit-Tuesday, pedlars' ware.
- Westerham*—May 3, cattle; September 19, pedlary.
- Whistable*—Thursday before Whitsunday, pedlary, and fish.
- Wingham*—May 12, November 12, cattle.
- Wittersham*—May 1, pedlar's ware.
- Woodnesborough*—Holy Thursday, toys.
- Wrotham*—March 4, horses, bullocks, &c.
- Wye*—March 24, May 29, September 30, November 2, horses, cattle, and pedlary.
- Yalding, near Maidstone*—Easter-Tuesday, October 15 and 16, cattle, and slops.

TABLE OF DISTANCES.

The Names of the respective Towns are on the top and side, and the square where both meet gives the Distance.

New Romney.....	2	34½	

LANCASHIRE.

GENERAL DESCRIPTION OF THE COUNTY.

THE maritime county of Lancaster is bounded, on the north, by Cumberland and Westmorland; on the east, by Yorkshire; on the south, by Cheshire; and, on the west, by the Irish sea. According to Yates's survey, its greatest length is 74 miles; its breadth, $44\frac{1}{2}$; its circumference, 342; and its contents, 1705 square miles, or 1,129,600 acres. The Population Tables of 1811, estimate its contents at 1,155,840 acres. The air of this county is, in general, more serene than that of any other maritime county in England; on which account, the inhabitants are strong and healthy, except in the neighbourhood of the sea, and near the bogs and fens, where the sulphureous and saline effluvia occasionally produce fevers, and various chronic diseases. The eastern side of the county is more subject to rains than that which borders on the sea-coast; for, as the clouds are wafted over the Irish sea from the Atlantic, they are checked by the mountainous ridge, and hence the rains are continually falling on the western side of these intercepting eminences. At Townley, near Burnley, it has been found that 42 inches of rain fall annually, at a medium; and, during the same period, the annual height of the rain has been only 33 inches at Manchester. At Liverpool and Preston, the average has been considerably less. The humidity of the climate is injurious to the arable lands; though, at the same time, it is favourable to the meadow and pasture grounds. Frosts are less severe, and of shorter duration, on the western, than on the eastern side of the hills.

SOIL, &c.]—The soil of the county is of a various nature, and its features are strongly marked, particularly in the northern part, and along the eastern border—the hills presenting a bold appearance, and the vallies are narrow and irriguous.—Near the sea-coast, and along the southern ridge of the county, following the course of the Mersey, the land is low and flat. In various parts, near the shore, there is soil two feet below the sand, and it is probable, that the original surface was gradually buried by an accumulation from the neighbouring

hills. There are few counties which exhibit so great a variety of soil. The district which lies between the Ribble and the Mersey, is chiefly a sandy loam, adapted for every species of culture. The sub-stratum is the red rock, or clay-marle, the most preferable of all soils. The moor lands are of various qualities, producing heath, and other wild plants, and constitute a greater proportion than might have been expected in so populous a district. This county abounds with bogs, or morasses, provincially termed mosses. These are large tracts of land, of a brown and barren appearance, consisting of a spongy soil, composed of the roots of decayed vegetables, in different states of decomposition. The surface of these mosses is turfy; below, is a black, moist, spongy earth, which being dug up with spades, almost in the form of bricks, and dried, is what they call peat, and is used as fuel: sometimes it contains so much bituminous matter as to burn with a flame. Large trees are frequently found buried several feet below the surface of these morasses, so well preserved from decay by the exclusion of air, that they are capable of being wrought into furniture. After penetrating quite through the moss-earth, or bed of peat, sand or clay is met with. It is evident, that these tracts were once forest land, the trees upon which, were destroyed by an inundation of salt water. One of the largest of these mosses, called Chatmoss, is between Manchester and Warrington, in the parish of Eccles. It extends, on the left side of the road, ten miles east and west; and, in some places, seven or eight miles, from north to south. These tracts have been much improved; and, by draining and marling, several hundreds of acres have been brought into cultivation, within these few years.

AGRICULTURE, PRODUCE, &c.]—Although there are but few open or common fields remaining, there are large tracts of waste land in this county.—Yates makes the moss lands amount to 26,500 acres; and the moors, marshes, and commons, to 482,000, amounting together, to 508,500 acres.—Many of these lands are incapable of tillage: some consist

LANCASHIRE.

British Statute Miles
0 1 2 3 4 5 6 7 8 9 10 11 12

Longitude West 50 from London

consist of mountainous tracts, craggy, steep, and barren, which are employed for sheep walks; others of low swamps, overcharged with stagnant water, from which a sufficient fall has not been discovered for the purpose of drainage. Many thousand acres of these wastes, however, are capable of being converted into arable, pasture, or meadow land, of the very first quality. The agricultural produce of this county, consists chiefly of oats and potatoes; both which are used for human sustenance; many of the labouring classes, in the northern and eastern parts, being chiefly supported by them. A considerable quantity of barley, and some wheat, are cultivated in Low Furness, the Filde, and in the south-western parts of the county; but, it is generally allowed, that Lancashire does not produce a fourth of the grain necessary for the consumption of its inhabitants. The lands near the great towns are chiefly appropriated to pasturage, and gardens. It was in Lancashire, that potatoes are said to have been first cultivated, after their introduction into this country; but it was not until many years after, that they became a general article of consumption, and of exportation. They have now brought the cultivation of this root to high perfection, and it forms a considerable branch of commerce both to Ireland and London. The produce of an acre is generally from 2 to 300 measures, or bushels, each bushel weighing about 90lb.

WOODLANDS.]—Lancashire is not remarkable for its timber. Indeed, towards the coast, it is with difficulty, that wood of any kind can be raised; the tops of the trees, hedges, and even the corn in the fields, bend towards the east, shrinking, as it were, from the cold western gales brought over the sea. In the northern part, many acres of coppices are cut down every fifteen years, and burnt into charcoal. Towards the central part of the county, there are some good woods; the timber, healthy; there is also a considerable quantity grown in hedge-rows; but sunshine is generally preferred to shade. There are many excellent plantations about gentlemen's seats and pleasure-grounds, in a very thriving state. The alder has, of late years, become an article of consequence, from the demand for its wood, which makes the best poles to hang cotton yarn on to dry; and for its bark, which sells at nearly a penny per pound, as an article for dye. The alders, planted on the side of the Duke of Bridgewater's canal, upon the loose grounds, for a considerable distance, by way of security to the banks, not only answered the original purpose, but have proved a profitable plantation; the alder admitting of being cut down every fourth or fifth year. The osier willow is also in much demand for hampers, &c.

CATTLE.]—In the year 1803, when England was threatened with an invasion, the Lord-Lieutenants were required, by Parliament, to obtain accounts

of all the live-stock, &c. in their respective counties. The return, from Lancashire, was, in substance, as follows:—Oxen, 648; cows, 84,527; young cattle and colts, 54,578; sheep and goats, 80,772; pigs, 30,982; riding horses, 5474; draught horses, 26,659. Very few sheep are kept in the southern parts of the county, except those which are purchased in distant parts, by the butchers, and kept a few weeks on grass, for their own convenience; or, by gentlemen, for the consumption of their families, curiosity, or occasionally to eat off their turnips, previously to laying down the land. In the northern part of the county, sheep are bred and kept upon the mountains and moorlands.—There is also a breed, called the Warton, or Silver Dale Cragg sheep, which is much esteemed for the fine flavour of its flesh, fineness of its wool, and tendency to fatten, at an early period.

Holt, in his "General View of the Agriculture of the County of Lancaster," observes, that, "to trace the origin of a breed of cattle now prevailing in Lancashire, would probably, at this time, be a difficult task. But that they were famous over the whole kingdom, is evident, from being so frequently noticed, and in such estimation as to be sought after from all parts of the kingdom. In such repute were they, and of such superior quality, that that great judge in cattle, Mr. Bakewell, thought proper to make them the source from which he has, by crossing, &c. made much improvement. But, as the breed has been under a progressive state of melioration in Leicestershire, it seems to have been in an equal state of retrogradation in Lancashire, and as if overawed by competition, has silently yielded to a conqueror. It is not long since, however, that Pennant made the following observations in his tour through Lancashire:—'Breakfasted at Garstang, a small town, remarkable for the fine cattle produced in its neighbourhood. A gentleman has refused thirty guineas for a three year old cow; has sold a calf of a month's age, for ten guineas, and bulls for 100; and has killed an ox, weighing twenty-one score per quarter, exclusive of hide, entrails, &c. Bulls, also, have been let out at the rate of thirty guineas the season'." The cows of this county are rather smaller than those of Leicestershire; and they are known by their wide-spreading horns and straight backs. There is no particular breed peculiar to the county. They are generally bought out of the herds from the neighbouring counties, or from Wales or Ireland. Numbers of horses have been bred in this county, of late years, on account of the increased demand; but very little attention has been paid to the breed. For agricultural and ordinary purposes, strong black horses are chiefly used.

PLANTS.]—The most remarkable plants of this county are enumerated, in the note, below.*

MINERALS,

* *Aira aquatica*. Water Hair Grass; in watery places, and banks of rivers.

Aira montana. Mountain Hair Grass; in sandy dry heaths and pastures. *Andromeda*

MINERALS, FOSSILS, &c.]—Though this county is rich in mineral productions, its mineralogical history has never been sufficiently illustrated. By the advantages of water conveyance, coal, a prolific production, is sent to Manchester, Bolton, &c. and along the coast. It abounds in the southern and middle parts, but chiefly in the hundreds of West Derby and Salford. At Haigh, near Wigan, a species of coal is found, of a bituminous quality, resembling black marble. It is called Cannel Coal: it consumes rapidly, and with a clear flame. Limestone is procured, in great abundance, in the north, and north-east parts of the county. In the neighbourhood of Leigh, limestone is found, of a nature to resist the action of water, and it is used in the construction of such works as are exposed to moisture.

Stone, of various kinds, is produced in this county. Near Lancaster, is a large quarry of very fine free-stone; from which, the town has been chiefly built. Blue slates are found, in great abundance, on the Coimstone and Telberth waste fells, near Hawkshead, which form an article of considerable exportation. Scythe stones are procured at Rainford.—Iron ore is found, in great abundance, between Ulverstone and Dalton. Some copper mines have been opened in the north, but with little success. At Anglesack, near Chorley, is a lead mine, belong-

ing to Sir Frank Standish, Bart. which consists of several veins, running in various directions. The composition of the matrix is carbonate and sulphuret of barytes: the former is found, in the greatest abundance, near the surface. There are numerous mineral and medicinal springs in this county; the chief of which will be duly noticed, with the places at which they respectively occur.

RIVERS, FISHERIES, &c.]—The principal rivers of Lancashire, are the Calder, the Duddon, the Crake, the Loyne, or Lune, the Douglas, the Ribble, the Mersey, and the Irwell. There are also several smaller streams or rivers, all of which direct their course towards the west, and fall into the ocean. The Duddon, which we have noticed in our account of Cumberland, skirts and separates the western side of Furness from that county; and, at its junction with the sea forms, at high water, a bay of considerable extent. The Crake runs nearly parallel to the Duddon, and connects the water of the lake, called Thurston Water, with the sea at Leven Sands. Nearly at the same place, the waters of the lake of Winandermere fall into the sea, through the chanel of the Leven. Rising amongst the fells of Westmorland, the Loyn enters this county near Kirkby Lonsdale. Its stream is soon afterwards increased by the waters of the Wening, and the Greta, from Yorkshire, and then passes through the de-

Andromeda polifolia. Marsh Wild Rosemary; on turfy bogs.
Asarum Europæum. Asarabacca; in woods.
Athamanta meum. Spiguel Mew, or Baud Money; in mountainous pastures.
Bartisia viscosa. Marsh Eyebright Cow Wheat; in bogs about Latham, near Ormskirk.
Blasia pusilla. Dwarf Blasia; on the sides of ditches and rivulets; near Manchester.
Brassica monensis. Small Jagged Yellow Rocket, of the Isle of Man; between Marsh Grange farm and the Isle of Walney.
Carex limosa. Brown Carex; } on turfy bogs.
Chara tomentosa. Brittle Chara; }
Cineraria palustris. Jagged Fleabane; in the ditches about Pillin Moss, plentifully.
Cistus hirsutus. Hairy Cistus; on the rocks about Cartmell Wells.
Cochlearia clurica. Small Sea Scurvy Grass; in the Isle of Walney.
Conferva gelatinosa, L. A variety of Jelly Conferva, in fountains, and pure rivers; near Manchester.
Echiniphora spinosa. Prickly Sampire, or Sea Parsley; at Roosbeck, in Low Furness.
Eriophorum vaginatum. Hair's Tail Rush; upon the mosses.
Fucus fibrorus. Fibrous Fucus; on the shore.
 — *filicinus.* Fern Fucus; on submarine rocks and stones, in the Isle of Walney.
 — *pedunculatus.* Pedunculated Fucus; on submarine rocks and stones; in the Isle of Portland.
Galanthus nivalis. Snowdrop; in meadows.
Galeopsis tetrahit, L. Nettle Hemp; with a party-coloured flower; in sandy corn fields.
 — *viscosa.* Hairy Nettle Hemp; in sandy corn-fields.
Gentiana pneumonanthe. Marsh Gentian, or Calathian Violet; in wet meadows.
Geranium sanguineum, L. Bloody Crane's Bill, with a variegated flower; in a sandy soil, near the sea shore, in the Isle of Walney.

Lathyrus palustris. Marsh Chicken Vetch; in wet meadows.
Lichen ampullaceus. Bladder Lichen; in mountainous pastures, called Emmot pasture, near Colne.
 — *articulatus.* Jointed Lichen; on trees, near Burnley.
 — *fahlunensis.* Cork Lichen; on rocks and large stones, near Longdale.
 — *glaucus.* Glaucous Lichen; in mountainous pastures, called Emmot pasture, near Colne.
Lycopodium selago. Fir Club Moss; on mountainous heaths
Narthecium ossifragum. Lancashire Asphodel, or Bastard English Asphodel; on boggy grounds.
Ophrys cordata. Least Tway Blade; upon Pendle Hill, among the heath.
Potamogeton setaceum. Setaceous Pond Weed; on turfy bogs.
Polypodium dryopteris. Branched Polypody; on stones and dry places.
Potentilla verna. Spring Cinquefoil; in barren pastures, near Preston.
Prunus cerasus, L. Wild Heart Cherry Tree, Merry Tree; about Bury and Manchester.
 — *padus.* Bird Cherry; in woods and hedges.
Pulmonaria maritima. Sea Bugloss; on sandy sea shores; over against Bigger, in the Isle of Walney.
Rubus chamamorus. Mountain Bramble, or Cloudberry; upon mountainous turfy bogs.
Sambucus nigra, L. Elder Tree, with jagged leaves; in a hedge, near Manchester.
Sedum anglicum. English Stonecrop; on rocks, and stones.
Serratula alpina. Mountain Saw-Wort; on rocks, near Burnley.
Stellaria nemorum. Wood Stitch Wort; in wet woods and hedges.
Trogopagon porrifolium. Purple Goat's Beard; on the banks of the river Calder, near Whalley.
Ulva florescens. Yellowish Liverwort; on sea rocks, and stones; in the Isle of Walney.

lightful valley of Lonsdale. By a south-westerly course, it reaches Lancaster, where it becomes navigable; and, about two miles further, it is capable of bearing ships of considerable burthen. "Few streams," observes Mr. Skrine, "can equal the Lune in beauty, from Sedburgh, where it enters a cultivated and inhabited district, to its conflux with the sea; nor can many of the vales of England vie with the Lonsdale. Gray's celebrated view of it is taken from an eminence above this river, near the third mile stone from Lancaster, from whence almost the whole of this delightful district is visible, abounding in villages, with the town and castle of Hornby in the centre, finely intersected by the Lune, winding between hills clothed with wood, and backed by the high mountain of Ingleborough, in Yorkshire. The approach to Lancaster is indescribably striking, where the river becoming wider, and winding in several bolder sweeps, opens to the view of that singular town, descending from a high hill, whose summit is crowned by the bastions of its castle, and the lofty tower of its church." The Wyer, or Wyre, rising among the moors, on the north-eastern part of the county, meanders through a very romantic district; and, pursuing a south-westerly course towards the sea, receives the waters of several other mountain streams before it reaches Garstang church town; near which its current is greatly increased by the waters of the Calder, &c. Passing near the town of Poulton, it expands into a broad basin, called Wyer Water; after which, again contracting its banks, it falls into the Irish Sea between Bernard's wharf, and the North Scar. The river Ribble, like the Loyne, joins the sea, by a very broad estuary. This river, by the general consent of most antiquaries, has been understood to be the Belesima, of Ptolemy. "This beautiful stream," observes Whitaker, "intersecting, in its sinuous course, the whole county of Lancaster, receives, near Mitton, the Hodder, which, coming down from the Cross of Grete, for several of the last miles, forms the boundary of Yorkshire and Lancashire, as it must have originally done between two British tribes: the word Oder, in that language, signifying a limit, or bound." The Ribble, which is one of the largest rivers in the north of England, rises in the high moors of Craven, in Yorkshire. Commencing with a southerly course, it passes Clithero, and forming the boundary of the county, for a short distance, is joined by the Hodder, and the Winburne, from Whalley. Meandering by a westerly course to Ribchester, it receives three other smaller streams: whence, flowing through the charming valley of Ribblesdale, it passes near Preston, and soon afterwards unites with the Irish Sea. A little westward of Preston, the Ribble forms a spacious estuary, enlarged by the mouth of the river Douglas, which rises near Rivington pike; and, passing the town of Wigan, proceeds north-westerly by Newburgh, and near Rufford is joined by the Elder brook from Ormskirk. Having received the united rivulets of the Yarrow and Lostock, it falls

ÆOL. III.—NO. 108.

into the estuary of the Ribble, at Muck Stool. The Alt, rising near Knowsley Park, and flowing in a north-westerly direction, joins the Irish Sea, near Formby point. The Irwell rises in the moors, about the parallel of Haslingden, near the Yorkshire and Lancashire boundaries; whence it flows, swelled by other little streams, through the manor of Tottington to Bury: below which it forms a junction with the Roch, and afterwards makes a considerable curve to the west. Meeting with a rivulet from Bolton, the Irwell then suddenly winds towards the south-east; and proceeds, in that direction, to Manchester, where it unites with the Medlock and the Irk. Shifting its course to the west, and passing through Barton, where the Duke of Bridgewater's canal is carried over its surface, it falls into the Mersey, below Flixton. The country, from Bury to Manchester, through which the river pursues its course, is very romantic, and extremely populous. The scenery, from Lever to Clifton, is peculiarly attractive. Whitaker thus notices the Irwell:—"Welling gently from a double fountain, near the upper part of a hill, between Broad-Clough and Holme, in Rossendale, wantoning in wild meanders along the vale of Broughton, and wheeling nearly in one vast circle about the township of Salford, the torrent carries its waters along the western side of Mancunium, and was therefore denominated Ir-guial, Ir-well, or the Western Torrent."

Nearly all these rivers abound with fish: the Mersey, in particular, with sparkings and smelts; the Ribble with flounders and plaice; the Low or Loyne with the finest salmon; and the Wyer is famous for a large sort of mussel, called Hambleton Hookings; because they are dragged from their beds, with hooks, in which pearls, of a considerable size, are frequently found. The Irk is remarkable for eels so fat that few people can eat them.

Sea fish are also plentiful, and various in this county; the coasts supplying flounders, plaice, and turbot; the sea dog, inkle fish, and sheath fish, are taken upon the sands near Liverpool; sturgeon is caught near Warrington; and along the whole coast are found green-backs, mullets, soles, sand eels, oysters, lobsters, shrimps, prawns, the best and largest cockles in England, the echin, torcular, wilks, and periwinkles; rabbit fish, and pap fish; and such abundance of mussels, that they are sometimes used for manure, for which they are excellent.

The lakes constitute another prolific source of piscine produce. In those of Windermere and Coniston water, that beautiful fish, the char, is found in abundance. Pennant mentions, that the largest and most beautiful specimens he ever saw, were taken in Windermere, and sent to him under the names of the case char, gelt char, and red char, which he considers as varieties of the same species.

CANALS.]—The first complete artificial canal, cut in England, was, we believe, planned and executed in this county. This was the Sankey canal. At a

4 R

period

period long previous, however, to the forming of this canal, several acts of the legislature had been obtained, and companies formed, for rendering the Mersey, Irwell, Weaver, &c. navigable; and by the aid of the tide, which flows rapidly up the Mersey, vessels were enabled to navigate nearly as far as the town of Warrington. It was extremely desirable, however, to render the higher parts of the river, through its communicating branch, the Irwell, accessible for vessels, as far as Manchester. An act of parliament was accordingly obtained in the year 1720, by which certain persons of Manchester and Liverpool were empowered to make the Irwell and Mersey navigable between those towns. A navigable communication was consequently opened; but the later improvements in the Duke of Bridgewater's canal, which is not dependant on droughts and tides, have nearly superseded the use of the former channel. The navigation of the Douglas, about the same time, was equally attended to. The Wigan district being particularly rich in coal, the proprietors of the mines obtained an act of Parliament, in 1719, for rendering this river navigable. This was accomplished in 1727; and thus the speculators were enabled to convey their coals, &c. to the mouth of the Ribble; and thence, coastwise, to send them to the northern parts of Lancashire, Westmorland, &c. The Douglas navigation has since been purchased by the proprietors of the Leeds and Liverpool canal, who have in part substituted an artificial cut for the natural channel of the river. The Sankey canal originated with a company of gentlemen and merchants, who, in 1755, obtained an act of Parliament, authorising them to make Sankey brook navigable from the Mersey, which it joins about two miles west of Warrington, near St. Helen's. More effectually to accomplish the desired object, a new act was obtained in 1761, wherein it is specified, that part of the plan was then executed; but that in neap tides, the navigation was rendered impracticable for want of water in the brook. The undertakers were therefore empowered to make a canal, to extend from a place called Fiddler's Ferry, on the Mersey, to a spot about 250 yards from the lowest lock. The Sankey canal now runs entirely separated from Sankey brook, excepting crossing and mixing with it in one place about two miles from Sankey bridge. Its length, from Fiddlers' Ferry to where it separates into three branches, is $9\frac{1}{2}$ miles. From thence it is carried to Penny Bridge and Gerrard's Bridge, without going further: but from Boardman's Bridge it runs nearly to the limits of 2000 yards, making the whole distance from the Mersey $11\frac{1}{2}$ miles.—There are eight single, and two double locks, upon the canal, and the fall of water is about 60 feet. The chief article carried upon it is coal, of which, in 1771, there were taken to Liverpool, 45,568 tons; and to Warrington, Northwich, and other places, 44,152 tons. This navigation is never obstructed by floods, and seldom for any length of time by frosts.

Besides the Sankey canal, this county is intersected by portions of nine others, four of which communicate with the populous town of Manchester. Of these, the Ashton-under-Line canal, which communicates between Manchester and Ashton, was made in consequence of an act of Parliament, passed in 1792. Commencing at the east side of Manchester, it crosses the river Medlock, passes Fairfield, and at Ashton passes through a long tunnel in front of Duckenfield Lodge. Near this place, it is joined by the Peak forest canal; and, at Fairfield, a branch goes off to the New Mill, near Oldham. The whole length of this canal is eleven miles, with a rise of 152 feet. A branch of the Bridgewater canal exclusively belongs to this county, and communicates from Manchester, to Worsley, Leigh, &c. This branch commences at the Castle Field, in the suburbs of Manchester, and terminates at Pennington, near the town of Leigh. Contiguous to Manchester, there is a communication with the Mersey and Irwell navigation, and Manchester, Bolton, and Bury canal, by means of Medlock brook. Under the town of Manchester, are arched tunnels for a portion of this canal, of considerable length, from one of which coals are hoisted up by a coal-gin, through a shaft out of the barges below, into a large coal-yard or storehouse, in the main street; at which place, the Duke and his successors are, by the first act, bound to supply the inhabitants of Manchester, at all times, with coals at only 4d. per hundred weight, of 140lb. At Worsley, is a short cut to Worsley Mills, and another to the entrance bason of the famous underground works, or tunnels.—Here it buries itself in a hill, which it enters by an arched passage, partly bricked, and partly formed by the solid rock, wide enough for the admission of long flat-bottomed boats, which are towed by means of rings, and hand-rails, on each side. The canal, or tunnel, penetrates above three-quarters of a mile before it reaches the first coal works; where it divides into two channels, branching to the right and left. In the passage, at certain distances, are funnels cut through the rock, and issuing perpendicularly at the top of the hill. The arch, at the entrance, is only about six feet wide, and five in height above the surface of the water. In some places within, it widens, to accommodate two boats to pass each other. To this canal, the coals are brought, from the mines, in low waggons, which hold about a ton each, and are easily pulled down a gentle declivity, on an iron railway, by a man. One of the tunnels is as much as six yards below the canal, and another $35\frac{1}{2}$ yards above it, and 60 yards beneath the surface. These last, to which the boats ascend by means of an inclined plane, extend to the veins of coal, that are worked to a great depth under Walkden Moor. Near Worsley, a cut branches off, and ends at Chat Moss, a distance of about a mile and a half. The principal feeders for this canal, are the Worsley brook, with the mine water there collected, and the Medlock brook, at Manchester. The boats

boats that navigate from Worsley to Manchester, are $4\frac{1}{2}$ feet wide, and contain between seven and eight tons each. Several of them are usually linked together, and drawn by one or two mules. In the course of this canal, at several places, small channels are opened from the bottom of the canal, for the purpose of letting out water, to irrigate the land.*

The Douglas river navigation was effected under acts of Parliament, obtained in the years 1719, 1769, and 1782. The course of this navigation is nearly north and south; and, for the first nine miles from the sea, it is but little elevated. Its chief articles of conveyance are common and cannel coals, agricultural produce, and lime-stone. It commences in the tide-way of the estuary of the Ribble river, near Hesketh, and terminates in the Leeds and Liverpool canal, at Briers Mill. By the first act for the Leeds and Liverpool canal, in 1769, the proprietors of the Douglas navigation, were authorized to make a junction with the Leeds and Liverpool canal, at Newborough, by a cut of $3\frac{1}{4}$ miles long, parallel to this river, with a fall of twelve feet, which they completed in 1774; and this now forms part of the Leeds and Liverpool canal, south-east of Newborough Aqueduct Bridge. The canal from Brier's Mill to Solom, as part of the lower navigation, was cut and completed, in 1781.

Haslingden canal, according to an act, obtained in 1792, communicates, in a distance of about thirteen miles, between Bury, where it joins the Bolton and Bury canal to Church, where it joins the Leeds and Liverpool.

The Lancaster canal takes a long course of 75 $\frac{1}{2}$ miles, through nearly the whole county of Lancaster, and part of Westmoreland. It is authorised by acts obtained in the years 1791, 1792, 1795, and 1800. It commences at Kirkby Kendal, in Westmoreland, having a feeder from a rivulet about a mile from that town. It enters Lancashire, near Burton, having passed under ground for about half a mile, near Midway. At Lancaster, it is carried over the Leyne, by a surprising aqueduct bridge, of five arches. Near Preston, it is carried over the Ribble, by another aqueduct-bridge; and again, at Garstang, over the Wyre. Near Bethorn, it is carried over the Beloo; and, in the vicinity of Wigan, it passes under the Leeds and Liverpool canal, by an aqueduct of about 60 feet high. After passing Preston, it ascends, through a series of locks, to its highest level, on which it proceeds, a little to the eastward of Chorley, across the Douglas, through Haigh; and bending to the eastward of Wigan, arrives at its termination at West Houghton. A collateral cut in the neighbourhood of Chorley, is about three miles in length; and another,

near Borwick, is nearly $2\frac{1}{2}$ miles long. The principal object of this canal is to open a ready and reasonable communication between the coal and lime-stone countries, thereby interchanging and conveying these articles to different places, and to open the port of Lancaster to other populous towns on the north and south. This canal is, on an average, seven feet deep; the boats are six feet long, fourteen wide, and carry sixty tons. There are two tunnels on its course; one at Hincaster, near Leven's Park, of about 2400 feet long, and another through the Whittle Hills, near Chorley, which proved extremely difficult to execute. The Lancaster canal company is authorised to raise 414,000*l.* in 100*l.* shares, and 200,000*l.* more, in shares of 30*l.* each.

The Leeds and Liverpool canal takes an extensive meandering course, and unites the ports of Liverpool and Hull. It enters Lancashire a little north of the town of Colne, near which it crosses the grand ridge by means of a tunnel at Foulridge, 4890 feet in length, and 69 feet below the highest point of the hill. At Furnley, near Burnley, is another tunnel. The chief objects of conveyance on this canal, are common and cannel coal, lime-stone, merchandise, and the agricultural products in its vicinity. At Brier's Mill, it connects with the Douglas navigation. Near Bark Mill, not far from Wigan, it crosses the Lancaster cut, by an aqueduct bridge, 60 feet above that canal. At Church it connects with the Haslingden canal; at Slipton, with Thanet's navigation; and, at Windhill, with the Bradford canal. Collateral cuts branch off to Igh-ton Hill collieries, Waltham's Altham collieries, the Earl of Balcarras', and Mr. Shuttleworth's coal-works, &c. The old bason at Liverpool, is 52 feet above low-water mark in the Mersey river. Thence to Newborough, 28 miles, the water is level; to Wigan, seven miles, it is raised by five locks, 30 feet. This last length is sometimes called the Upper Douglas navigation. From Wigan to Bradshaw Hill, near Asperle, is three miles; and, in that short space, the level is raised 270 feet by 28 locks.—Thence to the aqueduct, over the Derwent, near Blackburn, is a level of 19 $\frac{1}{4}$ miles: thence to Grimshaw Park, near Blackburn, only three-quarters of a mile, are seven locks, raising it 54 $\frac{1}{2}$ feet. From this place to the end of the deviation at Barrowford, near Colne, is a level of 24 miles. The next three-quarters of a mile carries it up 67 $\frac{1}{2}$ feet by seven locks, when it enters the Foulridge tunnel, and thence descends, by several locks, to Leeds. The locks, on this canal, are 70 feet long, by 15 $\frac{1}{2}$ feet wide; and the barges employed, are keel-bot-tomed, and carry thirty tons of goods. Between

* To Mr. James Brindley, the proprietors of this concern, are principally indebted for the original successful execution of the navigation; and after his death, the works were carried on and promoted by Mr. Gilbert, and Mr. Benjamin Sothem; whilst the mining department was ably conducted by Mr. Tho-

mas Bury. Subsequently to the late Duke's decease, the whole of his canal property was vested, by will, in three trustees: the Bishop of Carlisle; the chief baron; and R. H. Bradshaw, Esq.

Leeds and Wigan, 100 flats, of 42 tons burthen, are employed in the coal trade; and passage boats are in constant use between those places. The survey for this navigation was made in 1767. The western end of the line was completed from Liverpool to the Douglas old navigation at Newborough, in 1770; and, in 1774, it was completed as far as Wigan. The company was authorised to raise 600,000*l.* in shares of 100*l.* Thus a canal has been made between the towns of Liverpool and Leeds, including a line of 107½ miles, and communicating at the latter place, with the river Aire; and, at the former, with the river Mersey; both of which are navigable to the German Ocean, on the east, and to the Irish Sea, on the west. The fall of water in this course, from the high ridge of mountains which divide Lancashire and Yorkshire, is 527 feet westward; and 446 feet eastward.

The Manchester, Bolton, and Bury canal, is authorised by acts obtained in the years 1790, and 1800, and takes a north-westerly direction from Manchester. Its northern end is considerably elevated, and its whole course comprehends a line of fifteen miles one furlong. It commences at the Mersey and Irwell navigation, near the junction of Medlock brook, at Manchester, and terminates at Bolton. At Bury, is a branch of four miles in length, to join the Haslington canal. From the Mersey and Irwell is a rise of several locks to the basin in Salford parish: thence for about four miles it pursues a level course. In the next three miles, are twelve locks, and the remaining track is level, including the branch to Bury. The whole rise is 187 feet. In its course, are two aqueduct bridges over the Irwell, at Clifton Hall, near Stocks: and another over the Leven, at Longfold. In 1797, this canal was completed to Bolton, except the locks near the Mersey and Irwell navigation. Passage boats are established between Bolton and Manchester.

By acts, passed in the years 1793, 1799, and 1803, the proprietors of the Rochdale canal were authorised to open a navigation from the Duke of Bridgewater's canal at Manchester, to the Calder navigation at Sowerby Bridge, near Halifax. The whole line was completed to Manchester, in 1804. By the first act, the proprietors were authorised to raise 391,000*l.* in shares of 100*l.* each; and by the last act, they were allowed to raise a large additional sum. From its head level, this canal falls 275 feet on the Halifax side, and 438 feet 7 inches on the Manchester side.

At Ulverston, is a short cut, or canal, of about a mile and a half, to communicate between that town and the Irish sea. Such are the principal canals and navigable rivers of this populous and flourishing county.

ROADS.—From the number of carriages, and the weight of the materials, which are in constant motion, the roads are mostly in a bad state. In the neighbourhood of Liverpool and Manchester, they

are paved; but, at the expence of repairing them is great, no advantage is derived from it: and, from neglect, they become extremely dangerous to travellers. In the northern and north-east parts, where materials are procured on the spot, the roads are, in general, in pretty good repair; but, it is not the case in the midland and southern parts, as the materials are all brought at a considerable distance from the Welsh and Scotch coasts.

BRIDGES.—The bridges in this county are remarkably numerous: exclusively of those belonging to townships, &c. nearly 500 public bridges are repaired at the expence of the several hundreds in which they are situated.

GENERAL HISTORY.—Amongst the tribes which inhabited this island, previously to the descent of the Romans, was that of the Brigantes; respecting whom, some interesting details will be found in our "General History" of the county of Cumberland. These people were in possession of that tract of country which comprehended between the Humber and the Tyne, on the eastern coast; and between the Mersey and the Eden, on the western coast. This extensive territory had been previously inhabited by the Setantii, the Segantii, or Sistantii; they had acquired this appellation, according to Dr. Whitaker, from their maritime situation, which either "simply signifies the country of water; or discriminately, the interior and southerly country of water: thereby expressive of the particular position of Lancashire, with respect to the Volantii and the sea. Setantii must have been the primitive appellation of the original colonists; and Sistantii, or Sistuntii must have been afterwards conferred on them, when new colonists had taken possession of Westmoreland and Cumberland, and when accuracy was obliged to distinguish one from another." The Romans having reduced almost the entire country, south of the Mersey, Julius Agricola, at the head of a powerful army, penetrated into the district of Sistuntii, about the year A. D. 79. Having established himself in the country, this General resolved to erect forts, and plant garrisons in them, the better to secure his conquests. To this commander, Whitaker has attributed the erection of the different Roman stations in this county. The whole of Lancashire, together with Yorkshire, &c. was included by the Romans, under the appellation of Maxima Cæsariensis, or Britannia Superior. The Saxons placed it within the kingdom of Northumbria, and according to Whitaker, it was formed into a separate county, about the year 680; at which period, Alanna was made the metropolis of the shire, and lent its own name to the county. Soon afterwards, the county was divided into two hundreds, tythings, &c. and that part called South Lancashire, was first parcelled into three, and subdivided into six hundreds, a short time previously to the Conquest. These were called Blackburn, Derby, and Salford; also Newton, Warrington, and Layland. These had their denomination from the towns and villages which

which were constituted the heads of their respective centuries, "and those of Salford, Warrington, and Newton, Blackburn, Derby, and Layland, were so constituted, belonged to the crown. All of them, but Newton, continued in its possession, as late as the reign of the Confessor. The whole of them had been retained by the crown, on the general partition of the country, as the appointed demesnes of royalty. And the town of Salford has, for this reason, been ever independent of the Lord of Manchester, and continues, to the present time, annexed to the regalities of the duchy. The whole compass of South Lancashire, which, through all the period of the Britons, probably had contained only two cantrefs, Linnis and another, now inclosed; thirty tythings, thirty manors, and 300 townships. The division of Salford, the only one of its three hundreds, that has been dismembered, had just ten manors, ten tythings, and 100 townships, within its present limits. And the custom, which is retained among us, to this day, of making hundreds responsible for robberies committed between sun and sun, had its commencement at this period, and was a natural appendage to the Saxon system of tythings. The subdivision of England into counties, hundreds, &c. has been generally attributed, by topographers, to Alfred; this opinion, however, is powerfully combated by Dr. Whitaker, who insists, that the system had its origin in Germany, and was brought hither by the Saxons, who adopted it some ages previously to the time of Alfred. The tythings and shire are mentioned in the laws of the West Saxons, before the close of the seventh century, and in the capitularies of the Franks, before the year 680, the tything, the shire, and the hundred, are also noticed.

ANTIQUITIES.]—The respective Roman stations, in this county, are referable, as already observed, to Julius Agricola. "Ad Alaunam," says Whitaker, "and Bremetonacæ, in the north; Portus Sistoniorum, in the west; Rerigonium, and Coccium, about the centre; Colonea, on the east; and Veratinum, and Mancunium, on the south. Some fortresses were absolutely necessary to the maintenance of the Roman conquests, and must always have been regularly erected by the Romans, as they extended their conquests. Six of these, in particular, are mentioned by the earliest accounts which we have of the Roman stations in Lancashire; and five of them, by one account, that was drawn up about 60 years after its reduction. Having been five of them originally British fortresses, they were now changed into stationary camps, and small garrisons, consisting principally of infirm and raw soldiers, who were lodged in them; while Agricola, with the rest, attacked the more northerly Britons, in the following summer. Thus was the autumn of 79," continues our author, "the very remarkable epoch of the first erection of our present towns in Lancashire." After the establishment of the stations, it was thought necessary to open a communication between them, by the means of military

roads, in which skill and industry were displayed, in a surprising degree. From Manchester, six Roman roads formed a communication with the principal stations: one branched off towards Stockport; another by Stretford, into Cheshire; a third, to Blackrod; a fourth, passed through Ribchester, and continued to (Bremetonacis) Overborough; a fifth, diverged towards Halifax; and a sixth, towards Almonbury. It is remarkable, that the principle upon which the Romans constructed their roads, is not generally adopted in this county: as the utility of it must be obvious in a country, where the roads are generally in a wretched condition, arising from continual rains, and constant wear.

Amongst the architectural antiquities in this county, may be mentioned Burscough abbey, Cartmel priory, Clithero castle, Cockersand abbey, Furness abbey, Gleaston castle, Holland castle, Hornby castle, Lancaster castle, Latham church, Manchester college, Ormskirk church, Thurland castle, Whalley abbey, Winwick church, &c.

CIVIL AND ECCLESIASTICAL JURISDICTION.]—Lancashire is included in the northern circuit; and the county assizes, and the quarter-sessions are holden at the town of Lancaster. The county is divided into seven hundreds, and consists of 68 entire parishes, and two parts of parishes, comprising a vast number of townships, villages, &c. It has 18 divisional meetings, or petty sessions, and 90 acting county magistrates. The ecclesiastical history of the county, commences with the Anglo-Saxons; and, after the establishment of the see of York, the whole of North Lancashire was connected with it. But, when Northumbria had been reduced under the dominion of the West Saxons, and the seven kingdoms became consolidated in one empire, the south of Lancashire was annexed to the province of Canterbury, and diocese of Lichfield; and continued so till the 16th century, when the two parts were again united, and placed under their original jurisdiction of York. On the first partition of the bishopric into archdeaconries, the principal towns of the latter would naturally be constituted the capitals of them; and the Roman colony of Chester was made the metropolis of the south of Lancashire, as the archdeaconry of Richmond was over the north; and both were united, by Henry the Eighth, to form a distinct diocese, their revenues being almost wholly engrossed by the income of the bishop. The next ecclesiastical division of the county was into rural deaneries, and the whole county, with the exclusion of Furness, was portioned into 36 parishes only. It appears, that these parishes were included within the four deaneries, all in the archdeaconry of Chester; Blackburn, Leyland, Manchester, and Warrington. But the deanery of Amounderness, and Furness, is in the archdeaconry of Richmond. The number of parishes has since continued to keep pace with the increase of population.

PARLIAMENTARY REPRESENTATION.]—This county returns 14 members to Parliament: two knights for the

the shire; and two representatives for each of the following boroughs:—Lancaster, Liverpool, Preston, Newton, Wigan, and Clitheroe. One of the members for the county is returned by the independent interest, and the other through the interest and influence of the Earl of Derby.

MANUFACTURES, &c.]—So very large a portion of this county, and its population, are employed in manufactures and comineree, that instead of devoting a considerable space to the subject under this head, we must refer the reader to our respective accounts of Lancaster, Liverpool, Manchester, &c.

MARKET TOWNS.]—The following is a list of the market-towns in this county:—

POPULATION.]—Respecting the very early population of this county, there are not known to be any documents extant; but, during the two last centuries, its increase has been truly astonishing. In the year 1700, the numbers were 166,200; in 1750, 297,400; in 1801, 672,731; and, in 1811, as appears at large by the subjoined table, it amounted to 828,309. The annual proportion of marriages, in this county, is one to 108; of births, one to 29; and of deaths, one to 48.

CHIEF TOWNS, PARISHES, &c.

ADLINGTON HALL.]—Southward of Chorley, about 8½ miles, is Adlington Hall, the seat of Sir Richard Clayton, Bart. erected by the present owner, on the site of the old mansion. The estate formerly be-

longed to the Adlingtons; but, for the two last centuries, it has been the constant residence of the Claytons. The house stands on a gentle declivity, and forms a striking object from many parts of the surrounding country. The collection of pictures is not very

very extensive; but, among them, may be noticed several family portraits, by Sir Godfrey Kneller, and also the works of some of the old masters.

ALKINGTON.] In the vicinity of Manchester, is Alkington, the seat of John Lever, Esq. It was the property of his uncle, Sir Ashton Lever, who commenced his grand collection of natural and artificial curiosities, at this place. It is said, that the idea originated in his having shot a white sparrow, which he was induced to preserve. Having suffered considerably in his fortune, through his zeal for collecting every object which was rare and curious, he obtained, in 1785, an act of Parliament, for the disposal of his museum, by lottery. It was ultimately dispersed by auction, in the year 1806.

ANCOAT'S HALL.]—Amongst the numerous old mansions, in the environs of Manchester, is Ancoats Hall, a venerable mansion, the seat of Sir Oswald Mosley, Bart. the lord of the manor of Manchester. The more ancient parts of the building are of timber and plaster. The two upper stories overhang the ground floor, and the large windows project in front of the building.

ASHURST BEACON.]—In the township of Dalton, is a hill, on which stands Ashurst beacon, that serves as a sea-mark, for vessels entering Liverpool harbour, from the north. It commands, on every side, a most extensive view; and the hills of Cumberland, Westmorland, Yorkshire, Derbyshire, and Shropshire, as well as the entire coast of North Wales, from the Dee to Anglesea, and sometimes the Isle of Man, are seen in clear weather.

ASHTON.]—The large town and parish of Ashton-under-Lyne are situated at the south-eastern extremity of the county, seven miles E. from Manchester. The town consists of several narrow streets, built on a high bank, which rises from the river Tame. It appears, from an ancient manuscript, that Ashton was formerly a borough. The principal part of the landed property of this parish belongs to the Earl of Stamford; in whose family it was conveyed by the marriage of Sir William Booth to the daughter of Sir Thomas Asheton, whose family possessed some peculiar privileges in this manor: among which was the power of life and death over their tenantry. In commemoration of this privilege, and its having been sometimes exercised, a field near the old hall is still called Gallows-Meadow. There is also an ancient custom here, called Riding the Black Lad, celebrated every Easter Monday, to perpetuate some act of great tyranny, exercised by Sir Ralph Asheton, in 1488, when Vice-Constable of England. The ceremony consists in exhibiting the effigies of a man, on horseback, through the

streets, which is afterwards suspended on the cross in the market-place, and there shot. The figure was formerly cased in armour, and the expenses of it were defrayed by the court. Another account of the origin of this custom, states, that Thomas Asheton, in the reign of Henry the Third, particularly distinguished himself, at the battle of Neville's Cross, and bore away the royal standard from the Scotch King's tent. For this heroic deed, the King conferred on Ashton the honour of knighthood; who, on his arrival at his manor, instituted the custom described above. The village of Ashton, in Makerfield, or in the Willows, 2½ miles N.W. by N. from Newton, in Makerfield, enjoys a very pleasant situation on the north road. The population of the township amounts to nearly 4000. The hardware and cotton manufactories give employment to the inhabitants.

The church is a large old building, part of which appears to have been built by the lords of the manor. On the pews, are some ancient carvings; and, in the windows, are exhibited some painted figures. Several of the Ashetons lie interred here, and their names are inscribed on the windows. Near the church, is a curious mansion, called the Old Hall, the oldest parts of which are said to have been built in 1483; adjoining this, stands a pile, which was formerly used as a prison. There are two hamlets connected with Ashton, Charlestown, and Boston. Manufactures of different kinds, a canal, and abundance of coal in the neighbourhood, have combined to render Ashton and its vicinity extremely populous. On the western side of the town, is Ashton Moss, which supplies the poor with peat-turf. Oak and fir-trees are frequently found by those who dig for the peat.

ASHTON HALL.]—At the distance of three miles south of Lancaster, is Ashton Hall, a seat of his Grace the Duke of Hamilton and Brandon. It formerly belonged to the family of the Laurences. Ashton Hall came into the present family, by the marriage of James, Earl of Arran,* afterwards Duke of Hamilton, with Elizabeth, daughter and heir of Digby, Lord Gerrard, of Bromley. The mansion, is a large building, with some square embattled towers; a spacious hall, and other features of an ancient baronial castle. It is situated in a fine park, through which flows a small rivulet, forming a narrow bay at the western side of the grounds. The park abounds with wood, and is agreeably diversified with hill and vale, and affords, from many parts, extensive views across the Lune to Morecambe Bay, the Irish sea, &c. The mansion has undergone considerable alteration, yet care has been

* This nobleman was eminently distinguished in the reigns of Charles the Second, and James the Second; by both these monarchs he had many signal honours conferred upon him: besides the appointment of Envoy-Extraordinary to the court of France, he was made Lord-Lieutenant of the county of Lancaster, in 1710, and Ranger of the Royal Forests; also Ad-

miral of the sea-coasts, &c. In December, of the same year, he was sworn into the Privy Council of Queen Anne. In the following year, he was created an English peer, by the title of Duke of Brandon. In 1713, he fought a duel with Lord Mohun, and fell in the rencounter.

taken.

taken to preserve its ancient character. Amongst the portraits which adorn the interior, are the following:—Elizabeth Gerrard, Duchess of Hamilton; the Marquis of Douglass and Clydesdale; and Lord Archibald Hamilton, by Gainsborough: the Duke of Bedford; a head, by Rembrandt; Clelia escaping from the Roman camp, by Raphael; a picture of great merit and beauty: a boar-hunt, by Snyders; a large landscape, with figures, by Berghem; some original cartoons, by Leonardi da Vinci, for his celebrated picture of the Last Supper. There are several other pictures of considerable merit, but the Duke's principal collection, is at Hamilton palace, in Scotland.

ATHERTON HALL.—Atherton Hall, northward of the town of Leigh, is a seat which formerly belonged to a family of that name, but is now the property of the Hon. T. Powys. It is a spacious mansion, and has a large entrance hall, of a cubical form. A curious circumstance was witnessed here, in the year 1680, which excited great controversy, from its singularity: this was no less than a shower of seeds. Many were of opinion, that it was wheat from heaven; but it was at length discovered to be a quantity of ivy-berries, supposed to have been carried, by a whirlwind, into the higher regions of the air.

BIGLAND.—Westward from Cartmel, about four miles, is Bigland, the seat of George Bigland, Esq. the house and grounds of which are pleasantly situated near a small piece of water. The higher lands command extensive views over Furness-fells, &c.

BLACKBURN.—Blackburn, the principal town of the hundred, to which it gives name, is 30 miles S.E. by S. from Lancaster, and 209½ N.N.W. from London. The parish of Blackburn is bounded on the west, by the Ribble, which separates it from the parishes of Mitton, Ribchester, and Preston; by the Calder, on the north; by the Hyndburne, and an imaginary line, on the east, it is separated from the parish of Whalley; and, to the south, it abuts on the parishes of Bury, Bolton, Leyland, and Brindle. Its form is irregular: its greatest length, from north-east to south-west, is about fourteen miles, and its greatest breadth exceeds ten miles. It contains the townships of Blackburn, Walton, Cuerdale, Samlesbury, Balderston, Osbaldeston, Salesbury, Dinkley, Wilpshire, Billington, Great Harwood, Little Harwood, Rishton, Clayton-le-Dale, Ramsgrave, Over Darwen, Lower Darwen, Tockholes, Mellor, Witton, Pleasington, and Livesey. Its area has been estimated at 86 square miles, or 55,040 statute acres. In the year 1811, the population of the entire parish, was 39,890; that of the township of Blackburn, 15,083; an increase of nearly, if not quite, of two-thirds in 20 years. A rivulet, anciently named Blakebourne, divides the town into two unequal parts, of which the western is by much the larger. In the form of the streets, there is little regularity; which may, in a great measure, be accounted for, by the intermixture of glebe and other lands. The

town contains two churches, one meeting-house for Presbyterians, one for Anabaptists, one for Papists, and two or three for Methodists. Here is a grammar-school, founded by Queen Elizabeth; a charity-school, founded by a Mr. Leyland, for the instruction of about 60 girls, in reading, sewing, and knitting; and a Sunday-school, for 300 children, established by the Rev. Thomas Starkie, vicar of the parish. At a little distance from the town, is a commodious poor-house, in one of the apartments of which is a dispensary. Three fairs are annually held in this town. The expence of the police is supported by a rate on the occupiers of buildings. Within the parish, are nine chapels of ease; Walton-le-Dale, formerly called Lawe, or Low, Samlesbury, Balders-ton, Sango, Great Harwood, Over-Darwen, Tockhole's, St. John's, in Blackburn, and Salesbury.

Formerly the trade of this town was the manufacture of Blackburn checks, a fabric consisting of a linen warp and a cotton woof, one or both of which being dyed in the thread, gave to the piece, when woven, a striped or checked appearance. This article was superseded by the Blackburn greys; and these again, about 40 years ago, by calicoes; the manufacture of which, at first confined to this town and neighbourhood, is now become one of the most important branches of industry of several of the northern counties. Blackburn, through their means, is, for its extent and population, one of the richest towns in Europe. To such excellence, are the arts of spinning cotton, and printing calicoes, now brought in this county, that a pound of cotton can be spun into 300 hanks, each 640 yards in length, and sold for eighteen guineas; and a furniture pattern be printed, which requires, in the execution, 448 blocks, to produce the required colours and figures. The estates in this parish, are generally divided into small farms, to supply the farmer, who is generally a weaver or mechanic, with milk and butter for his family. There are few, in the whole parish, that exceed a hundred acres. The grain usually grown, is oats; neither the climate, nor the soil, being favourable to the cultivation of wheat. Artificial grasses, turnips, and cabbages, are little cultivated here; but much attention is paid to the potatoe. There is not a single sheep-farm in the parish.

At Woodfold, in the township of Mellor, four miles west from Blackburn, a very magnificent house was erected, a few years ago, of a bluish grey stone, having in the centre a flight of steps, with a portico supported by four massy columns of the Corinthian order. Henry Sudell, Esq. the proprietor, and lord of the manor, has spared no expence in improving the grounds about this noble mansion, and in embellishing them with wood and water. The view, to the south side, or from the principal front, is bounded by a hilly outline, in which a rock of considerable height and breadth, forms a striking feature. This rock rests upon a bed of aluminous earth, and has been exposed to view, by the labour of man, in search of that substance. The ground
about

about the rock is wild and irregular, and forms a good contrast to the cultivated park, which makes the foreground of the landscape. A little to the west of the rock, and a mile or two beyond it, on more elevated ground, and on the very summit of the precipice, stands the old mansion of Houghton Tower, belonging to the family of that name. It is falling fast to decay, presenting an object at once picturesque and venerable. The west side of the house commands a delightful view of the vales of the Ribble and Darwen rivers, which mingle their streams below the village of Walton. The banks of these streams are well clothed with wood, and adorned with several handsome buildings.

At Witton, between one and two miles from Blackburn, is the mansion of Henry Fielding, Esq. It occupies a rising ground, at a little distance from the Darwen, and is embosomed in wood. It commands two pleasing and extensive views of that river.

On the same side of the vale, is another stone structure, the seat of J. F. Butler, Esq. These mansions are screened, from the north, by the hill of Billinge; the elevation of which, above the level of the sea, is about 300 yards; and from its top, may be distinctly seen, in clear weather, the mountains of Ingleborough and Pennigent, in Yorkshire; Blackcombe, in Cumberland; the hills, near Frodsham, in Cheshire; the whole coast of North Wales, &c.

At Molden Water, three miles from Blackburn, and still lower in the vale, the banks of the Darwen become more bold and craggy, and are well covered with wood. The river, in its course from this place to its junction with the Ribble, a distance of about seven miles, presents some very interesting and romantic scenery. Darwen Bank, the seat of Edward Padder, Esq.; Cuerdale Lodge, the seat of William Assheton, Esq.; Walton church; Cooper hill; and Walton hall, the mansion of Sir Henry Philip Houghton, Bart. are amongst the edifices which grace the banks of the Ribble, and of the Darwen. Opposite to the last mansion, on its north side, the Darwen falls into the Ribble, between two handsome stone bridges over the latter, at Walton and Penwortham.

Two stations, in the northern extremity of Blackburn parish, deserve to be noticed, as the views from them are extremely fine. One of these is in a farm called Egg Syke, on the southern bank of the Calder, about a mile and a half to the east of Whalley. At the foot of the eminence, whose steep side is covered with wood, the river makes a considerable winding. In the valley, to the east, the bridge forms a very picturesque object; beyond which are seen the sloping woods of Read hall. Between the bridge and the station, the river flows down with a gently winding course, the green pastures of Egg Syke in many places, sloping to the edge of the stream, through the openings in the banks that are fringed with wood. Towards Whalley, the course

of the river is much more winding, and its banks are diversified with many projecting points, richly covered with wood, of the greatest variety of foliage. The verdant holme land of Whalley demesne terminates the valley in this direction, and is crowned by the noble woods of the Hon. Richard Curzon, and Robert Whalley, Esq. on one side, and of Sir Thomas D. Hesketh, Bart. on the other. The summit of Grindleton fell, is caught through an opening made by the Calder valley. Immediately in front, is Marton, a seat of James Taylor, Esq. the grounds of which swell finely. Beyond Marton, the park and mansion of Clerk Hill appear to great advantage; and Pendle Hill, which forms a back ground, closes the landscape. The other station is on the margin of the Ribble, near Brockhall, the property of James Taylor, Esq. To the east, near the banks of the Ribble, stands Hacking Hall, an old mansion, the property of the Petre family. Beyond, in the fertile vale of the Calder, and situated on its banks, is Whalley; over which rise the fine woods and grounds, formerly a part of the abbey domain. To the west, is seen, over the bend of the Ribble, the large pile of Stoney-hurst, the ancient residence of the Sherburnes. This view is terminated by the lofty grounds of Longridge. Northward, a very rich and extensive view is obtained of the vale of Ribble, intersected by the finely wooded vales of Calder, on the east; and Oder, on the north-west. Here are seen, the church and woods of Mitton, the church of Waddington, the swelling and woody grounds of Wadda, with the town, castle, and church of Clithero. That vast mountain, Pendle Hill, forms the right screen to this view: and Waddington and Grindleton Hills form the left; in front, it is terminated by the more distant hills in Yorkshire. Although nearly the whole of this parish is inclosed, the lands are in general but poorly cultivated. The soil is chiefly a stiff clay; in the southern parts, is coal; it contains much grit-stone, but little or no lime-stone. Quicks and other common shrubs form the inclosures: these are interspersed with oaks, alders, and ashes, which are commonly stunted from the effects of the sea-breezes. This gives an air of dreariness and poverty to the parish.

BLACKPOOL.]—Westward of the town of Bolton, about five miles, is Blackpool, which has acquired, within the last 40 years, some celebrity as a watering-place. For this it is well adapted from its situation; the beach being flat and smooth, and the water clear. It derives its name from a pool of water, of a dark colour, formerly situated at the south end, but which is now filled up. Some faint views of the Isle of Man may be taken in a clear evening to the north-west; the fells of Westmorland, the crags of Lancashire, and the hills of Cumberland, are visible to the north. The mountains of North Wales, at a distance of 50 miles, may be seen on the south. The sea has greatly encroached on the land, even within the memory of persons now

now alive: the flatness of the beach prevents the approach of vessels, of almost every description, to the shore. There is a tradition, that a public house once stood near a stone called Penny, which is now half a mile in the sea. From the shallowness of the sea, there is but little fish procured; yet the rivers in the neighbourhood abound. At the south end of the hamlet, is a building, called Vauxhall, now in a ruinous state; it was formerly a retreat for Popish recusants: and, in 1715, was fitted up to receive the Pretender, till matters were ripe for a general insurrection. The regulations adopted here for bathers, are extremely judicious: so soon as the tide serves, a bell rings for the ladies to assemble, when no gentleman must appear on the parade, under the forfeiture of a bottle of wine. After the ladies have retired, the gentlemen are summoned by a like ceremony. On the beach, is the parade, a pleasant walk, of about 200 yards in length. A news-room, and coffee-room, have been established here, for the convenience of visitors. Rostall Hall, about five miles north of this hamlet, is the seat of Fleetwood Bold Hesketh, Esq. lord of the manor.

BLACKRODE.]—About 4½ miles S.S.E. from Chorley, is the village of Blackrode, at which place, Whitaker places the Roman station, Coccium; but he acknowledges, that in support of this hypothesis, there is but the faint retrospect of traditionary history, and the vague generalities of a winter's tale.

BOLTON.]—Great Bolton, or Bolton in the Moors, so called to distinguish it from other places of the same name, is a large thriving market and manufacturing town, 40 miles south-east from Lancaster, and 196½ north-west by north from London. It is traditionally said, that the cotton manufactory originated here. Leland mentions this place as being noted, in his time, for cotton yarns. According to tradition, some Flemings settled at Bolton, in the year 1570, and established here a novel species of business. Upon the revocation of the edict of Nantz, some French Protestants settled in this town and neighbourhood; and, in the year 1709, some poor Palatine weavers came here, and carried on their professions. Some large wooden shoes, which belonged to those men, are yet exhibited as objects of curiosity. The machines, called Mules, were invented by a poor weaver, of the name of Crompton, who resided at a place called Hall, situated in Axwood, to the north of Bolton, and hence they are called "Hall-in-the-Wood-Wheels." As a reward for his invention, the manufacturers subscribed to him, 100/. Previously to the inventions of Sir Richard Arkwright, what were then called cotton goods, were chiefly composed of Irish, or foreign linen warps, and cotton weft. Counterpanes, velvets, quilting, &c. were, however, entirely of cotton. British muslins were first manufactured at Anderton, in this county, in the year 1764. At this period, plain-striped, and spotted

muslins were also manufactured by Mr. Joseph Shaw, of this place; but the competition he was obliged to sustain with the East India Company's muslins, forced him to relinquish the pursuit. In the year 1782, Mr. Samuel Oldknaw commenced the manufacture of British muslins at Anderton, on his native soil. Mr. Thomas Ainsworth, Sir Richard Arkwright, and others, began this manufacture, also, at the same time; but Mr. Oldknaw is allowed the priority in the fabrication of India patterns. Bleaching is brought to a high degree of perfection in the neighbourhood of Bolton. M. Vallete, a native of France, a few years ago, introduced here a chemical process for bleaching, by which considerable time and expence are saved: one hour being sufficient for rendering a piece of calico perfectly white: an operation which demands, by the common method, three weeks of the most favourable weather. Previously to the late war, an act of Parliament was obtained for the sale of a tract of waste land, called Bolton Moor, for building. This land was divided into lots, and sold by auction, for 2632/. This sum, after all necessary deductions, was appropriated to the improvement of the town. The principal streets of Bolton unite in the market-place. A canal communicates with Manchester, from which a branch proceeds to Bury. On this canal, are twelve locks, and three aqueduct bridges. The latter are at the heights of ten, sixteen, and twenty yards above the bed of the river, which pursues the same course. The church of Bolton presents nothing worthy of remark, except the windows; in which are the shields of Chetham and Bridgeman. It is situated in Great Bolton, and has a chapel of ease, in Little Bolton. There are, besides, several meeting-houses belonging to dissenters of various denominations. A free-school here, upon a good foundation, was formerly superintended by the celebrated Mr. Ainsworth, author of the Latin Dictionary. In the Sunday-schools of the Methodists, upwards of 1000 children are instructed. In 1811, the population of the township of Great Bolton, was 17,070; that of Little Bolton, a mile and a half N. from Great Bolton, 7079; that of the entire parish of Bolton, 39,701.

BRIERCLIFFE.]—Briercliffe, three miles N.E. from Burnley, is chiefly remarkable for some encampments, &c. On the middle of Worsthorn-moor, are the remains of a small angular fort, consisting of a foss, and fragments of a wall, which inclose an area of 49 yards by 42. Vacancies for the prætorian and decuman gates, are distinctly visible. On the top of Twist Hill, is another fort, known by the name of Twist castle. On the high grounds, eastward of the latter, is a circular intrenchment, about 58 yards in diameter. Connected with these forts, were different beacons, and these with other works, constituted a series of military forts along the western side of the great ridge of hills. Whitaker is of opinion, that a chain of forts was constructed

structed in this part of the country to defend the Western Setantii, and their early colonists, from the attacks of the Eastern Brigantes.

BROUGHTON.]—The little town of Broughton-Furness, with a population of 986, is situated on the western borders of that district, nine miles N.W. by N. from Ulverston, and 280 N.N.W. from London. The town is raised on the slope of a hill; the houses are of stone, and disposed nearly in a regular square. This place has been greatly improved of late years; having a weekly market, and a fair annually, which is principally for the sale of woollen cloth, spun by the country people, sheep, short wool, and black cattle. The country round is mountainous, abounding in iron ore, copper, slate, &c. On the summit of a hill, to the north of the town, is an ancient tower.

BROUGHTON HALL.]—Broughton Hall, near Manchester, was once the property of the Stanley family. George Chetham, Esq. who acquired the estate by purchase, in 1699, built the old hall here. Samuel Clowes, Esq. of Chadwick, who married into the Chetham family, built the new hall.

BROWSHOLME.]—Browsholme, the seat of Thomas Lister Parker, Esq. in the original parish of Whalley, in the county of York, occupies a commanding situation, on a track of land, formerly a part of the forest of Bowland; which was, a few years ago, ranged by herds of wild deer. Browsholme has been long the seat of the bow-bearer, or master-forester of the district; and this title has been retained by the present possessor. There is a custom here, of letting the great sheep farms, which deserves notice; the flock, often consisting of 2000, or upwards, is the property of the lord, and delivered to the tenant, under a condition, to return, at the expiration of the term, a like number. This practice was familiar to the Roman law, and seems to have originated, from the difficulty of procuring tenants capable of stocking farms, of such extent. The river Hodder, famous for its amber, intersects the forest, and conduces to enliven its rude and barren aspect. On the banks of this river, is the little chapel of Whitewell, together with an inn, the courthouse of Bolton. The landscape, at this spot, is very beautiful: the Hodder, brawling at a great depth beneath the chapel, washes the base of a tall conical knoll, covered with oaks to its top, and is soon lost in the woods beneath. On the opposite hill, are the remains of a small Roman encampment. At a little distance from hence, on opening a cairn of stones, a sort of kist-vaen, and a skeleton, were found. On an adjoining height, a quarry or manufactory of quoins or portable mill-stones was discovered, which had probably been introduced into Britain, by the Roman soldiers. The mansion at Browsholme, is a large building, apparently of the age of Elizabeth; several improvements and alterations have been made in the house at various times; yet its possessors have been careful not to destroy

its ancient character. There is an extensive library, a collection of coins, and several valuable manuscripts, many of which relate to the antiquities of the neighbourhood. Among the curiosities, is the original seal of the Commonwealth, consisting of massy silver, and inscribed, "The Seale for approbation of Ministers." The family papers contain many curious documents of those times, and a large collection of songs and ballads, relative to the rump Parliament, which were never published.—The staircase is rich in painted glass. The collection of paintings is valuable, containing many works of the best Flemish masters, and our own artists. The hall is furnished with many antiquities; such as the Ribchester inscription of the 20th legion, celts, fibulæ, different pieces of armour, and a small spur, found in an apartment called King Henry the Sixth's, at Waddington Hall. Among the rest, is a complete suit of buff, worn by one of the family, who suffered for his loyalty, in the great rebellion. Whitaker states, that the only vestige remaining of the forest laws, is the Stirrup, through which every dog, except those belonging to the lords, is obliged to pass.

BURNLEY.]—The market-town of Burnley, or Brunley, which has increased immensely in population and importance, within the last 50 or 60 years, is 33 miles S.E. by E. from Lancaster, and 210 N.N.W. from London. It occupies a central and commanding situation, on a tongue of land, formed by the confluence of the Calder, and the Burn. There is great reason to suppose, that this was once a Roman settlement, as a road from Ribchester to Sack, passed through the town, and urns, coins, &c. have been frequently dug up in the neighbourhood. At the east end of the town, is a spot called Saxefield, which tradition points out as the scene of some battle in the dark period of the heptarchy. The cotton manufactory is now fully established in this town. On the two rivers, in the vicinity, are corn-mills, fulling-mills, a mill for grinding woods, &c. for dyers, and cotton manufactories. Burnley is subordinate to Whalley; and its chapel appears to have existed at the time of Edward the Third. Some parts of it are of the time of Henry the Eighth. At the east end of the north aisle, is a chapel; now the property and burial-place of the Towneley family. On the walls, are several shields of arms, cut in stone, with different empalements. There appears to have been four chantries, with regular endowments here. Here is a grammar-school, which is endowed, and supported by benefactions. The population of Burnley was, in 1811, 4368.

BURSCOUGH.]—At the village of Burscough, three miles N.E. by N. from Ormskirk, are, some remains of Burscough priory, founded by Robert Fitzhenry, in the time of Richard the First. This Robert endowed the priory with considerable property, for the health of the souls of his ancestors. At the Dissolution,

tion, this house maintained a prior, and five canons, of the Augustine order, with 40 servants, and had a yearly endowment of 129*l.* 1*s.* 10*d.*

BURY.]—The thriving market-town of Bury is seated on the Irwell, 41 miles S.E. by S. from Lancaster, and 194 N.N.W. from London. The Roch and the Irwell unite their streams about two miles below the town. Leland describes this place as a "poor market." There is a tradition of two castles being situated near the town. One of them was in a field, called Castle Croft, on the west side of the town: and parts of the foundation have been frequently dug up in the adjacent gardens: the other was situated in Walmesley, about two miles north, on the Haslingden road. The cotton manufactories are carried on here to a considerable extent, and the rivers and brooks in the neighbourhood, are all occupied with mills, &c. Among the various improvements in machinery, is one by Mr. Robert Kay, for making cards: this machine not only straightens the wire from the ring, but cuts it in lengths, staples it, turns it into teeth, and forms the holes in the leather: it also places in the teeth, row after row, until the cards are finished. All this is performed by a single operation of the machine, with the greatest expedition. The extensive printing works of Sir Robert Peel, Bart. have been of essential benefit to the place: this business is carried on upon the most improved methods. The canal to Manchester, commences at these works, and greatly facilitates the conveyance of raw materials, and manufactured goods. The country around Bury is agreeably diversified with hill and vale. The roads about are excellent, the materials being procured in great abundance. Bury is an extensive parish, and contains several townships, which, united, constitute the lordship of Bury. These are generally held by lease, under the Earl of Derby; and Tottington, higher and lower end, are considered as the royal manor of Tottington. Besides a church, there are three chapels of ease, within the parish. One half of the land is glebe land, and the other is held under lease of the Earl of Derby. The rector is empowered, by act of Parliament, to grant building leases for 99 years, with the privilege of renewal. There are meeting-houses for various classes of dissenters; a large free-school for boys, and a charity-school, for boys and girls. The population of Bury, in 1811, was 8762. At the north end of the town, is Chamber Hall, the seat of Sir Robert Peel, Bart.

CARTMEL.]—The market-town of Cartmel, 6½ miles E. from Ulverston, and 263½ N.N.W. from London, is situated in a narrow and well-wooded vale, nearly surrounded with bold hills, among which, the lofty ridge, called Hainpsfield-fell, overhangs it to the east. The antiquity of this district, which had a town called Sudgedluit, appears, by a grant of Egfrid, King of the Northumbrians, about the year 670. A priory was founded here, in 1188,

by William Mareschal, Earl of Pembroke, for canons of the order of St. Augustine: to this priory belonged the exclusive privilege of appointing a guide to direct travellers across the dangerous sands in the neighbourhood. The monastic church was purchased by the town, upon the Dissolution, and made parochial. It is a beautiful structure, having a tower in the centre of two square gradations. The nave is of a modern date. The choir is ornamented with handsome stalls, the canopies of which are ornamented with carved foliage. The east window is enriched with mullions and tracery, and filled with painted glass. The monuments are numerous and splendid. A monument of Mr. I. Robinson, records a donation of 20*l.* the interest of which was to be given to the guide appointed to conduct travellers over the sands. There are five chapelries attached to this church; i. e. Stavely, Cartmel-fell, Lindal, Broughton, and Flockburgh. All the livings are in the gift of Lord George Cavendish. Here is a free grammar-school, well-endowed. The school-house was rebuilt, in 1790. The population of Cartmel parish, in 1811, was 3939. Cartmel well, or spring, is in considerable repute for its medicinal qualities in scorbutic cases, and is much resorted to during the summer months. It issues from the base of a projecting rock, about three miles from the town, and is of a brackish taste. In the year 1806, were discovered, in this neighbourhood, by some labourers, while employed in getting stones, a great quantity of silver coins, inclosed in an earthen pot: they were in a high state of preservation, and are now in the possession of Lord Cavendish.

CASTLE-HEAD.]—Castle-Head, near Lindale, on the banks of the Winster, was the seat of the late John Wilkinson, Esq. who laid out the grounds with considerable taste. (See **ULVERSTON.**)

CHADERTON HALL.]—Chaderton Hall, the seat of Sir Watts Horton, is a modern brick building, in the neighbourhood of Oldham. The park abounds with picturesque scenery, and some fine pleasure grounds lie contiguous to the house.

CHORLEY.]—The market-town of Chorley, 32 miles S. by E. from Lancaster, and 207 N.W. by N. from London, is situated on the great turnpike-road between Liverpool and Preston, near the source of the Chor, a small rivulet, which gives its name to the place. The river Yarrow flows near to the town, and moves numerous mills, erected on its banks; these, with the printing and bleaching-grounds, cotton-manufactories, &c. which are spread around the country, impart to the whole district, an air of bustle and industry. The church is an ancient edifice, the walls of which are covered with coats of arms, inscriptions, &c. and the windows are decorated with numerous paintings. The town consists of two lordships. One magistrate presides over the police, who in conjunction with other magistrates, hold here, and at Rivington, alternately,

ternately, a petty sessions once a month. The Bishop of Chester has also a court here, which is held twice in the year. Chorley is a very improving place; and, for the encouragement of building, various clubs, and a building society, have been established. The abundance of coal which is procured here, as also lead, alum, sand, and marle, with the quarries of flag, slate, ashler, and mill-stones, and the facilities which these afford to the trade of the place, are highly favourable to such speculations. In the church-yard, is a grammar-school, which though endowed, has no free scholars. An almshouse, for the support of six poor persons, and a prison, have been erected in the town. In 1811, the population of Chorley, amounted to 5182.

CHISENHALE.—Chisnal Hall, or Chisenhale, about two miles N.W. from Standish, was formerly the residence of a family of that name. This was the birth-place of Edward Chisenhale, Esq. who bore a colonel's commission, during the civil wars, in the reign of Charles the First.* The old manor-house is now entirely destroyed, and the estate, on which is a farm-house, is the property of James Hammer-ton, Esq. of Hallyfield-Peel, in Yorkshire.

CHOWBENT.—This place, eight miles N.E. from Newton, in Makerfield, has, for the last twenty or thirty years, been in a very thriving state. In the rebellion of 1715, Mr. Wood, a dissenting minister, of the place, led his flock to join the royal standard; and, on this occasion, the important pass across the Ribble, at Walton, was intrusted to his protection: for his bravery, a captain's commission was presented to him.

CLITHERO.—The market and borough-town of Clithero, is seated on the eastern bank of the Ribble, near the northern border of the county, 24 miles S.E. by E. from Lancaster, and 215½ N.N.W. from London. It was an honour, at a very early period of our history; and it has been represented in Parliament, from the year 1558. It is a small town, on an insulated eminence, having its castle at one end, on an elevated lime-stone rock, the remains of which consist only of a square tower, distantly surrounded by a strong wall. In the latter part of the civil wars, it was a post of the royalists; but, in 1649, it was ordered to be dismantled. The town, the inaccessible parts excepted, had been entirely moated round. Mention is made of a chapel here, in the grant of Hugh de la Val, a Norman baron: this was within the castle, and was erected for the use of the baron, his family, tenants, and foresters. This chapel, which had always been deemed a parish church, is now totally ruined. The several chapels of Pendle, Whitewell, Rossendale, and Goodshaw, are under Clithero; and, in the church, which is a chapelry to Whalley, are the alabaster

figures of a knight and his lady, probably some of the family of Hesketh. This parochial chapel is of high antiquity; and the fine Saxon arch between the nave and the choir, is a complete specimen of the style which prevailed until the time of Henry the First. All the ancient inhabitants of the forests, in the most inclement seasons, and by roads almost impassable in winter, were obliged to bring their dead here for interment; though, in some parts, nearly twenty miles distant, before the foundation of Newchurch, in Rossendale. Yet the castle, with the demesnes and forests, is extra-parochial; and, to this day, is distinguished by the name of Castle-parish. The town has evidently assumed its name from its situation. "It is of an origin purely British, Cled-dur denoting a hill or rock by the water, and the additional syllable, hou, is purely Saxon, which also denotes a hill, and is merely an explanatory addition, adapted to the language and ideas of the Saxons." Clithero must have been a place of considerable importance, as we read of "Lambert, physician of Clyderhow," about the time of Henry the First; and it contained 66 free burgesses as early as the year 1240, which was a considerable number in those days; though the township alone now contains, by the returns of 1811, a population of 1767.

Clithero is governed by two bailiffs, who jointly exercise the power of one magistrate, or justice of the peace, and are also the returning officers for the borough. Freeholders only, who have estates for life or in fee, or resident owners, are entitled to vote. It has an excellent grammar-school, contiguous to the church-yard, which strictly preserves its character as a classical seminary, and is of the endowment of Philip and Mary. On the Yorkshire side of the Ribble, at Edisforth, within the borough, was formerly an hospital for lepers. Dr. Whitaker notices a tract of country between the Ribble and Pendle hill, bearing a distinct and peculiar character. After some general observations on the nature of the soil, from Lancaster to this place, as abounding with coals, iron, and other kindred minerals, and as possessing a set of native plants adapted to itself; he observes that, "here, on a sudden, the crust of the earth appears to have undergone a violent disruption, in consequence of which, the edges of the beds (of minerals) are thrown up into the air, and downward towards the centre of the earth. At an angle of no less than 45 degrees, immediately beyond this appearance, rises the huge mass of Pendle, which seems to have been thrown up by the same convulsion; and, immediately to the north again, appears a surface of lime-stone, with its concomitant system of plants and minerals; which, had the strata, to the south, maintained their

* This officer was selected, with five others, by Charlotte, Countess of Derby, for the defence of Latham House, at the memorable siege of that place, in 1644; where, by a skilful manœuvre, he cut off 500 of the besiegers. For this exploit, he was fined 800*l.* for delinquency. Another anecdote is men-

tioned of him, that he sallied forth, and seized upon the enemy's provisions, after they had been just boasting of them. His literary character was no less splendid, being the author of several works, justly celebrated in their time.

natural position, must have lain at a vast depth beneath. The effect of this convulsion is felt over a tract of 40 miles to the north, scarcely a seam of coal being found before we arrive at Burton, in Lonsdale. This fact serves to shew how much more the character of a country is determined by soil, than by climate; since, on the north of Pendle, and even on a declivity to the north, we see wheat, peas, beans, and other usual productions of a more southern husbandry, ripening, at least in favourable seasons; while, on the south, upon a declivity also, the hardy black oat itself is often indebted to the frosts of November, for all that resembles maturity about it." The hill of Pendle is noted by the peasantry of this county, and the adjoining one of York, especially in the district of Craven, by the following distich:—

"Pendlehill, and Pennygent, and little Ingleborough,
Are three such hills as you'll not find by seeking England
thorough.

Or,

"Ingleborough, Pendlehill, and Pennygent,
Are the highest hills between Scotland and Trent."

Yet the neighbouring hill of Wharnside, in Yorkshire, is said to be considerably higher than any of the others. It, however, makes a conspicuous figure on the south side of the plain. The sides are verdant, and the top moorish, and very extensive. On this hill, stood Malkin Tower, celebrated in 1633, for being the rendezvous of witches. Seventeen poor wretches were condemned, on perjured evidence; but the affair was scrutinised, and the poor convicts were set at liberty. A witness swore, he saw them go into a barn, and pull at six ropes, down which fell flesh smoking, butter in lumps, and milk as it were flying from the said ropes, all falling into six basons placed beneath. On this hill, are two large cairns, about a mile distant from each other: these were probably the ruins of some ancient Speculæ, or beacon towers, erected by Agricola, after the conquest of the country. There is another, of more modern date, which answers to one in Ingleborough hill, 20 miles to the north. From this may be seen an amazing extent of country: York minster is very visible, and the land towards the German ocean, as far as the powers of the eye can extend. Towards the west, the sea is very distinguishable, and even the Isle of Man, by the assistance of glasses: to the north, the mountains of Ingleborough, Wharnside, and other of the British Appenines. The other views are the vales of Hodder, Ribble, and Calder, (the first extends 30 miles,) which afford a most delicious prospect, varied with numberless objects of rivers, houses, woods, and rich pastures, covered with cattle; and, in the midst of this fine vale rises the town of Clithero, with the castle at one end, and the church at the other, elevated on a rocky seat: the abbey of Whalley, about four miles to

the south, and that of Salley, as much to the north, with the addition of many gentlemen's seats scattered over the vale, give the whole a variety and richness, rarely to be found in any rural prospects. It is also enlivened with some degree of commerce, in the multitude of the cattle, the carriage of the lime, and the busy noise of the spinners engaged in the service of the woollen manufactures of the clothing towns. About two miles from Clithero, on the road from Padiham to Whalley, are the extensive factory and print-grounds of Messrs. Miller, Burys, and Co. situated in a beautiful valley, watered by a small branch of the Ribble. The weaving and printing are here carried on to a great extent. The works are reckoned more compact, and better adapted to the purposes of printing, than any others in the county. The shops are all detached from one another: in one, the patterns are drawn; in another, the blocks are cut; in a third, the cloth is printed, &c.; so that every different department is conducted by a separate overseer. As these works are detached from any town, the proprietors have a shop, from which their men are supplied with every thing they may require at prime cost; and meat has frequently been sold at twopence per pound under the market-price. In and about these works, are employed nearly 2000 persons; and many of the printers earn above 100*l.* and none less than 50*l.* per annum. The proprietors were also induced, some years ago, to build a chapel here, at their own expence, and to pay a clergyman a regular salary for performing the duty.

CLIVIGER.]—In the township of Cliviger, at the S.E. extremity of the parish of Whalley, a large natural aperture has been formed through the mountain; whence the streams descend both to the eastern and western seas. This pass has evidently been formed by some great concussion of nature. Cliviger abounds with coals and iron; and, along one of the great fissures, called, by the miners, Walts, runs a single vein of lead. Some curious plants are found in this district; and the inaccessible rocks afford a secure retreat for birds of prey. Among these, the bird usually called the Rock Eagle, has, for time immemorial, taken up her abode, in defiance of the attempts which have been made to exterminate her. On the skirts of the wild moors which border on Yorkshire, near Mereclough, a number of Roman coins, and other relics, have been dug up.

COCKERNAND ABBEY.]—S.W. by S. from Lancaster, about 6½ miles, are some remains of Cookersand abbey, founded, about the year 1190, on the site of an hospital for Premonstratensian canons, by Theobald Walter, brother of Hubert, Archbishop of Canterbury, who gave all the pasture-grounds in Pilling, towards its erection. The abbey was situated on a neck of land, adjoining the sands of the river Cooker; from which it derives its name. It is defended from the encroachments of the sea, by a rock of red stone, and has a commanding

commanding view over the sands. The monastery, with its appendages, is said to have covered nearly an acre of ground; but, of these, the chapter-house is all that remains. It consists of an octangular room, the roof of which is supported by massive columns in the centre. It is somewhat remarkable, that, after its dissolution, by Henry the Eighth, this religious house should have been again restored to its ancient privileges, by the same monarch. The estate now belongs to John Dalton, Esq. whose mansion, Thurnham Hall, is on an eminence, two miles from the abbey.

COLNE.]—The little market-town of Colne, supposed, by some, to be the *Colunio* of the *Ravennas*, lies 35 miles S.E. by E. from Lancaster, and 216½ N. N. W. from London. Gough observes, that Colne has no other marks of a Roman station, than what arose from the discovery of some Roman copper coins, and others of silver, which have been found here at different periods. The chapel of Colne is subordinate to the church of Whalley. It is a spacious and respectable building, and appears to have been restored or rebuilt about the time of Henry the Seventh, or Eighth. The font is angular, and bears the name of Townley. On three sides of the choir, are portions of an old wooden screen, extremely elegant, and resembling one in the chapel at Townley, which Dr. Whitaker considers to be of the age of Henry the Eighth. In this building, are two chantries; one on the north side of the choir, belonging to the Banister family, of Parkhill; and one on the south side, belonging to the Townleys, of Barnside. The manufactories of Colne formerly consisted in woollen and worsted goods. In the fourth of Edward the Second, here was one fulling-mill, charged at 6s. 8d.; a circumstance which implies, that cloth was manufactured here at an early period; and contradicts the generally received opinion, that English wool was universally manufactured in Flanders, till an act of the tenth of Edward the Third. The cotton trade now prevails here, and the articles of manufacture consist chiefly of calicoes and dainties. A cloth-hall, or piece-hall, has been erected here. The Leeds canal passing within a mile of the town, has proved eminently serviceable to the manufactures of this place. The country is hilly, and abounds with coal, stone, lime-stone, slate, &c. The population of the town, in 1811, was 5336.

At Barnside, in the vicinity of Colne, is an old house belonging to the Townleys; and, about half a mile south of Barnside, is Emmott Hall, the seat of Richard Emmett, Esq. of whose family, Robert de Emot held lands here, in the year 1310. The house contains many family portraits. Near the house, is a perfect cross, with the cyphers, 1. p. 8. and m. half obliterated upon the capital. A very copious spring, in an adjoining field, now an excellent cold bath, is called the Hullovn, i. e. the Hallowen, or Saints-well. Alcaucoats, another old

mansion in the neighbourhood, belongs to J. Parker, Esq.

CONINGSHEAD.]—At Coningshead, two miles S.S.E. from Ulverston, was a priory of black canons, built in the reign of Henry the Second. The seat of Wilson Bradyll, Esq. now occupies the site of the ancient priory, at the foot of a fine eminence, the slopes of which are planted with trees and shrubs. The southern front is modern, whilst that of the north, is in the Gothic style, with a piazza and wings. Mr. West denominates this spot, “the paradise of Furness, or Mount Edgecumbe, in miniature.” On the east, a fine estuary opens to the view, presenting craggy rocks, islands, &c. hanging woods, intermixed with cultivated inclosures, with a back-ground of stupendous mountains.—This view is contrasted, on the other side, by a rich cultivated dale, beyond which are hanging-grounds, cut into inclosures, with scattered farms; the whole crowned by an extensive tract of rich pasture-ground.

CONISTON.]—Coniston is four miles west from Hawkshead. The old mansion of Coniston Hall, nearly covered with ivy, is situated near the western edge of Coniston Lake; or, as it is sometimes called, Thurston-water. This lake occupies an area of about seven miles in length, from north to south, by three-quarters, in its greatest breadth, from east to west. The shores of this lake are indented by several small bays; and the scenery around possesses considerable variety. The village of Coniston appears at the north-west end of the lake, and beyond this, rise the romantic mountains, called Coniston fells. Mr. West recommends to the traveller, who visits the lake, to direct his view first to the southern end, that by advancing northward, its most interesting features may progressively display themselves. Mrs. Radcliffe describes it as “the most charming lake she had seen during her tour.” Its greatest depth is said to be 40 fathoms. Among the fish, the char is in most esteem for its flavour. Great quantities of copper ore have been found in the fells, and large slate quarries are now worked in these mountains.

DALTON.]—The little market-town of Dalton, 5½ miles S.W. by W. from Ulverston, and 276 N.W. by N. from London, is agreeably situated in the midst of a most fertile country. It probably derived its name, in Saxon times, from its situation among dells or vallies; but its historical importance is derived from its connection with Furness abbey. King Stephen, in granting certain privileges to the abbot, contributed greatly to the importance of this town, which became the capital of Furness, and continued so till the Dissolution; when its consequence began to decline. Dalton consists of one principal street, which terminates in a spacious market-place. The appearance of the town has been much improved, many of the old houses having been rebuilt. From its situation on a limestone

a lime-stone eminence, much inconvenience is experienced by the inhabitants, from the difficulty in obtaining soft water, which is all brought, by hand, from a small brook, in the neighbouring valley. On a rocky eminence, westward of the town, is a tower of an ancient castle, erected probably to guard the northern approach of the abbey. In this fortress, the chief of that religious house held his court, and secured his prisoners. The building contains three floors, and is now appropriated to the courts-leet, and baron, of the lord of the manor and liberty of Furness. The church is a small neat building, with an organ. The parish of Dalton is divided into four townships, and the customary tenements of each, paying the same yearly rent, cannot be divided by the proprietor, and are not divisible by will. It used to be a custom, for every tenant to furnish the abbot with a man and horse, for the service of the King. Dalton has been noted for its annual hunts. This jubilee was formerly denominated, the Dalton route. In the year, 1631, this place was visited by the plague, which raged for nine months, and swept away a considerable portion of the inhabitants. From the parish register, it appears, that 360 persons fell victims to this pestilence. On the summit of an eminence, called High Haume, about a mile from Dalton, is a circular mound, partly surrounded by a trench, which appears to have been a fortified beacon.—From the printed reports of the House of Commons, the population of the parish of Dalton, in 1811, was 2074; that of the township, 648. Dalton was the native place of the celebrated artist, George Romney,* who was born at Beckside, on the 15th December, 1734.

DUNKINFIELD LODGE.]—Dunkinfield lodge, in the neighbourhood of Ashton, is the seat of Francis Dukinfield Astley, Esq. The house is an irregular pile, occupying a broad terrace, near the top of a steep hill, which rises almost perpendicularly from the river Tame. The latter forms, in its course, several cascades; and, in front of the house, sweeps round the base of the hill, presenting some very picturesque scenery. The views from the house and gardens are highly romantic. Dunkinfield contains several pictures, which deserve attention; particularly, Christ, and the Woman taken in Adul-

* His father was a cabinet-maker, and young Romney was early initiated in the business. In this narrow sphere, his genius soon indicated itself by many curious sketches and contrivances connected with the business. A talent for music led him also to construct various musical instruments. This, however, was not the proper theatre for the display of his talents, and his inclination soon impelled him to more congenial pursuits. After some years spent in his father's business, he was placed under the direction of an obscure itinerant painter, to whom he was articled for a term of years. Calculated as such a school might appear, to repress, rather than foster talents, the genius of young Romney presently soared above these discouragements, and vindicated its native privileges. At York, he attracted the notice of Sterne, who engaged him to paint se-

tery, by Titian; a landscape, by Booth; and another, by Barret.

DUNAL-MILL-HOLE.]—At a little distance from the village of Kellet, which lies about six or seven miles N. by E. from Lancaster, is a natural curiosity, called Dunal-Mill-Hole, which is a large cavern, of very romantic aspect, extending nearly 200 yards into the bowels of the hill. Its entrance is near a mill. The mouth of the cavern is romantically fringed with trees, which, hanging from the rocks, give it an air of awful grandeur. Immense fragments of rock, projecting from the roof of the orifice, as if ready to drop, and crush the visitor, form one of the most grotesque entrances imaginable. The appearance of this rugged cavern, is calculated to inspire terror: the numerous crevices in the sides: the dark passage beyond, which the eye cannot measure: the masses of rock projecting from the roof: and the noise of waters dashing from rock to rock, will often dismay the most adventurous traveller. In dry seasons, however, these terrific features are softened, and the curious traveller may then explore, in perfect security, the wonders of this curious place. Like these at Wokley and Castleton, and others in limestone hills, this cavern has several apartments with intermediate chasms: and its roof is hung with stalactites, and incrustations. A small rivulet passes through the cave; which, after a subterraneous course of two miles, again rises near the village of Cornforth falls into Morecambe bay.

DUXBURY HALL.]—Duxbury Hall, the seat of Sir Frank Standish, Bart. is about a mile and a half south of Chorley. It is chiefly appropriated to a stud-farm.

ECCLES.]—The parish of Eccles, 4½ miles W. from Manchester, occupies an area of about nine miles, from east to west, and four, from north to south. The church is a large structure; in the windows of which are the arms of the Booth family. In the chancel, is a curious monument of Richard Erereton, and Dorothea, his wife, with their effigies on the tomb. Two chapels of ease have been lately erected at Pendleton and Swainton, in this parish. Its relative state at different periods, will best appear from the following returns. In 1776, the number of inhabitants were 8723; in 1780, 9147;

veral scenes of his *Tristram Shandy*. Having parted from his master, not upon the most amicable terms, he returned to Lancashire, where he gave to the world several paintings. In 1762, he came to London; and, some time afterwards, commenced his travels into France and Italy, in pursuit of improvement. On his return, he commenced his career of portrait painting, with distinguished success. His health having declined, he retired to his native town, where he died on the 15th of November, 1802, and was buried at Dalton. His private character was marked by some eccentricities; but he was honest and warm in his attachments. As an artist, we may rank him with Reynolds and Gainsborough. He had a rapid execution, and an eye that did not often deviate from nature.

in 1785, 10,522; in 1790, 12,430; in 1793, 14,265; in 1800, 16,119; and, in 1811, there were 19,502. Worsley Hall, in this parish, is a venerable brick mansion, now in the occupation of R. H. Bradshaw, Esq.

ESTWAITE.]—Estwaite-water, or Lake, in the neighbourhood of Hawkshead, is about two miles in length, by half a mile in breadth; and divided by two peninsulas, one of which projects from each of the shores: these are fringed with trees, and the whole presents some beautiful sylvan scenery. On the eastern side, is a gentle slope, partly covered with woods: and, near the head, is a small island covered with shrubs, &c. This was formerly a floating island. This lake abounds with perch, pike, eel, and trout, but no char-fish have been found.

EVERTON.]—The village of Everton, one mile N.N.E. from Liverpool, is very pleasantly situated on an eminence, commanding an extensive prospect of the mouth of the Mersey, opening into the estuary of Bootle Bay, and of the Irish Channel, as well as of the opposite coast of Chester, and the northern part of Wales. Hence may be seen the road of Hayle Lake, remarkable for the rendezvous of the army and fleet under King William, for the conquest of Ireland, in 1689. Everton has, of late years, become the favourite residence of the Liverpool merchants, and several excellent houses have been built along the western declivity of the hill. Between Everton and Liverpool, is the district of Richmond, forming a pleasant and respectable neighbourhood, and uniting the conveniences of a town situation, with those of a country residence.

FAIRFIELD.]—The hamlet of Fairfield, in the parish of Ashton, already noticed, is a place of particular note, as being the settlement of a religious sect, called Moravians. These people have congregated themselves here within the last 40 years, and have built a chapel, with an organ, and several houses, which have assumed the appearance of a town. The chief of these form a square mass, round which is a broad-paved street, and this again is neatly surrounded with a series of respectable dwellings. The mass of this people is employed in some manufacture, or useful employment.

FELLS.]—This is the local denomination of that mountainous district, which constitutes all the northern part of Furness. These Fells are distinguished from each other, by the appellations of Conistone, Furness, and Cartmel. Wood has been very abundant on these eminences, and was generally cut down once in every fifteen years, to be charred, for the use of the furnaces and forges in the neighbourhood. The fells of Upper Furness have been called the Appenines of Lancashire; and, at an early period, were noted for their wild game, deer, &c.; The contiguity of High Furness to Scotland, subjected its inhabitants to repeated attacks from the borderers of the latter kingdom; and the high fells, partly covered with woods, afforded shelter to the

original wild beasts of the island. Wolves, wild boars, wild deer, falcons, &c. were common in this district; and there was an animal of the deer species, called the Segh. In 1766, three heads, with horns, were taken up on Duddon sands, of a size much superior to those of any deer now known; they are supposed to be the horns of the Scofe stag.

In the year 1561, the woods being greatly reduced, certain blomaries, in High Furness, were suppressed, at the common request of the tenants of Hawkshead and Colton, that the tops and croppings of these woods might be preserved for the nourishment of their cattle in winter. Since the beginning of the 18th century, the re-introduction of furnaces and forges, has advanced the value of wood considerably, and the tenants have found the means of improving part of their lands into meadows, and preserving their woods for the use of the furnaces. Among the trees of this district, the holly is sedulously cultivated and preserved: and, during the long and hard winters, its green leaves are given to the sheep.

FURNESS.]—"The lordship of Furness," observes West, in his Antiquities of this district, "in the north-west of Lancashire, and hundred of Loynsdale, comprehends all that tract of lands and islands, included within the following bounds; that is, beginning where the water descends from Winrose Hills, in Little Langdale to Elterwater, which divides Lancashire from Westmorland; so along the said water to Brathay Bridge, and where it runs into Windermere, and so down the said mere to Leven sands into the sea; thence along the sea to the island of Foulney, including the said island; so along by the isle of the Pile of Fouldrey and Walney to the river Dudden, which divides Lancashire from Cumberland, and up to the spot where the water of that river comes from Winrose Hills; and from thence to the place where the water descends from Winrose Hills to the Elterwater, where the boundary began. Thus Furness is separated, by water, from Westmorland, Cumberland, and the rest of Lancashire; and was, for that reason, called by the abbot, an Island. The liberty of the lordship of Furness extends itself over all the said tract of land and islands called Furness (for a similar reason as Amunderness was formerly, by the Saxons, called Agmonderuess, because it stretches out into the sea like a nose, a promontory, or ness of land, between the rivers Ribble and Cocker; so Furness lying to the north of Amunderness, stretching itself between the two estuaries of Leven and Dudden, in like manner, receiving from the Saxons a similar name) and all the lands and tenements included thereon; as well freehold as copyhold, are held either of the lord of the said liberty, or of the lord of some manor lying within the same, and who holds such manor of the lord of the said liberty." At three miles from Lancaster, is Hestbank, where the traveller who visits Furness, must forsake the firm beaten road, for trackless sands, which are

fordable

4 F

fordable at low water, from Hestbank, to a spot called the Carter, or Guide's House, about nine miles distant. It has been the custom to have a regular sort of guide, called the Carter, to attend and conduct strangers across this roadless desert. He is maintained by the public, and is obliged, in all weathers, to attend here from sun-rise to sunset. The priory of Cartmel was under the necessity of providing a proper person for this charge, and received synodals and Peter-pence to reimburse their expenses; but, since the Dissolution, the duchy of Lancaster grants it, by patent, to a trusty man, whose yearly allowance is 20*l*. His salary, however, has been further increased by a small donation left by a gentleman of Cartmel. — For want of this guide, many obstinate and careless people have lost their way, and perished: for, in case of darkness, fog, or unexpected tides, this situation is dreadful, and the horrors of an overwhelming grave affright and confound the bewildered traveller. In the midst of these sands, is the channel of the Ken, or Kent river; and, in other places, are several smaller rivulets, abounding with the flat fish called flook, salmon, &c. For a certain distance from shore, the right of fishing in these streams belongs to the Earl of Derby; but, beyond his bounds, the sands and fords are common property. To embank and bring under cultivation, this wide tract of sands, has often been recommended; but the vast expence attending such an undertaking, with the precariousness of most of the plans proposed, have hitherto prevented the adoption of this scheme. These sands, with another similar plain, occupy a space, which, in Ptolemy's time, bore the name of Moricambe, and is now called Morecambe Bay. This is formed by the Irish Sea to the south, and the irriguous shores of Lower Furness to the north and west, with a part of Lancashire to the east. There is no certain evidence of any Roman station in this part of the county, nor does it clearly appear, that the paved roads, which West describes as Roman, were really made by that people. In the Domesday Survey, the name of Furness does not occur, yet almost every village in Low Furness is mentioned, with the land-owners, and the quantity of arable land belonging to each. From this document, it appears, that this place was provided with "66 ploughs, exclusive of those which belonged to the lords of the particular manors, and to their tenants."

FURNESS ABBEY.] — Furness abbey, 7½ miles S.W. from Ulverston, and its circumjacent scenery, are thus beautifully described, by the romantic pen of Mrs. Radcliffe:—"About a mile and a half on this side of the abbey, the road passes through Dalton, a very ancient little town, once the capital of Low Furness, and rendered so important by its neighbourhood to the abbey, that Ulverston, the present capital, could not then support the weekly market, for which it obtained a charter. Dalton, however, sunk with the suppression of its neighbouring pa-

trons, and is now chiefly distinguished by the pleasantness of its situation; to which a church, built on a bold ascent, and the remains of a castle, advantageously placed for the command of the adjoining valley, still attach some degree of dignity. What now exists of the latter is one tower, in a chamber of which the Abbot of Furness held his secular court; and the chamber was afterwards used as a gaol for debtors, till within these few years, when the dead ruin released the living one. The present church-yard, and the site of this castle, are supposed to have been included within the limits of a castellum, built by Agricola, of the fosse of which there are still some faint vestiges.

"Beneath the brow on which the church and tower stand, a brook flows through a narrow valley, that winds about a mile and a half to the abbey. In the way thither, we passed the entrance of one of the very rich iron mines with which the neighbourhood abounds; and the deep red tint of the soil that overspreads almost the whole of the country between Ulverston and the monastery, sufficiently indicates the nature of the treasures beneath.

"In a close glen, branching from the valley, shrouded by winding banks, clumped with old groves of oaks and chesnut, we found the magnificent remains of Furness abbey. The deep retirement of its situation, the venerable grandeur of its Gothic arches, and the luxuriant, yet ancient trees, that shadow this forsaken spot, are circumstances of picturesque, and if the expression may be allowed, of sentimental beauty, which fill the mind with solemn, yet delightful, emotion. This glen is called the Vale of Nightshade; or, more literally, from its ancient title, Bekangsgill, "the glen of deadly nightshade," that plant being abundantly found in the neighbourhood.

"Its romantic gloom, and sequestered privacy, particularly adapted it to the austerities of monastic life; and, in the most retired part of it, King Stephen, while Earl of Mortaign and Bulloign, founded in the year 1127, the magnificent monastery of Furness, and endowed it with princely wealth, and almost princely authority, in which it was second only to Fontaine's abbey, in Yorkshire.

"The windings of the glen conceal these venerable ruins till they are closely approached; and the bye road that conducted us is margined with a few ancient oaks, which stretch their broad branches entirely across it, and are fine preparatory objects to the scene beyond. A sudden bend in this road, brought us within view of the northern gate of the abbey, a beautiful Gothic arch, one side of which is luxuriantly festooned with nightshade. A thick grove of plane trees, with some oak and beech, overshadow it on the right, and lead the eye onward to the ruins of the abbey, seen through this dark arch in remote perspective, over rough, but verdant ground. The principal features are the northern window, and part of the eastern choir, with

with glimpses of shattered arches and stately walls beyond, caught between the gaping casements.— On the left, the bank of the glen is broken into knolls, capped with oaks, which, in some places, spread downwards to a stream that winds round the ruin, and darken it with their rich foliage. Through this gate is the entrance to the immediate precincts of the abbey, an area said to contain 65 acres, now called the Deer Park. It is inclosed by a stone wall, on which the remains of many small buildings, and the faint vestiges of others, still appear; such as the porter's lodge, mills, granaries, ovens, and kilns, that once supplied the monastery; some of which, seen under the shade of fine old trees, that on every side adorn the broken steeps of this glen, have a very interesting effect.

“Just within the gate, a small manor-house of modern date, with stables, and its other offices, breaks discordantly upon the lonely grandeur of the scene. Except this, the character of the deserted ruins is scrupulously preserved in the surrounding area: no spade has dared to level the inequalities which fallen fragments have occasioned in the ground, or shears to clip the wild underwood that overspreads it; but every circumstance conspires to heighten the solitary grace of the principal object, and to prolong the luxurious melancholy which the view of it inspires. We made our way among the pathless fern and grass to the north end of the church, now, like every other part of the abbey, entirely roofless, but shewing the lofty arch of the great window, where, instead of the painted glass that once enriched it, are now tufted plants, and wreaths of nightshade. Below is the principal door of the church, bending into a deep round arch, which, retiring circle within circle, is rich and beautiful; the remains of a winding staircase are visible within the wall, on its left side. Near this northern end of the edifice, is seen one side of the eastern choir, with its two slender Gothic window frames; and, on the west, a remnant of the nave of the abbey, and some lofty arches, which once belonged to the belfry, which is now detached from the main building.

“To the south, but concealed from this point of view, is the chapter-house, some years ago exhibiting a roof of elegant Gothic fret-work, and which was almost the only part of the abbey thus ornamented; its architecture having been characterised by an air of grand simplicity rather than by the elegance and richness of decoration, which, in an after date, distinguished the Gothic style in England. Over the chapter-house, were once the library and scriptorium; and, beyond it, are still the remains of the cloisters, of the refectory, the locutorium, or conversation-room, and the calefactory. These, with the walls of some chapels, of the vestry, a hall, and of what is believed to have been a school-house, are all the features of this noble edifice that can easily be traced: winding stair-cases within the surprising thickness of the

walls, and door-cases, involved in darkness and mystery, the place abounds with.

“The abbey, which was formerly of such magnitude as nearly to fill up the breadth of the glen, is built of a pale red stone, dug from the neighbouring rocks, now changed, by time and weather, to a tint of dusky brown, which accords well with the hues of plants and shrubs, that every where emboss the mouldering arches.

“The finest view of the ruin is on the east side, where, beyond the vast shattered frame that once contained a rich painted window, is seen a perspective of the choir, and of the distant arches, remains of the nave of the abbey, closed by the woods.— This perspective of the ruin, is said to be 287 feet in length; the choir part of it is, in width, only 36 feet inside, but the nave is 70; the walls, as they now stand, are 54 feet high; and, in thickness, 5. Southward from the choir, extend the still beautiful, though broken pillars and arcades of some chapels now laid open to the day; the chapter-house, the cloisters, and beyond all, and detached from all, is the school-house, a large building, the only part of the monastery that still boasts a roof.

“As soothed by the venerable shades, and the view of a more venerable ruin, we rested opposite to the eastern window of the choir, where once the high altar stood, and, with five other altars, assisted the religious pomp of the scene, the images and the manner of times that were past, rose to reflection. The midnight procession of monks, clothed in white, and bearing lighted tapers, appeared to “the mind's eye,” issuing to the choir through the very door-case, by which such processions were wont to pass from the cloisters to perform the matins service, when, at the moment of their entering the church, the deep chanting of voices was heard, and the organ swelled a solemn peal. To Fancy, the strains still echoed feebly along the arcades, and died in the breeze among the woods, the rustling leaves mingling with the close. It was easy to image the abbot and the officiating priests, seated beneath the richly-fretted canopy of the four stalls, that still remain entire in the southern wall, and high over which is now perched a solitary yew-tree, a black funeral memento to the living of those who once sat below.

“Of a quadrangular court, on the west side of the church, 334 feet long, and 102 wide, little vestige now appears, except the foundation of a range of cloisters, that formed its western boundary; and, under the shade of which, the monks, on days of high solemnity, passed in their customary procession, round the court. What was the belfry, is now a huge mass of detached ruin, picturesque from the loftiness of its shattered arches, and the high inequalities of the ground within them, where the tower that once crowned this building, having fallen, lies in vast fragments, now covered with earth and grass, and no longer distinguishable but by the hillock they form.

“The

"The school-house, a heavy structure, attached to the boundary wall on the south, is nearly entire, and the walls, particularly of the portal, are of enormous thickness; but, here and there, a chasm discloses the staircases, that wind within them, to the chambers above. The school-room below, shews only a stone bench, that extends round the walls, and a low stone pillar, in the eastern corner, on which the teacher's pulpit was formerly fixed. The lofty vaulted roof is scarcely distinguishable, by the dusky light admitted through one or two narrow windows, placed high from the ground, perhaps for the purpose of confining the scholar's attention to his book.

"These are the principal features that remain of this once magnificent abbey. It was dedicated to St. Mary, and received a colony of monks, from the monastery of Savigny, in Normandy, who were called Grey Monks, from their dress of that colour, till they became Cistercians, and with the severe rules of St. Bernard, adopted a white habit, which they retained till the dissolution of monastic orders in England. The original rules of St. Bernard par-took, in several instances, of the austerities of those of La Trappe, and the society did not very readily relinquish the milder laws of St. Benedict, for the new rigours imposed upon them, by the parent monastery of Savigny. They were forbidden to taste flesh, except when ill, and even eggs, butter, cheese, and milk, but on extraordinary occasions; and denied even the use of linen and fur. The monks were divided into two classes, to which separate departments belonged. Those who attended the choir, slept upon straw, in their usual habits; from which, at midnight they rose, and passed into the church, where they continued their holy hymns during the short remainder of the night. After this first mass, having publicly confessed themselves, they retired to their cells, and the day was employed in spiritual exercises, and in copying, or illuminating manuscripts. An unbroken silence was observed, except when after dinner, they withdrew into the locutorium; where, for an hour, they were permitted the common privileges of social beings. This class was confined to the boundary wall, except that on some particular days, the members of it were allowed to walk in parties beyond it, for exercise and amusement; but they were very seldom permitted either to receive or pay visits. Like the monks of La Trappe, however, they were distinguished for extensive charities, and liberal hospitality; for travellers were so scrupulously entertained at the abbey, that it was not till the Dissolution, that an inn was thought necessary in this part of Furness, when one was opened for their accommodation, expressly because the monastery could no longer receive them.

"To the second class were assigned the cultivation of lands, and the performance of domestic affairs, in the monastery.

"This was the second house in England, that received the Bernardine rules, the most rigorous of which, however, were dispensed with, in 1485, by

Sixtus the Fourth; when, among other indulgences, the whole order was allowed to taste meat on three days of the week. With the rules of St. Benedict, the monks had exchanged the grey habit for a white cassock, with a white caul and scapulary. But their choir dress was either white or grey, with caul and scapulary of the same, and a girdle of black wool; over that a mozet or hood, and a rocket. When they went abroad, they wore a caul and full black hood.

"The deep forests that once surrounded the abbey, and overspread all Furness, contributed, with its insulated situation, on a neck of land running out into the sea, to secure it from the depredations of the Scots, who were continually committing hostilities on the borders. On a summit, over the abbey, are the remains of a beacon or watch-tower, raised by the society, for their further security. It commands extensive views over Low Furness, and the bay of the sea immediately beneath; looking forward to the town and castle of Lancaster, appearing faintly on the opposite coast; on the south, to the isles of Walney, Fouldrey, and their numerous islets, on one of which stands Peel castle; and, on the north, to the mountains of High Furness and Coniston, rising in a grand amphitheatre round this inlet of the Irish Channel. Description can scarcely suggest the full magnificence of such a prospect, to which the monks, emerging from their concealed cells below, occasionally resorted, to soothe the asperities which the severe discipline of superstition inflicted on the temper; or, freed from the observance of jealous eyes, to indulge, perhaps, the sigh of regret, which a consideration of the world they had renounced, thus gloriously given back to their sight, would sometimes awaken.

"From Hawcoat, a few miles to the west of Furness, the view is still more extensive; whence, in a clear day, the whole length of the Isle of Man may be seen, with part of Anglesea, and the mountains of Caernarvon, Merionethshire, Derbyshire, and Flintshire, shadowing the opposite sides of the horizon of the Channel.

"The sum total of all the rents belonging to the abbey, immediately before the Dissolution, was 946l. 2s. 10d. collected from Lancashire, Cumberland, and even from the Isle of Man; a sum, which considering the value at that period, the reign of Henry the Eighth; and the woods, meadows, pastures, and fisheries, retained by the society in their own hands; the quantity of provisions, for domestic use, brought by tenants instead of rent, and the shares of mines, mills, and salt-works, which belonged to the abbey, swells its former riches to an enormous amount.

"Pyle, the last abbot, surrendered with 29 monks, to Henry the Eighth, April 9, 1537; and, in return, was made rector of Dalton, a situation then valued at 33l. 6s. 8d. a year."

GARSTANG.] — The market and borough town of Garstang is seated on the western bank of the Wyer, 11 miles S. by E. from Lancaster, and 227½ N. W.

by

by N. from London. The population of the township was, in 1811, 720; that of the parish, 6190. The town of Garstang, incorporated by Charles the Second, is governed by a bailiff, and seven capital burgesses. The charter invests the corporation with an authority to try all misdemeanors committed within their liberty. The Lancaster canal, which passes by the town, is of essential advantage, in a commercial point of view, and will doubtless conduce to the establishment of more considerable manufactures in the place. The river Wyre, which flows near this place, abounds with trout, chub, and gudgeons; and, in the spring, with smelts.—The river was once so swollen by incessant rain, as to inundate the church; in consequence of which, the foundations were so much injured, that it was found expedient to take it down, and rebuild it, in the year 1746. The church was formerly appropriated to the abbey of Cockersand: it has chapels at Market-Garstang and Pilling. At Catteval, two miles to the south, is a large printed cotton and calico manufactory; and, at Scorton, Dolphinholm, and Catstraw, to the north-east, are various spinning manufactories.

In the neighbourhood of the town, are the following seats: Kirklaud Hall, the seat of Alexander Butler, Esq.; Myerscough House, the seat of Charles Gibson, Esq.; and Claughton Hall, the seat of William Fitzherbert Brockholes, Esq.

GARSTON.]—In the chapelry of Garston, 6½ miles S.E. from Liverpool, is an old mansion, called Aidburgh Hall, belonging to the Tarleton family.—Amongst numerous other old halls, and handsome modern buildings, in this neighbourhood, is Allerton Hall, the seat of William Roscoe, Esq. the elegant author of the *Life of Lorenzo de Medici*. The house is partly ancient, and partly modern, and commands a cheerful view of the broadest part of the Mersey, with the high lands about Runcorn, in Cheshire. This estate formerly belonged to the family of Latham, of Allerton.

GAWTHORP.]—In a low situation, on the banks of the Calder, is Gawthorp, a castellated mansion, the ancient residence of the Shuttleworths, as early as the time of Richard the Second. In the vicinity of this is Huntroyd, a modern mansion, belonging to Legendie Piers Starkie, Esq.

GILLIBRAND HALL.]—Gillibrand Hall, the seat of Thomas Gillibrand, Esq. has been built within these ten years, on the site of an old moated mansion. It stands about a mile W. from Chorley.

GLEASTON CASTLE.]—The ruins of this ancient fortress are situated about two miles east of Furness abbey; three square towers, with some connecting walls, are all that at present remain. The walls are thick, and their composition is mud, pebbles, &c. faced with limestone. This castle appears to have been a baronial mansion, belonging to the manor of Aldringham. In the reign of Queen Mary, it was the residence of the Duke of Suffolk, who was beheaded, and his estates confiscated. At a short distance from the castle, is a copious running spring, which Mr. West

remarks, would be equal to that at Holywell, in Flintshire, if it were confined to one bason. Aldringham Hall, once the residence of the Fleming family, is entirely swept away, and the ancient village of that name, is now reduced to two houses, with the church between them. Here are some ancient encampments. The sea has made considerable encroachments at this place.

GREENHALGH.]—At the village of Greenhalgh, 8½ miles N. W. by N. from Kirkham, are the ruins of Greenhalgh castle, which seems to have originally consisted of seven or eight towers of great height and strength. Some writers date its foundation in the Saxon heptarchy; and others attribute it to Thomas Stanley, first Earl of Derby, in the reign of Henry the Seventh. The country around is noted for its fine breed of cattle, and for abundance of potatoes.

HAIGH HALL.]—On an elevated site, about a mile N. from Wigan, stands Haigh Hall, the ancient seat of the Bradshaighs, whose family is now extinct. From this family, it descended to the Earl of Balcarra, who now resides here. This venerable mansion was built at different periods; the chapel is supposed to be of the age of Edward the Second. In the front, are the arms of Stanley and Bradshaigh. The house contains some good paintings. Adjoining the hall, is a summer-house, built of cannon coal, under the direction of the late Lady Bradshaigh, who forms so distinguished a figure in the correspondence of Richardson.

HALE HALL.]—In the chapelry of Hale, 7½ miles S. from Prescott, is Hale Hall, a seat belonging to John Blackbourne, Esq. This estate appears to have belonged to the Ireland family, soon after the Conquest; one of whom was buried in the chapel belonging to the hall, in 1088. The north front of the mansion was built in the year 1674, by Sir Gilbert Ireland. A modern front, to the south, was erected a few years ago, which commands a fine view of the Mersey, with the high grounds of Cheshire, and part of North Wales. The river here is about three miles across, and Mr. Blackbourne, as lord of the manor of Hale, is entitled to fourpence, for every vessel that anchors on the northern shore, in this district. Near the house, is a decoy-pool, for taking wild fowl. Here is a small chapel, which is independent of the parish church of Childwall. In this chapelry, was born, in the year 1578, John Middleton, commonly called, the "Child of Hale," who was remarkable for his gigantic stature, and uncommon strength. It is said, that Sir Gilbert Ireland introduced him to the presence of James the First, in a very fantastic dress, having large ruffs about his neck and hands, a striped doublet round his waist, a blue girdle, embroidered with gold; large white plush breeches, adorned with blue flowers; green stockings; shoes, with red heels, tied with red ribbon; and wearing, at his side, a sword, suspended by a broad belt over his shoulder, which was embroidered similar to the girdle. On his return from London, a portrait was taken of him,

him, which is now preserved in the library of Brazen-nose college, Oxford. This extraordinary personage was nine feet three inches in height; his hand, from the carpus to the end of the middle finger, measured 17 inches; and his palm, 8½ inches. His formidable appearance was always a sufficient guard to his master's house, from nightly depredators.

HASLINGDEN.]—This is an improving market and manufacturing town, occupying a bold and bleak site, 7¼ S.W. by S. from Burnley, and 202¼ N.N.W. from London. Formerly the town was seated on the brow of a hill, where the church, which was rebuilt about 40 years ago, still continues. The introduction of the cotton manufactures has occasioned a large increase of buildings in the valley, below the old town. It probably derived its name from the hazel groves, which formerly much abounded here. Though accounted a parish, it is only a parochial chapelry, subject to Whalley. In the church, is a font of the time of Henry the Eighth, and some ancient tombs. The town is governed by a constable, and six churchwardens, who have the care of six divisions; two of these have a chapel of ease of their own. A spirit of industry and enterprise pervades all ranks. Among other improvements, a handsome square was completed a few years since. The canals are of the most essential advantage to this town. Numerous mills for carding and spinning, are established on the river. The population of Haslingden, in 1811, was 5127.

HAWKSHEAD.]—The little market-town of Hawkshead, is situated 28 miles N.N.W. from Lancaster, and 266¼ N.N.W. from London. Being the principal town of Furness fells, it is the centre where all business is transacted; and though it has no staple manufacture, yet from local circumstances, it has a considerable market. The church, which was formerly a chapel under Dalton, was made parochial towards the close of the 16th century, by Edwin Sandys, Archbishop of York;* he also founded and endowed here a free grammar-school. A neat town-house was built a few years ago, by subscription. At Gallow-Barrow, an adjoining village, is a chantry-house, endowed, in 1717, by the will of the Rev. Thomas Sandys, for the maintenance of poor boys, natives of the place, who are to be educated at the free-school. Hawkshead, in 1811, contained a population of 676.—Near this town, are the remains of a house where one of the monks, as representative of the Abbot of Furness, resided, and performed Divine service, and other parochial duties. Over the gateway is a court-room, where the abbot's temporal rights and jurisdiction, were exercised by the bailiff of Hawkshead. In the vicinity of the town,

* Dr. Edwin Sandys, a native of this town, was the son of William Sandys, Esq. of Estwaite, in Furness. He was educated at Cambridge, and rose to the honours of master of Catherine Hall, and vice-chancellor of the university. Having incurred the displeasure of Queen Mary, by a sermon in defence of Lady Jane's right to the throne, he was stripped of his promotions, and imprisoned six months; after which he went

are the following seats:—**Craithwaite Hall**, on the western bank of the Windermere, is the seat of William Rawlinson, Esq. At Coniston-Water-Head, is a seat of George Knott, Esq.; and, at Bellmont, is a seat of the Rev. Reginald Braithwaite, M. A.

HEATON HOUSE.]—About four miles N. E. from Manchester, is a seat of the Earl of Wilton. This estate is part of the township of Little Heaton, in the parish of Prestwich. The present noble possessor of Heaton inherits this estate, in regular descent, from Sir John Egerton, who came into possession in the reign of Queen Anne. The mansion, a handsome structure, of stone, stands in a commanding situation, in the midst of a fine park. In the centre of the south front, is a semicircular piece of architecture, of the Ionic order, surmounted with a dome; and, branching from the former, are two spacious colonnades, terminated by two octangular pavilions. This front commands some pleasing prospects. The interior of the mansion corresponds with its outward appearance, and is furnished with great elegance. On an elevated spot, in the park, is a circular temple, which commands some very extensive views of Yorkshire, Cheshire, Derbyshire, and Staffordshire. The park, which includes an area of about five miles in circumference, has lately been inclosed.

HELEN'S, ST.]—St. Helen's, from its advantageous situation on the Sankey canal, 3¼ miles N.E. by E. from Prescott; and, from its natural characteristics, has gradually increased to its present size and importance. An extensive copper work was established here, about the year 1780, by the proprietors of the Paris-mine, in Anglesea; and, it is estimated, that at these works, and another, belonging to the Company, on the same canal, 20,000 tons of ore are annually smelted. The works at Ravenhead produce, weekly, 30 tons of small copper bars, on account of the East India Company, which are exported to China, where they are said to circulate as coin. These bars are dropt from the mould into the water, when an effervescence commences, by which the bar is changed from a leaden hue, to the colour of red sealing-wax.

HEYSHAM.]—At Heysham, 4½ miles W. from Lancaster, are the ruins of a small ancient building, called St. Patrick's Chapel. Its architecture is of a very early character: a semicircular arch forms the entrance-doorway, which is ornamented with fluted mouldings. The building is very small, and its situation is on a rock. At a short distance from one end, are four holes cut in the shape of stone coffins, out of the original rock; close to which is a natural bench. The whole appears to have been formed as

to Germany, and remained there till the Queen's death. Upon the accession of Elizabeth, he took an active part in the reformation of the church, and was soon advanced to the see of Worcester; whence he was translated to that of London, and afterwards to the archbishopric of York. He died at Southwell, the 10th July, 1588, and was interred in that church.

an oratory for a Catholic priest, to offer up prayers for the souls of some persons that were shipwrecked on this coast.

HOLKER HALL.]—A little to the westward of Cartmel, is Holker Hall, one of the seats of Lord George Cavendish. The house is a large irregular building, forming two right-angled sides of a triangle, and has been partly fronted in the Gothic style. The park is finely wooded; and, from its rocky hills, commands some grand and picturesque views. The interior of this mansion contains a large collection of pictures; some of which are fine and curious. Among the portraits, are the following:—Duchess of Cleveland, by Lely; Admiral Penn, half-length, dressed in black; Sir James Lowther; Thomas Wriothesley, Earl of Southampton; a head; Vanduyck, when young, by himself; Lord Richard Cavendish, by Sir Joshua Reynolds; Sir Thomas Riston, ancient proprietor of Furness abbey, and manor. Among the paintings, the following may be selected as worthy of peculiar attention:—Two landscapes, by Claude; and one by Tuccarelli; two interior views of churches, one by day-light, and the other represented under the effect of lamp-light; St. Francis D'Assize, kneeling, a fine picture, in the style of Spagnoletto; two large landscapes, by Claude; a party of peasants, at cards, by Teneirs; two pictures, by Wouvermans; two fine battle-pieces, by Borgognoni; an historical picture, by Poussin; a landscape and cattle, by Rubens; a landscape, by Hobbins.—In the vicinity of Holker, is Flookborough, formerly a market-town, but now reduced to a small village.—Near this place, is a famous spa, called Holy-well, the water of which is recommended in cutaneous disorders.

HOLLAND.]—Holland, or Up Holland, five miles W. by S. from Wigan, gave name to the illustrious, but ill-fated family of Holland. Here was formerly a Benedictine priory.

HOLME.]—This place, which is 4½ miles S.E. by S. from Burnley, is, at present, a chapelry to Whalley. The surrounding country, which belongs to the Rev. Dr. Whitaker, was much improved between the years 1784 and 1789; during which period, 422,000 trees, of various species, were planted on the rocky brows, and in the glens and gullies of this estate. The house was originally built of wood, and contained some private closets for the concealment of priests, as the family continued recusants to the latter end of the reign of Elizabeth. A chantry belonged to this demesne, founded after the dissolution of Whalley abbey; but it was soon after dissolved. The chantry, however, was preserved; and had a clergyman licensed to it, in 1742. It now belongs to Dr. Whitaker, who was licensed

on his own petition. A practical superstition, which is peculiar to the place, deserves to be mentioned. The hydrocephalus is a disease incident to adolescent animals, and supposed to be contagious. In order to check the progress of the disease, it was usual with the farmers, when a young beast had died of this complaint, to cut off the head, and convey it for interment, into the nearest part of the adjoining county. It is not easy to give an adequate reason for such a fantastic custom; but it may, probably, have arisen from some confused analogy to the case of the Azazel, between the removal of sin, and of disease.*

HORNBY.]—The little market-town of Hornby, ten miles N.E. from Lancaster, and 248½ miles N.N.W. from London, is situated on the eastern bank of the Lune, over which is a bridge of three arches. Its population, in 1811, was 420. From this town, the views down the valley, are extremely fine, and the winding river, with its wooded banks, present some highly picturesque scenes. The cotton manufactory constitutes the chief business of the place. A religious hospital, or priory, for Premonstratensian canons, was founded here, and made subject to the abbey of Croxton, in Leicestershire. At the Dissolution, it was granted to the Monteagle family, who possessed an old baronial mansion, called Hornby Castle. This castle stands on an eminence, about half a mile from the river, and was founded by N. de Mont Begon. It is now the property of John Marsden, Esq. The church, which is subordinate to Melling, is a neat edifice, with an octangular tower.

HULME HALL.]—At a short distance, W. from Manchester, stands Holme, or Hulme Hall, a curious specimen of ancient domestic architecture. But its appearance is rather romantic than beautiful. It is situated on the side of a shelving bank of the Irwell, and is now in a state of dilapidation. This manor belonged to Adam de Rossindale, in the time of Edward the First. George Lloyd, Esq. obtained it, by purchase, in 1751, and it afterwards came into the possession of the late Duke of Bridgewater. During the civil war, the dowager Lady Prestwich encouraged her son to be faithful to the royal cause by suggesting to him a treasure, which was supposed to be concealed in Hulme; but, being taken speechless, the nature of the treasure could never be ascertained.

INCE BLUNDEL.]—Nine miles N. from Liverpool is Ince Blundel, the seat of Henry Blundel, Esq. This estate and manor appear to have been in possession of the Blundel family, in the time of Henry the Third, and descended in a regular succession to the present owner. The mansion is a large hand-

* William Whitaker, an eminent divine, was a native of Holme, and was born A.D. 1550. His death took place, in 1598, and he was buried in the anti-chapel of St. John's college, Cambridge. At the age of twelve, he was sent to St. Paul's school, and from thence proceeded to Trinity college, Cambridge. In his thirty-first year, he was elected regius pro-

fessor; which elevation, at so early a period, must be a proof of very extraordinary talents. In 1585, he became a controversial writer. Of these writings, a large folio volume was published after his death, which is a monument of incredible industry and great facility in composition.

some building, richly stored with works of art, and the collection of ancient statuary may be pronounced of unrivalled merit in this country. A pantheon, on a plan resembling that of Rome, is the repository of choice specimens of sculpture. The collection is very extensive, and contains many of the productions of the most celebrated artists of Greece. In forming this collection, Mr. Blundel has devoted a considerable portion of his life, and expended immense sums of money. His zeal in pursuit of this object has been unremitted, and having been much abroad, he had opportunities of collecting many objects which were not sufficiently appreciated at the time. It would be impossible here to give the reader an accurate description of the whole, which consists of 100 statues, 150 busts, 110 bass-relievs, 90 sarcophagi and cinerary urns, 40 ancient fragments, besides marble pillars, tables, and other antiquities; and also about 200 pictures. We will, however, select from each class, a few of the most striking. Of the statues, Minerva and Diana, in the entrance-hall, may be ranked with the finest works of Grecian art. The Minerva is remarkable for her graceful ease, and dignified expression. It was found at Ostia, and brought from the Duke of Lante's palace at Rome. The Diana is distinguished for her sweetness of countenance, and her firm and dignified attitude, curious dress, and rich buskins. The legs and feet claim particular attention for their admirable execution. In this hall, is a lovely figure of modern sculpture, by Canova, representing Psyche, gracefully bending over a butterfly. The statue of Jupiter Pacificus finely expresses the attributes of the god of Peace. The Theseus, a remarkably fine colossal statue, was found in Adrian's villa, and was purchased of the Duke of Modena. The Esculapius is in fine preservation, and was much noted in the villa Mattei. The figure of the muse, Urania, is remarkable for its beautiful drapery, and elegant form. The Juno, veiled, holding a pomegranate; the statue of a Roman senator, in his robes; the Bacchus, Apollo, Anchyræ, and several different statues of Minerva, Apollo, Venus, Mercury, Hygeia, Isis, &c. claim a particular attention; as also some rare antique Egyptian idols: among which, is one in basalt. There are also two groups of statuary in the conservatory; one of which is considered as the finest specimen of ancient sculpture extant.

Among the busts, the most conspicuous are those of Adrian, Septimus Severus, Salvius Otho, Cicero, Claudius Drusus, Augustus Cæsar, Julius Cæsar, Claudius Albinus, Cato, Didia Clara, Marciana, Julia, and a colossal bust of Vespasian. The busts of Jupiter Serapis, and Bacchus, are fine and genuine antiques. Two casts, in bronze, of the heads of the celebrated centaurs at Rome, and three or four tragic masks, three feet in height, are valuable for their excellence and rarity. In reviewing the ancient fragments, the very curious and highly finished hand, on a pillar of porphyry, in the en-

trance-hall, claims our first regard. Another hand, which belonged to the celebrated statue of the philosopher Teno; an antique foot, on a pedestal; a leg and thigh; are fine relics. Here is also a colossal fragment, of most admirable sculpture. In the collection of bass-relievs, a lion's head, an Etruscan sacrifice, a tabula votiva, terminus, bacchanalian scene, chariot-races, an elegant figure of Victory, Nereides, a sepulchral monument, and a Jupiter Pacificus, are deserving of particular attention. The sarcophagi, and cinerary urns, are rare specimens, particularly one of the sarcophagi, seven feet long, and four high, at each end of which, are lions devouring their prey. The collection of marble tables, between 30 and 40 in number, is peculiarly choice and valuable. These are of Sicilian jasper, Verd-antique, peccorella, Oriental alabaster, lava, dova, brocatella, branco-nero, specimen tables, and fine mosaic, both ancient and modern. Also several columns and pillars, of various sorts of marble, with several alabaster, and Etruscan vases, and curious antique bronzes. The pictures are not so select as might be expected; yet there are some fine paintings, among which are the following:—The Fall and Redemption of Man, by Raphael; the Marriage Feast, by Paul Veronese; Bacchus and Ariadne, a large painting, by Sebastian Ricca; four fine landscapes, by Wilson; two curious portraits, by Gerard Dow; the Alchymist, by D. Teniers.

IRELETH.—Kirkby Ireleth, five miles W. from Ulverston, was formerly the seat of the ancient family of Kirkby. The manor-house, now much decayed, was called Kirkby Cross House, from a cross before the door, the head of which is said to have been broken off by order of Archbishop Sandys.—Ireleth is the place whence the iron ore is now shipped; and its name may probably be derived from Ire, iron, and Lath, a barn, in the local dialect.

KIRKDALE.—This pleasant village, two miles N. by E. from Liverpool, was anciently part of the possessions of the family of More, or De la More, who settled in this neighbourhood, about the year 1280, and built a magnificent moated house, near Liverpool, and another at a place called Bank Hall, in Kirkdale, near the sea, which was a curious specimen of ancient architecture. These buildings were pulled down many years ago.

KIRKHAM.—The little market-town of Kirkham, 22 miles S. by W. from Lancaster, and 22½ N. W. by N. from London, has a well-endowed free-school, with three masters. It has some trade in coarse linens, and also in sail-cloth. A mile west of the town, is Ribby Hall, a large well-built brick mansion, belonging to Joseph Hornby, Esq. The population of Kirkham, in 1811, was 2214.

KNOWSLEY.—In the village of Knowsley, 2½ miles N.W. from Prescott, is Knowsley Park, an ancient seat belonging to the Earl of Derby. The park is extensive, and abounds with fine wood; but many of the largest trees are nearly stripped of their foliage, and slope towards the north-east. The man-

sion

sion is seated on an elevated part of the park, and has evidently been erected at different periods.—The most ancient part, which is of stone, with two round towers, is said, in a work intitled “Description of the Country round Manchester,” to have been raised by Thomas, first Earl of Derby, for the reception of his son-in-law, Henry the Seventh; but, in the “History of the House of Stanley,” it is stated, that the Earl only enlarged the house by a stone building, and repaired and beautified the other part.” The preparations made by the Earl, for the royal visit, were upon a grand scale; for, besides the alterations at the mansion, he made a road from the cross ways leading from Sankey and Wenwick to the river; and, at the bottom, erected a spacious stone bridge, and threw up a causeway across the marshes, to the rising ground, on the Cheshire side, which was kept in repair to the time of William, Earl of Derby. The additions which were then made to Knowsley mansion, are not precisely defined; and the next alterations made were by James, the tenth Earl, in the reigns of William the Third, Queen Anne, and George the First. He died at Knowsley, in 1735. The work just referred to, specifies, that he rebuilt the old seat in the modern style; and, on the front of it, caused the following inscription to be cut:—“James, Earl of Derby, Lord of Man and the Isles, grandson of James, Earl of Derby, by Charlotte, daughter of Cloud, Duke of Tremouille, who was beheaded at Bolton, the 16th of October, 1651, for strenuously adhering to King Charles the Second, who refused a bill, unanimously passed by both Houses of Parliament, for restoring to the family the estates which he had lost by his loyalty to him.” The house contains many portraits of the ancient family of Stanley, which are interesting, as serving to perpetuate the resemblance and costume of characters who form so distinguished a figure in the history of their country. Exclusively of the above, are several other portraits; and a large collection of pictures, by the old masters: some of which are of sterling merit. The principal of these were collected by James, Earl of Derby, who patronised a Mr. Winstanley, a native of Warrington, and sent him abroad to collect them.

LANCASTER.]—The market, borough, and county-town of Lancaster, is situated at the distance of 238½ N.N.W. from London. During the occupation of the country by the Brigantes, it was called “Caer Werid,” the green town. It afterwards became a Roman station, which occupied the eminence where the castle and church now stand.—Antiquaries have generally described this station as the Longovicum of the Romans; but the Rev. John Whitaker, who is of a different opinion, observes as follows:—“In Richard’s *Iter*, the station Ad Alaunam, appears clearly from the mention of Luguvalium and Brocavonacis, on one side, and of Coccium and Mancunium on the other, to be somewhere upon or within the northern borders of Lancashire. And

this, and the name, Ad Alaunam, carry us at once to the station at Lancaster, the castrum upon A Laun, or the river Lan. The reality of this station has always been confessed, but the name of it has been sometimes supposed to be the Lugandinum of the Chorography, and more generally, but more wildly, the Longovicus of the Notitia. It was certainly fixed upon the plane of the present castle-hill, as the rocky eminence of the hill, and the immediate vicinity of the river, clearly evince, of themselves, and as the still hanging remains of the Roman wall, upon the steepest part of it, concur to demonstrate.” Reynolds, in his *Iter Britanniarum*, identifies this place as the Breme-tonacis, of Antoninus. Thus various opinions prevail concerning the Roman name of this station, though all agree that it was possessed by the Romans. Camden is very positive on this head; but the fragment of a wall which he and Mr. Whitaker ascribed to that people, seems to have belonged to some monastic building. It was situated on the declivity of the hill, between the castle and the bridge, and was called “Wery-Wall,” probably from the British name of the town, “Caer Werid.” Leland, indeed, could not meet with any evidence that the town had ever been walled. However, from various Roman antiquities, which have, at different times, been discovered, within the town, it cannot be doubted, that Lancaster was a Roman military station, or garrison; but whether it bore the appellation of Ad Alaunam, or Longovicum, or both these names, at different periods, is not easily determinable. Under the Anglo-Saxon dynasty, also, Lancaster was certainly a fortress of considerable consequence; for it appears to have been the grand barrier and obstacle to the northern Picts, or Scots, who having eluded or conquered the intermediate garrisons between their southern boundaries and this place, generally encountered a stubborn resistance and repulse here; a circumstance which greatly exasperated the marauding borderers, who, immediately after the Romans left the island, attacked the town, and levelled its fortifications. Soon after the arrival of the Saxons, and the establishment of the Northumbrian kingdom, the commanding site of this ruined town attracted the new settlers, who appear to have restored some of the dwellings, and re-edified parts of the castle. The superiority of this to any other town in the district, is manifested, in the event of its being constituted, in the seventh century, the chief town of the county. Of its annals during the Saxon heptarchy, we have no records; but, soon after the Norman conquest, the town again assumes some historical consequence. At the time of the Domesday survey, there was no church at Lancaster; yet, from the name Cherca-lancaster, affixed to one of the villages, it seems probable, that here, as in many other instances, had been a Saxon church, which was probably destroyed in the ravages of the Danes. Lancaster, on account of its bold and elevated situation, was probably obtained

tained from the Conqueror, in the end of his reign, or from William Rufus, soon after his accession, by Roger de Poitou, for the erection of a great baronial castle; for, as early as the year 1094, we find this person granting the church of St. Mary, in this place, then newly founded by him, to the abbey of Sees, in Normandy, to which it continued a cell until the alien priories were seized by Henry the Fifth, when it was granted once more to the Carthusian abbey of Sion, in Middlesex, to which it continued to be a cell till the general dissolution of monasteries. The foundation of the church, and of the castle, were probably contemporary. The great tower of the latter, still standing, displays the strong massive style of architecture of that period. Hubert, Archbishop of Canterbury, besieged and took this castle, in 1199: at which period, it was possessed by the brother of King John, in trust for that monarch, when he came to the crown. In the year 1205, the castle and honours appear to have been in the possession of Ranulph Blundevil, Earl of Chester; and, in the years 1216 and 1223, the same were held in charge by William de Ferras, Earl of Derby. Parts of the foundations of the castle have been attributed to the Romans, and the large square keep has been commonly ascribed to the Saxons; whilst the grand entrance tower gateway, with some other portions, are generally referred to the reign of Edward the Third. Lancaster owes its chief celebrity to that monarch, and to his third son, John of Gaunt, who was created by his father, Duke of Lancaster. After this creation, the style of John of Gaunt was Duke of Lancaster, and Earl of Richmond, Leicester, Lincoln, and Derby; and he claimed, as Earl of Leicester, the office of hereditary seneschal, or steward of England; as Duke of Lancaster, to bear the great sword, called Curtana, before the Kings of England, at their coronation; and, as Earl of Lincoln, to be grand carver at the dinner given on that occasion. The Duke being invested with this title, his royal parent next conferred on him certain grants and privileges to support his dignity; and, it appears, that the duchy of Lancaster was constituted an important establishment—a sort of petty kingdom. The castle, it is supposed, was now considerably enlarged, and that a household was established here, suitable to the dignity of its proprietor, and to the customs of the times. The Duke also procured for the town, the exclusive right of holding the sessions of Pleas for the whole county.—Thus the prosperity of Lancaster materially depended upon its connection with the lords or proprietors of the castle; a circumstance which will account for the steady loyalty evinced by the inhabitants, even in the reign of King John, who granted them a charter as ample as those he had before conferred on Northampton and Bristol. What the inhabitants of this town gained, however, by their adherence to the monarch, was counterbalanced by their losses through their devotion to the Lancas-

trian line, during the unhappy civil war between the houses of York and Lancaster. This town was then half depopulated; and, even in Camden's time, the residents consisted principally of husbandmen. On the confirmation of the charter, with additional privileges, by Charles the Second, the town again revived; and, from that period, it appears to have progressively augmented its commerce, trade, and buildings.

The castle, which has been alternately the terror, glory, and safeguard, of the town, is spacious in plan, and commanding in situation. Occupying the summit of a high hill, built of strong materials, with massive walls, and several guard-towers, bastions, &c. it must formerly have assumed a grand, and apparently safe residence. Much of its ancient character and dignity have been sacrificed; yet it still occupies a spacious area, and its architectural features and appropriation are entitled to general admiration. The exterior walls embrace an area of 380 feet from east to west, by 350 feet from north to south; in which is a large court-yard, with smaller yards, and several differently shaped towers. The whole is now appropriated to the county-gaol, with its appendages of gaoler's house, prisoners' rooms, cells, workshops, courts of justice, &c.—Nearly facing the east, and communicating with the town, is the strongly fortified tower-gateway, or chief entrance, consisting of two semioctangular projections, perforated near the bottom, with narrow apertures in each face for the discharge of arrows. The whole of the summit has bold machicolations, with embrasures, &c. The gateway was additionally guarded by portcullises. Within this entrance, is a large open area, or court-yard, surrounded with towers and fortified walls; nearly facing the entrance, at the opposite side of the court, is the large square keep; the walls of which are of amazing thickness, and its apartments are of grand dimensions. The floors of these rooms are stone and composition. The summit commands several extensive, diversified, and sublime views, in “which the winding river Lune, with its bridges and aqueduct, the expanded view of the bay of Morecambe, the mountains of Cumberland, Westmorland, and Yorkshire, and the beautiful vale of Lonsdale, constitute the prominent features.” A little north of the keep, are the shire-hall, and county courts, with their offices, &c. mostly of modern erection. Mr. Harrison, the architect of Chester gaol, &c. gave the principal designs for these alterations, which in general have been grand and judicious; but the more recent finishings are from the designs of Mr. Joseph Gandy. In the decorative finishing of the windows, &c. of the grand jury-room, which is circular, with a carved roof, ornamented with groins, springing from brackets, and in the shire-hall, the latter gentleman has introduced some elegant and correct architectural decorations. The shire-hall is singularly beautiful, and consists of a semicircular area, with an aisle going

going round it, and has a groined roof, with the interstices between the groins open. This roof is supported by six quadruple clustered columns. Against the flattened side of the room, are the judges' seats, beneath elegant pinnacled canopies, and the windows, doors, pannels, seats, &c. are all finished in a style corresponding to the enriched ecclesiastical buildings of the fifteenth century.—Over the judges' seats, are two full-length portraits of Lord Stanley, and Mr. Blackburne, members for the county. Between them, is a full-length portrait of his present Majesty, seated on a charger, with a view of Lancaster castle and church in the background, by Northcote. On it is the following inscription:—"Presented to the County Palatine of Lancaster, by the High Sheriff, James Ackers, Esq. of Lark Hall, Ann. Dom. 1800." In a circular tower, called John of Gaunt's Oven, is a collection of rolls, records, &c. relating to the official business of the county. In another part of the new buildings, are the Crown Hall, a spacious and appropriate room, also a library, &c. all finished and fitted up in a grand, substantial, and elegant style. On the north and south sides of the castle, are raised terraces, forming very pleasant promenades. Some charitable legacies have been bequeathed to the debtor prisoners of this gaol; the walls of which are estimated to contain 5000 men.

Adjoining the castle, is the parish church, a large spacious building, consisting of a nave, side aisles, and a tower at the east end. The aisles are divided from the nave by eight pointed arches on each side, the mouldings of which spring from clustered columns; and, at the east end, is a wood screen, of elegant carving, enriched with foliage, pinnacles, crockets, &c. Here are a few of the monkish turn-up seats still remaining. Among the monuments, is a mural marble slab to William Stratford, LL.D. commissary of the archdeaconry of Richmond, who died in 1753, by L. F. Roubiliac. On it, is a small groupe in basso-relievo, representing a figure of Charity relieving an Old Woman, with two Children. The figures, though slight, are marked with masterly expression, and evince the taste and skill of this justly eminent sculptor. Against the north wall, is a large mural tablet to the memory of Samuel Eyre, a judge, whose body was removed to Salisbury, the 12th of September, A.D. 1698. On a grave-stone, is the following pompous inscription, commemorative of Thomas Covell, who was "six times mayor of the town, 48 years keeper of the castle, 46 years one of the coroners of the county; captain of the freehold land of the hundred of Lonsdale, on this side of the sands, &c. and died August 1st, 1639:—"

"Cease, cease to mourn, all tears are vain and void,
He's fled, not dead; dissolved, not destroy'd;
In heaven his soul doth rest, his body here
Sleeps in this dust, and his fame every where
Triumphs: the town, the country farther forth,
The land throughout proclaim his noble worth.

Speak of a man so courteous,
So free, and every where magnanimous;
That story told at large here do you see
Epitomized in brief, COVELL was he."

Lancaster church was one of the churches reserved by Henry the Eighth, as a sanctuary, after the abolition of that dangerous privilege in other parts of the country.

The situation of the town being on a gentle ascent, and the summit adorned with the church and castle, the general appearance is commanding.—The river Lune makes nearly an acute angle on the north side of the town, whence several regular streets proceed to the south, leaving the church and castle in some measure detached. Many of the former are narrow, but the houses are generally good, constructed of free-stone, and covered with slate. There are also several handsome mansions, the residence of men of fortune. An extensive quay, large warehouses, and many neat houses, were erected a few years ago; and some of the streets are well-paved. The town has a chapel dependent on the established church; in addition to which the Quakers, Presbyterians, Methodists, and Roman-Catholics, have their meeting-houses.

The shambles of this town deserve particular notice, as they resemble a street, where every butcher occupies a shop, and has his name over the door. An ancient bridge, now in ruins, connected the opposite shores of the Lune, near St. George's quay; but the increasing opulence and population of the town, rendered a new and more commodious one necessary. This was erected from the extremity of Cable Street to Skerton, at the expence of nearly 12,000*l.* which was paid by the county. The arches, of equal size, and elliptical, are five in number; the length of this handsome structure is 549 feet.

Lancaster has a theatre, situated in St. Leonard's gate; and an assembly-room, in Buck Lane. In Buck Lane, are also twelve alms-houses, founded in 1715, for twelve poor men, who receive 16*s.* 8*d.* per quarter, and new coats annually. These were founded by William Penny, alderman. Amongst other benevolent institutions, are four alms-houses, called Gardner's Charity, founded in 1485, and rebuilt in 1792; six almshouses, founded in 1651, by George Johnson; and Common Garden Street hospital, consisting of eight houses for maiden ladies, who are allowed 3*l.* per annum, and a new gown each, for which they are indebted to Mrs. Ann Gillison, of Lancaster, who died in 1790. The inhabitants have, at different periods, established a free-school, and two charity-schools; the first, for the education of 60 boys, was rebuilt by subscription, in 1682, under the auspices of Bishop Pilkington. One of the charity-schools is for 50 boys, who are clothed, educated, and allowed the sum of 6*l.* as an apprentice fee. The other school, supported by similar means, is in the High Street, where 40 girls are clothed and instructed.

The manufactories of Lancaster, which are inconsiderable,

considerable, chiefly consist of cabinet-making, spinning of twine, cotton printing, and weaving of sail-cloth. Ship-building has been greatly encouraged, and many large vessels have been constructed, particularly by Mr. Broockbank. Unfortunately, the Lune is obstructed by shoals, which prevent vessels of considerable bulk from approaching within six miles of the town; nor can those above 250 tons reach the quays. Lancaster trades to America with hardware and woollen manufactures; forty or fifty ships trade to Norway; and, besides cabinet goods, considerable quantities of candles are exported to the West Indies. The Custom House is a small neat building, with a portico supported by four Ionic columns.

Almost in the centre of Lancaster, is the town-hall, a large commodious building, ornamented with a bold portico. In the council-room, is a full-length portrait of Nelson, and another of Pitt, by P. M. Lonsdale, a native of this town.

Lancaster first sent members to Parliament, in the 23d of Edward the First. The returning officers are the mayor and two bailiffs. Edward the Third granted permission for the mayor and bailiffs to hold the pleas and sessions at Lancaster, and no where else in the county. The corporation is composed of a mayor, recorder, twelve aldermen, two bailiffs, twelve capital burgesses, twelve common burgesses, a town-clerk, and two serjeants at mace.

An excellent salt-marsh adjoins the banks of the Lune; of which about 500 statute acres belong to 80 of the oldest freemen of Lancaster, or their widows, being held in trust by the corporation. This marsh is pastured, and divided into what are termed *Orl Grasses*; that is, a privilege of turning one horse, or two cows, of any size, to summer upon this common: a poney being reckoned equal to two oxen, however small the horse, or large the ox.—The number of grasses, or gates, is equal to that of privileged burgesses, with two more for the trustees; 82 in the whole, which, if let, are worth 1*l.* 11*s.* 6*d.* or upwards, each, per summer.

Lancaster has communication with the rivers Mersey, Ribble, Ouse, Trent, Darwent, Severn, Humber, Thames, Avon, &c. which navigation, including its windings, extends above 500 miles into the counties of Lincoln, Nottingham, York, Westmorland, Chester, Stafford, Warwick, Leicester, Oxford, Worcester, &c. About a mile to the north-east of the town, is a grand aqueduct-bridge, which conveys the Lancaster canal over the Lune. This fabric, designed, and executed, by Mr. John Rennie, civil engineer, is justly considered as the most magnificent structure of this kind, that has ever been erected in Britain. The architect had to encounter a depth of water in the bed of the river, and a soft muddy bottom. "It was therefore found necessary to lay a foundation at the depth of 20 feet beneath the surface of the water. This consists of a flooring of timber, supported by piles 30 feet long. The foundation alone is said to have

cost 15,000*l.* and the superstructure above double that sum, although the stone was obtained within about a mile and a half of the place. The bridge consists of five circular arches, springing from rusticated piers, with Gothic ends. Each arch is of 70 feet span, and rises 39 feet above the surface of the river. The whole bridge has a handsome cornice, and every part of it is designed with strict regard to strength, durability, and elegance. The total height, from the surface of the river to that of the canal, is 51 feet, and barges of 60 tons burthen pass over it." About a mile north of the town, is Beaumont Hall, the seat of E. F. Buckley, Esq.; and, about a mile further, is Halton Hall, the seat of W. B. Bradshaw, Esq.

LATHAM.]—The township of Latham, with a population of between 2 and 3000, is 3½ miles N. E. by E. from Ormskirk. In the township, is Latham House, the seat of E. W. Bootle, Esq. M. P. distinguished as the ancient residence of Robert de Fitzhenry, or Latham, one of the barons who commanded at the memorable siege of Calais, in the reign of Edward the Third. It also acquired particular renown, by the astonishing resistance it made under the command of Charlotte, Countess of Derby, who was besieged here by Colonels Egerton, Rigby, Ashton, and Holcroft, from the 28th of February, 1644, to the 27th of May, following, when she was relieved by Prince Rupert. The Earl was in the Isle of Man. "The heroic and most undaunted Lady Governess was often without the gates, and sometimes near the trenches of the enemy, encouraging her brave soldiers with her presence; and, as she constantly began all her undertakings with prayers in her chapel, so she closed them with thanksgiving; and truly, it was hard to say, whether she was more eminent for courage, prudence, and steady resolution; or justice, piety, and religion." However, by an order of the King, on the 4th of December, 1645, the house was surrendered to the Parliament army; and the manor was afterwards charged with the payment of 600*l.* per annum, on a composition with the commissioners, the house having been mostly demolished on its coming into the hands of the Parliament. William Richard George, ninth Earl of Derby, intending to re-edify this ancient seat, erected a sumptuous and lofty front, which composes a part of the present house, but did not live to finish his design. Henrietta, Lady Ashburnham, one of his daughters and coheirresses, sold it to Henry Furness, Esq. from whom it was purchased, in 1724, by Sir Thomas Bootle, of Melling, afterwards chancellor to Frederick, Prince of Wales, whose niece married Richard Wilbraham, Esq. of Rode Hall, in Cheshire; and their eldest son is the present possessor. Latham House was built of stone, by Sir Thomas Bootle, after a beautiful design of Leoni. Dr. Aiken describes it as having a ground-floor, principal, and attic; and a rustic basement, with a double flight of steps to the first story. The north front contains nine windows on each floor, and

and the south front, thirteen. The body of the house extends 156 feet by 75; and the offices attached to it by two colonnades, supported by Ionic pillars. Among other good apartments, Latham House contains a hall of 40 feet square, and 30 high; a saloon of 40 by 24, and 24 high; a large library, besides two principal staircases. The pictures are few, and consist chiefly of Frederic, Prince of Wales, and the principal persons of his court.—This house stands nearly in the centre of a park, five miles round, and commands an extensive view, towards the north, of the mouth of the Ribble and the sea, with the mountains which divide Yorkshire and Lancashire. At a quarter of a mile from it, in the park, is a chapel, founded in the fifteenth century, with some alms-houses adjoining, for the benefit of twelve alms-people. A chaplain, who bears the name of almoner, performs regular duty at this chapel. A little beyond the limits of the old park, was a celebrated spring of chalybeate water, known by the name of Maudlin Well. Its water, both in taste and quality, resembled that of Tunbridge Wells, and is said to have performed many cures. About twelve years ago, from working the coal-mines, in the neighbourhood, this spring was lost: but, in Latham Park, near the house, there is one of the same quality, though inferior in strength. In the neighbourhood, is Cross Hall, which formerly belonged to the Earl of Derby, and is now the property of Colonel Stanley. The house having become ruinous, was pulled down some years ago, and a farm-house occupies its place. At a short distance also, is Blythe Hall, once the property of William Hill, Esq. but since purchased by Thomas Langton, Esq.

LEIGH.]—The market-town of Leigh, 6½ miles N.E. from Newton, in Makerfield, has a population of about 1600. The dairies in the neighbourhood, are famous for their mild and rich cheese. A branch of the Bridgewater canal passes through this town, and has greatly improved its commerce. The town and neighbouring hamlets abound with manufactories; and coals are in great abundance.

LEVEN SANDS.]—The passage of these sands, from Cartmel to Ulverston, Dalton, &c. like that of the Lancaster sands, is dangerous, and a guide is stationed here to conduct the traveller over the bed of the river. The water, at spring tides, sometimes rises fifteen feet above the level of the sands.—Nearly in the mid-way, is a small insulated spot, called Chapel Island, where are some remains of an ancient oratory, supposed to have been the work of the monks of Furness, in which a priest was stationed to offer up daily prayers for the safety of passengers. About mid-way between the shores, the united waters of the Leven and Creke flow to the sea, and are fordable at low water. The scenery around this flat district, is diversified, and presents to the eye different aspects, as beheld under the influence of season and weather. To the south, the retiring sea exhibits a beautiful appearance from its

sparkling shore, and from the vessels that glide along the horizon; while the prospect, to the south-east, is terminated by promontories and creeks.—To the north, the aspect changes: rugged shores, with lofty mountains, spotted with woodland and heath, form a grand and sublime feature.

LEYLAND.]—Leyland, or Layland, 4½ miles N.W. from Chorley, was formerly of sufficient importance to give name to the hundred; and it still contains a population of about 2646 persons. The church measures from 65 feet by 33, and is one entire space. Monuments of the Farrington family may be seen here. Shaw Hall, the seat of ——— Farrington, Esq. lord of the manor, is a large irregular building. Its situation is pleasing, and it commands some extensive prospects. Here is a museum of natural history, with some curious fresco paintings, brought from Herculaneum. The situation of the eastern part of Leyland hundred, on a flat shore, subjects it to occasional inundations from the tides. In the year 1720, a violent storm forced the sea over its banks, and a tract of 6600 acres, was completely inundated. Houses, cattle, and grain, were washed away in a moment. The mischief extended to the parishes and townships of Hesketh-cum-Breconsall, Tarlton, North Meols, Ince Blundell, Lytham, Warton, Westley, and even to Cockerham. The damages sustained were estimated at 10,227*l*.

LIVERPOOL.]—The great and important commercial town of Liverpool, formerly an inconsiderable hamlet of the parish of Walton, lies 53 miles S. by W. from Lancaster, and 205½ N.W. by N. from London. The entire town, with its suburbs, according to a survey, taken in 1785, includes an area of 4000 yards from north to south, and 2500 yards from east to west. The latter side is bounded by the Mersey; on the opposite side are the borders of the townships of West Derby and Everton; the northern side joins the township of Kirkdale; and its southern side is skirted by Toxteth Park. The progressive increase of its population will be seen by the following statement:—

<i>Years.</i>	<i>Houses.</i>	<i>Inhabitants.</i>
1700.....	1312.....	5,714
1753.....	3700.....	20,000
1760.....	4200.....	25,000
1774.....	8002.....	34,653
1801.....	11,774.....	77,653
1811.....	16,162.....	94,376

In 1813, the empty houses in Liverpool, and its environs, reckoning front houses only, amounted to 1423; but, in the winter of 1815, the number of uninhabited houses, was only 731; consequently, there were 691 more houses occupied in 1815 than in 1813. This number, on the usual scale of 5½ persons to a house, adds to the population 3800 persons, exclusive of the back houses, which had increased in more than an equal proportion.

By the Saxons, this place is understood to have been

been called Lyferpole: others name it Letherpoole, Lyverpoole, Lyrpole, Lerpoole, Leerpool, Livrepol, Lyverpol; and, about 40 years ago, it was mostly spelt Leverpool; which is justified by some ancient MSS. and a charter as far back as the year 1524. The etymology is not easily ascertained. Some imagine it to have taken its name from a bird, formerly found in this place, called Liver; but this very bird seems to have had no other than a fabulous existence. Others consider it to have been derived from a sea-weed, known by the name of Liver, in the west of England; or, from the hepatica, or liverwort, found on the sea-coast. Some again, suppose it might originate from the family of Lever, which is of ancient date, and whose arms are exemplified in a MS. in the Harleian Collection, at the British Museum, supposed to have been written as early as 1567. Respecting the latter part of the name, however, it is generally agreed, that it was owing to a body of water with which this place was formerly overspread, like a pool. St. Patrick is said to have visited Liverpool, in his way to Ireland; in commemoration of which, a cross was erected; which, though long since destroyed, still gives name to the place where it stood, near the lower end of Water Street.

According to Camden, Roger de Poitiers, who had lands given him, in this part of the county, by William the Conqueror, built a castle here. This Roger held all the lands between the rivers Ribble and Mersey. The statement of Camden is extremely equivocal; but it is probable, that Prince John, son of Henry the Second, erected a fortress here; for that monarch having granted his son the lordship of Ireland, with its dependencies, and as the newly constituted port of "Lyrpul," was most conveniently situated for shipping stores, &c. for that island, it became necessary to secure the place by a military establishment. It appears, also, that the town had acquired some distinction, as Henry the Second, in 1173, granted it a charter, wherein it is stated, "that the whole estuary of the Mersey shall be for ever a port of the sea, with all liberties to a port of the sea belonging; and that place which the men of Lyrpul call Litherpul, near to Toxteth, from each side of the water they may come and return with their ships and merchandise freely, and without obstruction." In different subsequent charters, the place is spoken of, by each monarch, as "our borough or vill" of Liverpool; and mention is made of persons holding burgages under the crown.— Since the beginning of the present century, the town, although a borough, may be considered as perfectly free, for the purpose of commerce, to all the world.

Leland states, that Liverpool was a paved town, when he visited it; much resorted to by Irish merchants, &c. and that its small port duties were then deemed attractions to traders. From the town record of November, 1565, however, we find that the merchandise and commerce of the place were then

much reduced. Liverpool then contained only 138 householders and cottagers. Besides, in a petition to Queen Elizabeth, in 1571, the place is styled, "her Majesty's poor decayed town of Liverpool." At this period, there were only twelve barks, or vessels, with 75 men, belonging to this port, and the whole estimated at 223 tons burthen.

In consequence of the extended increase of the town, it was found necessary, in the reign of William the Third, to obtain an act of Parliament for making Liverpool a distinct and separate parish from that of Walton on the hill. From this period, the town gradually and rapidly advanced in population, buildings, commerce, and riches.

Considering the numerous charters and acts that have been successively obtained in behalf of this town, and on which its immunities, privileges, and civil proceedings, are founded, it must surprise many to be told, that some ambiguity and difficulty still exist, respecting the formation of the corporate body. A dispute has arisen, and generated two parties, or corporations, the old and the new; the first consisting of the mayor, bailiffs, and burgesses; and the latter of the mayor, bailiffs, and common-council. To settle this dispute, the old corporation resolved to try the issue of their claim at the Lancaster assizes, in 1791: and after various learned and legal arguments were advanced on both sides, it was decided in favour of the old corporation.— This decision was contested by the new corporation, who obtained a new trial in the Court of King's Bench, before Lord Kenyon, when it was decided, that the mayor, bailiffs, and common-council, constituted the proper corporation.

It is evident, that the present prosperity of Liverpool has arisen from a combination of causes; amongst which may be chiefly noticed its natural situation, its free water carriage, with the numerous manufacturing towns and mines of the county, and the enlightened policy of its civil government. Seated on the eastern bank of the estuary of the Mersey, it possessed a ready and easy communication with St. George's channel, and thence to the Atlantic ocean. Ships, when the wind is fair, at about east-south-east, will sail from the docks to the main Irish sea, in a few hours. The river gradually expands, between the town and the sea.— From the fort, to Seacombe ferry, opposite, it is about 1360 yards across. At spring tides, the water sometimes rises 30 feet; but, at dead neap, only 13 feet. Leland, as already observed, states that this port was well frequented by Irish merchants in his time; and its first importance doubtless arose from the low ratio of its import duties. From the flatness of the shore, and other circumstances, the shipping were formerly subject to great inconveniences; for, though vessels rode safely in the offing, they were obliged to ride there as in a road, rather than a harbour. In the reign of Elizabeth, a mole was formed to lay up the vessels in the winter; and a quay was made for the advantageous shipping

shipping and unshipping their cargoes. In 1709, an act of Parliament was obtained for the formation of a wet dock, now called the "Old Dock." From the increase of trade, this was soon found insufficient, and another act was obtained, in 1736, for the enlargement of the old dock, for the formation of another, called Salt-house dock, and for rendering the harbour more secure, by erecting a pier. A third act was obtained, in 1761, to enlarge the powers of both the former. Thus, a third dock, called the St. George's dock, was formed, and piers to secure the outer harbour; and two light-houses were built. Two other docks have since been made, called the King's dock, and the Queen's dock, which are situated at the north-west end of the town, and accommodated with a dry bason, and two graving-docks. These docks may be described as consisting of three sorts: the wet docks, which usually receive such ships as are on foreign service, and consequently have large and heavy cargoes to discharge; the dry docks appropriated to receive the vessels that are employed coast-ways; and the graving docks, which by flood-gates are calculated to admit and exclude the water at pleasure, for the purpose of caulking, and performing other repairs to the shipping. The uncertainty of the tides, and flatness of the shore at this port, first suggested the necessity of some artificial accommodation for the merchant vessels; and, as early as 1561, a scheme was planned for constructing a sort of dock, as a shelter from storms, &c.; but it was not till 1710, that an act was obtained to construct a regular dock. Since that time, the docks have increased in number, with the increase and population of the town, and are now augmented to fifteen: seven wet docks, five graving docks, and three dry docks, independent of the Duke of Bridgewater's dock; occupying a space of more than three miles in circumference; the whole constructed, formed, and built, upon the bed of the river. St. George's, the Old, and Salthouse docks, communicate; so that ships can pass from one to the other, and into the graving docks, without going into the river; and the King's and Queen's docks communicate in the same manner, and with their own graving docks. There are perfect communications, under ground, between all the wet docks, by large tunnels, for the purpose of one dock cleaning or washing another. Each wet dock has a dock-master, with an annual salary of 105*l.* whose office is to regulate the internal decorum of the dock, by allotting the positions of the ships in their loading and unloading; to direct the management of the flood-gates, and to attend to the docking and undocking of the ships at the time of the tide. The docks have watch, scavengers, and lamps, distinct from those of the town. Fires are not suffered; and even candles are not permitted to be lighted on board the ships, except scoured in lanterns; nor tobacco smoked, under a fine of 2*l.*; nor any combustible matters left on the decks, or on the adjoining quays, in the night, under a fine of 10*l.* By these precautions, an acci-

dent from fire, has happened only once; yet scarcely a day passes without fines being incurred. The penalty for having gunpowder in the docks, is 40*s.* Large ships, when loaded, cannot pass the dock gates at neap-tides, for want of sufficient depth of water there; so that when a ship of that description in the dock, is ready for sea during the spring tides, and the wind unfair, it is conveyed into the river, and there remains at anchor, to take the advantage of a favourable wind. If a large ship arrive from sea, during neap-tides, it continues in the same situation till the next spring-tide rise high enough to float it into the dock. In the year 1724, the dock duty amounted to only 810*l.* 11*s.* 6*d.*; in 1760, it was 2380*l.* 6*s.* 7*d.*; in 1780, 3528*l.* 7*s.* 9*d.*; in 1800, 23,370*l.* 13*s.* 6½*d.*; and, in 1805, 33,361*l.* 13*s.* 1*d.* The aggregate current expenditure, on account of the docks, which has probably increased in proportion to the duties, amounted, in 1805, to 27,880*l.*

Connected with the docks, are wide and commodious quays, with large warehouses, calculated to store up such goods as are not immediately delivered to the retail dealers, &c. The Duke of Bridgewater's dock, is devoted to the flats and barges, belonging to the canals which communicate to Runcorn, Manchester, and the manufacturing towns in this part of the country. The direction and government of the docks are vested in the corporation, as trustees; whose accounts are annually examined, and settled, by seven commissioners.

By a comparison of the number of ships which sailed from and to the respective ports of Liverpool and Bristol, and on an average of five years, 1759 to 1763 inclusive, the shipping of the former far exceeded that of the latter; while the customs of Bristol exceeded those of Liverpool. This seeming paradox is solved, by adverting to the nature of the articles, and differences of duty, imported into the two ports. From that period, and especially since 1770, in every point Liverpool has been surpassing Bristol; the precedence of which has been attributed to two causes, the ardent pursuit of the African trade by the one, and the humane dereliction of it in the other; and the superior advantages which Liverpool has long enjoyed, by means of her floating docks.

The public structures of this town, connected with its trade and commerce, are the Exchange-buildings, Town-Hall, and Mansion-House, Custom House, Corn-Exchange, Tobacco Warehouse, &c. The Liverpool Exchange is the most spacious in plan, and ornamental in architectural elevation. It cost, in erecting, 80,000*l.* raised from 800 transferable shares of 100*l.* each. The buildings occupy three sides of a quadrangle, having the north front of the town-hall, for the fourth side, and together include an area of 194 feet by 180. The architecture was designed to harmonise and correspond with the north elevation of the town-hall, and thus constitute an uniform quadrangle. The new building consists of a rusticated basement, with a piazza extending

extending round the whole, and opening to the area by a series of rustic arches, between strong piers. Above this are two stories, ornamented with Corinthian pilasters, and surmounted with an enriched bold cornice and parapet. In the centre of the north side, resting on the basement, is a grand recessed portico, with eight handsome Corinthian columns. This building accommodates the merchants, brokers, underwriters, and others, of the town, who are devoted to mercantile pursuits. In the east wing is a coffee-room, 94 feet by 52, supported on large columns. Above this, is another spacious room, 72 feet by 36, appropriated to the underwriters, &c. on the principle of that of Lloyd's, in London. In the centre of the area, is a splendid naval monument, to the memory of Lord Nelson, designed and executed by Mr. George Bullock, in artificial stone, at the expense of 8000*l.* which sum was raised, by subscription, for the purpose. "In the statue of Lord Nelson," observes Mr. Bullock, in the description of the model which he presented to the committee, appointed to decide on its adoption, "I have endeavoured to express the calm and dignified composure for which he was so pre-eminently distinguished in the hour of danger: his effigy is, therefore, plain and simple, placed in a firm and decided attitude; the Union Flag and Anchor, are introduced, as the distinguishing marks of his professional rank; at the same time, pointing out the means by which his fame and glory were obtained. The pedestal, on which the hero stands, is encircled with a double coil of British cable, resting on the plinth, and enriched by the representation of his four principal engagements, viz. St. Vincent, the Nile, Copenhagen, and Trafalgar; four figures of victory, whose hands are united by crowns of laurel, suspended over each battle, are the supporters of this column, representing an unbroken chain of splendid victories. The cornice of this column is composed of the leaves of the British oak; on the sub-plinth, are seated four nautical figures, emblematical of the four great battles fought; these figures do not convey any idea of captivity more than is absolutely necessary to shew defeat; the body of the sub-plinth is enriched with the heads of the four ships in which those brilliant exploits were achieved, at once perpetuating the glory of the British navy, and the ships by which its glory was confirmed. The heads of the men of war are to be fac-similes of the respective ships, as in action, conveying to posterity, the identity of the individual vessels which contributed to fix its fame on an immutable basis. The whole is erected on a mural base, guarded by four lions, couchant, emblematical of the indigenous and naval valour of Great Britain, forming the grand bulwark to the whole; and intimating, that courage is the surest guide to naval glory. On the projecting sides of the mural base, in raised bronze letters, appears a description of every battle, with every ship engaged, together with that of its opponent; and, on the

front, the sum total of the vessels taken and destroyed: by which, each Captain's name becomes enrolled with that of his ship, and is handed down to future ages, with his beloved and lamented chief. This monument, the grateful effusion of liberality to British valour, and departed excellence, rises from an encircled quadrangle, containing 1500 feet of water, to be supplied by the pipes already fixed, and which can be easily brought to feed the reservoir, appearing to issue from four heads placed in the intermediate spaces of the mural base, representing the four great and principal rivers of England, Ireland, Scotland, and Wales, as contributing to commerce, and promoting that naval exertion, the cultivation of which has so firmly cemented the maritime interest and power of this proud and happy island. The circle is encompassed by a correct imitation of boarding nets, illuminated by ships' lanterns; the whole forming a rich naval pillar, of an order almost entirely new; strictly conforming to all the rules of Corinthian architecture, in all its dimensions, and possessing the peculiar recommendation of being indebted to no foreign adventitious ornament for its support; no heathen mythology is here introduced, nor any foreign attribute; as it has been my principal ambition, to erect such a nautical monument, with British materials, as shall at once tell the history of that hero, whom Britons still lament, and convey to posterity, the plain unvarnished tale, of British courage, fortitude, and glory."

The town-hall, formerly called the Exchange, is a large irregular pile of building, which was erected about the year 1750. The ground-floor was intended for an exchange, and calculated to accommodate the merchants with insurance-offices, &c. Unfortunately, the whole of the interior was destroyed by fire, in 1795. The corporation consequently resolved to rebuild it on a more extended and improved plan, and to appropriate the whole to judicial and other offices, for the police of the town, for a mansion for the mayor, a suite of public assembly-rooms, and for all the offices devoted to the business of the corporation. The ground story, on the south side, consists of a handsome entrance-hall, leading to a flight of stairs, a committee-room, and a private room for the mayor; on the east side, are a vestibule, rooms for the magistrates and juries, and the town-clerk's offices; on the north side, an entrance-hall, leading to the town-hall, or general sessions-room, to the rotation-office, &c. On the principal floor is a grand suite of rooms, consisting of a saloon, 30 feet by 26; a drawing-room, 33 feet by 26; a ball-room, 90 feet by 42; a second ball-room, 66 by 30 feet; a card-room, 32 feet by 26, &c. The summit of this building is terminated by a dome, of modern construction, ornamented with several columns. Round the frieze, and in the pediment of the southern front, is a profusion of badly finished sculptured decoration.

On the 24th of April, 1807, the first foundation stone

stone of a new Corn Exchange, was laid in Brunswick Street. It is a handsome structure, of plain Grecian architecture, with a stone front. Like the New Exchange buildings, it was erected by subscription; a fund of 10,000*l.* having been raised, by shares of 100*l.* each. It was opened, for the first time, on the 2d of August, 1808.

The Custom House, on the south side of the Old Dock, presents nothing remarkable. The Tobacco Warehouse, and various other commercial warehouses, are devoted to the stowage of imported goods.*

The most ancient of the churches, in Liverpool, called St. Nicholas, or the Old Church, was a very low structure, having windows with pointed arches, and a small tower, crowned by a spire. Near it, was a statue of St. Nicholas, the tutelary deity of the maritime part of the place, to which sea-faring people usually made a peace-offering, previously to their embarking; and another, as a wave-offering, on their return for their successful issue of the voyage. This church was destroyed by the fall of the tower, on Sunday, the 12th of February, 1810.†

St. Peter's church was built in the year 1704. It is a plain structure, having a quadrangular tower,

the upper story of which is octangular, terminated by eight pinnacles; with a gilt fan.

St. George's church, which was finished in 1744, partakes of a classical style. The body is formed by a Doric range, bearing an attic entablature; with a parapet ornamented with vases. The windows for affording light, both to the aisles and galleries, are disproportionately large. On the south side, is a wide handsome terrace, raised on six rustic arches; at the extremity of which are two wings, consisting of octangular buildings; one of which is appropriated to the clerk of the market, and the other to a cell for confining delinquents. The steeple consists of five tiers, or portions, ornamented with pilasters of the Doric, Ionic, Corinthian, and Composite orders; and, above the tower, rises a lofty, tapering, octangular spire.

St. Thomas's church, which was built in 1750, is better proportioned, but has an unusual appearance. "The body consists of a rustic base, having two tiers of windows; the upper calculated for a drawing-room, and the lower for a prison: nor is the large semicircular Venetian window, at the east end, in a happier style. The double Ionic pilasters attached to the sides, as they appear to have nothing

* In the year 1802, a dreadful fire happened amongst these buildings, which is thus recorded in the Monthly Magazine:—"On Tuesday, September 14, a disastrous and destructive fire broke out in the warehouses belonging to T. France, Esq. at Goree, whose spacious and lofty front long attracted the admiration of strangers, and which was not surpassed in magnitude, by any similar structure in the kingdom. The celebrated warehouses at Antwerp, as well as those at Venice, equally famous, were neither so lofty nor commodious as this warehouse, or rather this pile of warehouses. About ten o'clock in the evening, a smoke was observed to issue from a room in the warehouse; and though, for a time, appearances seemed to justify a hope that the mischief might be subdued without much effort, no sooner were the doors and windows of the building forced, than the flames, which had all been smothered, burst out with horrid fury, extending their ravages in every direction, with equal rapidity and violence, and exhibiting a spectacle of solemn grandeur; a scene sublime, terrific, and of such majestic horror, as no tongue nor pencil can describe. In a few hours that immense pile, together with the large and commodious range of warehouses which was erected in front, at the distance of sixteen yards, as well as that which extends from it, in a line to Water Street, was a heap of ruins, and a great proportion of all that rich and various produce, with which every apartment of these buildings had been stored and crowded, was consumed. The whole number of warehouses destroyed, is about 30, from six to 13 stories high, and of a proportionable depth; though *Billing's Liverpool Advertiser* mentions only 17. The tide being fortunately at flood, it afforded an opportunity to the shipping to remove beyond the reach of the flames. Not a single individual lost his life during the conflagration; but, it appears, that sometime afterwards, part of the ruins fell on a Mr. Phillips, employed in the service of Mr. Forster, and that he was so dreadfully crushed, that he died in the space of a few hours. The most beneficial effects were produced from the abundance of water which the springs of Bootle water-works yielded, in arresting the dreadful conflagration. The value of the property destroyed has been variously estimated; but, according to a medium computation, may be stated thus:—The buildings, 52,000*l.*: sugar, 51,000*l.*: cotton, 26,000*l.*: coffee, and other West India produce, 40,000*l.*: grain, 110,000*l.*: tallow, hemp, &c. 16,000*l.*: total, 295,000*l.*"

† A few minutes before Divine service, and just as the offici-

ating clergyman was entering the church, the key stone of the tower gave way, and the north-east choir, comprising the north and east walls, with the whole of the spire, came down, and with a tremendous crash, broke through the roof, falling along the centre aisle, till it reached near to the communion rails, and in its fall, carried with it the whole peal of six bells, the west gallery, the organ, and clergyman's reading desk, totally demolishing them, and such seats as it came in contact with. Not more than fifteen or twenty adult people were in the church at the time, and of these the greater part escaped; but the children of a charity-school, who march in procession somewhat earlier than the time of service, had partly entered. The boys, who were the last, entirely escaped; but a number of girls, who were either entering the porch, or proceeding up the aisle, were in a moment overwhelmed beneath the falling pile. The crash of the steeple, and the shrieks of terror which issued from those who had escaped in the church, or were spectators in the church-yard, immediately brought a large concourse of people on the spot, who did not cease to make unabated efforts to rescue the unfortunate victims from the falling masonry, till all the bodies were extricated, notwithstanding the tottering appearance of the remaining part of the tower of the roof and church, which momentarily menaced a second fall. Many instances of hairbreadth deliverances occurred. All the ringers, except one, escaped; who was caught in the ruins, and yet was extricated alive by his brethren. The alarm, it is said, was first given to the ringers, by the fall of a stone upon the fifth bell, which prevented its swing; the men ran out; and a moment did not elapse before the bells, beams, &c. fell to the bottom of the tower, and their escape would have been impossible, had not the belfry been upon the ground-floor. The Rev. ——— Roughedge, the rector, owed his safety to the circumstance of his entering the church at an unaccustomed door. The Rev. L. Pughe, the officiating minister, was prevented from entering by the children of the school, who were pressing forward.—The teacher, who was killed, had just separated the children, to afford him a passage, when a person exclaimed, "For God's sake, come back!" He stepped back, and beheld the spire sinking, and the whole fell in. A person, named Martin, was seated in his pew; the surrounding seats were dashed in pieces, and heaped with ruins, but he came out unhurt. Twenty-seven bodies were taken out of the ruins, and twenty-two were either killed, or expired afterwards.

to support, add little to its decoration. The tower is lofty, terminating in a well-proportioned spire, nearly half the height from the base: but its immediate and appropriate support consists of four couplets of Corinthian columns, on which, as though ashamed of their station, stare four crocket pinnacles, combined with four vases."

St. Paul's church, erected at the public expense, and consecrated in 1709, is a miniature imitation of the cathedral of London. "On the west side, a grand Ionic portico forms a suitable vestibule to the building, which is also of the Ionic order throughout. The base is rustic, the walls plain, terminated by a balustrade, decorated, but not crowdedly so, with plain neat vases. The dome is crowned with a lantern, and its finial, a ball bearing a cross. Though the exterior of this building loses all appearance of grandeur or beauty, to the eye that has dwelt on the designs of St. Peter's, at Rome, and St. Paul's, at London, yet it assumes some importance and elegance when compared to the other modern churches of the town, or the generality of those sacred edifices that have been erected since the reign of Henry the Eighth. Its interior is more imposing than the exterior, from the disposition and character of the pillars that support the dome. Like most buildings with domes, or of circular arrangement, this is very unfavourable for the communication of sound."

St. Ann's church, built by two proprietors, in 1770, is remarkable for having its galleries supported by slender cast-iron pillars; and for being placed north and south, instead of east and west.

St. John's church, which was raised at the public expense, was finished in 1784.

Trinity church, consecrated in 1792, is remarkably commodious and neat. It is private property.

Christ's church is a large and handsome building, with two rows of galleries. The organ, constructed by Mr. Collins, of this town, is divided into two parts, 14 feet asunder; the organist is placed in the centre, with his face towards the congregation; the swell is behind him, on the floor; and the movements are beneath his feet. This church, built by an individual, at an expense of 15,000*l.* was consecrated in the year 1800.

St. Mark's church, a large edifice, raised by subscription, at an expense of 16,000*l.* was finished in 1803. It will hold nearly 2500 persons.—The increased population of the town having rendered another church necessary, the first stone of a new one was laid, by the mayor, on the 21st of June, 1816.

In addition to the churches of the establishment, here are three Roman Catholic chapels, a Scotch church, a Welsh church, a Quakers' meeting, a Jews' synagogue, and five or six chapels, or meeting-houses for the different sects of dissenters. Several of the meeting-houses are neat and comfortable structures; but what is called the Octagon, claims the most notice, as it unites great convenience with some portion of dignity.

The Blue Coat hospital made its appearance as a charity-school, supported by annual subscription and donation, for the educating and maintaining 40 boys and ten girls, A. D. 1709. The number now provided for, is upwards of 280. The building consists of a large body, having two wings; the whole built of brick, and ornamented with stone.

At the public Infirmary, all persons, without exception, are admitted, who come properly recommended by a subscriber; and, in cases of sudden accident, this is dispensed with. This building is composed of brick, coped with stone. The wings form an Asylum for decayed Seamen, with their widows and children. This charity, which commenced in 1749, by a drawback of sixpence per month from the wages of every mariner belonging to, or sailing out of, the port.

Here is a poor-house, a large plain building, extremely well adapted to its purpose;—a dispensary, at which, since its commencement, in 1778, nearly 11,000 persons, on an average, have been annually cured, of almost every disorder incident to human nature;—an asylum for the indigent blind;—and a ladies' charity, established in 1796, to afford relief and comfort to poor married women in child-bed, at their own houses.

The Liverpool theatre, situated in Williamson Square, is a large and commodious pile of building. It was finished in 1772, and cost about 6000*l.* which was raised by 30 proprietors. Fourteen or 15 years ago, the front was enlarged, and a new elevation erected, from the design of J. Foster, Esq.

The Athenæum, constituting a news, and coffee-room, and public library, was commenced in 1798. The expense of the building, erected by a subscription of 4400*l.* with its establishment and current support, is defrayed by between 4 and 500 subscribers; 300 of whom paid, on entrance, ten guineas, for each share; afterwards, the shares were raised to twenty guineas; and, subsequently, they were further augmented to thirty guineas each. The subscribers, also, pay two guineas, annually, each. The Union news-room, a similar establishment, instituted on the 1st of January, 1801, cost between 4 and 5000*l.* It has a stone front in Duke Street. The Lyceum, consisting also of a coffee-room, library, &c. is a large handsome pile, erected at an expense of about 11,000*l.* which was raised by a subscription of 800 proprietors, who pay, annually one guinea, each, towards its support, &c.—The Commercial news-room, in Lord Street; and the Minerva news-room, in Upper Dawson Street, are minor institutions, of a similar nature.

The music-hall, in Bold Street, is a large handsome pile of building, provided with every accommodation for concerts, &c.—The assembly-room is a part of the Liverpool Arms hotel, in Castle Street.—Liverpool also contains a circular room for a panorama; a museum, belonging to Mr. Bullock; a Freemasons' hall, a botanic garden, &c. The botanic garden, at the S.E. end of the town, consists of
about

about five acres of ground. It is supported by between 3 and 400 proprietors; who, besides an original advance, pay an annual subscription of two guineas.

The borough boundaries are defined by marks, called Mere Stones; within which, its liberties are included, comprising an area of 2102 acres; of which about 900 belong to the corporation, and the rest is private property. The streets in the oldest part of the town are too narrow, to be either handsome or healthy; and with respect to many of the modern buildings, greater regard has been paid to convenience, than to beauty. There are, however, several handsome streets, and fine houses.

Notwithstanding the general prosperity of the town, the corporation, by failures, and want of money, were, in the year 1793, obliged to apply to Parliament for relief. Their income, for the year 1792, was 25,000*l.* 17*s.* 11*d.*; their whole property was valued at 1,044,776*l.*; and their debts amounted to 367,816*l.* 12*s.* leaving a surplus of 676,959*l.* 8*s.* besides some contingent concerns, estimated at upwards of 60,000*l.* more. Parliament allowed the corporation to issue negotiable notes, for a limited time, which was of great service to the trade of the town.

Till within these few years, Liverpool was but ill supplied with water, and at a great expense.—That useful article used to be carried about the town, in carts, and sold for a halfpenny a bucket. This deficiency has been completely remedied.—The Bootle springs, near 2000 of which concentrate, as it were, at one point, rise upon the estate of Lord Derby, and are situated upon a hill in the village of Bootle, three miles north of Liverpool, and have been brought into the town by great perseverance and expense, and uncommon exertions; so that the inhabitants at present daily experience the comforts of abundance of fresh water, without having recourse to the slovenly and expensive mode of water carts. The immense reservoir constructed at the entrance of Liverpool, receives a sufficient quantity of water to counteract, at any future period, so dreadful a calamity as visited the town some years ago. To supply the shipping, and guard against disappointment to the inhabitants, as in case of accidents to the long train of pipes, this reservoir is capable of containing nearly 4000 tons of water.

The borough of Liverpool returns two members

to Parliament, who are elected by the votes of the free burgesses, about 2500 in number. The town was incorporated by King John; constituted a borough, 23d of Edward the First; and, in 1729, it was determined, that the right of election was vested in the mayor, bailiffs, and freemen, not receiving alms. All the freemen enjoy this singular privilege, that they are also free of the city of Bristol, and of Waterford and Wexford, in Ireland.

The Parliament had a very strong garrison here, in 1644, under the command of Colonel Moore. Prince Rupert, assisted by the Earl of Derby, approached the town, after taking Bolton. It was defended on the east and north, by a strong mud wall, with a vallum and foss, 36 feet wide, and nine deep. On the top of these were placed numerous bags of Irish wool. The south-east side was naturally defended by a wide marsh, inundated from the river; the streets leading to this were shut up, and those towards the land were defended by gates, with pieces of cannon planted in each avenue. It had a strong castle on the south, surrounded with a ditch, 36 feet wide, and 30 deep; upon the ramparts of which were cannon, and the entrance defended by a fort of eight guns. A covered way led thence to the river, by which the ditch was filled occasionally with water; and by which, at ebb tide, provisions and stores were brought in. The Prince, having gained the heights, encamped on the hill; and having, in vain, summoned the place to surrender, he commenced the siege, which, with continual repulses, and great slaughter, continued one month. From treachery of the commandant, as has been alledged by some—or the works, on the north side, being deserted by the troops, as mentioned by others—a breach was then made, and the Prince's army entered the town, putting to the sword all they met. The troops from the castle then beat a parley, submitted to become prisoners of war, and the whole town surrendered; but it was soon after retaken by the Parliament army, and Colonel Birch was appointed governor of the castle. After this, the works were dismantled. A fort has been erected on the banks of the river at the N.W. end of the town, but this is too trifling and weak to afford much protection.

Amongst the distinguished natives of Liverpool, may be particularly mentioned a sculptor, of the name of Deare, and Stubbs,* the painter. There is, also, at this time, (September, 1817,) a young lady,

* George Stubbs, Esq. R. A. was born in the year 1724, and died in 1806. When a young man, his attachment to the arts overcame every other inclination; he has frequently been known to carry parts of a dead horse into his lodging-room for the purpose of dissection, until he was threatened with a prosecution for a nuisance. About the year 1754, he visited Italy, whence he returned to settle in London, and soon acquired the highest reputation as an animal painter; his horse and lion, or lion and horse, and his full-length tiger, are unique in their kind. This last picture was universally admired. It was engraved by Dixon, in mezzotinto; but the plate was burnt in a fire that

consumed the house of the printer. Mr. Stubbs painted several pictures of Phæton, in which the horses are done in an admirable style; his four pictures of Shooting were engraved by Woollet. He did not succeed so well in large figures, as in small ones, and landscapes. His figure of Hope nursing Love, cannot be compared with those of brood mares, horses, colts, dogs, &c. In the year 1766, he published an admirable work on the "Anatomy of the Horse," in 18 plates, all designed from nature, with great labour and accuracy. The plates were engraved by his own hand. He resided many years in Upper Seymour Street, Portman Square, where a stable used to constitute

lady resident in, and a native of, the town, who, though in a state of actual blindness, possesses the astonishing faculty of reading by the points of her fingers; or, in other words, she has perceptions, through the points of her fingers, similar to those which are usually acquired through the medium of

the eye. Of this phenomenon, which is altogether new to the scientific world, some eminently curious particulars, from the Rev. T. Glover, of Stonyhurst, in this county, will be found in the note below.*

LOSTOCK HALL.]—Westward from Bolton, about three

stitute his work-room. He invented a species of enamel painting, on large plates, which was extremely curious. At the time of his death, he had, in hand, a work on comparative anatomy, which he was labouring to complete; it was to have been comprised in 30 plates. Three parts of this work were published after his death. In his person, Mr. Stubbs was robust, and inclined to corpulency: he was, however, extremely active, and an early riser; when past fourscore, he has been known to walk from Seymour Street to Fleet Street, and back again, before breakfast.

At one of the exhibitions in Spring Gardens, a dog having obtained admission, ran up to Mr. Stubbs's picture of a cat, which happened to hang low; but, finding that it did not move, he ran away, barking at it.

* "Without pretending to give a medical report of this singular case, I shall briefly premise, that Miss M'Evoy is a native of Liverpool, and about 17 years of age. She became blind in the month of June, 1816, from a disorder in the head, which was supposed to be water on the brain, and which was treated as such. She was partially relieved by a discharge from the ears and nostrils. She has since experienced two returns of the same disease, and each time has been relieved by a similar discharge of fluid. She has remained completely blind from the time of the first attack. She first discovered, by accident, about the middle of October, 1816, that she could read by touching the letters of a book. Having blindfolded her in such a manner that I was certain not a ray of light could penetrate to her eyes, I made the following experiments, most of which had not been tried before. I copy the results from notes taken on the spot, and nearly in the order in which they were made:—

"I presented to her six differently coloured wafers, fastened between two plates of common window glass. She accurately named the colour of each. She pointed out, unasked, the cracks and openings in the wafers. Being asked, while touching the surface of the glass above the red wafer, if the substance under might not be a piece of red cloth or paper, she answered, "No: I think it is a wafer."

"She described the colour and shape of triangular, square, and semicircular wafers, fastened in like manner between two plates of glass.

"To the seven prismatic colours, painted on a card, she gave the following names: scarlet, buff, yellow, green, light blue, dark blue, or purple, lilac. As the orange paint was much faded, the term buff, was correctly applied to it.

"The solar spectrum being thrown by a prism, first on the back, and then on the palm of her hand, she distinctly described the different colours, and the positions which they occupied, on her hands and fingers. She marked the moments when the colours became faint, and again vivid, by the occasional passage of a cloud. On one occasion, she observed, that there was something black upon her hand; but, perceiving it to move, she said it was the shadow of her own fingers, which was correct. The prismatic colours have afforded her the greatest pleasure which she has experienced since her blindness; the violet rays were the least pleasant. She never saw a prism in her life.

"The prism being put into her hands, she declared it was white glass; but, on turning it, she immediately said, 'No, it is not; it is coloured; it has colours in it;' and she traced with her fingers, what she called, 'bent stripes of colours.' She could discover no colours on that side of the prism on which the direct rays of light fell.

"She perceived the coloured rings formed by pressing together two polished plates of glass. She said, she felt them at the edge of her fingers flying before them.

"Several attempts were made to ascertain whether she could discover colours in the dark, by presenting differently coloured objects to her hands, concealed under a pillow. She always failed; every thing appeared black. On one occasion, she said a green card was yellow.

"She read a line or two of small print by feeling the letters. She next read through a convex lens at the distance of nine inches from the book. The principal focal length of the lens is 14 inches. While reading, she gently rubs the upper surface of the lens with the tips of her fingers; she reads much easier through the lens than without it. She says the letters appear larger, and as if they were printed on the glass. A pen-knife was laid on the line which she was reading, and she immediately perceived, and named it.

"A concave lens being put into her hands, she tried to read through it at the distance of seven or eight inches, but said, that the letters were all confused. As she moved the lens gradually towards the book, she at length perceived letters, but observed, that they were very small. She could not read easily until the glass was laid upon the paper.

"She read common print by feeling on the upper surface of a piece of common window glass, held twelve inches from the book. At a greater distance, she could not read; but could read much easier when the glass was brought nearer to the book. In like manner, she perceived, through the glass, several coins spread out before her; told which had the head, which the reverse upwards; pointed out the position of the arms, crown, &c.; read the dates; and, observed, unasked, that one half-guinea was crooked.

"On applying her fingers to the window, she perceived two newly cut stones, of a yellow colour, lying one on the other, at the distance of twelve yards. She described a workman in the street, two children accidentally passing by, a cart loaded with barrels of American flour, another with loaves of sugar, a third empty, a girl, with a small child in her arms, &c. One of the company being sent to place himself in different positions, she marked every change of position as soon as any one with his eye-sight could have done. A middle sized man, at the distance of twelve yards, did not appear, she said, above two feet high. As he approached nearer, she observed, that she felt him grow bigger. All objects appear to her, as if painted on the glass.

"A stone ornament, in the shape of an orange, she took for a real orange, feeling through the plane glass, at the distance of two or three inches: at the distance of fifteen inches, it appeared no larger than a nut; at thirty inches distance, it was diminished to the size of a pea, the brightness of the colour remaining undiminished.

"On touching a plane glass mirror, she said, that she felt the picture of her own fingers, and nothing else.

"Holding a plate of plane glass three or four inches before the mirror, she was then enabled to perceive the reflected image of herself. When the mirror was gradually removed further off, she said her face diminished. All objects constantly appear as a picture, on the glass which she touches.

"She perceived through a plane glass, as before, the image of the sun reflected from a plane mirror; also the sun itself. She said that she was not dazzled with it, but found it very pleasant.

"She accurately described the features of two persons, whom she had never seen before, holding the plane glass at the distance of three or four inches from the face.

"Several small objects were held over her head. She perceived them all through her plane glass. On one occasion, she asked, doubtingly, if a three shilling piece was not a guinea; but,

three miles, stands *Lostock Hall*, an ancient mansion, which descended from the *Anderton* family, to the *Blundells*, of *Ince*. The house is formed of wooden beams, and plaister; and, over the entrance door, is the date 1563. The rooms, in general, are vainscotted. The gateway is of stone. The royal arms, with the date 1390, are to be seen over the large bay window.

LYDIATE.—The little township of *Lydiat*, $\frac{1}{2}$ miles S.S.W. from *Ormskirk*, is remarkable for the ruins of a building, formerly a chapel of ease to *Halsall* church. It was a small, but most beautiful, structure. The outward walls, and the tower, with pinnacles and battlements, venerably overgrown with ivy, are yet standing.

MANCHESTER.—The large and populous town of *Manchester* is seated on the borders of the county, on the rivers *Irk*, *Medlock*, and *Irwell*, 59 miles S.E. by S. from *Lancaster*, and 180 N.W. by N. from *London*. Its name implies, that it was a Roman station; and *Mr. Whitaker* has distinctly proved, that the Romans held an important military post on the banks of the *Irwell* and *Medlock*, which here unite their streams. According to this author, *Agricola* established a post here, called *Mancunium*, "in the year of Christ, 79." He also asserts, that a "castle was built on the site of *Castle-field*; and the protection of a castle constantly gave rise to a town. The dimensions of *Mancunium*," says he, "the British name of the place, are still," in 1771, "visible. It filled the whole area of the present castle-field, except the low swampy part of it, on the west, and was twelve acres, three roods, and ten perches in extent. Terminated by the windings of the *Medlock*, on the south, south-east, and south-west, it was bounded, on the east, by a fosse; on the west, by the present very lofty bank; and, on the north, by a long and broad ditch." This description applies to the British fortress; for, after the Romans possessed it, they abridged the limits of the castrum, and reduced it from an area of

"thirteen acres of our statute measure, to about five acres, and ten perches. The new erected fort, in castle-field, still retained the name of the ancient fortress upon it, and *Mancenion* was only changed into *Mancunium*."—The Roman station of *Mancunium* was connected with seven others, by means of military ways, or roads. Of these, *Mr. Whitaker* endeavours to define and describe six: one, leading to *Ribchester*; a second, to *Blackrode*; a third, to *Warrington*; a fourth, to *Buxton*; a fifth, to *Ilkley*, in *Yorkshire*; and a sixth, to *Kinderton*, in *Cheshire*. Besides the station already described, as occupying the site of *Castle-field*, *Mr. Whitaker* contends, that it was connected with a *Castra-Æstiva*, or summer-camp, which he fixes at that part of the town where the college, &c. now stand. After the Romans had possessed this station nearly 400 years, it was re-occupied by the Britons, who soon relinquished it to the Saxons. During the reigns of these invaders, *Manchester* was several times a place of military conflict. It is said to have been fortified, and partly rebuilt, by *Edward the Elder*, King of the *Mercians*, in 920. In the next century, the *Domesday Book* mentions two churches as belonging to this place, *St. Mary's*, and *St. Michael's*. One of the followers of the Norman invader fixed his residence here; and his name, spelt *Albert de Gresley*, *Gredley*, *Gressel*, and *Grelle*, appears as witness to a charter to our *Lady of Lancaster*, in the time of *William Rufus*. His son, *Robert*, resided chiefly at his barony here, but gave his mills on the *Irk*, to the *Cistercian* monks of *Swineshead*, in *Lincolnshire*; and, after attending the King in *Normandy*, obtained the grant of a fair at his lordship of *Manchester*, on *St. Matthew's day*, annually, and the day before and after. His great grandson, *Thomas*, on the 14th of *May*, 1301, granted to his burgesses of *Manchester*, a charter, which is said to be still extant, of the custom of the manor, and was summoned, as a baron, to *Parliament*, from the first to the fourth

but, raising the glass, and bringing it nearer to the object, she corrected her error.

"She was unable to distinguish colours by the tongue; but holding between her lips, the red, yellow, blue, and white petals of different flowers, she told the colour of each accurately.

"She accurately distinguished polished glass from natural crystals by the touch. She declared three several trinkets to be glass, which were believed to be stone: being tried by a file afterwards, they proved to be paste. She also distinguished between gold, silver, brass, and steel; likewise between ivory, tortoise shell, and horn. "Gold and silver," she said, "feel finer than the other metals; crystals feel more solid, more firm, than glass.

"She could not discover, by feeling, any difference between pure water, and a solution of common salt and water.

"These experiments were frequently repeated and varied, during the space of three days that I had the opportunity of seeing her, with the same results.—I must observe, that this faculty of distinguishing colours and objects is more perfect at one time than at another; sometimes it suddenly and entirely fails; then every thing, she says, appears black. This sudden change seems like to what she remembers to have experienced, when a candle has been extinguished, leaving her in the dark.

VOL. III.—NO. III.

She says, that she has not been taught by any one, to distinguish colours by her fingers; but that, when she first perceived colours by this organ, she felt convinced, that they were such and such colours, from the resemblance of the sensations to those which she had formerly experienced by means of the eye.

"From the preceding facts, it appears, that *Miss McEvoy* has perceptions, through the medium of her fingers, similar to those which are usually acquired through the medium of the eye. With respect to the manner how she acquires them, and the necessity of an intermediate transparent substance when she does not actually touch the object, I shall offer no conjecture. I have only further to add, that she has no apparent motive for attempting to impose upon those who visit her, were such an imposition practicable. She receives no remuneration from visitors. On the contrary, the mere presence of a stranger agitates her considerably, for a time; so very weak and delicate is her state of health. Any noise or bustle affects her still more painfully; and I am ashamed to say, that some of her visitors have shewed a great and culpable disregard for her feelings, and subjected her to much unnecessary inconvenience.

"T. GLOVER."

"*Stonyhurst*, August 25, 1817.

4 L

of

of Edward the Second. Thomas Delawar, who was rector of Manchester, in 1422, obtained a license to found a collegiate church, &c. here, which he liberally endowed, on the payment of 200 marks into the exchequer. The Bishop of Durham granted to the first master or warden of the said college, five messuages and ten acres of land, parcels of the manor of Manchester, with various other lands. But Fuller, in his *Worthies*, observes, that "the endowment of this collegiate and parochial church were the glebe and tythes of the parsonage, which glebe was computed to be about 800 acres of this county measure, (about half as many more of the statute measure,) besides a considerable part of the town, commonly called *Dean's Gate*, (a corruption of *St. Diony's Gate*, to whom, and to the Virgin Mary, and *St. George*, the church was formerly dedicated,) now situate on the side of the glebe land belonging to the church; and the tythes of the parish arose from the 32 hamlets, or townships, into which it is divided." At this time, the founder is said to have erected the present college for the residence of the collegiate body, at the expense of 3900*l*. The greater part of the church was probably completed during the life of John Huntingdon, the first warden, who was president here from 1422 to 1459; and, consequently, had full time to manifest his disposition and zealous perseverance. His effigies, in sacerdotal vestments, is engraven on a brass plate, in the choir near the altar, with an inscription expressive of the chief object of his zeal. On the dissolution of the original college, in 1547, the house and some of the lands were sold to the Earl of Derby, who maintained several ministers to officiate in the church. On its being refounded in Queen Mary's reign, when the statutes of the first foundation were revived, most of the lands were restored; but the Earl of Derby retained the collegiate house, with some of the lands of small value. In 1578, it was refounded, by the name of *Christ's College*; but was once more dissolved, in consequence of some complaints exhibited against the warden, and refounded by Charles the First, by charter, bearing date the 2d of October, 1636. By this charter, the college was to consist of a warden, who was to be at least B. D. or LL.B. and four fellows, who are to be M.A. or LL.B. and two chaplains, to be at least A.B. with two clerks, of which one is to be in orders, four singing men, and four chorister boys. The Bishop of Chester is visitor. The warden is appointed by the crown; but every other vacancy is filled up by the warden and fellows. This establishment was ejected by the Parliament; its revenues seized; and, in 1649, the door of the chapter-house, and the college chest were broken open by the soldiery, under Colonel Thomas Birch, when the deeds and writings relating to the foundation, were taken to London.—They were afterwards destroyed there, in the great fire of 1666. In 1649, the independents converted the college-house into a meeting-house. During the siege of Manchester, in 1642, it had been used

as a storehouse, by the troops within the town.—In 1653, it was purchased by the Earl of Derby, in pursuance of a recommendation in the will of Mr. Chetham, as a suitable building for the benevolent institution which that gentleman then had in view.

The manor of Manchester, in the year 1579, was sold from the Delawar family, with all its rights and privileges, to John Lacye, of London; who resold it, in 1596, for 3500*l*. to Sir Nicholas Mosley, from whom it has descended to the present Sir Oswald Mosley, Bart.

Hugh Oldham, a native of Oldham, in this county, and Bishop of Exeter, who died in 1519, founded a grammar-school here, and endowed it with certain lands, and some corn-mills, which he had purchased at Manchester. Amongst other provisions, it is directed, that no male infant, of whatever county in the kingdom, shall be refused admission. The master and usher are to be appointed by the president of Corpus Christi college, in Oxford; and, in default of nomination within a reasonable time, to devolve on the warden of Manchester college. The principal master, besides a dwelling-house, &c. has 240*l*. per annum; and the second master, 120*l*. besides three others, who have 80*l*. a year each. This school has eight exhibitions for Oxford university, each of 25*l*. a year; and those who are entered at Brazen-nose college, have a fair chance of some valuable exhibitions from lands, in Manchester, bequeathed by the late Mr. Hulme.

The buildings of Chetham's hospital, commonly called the College, (having originally been the place of residence of the warden and fellows of the college,) and a large inclosed area, are situated on a high perpendicular rock, bounded by the Irk, close to its confluence with the Irwell. The hospital was founded pursuant to the will of Humphrey Chetham, Esq. of Clayton, near Manchester, who had been remarkably successful in trade, in the middle of the 17th century. A charter, for the purpose, was obtained from King Charles the Second, dated November 10, 1663, vesting the funds in trustees, who were constituted a body corporate. The munificent founder, in his will, as already intimated, directed that his trustees should, if possible, purchase the building which had formerly been the residence of the warden and fellows of the collegiate church. The trustees were able to accomplish the point, very shortly after Mr. Chetham's decease. The foundation was originally for 40 poor boys, admissible between the age of six and ten years, who were maintained and educated until the age of fourteen, when they were apprenticed to some useful trade. By an improvement in the funds of the charity, the boys were increased to 60; and continued such until the Easter meeting of the trustees, in 1780, when another augmentation took place, and the number has since been constantly 80.—The townships pointed out by the founder, as objects of his charity, are the following, with the respective number admitted from each:—Manchester,

at

at first, 14, now 28; Salford, 6, now 12; Droylsden, 3, now 6; Crumpsall, 2, now 4; Bolton-le-Moors, 19, now 20; Turton, 5, now 10; so that 89 persons are now annually provided for by this institution; including, for the hospital, a governor, one man, and five women servants; a schoolmaster, and (on the library account) a librarian.—The library, which occupies an extensive gallery of the same building, owes its foundation, and increasing importance to the same benevolent source. The annual value of the fund originally bequeathed for the purchase of books, and for a librarian's salary, was 116*l.*; but, by recent improvements of the estate, the income is now more than three times that sum. The books, at this time, amount to upwards of 15,000 volumes, of which a catalogue, handsomely printed in two volumes, 8vo. has been published by the librarian, the Rev. Mr. Radcliff. The books are kept in excellent order and preservation, though offered to the benefit even of strangers, who are allowed to peruse any of them, in a comfortable room, three hours every morning, and as many in the afternoon. In this library, is a curious MS. roll, containing the Pentateuch, in Hebrew, bequeathed by Dr. Byrom, to the library; and, among other valuable MSS. are the following, viz. Visitation of Lancashire, 1580, by Flower and Glover; Hollinsworth's Mancuniensis; Kuerden's Collections for a History of Lancashire; Knyvett's Project for the Defence of England; Lyndsay's History of Scotland, the original MS.; Smith's Visitation of Lancashire, in 1599; Wickliffe's New Testament; a Psalter, the gift of John Gyste, for the use of the monastery of St. John the Baptist, at Godstow, &c.

The collegiate church is a large pile of building, which occupies the site of the old parish church of Manchester. The exterior of the edifice, which is constructed of a red crumbling stone, has suffered greatly from the operations of fire and smoke.—The church-yard, from the multitude of interments, its exposure to every annoyance of a crowded town, and the neglect of railing off the different foot-paths and projections of the building, has long been in a very disgusting and offensive state. Within, and on the south side, are several large chantries, one of which is the property and burial-place of the Traffords. At the east end, behind the altar, is the chapel of the Chethams, where the founder of the hospital has a tomb. Of some later monuments of the family, the marble retains very little of its original polish or whiteness, incessant showers of corrosive soot penetrating every chink and cranny. On the north side of the north aisle, is a spacious chapel, built by Bishop Stanley, and now the property of the Earl of Derby. This is let out for interments at a stated price. Beyond this is a small projecting chantry, in which, within a plain altar-tomb, lies James Stanley, Bishop of Ely, and warden of Manchester, who died in the college. There is a small figure of him, in brass, and an inscription in old English. The chief ornaments of this

church are the stalls, screens, and lattice-work of the choir, finished principally at the expense of this prelate. In richness and delicacy of execution, the canopies of these stalls can scarcely be surpassed.

The town, or more probably the church, of Manchester, was originally a place of sanctuary, and one of the eight places to which this privilege was confirmed by Henry the Eighth. The privilege, however, was transferred to Chester, in the following year, as it had been found prejudicial to the wealth, credit, and good order, of the town.

At the time of the Spanish armada, when every part of the kingdom was called to contribute its quota of defence, Manchester furnished only 38 men forarquebusiers, the same number for archers, and 144 men for bills and pikes; and, in 1599, on raising men to suppress the rebellion in Ireland, the magistrates were cautioned not to send any vagabonds or disorderly persons, but men of good character, and particularly young men, who were skilled in the use of the hand-gun. In 1605, a pestilence here carried off 1000 persons; and little more of the general history of Manchester is known, until 1642, when, in the dispute between Charles the First and his Parliament, it took side with the latter, and the town was occupied by the county militia. The Earl of Derby besieged it, in vain; retiring, after several days, with considerable loss. A violent pestilence broke out here, in 1645, when collections were made in all the churches of London and Westminster. The fortifications of the town were dismantled in 1652.

In 1708, an act was obtained for building St. Ann's church, the site of which, with the square, was formerly a corn-field, known by the name of Acre's Field. It was finished in 1723. St. Mary's church was rebuilt, by act of Parliament, in 1753. St. John's church was built by the late Edward Byrom, Esq. St. Paul's was erected about 59 years ago. It is a handsome spacious building, chiefly of brick, to which was added, a few years since, a lofty and substantial stone tower. St. James's church, built by the Rev. C. Bayley, D.D. finished in August, 1788, is a large well-lighted building of brick and stone, with a small stone steeple. St. Michael's, also of brick and stone, with a square tower, was built by the Rev. Humphry Owen, (one of the chaplains of the collegiate church, and rector of St. Mary's.) This church was consecrated on the 23d of July, 1729. St. Peter's church is built of Runcorn stone, and is a remarkably elegant structure, of the Doric order. The portico, in particular, which terminates the view down Dawson Street and Mosley Street, is very fine. This church was built by subscription, and the foundation was laid, December 11, 1788. The whole was begun and completed from the designs, and under the direction of Mr. James Wyatt. The inside of this church is as elegant as the exterior of the building. Over the altar, is a very fine painting, an undoubted original, by Annibal Caracci, representing

presenting the descent from the cross. This church was completed in 1794. St. Clement's, Trinity, and St. Stephen's, in Salford, and St. George's churches, are all handsome structures; but do not require any particular description.

In the year 1757, an act was obtained to exonerate the town from the obligation of grinding corn at the free-school mills. In 1776, another act was passed for widening the streets. In 1791, an act was obtained for lighting, watching, and cleansing the town; on which occasion, a watch-house was established; and, in 1792, the centre of the town was farther improved by taking down the Exchange.

The Infirmary, Dispensary, Lunatic hospital, and Asylum, are included in one spacious building, in the highest part of the town. The foundation for the first of these edifices, was laid in 1753, when only 250*l.* had been subscribed towards it. The plan for receiving 40 patients, was afterwards extended to 80; but 160 beds, or more, are now appropriated for the use of patients. In 1792, a Dispensary was added, and a suitable building annexed; collections for which, were made at the different places of religious worship, to the amount of more than 4000*l.* The Lunatic hospital and Asylum were opened in 1766. A poor-house also was opened in 1792, and another at Salford, in 1793; in which paupers are employed in the various parts of the cotton manufactures, and in such other branches of the business as they may be respectively qualified for.

The Sunday-schools form a distinguishing feature of this town; one for children, whose parents belong to the established church; and the other, for those of other denominations. The Public Baths, situated at the entrance of the Infirmary Walks, consist of hot, tepid, vapour, and cold-baths, to which are attached comfortable dressing-rooms, regulated with the strictest order and propriety.

The Lying-in-Hospital, at Salford, instituted in 1790, provides professional aid and domestic accommodation for pregnant women, who are received into it, and for the delivery of poor married women at their own houses.

The House of Recovery, an appendage to the Infirmary, accommodates 100 patients. This originated in 1796, and is calculated for persons in contagious fevers; the apartments being ventilated in the best possible manner.

The Strangers' Friend Society, instituted in 1791, distributes clothes, beds, and blankets, and whatever may be found necessary for the comfort of poor strangers. People of every religious denomination, are subscribers to it; and the Methodists, with whom it first originated, invariably exclude their own poor from its benefits.

The Boroughreeve's Charity arises from lands and monies, left for distribution to poor, aged, and impotent inhabitants in Manchester. These are provided with linen cloth, coats, gowns, or money,

at discretion, according to their respective wants; but the lands were sold for building on, a few years ago, and the value of that part of the property is augmented in more than a quadruple proportion. The cloth given on this occasion, is so marked as to prevent its being either pawned or sold.

In the year 1809, under the patronage of Sir Robert Peel, Bart. a "Ladies' Society, for employing the Female Poor," was established here. The object of this institution is, to employ poor women in making up wearing apparel, and other plain articles of domestic usefulness, in a cheap and substantial manner.

Besides the Grammar School, already mentioned, there are many private schools, both here, and in Salford.

The Literary and Philological Society of this town, was established in 1781. The late Dr. Thomas Percival, a native of Warrington, was long president of this institution. It has published several volumes of its memoirs, some of which have been translated into the French and German languages. The Society's meetings are every alternate Friday, from October to April; and, on admission, by ballot, each member pays an entrance of two guineas, and an annual subscription of one guinea.

The Philological Society, instituted in 1803, on the model of a similar society in Liverpool, professes "to cultivate literature, and science in general, polemic politics, and polemic divinity, only excepted."

The Manchester Circulating Library, instituted in 1757, is the joint property of between 3 and 400 subscribers. The price of an admission, and proprietary ticket, transferable by sale or legacy, is five guineas, and each member pays fifteen shillings yearly.

The Manchester New Circulating Library, and News-Room, called "the Portico," in Mosley Street, was instituted in 1792. The Library contains 4 or 5000 volumes. The expenses of the building were defrayed by a number of proprietors, who paid thirteen guineas in advance, and an annual subscription of two guineas. The price of a proprietary ticket is now thirty guineas. The dimensions of the building are as follow: length, 106 feet; width, 49; height, 45. The coffee-room, is 66 feet by 42; and 38 feet high to the springs of the dome ceiling. The dimensions of the library are the same as the coffee-room. The gallery is supported by reeded pillars, which admit warm air. The reading-room, and card-room, are 30 feet by 16 each. The two principal fronts are constructed of stone, in the Ionic order.—There are other reading and literary societies in this town.

The Manchester Agricultural Society, instituted for the purpose of promoting and encouraging the useful arts and sciences of life, was established in 1767; and, since that period, has distributed many premiums for valuable discoveries. The society grants

grants premiums to cottagers who support their families without parochial aid; and honest and good servants are rewarded by honorary presents.

To the Repository, an institution adapted to encourage and reward industrious females, the necessities may send, with a ticket and price, any article of fancy, &c. which is exposed for sale; and, when sold, the money is paid over to the owner, who pays one penny in a shilling for commission.

The Theatre, a new building, on a large scale, was first opened in 1807. The Assembly-Rooms are contained in a plain building, which was erected by a subscription of 100 persons, at 50*l.* each, about the year 1792. The hall-room, 87 feet long, by 34 broad, is decorated with three elegant pendant, and twelve mural glass chandeliers. In the tea-room, is a full-length portrait of the late Lord Strange, father to the present Earl of Derby. A concert-room was erected here, in 1777, and its meetings are well supported by amateur musicians.

The New Bailey prison, in Salford, finished in 1790, is a massive pile, constructed on Howard's plan, at the expense of the hundred of Salford, to which district it is exclusively appropriated. It is inclosed within a square wall, of 360 feet in diameter. At the entrance, is a handsome rusticated building, containing the sessions-room; adjoining which, are with-drawing rooms, for the magistrates, counsel, jurors, witnesses, &c. The turnkey lives on the ground-floor; and, behind the lodge, in the midst of a large area, is the prison, in the form of a cross, three stories high. From the centre of each story, all the four wards, with the door of every cell, may be seen. No prisoner here is fettered; but, if refractory, is removed to a solitary cell. The prisoners wear blue and red before conviction, and blue and yellow afterwards. No person is suffered to be idle, people of all trades being constantly employed.

The barracks are at Hulme, a township in the suburbs. They are constructed on a uniform plan, for the accommodation of dragoons.

The civil government of this town is vested in a boroughreeve, who is annually chosen; two constables, and a deputy constable; and the township of Salford is under a similar government. For the administration of justice, several respectable magistrates assemble on Wednesday and Saturday mornings, weekly. Quarter-sessions, also, are held four times a year; when, from press of business, the court has been sometimes kept sitting nearly a fortnight. The lord of the manor, also, holds a baronial court, monthly, for the recovery of small debts; and, in Salford, which is royal demesne, is a hundred court, for the same purpose, holden under the King, once a fortnight, by the right honourable the Earl of Sefton.

The bridges of communication between the two towns over the Irwell, are the Old Bridge, which was erected about the time of Edward the Third, of three arches, on which was a chapel in Leland's

VOL. III.—NO. III.

time, since used as a dungeon, but removed in 1778, when the bridge was made wider. Black Friars' Bridge is made of wood, though flagged with stone, for foot passengers only. It was determined, in the summer of 1817, that this bridge should be rebuilt, with stone. The expenses of the New Bridge, which was erected in 1783, were defrayed by subscription shares of 40*l.* each. It is handsomely built of stone, with three arches, besides a small one left open as an acknowledgment of the Duke of Bridgewater's right to a towing path to his quay, on the Salford side of the river. "The subscribers, at the end of 18 years, having reimbursed themselves by a toll on passengers of every description, with an interest of seven and a half per cent. on the original capital, not only purchased buildings to be pulled down, at the upper end of Bridge Street, to extend the shambles, and widen the access to the bridges, but generously relinquished all future toll to the public, though in the year preceding, it had been let for 1150*l.* per annum." The small stream of Irk, which passes through a part of the town, has six or seven bridges upon it; and the Medlock, a larger current, has eight or nine, in various parts of the town. That of Oxford Street, in particular, merits much attention. In the summer of 1817, a new cast iron bridge was thrown over the Irwell, from Salford to Strangeways. It is composed of one arch of 20 feet span; and it was completed in eight months, by the Colebrook Dale Company.—Shooter's Brook has three bridges over it, and there is one of three arches over Shude-hill pits. There are upwards of 20 bridges over the different canals. The grand aqueduct of Ashton canal, over Shooter's Brook, in a diagonal direction, is of singular construction, and is truly picturesque on the approach from Piccadilly. The tunnel at Knot-mill, through which the Rochdale canal passes, to join the Duke of Bridgewater's below Castle-field, is also entitled to notice. This tunnel passes under the street leading to Castle-quay, at each end of which are bridge-like battlements in Gaythorn Street, and Castle-field. The conveniences for the transit of goods are almost incalculable. About 50 years ago, only eight vessels were employed in the trade between this town and Liverpool; but now there are more than 120. The land and canal carriage has also increased more than in equal proportion. Eighteen or 20 coaches leave Manchester daily, for London, and different places; and eight others, three times a week; whereas two only left this place twice a week, so late as in 1770, one of them to London, and the other to Liverpool. In 1754, the Flying Coach engaged to be in London, in four days and a half; now the mail coaches constantly run it in 30 hours; and there have been instances of the Defiance and Telegraph coaches reaching Manchester from London, in less than 20 hours.

The manufactures of Manchester have been justly described as constituting the very *soul* of the place, and the factories its *body*.—In the fifth and sixth years

4 H

years of the reign of Edward the Sixth, an act passed for the better manufacture of woollen cloth, wherein the Manchester cottons, as then called, and Manchester friezes, are directed to be made of a proper length and breadth, which cottons were certainly then made from wool. In the year 1557, another act passed to amend the preceding; and recites, in the same terms, the Manchester and Lancashire manufactures. Another act for the regulation of sealing the cloth, by the Queen's aulneger, passed in 1565. The trade of Manchester is described, in 1650, as "not inferior to that of many cities in the kingdom, chiefly consisting in woollen friezes, fustians, sack-cloths, mingled stuffs, caps, inkles, tapes, points, &c. whereby not only the better sort of men are employed, but also the very children, by their own labour, can maintain themselves. There are, besides, all kinds of foreign merchandise brought and returned, by the merchants of the town, amounting to the sum of many thousand pounds." Cotton goods, of English manufacture, appear to have been a novelty in the year 1774, when an act of Parliament was passed, declaring, that stuffs made entirely of cotton spun in this kingdom, had lately been introduced, and the same were allowed to be used as a lawful and laudable manufacture. A duty of three-pence per square yard was to be paid on every piece that was printed, painted, or stained. The author of a pamphlet, published in 1788, observes, that not above twenty years before that period, the whole annual value of the cotton manufactures of this kingdom was under 200,000*l*. and that not above 50,000 spindles were employed in spinning cotton yarn; but, in 1787, that number was calculated to have augmented to 2,000,000, and muslins were then made in British looms, which rivalled those of India. A writer, who investigated the subject of the cotton manufactures, in 1787, estimates the supply and expenditure of cotton, in the following proportions:—

<i>Imported from</i>	<i>Pounds</i>	<i>Worked up in</i>	<i>Pounds</i>
British West Indies...	6,600,000	Candlewicks.....	1,500,000
French and Spanish colonies.....	6,000,000	Hosiery	1,500,000
Dutch ditto.....	1,700,000	Cotton goods, } mixed with silk or linen. }	2,000,000
Portuguese ditto.....	2,500,000		
East India procured } from Ostend..... }	100,000	Fustians	6,000,000
Smyrna or Turkey.....	5,700,000	Calicoes & Muslins	11,600,000
	22,600,000		22,600,000

At the present time, it is supposed, that, throughout the kingdom, not fewer than 400,000 persons are employed in the cotton manufacture; nearly one-half of them in the calico and muslin branches, wherein the value of the raw material is advanced, by industry and ingenuity acting upon capital and machinery, to from ten to fifty times the value of it, when purchased by the manufacturer.

The high rank which Manchester holds in the

scale of commercial importance, may be chiefly attributed to the nature and extent of the improvements in the cotton spinning trade, by which the production of all the articles essential to the manufacture of cotton goods has been facilitated, and every competition, heretofore regarded as too formidable to be successfully opposed, has been completely borne down. The spinning concerns, in the town and neighbourhood, are numerous, and many of them of great magnitude, some employing from 30 to 70,000 spindles, and yielding upwards of 600,000 hanks per week, each hank measuring 840 yards, or, in the whole, 504,000,000 yards, a prodigious length to be the produce of six days' labour. The improvements made for the last 35 years have been, in a great degree, confined to the spinning department, and those preparatory processes which the present mode of making yarn requires. Not more than half a century has elapsed, since all the cotton yarn, manufactured in this country, was spun by hand, upon that well-known domestic instrument, called a One Thread Wheel. The first successful attempt that was made to spin cotton by machinery, was by a person of the name of Hargreave, of Blackwell, in Lancashire; who constructed a machine, which he called a Jenny, and by which a single person could spin from 20 to 40 threads at one time.—These machines, in a short time, became very general; and, upon them, was produced the web or shute of which the various kinds of cotton goods were made. The warp or webb of these goods was almost universally linen, until it was discovered that by uniting two of the threads produced by the jenny, and twisting them together, an excellent substitute was provided for linen yarn, heretofore used for warp. The late Sir Richard Arkwright, for whom the accomplishment of this great object was reserved, after many experiments, finished his first engine, in 1768; and, in the following year, took out a patent. From the expiration of Mr. Arkwright's patent, the spinning of yarn, and manufacture of cotton goods rapidly increased; machines were successfully employed to abridge labour, and no difficulty or competition presented itself of so formidable a nature as to defeat the genius and industry of those who were engaged in the trade. The cotton, as it is received in its original packages, is committed to women or girls, who beat it with slender rods, by which the fibres are expanded, and the seeds and husks are loosened, and more distinctly seen; these are carefully picked out, and the cotton is then taken to a machine, by which it is carded. This machine consists of two or more cylinders, moving with great velocity, in opposite directions. By this machine, the cotton is so disposed as to be taken off in a small substance, resembling a spider's web. This is conveyed into a can, by a pair of rollers, fixed to the machine; in a perpetual or endless carding, after which several of these cardings are united, and frequently passed between iron rollers, by which the fibres become better arranged, and the bulk considerably

derably reduced. Another, and similar operation, called roaving, succeeds, with this difference, that after the cotton has passed through these rollers, it falls into a can, open at the top, which moves upon a centre with considerable velocity, and by which the cotton becomes a soft thread, and capable of further extension, according to the fineness of the yarn required. This process is succeeded by another called stretching, or roaving, upon a machine very similar to the mule, and which is the last of the preparatory processes. The mule upon which these roavings are spun is a curious machine, and like the jenny, when first invented, carried from 80 to 100 spindles; these have been successively increased, until the prevailing size now is 300 spindles.—Power having also been found applicable to give motion to these machines, two of them are managed by one man, and three or four children, whose employment it is to lay the thread, when made, upon the spindles, and to piece up those that may break. By this arrangement, and the successful application of mechanics to this branch of business, what would, 40 years ago, have required 600 women or girls to have performed, can now be done by one man and four children! By the Lancashire spinners, more than 400 hanks, weighing two pounds, have been drawn from four pounds of raw East India cotton, each hank measuring 840 yards, and reaching upwards of 180 miles, or nearly as far as from London to Manchester. The number of printers is calculated at about 7000; and each of these employs three persons, making the whole 21,000. Each printer will employ nine weavers to make the cloth he prints. Supposing the printer to print three pieces per day, and the weaver to weave two pieces per week, the number will be 63,000. These 63,000 weavers will employ 25,000 persons to make the yarns ready for the loom. Thus it appears, that there are 109,000 persons dependant on these 7000 printers, so that every printer, set to work, will employ nearly 16 persons in all the different branches of the cotton business, notwithstanding the great improvements in machinery of every description, which have taken place.

The foundation of the Manchester Commercial Building, was laid the 20th of July, 1806. It is built entirely of Runcorn-stone, from the designs of Mr. Harrison, of Chester. The principal object of its erection, was to furnish a place of public resort for the merchants and manufacturers of the place and neighbourhood, on the plan of Lloyd's Coffee-House, in London, and every article of political

and commercial intelligence is there procured for their perusal. The fund for defraying the expenditure, estimated at 20,000*l.* was raised by the sale of shares of 50*l.* each.

Some estimate of the increase of population in Manchester and Salford, may be formed from what follows. In the year 1757, an enumeration of the inhabitants of these townships took place; when the number appeared to be about 19,839.—In 1773, an accurate survey of Manchester was taken, which gave the following results:—

	<i>Manchester.</i>	<i>Salford.</i>	<i>Total.</i>
Houses inhabited.....	3402.....	866.....	4268
Families	5317.....	1099.....	6416
Male Inhabitants.....	10548.....	2248.....	12796
Female Do.	11933.....	2517.....	14450

Persons to a house, 6½; to a family, 4½.

At the same period, the township of Manchester, detached from the town, contained 311 houses, 361 families; 947 males, 958 females: total, 1905.—And the whole parish of Manchester, comprising 31 townships, in a compass of 60 square miles, contained 2371 houses; 2525 families; 6942 males; 6844 females: total 13,786 inhabitants. The whole number then of the inhabitants of the town, township, and parish of Manchester and Salford, amounted at that time, to 42,927. In 1788, the numbers were, in the township of Manchester, 5916 houses; 8570 families; 42,821 persons: in the township of Salford, about 1260 houses. The whole number of persons, in both towns, might then be reckoned at more than 50,000.—During the year 1791, the christenings in the towns amounted to 2960; the burials, to 2286. These numbers, by the usual mode of calculation, will give from 65 to 75,000 inhabitants; an increase almost unparalleled. According to the returns under the population act, in 1801, it appeared that Manchester and Salford then contained:—

	<i>Manchester.</i>	<i>Salford.</i>	<i>Total.</i>
Male inhabitants	32603.....	6540.....	39143
Female Do.	37857.....	7053.....	44910
Houses inhabited.....	10445.....	2204.....	12649
Number of families	15509.....	2943.....	18452
Houses uninhabited.....	251.....	28.....	279
Total number of inhabitants, of both sexes, 84,053.			

In the year 1811, the population of Manchester was 79,459; that of Salford, 19,114; making a total of 98,573.

The Rev. Mr. Byrom,* author of a well-known system

* John Byrom, A.M. and F.R.S. born at Kersall, near Manchester, was the youngest son of Mr. Edward Byrom, of that town. At Merchant Taylors' school, in London, he distinguished himself by his classical acquirements; and, in 1708, in his 17th year, he was admitted a pensioner of Trinity college, Cambridge. In 1714, he was elected a fellow of his college,

soon after which he wrote his first paper in the Spectator, and afterwards his celebrated pastoral of Colin to Phoebe. He practised short hand, with some success, at Manchester; and, on coming to London, acquired, by his exertions, a comfortable competency. The celebrated Earl of Chesterfield was his pupil. In 1723, he was admitted into the Royal Society; and, in

system of short-hand, and Dr. Falkner,* were natives of Manchester, or its neighbourhood.

MEADOWS.]—On this estate, in the neighbourhood of Wigan, originally stood the family mansion of the Marklands. On the site of the old dwelling, a substantial farm-house was erected a few years ago. The Meadows has been an hereditary estate of the Markland family,† ever since the time of Edward the First.

MIDDLETON.]—This place, 6½ miles N. by E. from Manchester, and 189½ N.N.W. from London, having become a place of considerable importance, from the progressive increase of its population, a grant was obtained, in 1791, for a weekly market, and three annual fairs. A market-place, with shambles, warehouses, &c. have been erected by Lord Suffield, the lord of the manor, who holds the principal part of the landed property of the place. Two constables constitute the police, and are chosen annually. The parish, which embraces seven or eight hamlets, is a rectory. The church is a venerable pile. Under the embrasures of the aisle, are various shields and devices; and the windows exhibit several subjects in painted glass. The chancel is divided from the choir, by a carved screen, of seven compartments; on which are shields, and armorial bearings, of the Ashetons, Radcliffes, Grosvenors, and Stanleys.—A free grammar-school was founded here, in 1572, by Dr. Alexander Nowel, dean of St. Paul's. It is a flourishing establishment, and contains nearly 200 scholars. The cotton manufactures are on a large scale, and the business is carried on to its full extent. There is, likewise, a considerable manufactory of twist. The population of this town, in 1811, was 4422.

MITTON.]—The village of Great Mitton, in the parish of the same name, is partly in this county, and partly in that of York, three miles S.W. from Clithero. The church occupies a very commanding site, on a lofty and steep bank, near the spot, where the Ribble forms a junction with the Hodder. The church is of the age of Edward the Third, and contains several monuments of the Sherburnes, of Sto-

nyhurst; the most ancient of which is one to the memory of Sir R. Sherburne, who died in 1594. The inscription informs you, that he was master-forester of the forest of Bowland, Lieutenant of the Isle of Man, and deputy Lieutenant of the county. There is a long inscription, recording the virtues of Sir Nicholas Sherburne, who died in 1717. He was a great benefactor to the neighbourhood, and was the first who promoted the spinning of Jersey wool, among the poor people. The church of Mitton was appropriated to the abbey of Cockersand, by Archbishop Melton, in 1328. Near Mitton, is Boshall, a large mansion, belonging formerly to the Lacies. It appears to have been since rebuilt, and is the property of John Lloyd, Esq. of Gwerblas, in Merionethshire.

Little Mitton, 2½ miles S.W. from Clithero, is a hamlet and manor, within the parish of Whalley, near the confluence of the Ribble, the Hodder, and the Calder rivers. The manor-house is a fine specimen of architecture, of the age of Henry the Seventh. The lower part is of stone, and the upper stories of wood. The interior of the mansion deserves attention, particularly the hall, which is very curious: the ceiling is of oak, in wrought compartments; the principals turned in the form of, obtuse Gothic arches; the pasterns deeply fluted, their capitals enriched with carving: the walls covered with wainscot, and the bow window adorned with armorial bearings, in painted glass. The screen is very rich, but of a more modern date than the rest. Upon the pannels of it, are carved ten heads, of a rather rude character; designed, doubtless, for portraits. Our ancestors seem to have had an extraordinary partiality for southern aspects, and the situation of this mansion, is a striking instance of this: the front looks towards a marsh, overgrown with alders, and the beautiful landscapes in Ribblesdale, to the north and west, have been entirely neglected.

MOSLEY.]—Mosley, nine miles E. from Manchester, is a considerable manufacturing village, with upwards of 100 houses, many of them large and well-built, chiefly of stone.

in No. 488, of the Philosophical Transactions, is his paper on the Elements of Short Hand. He published Miscellaneous Poems, in 2 vols. 8vo.; those on Enthusiasm, and the Immortality of the Soul, are considered as excelling in merit. He died in 1763, having supported, through life, a character of virtue and honour.

* Thomas Falkner, the son of an eminent apothecary of Manchester, was bred to his father's profession. At 20, he removed to London, for the practice of the hospitals, but soon afterwards engaged as surgeon in a vessel bound to Africa. His health having been severely impaired during the voyage, at Buenos Ayres, he went on shore to recover it. He there received so many acts of kindness from the Jesuits, as induced him to become a member of their college; whence he was soon sent out as a missionary, to visit the extreme parts of the South-American continent, where he remained six years. On his return, he was appointed physician to the college, and continued until the suppression of the order, in 1767, when he and his colleagues were sent prisoners to Cadiz. He there lingered some months in a dungeon, but at length procured his release, through the En-

glish ambassador, and, in 1768, returned to London, after an absence of 38 years. He afterwards became domestic chaplain to a gentleman of Worcestershire, where he died in 1774. Soon after this event, Mr. Pennant published "the description of Patagonia," written by Falkner. Pennant observes, that Falkner returned to Europe, with a suit of Patagonian cloth, a cup of horn, and a little pot of Chilian copper, the whole fruit of 38 years labour, which the Spaniards humanely left him.

† Jeremiah Markland was born at Childwall, in the year 1693. He was one of the most distinguished classical scholars of the 18th century; and, at the time of his death, was senior fellow of Peter House, Cambridge. When young, a proposal was made him, by Dr. Mead, to travel into France and Italy, in search of literary treasures; but, from some cause, the negotiation was broken off. After a life of literary retirement, he died at the advanced age of 83, in the village of Dorking, Surrey, in 1776. He was no less distinguished for the benevolence of his heart, and the simplicity of his manners, than for the depth of his learning.

NEWTON.]—

NEWTON.]—The market and borough-town of Newton—Newton-in-Makerfield—or Newton-in-the-Willows, with a population of about 1600, is 47 miles E. by E. from Lancaster, and 192½ N.W. by N. from London. It was royal demesne in the time of Edward the Confessor; and, after the Conquest, it was long in the possession of the Langton family, usually styled Barons of Newton. It has returned two members to Parliament, from the first year of Elizabeth. It had formerly a market.—Leland gives the following description of it: "On a brok a litel poore market, whereof Mr. Langton hath the name of barony, Sir Perse Lee of Bradley hath his place at Bradley, in a park, two miles from Newton." It consists at present of one broad street. Here is an old hall, built of wood; in the windows of which is a considerable quantity of painted glass. It stands on a rock; in which have been discovered several subterraneous passages. The remains of a moat are still to be seen. This place is supposed to have been a royal palace.

At the Red-Bank, near Newton, a detachment of Cromwell's army defeated a party of Highlanders, in August, 1648, on their march from Preston; most of the prisoners were hanged in a field, which still bears the name of Gallows' Croft. A large stone was placed in the hedge to commemorate the event.

OLDHAM, ROYTON, &c.]—We mention Oldham and Royton together, in order that we may avail ourselves of the descriptive powers of a very recent tourist through this part of the county. Oldham, 7½ miles N.E. from Manchester, is celebrated for its manufacture of hats, and strong fustians. Though raised to the dignity of a market-town only a few years ago, it has a church, a chapel of the establishment, and some dissenting meeting-houses. It stands on high ground, on a branch of the Medlock, near its source; the river Irk also commences its channel in the neighbourhood. The peculiar utility of these streams in carrying on the machinery, &c. of manufactories, has occasioned the erection of many; and an immense number of these, with connected houses, have been erected in this part of the county within a few years. Abundance of coal is easily and cheaply obtained here. A free-school was founded at Oldham, by James Asheton, Esq. of Chadderton. In 1811, the town of Oldham contained 16,690 persons. Royton, 4½ miles S. by E. from Rochdale, abounds with manufactures and coal-mines. Royton Hall, the seat of Joseph Pickford, Esq. formerly belonged to the Byron family, who had considerable landed property here. It is pleasantly seated in a deep valley, surrounded by high hills. In the house, is a circular stone staircase, remarkable for its solidity and strength.—Here is a chalybeate spring.—The tourist, to whom we have alluded, commences at Loeside, and, taking a circular sweep, ends at Oldham. "Loeside, then," says he, "is a neat

clean fold, situate on the slope of a hill called the Loe; or, more emphatically, the Great Loe. The oldest house therein appears to have been built about the time of the great plague in London; there is a stone still remaining, with the year of its building, or rebuilding thereon; this is 1664, and the initials of the then owner, as we suppose, are graven thereon. This place is the residence of Mr. Jonah Andrew, and he has an elegant house built on the southward side thereof. He is one of those men who shrink from public gaze; I have often heard him repeat, that he wished to be considered, not as one of the bustling crowd, who make such a squabble for the tiny bits of yellow dirt, about which the mole-hill is so agitated, and which the crowd make such a "hurly burly" after; but as one, who, during his short stay in this troublesome tenement of earth, was anxious to enjoy the same at ease; to cheer his friend and himself, without griping too greedily at the earnings of labour, so hardly acquired with the sweat-bedewed brow.—His nature is such, he appears never so happy as when he pours the glass of October to exhilarate the drooping spirits of his guests, and those are generally selected from the most industrious and deserving of his neighbours and friends. Oft, and many a time, has the palm of labour supported a full goblet to renew the waste of his spirits, on his "clean hearth stane." His wish is not to move in a higher circle than the true only "English yeoman," whose hospitable board we have heard, was wont to groan under its load of meat which filled the bellies of the happy laborious circle who were fortunate enough to live in the neighbourhood of this truly noble mansion. O tempora! O mores! Where now is that house and that table!!! It seems like the dreams of fairy land!!! Much different, indeed, the practice of most of the great ones of our day. Shut up from, and excluded all communion with labour, and its but too common attendant, poverty, they know none of their distresses, and but too often appear to believe they have none; and should any of this wretched tribe, driven by strong necessity, commit any trivial defraud, they raise their hands, "and wonder who could do them!"—The worthy man we are now describing, by associating with all ranks, has an opportunity of seeing into the remote causes of many an action committed by the lower classes of society, which is impenetrably hid from the fine gentleman, whose body is composed of atoms too refined to come in contact with vulgar dust. Our hero, too, is not insensible to the charms of science and of art, though many may suppose, from my foregoing account, I have been sketching out the brutal bumpkin of a country squire. He is not only an admirer, but an encourager of every appearance of genius; in short, let me conclude with the old adage,—"Experience proveth all things."—Pursuing the high road, we next come to the cottages of Fanny Bank; and, below them, in a bottom, lies the Fold, bearing the name of Roundthorn.

Roundthorn. There are a great number of coal-works in this neighbourhood, belonging to the Coal Company of Wernith. Higher on the road to Oldham, you pass Roxbury, a pleasant Fold, situate on a gentle ascent; and above this, a place called Roxbury Hill. Wide thereof, lie the cottages and the old mansion of New Earth, and the old farm of Gibraltar; with a new built mansion lately inhabited by the Kenworthies. From the top of the neighbouring hill, called the Loes, you have a charming prospect. You have an extended view, from the top of this hill, to the Welch mountains on the south, with views of Ashton-under-line and Stockport too; on the south-west, appears the broad column of smoke that ascends from the towns of Manchester and Salford; in the west, appears Bury; and, in the back-ground, rises Bolton, and the Blackburn hills, almost as far as Preston. On the north, you have a view of the hills wide of Haslingden; and behind Rochdale, Oldham appears full and distinct in the north-west. Just at the ascent of the hill, rises Glodwick, a populous little village; and the cottages of Lillies, both Higher and Lower. The further New Earth appears on the north brink of the hill; and the new-inclosed moor, called Greenacres, the scarce-cultivated surface of which, just assuming the garb of verdure, appears more than commonly pleasing to an eye that has long been accustomed to behold it in its natural rudeness—"A joyless, lifeless waste."—Rising in clusters around it, appear Keverlow, Side of the Moor, the House of Industry, and the Fold, with the agreeable cottages lately christened Mount Pleasant, the village rising in the bottom, called Mumps, with the cotton-works, and all the crowded buildings around it. From our present stand, appears the Loes, like a small country town. Fowleach appears on the other side of the moor, with the Stampstone; the hill, too, and a fair view of the Dirtcar, and Water Sheddings Road, which is the new road from Halifax to Oldham; and, full in view, appears the house of John Dunkerley, Esq. called Pit Bank. This mansion, for elegance and beauty, may rank as the second in the parish. Sir Watts Horton's, at Chadderton, we must certainly allow, has a more grand appearance; but, for simplicity and happiness of situation, it has a higher claim than even his. But there is a neat mansion, on the east side of this moor, that, to my fancy, appears more charming than either of these. This is the house of James Lees, Esq. of Clarksfield; the model of which might have been taken from the much celebrated mansion of William Hamilton, Esq. of Bush Hill, near Philadelphia, in America; for it appears to be nearly an exact copy thereof. Wide of this, lies the old, but stately, house of Clarksfield, now occupied by Joseph Lees, Esq. and a little above this, the small village of Greenacres, with Melasses Street, and the Mill, or more fully, Waterhead Mill, which are not visible from hence, being situated in a bottom. Welly-hole and

Hanging-bank lie wide of Greenacres, betwixt it and the Lees Road.

"Let us now proceed by Glodwick, along the highway, by the public inn, called Free-lane-ends, and leaving the moor's bottom on our left, we pass Fowleach, and journey along the Old Road to Royton, in order to survey the northern part of the parish.—Journeying along towards Royton, we come to Clough Fold, lying on the right. Here are a number of low detached cottages, partially covered with thatch. Further from the highway, lies Acre Mill, and Hopkin Fold, which is a neat clean cluster of houses, built on the side of a hill. Passing forward on the left, you leave Bolderhead, and Bolderhead Style, the Crab-tree, and Bargap, some ancient tenements, subject to Horsedge, in the time of Elizabeth. The road sweeps along by a very old, but ruinous place, called Potters; and passing this ruinous heap of cottages, we come to the late waste land called Higher Moor, which, in consequence of a late act obtained for the inclosure of the commons in the township of Oldham, &c. has been inclosed and converted almost immediately into rich pasture-grounds, corn-fields, and gardens. The newly-planted hedge-rows, opening their refreshing verdure to the warm sun, charmed and pleased me much; nor was I less delighted with the abundant treasure Ceres had just discovered in her lap; it was a rich, it was a bounteous sight, and such a sight as the sons and daughters of Industry may contemplate upon with the emotions of delight and adoration; adoration, not to the green mantle of nature, but to Nature's God, who spreads the scene around with such a prospect of coming plenty. Around the confines of this pleasing spot of ground, now rendered fertile, rise several substantial habitations, of modern date; and several low huts or cots appear in the back-ground, exhibiting marks of higher antiquity. One mansion we more particularly noticed, as being more fully entitled to remark than the rest, being, as we suppose, the old manor-house of the neighbourhood; we mean Higginshaw, so properly called, inhabited by Mr. Samuel Milne. To appearance, this structure may have been built three, or at least two centuries ago. The yard, with the portal door, the yews in front, and the silver-edged holly, all seem designed to inspire an idea of veneration for the solitary mansion. To say that the house is an elegant one, we believe would be truly laughable; but to say that it is a house, in which you see all the elegance of rural taste, would be a very just, we believe a very proper expression. The gardens around display all the beauty which we can find in many a finer modern country retreat, though perhaps the owner has been studying for years to add to its simplicity and neatness. You have, in this little useful piece of horticulture, a display of every thing curious for the son of Linnæus, the kitchen-maid, and the worshipper of Flora. Tulips, whose richness of colour may compare with the much-famed

famed Tyrian dyes—trees, whose branches almost bend with the bloom alone of coming fruit—herbs, that, joined with the mingled sauces of the kitchen, seem so delicious and so proper a food for the sultry months of summer; remarkably adapted, not only to allay thirst, but to prevent that scrophulous habit of body, to which we are almost all liable in the tropical months. In short, I never visited a garden where you find so much and so many gratifications, under an appearance so mean; the exterior of which speaks much against the interior part of this luxurious and delicious inclosure.—After a time, we arrive at the village of Heyside, which was formerly noted as being the residence of the family of Travis. There are a vast number of houses here, chiefly of modern date; one public-house, kept by a widow of the name of Lees, and a butcher's stall adjoining. Here live the family of the Nields too; one of whom has made a great noise in the musical world, being allowed to be one of the first vocal performers in the kingdom. The inhabitants of this place seem much attached to this science, and many of them have bent their minds thereto with very great success. Littlewood is a new range of brick-buildings, contiguous to Heyside; they are, in general, well-built, and the inhabitants appear a clean, industrious people. We now proceed to Mr. Cocker's mansion, at New Bank, whose house is one of the common-place houses of our country gentry; it is a neat and elegant habitation, but not one so admirable as we might expect from the great and manly spirit of its proprietor. Leaving the horse or bridle road, we come by a bye-path, to a place overshadowed by trees, called Birchshaw; and, from the top of a hill, near this ancient mansion, we have a fine and very beautiful and extensive view of the surrounding country, which appears, from hence, like one large extended valley.—Continuing our journey from Shaw, we ascend to Higher Crompton, a small village; in the vicinity lie the Rushcrofts, the Higher and the Lower.—Situating in the downs or lower grounds, in a different direction from High Crompton, you behold the farms of Hungerhill and Bardsley's; as also New Barn. On the ridge of hills above, lie Leonard Cross, and Narrow-yate-brow. Nether House, and Lime Field, lie in the valley below; and still nearer the village of Royton, lie Fir Lane, and Dog's-foot brook, and a cotton-mill adjacent. Lower Crompton, another inconsiderable village, is so situated, that it intercepts, in some measure, our perfect view of the former places; and wide thereof, you behold a farm, called Rushy Fields; Holroyd cotton-mill lies in the vicinity hereof. School-croft Lane, and the neat and pleasant village of Cowlishaw, are a remove nearer our station. Poultry-house farm lies on the flat of this pleasing vale or declivity. White Bank lies considerably more under that ridge of high land, called Oldham Edge; near to which place is a chalybeate spring, which was much resorted to by persons from various parts,

some years ago. Lusley brook, and High Barn shaded by sycamores, appear very pleasant rural retreats, as viewed from our stand; they lie almost in a direct line between Heyside and Royton. We now come to the very considerable village of Royton, situated on a branch of the river Irk. The seat of Joseph Radcliffe, Esq. who has removed to Mills Bridge, near Huddersfield, which presents itself at our entrance; though rather decayed in its appearance, its aspect plainly speaks—

“I'm left in solitude to mourn my Lord.”

It is at present occupied by Mr. Hordern, curate of Shaw. The village of Royton bids fair to rival its neighbouring superior, Oldham, for neatness, and being better laid out to the advantage of trade, and the comfort of its inhabitants; and though it be nothing near so large, it certainly has increased amazingly, within a few, a very few years. Thorpe, a small village, lies further than Royton; wide of the main road to Rochdale, Hough-bottom too, not misnamed, as lying in a bottom. Haggate Lane, now very populous, and the ancient Fold of Haggate; these places lie wide of Royton also, but more to the left, on the bridle road to Chadderton. And now the reader will be pleased to suppose we have ascended a high but very airy and pleasant eminence, called Chadderton heights; from hence we see Royley colliery just below, Haggate Fold aforementioned, Stott-field, and Birchen-lees. One remove farther on towards Chadderton, and you behold the village of Street Bridge, furnished with houses of entertainment, and surrounded by coal-mines, the swarthy sons of which are not the worst friends to his Majesty's excise.—On the other side of this streamlet, which pays its tributary waters to the Irk, nearly opposite to these places, lie Dry Clough and Edge Lane, with the detached habitations scattered round North Moor, and the dwellings above, that lie round the borders of Sarah Moor, as also the farm of Grimsby. Wide of Street Bridge, aforementioned, lie the Jealots; and immediately under our station at Chadderton heights, lie the Heys and Nod, a farm-house occupied by a manufacturer of light goods, and also another farm, bearing the name of Cragg; and, below these places, lies Chadderton Fold. Exactly opposite to these, on the other side of the water, lie Chadderton mill, and Chadderton cottage, occupied by the Rev. — Horton, a relation of the baronet of the same name, whose hall is in the vicinity of this place. The seat of Sir Watts Horton is a truly elegant mansion; the park and gardens around give it an air of magnificence; but a high brick wall, lately raised in front of the house, though it may have prevented the too forward gaze of passengers and visitants, has hurt the elegance of its appearance. They say the hall has a good collection of pictures. The place looks desolate; the absence of its owner is testified in every avenue, and every plantation.—

Leaving

Leaving this place, we beg leave just to mention, that Burnley Lane, which is a part of the road to Oldham from here, has a great number of brick habitations erected on the sides thereof. Hence we cross the new road that connects, by a nearer and easier passage, the towns of Oldham and Middleton. We now come to the former seat of ——— Hibbert, Esq. of Stock Field, now occupied, in part, by several genteel families. This place is a most agreeable and a most elegant rural retreat; the gardens around are charmingly pleasant in summer, being laid out gently declining to the warmth of a meridian sun, and not directly meeting the full rays thereof. Adjacent, lies a cotton mill or factory, and a house adjoining, belonging to Messrs. Fletcher and Smethurst. Cowhill and Alder-root, two very neat little Folds, lie still a remove nearer Oldham. Hollinwood, over which passes the main road to Manchester from Oldham, lies on the right of these places. There are a very great number of houses built on the skirt of this rude looking place. Chamber Hall, now inhabited by Mr. Bell, and Wefneth Hall, two of the most ancient residences in the parish, lie in the vicinity of Hollinwood.— We now pass along the main road to Oldham; and we have a fair view of Westwood, the seat of William Clegg, Esq. This place is truly genteel, and worthy its great enterprising proprietor. The elegant houses of James Clegg, and Abraham Clegg, Esquires, add a beauty to the lower part of the village of Oldham. We now enter this noted village, whose trade in hats is not equalled by any in the kingdom, perhaps; not to mention its great progress in the cotton branch: for, perhaps, in the manufactory of strong fustian goods, there was no place lately, near Manchester, that rivalled it.— Right before us, and intercepting our prospect of Shore Edge, as viewed from our present station, we cannot but remark the neat and elegant houses of two of our manufacturers, in the cotton business; one of which is the mansion of Mr. Cheetham, near to a place called Sheep Cotes. This is a well-built stone edifice; its appearance conveys the idea, *utilis et elegantia*. It is a real fact, that on the site hereof, not many years ago, was a rugged, rough, unsightly, stone quarry, many yards in depth; but how is the eye surprised at seeing this heap of rubbish put on the pleasing garb of the proudest cultivation; and in a time so short too, and in a manner so strange and sudden!—From the front part of the house, Mr. Cheetham has a pleasing prospect of the village of Shaw, and the ridge of sullen-looking mountains that almost environ it; the only opening left is a vista, right beyond the village, which opens on the eye, exhibiting a flat of the richest pasture and meadow-land, and here and there a beautiful tuft of woodland verdure, which gives a vast and goodly richness to the landscape. This country seems notoriously sylvanic, and its scenes are like the descriptions of romance and fairyland. To return, this residence of Mr. Cheetham

was, some few years ago, as rude a plot of ground as the township contained; but Mr. Cheetham, seizing the magic wand of Vertumnus, hath changed this “brute unlovely chaos” to a “green abode of life.”—Another glance of the eye brings before us the house of Mr. Abraham Cocker, of Lane Side. This is an ancient structure, now modernised, and rendered truly neat by the hand of this industrious man. The fences round have been trimmed up by the hand, that adds a charm to all, and renders life delightful:—

—————Industry if she turn,
E'en the drear desert brightens, mountains smile,
And vallies laugh in gay luxuriance round!

“I cannot omit saying, that Mr. John Newton lives at the venerable abode of Bank House, which has been before-mentioned. Neither can I forget mentioning the remarkable spring at Black Clough, the sweetness and clearness of which, if equalled, is not exceeded by any. Crompton Hall, we now have occasion to notice, as being wide of Shore Edge a little. This is perhaps one of the oldest mansions in the township. Mr. Cheetham aforesaid, who seems to bend his mind remarkably to antiquities, assures me, that he has read of this place being in the possession of a person of the name of Crompton, some centuries ago; perhaps the progenitor of the present family of Crompton, who are now settled at High Crompton. The valley, where this place stands, is remarkable for quarries of stone, beds of coal, and the clearest and purest springs of water. In the top part of the valley, which winds about towards Grange, there is an exhibition of the most romantic scenery, scarcely exceeded by those remarkable dales in Derbyshire. The writer never beheld any thing equal to the appearances that arrested his eye on entering this truly astonishing valley, which bears the name of Orchery Wood. The rock, which, on each side, rises almost perpendicular, to a height that terrifies the most daring and adventurous eye, added to the rudeness of all around, fails not to inspire an idea of the appearances exhibited by dame Nature in the primeval ages. The dashing of the waters from rock to rock, and the rustling of the wind through these dreary wildernesses, with the horrid yawning of the caverns around, partly natural, and partly artificial, form such a groupe of novelties, as would almost give inspiration to the most insensible. Leaving this extraordinary valley, I must call the attention of my readers to three most remarkable tumuluses, or redoubts; one of which, and the most remarkable, is above Crompton Hall. They are supposed to have been thrown up in the time of the civil wars, in the reign of Charles the First, as a kind of shelter, or retreat, for the adherents to royalty. They are all formed under that high ridge of hills, that extends all along here, and are placed at about three-quarters of a mile distance

tance from each other. The first they call Sholver Hey redoubt; the second, and the most remarkable one, is the redoubt at Cutts, above Crompton Hall, as before observed; and the third, and last, the most northerly one, is the redoubt at Slen sides.—The appearance of these barrows of earth brings to my mind a traditional story, which I have often heard my father relate. He said, that an ancestor of his, who lived at Crompton mill, being much attached to the royal cause, had been with a number of persons, of the same principles, on a fishing party; that they called at Moss Hey, near the village of Shaw, to fry their sport. They had but just served them up, when a person coming in hastily, informed them, that a party of the Parliament's cavalry were in search of them; and, he assured them, that before they could finish their repast, they would arrive on the spot. Whereupon they all threw down their knives, plates, fish-hooks and all, and fled, excepting only the good old ancestor, the miller; who swore, if the devil himself came, he would have the 'last snack.' He had scarcely finished, when they arrived; by some means or other, however, he escaped the house, and though closely pursued, he ran in such a zigzag direction, over the mosses and quagmires, adjoining, that their horses presently stuck fast, and they, with much difficulty, escaped themselves. By this time, my good old dusty progenitor had reached Sholver Hey redoubt; whence he halloed to them, and tauntingly cried, 'Where are your pot guns now!' Below this place, near Crompton Hall, stands a house occupied by one Mr. Stephen Sixsmith, a man considerable in the cotton business. Here, too, is a colliery, belonging to Miss Ann Hilton, called Brook Colliery. Here is an old house, likewise, that lies near, called Brook; and here it was, that, during that tremendous storm of lightning, rain, and thunder, which made such havoc in Crompton, about some fifty years ago, that a man who came to pay his addresses to a girl in the old mansion, was, through the violence of the flood, obliged to climb a plum-tree near the house, to save himself. The torrent still rising, he was afraid that the tree itself and all would be washed down, and in consequence thereof, he made a shift to scramble to one of the boughs that overhung the roof of the barn, and from thence descended on the slate. Not liking his situation, the rain descending in one continued torrent, he, by force, lifted up one of the slates, and let fall a fragment of stone, to sound whether it fell on the hay-loft, or into the flood. This experiment he repeated till he found himself right over the hay-mow; whereupon he dropped down upon it, and there lay until day-break. It was this storm or flood that was so severe at Dingle afore-named, where one man was killed by the lightning, and an old woman, resident in the same house, had her clog split by the same, which remains to this day in the Blue Coat hospital, at Manchester, a memento of its direful effects. The damage done by this

VOL. III.—NO. 112.

dreadful storm was incredible. One circumstance I cannot omit: Mr. Edmund Cheetham, of Shaw, informed me, that this flood floated him and his little infant sister, both in bed, nearly half a mile.—Above the places we are describing, in a wild inlet on the edge of these barren mountains, lies a place, called Brown Barn, remarkable as being the residence of two Scotchmen; who, it is supposed, fled here to avoid the fury that followed the abettors of the rebellion, in the year 1715. What their occupation was, in this dreary solitude, is unknown; but the dregs of iron ore are frequently dug up here. It is worthy of remark, that they were the first persons that were buried at Shaw chapel."

ORMEROD HOUSE.—Eastward from Burnley, about two miles, is Ormerod House, which appears to have been built in, or near the year 1595, as that date, with the names of Laurence Ormerod, and Elizabeth Barcroft, appears upon the front. Behind the house, is a grove of sycamores and elms, forming an extensive rookery. In the township of Ormerod is preserved an instrument of ancient and approved efficacy in suppressing the license of female tongues. It is called a Brank, and was placed on a woman's head, who was led, or driven through the streets, with this ignominious badge.—Dr. Plott, after giving a minute description of this instrument, says it "is much to be preferred to the ducking-stool, which not only endangers the health of the party, but also gives the tongue liberty betwixt every dip; to neither of which this is at all liable."

ORMSKIRK.—The populous market and manufacturing town of Ormskirk is 40 miles S. by W. from Lancaster, and 209½ N.W. by N. from London. It formerly belonged to the canons of Burscough priory; and, by a royal grant to that religious house, was invested with the privilege of a market and fair. Leland says, there is "a parish church in the town, no river by it, but mosses on each side." The town now contains four principal streets, which intersect each other, nearly at right angles: and the spinning of cotton for the Manchester manufactories, and thread for sail-cloth, constitute the chief employ of the inhabitants.—The tower and steeple of the church, are detached; a remarkable circumstance, which has never been satisfactorily accounted for; though it is traditionally reported, that it originated with two capricious sisters, who were desirous of raising some sacred memorial. They agreed to build a tower and steeple, but they could not agree about uniting and connecting their works; so, at length, they determined to erect both, detached from each other. Within the church, is a burial vault of the Derby family, who, previously to the dissolution of the monasteries, were interred at Burscough priory. The church, which stands at the N.W. end of the town, on an eminence, contains, among other monuments, "two figures of Staules; short hair, hands closed, heralds mantles and arms. Two ladies

4 •

ladies in close-bodied gowns, one with an Earl's coronet; these, probably, were the first Earl of Derby, and his two wives; the lady, with the coronet, his second wife, the Countess of Richmond; as the first, who was sister to the famous Richard, Earl of Warwick, died before he was created Earl. The population of Ormskirk, in 1811, was 3064.*

OVERBOROUGH.]—Northward from Hornby, about five miles, is the village of Overborough, the Roman station of Bremetonacæ. According to Rauthmell, Julius Agricola made choice of this spot to build Bremetonacæ; and, after it had been demolished by the Picts, it was again repaired and garrisoned by Theodosius, in the fourth century.—Among the fragments of antiquity, which this place exhibited, was an altar, dedicated to the idol Magan, by a Roman lady, upon her recovery from an indisposition. On one side, was an inscription; on another, a basso-relievo of an owl; and the third had the representations of two instruments used in sacrificial ceremonies. At some distance east of Overborough, at a place called Gargrave, is a camp, which Mr. Rauthmell attributes to Agricola. A Roman tessellated pavement was discovered here, some years ago. Roman roads connected with this station, are still to be distinguished in various places; and, between Overborough and Lancaster, a Roman mile stone, with an inscription, is preserved. At Overborough, is a seat of the Fenwick family.

PENWORTHAM.]—At Penwortham, 2½ miles S.W. from Preston, was a priory of Benedictine monks, subject to the abbey of Evesham, in Worcestershire. It was founded in the Conqueror's time, by Warine Russel; and, at the Dissolution, the site and buildings were granted to John Fleetwood.—Near this place, a seal, or sea-calf, was once taken in the Ribble.

PILLING MOSS.]—Westward from Garstang, about three miles, is the east side of Pilling moss, which exhibited a rare phenomenon, some years ago, and is thus noticed in the Philosophical Transactions:—"On Saturday, the 26th of January, 1744-5, a part of Pilling moss, lying between Hescomb Houses,

and Wild Bear, was observed to rise to a surprising height. After a short time, it shrunk as much below the level, and moved slowly towards the south side; and, in half an hour, it covered 20 acres of land. The improved land adjoining to that part of the moss, which moves in a concave circle, containing near 100 acres, is nearly filled up with moss and water; and, in some parts, is thought to be five yards deep. One family is driven out of their house, which is quite surrounded, and the fabric is tumbling down. The part of the moss, which is sunk like the bed of a river, runs north and south, and is above a mile in length, and half a mile in breadth. When the moss began to move, a man was passing over it from the west, who perceived, to his great astonishment, that the ground moved southward. By a speedy return, he had the good fortune to escape being swallowed up."

POULTON.]—The small market-town of Poulton, 21 miles S.W. by S. from Lancaster, and 233½ N.W. by N. from London, has three free-schools. Its population was, in 1811, 926.

PRESCOT.]—The market-town of Prescott, with a manufacturing population of 3678, is 50 miles S. from Lancaster, and 197½ N.W. from London. It occupies an elevated site, on the great road between Liverpool and Warrington. Leland calls this place a "little market, having no notable water about it, a three mile from Mersey up toward Lyrpole." This parish abounds in coal, from which Liverpool, and its adjacent parts, are plentifully supplied.—Among the manufactures of this place, those of watch-tools, and movements, and small files, are much celebrated. The former have been long established here, and are now carried on to a great extent. The drawing of pinion-wire, which originated here, is carried on as far as to 50 drawings, and the wire is completely adapted to every size of pinions to drive the wheels of watches. This pinion-wire is now very cheap, the price having been lowered in consequence of one of the workmen having settled at Islington, where he offered it at half price, to the tool shops in London. The small files made at Preston, are in great estimation. Here are also

* William Thomas Lewis, comedian, died at Westbourne Place, Chelsea, January 13th, 1811, aged 65 years. This admirable performer, and truly good man, was born at Ormskirk, in Lancashire. His grandfather was a clergyman, rector of Trahere, in Caermarthenshire, and second son of Erasmus Lewis, Esq. private secretary to Mr. Harley, (afterwards Earl of Oxford, prime minister to Queen Anne) often mentioned in the correspondence of Swift and Pope. His father, Mr. William Lewis, served his time to a linen-draper, on Tower Hill; but he quitted trade for the stage. He performed at Dublin. In 1749, young Lewis was carried to Ireland; where he was afterwards educated, at Armagh. He appeared, early in life, on the stage at Edinburgh, where the late Mr. Digges was manager. In 1771, he acted the part of Belcour, in the West Indian, at Dublin, with such applause, though opposed to Mossop, who performed the same character, in the rival theatre of that city, that Macklin made a most favourable report of him to Mr. Colman, then manager of Covent Garden theatre, and he was called to London, where he first appeared as Belcour.

He became a favourite with the public, from that moment; and, after the death of Woodward and Barry, he succeeded to some of the first characters in the drama, which he played with a sprightliness entirely his own. In 1782, he became deputy-manager of Covent Garden Theatre; and rose to the highest rank in his profession. His style of acting was of so singular a cast, that many of the dramatists of his time wrote parts peculiarly adapted to the display of his excellencies. He retired from the stage, in the year 1803, in consequence of a severe illness. But, although he ceased to appear as an actor, he conducted the affairs of the Liverpool and Manchester Theatres, conjointly with Mr. Knight. He married a Miss Leeson, of Covent Garden Theatre, an amiable and accomplished woman. No man was more beloved in his profession, than Mr. Lewis; he was a good husband, and an affectionate father. He left behind him three sons and two daughters. The death of a beloved daughter preyed upon his spirits, and induced a train of disorders, which baffled the skill of his physician, and he died in the bosom of a family remarkable for filial piety.

manufactures of cotton goods, sail-cloth, and coarse earthenware. The church is large, with a lofty steeple. A statue of John Ogle, of Prescott Hall, is affixed to the outside wall. The chapelries of Farworth, to the south; Rainsforth, to the north; and St. Helen's, and Sankey, to the east, are all within this parish. Among the great manufactories in this vicinity, that of plate-glass, at Ravenhead, deserves particular notice. An act of Parliament was obtained, in 1773, for establishing these works, and incorporating a body of proprietors. The concern failed about 25 years ago; in consequence of which, the premises were sold in 1794. A new company was, however, shortly after established, who have succeeded in placing the concern on a firm basis. Cast plate-glass, with concave and convex mirrors, are now made here equal to any that have been imported from the continent. Of the latter, some have been made 30 inches in diameter; and, of the former, 143 inches in height, by 72 in width. These works cover about 20 acres of ground, and nearly 300 persons are employed.—The casting-room is 200 feet long, by 78 feet wide, and is supported by lofty arches. There are three furnaces; and the table, on which the plates are cast, is a solid piece of copper, 14 feet long, by eight feet in breadth, and seven inches thick. Two large stone engines are employed for grinding and polishing.

PRESTON.]—The market and borough-town of Preston is 22½ miles S. by E. from Lancaster, and 216½ N.W. by N. from London. It is agreeably seated on an eminence, rising from the northern banks of the Ribble. Preston is considered the most fashionable place in the county; and, within its boundaries, and in the immediate vicinity, are many large and elegant mansions. In former times, it was nearly free from manufactures; but, of late years, many spacious warehouses, and extensive workshops have been erected. Camden considers, that the town arose out of the ruins of Ribchester, a celebrated Roman station, farther up the river. It is said to have derived its name from the number of religious houses founded here, and hence called *Priests-town*; afterwards contracted to *Prest-town*, *Prestun*, and *Preston*. Edmund, Earl of Lancaster, son of Henry the Third, founded a house of Grey Friars at this place; and, before his time, an hospital had been established here. The ville of Preston, with some hamlets appertaining to it, was held by Tosti, the fourth son of Godwin, Earl of Kent.—Preston obtained the privilege of a borough, in 1179; and the inhabitants gave 100 marks to enjoy the same privileges as those of Newcastle-upon-Tyne. Though it sent members to Parliament, four times in the reign of Edward the First, and in the first year of Edward the Second, it had

afterwards no summons to that purpose, until the reign of Edward the Sixth. It has frequently been the seat of violent contests. The right of voting is in the inhabitants at large. The Earl of Derby, who has a handsome house here, returns one member; but the opposite interest generally carries the other. The returns are made by the mayor, and two bailiffs; and the corporation, besides the mayor, has a recorder, alderman, common-councilmen, a town-clerk, &c.

In the year 1322, Robert Bruce made an irruption into England, by way of Carlisle, passing through Cumberland, Westmoreland, and Lancashire, as far as Preston, part of which he burnt.

This town has the advantage of being the seat of various law-courts; among these, the duchy of Lancaster has a court of chancery, in which all causes are heard and determined according to certain peculiar customs of their own. Under the chancellor of the duchy, who is the chief judge, is a vice-chancellor, with the attorney-general, chief-clerk, registrar, and examiner, attornies, and clerks, prothonotary, and clerks of the crown, &c. From the weekly county court also, writs for debts above 40s. are issued, and executions follow on failure of appearance. Other courts are also held here; and a court of quarter-sessions of the peace, by adjournment from Lancaster, on Thursday, in the week after Epiphany.

Preston church is a large building. The parish is large, and has three chapels of ease; Broughton, St. Lawrence, and the New Chapel.

In the civil wars, the Duke of Hamilton, who had brought an army from Scotland, for the service of Charles the First, was routed on Ribbleson moor, to the eastward of the town, and at the pass of the bridge. In 1715, also, the friends of the Pretender, were here defeated by the royal forces, under the command of Generals Willes and Carpenter. Numbers of them were made prisoners, brought to trial, and found guilty of high treason. One of these, was Thomas Syddal, a blacksmith, whose head was set up on the cross at Manchester; and it is remarkable, that in the year 1745, when another rebellion broke out in favour of the Pretender, the son of the said Thomas Syddal, who was a barber, was made a prisoner, and executed; and his head placed on the top of the Exchange at Manchester, September 18, 1746.

A charter was granted to the burgesses of Preston, in 1172, by Henry the Second, sanctioning the guild-merchant within the borough, then established.* This is a sort of public carnival, or jubilee. It begins about the latter end of August. By the charter, which obliges the corporation to celebrate it at the end of every 20 years, on pain of forfeiting their elective franchises, and their rights as burgesses,

* The last guild commenced on the 30th of August, 1802, when an immense concourse of people of all ranks was assembled;

and processions of the gentlemen at the head of the different classes of manufacturers, with symbolical representations of

gesses, 28 days of grace are allowed to all who are disposed to renew their freedom. By public proclamation, it is declared, that on failure of doing so, they are ever after to be debarred of the same on any future occasion.

The mischiefs done by the rebels, in 1715, occasioned the town to be rebuilt in a more commodious and pleasant manner. It is now handsome, and well-built, with broad regular streets, and many good houses. The town is supplied with coals by the Douglas navigation, which joins the river below Walton bridge, and by the new Lancaster canal, which passes near it. By these canals, communications are opened with the Mersey, Dec, Ouse, Trent, Derwent, Severn, Humber, Thames, Avon, &c.

Preston, from its commanding situation, as a military post, has been deemed of the utmost importance in all the civil commotions of the kingdom.—Traces of a Roman military way may be discovered on the adjoining common, from the mouth of the Ribble to Ribchester.—Near the town, are many fine walks; but the most favourite is that of Enim, or Haynam; from which the Pretender is said to have viewed the town and the country below it, in 1745, with extraordinary feelings.

The town-hall is a very large and handsome building. Sir Edward Stanley, Bart. afterwards Earl of Derby, made a present of the picture of George the Second to the corporation. The assembly-rooms, which were built at the sole expence of the Earl of Derby, are elegant and commodious.—The new prison, or penitentiary-house, near the entrance of the town from Chorley, by Walton Bridge, is on the plan of Mr. Howard. It is appropriated for the criminals of Lonsdale, Amounderness, Blackburn, and West Derby hundreds. Its purpose is for salutary confinement, and reformation only. Each prisoner is allowed daily a pound and a half of bread, and a piece of butter, with a half-penny worth of potatoes; and they are permitted to exchange what they do not eat for tea and sugar; but all strong liquors are absolutely prohibited. A

of their respective branches of trade and commerce, and bands of music, passed through the principal streets of the town. The mayor and corporation, with the wardens of the different companies at the head of their respective incorporated bodies, each in their official dresses, and with their usual insignia, fell into the ranks in due order; and the whole was preceded by an excellent band of music belonging to the 17th regiment of light dragoons, in full dress, and their officers newly clothed. Besides the wool-combers, spinners, weavers, cordwainers, carpenters, vintners, tailors, smiths, plumbers, painters, glaziers, watch-makers, mercers, and drapers' companies, the whole was closed by the butchers, skimmers, tanners, and glovers, habited in characteristic dresses, each company being attended by a band of music, and a very elegant ensign. In this order they proceeded to church; and, after service, returned and paraded through the different streets, in the same order. The mayor afterwards entertained the gentlemen at his house; and, on the next day, the mayoress repeated the treat to the ladies of the town and its vicinity, who formed a procession on this day, in a similar manner, preceded by the girls of the cotton manufactory, superbly

new bridge was built over the Ribble, in 1781, under the authority of an act of Parliament, the former one having been washed away by a flood. The population of Preston, in 1811, was 17,065.

PRESTWICH.]—The township of Prestwich, is 4½ miles N.W. by N. from Manchester. The parish of Prestwich, with that of Oldham, constitutes one rectory, denominated Prestwich and Oldham, though the parishes are, in other respects, separate. The parish of Prestwich contains the following townships: Prestwich, Great and Little Heaton, Whitefield, Unsworth, Outwood, Alkington, and Tong. The parish is about fifteen miles in length, and three in breadth. The land has of late years been much improved by manuring and draining; where this is not the case, the soil is very indifferent. The larger part of the parish is in pasture, owing to the great demand for milk and butter at Manchester.

RAMPSE, WALNEY, &c.]—Rampside, a little village, on the southern shore of Furness, nine miles S.S.W. from Ulverston, is a place of resort in the bathing season. The roots, and remains of trees, which are to be seen in the sands, afford a strong presumption, that the islands to the south and west, have been separated from the main land, and formed by the gradual encroachment of the sea. The islands are eight in number; among which the most considerable, is Walney. It consists of a long bank running parallel to the lower part of Furness. The whole island lies upon a bed of moss, which is discovered beneath a layer of sand and clay. In this moss, large trees have been found. The abbots of Furness undertook the support of the dykes; but, since the suppression of the monastery, the sea has made great encroachments, and threatens its total destruction. The island is about ten miles in length, by one in breadth, and exhibits the appearance of a bank, or wall, in the sea; hence its nomination by the Saxons, of Waghney, Woney, and Walney. It contains two hamlets, Bigger, and North Scale; and has a chapel of ease under Dalton. At the southern extremity of the island is a light-house, which was erected in 1790. It is about 68 feet high; and its

dressed, and profusely decorated with jewels. Nearly 400 of them, each wearing an elegant fashionable plume of feathers, formed such a brilliant display of beauty and elegance, as irresistibly to attract universal attention and admiration. The procession was conducted to and from the church, in like manner as on the preceding day; in the course of which, a miniature model of a complete steam-engine was introduced at work, and performing every operation of the cotton manufactory. The whole was extremely showy and brilliant: Balls, races, and plays, were not forgotten.—The "guilda mercatoria," or merchants guild, is a privilege to merchants, enabling them to hold certain pleas of land, &c. within their own precinct, and is confirmed by acts of Parliament, in the 37th of Edward the Third, and 15th of Richard the Second. It is of Saxon origin, by which certain communities stipulate with each other, to punish crimes, make good losses, and acts of restitution in proportion to offences. Fraternities and guilds, therefore, are of ancient use, long before formal licenses were granted; at this day, a guild implies a company united together, with private laws and orders, after license obtained from the King for that purpose.

reflectors

reflectors are made to revolve by clock-work. Opposite to Walney, is another small island, called the Pile of Fouldrey, on which are the ruins of an ancient castle. It was built by one of the abbots of Furness, in the reign of Edward the Third, to guard the coast, and likewise as a retreat for the monks in times of danger. At North Scale, are several wells of fresh water, which are formed and regulated by the flux and reflux of the tides. The deepest of these wells begin to swell at half-flood; but those which perforate the higher part of the stratum are then empty, and do not begin to rise until high water; for the fresh water will continue to accumulate until it attains the level of the salt water in the channel. The wells are situated close by Walney channel, and are sunk into a bed of sand before any water can be procured: from which we may infer, that in its passage through the sandy stratum, the water deposits its saline particles.

RIBCHESTER.]—The humble village of Ribchester, determined, by Dr. Whitaker, to have been the *Coccium* of Antoninus, an important military station of the Romans, is $5\frac{1}{4}$ miles N. N. W. from Blackburn. "This celebrated station," observes the Dr. "was placed with the peculiar judgment which marks Agricola's encampments; for to him, unquestionably, it must be referred, on the northern bank of the river, and flanked by the deep channel of a brook on the east, corresponding to which, on the west, is a large sluice, or channel, to which tradition has assigned an use, confirmed by many nautical relics; namely, that of a dock, or slip, for vessels. That the tides once rose so high as to waft vessels of burden to the quays of *Coccium*, there can be little doubt, nor is it necessary to resort to the violent expedient of an earthquake in order to account for their recess. A gradual aggression of sands, aided by strong westerly winds, and not sufficiently repelled by floods from the land, will abundantly account for an appearance so frequent, that we have almost ceased to inquire into its causes."—Several inscribed stones, innumerable smaller antiquities, many coins of large brass, and some denarii, of the upper empire, have been found here. Dr. Whitaker possesses a gold ring, set with a cornelian of many faces, having a representation of a dove in the centre, and inscribed *AVE. MEA. VITA*. "But the noblest discovery ever made here, or perhaps in Britain, was in the year 1796, when the shelving bank of the Ribble exposed the following remains, which seemed to have been deposited in an excavation of the earth, filled up with soil of a different quality; first, a large flat earthen vessel, extremely thick, with the potter's stamp very distinct, *Boriedof, Boriedi Officina*. 2nd. An entire *patera* of copper, about six inches diameter, with a handle. 3d. The imperfect remains of a similar vessel. 4th. A colum, or colander, of the same size and metal. 5th. Several concave and circular plates of copper, with loops behind, which had evidently been intended to fasten them perpendicularly against

VOL. III.—NO. 112.

a shaft, in order to form a Roman *vexillum*. 6th. A very fine helmet, of which the crest was a sphinx, the head-piece enriched with basso-relievos of armed men, skirmishing with swords, and a vizor consisting of an entire and beautiful female face, with orifices at the eyes, month, and nostrils. The vizor, a most delicate and exquisite piece of workmanship, is supposed to be Grecian; and, from the boldness of its lines, to belong to a period somewhat anterior to the last perfection of the arts in that wonderful country." These relics were deposited in the museum of Charles Townley, Esq.

At a little distance from the church, are the remains of a rampart and foss, where anchors have been found, from which the place is supposed to have obtained the name of Anchor Hill. Rings of ships were also found; and, in sinking a well some years ago, a ship, or vessel, was discovered at the same place. From Ribchester, a Roman road, called the Watling Street, takes a northern course over Longridge fell, and is distinguished as a long stripe of green, intersecting the brown heath of the mountain. Having reached the summit of the hill, it takes a turn towards the north, then descends again, is very conspicuous at intervals, has a broad and high ridge in the inclosures of the townships of Thornley and Chargeley, enters Bowland a little below Dowford Bridge, passes about half a mile west of Browsholme, traverses, in a direct line, the high grounds to the north of that house, and then passes to the north of Newton and Sladebum, and traces the Hoddër to its source at Cross of Greet, which is the northern boundary of the original parish of Whalley. A portion of this way, about 330 yards in length, was laid open by the cultivation of a morassy piece of ground, and is described by Rauthmell, to have consisted of a substratum of large pebbly gravel, spread on the surface of the morass, and covered with large flat paving stones above."—The parish of Ribchester, with Chipping, was taken out of Whalley. Here were two chantries; one belonging to the Townleys, of Dutton, the other to the lord of the manor.

RIVINGTON.]—Near this village, $4\frac{1}{4}$ miles E.S.E. from Chorley, is a lofty hill, noted for a high peak, or beacon, which served, in the civil wars, as a watch-tower. From its commanding situation, and extensive views, many parties frequent this elevated spot during summer evenings. Here is a free grammar-school, founded by James Pilkington, Bishop of Durham, in the reign of Elizabeth.

ROCHDALE.]—The market-town of Rochdale, is 40 miles S.E. from Lancaster, and 197 N.N.W. from London. It is situated in the three townships of Castleton, Spotland, and Wandleworth, which separately maintain their own poor. The largest part of the town lies in Wandleworth, and the whole of its population amounted, in 1801, to 10,509.—Since that period, it has greatly increased. The parish of Rochdale, which is of great extent, measuring eleven miles from N. to S. and nine from

E. to W.

E. to W. formerly consisted of four townships, viz. Butterworth, Castleton, Hunderfield, and Spotland; but is now subdivided into the townships of Blatchinworth, Butterworth, Castleton, Spotland (Further-side), Spotland (Nearer side), Todmorden and Warlsden, Wardleworth, and Wuerdale, and Wardle; comprising an aggregate population of 37,229 persons. The vicarage of Rochdale, which is in the presentation of the Archbishop of Canterbury, is said to be of greater value than any other in the kingdom. It formerly belonged to Whalley abbey. Nine chapels of ease are subordinate to Rochdale, one in the town, and one at each of the following places: Littleborough, Milnrow, Todmorden, Whitworth, Friermeor, Lydyate, Saddleworth, and Dobcross.—The original town of Rochdale, appears to have been entirely within the township of Castleton, where an ancient castle formerly reared its embattled walls, and where there is still a lofty artificial mound of earth, called the Keep.—Dr. Whitaker supposes that a castle was erected here before the Roman conquest.

Archbishop Parker founded a free grammar-school in this town, in the reign of Elizabeth. Another free-school was established here by Mrs. Hardman; and, since the year 1784, sixteen or more Sunday-schools have been formed. Here are meeting-houses of the Presbyterians, Baptists, and Methodists.

This parish abounds with slate, stone, and coal; and the manufacture of baize, flannels, kerseys, coatings, and cloths, is carried on here very successfully.

Stubley, in this parish, was long the residence of the Holts, a memorable family in these parts. The house, which appears to have been built by Robert Holt, Esq. in the reign of Henry the Eighth, consists of a centre with two wings. It contains much carving in wood, particularly a rich and beautiful screen between the hall and the parlour, with a number of family crests, cyphers, and cognizances. It was abandoned for the warmer and more fertile

* This author, whose name was John Collier, was born near Warrington, and was first intended by his father for the church; but instead of that he was placed with a Dutch loom weaver. Disliking this sedentary life, he commenced itinerant school-master; and, after wandering about for some time, he obtained an humble settlement at a free-school at Milnrow, near Rochdale, where he and Mr. Pearson, a curate, divided the salary of 20*l.* a year. On the death of his partner, Tim was nominated sole master. He had previously kept an evening school, which was now relinquished; though from motives of saving prudence, he employed the Christmas and Whitsuntide vacations in teaching at Oldham, &c. He also began to study music and drawing, which he pursued with such avidity, that he was soon enabled to instruct others. Having succeeded in delineating some caricature heads, figures, and groups, he sold a great number of them to travellers, and even to the Liverpool merchants. The first regular poetical composition which he published, was styled the Blackbird, and intended to ridicule a Lancashire justice, who was more known for political zeal and ill-timed loyalty, than good sense and discretion. Marrying about this time, his domestic cares and expenses increased, and he was obliged to be additionally industrious. Besides the duties of his school, and

situation of Cartleton, by Robert Holt, Esq. about a century and a half ago.

In this neighbourhood, on the bank of the Beil, is the ancient house of Belfield, formerly part of the possessions of the Knights of St. John of Jerusalem; and, afterwards of the Butterworths.—Alexander Butterworth, Esq. devised this and other considerable estates, to Richard Towaley.

In the township of Butterworth, is Clegg Hall, a strong square building, apparently of James the First's time.

Foxholes, north of Rochdale, is the seat of John Entwistle, Esq. The present mansion was built by Mr. Entwistle, in 1792. The family of Entwistle derive their descent from Sir Bertyn, or Berthram Entwistle, Viscount and Baron of Brybroke, in Normandy; who, for his eminent services, was knighted at the battle of Agincourt. He was slain in support of Henry the Sixth, at one of the battles of St. Albans. His family quitted their paternal estate in the 16th century, and fixed their residence at this spot.

The neighbourhood of Rochdale is considered as the centre of what is termed the Lancashire dialect, which has acquired some notoriety by the humorous writings of Tim Bobbin.*

ROYTON.]—(See Oldham.)

RUFFORD HALL.]—At Rufford, 5½ miles N.N.E. from Ormskirk, is Rufford Hall, an estate belonging to Sir Thomas Dalrymple Hesketh, Bart. who has built a new mansion on it, and much improved and adorned the park by new plantations, &c. This estate has a chapel of ease, which was built at an expense of 1165*l.* The dean and chapter of Chester receive 40*l.* per annum from the manor of Rufford.

SALESBURY HALL.]—This estate, on the banks of the Ribble, nearly opposite Ribchester, has been successively the property of the Salesburies, Clitheroes, and Talbots. Of the last family, Thomas Talbot, in 580, was keeper of his Majesty's records in the Tower, and furnished Camden with a cata-

teaching music, he laboured at the easel, and painted altar-pieces for chapels, and signs for public-houses. Having a retentive memory, and associating a good deal with the unsophisticated natives of the county, he had treasured up all the local terms and phrases, with the vulgar and obsolete words used in common discourse by the lower classes. These at length he committed to the press in the form of a dialogue, and published under the title of "Tim Bobbin's Lancashire Dialect." Its novelty and humour soon excited public curiosity, and not only rendered a second edition necessary, but provoked some mercenary publishers to pirate it. While the former gratified the moderate ambition of the author, the latter provoked his indignation and anger, and made him exclaim, "That he did not believe there was one honest printer in Lancashire." His last literary production was intitled "Curious Remarks on the History of Manchester;" which the author concludes by saying that the style of that work "appears to him to be affected, of a mongrel-py'd kind, produced by the dregs of Ossian, and the lofty fustian of a proud Oxonian." Mr. Collier died in the possession of his mental powers, at the advanced age of eighty.

laque of Earls, for his Britannia. The remains of the hall are partly of wood and partly of stone, and the whole originally encompassed a quadrangular court. A piece of Roman sculpture of Apollo, brought from Ribchester, has been fixed on one of the walls.

SALFORD.—This hundred, which occupies the south-eastern corner of the county, and is bounded, on the east, by Yorkshire; is separated from Cheshire, by the Mersey and Tame, while the hundred of Blackburn abuts against its northern limits; and the hundreds of Leyland, and West Derby, constitute the western extremity. In this extensive district are the great manufacturing towns of Manchester, Ashton, Rochdale, Bury, and Bolton; it is intersected by the canals of Rochdale, Bridgewater, Ashton, and of Bolton and Bury; and also by the river Irwell, which is navigable westward to the Mersey. The township of Salford is so intimately connected with Manchester, that every thing of importance relating to the former has already been noticed in our account of the latter.

SAMLESBURY.—East by N. from Preston, 4½ miles, is the extensive manor of Samlesbury, which, for 350 years, was possessed by the great family of Southworth. The manor-house had originally a moat, and inclosed three sides of a large quadrangle. In the centre, was the great hall, which is probably of the time of Edward the Third. It is remarkable for the massiveness of its wood work. The remaining wing is of a later date. The oak timber employed in this building is immense. The principal timbers are carved with great elegance, and painted figures of saints are to be seen in the compartments. The outsides of the building are adorned with profile heads of wood, cut in relief, with huge medallions. The inner doors are without a pannel or lock, being always opened with a latch and string. It is worthy of remark, that the boards of the upper floors, instead of crossing the joists, are placed parallel to them.

SCARISBRICK HALL.—About three miles N. from Ormskirk, stands Scarisbrick Hall, the seat of the late Thomas Eccleston, Esq. This gentleman, who settled here in the year 1778, and died in the month of December, 1799, distinguished by his spirited improvements in the agriculture of his estate. In 1796, he received, from the Society of Arts, the honorary gold medal for the useful effects he produced in draining that sterile tract of bog-land, called Martin Meer. The meer was formerly a large pool, or lake of fresh water, of an irregular form, surrounded chiefly by mosses, or boggy land, containing near 1717 acres of eight yards to the pole, or about 8032 statute acres. It lies in the different manors of Scarisbrick, Bursoough, North Meols, Tarleton, and Ryfford. To drain this stagnant pool, was a favourite scheme of a Mr. Fleetwood, of Bank Hall, as early as the year 1692. That gentleman, however, failed in effecting his intention. Mr. Eccleston, assisted by the scientific

and skilful advice of Mr. Gilbert, of Worsley, who had judiciously planned, and successfully executed, some difficult subjects of engineering for the Duke of Bridgewater, resolved to make another effort. The plan which Mr. Gilbert struck out, and which Mr. Eccleston executed, was to have in the main sluice, or canal, which is nearly five miles in length from the sea-gates, three different pair of flood-gates. The first, to keep out the sea; the second, at about half a mile distance nearer to the meer, to stop the sea there in case any accident should happen to the first; and the third built close to, and in the same walls with the sea-gates, but to open and shut in a contrary direction. All these gates are kept open when the tide has sufficiently retired; and when the water rises above the level of the meer, the sea-gates are shut. Thus, the great obstacle to the perfect draining of Martin meer, which had baffled numerous efforts of the proprietors for almost a century, was done away. A part of the land being drained in 1783, in 1784, some few acres were ploughed up, and yielded a tolerable good crop of spring corn; some yielded a very inferior kind of hay; and the rest was pasture. In 1785, the proprietor prepared for oats and barley, by ploughing nearly 200 large acres. Previously to this the best meer-lands let for a few shillings the large acre. In 1785, he sold some standing barley at 11*l.* 17*s.* 6*d.* per acre; and the purchaser to cut, carry off, &c. at his own expense. Good roads, for several miles in length, have been made across the meer, by means of faggots, covered with a stratum of sand. The recovered land is now generally appropriated to pasturage, for horses.

SEFTON.—The manor of Sefton, or Sephton, 7 miles N. from Liverpool, formerly belonged to the Molyneux family of Norman descent. The church is a large handsome building, with a nave, two aisles, and a steeple. This church is supposed to have been built in the time of Henry the Eighth, by Anthony Molyneux, rector of the place, a man equally distinguished for talents and piety. The chancel is divided from the nave by a screen, and contains sixteen stalls of elegant carved work.—The remains of several of the Molyneux family are deposited in this place, and their monuments are still to be seen. Among these are two cross-legged figures in stone, with triangular shields, expressive of the order of Knight's Templars. Around an altar-tomb of white marble, is an inscription for Sir Richard Molyneux, who died in 1430, and Joan, his wife. This Sir Richard greatly distinguished himself at the battle of Agincourt, and was rewarded, by Henry the Fifth, with the honour of knighthood. Effigies in brass, record the memory of Sir William Molyneux, who signalised himself in three actions against the Scots, in the reign of Henry the Eighth. On a flat stone, is an inscription to the memory of Caryl, Lord Molyneux, who devoted himself to the unfortunate cause of Charles: having raised a troop of horse,

in his support, for which he was subjected to great persecution, during the usurpation; but, was afterwards advanced to high honours. In the broken painted glass in the window, are some inscriptions recording the respective donors.

SMITHILLS HALL.—This estate, about two miles N.W. of Bolton, was anciently the property of the Ratcliffe family; but it passed, by marriage, to a younger branch of the Bartons, of Barton and Holm. It afterwards belonged to the Byroms; and was purchased, some years ago, by a Mr. Ainsworth. It is situated in a wood above a small rocky glen. Its form is quadrangular, with entrances from the north and west sides. It was originally built of timber, and an old gallery of the ancient structure may still be seen. The east front is of stone, and possesses great elegance. The hall is wainscotted all round, and the middle row of pannels is filled with various carved devices. The windows of this hall, as well as of the chapel, contain some painted glass. In the windows of the kitchen, and on the wainscot, are the monograms of A with a *bar* and a *tun*, which are supposed to allude to Sir Andrew Barton, a noted pirate. It is, however, more probable, that these were designed for Andrew Barton, who flourished in the time of Henry the Seventh; and who built, or greatly altered the house; and the crest of the oak branch must have belonged to a branch of the Ratcliffe family.

SMEDLEY HALL.—This seat, the property of Major Hilton, who possesses it from the Cheetham family, is about a mile N. from Manchester.

SOUTHPORT.—This village, in the neighbourhood of Rufford Hall, has become a place of fashionable resort for bathing; and its fine flat sands are peculiarly favourable to this healthful recreation. Here is a good inn, and several lodging-houses.

SPEKE HALL.—In the chapelry of Speke, 6½ miles S.S.W. from Prescott, is the curious old mansion of Speke Hall, built chiefly with timber and plaster. When entire, it inclosed a square area or court. The house, which was formerly surrounded with a moat, came into the possession of the Norris family, by a marriage with that of Molyneux. Sir Edward Norris particularly distinguished himself in the battle of Flodden Field. A mutilated pedigree of this family, painted on canvas, is attached to an ancient carved mantle-piece in one of the rooms. This mantle-piece is esteemed a curious specimen of old carving, and is traditionally, though perhaps erroneously, said to have been brought from Edinburgh castle, after the battle of Flodden, in 1513.

STALEY BRIDGE.—This is a large populous hamlet, on the banks of the Tame, over which is a substantial bridge, two miles E. from Ashton. On an eminence, is an octagon chapel of ease. Staley Bridge has long been noted for its woollen-cloth dyers, pressers, and weavers; but the cotton business is now the most prevalent.

STANDISH.—At this place, three miles N.W. by N. from Wigan, a family of the name of Standish

appears to have been settled soon after the Conquest. John Standish, Esq. a servant to Richard the Second, distinguished himself by wounding Watt Tyler, in the memorable rencontre in Smithfield. For this service he was knighted. Sir Ralph Standish commanded an army in France, under Henries the Fifth and Sixth; and Sir Alexander Standish was knighted for his behaviour at the battle of Hopton-field, in Scotland, in 1482. Henry Standish, Bishop of St. Asaph, in 1519, accompanied Sir John Baker on an embassy to Denmark, in 1526; and, in 1530, was one of the bishops who assisted Queen Catherine in the suit concerning her divorce from Henry the Eighth. The church, which is a handsome building, was erected in 1584, chiefly by the aid of the rector, Richard Moodie, who maintained the workmen with provisions during the time. It contains a tomb of Sir Edward Wrightinton, Knt. an eminent counsellor, who died in 1658. Another is raised to the memory of the first Protestant rector, Richard Moodie, of whom there is a statue, in a Franciscan habit, of which order he had been before he conformed to the Protestant establishment. Various Roman coins, and other antiquities, have been found in this neighbourhood.

STARKIRK.—At Starkirk, in the parish of Sefton, were found, in 1611, a number of Saxon and other coins, which were engraved and published at the expense of William Blundell, Esq. lord of the manor. The 32 Saxon coins make plate the third of those given by Spelman, in his *Life of Alfred*.

STEDZ.—The chapelry of Stede, contiguous to Ribchester, appears to have belonged to a guild or hospital of high antiquity; and is said to be the most ancient building in the parish of Whalley. The windows are narrow, and lancet-shaped, and the doors are enriched with Saxon ornaments; the style of the whole is that of the age of Stephen. The inside of this little edifice has a still greater claim upon our attention. Divine service has been performed in it, only twice a year, since the Reformation, in a pulpit elevated on a stone basis. Here is a coffin tomb of high antiquity, broken in fragments, and the floor is strewn with ancient grave-stones, some of which have Norman inscriptions. Under a slab of white marble, lies interred the body of the late Catholic Bishop Petre, who died at Showley, in 1775, at the age of 84. The east window, being much broken, branches of ivy have penetrated through the orifices, forming beautiful festoons over the altar, the effect of which is peculiarly striking.

STONYHURST.—Stonyhurst, the noble mansion of the Sherburnes, about three miles N. E. from Ribchester, stands on an eminence which commands some extensive views both of Calderbottom and Ribblesdale; but it is well-screened from the north by the vast bulk and extent of Longridge-tells. It was probably begun by Sir Richard Sherburne, who died in 1594, and finished by his son, in

in 1596. The heavy cupolas were added by Sir Nicholas Sherburne, who came to reside here in 1695; and the canals dug, and gardens laid out by himself in the Dutch taste. The domestic chapel was over the gateway; but a spacious and handsome oratory has been fitted up, which, with the size and general disposition of the apartments, renders the whole easily convertible to the purpose of a large Catholic seminary, to which it has been some years appropriated. The house and demesne belong to Thomas Weld, Esq. of Corfe castle, Dorsetshire. The mansion is a lofty, large pile, constructed at different periods, with a court in the middle. Its entrance gateway is ornamented with columns of the different orders, placed in pairs one over the other. The apartments are spacious, demonstrating that greatness, rather than comfort, was the principal object of the builder. This estate was left by the Duchess of Norfolk, in 1734, to her heirs, the Welds, descendants of the Sherburnes.

SWARTMOOR HALL.]—About half a mile from Ulverston, is Swartmoor Hall, an ancient mansion, once the residence of two singular characters, Thomas Fell, and George Fox. The former was a barrister-at-law, and justice of the quorum, &c. and had served in several Parliaments. The latter made a convert of the former, and afterwards married his widow. The name of Swart, or Swartzmoor, seems to have originated from one Martin Swartz, who encamped here in the year 1487, with an army of Germans, in order to collect reinforcements in these parts, with the design of wresting the crown from Henry the Seventh.

THURLAND.]—Northward from Hornby, about two miles, is Thurland castle, which formerly belonged to the Tunstal family, who took that name from a village so denominated. At the breaking out of the civil wars, this fortified mansion, with its domain, belonged to Sir John Girlington, by whom it was garrisoned for the King; in whose behalf, it sustained a close and tedious siege. A party of the King's troops came to relieve it, but was repulsed by Colonel Rigby, and it was ultimately obliged to surrender. Sir John Girlington was afterwards slain at Melton Mowbray, in Leicestershire. A descendant from Paul Burraud, Esq. is now owner of this estate.

TOWNLEY HALL.]—Townley Hall, a seat of John Townley, Esq. whose ancestors resided here previously to the year 1181, stands two miles E.S.E. from Burnley. At a short distance south of the mansion is a knoll, called the castle-hill, on which the first dwelling-house is supposed to have been erected. The present is a large venerable structure, the principal parts of which form three sides of a quadrangle. About a century back, the house occupied the four sides of a quadrangular court; and must then have assumed a grand collegiate appearance. The north-east side contained two turrets at the angles, a gateway, a chapel, and a sacristy, with a library over it. The opposite side

has walls more than six feet thick, which are constructed with grout-work, and the windows are large, with square tops, &c. The late Charles Townley, Esq. a man of acknowledged taste and virtue, and the present proprietor, is the patron and admirer of topography, and English antiquities. Here is a regular series of family portraits, from John Townley, Esq. in the time of Elizabeth. One apartment is filled with heads inserted in the pannels; and, in another room, is a fine picture of the first Lord Widdington, who was killed in Wigan Lane. The greatest ornaments of Townley are its fine ancient woods; the greater part of which consists of old oaks. These are dispersed over a large park, which, with the contiguous mountains, and distant country, present various combinations of grand and highly picturesque scenery.

TRAFFORD HALL.]—This mansion, the seat of John Trafford, on the southern bank of the river Irwell, about five miles W. from Manchester, is a modern structure, cased with stucco. The Trafford family was settled here before the Conquest; Sir Ranulphus de Trafford was a distinguished warrior in the time of Canute.

TURTON TOWER.]—This old fortress, which consists of four stories, with an embattled parapet, is in the parish of Bolton. It contains some ancient armour. It belongs to the Chetham family.

TYLDESLEY.]—Tyldesley, eight miles N.E. by E from Newton, in Makerfield, derives its name from the Tyldesley family, of whom Sir Thomas Tyldesley particularly distinguished himself during the troubles of Charles the First's reign, and fell in the fight of Wigan Lane. On a pillar, near Wigan, is fixed a brass plate, with an inscription, to perpetuate his memory. Sir Thomas was interred at Leigh; but of his tomb, only a few relics are now to be seen. The chief property in this hamlet belongs to Thomas Johnson, Esq. When he took possession of this estate, by purchase of his grandfather, there were only three farms on it; but, by the establishment of manufactures, it contained a population of 3492 persons, in the year 1811.

ULVERSTON.]—The ancient sea-port and market-town of Ulverston, 20 miles N.W. from Lancaster, and 270½ N.N.W. from London, is agreeably seated on a declivity towards the S. about a mile from the Leven Sands, whence vessels of 150 tons burthen, come up to the port at high water. The principal trade of this place is in iron ore, pig and bar iron, limestone, blue slate, oats, barley, and beans; of which the last used to be sent to Liverpool, in large quantities, for the food of the negroes in the Guinea trade. The manufactures carried on here are cotton, check, canvas, hats, &c. Ulverston obtained a charter, in the year 1279, for a weekly market and annual fair; but was not much benefited by this grant, while Furness abbey was inhabited by the monks. After the dissolution of that monastery, Dalton lost its importance, and Ulverston

ston became the emporium of the district. The town has greatly improved in appearance, within the last 50 or 60 years: the streets are spacious and clean, and the houses are well built. At the intersection of two principal streets, in the centre of the most ancient part of the town is an old cross. The chief part of the church, which stands in a field near the town, was rebuilt in 1804; it is a plain, neat structure, having three aisles, and a square tower. Ulverston has a small theatre, an assembly-room, and a public subscription library. A canal was cut, in 1795, to form a communication from the east side of the town, to the channel of the Leven. It is well supplied with water; has a spacious bason, with a warehouse; and has been navigated by ships of 400 tons burthen. The population of Ulverston, in 1811, was 3378.

Castle Head, in this neighbourhood, which we have already described as the seat of the late John Wilkinson, a great iron-master, was left by that gentleman, to his widow, in the year 1808. Mr. Wilkinson died in the month of July, in that year; and, in August, an iron coffin, to hold his remains, arrived at Ulverston, in a sloop, from the foundry at Bradley, with an iron tomb and pyramid, with iron letters, gilt, for the following inscription, which Mr. Wilkinson had himself composed:—

“ Delivered from persecution of Malice and Envy,

HERE RESTS

JOHN WILKINSON,

IRONMASTER,

In certain hope of a better State and heavenly

Mansion,

As promulgated by

JESUS CHRIST,

In whose Gospel, he was a firm Believer;

His Life was spent in Action

For the Benefit of Man,

And he trusts, in

Some degree,

To the

GLORY OF GOD.

“ His different Works that remain, in various parts of the Kingdom, are testimonies of unceasing labour, until death relieved him, the 14th day of July, 1808, at the advanced age of eighty.

Shortly afterwards, the body was interred, and the tomb erected upon a rock, fronting the house at Castle Head, and completely exposed to view.

URSWICK.]—At URSWICK, three miles S.W. by S. from Ulverston, are two ancient fortifications, called Stone Walls; one square, the other nearly circular. They both consisted of walls formed by stones piled up without mortar. The circular area measures, in diameter, about 300 feet.

WALNEY.]—(See Rampside.)

WALTON.]—Walton-on-the-Hill, so called from the elevated situation of its church, is three miles N. by E. from Liverpool, and comprehends a large tract of country, having the chapelries of Formby, West Derby, and Kirkby, dependant on, and subordinate to, its church; besides the townships of

Toxteth Park, Croxteth Park, Bootle, Everton, Kirkdale, Fazakerly, Linacre, Simond's Wood, Raver's Meals, &c.—The church forms a good sea-mark.

WARRINGTON.]—The extensive market-town of Warrington, 51 miles S. by E. from Lancaster, and 187½ N.W. by N. from London, lies on the northern bank of the river Mersey, and is midway between Manchester and Liverpool. A Roman station is, by some, supposed to have been established here; but, there is little to justify this opinion. The bridge, built by the Earl of Derby, for the accommodation of Henry the Seventh, crosses the river at this place. Here was formerly an Augustine friary, now entirely demolished. Edward the First granted to the town a charter for a market and fairs. Warrington is described by Leland, as “ a paved town, of pretty bigness, with a church at the end of it, and having a better market than Manchester.”—The town consists of four principal streets, which are mostly narrow, inconvenient, and unpleasant. “ The entrance into the town,” observes Pennant, “ is unpromising, the streets long, narrow, ill-built, and crowded with carts and passengers; but, farther on, are airy, and of a good width, yet affording a striking mixture of mean buildings, and handsome houses, as is the case with most trading towns that experience a sudden rise.” The principal trade of the place consists in the manufacture and sale of sail-cloth, or poldavy; but some coarse linens, checks, &c. are also made. The raw materials are mostly brought from Russia. Pin-making, glass-making, and iron-founding, are also carried on here. Warrington may, in some measure, be considered as a port-town, the Mersey admitting, by the help of the tide, vessels of 70 or 80 tons burthen, to Bank Quay, a little below the town, where warehouses, cranes, and other conveniences for landing goods are erected. The spring-tides rise at the bridge to the height of nine feet. Upwards, the river communication extends to Manchester. Besides the parish church, here is a chapel of ease, and another chapel of the establishment in the suburb over the bridge belonging to the parish of Groppenhall. There are also places of worship, for the Roman Catholics, Presbyterians, Anabaptists, Methodists, and Quakers. There is a very well endowed free-school in the town; and a charity for educating and maintaining poor children of both sexes.—There being no other bridge over the Mersey between this place and Liverpool, and for many miles east of it towards Manchester, has occasioned the pass here to be a place of repeated conflict, in the civil commotions of this kingdom. The most memorable event of this kind occurred in 1648, when a large body of the fugitive Scotch army, under the Duke of Hamilton, was pursued to Ribbleson Moor; and, though they made an obstinate resistance, for some hours, at this bridge, yet above 1000 were killed, and their Lieutenant-General Bayley, with

2000

2000 soldiers, were taken prisoners. Again, in 1651, General Lambert, who had commanded on the former occasion, fixed on this spot to oppose and resist the Scotch army under the young King, who was here repulsed. In 1745, also, the middle arches of the bridge were broken down, to check the progress of the rebels.—The population of Warrington, in the year 1811, was 11,738.

Oxford Hall, a little to the north of Warrington, is a seat of the Blackburne family. John Blackburne, Esq. who died at the age of 96, was much respected for his many good qualities. His garden, an object of much curiosity, was visited by some of the most eminent botanists in the country.

The dissenting academy, at Warrington, has been long celebrated for the literary eminence of its masters and tutors; among whom the names of Enfield and Wakefield, will long be honourably remembered.*

WHALLEY.]—Four miles S. by W. from Clithero, is the village of Whalley, remarkable for its ancient abbey, and for the extent of its parish, which comprises a great part of Blackburn hundred, and contains 15 or 16 parochial chapels within its limits. Before the dissolution, the parish of Whalley was under the jurisdiction of the abbey. At the time of the Domesday Survey, the church of St. Mary, in Whalley, had two ploughlands, about 290 statute acres, free from all customs and impositions, and it had at least a square mile of wood, or about 640 statute acres; the rest, nearly 660 acres more, making in all 1561 statute acres, were then in common. Though it had so large a proportion of wood at that time, it has now only enough to adorn, but not to encumber it; and may be deemed a tract of more than usual fertility and beauty. “Augustine, the first missionary of Christianity to this island,” observes Pennant, “founded a church in these parts, which was long parochial to the wide tract of Blackburnshire and all Bolland. As converts increased, more places of worship were erected. These had no particular patrons; but the lords of the soil, in which they lay, appointed their relations or friends to the cure, who were called rectors, and were generally married men, and persons of property. The country at that time, was very thinly peopled, and the bishops left the government of the newly erected churches to their owners, with the power of deans, an honourable appellation, for which they were long distinguished, the office being hereditary. In the

reign of William Rufus, the last dean being prohibited marriage by a council, the presentation of Whalley and its chapels was granted to his relation, John, constable of Chester, and Lord of Blackburn; and Henry Laci, Earl of Lincoln, a successor of his, bestowed this church on the white monks of Stanlaw, in Wirral, with the proviso, that if the number of monks should be augmented from 40 to 60, they should remove to Whalley. This was effected in 1296, when the new monastery was built by the munificence of the Earl, who translated to it the bones of his ancestors, who had been interred at Stanlaw. This abbey flourished till the year 1536, when the abbots and monks of several convents, who before had either surrendered their houses, or been driven from them, encouraged by Aske's rebellion, or the pilgrimage of grace, repossessed themselves, and resumed their functions. Amongst others were the religious of this house, as well as others in the north; but the Earl of Shrewsbury, who commanded against the rebels, had them taken out, and martial law executed upon them. John Paslew, the 25th abbot, and one of his monks, were hanged at Lancaster. After the Dissolution, it was granted, with the greatest part of the demesne, by Edward the Sixth, to Richard Ashton, of Darcy-Lever, a branch of the house of Middleton; the rest to John Braddyl, of Braddyl, in this parish, whose ancestors were settled in these parts, from the time of Edward the Second.” The house and manor of Whalley came into the family of the Curzons, during the last century, the late Sir Nathaniel Curzon having married the co-heir of Sir Ralph Ashton.—A singular grant was made to this abbey by Henry, Duke of Lancaster, of two cottages, seven acres of land, 183 acres of pasture, and 200 acres of wood, in Blackburn Chase. Another grant was made of the same nature, in the neighbourhood, to support a female recluse, and two women servants, within the parish church-yard of Whalley, who were perpetually to pray for the souls of the Duke, and all his posterity. The convent was to repair their habitation, and to provide a chaplain, and a clerk, to sing mass to them, in the chapel belonging to their retreat; to bestow on them, weekly, seventeen loaves, weighing fifty souldz de sterling a-piece, of such bread as was used in the abbey; seven loaves of the second sort; eight gallons of the better sort of beer, and three-pence for their food. Besides, they had, annually, on the

* Thomas Percival, M.D. F.R.S. and R.M.S. a native of Warrington, was born in 1740, and died at Manchester, in 1804. After receiving the rudiments of his education at the free grammar school, he was enrolled the first student of Warrington academy, in 1757, where he continued about three years, and then removed to Edinburgh, where he studied physic for three winters. In 1763, by the friendship of Hugh, Lord Willoughby, of Parham, he was unanimously elected a fellow of the Royal Society. He afterwards visited Paris, &c. and in 1765, took his degree of M.D. at Leyden, on which occasion, he published his thesis, “on the Effects of Cold on the Human

Body.” In 1766, he married Elizabeth, daughter of Nathaniel Basnett, Esq.; and, in 1767, settled at Manchester, where he remained till his death. He was well known in the literary world, by his father's instructions to his Children; Moral and Literary Dissertations; and Medical Ethics; besides many excellent papers in the Memoirs of the Manchester Society, of which he was one of the founders and ornaments. The Society testified their unanimous respect to his memory, by placing a marble tablet over the chair which he had so many years occupied as their president.

feast of All Saints, ten large stock-fish, a bushel of oatmeal, for pottage; a bushel of rye; two gallons of oil, for their lamps; one pound of tallow, for candles; six loads of turf, and one of faggots, for their fuel. On the death of any of these recluses, the Duke, or his heirs, were to appoint successors.

In the year 1643, this place suffered considerably. The Earl of Derby posted his men in the church and tower, until the country people, who were zealous partizans for the Parliament, took up arms, and expelled them, with great effusion of blood.

Whalley is a name of Saxon origin, signifying the "field of wells," a term peculiarly descriptive of its situation. By the Parliamentary survey of 1650, it was found that the parish contained 35 townships. The columns of the north aisle of the church, which are cylindrical, but not massy, are the oldest parts remaining, and must have been erected considerably later than the Conquest; and the choir, a little before or after 1235. The windows are lancet-shaped, and the buttresses perpendicular, with little projection. The east window, which occupies the place of the three original lights always seen in the east end of the genuine buildings of this period, is comparatively modern. Within and on the south side of the altar, are three seats for the officiating priests, supported on small cylindrical columns. The hearth of the vestry is a very ancient grave-stone, with a border of foliage, and an inscription, of which the letters remaining are of the form of Edward the First's time; part of the stalls of the abbey have been removed into the choir, to which, however, they are most awkwardly adapted. The pew in the church, formerly called St. Anton's Kage, belongs to the Townley family, in right of their manor of Hopton. A dispute arose on account of sittings in the church, and Sir John Townley, as the principal man of the parish, was sent for to decide it; when it was remembered that he had made use of the following remarkable words: "My man, Shuttleworth, of Hacking, made this form, and here will I sit, when I come; and my cousin, Nowel, may make one behind me, if he please;" this is the exact relative situation of the two pews at present, "and my sonne, Sherburne, shall make one on the other side, and Mr. Catterall another behind him; and, for the residue, the use shall be, first come, first speed, and that will make the proud wives of Whalley rise betimes to come to church." Of this pew, the old wainscotting still remains, though the lattice work above has been cut away. In the church-yard, are three ancient stone crosses, supposed to have been raised in the time of Paulinus, whose ministry in Northumbria

commenced in 625, and terminated in 631, when he was driven from that kingdom.

Dr. Aikin, in his "View of the Country round Manchester," thus notices Whalley abbey:—"The boundaries of this religious house were very extensive. Two square towers still remain with arched gateways. Beneath are the ancient entrances into the place. One is finely vaulted, and the arch secured by stone ribs, curiously intersecting each other. A part of the conventual church also still remains, and some of the old dwelling part of the abbey. On a bow window, are cut in stone, several coats of arms, of the founders, and benefactors, as the Lacies, Stanlies, &c. There are the ruins of a vast length of room, which probably was the refectory, with windows on each side, some rounded, some pointed. Above this had been the lodging-rooms. A great court lies to the west of these, and on one side is a great pile, with two rows of rounded windows, with Gothic stone work within."

Whalley has a small school, of the foundation of Edward the Sixth; which, with those of Middleton and Burnley, have thirteen scholarships in Brazen-nose college, Oxford.

The population of the village of Whalley, in 1811, was 1004; that of the parish, 62,106.

WHITTLE-LE-WOODS.]—This place, $3\frac{1}{2}$ miles N. by E. from Chorley, is entitled to notice as the natal spot of that celebrated mathematician, Sir Jonas Moore.*

WIGAN.]—The market, and borough-town of Wigan, is 39 miles S. by E. from Lancaster, and $199\frac{1}{2}$ N.W. by N. from London. It is seated near the Douglas. Leland spoke of it, as a "paved town, as big as Warrington, but better builded, and inhabited by some merchants, artificers, and farmers." Its appearance is neat, though irregular; but it has been much improved, by the opening of two new streets, and the erection of several handsome buildings. It has an extensive trade in the manufacture of coarse linens, &c. Here are, also, some large brass and pewter-works. The corporate body consists of a mayor, recorder, twelve aldermen, and two bailiffs. It returns two members to Parliament; and the right of election is vested in the free burgesses, in number about 200.

Wigan church is ancient beyond any traditionary account. It is a handsome structure, composed of a nave, a spacious chancel, and two side aisles. The original chancel was taken down, and rebuilt on a larger scale, about the middle of the seventh century, by an ancestor of the present Lord Bradford. The only monuments worthy notice are, one to the memory of Sir Roger Bradshaigh, who dis-

* He was born in the year 1614; Charles the Second appointed him Surveyor-General of the Ordnance. He was also one of the governors of Christ's hospital, and induced his royal patron to found a mathematical school in that seminary; for the use of which, Sir Jonas compiled a general system of mathematics, in two volumes. He discovered and promoted the talents

of Flamsteed, who was placed in the Royal Observatory, at Greenwich, at his express recommendation. Sir Jonas Moore died in 1679, and was interred in St. Peter's church, in the Tower of London, where a handsome inscribed marble monument was raised to his memory, by his son-in-law, William Hanway, Esq.

tinguished

tinguished himself upon many benevolent occasions in this county, and those of some others of his family.—Amongst the charitable institutions at Wigan, are some alms-houses, founded by lady Bradshaigh; a good workhouse for the poor of the township; a blue coat school; and a free grammar school.

In three of the twelve townships of this parish are chapels of ease. In the townships of Aspinall, Haigh, and Hindley, are found quantities of the finest cannel coal, in large blocks, which will receive a polish equal to that of jet.

This fossil, besides constituting an excellent article of fuel, is capable of being manufactured into a variety of ornamental vases, trinkets, &c.

Formerly there was a sulphureous well near this town, the water of which, on the application of a candle, would take fire, and burn like brandy. Although the water was cold, the heat of the vapour was sufficient to boil eggs, meat, &c. The spring has been lost amongst the coal-works; but similar effects are frequently produced at various places in the neighbourhood.

Wigan Spa, or New Harrowgate, a strong sulphureous spring discovered a few years ago, is said to resemble the water of Harrowgate, in Yorkshire, excepting that it does not contain so much salt. An elegant building has been erected, for the accommodation of those who frequent the spring, either to drink the water, or to use it in hot or cold bathing. It is considered very successful in cutaneous or scorbutic cases.

WINDERMERE.—The lake of Windermere, or Winandermere, 9 miles W. N. W. from Kendal, is situated in a parish of the same name, which divides the district of Furness from the county of Westmorland. It occupies an area of about fifteen miles in length, by one mile in width, though, in some places, the breadth is more, and in others it is not above 500 yards. Near Newby-bridge it is fordable. This lake is the largest in England, and was supposed to be unfathomable. Its greatest depth has, however, been found to be 201 feet, near Ecclesrig-crag. The bottom of the lake in the middle of the stream is a smooth rock; in some places the sides are perpendicular, for a mile without interruption. The rivers Brathay and Rothay, which join at the west corner of the lake, form this vast reservoir. About four miles lower down, on the east side, Troutbeck river descends from the fells, and joins the mere. Estwaite-water also discharges itself into Windermere at Cunsey-beck. At its southern end, this mere terminates at Newby-bridge, whence the waters usually fall through the channel of the Leven-river, forming several cascades over the cragged rocks. From Newby-bridge, to the mouth of the Crake-river, a distance of about two miles, the water of the Leven falls nearly 105 feet.

WINWICK.—Winwick, one of the richest rectories in England, lies 2½ miles N. from Warrington. With the exception of one estate, the whole township is glebe land; and the rector is lord of

the manor. The rectory, valued in the King's book at 102*l.* 9*s.* 9½*d.*, is estimated to be worth 3000*l.* a year. The church is an ancient structure, and on its south side is the following Latin inscription, in old characters, purporting that this place was a favourite seat of Oswald, king of Northumberland, who, according to Camden, and others, was slain at Oswestry, in Shropshire:—

“Hic locus, Oswalde quondam tibi placuit valde;
Northanubrorum fueras Rex, nuncque polorum
Regna tenes, Prato passus Marcelde vocato.
Anno milleno quingentesimo tricensimo,
Sciator post Christum murum renovaverat istum:
Henricus Johnston curatus erat simul hic tunc.”

It deserves remark, however, that this parish anciently bore the name of *Macrefeld*; and the church here is dedicated to St. Oswald, king and martyr; a circumstance which tends to support the opinion, that Winwick, and not Oswestry, was the place where Oswald was barbarously slain, in the thirty-eighth year of his age.—In the church is a chantry belonging to the Legh family of Lyme-Hall, Cheshire, and amongst the monuments is one with a brass plate, effigies, &c. to Sir Peter Legh and his lady.

WRIGHTINGTON HALL.—Westward of Standish, in a charming little park, is Wrightington Hall, an old stone house, the first sash-windows of any house in the county.—The Lancaster canal passes at a short distance, and greatly facilitates the conveyance of coals, &c.

FAIRS.—*Ashton-under-Line*—Aug. 5, Dec. 3, cattle, horses, toys, &c.

Blackburn—East. Monday, cattle, horses, toys, &c. May 11, ditto, Sept. 29, toys, and small wares.

Bolton—July 19, Oct. 2, cattle, horses, and cheese.

Booth—Whit-Saturday, Saturday before Oct. 23; pedlary.

Broughton—Aug. 1, Woollen-yarn.

Burnley—Mar. 6, East. Eve, horned cattle, May 9, and 13, July 10, Oct. 11, horses, cloth, and pedlars ware.

Bury—Thurs. before Mar. 5, May 3, Whit-Monday, Thurs. before St. James's day, and on Thurs. before Oct. 29, woollen cloth.

Cartmel—Whit-monday. Tues. following Oct. 29; pedlary.

Chipping—East. Tues. Aug. 24, cattle.

Chorley—Mar. 26, May 5, Aug. 20, horned cattle; Sep. 4, toys, small wares, woollen-cloth.

Clithero—Mar. 24, Aug. 1, 4th Sat. after Michaelmas day, Dec. 7, cattle, woollen-cloth, and horses.

Cockerham—East. Monday, pedlary.

Colne—May 14, Oct. 10, cattle, sheep, woollen-cloth.

Dalton—June 6, Oct. 23, horses, horned cattle.

Garstang—Holy Thursday, cattle, and hard ware; July 9, 10, 11, cattle, wool, woollen-cloth, toys, and hardware; Nov. 21, 22, 23, cattle, horses, woollen-cloth, hard ware, and onions.

Haslindon—February 2, May 3, July 5, Oct. 2, horses and sheep.

Hawkeshead—Easter Mon. the Monday next before Ascension-day, Whitsun Monday, Oct. 2, cattle and pedlary.

Hornby—July 30, 31, cattle and horses.

Inglewhill—Mon. before Holy Thurs. Oct. 5, cattle.

Kirkham—June 24, cattle and horses; Oct. 13, toys and small ware.

Lancaster—May 1, cattle, cheese, pedlary; July 3, ditto and wool; Oct. 10, ditto, and cheese.

Liverpool—July 25, Nov. 11, cattle and horses.

Manchester—Whit-Mon. Oct. 1, Nov. 17, ditto, cloth, and bedding.

Newburgh—June 21, cattle and horses.

Newchurch—Ap. 29, Sep. 30, cattle and sheep.

Newton—May 17, Aug. 11 and 12, cattle, horses and toys.

Oldham—May 2, ditto and sheep.

Ormskirk—Whit-Mon. Sep. 8, cattle and horses.

Padiham—May—, Sept. 26, coopers and other wooden ware.

Poulton—Feb. 13, May 2, cattle and small wares.

Prescot—June 2, 3, 4, Oct. 21, ditto.

Preston—Mar. 27, cattle and horses; Sep. 7, coarse cloths and small wares; First Sat. after Jan. 6, chiefly horses.

Ratcliffe Bridge—Ap. 29, cattle, horses; April 30, Sep. 28, 29, wool, cloth, pedlary.

Rochdale—May 14, Nov. 7, cattle, horses, wool-len-cloth.

Rufford—May 1, cattle.

Standish—June 29, Nov. 22 do. horses, and toys.

Ulverston—Holy-Thurs. Thursday after Oct. 23, pedlary.

Upper Holland—July 15, cattle, horses, toys.

Warrington—July 18, Nov. 30, ditto and cloth.

Weeton—First Tues. after Trin. Sunday, cattle and cloth.

Wigan—Holy-Thursday Oct. 28, horses, horned cattle, and cloth; June 27, horses, and horned cattle.

TABLE OF DISTANCES.

The Names of the respective Towns are on the top and side, and the square where both meet gives the Distance.

LEICESTERSHIRE.

LEICESTER

British Statute Miles

LEICESTERSHIRE.

GENERAL DESCRIPTION OF THE COUNTY.

LEICESTERSHIRE is an inland county, bounded, on the north, by Nottinghamshire and Derbyshire; on the west, by a small part of Derbyshire, Staffordshire, and Warwickshire; on the south, by Northamptonshire; and, on the east, by Rutlandshire and Lincolnshire. Extending from E. to W. about 30 miles, and from N. to S. about 25, it is about 100 in circumference. Its contents were formerly estimated at 500,000 statute acres; but, according to the latest survey, made by government, the quantity is 522,240 acres.—The county is intersected by various rivers and smaller streams; notwithstanding which it has neither bogs nor marshes; and the air is considered to be very salubrious.

RIVERS AND CANALS.]—The rivers of this county, though numerous, are rather convenient and ornamental than grand or important; and, as Leicestershire is more an agricultural than a commercial district, it has not equally participated with many other counties in canal navigation. The principal rivers are the Soar, the Swift, the Welland, the Avon, the Wreke, and the Anker. The Soar, anciently called the Leire, which is the largest of these, has two sources, in the south-western part of the county, and after receiving a small tributary stream near Whetstone, passes by the west and north sides of the town of Leicester; whence it continues nearly due north, and after passing close by Mount-sorel, receives two or three small streams, and disembogues itself into the Trent a little north of the village of Ratcliffe. Thence to Stanford, a little to the north of Loughborough, it constitutes the natural boundary between this county and Nottinghamshire. In this short course of about nine miles, are five artificial cuts, made to avoid the windings of the river, &c. In 1634, Thomas Skipworth, Esq. obtained a royal grant to make this river navigable for boats and barges, from the Trent to Leicester. In 1776, the Soar was allowed to be made navigable from the river into which it empties itself to Bishop's-Meadow, within the liberty of Garendon; and a navigable cut was at the same time authorised to be made and maintained thence, near, or up and into The Rushes at Loughborough. In 1778, a canal was opened at Loughborough, supplied by several neighbouring streams, and communicating with the Soar; which now brings up coals, &c. at a very

easy price.—The Welland, according to Sir Thomas Cave, rises at Sibbertoft; but, by Prior's Survey, it appears to have three or four heads, near the south-east angle of the county; all of which unite at Medbourn, and leave the county between Caldecot and Rockingham, where it joins another river from the north. The Avon rises near Husband's Bosworth; and running westerly, forms the outline of the county to Dovebridge, where it enters Warwickshire, and continues till it unites with the Severn, near Tewkesbury. The Severn flows to St. George's Channel; and the Welland, which rises in the same part of this county, empties its waters into the North Sea, or German Ocean. The Wreke, Wrekin, or Wreak; rises at Abkettleby, in the eastern part of the county, and passing by Welly, joins its waters with the Eie, or Eye, whose united streams fall into the Soar near Mount-sorel.

In the spring of 1805, the long projected Ashby-de-la-Zouch canal was opened for trade, and its junction with the Coventry canal was completed, by which a communication was formed through the Coventry, Oxford, and Grand Junction canals to London; by the Coventry and Birmingham, and Fazely canals to Birmingham; by the Coventry, and Trent and Mersey canals, to Liverpool and Manchester; and by the Coventry, Trent, and Mersey, Staffordshire and Worcestershire canals, and the river Severn, to the port of Bristol. The Ashby-de-la-Zouch canal extends thirty miles without a single lock, and being joined with the Coventry and Oxford canals, and running upon the same level, a line of canal is presented of more than 70 miles in length towards the metropolis without a single lock! Different wharfs are opened along the line of the canal. That near Hinckley is upon a considerable scale, and made at a great expence, by the adventurous and spirited exertions of Thomas Sansome, Esq. who, at his own cost, extended the canal about two hundred yards of deep cutting nearer to the town, and to the turnpike-road leading to Hinckley; and likewise built large and commodious warehouses. Goods are here taken in and forwarded to all parts of the kingdom; and the neighbourhood is amply supplied with Leicestershire, Warwickshire, and Staffordshire coals, Welsh slates, Newcastle tiles, lime, timber, &c. at reasonable prices. Mr. Sansome has built a handsome inn adjoining

joining the wharf. This canal, so beneficial to the country, was originally undertaken at the recommendation and under the patronage of the present Marquis of Hastings, then Earl of Moira, who assured the subscribers, at a meeting of the county, at the castle of Leicester, that the rich mines of coals, lime, and iron-stone, which abounded upon his estates about Ashby-de-la-Zouch, should be opened for the public benefit.

The Oakham canal commences at and joins the Melton navigation, on the south side of the town of Melton, and proceeding on the north side of the river Eye, passes Brentingby, Wiveby, Stapleford, Saxby, Wymondham, Edmonthorpe, Teigh, Market Overton, Barrow, Cottesmore, and Burley, and joins the town of Oakham on the north side; forming a course of 15 miles, with 126 feet regular rise, in the first eight miles and a half; that is to Edmonthorpe; and from thence to Oakham is level; the reservoir is near Langham, on the west side of the canal.

The rivers Wreak and Eye are made navigable from the junction at Turnwater-meadow to Melton Mowbray, by several new cuts and deviations, where necessary.

The Grantham canal commences on the east side of Grantham, passes Harlaxton, the Point, at the foot of Woolthorpe-hill, Stainworth, Red-mill, along Relvoir Vale, by Barkestone, Plunger, Harby, Long Clawson, to Hickling, being from Grantham a course south-west; from Hickling it bends to the north, and passes through Kinnoulton, Coulton Bassett, Cropwell Bishop, and joins the Trent between Holme, Pierrepont, and Radcliffe. There is a branch from near Cropwell Bishop to Bingham. The length of this canal from Grantham to the river Trent is 30 miles, with 148 feet fall to the river. The branch to Bingham is level, more than three miles in length.

The Loughborough canal commences at the river Soar, a little below Grace Dieu brook, and takes a straight course to the rushes at Loughborough. Forming a chain of connection with the Trent, and thence with most of the canals in the kingdom, this is of the greatest utility, particularly to the town of Loughborough. Its course, the whole of which is level, is about a mile.

The Leicester canal, which commences at, and connects itself with, the basin of the Loughborough canal, passes on the north side of the town, and falls into the river Soar, at Quorndon; thus far it is a new cut; the remainder is only an improvement of the river, with occasional cuts and deviations. From Thriukstone-bridge to the Loughborough canal is about seven miles and a half, with a fall of 185 feet; from the Loughborough canal to its junction with the Soar is a level of about three miles, and from thence to Leicester is 11 miles, with a rise of 45 feet.

The Union canal commences at and joins the Soar navigation on the west side of Leicester, and for nearly three miles, to Ayleston, runs, with a few deviations, in the course of that river: from Ayles-

ton, the whole of the line is now cutting; and, running a southerly course it passes Glen Parva, Wigston, Newton, Harcourt, Wistow, and Saddington, where there is a tunnel of 40 chains. From this tunnel, making an elbow, it passes Foxton, where there is another tunnel of 40 chains, passing which is the branch to Market Harborough. From the above tunnel it makes a bend, crosses the Welland, and passes between Marston, Trussell, and Hothorp, and turns up by East Farndon and Oxendon Magna, where there is a small tunnel of 13 chains; near which is the reservoir for the summit level supplied by the Oxendon Brook. From Oxendon it goes near Kelnarsh, where it passes another tunnel of 45 chains, and proceeds by Maidwell, Lampport, Hanging, Houghton, Brixworth, and parallel with that branch of the Nen called the Northern river. It passes Stratton, Pilsforth, Chapel Brompton, Kingsthorpe, Dallington, and on the west side of Northampton joins the Nen navigation, and the branch of the Grand Junction canal; completing a source of 43 miles and three quarters from Leicester to Northampton, with 407½ feet of lockage, and passing through four tunnels. The branch to Market Harborough from the junction is three miles and three quarters, and is level. The lockage may be more particularly specified as follows: from West Bridge, at Leicester, where it joins the Soar, to near Saddington, is 12 miles and three quarters, with 100 feet rise; from thence to near Oxendon Magna is 13 miles and a half, and level; here in one furlong is a rise of 50 feet to the summit level, which continues to the south side of the tunnel at Kilmarshe near five miles; from thence to the junction with the Northern River at Northampton is 11 miles and three quarters, with 197½ feet fall; from thence to the junction with the river Nen is three quarters of a mile, and level. The proprietors of this undertaking are incorporate under the name of—The Company of Proprietors, of the Leicestershire and Northamptonshire Union Canal.—On the 13th of November, 1809, the New Cut on the Union Canal from Leicester to Harborough, through Foxton, was opened: upwards of 10,000 persons were present, and a sumptuous entertainment was given at the Angel Inn, in Harborough, to about 180 gentlemen interested in the concern. Thus did the Union Canal Company, after a period of 15 years from its commencement, finish a work of great public utility. Very few canals in the same distance have had to encounter such difficulties in the course of the undertaking. Nearly 200 feet of lockage, a tunnel more than half a mile in length, two considerable aqueducts, other large embankments, a large reservoir, and several hundred yards of very deep cutting were completed.

MINERAL AND MEDICINAL SPRINGS.]—At the village of Nevill Holt, and in the neighbourhood of Lutterworth, are some remarkable springs, the properties of which will be noticed in our account of those places.

PLANTS.]

PLANTS.]—The more remarkable plants of this county, which seem to be numerous, are given in a note, below.*

- * *Acorus calamus*. Sweet Smelling Flag or Calamus in the river Soar, in several places between Loughborough and Keyworth, especially about Normanton plentifully, and near the Abbey at Leicester, sparingly.
- Adoxa moschatellina*. Tuberos Moschatel, or Muskwood Crowfoot; among the bushes on the south side of Buddon wood, sparingly.
- Agaricus piperatus*. Pepper Mushroom; in the outwoods near Loughborough, and in Buddon-wood, near Mountsorrel, plentifully.
- *umbelliferus*. Little delicate Umbrella or Wood Agaric; in hedge bottoms, and in woods, arising from the putrid leaves.
- Aira praeox*. Early Hair-grass; on sandy and barren grounds and on mud walls; in several places about Leicester and Loughborough, upon Beacon and Bardon Hills in Charley forest, plentifully.
- Alchemilla vulgaris*. Ladies Mantle; in the moist closes at Woodhouse, near Buddon-wood, upon Charley forest, near Beacon-hill, and in Wichwood forest.
- Allium ursinum*. Ramsons; among some bushes by the side of a rivulet near Buddon wood.
- *vineale*. Crow Garlic; in meadows and pastures; found but rarely.
- Anthosceros punctatus*. Spotted Anthosceros; upon the banks of brooks and ditches in several places.
- Aquilegia vulgaris*. Common Columbines; in the outwoods near Loughborough.
- Asperula odorata*. Herb Woodroof; in Buddon, Oakley, and Holling hall woods near Loughborough, and in the Stocking wood near Leicester.
- Asplenium Adiantum nigrum*. Black Maiden-hair; in woods and shady lanes, at the roots of trees about rocks, and on old stone walls.
- *Trichomanes*. Common Maiden-hair, or English black Maiden-hair; on an old wall in Normanton, near Loughborough.
- *viride* β. Green Maiden-hair; upon the rocks on Beacon Hill in Charley forest.
- Atropa Belladonna*. Deadly Nightshade, or Dwale; in hedges and among rubbish: about Grace Dieu abbey, sparingly.
- Boletus bovinus*. Cow Boletus; in the outwoods near Loughborough abundantly, and in Buddon wood near Mountsorrel.
- Bryum glaucum*. White Bryum; upon Charley forest, among the *sphagnum palustre* which is much more frequent.
- Campanula glomerata*. Lesser Throatwort; in mountainous places, especially of a chalky soil.
- *hybrida*. The Lesser Venus Looking Glass, or Coddled Corn Violet; among the corn near Loughborough.
- *patula*. Field Bell flower; in Buddon wood, and in some of the hedges and lanes adjoining.
- Cardamine hirsuta*. Hairy Ladies smock, or the Lesser Hairy impatient Cuckow flower; by the side of the brook at Thorpe near Loughborough, and elsewhere.
- *impatiens*. Impatient Ladies Smock or Cuckow flower; among the rocks on the summit of Beacon hill.
- Carduus eriophorus*. Woolly headed Thistle; in the Stocking wood near Leicester, and upon the wolds about Dalby and Waltham.
- *pratensis*. The English soft or Gentle Thistle; in some of the boggy places at Woodhouse near Buddon wood.

SOIL, &c.]—This is principally a flat county, and is chiefly appropriated to grass farms. To describe the soil of the whole county would be somewhat

- Caucalis nodosa*. Knotted Parsley; by the turnpike road about Hathern, and upon dry banks about Leicester.
- Cerastium aquaticum*. Marsh Mouse-ear Chickweed; in watery places, and on banks of rivers, very common.
- Cerastium semidecandrium*. The Least Mouse-ear Chickweed; on walls and in pastures, very common.
- *viscosum*. Broad Leaved Mouse-ear Chickweed; in meadows and pastures; on wolds very common.
- Ceratophyllum demersum* β *submersum*. Horse-tail Water Milfoil; in ditches and slow waters, about Loughborough.
- Chrysosplenium oppositifolium*. Golden Saxifrage; in the outwoods near Loughborough, and among the bushes on the south side of Buddon wood, sparingly.
